Although this Court's opinion appears to treat the scope of the powers of the District Court as the principal question in the case, we have believed and still believe that there has been and will be no real problem in adjusting the complementary roles of the Commission and the courts so long as both apply the same consistent and determinable legal standard of fairness and equity on the same record. We believe that the Commission in this case applied such a standard, consistent not only with that employed in prior reorganizations under the Holding Company Act but also with that applied in reorganizations generally and we have tried to show that the criticisms in the opinion of that standard and the Commission's application of it were based upon misconceptions resulting from a shorthand presentation by counsel. We therefore respectfully urge that the Court reconsider that portion of its decision and opinion on the basis of the fuller discussion of the proc-

---

(C. C. A. 2, 1947), some inquiry was permitted concerning alleged procedural irregularities not susceptible of evaluation on the basis of the administrative record—specifically, charges by one Samuel Okin that the corporate management had been "coerced" by the Commission's staff into filing the particular plan. In both cases the court satisfied itself after a preliminary investigation that there was no factual basis to the charges.

cesses actually employed by the Commission, and the reasons therefor, set forth above.

Accordingly, we submit that the petition for rehearing should be granted.

Respectfully submitted, Roger S. Foster, Solicitor, Securities and Exchange Commission, 425 Second Street NW., Washington 25, D. C.

April 2, 1948.

List of Significant Commission Orders Which Have Affected the Engineers System

Release No.

2535 Merger of Mesilla Valley Electric Co. into El Paso Electric Co. and recapitalization of El Paso.

2569 Refunding of bonds of Virginia Electric and Power Co.

2699 Approval of Engineers' acquisition of its own preferred stock.

2884 Approval of consolidated tax returns by Engineers and Puget Sound Power and Light Co.

2897 Order of divestment directed against Engineers.

3230 Approval of dissolution of the Western Public Service Co. of Delaware.

3796 Order directing divestments by Engineers.

4114 Order disapproving plan to reacquire preferred stock.

4255 Approval of amended recapitalization plan of Puget Sound.

4421 Application for approval of divestment of El Paso.

4479 Extension of time for disposition of Puget Sound securities.

4559 Approval of divestment of El Paso.

4997 Approval of reacquisition of preferred stock.

5021 Merger of Virginia Public Service into Virginia Electric.

[fols. 90-91] 5058 Release of jurisdiction for securities sale of Virginia Electric.

5146 Extension of time for disposition of El Paso Electric.

5180 Extension of time to acquire preferred stock.

5499 Approval of liquidation and dissolution of El Paso
5738 Sale of Savannah Electric and Power Co.
5741 Refinancing of Virginia Electric.
5844 Sale of investment in Missouri Service Co.
6420 Sale of investment in the Western Public Service Co.

[fol. 92] In the United States Circuit Court of Appeals for the Third Circuit

[Title omitted]

Petition for Rehearing of Thomas W. Streeter, et al.—Filed April 16, 1948

The appellants, Thomas W. Streeter, *et al.*, preferred stockholders of Engineers Public Service Co., have upon application of counsel been granted permission by this Court to adopt so much of the Petition for Rehearing of the Securities and Exchange Commission (hereinafter called the "Commission") as appears appropriate and consistent with their previous position, and to file a brief in support thereof. Broadly speaking, we adopt the views of the Commission with respect to valuation and the complementary roles of the Commission and the District Court as set forth in its Petition for Rehearing, but do not thereby relinquish or abandon the claims previously asserted by us to the following effect: (1) that the remand to the Commission is proper, for the reason, *inter alia*, that the District Court [fol. 93] failed to approve the plan *in toto*;[1] (2) that the plan, as modified by the District Court, is not fair and equitable to preferred stockholders on the grounds, among others, that it permitted the premature termination of divi-

[1] The Commission apparently opposes remand if, on review in the District Court or on appeal, stated value, *i. e.*, $100, or the involuntary liquidation amount, is determined to be fair and equitable in view of the so-called contingently approved alternative allocation. (See Commission's Petition for Rehearing at p. 5, fn. 1.) In this respect, we are in disagreement with the Commission for the reason that such partial approval of the plan requires remand under such circumstances, as more fully explained in Streeter Main Brief at pp. 45 ff.

dends and that, accordingly, the Escrow Agreement is inadequate; and (3) that the modification or amendment of the plan was accomplished without notice and an opportunity to be heard; and (4) that, under the circumstances of this case, the retirement of the preferred stock was voluntary within the meaning of the charter.[2] However, we do not intend to press these claims further, at this time on this particular Petition.

It is our present purpose to seek clarification of various statements in this Court's opinion relating to the respective functions of the district court and the Commission and the proper standards for valuation by the Commission of the preferred and common stock; to ascertain the proper application of such standards to the facts of the instant case; and to draw to the attention of the Court relevant facts, which apparently have been overlooked or of which sight has been lost.

Argument

This Court has stated that an 11(e) district court must function as an equity reorganization tribunal with the powers and functions of such court, and elsewhere indicates that respect is to be accorded to the findings of the Commission and that the administrative record may be reopened [fol. 94] for additional evidence before the district court. It is not clear from the opinion of the Court whether the treatment of the Commission's findings with respect, involves the application of the substantial evidence rule or another standard. Furthermore the reopening of the administrative record would be contrary to the preponderance of the judicial authorities and would also pave the way for a trial *de novo* and the dangers incident thereto. A proper division of the function between the court and the agency requires recognition of their complementary roles.

This Court also directs consideration of all pertinent factors and substantial equities in arriving at equitable equivalents whether *ex* or *intra* the Act, and criticizes the Commission for an attempted substitution of a novel doctrine of investment value for that of equitable equivalents. The significance of the phrases "substantial equities" and "pertinent factors" needs amplification.

It is possible that the Court has a misconception of the meaning of "*ex* the Act" and offers a choice in valuation

---

[2] Streeter Main Brief, pp. 45 ff., 41 ff., 43 ff., p. 33, fn. 104.

not in accordance with the applicable decisions. Moreover, its criticism of the Commission for employing inconsistent techniques in valuation appears not warranted. Furthermore, the Court has lost sight of the real meaning of investment value as merely signifying going concern value. In this sense investment value is merely the method for arriving at the equitable equivalent and not a substitute for it. In addition, it is urged that the Commission properly evaluated the security interests by taking into account earning capacity, asset position, dividend record, and other pertinent data relating to the going concern value thereof.

[fol. 95]

I

The Court should clarify the respective roles of the district court and the Commission in respect to the treatment of the Commission's findings and the status of the administrative record.

Due regard for the proper distribution made by Congress of legal authority as between two law-enforcing agencies of government—the administrative and the judicial—is required.[3] The courts do not carry the sole burden of carrying out the Public Utility Holding Company Act (hereinafter called the "Act"), as the Commission has been entrusted with a share of that responsibility. Not only the courts are the guardians of rights of stockholders in simplifications pursuant to the Act, but the Commission has also received its legislative mandate to protect investors' values.[4] Court and agency are not totally independent and unrelated instrumentalities, but exercise roles complementary to each other and can achieve the objectives of the Act

---

[3] *Columbia Broadcasting System* v. *U. S.*, 316 U. S. 407, 441, 86 L. Ed. 1563, 1584 (1942).

[4] It may well be that the statutory interpolation in the reorganization process of an expert body as the Commission charged with the duty of protecting the rights of stockholders as well as the public interest is the basis for the omission of voting requirement of traditional bankruptcy reorganization. In any event, no vote is required, where an overriding statutory policy compels the reorganization as for instance under the Hepburn Act. *Continental Ins. Co.* v. *U. S.*, 259 U. S. 156, 66 L. Ed. 871 (1922).

only through coordinated action.[5] The respective roles of [fol. 96] court and agency have not been sharply defined in every detail by Congress and therefore are gradually being spelled out by the judicial decisions. In the course of delineation the Court should be wary against interpolating its notions of policies in the interstices of legislative provisions and must not distort the statutory scheme by a jealous predilection for the judicial role, in the exercise of its power, in disregard of the legislative division of functions between the Commission and the district court. *Scripps Howard Radio* v. *F. C. C.*, 316 U. S. 4, 11, 86 L. Ed. 1229, 1235 (1942). In the instant case, this Court's conclusion that a section 11(e) "district court must function as an equity reorganization tribunal with the powers and functions of such court, and not a mere review court"[6] by the very breadth of its language apparently relegates the Commission to a position of comparative insignificance and renders ambiguous, if not meaningless, its various statements relating to the respect to be accorded the findings of the Commission and permits the reopening of the administrative record.

A. The findings of the Commission should be accorded due weight

It would seem to follow from this Court's view to the effect that the district court is "to exercise its independent plenary judgment as an equity reorganization tribunal upon every matter relating to the fairness and equity of the reorganization", that the district court can ignore completely the findings of the Commission, with respect to the fairness of the plan, and, in reality, conduct a trial *de novo*.

---

[5] *Federal C. C.* v. *Pottsville Broadcasting*, 309 U. S. 134, 142, 84 L. Ed. 656, 661 (1940). In the *Pottsville* case, the Supreme Court made this pertinent observation:

"* * * The technical rules derived from the interrelationship of judicial tribunals forming a hierarchial system are taken out of their environment when mechanically applied to determine the extent to which congressional power, exercised through a delegated agency, can be controlled within the limited scope of 'judicial power' conferred by Congress under the Constitution." (at p. 141 of 309 U. S.).

[6] Opinion, p. 21.

But then in a somewhat different vein the court says at two places:

> "* * * The [district] court of course may not act capriciously in rejecting valuations made by the Commission. * * *
>
> * * * * * * * *
>
> [fol. 97] "The findings and conclusions of the Commission were not binding upon the learned District Judge though, as was proper, he treated them with respect" (Opinion, pp. 24, 25).

The foregoing quotations closely approximate the "substantial evidence" rule, as applied by the majority of circuit and district courts that have passed upon this question to date. *Ladd* v. *Brickley*, 158 F. (2d) 212, 216 (C. C. A. 1, 1946), cert. den. 329 U. S. —, 67 S. Ct. 675 (1947); *Lahti* v. *New England Power Ass'n.*, 160 F. (2d) 845, 850 (C. C. A. 1, 1947), affirming *In re New England Power Association*, 66 F. Supp. 378, 382 (D. Mass., 1946); *Public Service Commission of N. Y.* v. *S. E. C.*, C. C. H. Fed. Sec. Serv. Current Vol. Par. 90,405 (C. C. A. 2, 1948), affirming *In re Kings County Lighting Co.*, 72 F. Supp. 767, 783 (E. D. N. Y., 1947); *Massachusetts Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. (2d) 424, 430, cert. den. 327 U. S. 795, 66 S. Ct. 817 (1946); *In re New England Public Service Co.*, 73 F. Supp. 452, 456 (D. Me., 1947). For instance, the Circuit Court of Appeals for the First Circuit in *Ladd* v. *Brickley*, *supra*, says in this connection:

> "* * * But the studied conclusion of an expert body which has made a prolonged investigation of a subject from the standpoint of the public interest is to be taken seriously."

More recently within the same Circuit, the District Court in *In re New England Power Association*, *supra*, stated:

> "In truth, any court charged with a review of the findings of the Securities and Exchange Commission, in a matter so complex in its nature as is the present proceeding, should accept the findings of the expert body unless it concludes that an error of law has been committed or the findings are of an arbitrary or capricious nature."

[fol. 98] Again in the Eighth Circuit, the Circuit Court of Appeals there establishes a similar standard in the following terms:

> "* * * The proper measure of such equivalence is for the determination of the Commission in the first instance, and its expert skill in appraising the facts to be considered must be accorded due weight by the Court" (*Massachusetts Mutual Life Ins. Co.* v. *S. E. C.*, *supra*, at p. 430).

The same principle has apparently been applied by the Circuit Court of Appeals for the Second Circuit in the *Public Service Commission* case, *supra*, where the Court said:

> "* * * Whether there was any evidence to support the conclusion that the old common shares had any value, based upon the future earning power of the Kings County Company, is an inquiry into which we are not disposed to enter. Any opinion is at best a guess, dependent, among other things, upon what rates the Company will be allowed to charge. There was certainly some basis for the valuation of the SEC when the order of the District Court was entered on July 16, 1947" (at pp. 91, 228-9 of C. C. H. Fed. Sec. Serv. Current Vol.).[7]

[7] The Circuit Court in the *Public Service Commission* case, *supra*, appears to endorse the same principle announced in the following language by the District Court at page 783 of 72 F. Supp.:

> "As far as I am concerned, my duty is at an end when I find, as I do, that the action of the Securities and Exchange Commission was based upon findings supported by evidence, and was made pursuant to authority granted by Congress. I do not pretend to have either technical competence or legal authority to pronounce upon the wisdom of the course taken by either commission. *Board of Trade* v. *United States*, 1942, 314 U. S. 534, 548, 62 S. Ct. 366, 86 L. Ed. 432; *National Broadcasting Co.* v. *United States*, 1943, 319 U. S. 190, 224, 63 S. Ct. 997, 87 L. Ed. 344; both of which cases are cited in *Securities and Exchange Commission* v. *Chenery Corp.*, 67 S. Ct. 1575."

[fol. 99] Moreover, this same doctrine has been applied in analogous situations to findings of other administrative agencies (*Dobson* v. *Commissioner*, 320 U. S. 489, 64 S. Ct. 239 (1943)) and has just been reaffirmed in *Commissioner of Internal Revenue* v. *Sunnen*, 16 U. S. Law Week 4301, 4303 (April 6, 1948), where the Supreme Court said:

> "* * * And it is well established that its [Tax Court's] decision is to be respected on appeal if firmly grounded in the evidence and if consistent with the law."

And this substantial evidence rule has been currently applied by this Court to a Tax Court finding of value stating:

> "* * * Examination of the record and of the briefs filed by the parties and consideration of the oral argument convince us that the conclusions of the Tax Court do find substantial ground in the evidence. As we stated in *Cochran* v. *Commissioner*, 163 F. (2d) 153, 155, * * * the values of properties 'are purely questions of fact'. We went on to say that if there was any evidentiary basis for the Tax Court's finding we could not substitute our own evaluation for that of the Tax Court. The appeal at bar is ruled by such cases as *Dobson* v. *Commissioner*, 320 U. S. 489 and *Commissioner* v. *Scottish American Co.*, 323 U. S. 119" [*Lehn & Fink Products Corp.* v. *Com.*, 48-1 C. C. H. USTC Par. 9123 (C. C. A. 3, 1948)].

Furthermore, even in what may be considered the reverse situation, where the pertinent statute appeared to have made an Interstate Commerce Commission finding of value conclusive, the Supreme Court has indicated that such finding of value can only be sustained if supported by material evidence.[8]

[fol. 100] Accordingly, a similar treatment of the findings of the Commission would be appropriate and warranted in view of the statutory scheme of complementary roles. In fact, such view accords with the earlier expressions of this Court as well as of the district courts within

---

[8] *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 473, 87 L. Ed. 892, 932 (1943).

this circuit (or at least their spirit and philosophy) relating to the weight to be attached to findings of the Commission. Thus in *In re Standard Gas & Electric Co.*, 59 F. Supp. 274, 283 (D. Del., 1945) rev'd on other grounds, 151 F. (2d) 326 (C. C. A. 3, 1945), the District Judge (Leahy, *J.*) said in no uncertain terms in a section 11(e) proceeding:

> "* * * Under the substantial evidence rule, we are required and should follow the 'informed' judgment as articulated in the Commission's findings.
>
> * * * * * * * * *
>
> "Examination of testimony and documentary proofs presented to the Commission demonstrates manifestly there was substantial evidence to support the Commission's findings as to the value of the securities to be distributed to the Noteholders under the plan. * * *"

In the same spirit, this Court, although reversing on appeal on a point of law, said:

> "This case does not come to the court as the result of agreement between the parties or the action of a special master approving a plan in the common form of reorganization proceeding. It comes following a thorough consideration by the Securities and Exchange Commission which has a very broad grant of power from Congress in the premises.
>
> "It can be set out as a well established rule of administrative law that the action of an expert administrative body in determining the particular remedial measures demanded in an individual case is not to be overturned by court action unless the ad- [fol. 101] ministrative body has lost sight of the law. The more technical the subject matter before the administrative tribunal, the more reluctant the court should be, we think, in disagreeing with it on a matter which is a question of judgment" (at p. 331 of 151 F. (2d)).

In view of the general adherence to the substantial evidence rule, the earlier judicial pronouncements within this circuit and the statements in this Court's opinion, it is

urged that this Court provide a standard under which the District Court will not be permitted to ignore the findings of the Commission relating to the fairness and equity of the plan as it did, but be required to accord them their due weight.

On the other hand, if the substantial evidence rule is not to be applied to the findings of the Commission, then this Court should clarify its statements regarding the treatment with respect to such findings in order to establish a comprehensive standard for the guidance of the district court. A rejection of the substantial evidence doctrine would clearly be contrary to the preponderance of judicial authorities and may result in a trial *de novo* by the district court. To that extent then, this Court would have thereby minimized the role of the Commission, an expert administrative body, in violation of the spirit of its own remarks, if not the words themselves, in the *Standard Gas & Electric Co.* case, quoted above.

B. The administrative record should not be reopened before the District Court and a trial *de novo* conducted.

This Court has also sanctioned an attack upon the position of the Commission, and at the same time generated uncertainty and confusion, by its statement as to the reopening of the administrative record by a section 11(e) court. In this connection, this Court said:

> "* * * This does not mean, however, that the Section 11(e) court may not receive evidence *aliunde* the [fol. 102] Commission's record respecting the fairness and equity of a plan. It may decide upon the new evidence and that contained in the Commission's record that the plan is unfair and inequitable and remand the proceeding to the Commission for further consideration; or it may remand without taking new evidence, pursuing the course outlined at an earlier point in this paragraph" (Opinion, p. 17).

The Court's ruling in this respect would not seem to be supported by the Commission's interpretation of the Act, as is evident from the following testimony of a former director of the Public Utilities Division of the Securities

and Exchange Commission which this Court quoted in another connection as follows:

> "[the district court], on the basis of the record made before the Commission, holds full hearings on the plan, including briefs and oral argument * * *" (Opinion, p. 14).

It is explicit from, or at least implicit in, the foregoing statement that the Commission does not contemplate the receipt of evidence *aliunde* the Commission's record in respect to the "fairness and equity of a plan" and a trial *de novo* before the district court, but a hearing conducted "on the basis of the administrative record". Moreover, such reopening of the administrative record for the receipt of additional evidence is contrary to the rule uniformly and generally applied by the courts to 11(e) proceedings under the Act.[9] *In re Electric Bond & Share Co.*, 73 F. Supp. 426, 443 (S. D. N. Y., 1946), aff'd 161 F. (2d) 978 (C. C. A. 2, 1947); *In re Laclede Gas Light Co.*, 57 F. Supp. 997, 1002 (E. D. Mo., 1944), aff'd *sub nom. Massachusetts Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. (2d) 424 (C. C. A. 8, 1945), cert. den. 327 U. S. 796; *In re Jacksonville Gas Co.*, 46 F. Supp. 852 (D. Fla., 1942). This prin- [fol. 103] ciple has been succinctly stated in *In re Electric Bond & Share Co., supra*, where the district court said:

> "* * * The function of the court is to approve and enforce the plan of reorganization submitted to it, if it finds such plan fair and equitable and appropriate to effectuate the purposes of the Act. To do this the court must examine the plan and the record upon which the Commission's approval of the plan was based. To judge the plan on any other record would run counter to the procedure expressed in the statute.
>
> "The reason for this procedure is evident. The method of procedure outlined in the Act * * * plainly discloses that it was the purpose of Congress to set up a body in the Commission that would be especially trained and versed in matters relating to Public Utili-

[9] Recognition of this doctrine appears in the cases applying the substantial evidence rule. See cases cited at p. 6 of this Petition.

ties. These are complex matters calling for the services of experts'. *In re Laclede Gas Light Co., supra.*"

Furthermore, the dangers incident to a procedure reopening the administrative record are obvious; in substance a trial *de novo* may be had and obstructionists may make a Roman holiday of these complex utility simplification proceedings. The delay incident thereto may in a swiftly moving world result in a procession of stale records and thus a complete frustration of congressional intent. Also as the Commission so aptly points out in its Petition for Rehearing, the ruling on remand for a finding on unfairness based on additional evidence not heard by the Commission may conceivably be construed as binding upon the Commission, even though such limitation upon the action of the Commission is not intended.

[fol. 104] II

The Court appears to establish a different standard for valuation than that enunciated in the *Otis* case. Its criteria for valuation are vague and it unjustly criticizes the Commission for using inconsistent techniques in valuation and for attempting to apply the new doctrine of investment value in place of the doctrine of equitable equivalents.

It is well established that the words "fair and equitable" are words of art and have the same meaning under Section 11(e) as in other reorganizations.[10] In other words, fairness and equity require "full priority in treatment to be accorded various classes of security interests"—creditors and stockholders and various classes of stockholders, or that "each security holder in the order of his priority receives from that which is available for the satisfaction of his claim the equitable equivalent of the rights surrendered". *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 639-40 (1945), quoting from *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co.*, 318 U. S. 523, 565, 87 L. Ed. 959 (1943). It is also clear under the doctrine of the *Otis* case that in evaluating the rights surrendered liquidation preferences are not matured by the

[10] *Case* v. *Los Angeles Lumber Products Co.*, 308 U. S. 106, 84 L. Ed. 110 (1939); *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 647 ff., 89 L. Ed. 511 (1945).

impact of section 11 and that the entire bundle of rights surrendered must be determined as though in a continuing enterprise—a going concern.

This Court, although recognizing the doctrine of the *Otis* case, seems to suggest a somewhat different standard for arriving at the equitable equivalent in the following language:

> "* * * All pertinent factors and all substantial equities must be considered by the Commission whether [fol. 105] equitable equivalents are to be reached by the approach *ex* the Act or the approach *intra* the Act. The new doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equitable equivalents enunciated in the Otis & Co. decision" (Opinion, p. 30).

A. The phrase "substantial equities" is ambiguous and nebulous.

In the first place, it is not clear what the Court means by "substantial equities". If this phrase is intended to mean "colloquial equity" as used by the District Judge in a non-technical sense, such significance, we submit, is at variance with the technical definition ascribed to the expression "fair and equitable" as indicated above and was not applied in the *Otis* case by this Court or the Supreme Court, although previously suggested by the District Court. In any event, the expression "substantial equities" is too nebulous to afford an adequate guide in valuation by the Commission and consequently requires further definition.

B. The expression "pertinent factors" requires explanation.

The Court, moreover, in the statement quoted above directs the Commission to consider "All pertinent factors" in arriving at equitable equivalents. It is not clear as to what is embraced within the phrase. If the phrase refers to such factors as earnings, market history, dividend record, etc., then these factors were considered by the Commission as reference to its Opinion and Findings (R. 61a ff.) and the administrative record (R. 2087a ff.) will disclose. If market history is to receive weight in the opinion of this Court, it would not be amiss to point out that market prices

do not constitute a test of fairness (Streeter Reply Brief, p. 21). If investment value is to be treated only as one of a [fol. 106] series of factors as the Court indicates, then it is our view that the Court has misconceived the meaning of investment value as will be demonstrated below. In any event, the phrase should be more fully defined so as to afford a comprehensible criterion for valuation.

C. The Court labors under a misconception of the meaning of "*ex* the Act" and offers a choice of valuation not in accordance with the applicable decisions. Its criticism of the Commission for employing allegedly inconsistent techniques in valuation is not warranted.

Furthermore in the quotation above from the opinion of the Court, the Commission is given the choice of valuing "*intra*" or "*ex*" the Act and elsewhere in the opinion is criticized for attempting "to value the securities of Engineers both *ex* the Act and *intra* the Act." The phrase "*intra* the Act" cannot be interpreted to permit valuation of the securities as if the liquidation pursuant to the Act comes within the coverage of charter liquidation provisions, since in the opinion of the Court, under one of the principles enunciated by the Supreme Court in the *Otis* case, the charter provisions of Engineers are "not dispositive of the issues presented."[11] Consequently the significance of the phrase "*intra* the Act" is nowhere explained, even if viewed as a proper basis of valuation, and should therefore be the subject of clarification.

The approach to valuation "*ex* the Act" conceivably involves two interpretations, as the Commission carefully points out in its Petition for Rehearing (at p. 19 ff.), namely "as if the Act had never been passed (which the Court apparently adopts)[12] or as if the present reorganization were not required by section 11(b) of the Act. For the purpose of this Petition we concur in the Commission's [fol. 107] view that if valuation *ex* the Act embraces the first alternative and is to be predicated upon an "as if"

---

[11] It should be noted that Commissioner Hanrahan held that the action proposed by Engineers was "voluntary" within the meaning of voluntary call or liquidation provision of the Charter. R. 141a.

[12] Opinion, p. 26.

reconstitution of the assets of Engineers, then the requisite ascertainment and computation of losses to Engineers through the operation of the Act by the Commission would be both fruitless and impossible of achievement. Moreover, as the Commission properly notes, any re-examination of divestments, or other transaction executed pursuant to the Act, such as Puget Sound[13] or El Paso Natural Gas Co.[14] divestments, with a view to hindsight reallocation may constitute collateral attacks upon final decisions. Such re-examination would run counter to the salutary policy underlying the doctrine of *res judicata* as recently reaffirmed by the Supreme Court in the *Sunnen* case, *supra*, where the following statement is made:

> "* * * The general rule of *res judicata* applies to repetitious suits involving the same cause of action. It rests upon considerations of economy of judicial time and public policy favoring the establishment of certainty in legal relations. * * *.
>
> "* * * Once a party has fought out a matter in litigation with the other party, he cannot later renew that duel" (at pp. 4302-3 of 16 U. S. Law Week).

On the other hand, valuation, as if the present reorganization were not required by the Act or apart from the present reorganization (which is the other interpretation of "*ex* the Act" advanced) is, we submit, the correct basis under the *Otis* case, where the Supreme Court said:

> "We reach the conclusion that the Securities and Exchange Commission applied the correct rule of law as to the rights of the stockholders inter sese. That is to say, when the Commission proceeds in the simplifica- [fol. 108] tion of a holding company system, the rights of stockholders of a solvent company which is ordered by the Commission to distribute its assets among its stockholders may be evaluated on the basis of a going business and not as though a liquidation were taking place" (323 U. S. 633).

The Court has apparently misapprehended the meaning of "*ex* the Act" and consequently unjustly criticized the

---

[13] *Puget Sound Light & Power Co.*, 13 S. E. C. 226 (1943).

[14] *Engineers Public Service Co.*, H. C. A. R. No. 4559.

Commission for adopting inconsistent techniques in valuing the preferreds "*ex* the Act" and the common "*intra* the Act". The Commission valued both the common and the preferreds, "*ex* the Act" or apart from the reorganization, in accordance with the principles enunciated in the *Otis* case. Applying the doctrine of full priority, the Commission first valued the preferreds and consequently in valuing the preferreds apart from reorganization or on a going concern basis, necessarily reciprocally valued the common by the same standard. In other words, since the total enterprise is to be divided between the preferreds and the common, once the preferreds have been valued on a going concern basis and that value subtracted from the total, the residual value is thereby established for the common, on the same basis. This valuation process is further elaborated in the Commission's Petition for Rehearing (at p. 12 ff.), in which we concur in this respect.

Moreover, an allocation may properly be made without dollar valuation, as long as each security holder receives in the order of his priority, the equitable equivalent of the rights surrendered. *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co.*, 318 U. S. 523, 565, 87 L. Ed. 959, 1007 (1943); *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 482, 87 L. Ed. 892, 936 (1943); *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 89 L. Ed. 511 (1945). But that determination cannot be made by the use of any mathematical formula nor with mathematical certitude. *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P.* [fol. 109] *R. R. Co., supra.* Furthermore, compensatory treatment may be made in either cash or securities.[15]

D. A distinction on the basis of the termination of the enterprise in the instant case is contrary to the language in the *Otis* case, fails to recognize the virtual continuation of the enterprise and overemphasizes the sequence of simplification.

The Commission in evaluating the preferreds and the common on a going concern basis as indicated above was merely following the doctrine of the *Otis* case. This Court, however, maintains that the Commission disregarded what it conceives to be a substantial difference between the instant case and the *United Light & Power Co.* reorgani-

[15] Streeter Main Brief, p. 38.

zation in that in the former "the fact is that the holding company is at an end, both for the preferreds and the common," while in the "latter case, the security holder participation in the enterprise was shifted from the top holding company to a subsidiary holding company but the holding company enterprise continued."[16]

If by the foregoing statement the Court implies that the *Otis* case involved a "nominal" liquidation and does not apply to a "real liquidation", assuming *arguendo* but without conceding that the present Engineers' plan is a real liquidation, this distinction, we submit, overlooks the following language in the Supreme Court's opinion:

[fol. 110]

> "* * * Where pre-existing contract provisions exist which produce results at variance with a legislative policy which was not foreseeable at the time the contract was made, they cannot be permitted to operate. * * * The reason does not lie in the fact that the business of Power continues in another form. * * * It lies in the fact that Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of creditors. We must assume

[16] It is interesting to note that the District Judge in the instant case (R. 288a, fn. 2) apparently takes a somewhat different view from that of this Court, stating:

> "Although I have an entirely open mind on the question, my present thought is that the rule of Otis & Co., applies also to a situation in which there is a true liquidation rather than a nominal or formal liquidation mainly because this is not a change in corporate form contemplated by the charter. But counsel argue forcefully that Otis & Co. by its stress that the court was there concerned with a continuing enterprise impliedly holds that a different result would obtain in a true liquidation. I think that perhaps Otis & Co. was not intended to go that far. When a novel question is before a court, it frequently grabs any and all reasons in support of its conclusion. It does not follow, however, that any one of those facts is the *sine qua non* for the decision."

that Congress intended to exercise its power with the least possible harm to citizens" (323 U. S. 624, 638, 98 L. Ed. 511, 522 (1945)).

In fact, the Commission considered the dissolution of the United Light & Power Company as an *actual* dissolution and not merely the "peeling off" of a company in a holding company system. In the reorganization of Puget Sound Power & Light Company, the former subsidiary of Engineers, the Commission quoted the views enunciated in its *United Light & Power* decision (H. C. A. R. No. 4215) and then said:

> "These views were expressed in the course of our discussion of a proposal which contemplated an actual liquidation."

It would be anomalous if this Court should now hold that the Commission's decision in the original "investment value" case was based upon the fact that there was no actual liquidation taking place.

Even assuming that the *Otis* case applies only where there is no liquidation of the enterprise in the real sense of [fol. 111] the word, we submit that in substance the enterprise represented by Engineers is not being liquidated. The security holders of Engineers have nothing more than indirect interests in the operating companies, which operating companies are the business of Engineers. All that will happen after the plan is consummated insofar as the common stockholders are concerned, is that they will hold directly what they now hold indirectly. The company itself has pointed out to its stockholders that the results of the Plan would be to give them a direct ownership of the subsidiary companies.[17] In this connection, the Supreme Court has pointed out that dissolution of a holding company means little more than the receipt of securities of the operating company in lieu of their present shares in the holding companies.[18] Thus even if the rule of the *Otis* case depends on the absence of a true liquidation, which we deny,

---

[17] R. 1396a.

[18] *American Power & Light Co.* v. *S. E. C.*, 329 U. S. 90, 91 L. Ed. 89 (1946).

that rule applies to this case because there is no actual liquidation.[19]

Likewise if the Court suggests that the rule of the *Otis* case is not to be applied in the instant case since here there is no continuation of an underlying holding company system which was the fact in the *United Light & Power* system, we submit that such distinction does not bear analysis. [fol. 112] The *Otis* rule has been applied in simplification proceedings under section 11, regardless of whether or not there was a continuing holding company system. For example, it was applied by Engineers itself when it filed a plan for Puget Sound Power & Light which had no holding company system beneath it.[20] It was applied by the Commission in *Southern Colorado Power Company*, H. C. A. R. No. 4501, in which the holding company interest was wiped out so that Southern Colorado was no longer in a holding company system. The District Court enforced the plan,[21] the Circuit Court of Appeals affirming on appeal on the authority of the *Otis* case and the Supreme Court denying certiorari.[22]

---

[19] In *El Paso Electric Co.*, H. C. A. R. No. 5499, at p. 14, Commissioner McConnaughey discusses the meaning of "liquidation" as follows:

> "'Liquidation' has various meanings depending upon the setting in which it is used. In its most generally accepted sense, as applied to corporate operations, the word describes a complete winding up that brings to an end the active participation in the going enterprise of all who theretofore had been associated with it. Not only is the intangible corporate vehicle dissolved as is proposed here, but the rights and property with which the business had been conducted are disposed of and the proceeds distributed among all the participants in proportion to their interests. Thereafter, none of them draws benefit from the continued operation of the enterprise. The interest of all participants is liquidated."

[20] *Puget Sound Light & Power Company*, 13 S. E. C. 226, 246 (1943).

[21] *In re Southern Colorado Power Company*, Civil Action No. 670 (D. C. Col. 1944).

[22] *Disman v. S. E. C.*, 147 F. (2d) 679, (C. C. A. 10, 1945); cert. den. 325 U. S. 863; 89 L. Ed. 1984 (1945).

If the Court's view is applied to its logical conclusion, the sequence of simplification becomes highly significant. For instance, suppose a holding company system where there is an intermediate company between the top holding company and the operating companies. It would seem from the Court's language quoted above that the *Otis* rule would be applied to the first of these two holding companies but not to the liquidation of the second, since no holding company system remains after the liquidation of the second. Such result could hardly be justified as fair and equitable when each holding company has separate groups of stockholders whose interests are accorded different treatment although both companies were dissolved because of the Act. It is merely a matter of procedure when the liquidation of a particular company in a holding company system occurs, and such procedural decisions should not affect rights any more than the selection of a particular method of system [fol. 113] adjustment, as merger, consolidation, etc. In this connection, the Supreme Court has cautioned:

> "* * * The selection by the Commission of one method of system adjustment to accomplish simplification rather than another is an incident which ought not affect rights" (*Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 631, 89 L. Ed. 511, 518 (1945)).

Consequently, it is urged that the Commission properly applied the principle of the *Otis* case to the case at bar, regardless of whether or not a liquidation be deemed to have occurred or the enterprise to have ended.

E. The Court has lost sight of real meaning of investment value as merely signifying going concern value, which is the basis for arriving at equitable equivalents. The Commission considered all data relevant to going concern value including asset position, dividend record, earning capacity, etc.

The Court also criticizes the Commission for attempting to substitute "the new doctrine of investment value" for "the doctrine of equitable equivalents enunciated in the Otis & Co. decision" and for failing to give substantial consideration to the future earning power of Engineers and its subsidiaries.

The general use of the expression "investment value" to connote the process of a valuation on a going concern basis

may have misled the Court into believing that a novel technique for valuation is being introduced. The fact is otherwise. The Supreme Court in the *Otis* case recognized that the Commission in the simplification of a holding company system evaluates the rights of stockholders of a solvent company "on the basis of a going business." Reference to "investment values" as found by the Commission is even made in that decision by the Supreme Court. Furthermore, the import of this expression as well as its lack of novelty is further clarified by consideration of the following [fol. 114] statement by the Commission when in passing upon the reorganization in *United Light & Power Co.*, H. C. A. R. No. 6603 (1946), it said:

> "It is settled that in a Section 11 reorganization a security holder must receive, in the order of his priority from that which is available for the satisfaction of his claim, the equitable equivalent of the rights surrendered. The criteria which determine the measure of participation under the fair and equitable standards of Section 11(e) have been developed in a series of decisions * * * In these cases we have held that the 'fair and equitable' standard does not permit us to treat liquidation preferences as though they were claims matured by operation of Section 11; that a liquidation preference is not, therefore, controlling but is significant only as comprising one of the bundle of rights attaching to a security; and that the present investment worth of a security, based on the bundle of rights surrendered, must be the measure of its participation in a Section 11(e) plan."

Thus it is clear that investment value or worth is not a substitute for equitable equivalent, but a means of arriving at it—in other words, the product of the valuation process. Reflected in the present investment worth is the earning power, market history, dividend record, asset priorities, etc. That such factors were considered by the Commission is readily apparent by reference to the Commission's Opinion and Findings (R. 61a) and to the administrative record as well (R. 2087a). An analysis of the corporate and consolidated capitalization and surplus accounts of Engineers and its subsidiaries was submitted and considered. Dr. Badger, an expert witness, prepared an extensive report analyzing the values of the three series of

preferred stock. After analysis of the earnings and assets of Engineers, he compared Engineers' preferreds with preferred stocks of five public utility holding companies which he believed to be similar to Engineers for the period [fol. 115] 1940 to 1945, with reference to "times all charges and preferred dividends earned," "proportion of prior obligations to total capitalization," "book value of equity per share of preferred," "per cent of net quick assets to prior obligations" and "times parent company dividends were earned." Dr. Badger also prepared a study of the preferred stock of ten operating and holding companies selected for similarity of their earnings to those of Engineers. He concluded that the $5.00, $5.50, and $6.00 preferreds had a fair investment value of $106.25, $111.38 and $111.50 respectively, which values were equivalent to the full call prices for the stock plus three months cumulative dividends and that the investment values absent the call features would have been substantially in excess of the vaues set forth (R. 2118a). It also appears from the opinion of the Commission that "No additional expert testimony on value was introduced into the record and no serious challenge was made in the proceedings to Dr. Badger's conclusion that the fair investment value of the preferred on a going concern basis is in excess of the call price" (R. 67a). In fact this view was substantiated by other testimony as that, for instance, by Mr. Barnes, President of Engineers (R. 522a). In the opinion of both witnesses the call price of the securities established a ceiling or "stopper" on their value.

It is apparent that the Commission in arriving at equitable equivalents has taken into account asset coverage, earning records, earning capacity, the nature and condition of the underlying properties, etc. Such criteria as earning records, assets, etc. in addition to earning capacity, provide a proper basis of valuation. *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 526, 85 L. Ed. 982, 994 (1941). In this connection, it is evident from Dr. Badger's analysis, that in his opinion the estimated 1946 earnings indicated a continuation in earnings shown for the 1940-1945 period, that earning trends of Engineers' subsidiaries should not run counter to the strong growth trend of the public utility industry as there were no peculiar [fol. 116] economic characteristics in respect to the territories served by these companies, and that Engineers

should continue in future years to register progress along with other units in the industry (R. 2103a). Thus in the instant case, actual as well as estimated earnings were considered, although projection into the indefinite future was unnecessary, especially since the exclusion of the common stock or its "indefensible participation" was not at stake. The extent and method of inquiry for a valuation on the basis of earning capacity are necessarily dependent on the facts of each case. *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 527, 85 L. Ed. 982, 994 (1941). Thus it is clear that the Commission determined the equitable equivalents of the rights surrendered on the basis of asset coverage, condition of the property, earnings record, earning power and all other data relevant to going concern or investment value.

Conclusion

The respective roles of Court and Commission require amplification. In this connection, actual recognition should be accorded the findings of the Commission when supported by substantial evidence in the record, as in the instant case.

In addition, the court has misapprehended the approach followed by the Commission evaluating the rights surrendered and its criticism of the Commission for allegedly applying inconsistent techniques in valuation and for substituting the novel "doctrine of investment value" for "the doctrine of equitable equivalents", appears unjustified.

Accordingly we respectfully urge that the Court reconsider those portions of its opinion which are apparently based upon misconceptions indicated and grant a rehearing.

In the event the Court should deny a rehearing, it is respectfully requested that the mandate of the Court, in addition to its present provisions, also direct the stay of [fols. 117-118] any further steps, actions or proceedings in performance of or execution of the plan, pending determination of the issues herein.

Respectfully submitted, Lawrence R. Condon, Attorney for Petitioners, Thomas W. Streeter, et al., 165 Broadway, New York 6, N. Y.

Certificate

I, Lawrence R. Condon, of 165 Broadway, New York, N. Y., an attorney admitted to practice *pro hac vice* in the United States Circuit Court of Appeals for the Third

Circuit and counsel for Thomas W. Streeter, *et al.*, Petitioners herein, do certify that, in my opinion, the foregoing Petition for Rehearing is presented in good faith and not for delay.

Lawrence R. Condon.

April 15, 1948.

[fol. 119] In United States Circuit Court of Appeals

Petition for Rehearing of Home Insurance Company, et al.—Filed April 16, 1948

To the Honorable Judges of the United States Circuit Court of Appeals for the Third Circuit:

The Home Insurance Company, City of New York Insurance Company, National Liberty Insurance Company of America, The New Brunswick Fire Insurance Company, The Homestead Fire Insurance Company, The Georgia Home Insurance Company, and Tradesmens National Bank and Trust Company (herein called the Home-Tradesmens Group), as holders of preferred stocks of Engineers Public Service Company, respectfully request the Court to grant a rehearing in the above entitled matter. The bases of this petition are as follows:

The Court has ordered the District Court to remand the record to the Commission for further and appropriate action in the area defined by the Escrow Agreement. The Court correctly concludes that "*the problem is and will remain, until its disposition by the Commission, one of valuation of the securities of Engineers, viz., the preferreds and the common*" (Opinion, 31, emphasis supplied). Underlying this conclusion are the statements of the Court that the District Court may not value the securities, find equitable equivalents therefor, and substitute its own estimates for those of the Commission (Opinion, 30, 31). The collective import of the foregoing is that the findings of the Commission in these respects have stature in the District Court and that the District Court's veto power is subject to the restraints customarily applied in administrative law. Were this the ultimate and only distillate of the Opinion, the solution of the problem would be relatively simple.

We believe that the findings of the Commission, rightly understood, establish the call prices of the preferred stocks

as the equitable equivalents of the preferred stocks. All the questions raised in the District Court were raised and argued before the Commission as the record and briefs will show. In the proceedings before the Commission the efforts of all counsel were addressed to the questions whether the [fol. 120] controlling measures were the involuntary liquidating prices for the preferreds or the equitable equivalents, and what were the equitable equivalents. The Commission recognized this in the following words (R. 62a):

> "It is settled that in a Section 11 reorganization a security holder must receive, in the order of his priority, from that which is available for the satisfaction of his claim, the equitable equivalent of the rights surrendered. Since under the circumstances of this case, we do not think it proper to regard the liquidation provisions of the charter as conclusive in determining those rights, we must consider all provisions of the charter applicable to the preferred, such as the dividend rate and the call price as well as the liquidation preferences, and we must analyze the financial condition of the company with particular regard to the asset and earnings coverage of the preferred."

The Commission then proceeded to examine the factors and in the course of its examination found that the fair investment values of the preferreds exceeded the call prices of the preferreds (R. 67a). According to our understanding of the Opinion, this Court believes that the Commission abandoned its announced precept and considered only investment values in appraising the equitable equivalents, whereas the conclusion of the Commission was that, upon a full consideration of the record, the fair and equitable standard would require the payment of amounts equal to the call prices plus accrued dividends (R. 68a). Were the record remanded to the Commission, we do not see how the Commission could do anything but reaffirm its present findings in language to show more clearly, if need be, that the relevant impacts of all the factors discussed were considered and weighed and are inherent in the Commission's determination of the equitable equivalents. We will not expand upon this aspect of the case in view of the comprehensive treatment accorded it in the Commission's petition for rehearing.

[fol. 121] However, if we understand the Opinion, this Court holds that the District Court must exercise its independent plenary judgment as an equity reorganization tribunal upon every matter relating to the fairness and equity of the reorganization, and may reject valuations made by the Commission in fulfilling the Court's statutory function in determining whether the plan is fair and equitable. The only restraint on the District Court is that it may not act capriciously in rejecting valuations made by the Commission, just as the Commission may not act with caprice in valuing securities (Opinion, 24, 25). The Opinion expressly rejects as inapplicable to the findings of the Commission in proceedings under Sections 11 (e) and 18 (f) the contentions that the District Court may not disturb the findings of the Commission unless they lack rational or statutory foundation, and may not reverse the Commission's judgment unless the Commission has abused its discretion (Opinion, 25). By implication the Court also rejects the more conservative rule that such findings should not be set aside if based on substantial evidence and consistent with law. Unless the term "caprice" has some special significance in this setting which we do not comprehend, the stage is thus set for an impasse in any situation where there may be a reasonable difference of opinion, unless the Commission bows to the discretion of the District Court as the tribunal having the last word. If the District Court be free to reject the findings of the Commission in the area of reason, then the veto power of the District Court would be the equivalent of the power to value securities, to resort to its own estimates, to find equitable equivalents. All that is left to the Commission is the power to keep on trying. If our analysis of the Opinion be correct, we respectfully submit that Congress intended the findings of the Commission to have greater stature in the District Court in proceedings under Section 11 (e) and that the question should be reexamined. Several factors seem to us to compel the conclusions that the District Courts in such proceedings may [fol. 122], not exercise undiminished all the powers which a court of equity may exercise in equity reorganizations and that at least the substantial evidence rule should apply.

First, the Opinion in this respect seems to us to be at variance with and overrule the decision of this Court in *In re Standard Gas & Electric Co.*, 151 F. 2d 326. In the proceedings in the District Court, *In re Standard Gas &*

Electric Co., 59 F. Supp. 274, the District Court accepted the Commission's valuations of Standard's notes and of the portfolio securities to be given in payment of the notes, but disqualified the medium of payment as unfair and not the equitable equivalent of the bundle of rights represented by the notes. The District Court held that the market values of the portfolio stocks were subject to fluctuation, that the market history was irrelevant and unreliable, that no plan should be based on the possibility of constancy of the security markets, and that fairness could under the circumstances only be accomplished by cash payment (pp. 280, 281). On the question of valuation, the District Court held that the findings of the Commission were supported by substantial evidence and that the Court was required and should under the substantial evidence rule, at least in this respect, follow the "informed judgment" of the Commission as articulated in its findings (p. 283). Thus the District Court rejected the Commission's findings on the equitable equivalent of the notes. On appeal this Court circumscribed the veto power of the District Court in unmistakable terms (151 F. 2d 326 at 331). It said, inter alia, that neither the District Court nor the Appellate Court is to substitute its notion of practical expediency for that of the Commission, that the Commission's judgment was not unreasonable nor inequitable and should be allowed to stand. Here is clear mandate that the findings of the Commission should stand unless they are affirmatively unreasonable or inequitable, even though the District Court might have reached a different conclusion if left to itself. [fol. 123] This Court has cited the Standard case for the proposition that any question which goes to the issue of what is fair and equitable may be raised in and must be passed upon by the District Court, *with the notation that the question here presented was not in focus* (Opinion, 23). It seems to us that the question of the standing of comparable administrative findings was completely within the orbit of the case on appeal and in focus. The factors which persuaded the District Court to overrule the Commission on the fairness of the plan were within the special competence of the Commission, whether the problem be classed as one of method or practical expediency or of equitable equivalence. Since the problem in Engineers is admittedly one of valuation by the Commission, we do not see how anything less than the substantial evidence rule can be

applied unless the Court means to overrule its decision in the Standard case.

Second, we submit again, that the provision of Section 24 (a) that the findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive on the Circuit Court of Appeals has significance in Section 11 (e) proceedings in spite of the fact that it is not mentioned therein. Situations have arisen and presumably will continue to arise where appeal under Section 24 (a) may be the only method whereby an aggrieved person may test the fairness and equity of a Section 11 (e) plan as, for example, where a company plans to proceed without requesting enforcement proceedings. Thus the findings of the Commission have different quality depending on procedural accident.

The Commission's petition for rehearing expresses the belief that there has been and will be no real problem in adjusting the complementary roles of the Commission and Courts so long as both apply the same consistent and determinable legal standards of fairness and equity on the same record. We concur in the necessity of establishing the same standards of fairness and equity for both tri-[fols. 124-128] bunals, but we doubt that the complementary roles of the Commission and the several District Courts can be adjusted without the aid of the substantial evidence rule. Standards of fairness and equity are not susceptible of precise definition, and common understanding and uniform application of such standards are seldom, if ever, attained in human affairs. We urge that the absence of any express provision in Sections 11 (e) and 18 (f) does not preclude resort to the substantial evidence rule in proceedings under those sections, where as failure to apply the rule in enforcement proceedings in the District Court leaves the two appraisers without an umpire.

We realize that the substance of these arguments has already been presented and considered by this Court, but the far reaching consequences and conflicting impact of the Opinion impel us to urge reconsideration of these issues by the Court. In so doing we do not mean to waive the related and subsidiary questions on these and other issues presented in the Commission's petition for rehearing. Acting pursuant to the permission heretofore granted by this Court we adopt the views of the Commission as set forth

in its petition subject to the comments above with respect to the substantial evidence rule.

Accordingly we respectfully request that a rehearing be granted in accordance with this petition and the petition of the Commission hereby adopted.

Respectfully submitted, Francis H. Scheetz, Attorney for Petitioners. Evans, Bayard & Frick, Of Counsel.

April 16, 1948.

I hereby certify that the petition for rehearing is filed in good faith and not for purposes of delay.

Francis H. Scheetz, Attorney for Petitioners.

[fol. 129] IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

[Title omitted]

ANSWER TO PETITIONS FOR REHEARING AND CROSS-PETITIONS FOR REHEARING BY CENTRAL-ILLINOIS SECURITIES CORP., ET AL.—Filed May 13, 1948

Preliminary

This answer is filed by Appellees Central-Illinois Securities Corporation and C. A. Johnson, in an effort to clarify the issues raised by the Appellants in their respective petitions for rehearing, and in the hope of facilitating the Court's disposition thereof. In addition, the Court is requested to treat a specific portion of this answer as in substance a cross-petition for rehearing on one limited phase of the Court's decision.[1]

[fol. 130] In general, it may be observed that the petitions of Appellants, although purporting to seek "clarification" of the Court's opinion and decision, actually proceed to reargue the various points which were fully briefed and argued before the Court prior to the rendition of its decision. Not only are no meritorious new arguments advanced, but Appellants persist in pressing upon the Court the same fallacious reasoning which the Court carefully considered and specifically rejected in its opinion.

---

[1] See discussion at p. 21 and note 31, infra.

Without attempting to deal with all Appellants' arguments in exhaustive fashion, the ensuing discussion touches upon most of the principal ones.

I

The argument that the Commission was not "inconsistent" in the valuation technique which it employed.

A major portion of the petition filed by the Solicitor of the Securities and Exchange Commission is devoted to taking issue with the Court's analysis of the inconsistent treatment accorded by the Commission to the respective claims of the Preferred and Common stockholders of Engineers. The particular target at which this phase of Commission Counsel's criticism is aimed is the portion of the Court's opinion which is set forth at pages 26-30. We believe that a reading of this section of the Court's opinion in conjunction with the arguments advanced in the Commission's petition establishes that the criticisms are devoid of merit, and have already been carefully considered and disposed of in the Court's opinion.

1. The Court did not misconceive the meaning of "*ex* the Act."

At the outset, the petition of the Commission suggests that the Court has misconceived the meaning of the "shorthand" expression "ex the impact of the Act", as employed by the Commission and the witnesses whose testimony [fol. 131] was cited in the Commission's Findings and Opinion.[2] The Court is informed that:

> "In other words, any shorthand description of the technique which the Commission has applied . . . as valuation 'ex the Act' is a misinterpretation unless understood with the interpolation 'ex [the present reorganization required by Section 11(b) of] the Act.'"[3]

---

[2] The petitions of the other Appellants echo this note. See Commission petition, pp. 6, 12; Streeter petition, pp. 3, 17; Home Insurance petition, p. 6.

[3] Commission petition, p. 12.

That the Court was not under any misapprehension on this point is evident from the statement early in its opinion that (p. 5):

> "It [the Commission] takes the position it has obeyed the clear mandate of the Act in that it has measured the rights to be surrendered by the preferred stockholders in terms of investment value; that is to say *ex* the Act *which itself necessitated the dissolution of Engineers* . . ." (Emphasis supplied.)

It is indeed perfectly clear that there was no *lack of comprehension* on the part of either this Court or the District Court as to the meaning and significance of the Commission's rationale; it is equally clear that after careful consideration both courts concluded that this rationale was gravely fallacious. For the Commission's new "valuation technique" is predicated on the erroneous hypotheses that in determining the rights of security holders in a liquidation necessitated by Section 11 of the Act: (1) values of senior securities are to be determined on the basis of their hypothetical market price as of the time of liquidation "apart from the impact of liquidation under Section 11", and in disregard of all the other impacts of the statute and their vital bearing on such "value"; (2) despite the fact that such values of the senior securities are said to be measured "as though in a continuing enterprise", no deter- [fol. 132] mination need be made of their future value on an earnings basis or otherwise if permitted to remain outstanding in the hypothetical "continuing enterprise"; and (3) no determination whatever need be made of the value of the *common stock* "apart from liquidation", "as though in a continuing enterprise", or otherwise (see Court's opinion, pp. 26-29).

2. The anomaly of Petitioners' insistence upon the applicability of the United Light formula which the Commission disregarded in the instant case.

The attempt made in the Commission's petition to defend the "valuation technique" employed by the Commission in its Engineers findings and opinion serves only to highlight the inconsistencies and paradoxes pointed out by the Court in its opinion. For example, throughout the petition the complete and final liquidation of the Engineers holding

company enterprise is referred to as a "reorganization", and is analogized with the reorganization of the *continuing* United Light & Power system discussed in the various *Otis* decisions. Thus, Petitioner pays no heed whatever to the Court's explicit finding that (p. 27):

> "Under the plan the common stock is excluded from the holding company enterprise as effectually as are the preferred for the common under the plan will receive participation only in operating companies. *The fact is that the holding company enterprise is at an end, both for the preferred and the common. The Commission apparently has disregarded this fact which supplies the substantial difference between the instant case and the United Light & Power Company reorganizations.* In the latter case the security holder participation in the enterprise was shifted from the top holding company but the enterprise as such continued. * * *
>
> * * * In determining whether the plan was fair and equitable the court valued the securities *ex* the Act, considering the holding company enterprise to be at an end *as it is in fact.*" (Emphasis supplied.)

[fol. 13] Yet, while erroneously insisting upon equating the *liquidation* of Engineers with the mere *reorganization* of the continuing United Light system, Petitioner is placed in the anomalous position of striving to justify its failure to apply the formula employed in the United Light decision wherein it valued the rights of *both* the preferred and the common, in relation to one another, on the basis of a determination of the future earning power of the system and the respective proportional claims of the two classes in such earning power.[3a]

Thus, Petitioner is in the logically indefensible position of arguing that the *Otis* formula is applicable to the Engineers liquidation in the face of the fact that the Commission *did not* apply this formula to Engineers, but sought instead

---

[3a] Consistent application of the *United Light* formula in the instant case would have resulted in an allocation to the Engineers preferred holders having a realizable cash value considerably *less* than $100 per share (see our Main Brief, pp. 55-58).

to substitute in its place the new "investment value" doctrine for measurement of the rights of the preferreds, but not the commons; causing this Court to say (p. 27):

> "In the instant case the Commission ascribed 'investment value' to the preferreds but failed to make a similar approach to the common. The result is that the Commission has attempted to value the securities of Engineers both *ex* the Act and *intra* the Act. We have used the phrase 'attempted to value' advisedly for we think that in the employment of the formula of 'investment value' the Commission erred in the light of the decision of the Supreme Court in the Otis & Co. case for the reasons set forth at a later point in this opinion."

3. The fallacy of Petitioners' reliance on "the Euclidian Axiom" for determining stockholders' rights in a liquidation.

In an attempt to controvert the Court's finding that the Commission had not appraised the rights surrendered by the common stockholders of Engineers either "*ex* the Act", [fol. 134] as in the case of the preferreds, or otherwise, Petitioners argue that the Commission did value the common stock because "The Commission's valuation merely assumes as a premise, the Euclidian axiom that the sum of the parts equals the whole".[4] But this "Euclidian axiom", whatever its other virtues, was never intended to provide, and does not, a standard for measuring the relative rights of different classes of security holders in either a liquidation or a reorganization.[5] In the *United Light & Power (Otis)* case,

---

[4] Commission petition, p. 13.

[5] See Jerome Frank, *Mr. Justice Holmes and Non-Euclidean Legal Thinking* (1932), 17 Cornell Law Quart. 568, 573-4:

> "* * * The axioms of Euclid are now recognized as mere assumptions. * * *
>
> The axioms or fundamental assumptions of pure mathematics can be chosen arbitrarily. The axioms or fundamental assumptions in any other kind of thinking cannot.
>
> This distinction is frequently overlooked. It is essential to clear thinking. For pure mathematics need

the demand of the preferred holders for 100% of the assets was entirely consonant with this "Euclidian axiom", since "the sum of the parts equalled the whole"; but the Commission and the various Courts in turn held that such a distribution was *not* consonant with the "fair and equitable" standard which governs reorganizations and liquidations under Section 11(e). Nor is it more logical to urge, as Petitioner does, that the common stockholders as junior security holders are merely entitled to receive whatever is left, if anything, after satisfying the prior claim of the preferred holders. For the basic question which presses for answer is: "But what *is* the correct measure of the preferreds' preferential claim?"

A preferred stock does not have a *prior* claim in liquidation by virtue of any divine ordinance, nor even one enacted by man. To the contrary, the settled rule of law is, [fol. 135] and has long been, that a preferred stock has no preference in liquidation except such as is expressly granted in the corporate charter; and if the charter is silent the preferred holders merely participate in liquidation *pro rata* with the common, share for share.[5a] On such a basis the preferred holders of Engineers would have realized something less than $50 per share in this liquidation.

The charter of Engineers, however, grants to the preferred holders a preferential claim to the extent of $100 per share in any liquidation "not voluntary"; and neither the Commission, the District Court nor this Court found the liquidation of Engineers to be "voluntary" within the charter meaning. Thus, $100 per share necessarily marks the outer limit of the preferred's contractual *preference* in liquidation; and no *preferential* claim can exist which

---

have no relation to anything in the existing world. Its axioms or assumptions may be nonsensical from the point of view of what has happened or is happening or will ever happen. * * * Bertrand Russell was speaking of pure mathematics when he said, 'Mathematics may be defined as the science in which we never know what we are talking about nor whether what we are talking about is true."

[5a] See authorities cited at p. 40, note 106, of our Main Brief (dated September 15, 1947).

does not stem from the contractual undertakings of the parties as embodied in the corporate charter.

It does not lie in the power of an administrative agency or even of a court of equity to enlarge the *preferential* claim of senior security holders, because such preference is purely a creature of contract. If in a liquidation or reorganization equitable considerations are found to warrant payment to senior security holders of amounts in excess of the preferential claim established by the charter, such additional amounts do not form part of the *preferential* claim of the senior security holders but merely constitute a supplemental claim which must be balanced against corresponding equitable considerations in favor of the junior security holders.[8]

---

[8] In *Otis & Co. v. S. E. C.*, 323 U. S. 624, the Supreme Court held that the preferential charter liquidation claim of the preferreds was not "matured" by the mere simplification and reorganization of the continuing holding company system there involved, and that fairness and equity required some participation to compensate the common holders for their measurable claims in the foreseeable future income of the continuing system. The Supreme Court did *not* find that the preferred holders, even in a reorganization of a continuing system, have a preferential claim *in excess* of that provided by the charter. Nor did the District Court or this Court, in the instant case, in stating that the charter provisions were not necessarily "dispositive of the issues presented", undertake to say that the preferred holders could under any circumstances be deemed to have a *preferential* claim in excess of that agreed to in the charter contract. At most both Courts were stating that the preferential claim might be added to or subtracted from, if special equitable considerations warranted, in determining the final rights of the respective classes of security holders; but to the extent that any amount in excess of the charter preference was allowed, such additional amount would not be a *preferential* claim but merely an additional allowance predicated on equitable considerations which would have to be balanced against corresponding equitable considerations in favor of the common holders. "All pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached

[fol. 136] The failure to recognize this fundamental principle must necessarily lead to the shocking result under the "investment value" doctrine as applied by the Commission in the instant case that senior security holders may be held entitled (absent a call provision) to receive in an authentic liquidation amounts 50% *or more*[7] in excess of the preferential claim accorded them by charter *leaving little or nothing for junior securities possessed of substantial value on the basis of every recognized criterion of reorganization law.* This wholly inadmissible result was clearly foreseen by Judge Leahy when he stated:

> "The argument for payment of the premium is comparable to dealing cards off the top of a deck. When full hands (based on theoretical 'investment value') have been dealt to all the senior security holders, the common would merely get whatever happens to remain. Under the Act the interest of all investors must [fol. 137] be considered. An emphasis on a preferred's rights must not slight the interests of a common stockholder. For if this occurs this is the direct opposite of the arguments utilized in United Light & Power, D. C. Del., 51 F. Supp. 217, aff'd 3 Cir., 142 F. 2d 413, aff'd sub. nom. Otis & Co. v. Securities and Exchange Commission, 323 U. S. 624, where participation was accorded the various security holders in accordance with the standard of colloquial equity" (R. 291a).

At pp. 93-95 of our Main Brief we demonstrated graphically the disastrous impact of the Commission's investment value doctrine when employed to value merely senior securities in a liquidation, while relegating the common to receive the "residual interest", *if any.* And this Court correctly apprehended the vice of this approach when it stated:

---

by the approach *ex* the Act or the approach *intra* the Act. The new doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equivalents enunciated in the Otis & Co. decision" (this Court's Opinion, p. 30).

[7] See, for example, Reply Brief of the Commission, p. 22:

> "For example, 6% preferred stock would be worth, if noncallable, approximately $175 on a 3.42 percent yield basis and $160 on a 3.75 percent yield basis."

> "* * * In the instant case the Commission ascribed 'investment value' to the preferreds but failed to make a similar approach to the common * * *" (p. 27).
>
> "* * * But whatever technique is chosen it must be employed consistently throughout the entire operation of valuation. * * * No particular, specific approach is to be nailed to the Commission's head. The Commission must, however, approach the problem of valuation with a full view of all the pertinent factors employing the same scales and the same measure throughout" (p. 29).

4. The futility of the attempt to contravene this Court's finding that the paramount criterion of future earning power was neglected by the Commission.

We believe that the foregoing discussion adequately demonstrates the futility and error of Petitioner's insistence that the Commission adequately "valued" the common stock by merely allowing to it whatever "value" remained after paying over to the preferreds the amounts determined on the basis of "investment value ex the impact of the Act". Brief reference may now be made to Petitioner's [fol. 138] equally futile and erroneous insistence[8] that this Court erred in stating (p. 26):

> "But we think it is clear that it did not give any substantial consideration to the future earning power of Engineers and its subsidiaries which the Supreme Court has held is one of the fundamental tests for reorganization valuation."

Finding itself wholly unable to controvert this completely accurate finding, Petitioner seeks to advance two arguments:

> (1) That the witnesses before the Commission did accord some consideration to *past* earnings, and did not find it necessary to "dwell" on a forecast of *future* earnings because of the "absence of any controversy

[8] Commission petition, p. 16.

that the * * * risk factor was such that in the absence of the call privilege the stock would have an investment value substantially in excess of the call price";[9]

(2) That the Commission found "by reason of economic value added in the reorganization process, the common stockholders were substantially better off as a result of the plan than before".[10]

Both of these arguments are patently devoid of merit. With respect to the first, it is to be noted that the tables of past earnings coverage set forth in the Commission's opinion without discussion[11] demonstrate a woefully slim margin of coverage in past years which fully justified the characterization by Barnes, President of Engineers, that [fol. 139] these preferreds were "closer to a low grade preferred", and which clearly cast grave doubt on their future "investment value" if permitted to remain outstanding.[12] Moreover, even accepting *arguendo* the extremely dubious

---

[9] Commission petition, pp. 16-17.

[10] Commission petition, p. 14.

[11] R. 64a-65a.

[12] R. 1138a, 1140a: It is to be noted that on a consolidated or system basis, the tables showed fixed charges and preferred dividends to have been earned during the period 1937-1945 by the scant margin of only 1.3 times, and that if the survey had been carried back several more years it would have shown that preferred dividends had not been covered *even once* during certain of those years (R. 1433a, 1434a).

Although Petitioners customarily refer to the Engineers preferreds as though they were the top-ranking security of the Engineers system, the fact of the matter is that they were actually a highly speculative *junior* security; the Commission's opinion itself concedes that the Engineers preferreds were *junior to 66.2% of the capitalization of the system* (R. 64a). Consequently, when system earnings were adversely affected, the impact on the Engineers preferreds was immediate and drastic. During the depression years, not only were the Engineers preferreds in default of dividends, but the preferred stocks of the operating company subsidiaries also had large dividend arrears (R. 1444a).

contention that the Commission might be excused from performing the vital task of determining future earning power merely because of "the absence of any controversy" that the preferred would *presently* have an investment value in excess of call price, the fact of the matter is that President Barnes (one of the two witnesses on valuation) *vigorously and repeatedly disputed* that such "investment value" could be accepted for the future as a "fair value", or as any value "which will be maintained as an average for an indefinite time in the future."[13]

Finally, it may be observed that the attempt now to urge that the Commission did give consideration to the future earning power of the enterprise is not only unpersuasive, but is also scarcely consistent with the virtual admission of Commission Counsel in their Main Brief that the Commission was merely concerned to determine the cash equivalent of the price which the preferred stockholders would [fol. 140] have had to pay *at that time* to reinvest in an allegedly "comparable" security.[14]

Turning now to the second of Petitioner's arguments referred to above, it is plain that any such "finding" by the Commission could certainly not be deemed a substitute for valuing the future earning power of the enterprise for

---

[13] R. 522a-523a, and see also additional quotations at pp. 73-4 of our Main Brief.

[14] See, for example, note 30, p. 28, of Commission Main Brief:

> "* * *. But regardless of the types of plan involved, forecasts as to the future are involved only with reference to a present appraisal of the fairness of the exchange. Here the possible yield from the cash proceeds was susceptible of measurement only on the hypothesis of reinvestment in a comparable security, in which event, as shown above, the cash equivalent must necessarily be measured in relation to the *current value* of the security surrendered. Apart from this reinvestment hypothesis, and looking only upon the immediate impact of the plan to compel the termination of the preferred stockholders' investment, we submit that there can be no objection to measuring the *current* value of that investment." (Emphasis supplied.)

reorganization purposes. But in any event, there is not even such a "finding", nor could there be.

The only possible basis for this expansive pronouncement of Petitioner is the statement in the Commission's opinion to the effect that "the retirement of the preferred stock will be of immediate benefit to the common stockholders".[15] An examination of the context in which this statement appears, however, makes it incontrovertibly plain that the Commission merely recognized that the impact of Section 11 on Engineers had been so severe, and the degree of governmental frustration of the enterprise so great, that the preferred stock had been transformed *as the result of the Act* into a burden for the common stockholders, instead of the valuable advantage it had formerly [fol. 141] constituted and would at present constitute, *if not for the Act*.[16]

[15] R. 69a.

[16] The Commission's own words leave no room for argument on this point (R. 59a):

> "The reduction of the Engineers holding company system from its previous size and diversity to a single operating company necessitates a commensurate contraction of its financial structure. Engineers' outstanding preferred, instead of providing valuable leverage for the common, has become a burden."

It is thus plain that it was *solely* the restrictions and sacrifices imposed upon Engineers *by the Act* which, even prior to the necessity for dissolution, had transformed the preferred from a valuable asset into a burden.

Cf. also, p. 37 of our Main Brief:

> "The process of liquidating Engineers had been under way in some measure ever since the passage of the Act in 1935, and has been large-scale since 1941. Yet throughout this entire period and long after the company was able to employ its senior capital profitably, the preferred stockholders have claimed and received dividends at the full rate stipulated in a contract which contemplated continuance of a going enterprise and not piece-meal protracted liquidation under Section 11 of an Act not foreseen."

Even disregarding the impact of the sacrifices and partial liquidation imposed on Engineers during the decade since adoption of the Act and prior to the final plan, it would still have been highly advantageous to the common stockholders of Engineers if they had been permitted to retain their enterprise alive, *and to continue the preferred stock outstanding.*[17] But again the Act intervened to impose upon them the final and ultimate necessity—the complete dissolution of the remainder of the enterprise. Under these circumstances, to refer to the "advantages" to the common of retiring the preferred stock which the Act alone had transformed from a "valuable asset" into a "burden" (as the Commission itself recognized), partakes of the character of "an exercise in semantics" to at least as great an extent [fol. 142] as the analysis of the preferreds on a fictional "going concern basis", respecting which Judge Leahy so cogently stated:[18]

> "Analysis of the value of the Engineers preferreds on a 'going concern' basis is largely an exercise in semantics, since the Act dictates the dissolution of Engineers and of the entire holding company enterprise, and thus makes impossible the 'going concern' in which the preferred and common stockholders engaged to invest. *If not for the requirements of the Act, Engineers as a 'going concern' would have been free to take advantage of the present low money markets by calling and redeeming its preferred stocks and replacing them with preferred stocks carrying a lower dividend rate than those now outstanding; it would thus continue to enjoy the leverage advantages of senior*

---

[17] Many sound utility operating company stocks can now be purchased at a price equal to 8 times current earnings, equivalent to approximately 12½% on cost. If not for the Act, Engineers' common holders would have been free to retain the capital of the preferred holders without any limitations of time at an over-all cost of approximately 5.40%, while realizing some 12½% upon this capital; or, in the alternative, the common stockholders had the option of calling the preferred stock and replacing it with preferred carrying an even lower dividend rate (cf. Judge Leahy's statement quoted above in the text).

[18] R. 311a-312a.

capital, but at a substantialy lower cost. Under these circumstances, payment of the premiums to the preferred stockholders would have been consonant with the purposes and intent of the charter redemption provision. *But the Act has made it impossible for the Company and the common stockholders to avail themselves of these benefits contemplated by the contract,* along with the many other advantages which would have accrued to them as a going concern, exclusive of the impact of Section 11.' " (Emphasis supplied.)

II

The argument that the Court's "mandate" requires the Commission to perform the "fruitless" and "impossible" task of "computing" the losses under the Act.

1. Petitioners set up a straw man through adoption of a distorted interpretation of the Court's language.

A major argument of Petitioners is that the Court's opinion "is susceptible of the construction that it imposes [fol. 143] upon the Commission both a legally irrelevant and an administratively impractical task".[19] In our view, however, the opinion is "susceptible" of such a construction only as the result of subtle exaggerations and misplaced emphasis of certain sentences in the Court's opinion.

As to the contention concerning the "legal irrelevance" of the factors stressed in the Court's opinion, we believe the discussion set forth above has demonstrated that this contention rests on Petitioners' basic misconception that the Commission has the right and power to enlarge the *preferential* claim of the preferred holders in disregard of all contractual limitations, in disregard of the values and equities of the common, and in disregard of the reality that the holding company enterprise has terminated for the common as well as for the preferred. Further discussion of this contention seems unnecessary.

Turning now to the argument that the Court has imposed on the Commission the "administratively impractical" task of "computing" all losses imposed on Engineers through the operation of the Act, we suggest that the

[19] Commission petition, p. 1; see also pp. 20-28.

Court's language is *not* susceptible of such construction on any fair or reasonable basis. An examination of the language to which the criticism is directed [20] establishes at the outset that the Court did not state that such losses must be "computed", but merely that they must be "weighed into the calculation". The significance of this distinction should be obvious, for it makes plain that the Court had [fol. 144] no intention of insisting upon the exact ascertainment and computation of each loss sustained by Engineers, but merely upon giving reasonable and due consideration to the fact that such losses (without necessity for precise computation) had been sustained.

Moreover, the Court emphasized that even this relatively simple task was not mandatory upon the Commission, unless the Commission elected to determine values "ex the impact of the Act"; in such event, the Court held, logic and consistency would be violated if the Commission took into consideration in valuing the *senior securities only* "ex the impact of the Act", favorable factors created by the deprivations and sacrifices imposed upon the common stockholders by this very same Act. *The Court was at pains to point out that what was required from the Commission was not the employment of any one particular technique, but simply logical consistency in the application of whatever technique the Commission elected to use.* We do not see how the Court could have made this plainer than its statement that (pp. 28-9):

> "The selection of possible though varying techniques is for the Commission in the exercise of its expert

---

[20] "The difficulty with the Commission's position in this connection, the formula of 'investment value' aside, lies in the fact that while it has attempted to appraise the preferreds (as distinguished from the common) *ex* the Act its basis of valuation, insofar as it has composed one, lies in factors which have come to existence because of the impact of the Act. Paradoxically, though the paradox is more apparent than real, if the equitable equivalents for relinquished securities are to be arrived at by the Commission under the doctrine of the Otis & Co. case, *ex* the Act, losses of the sort referred to in this paragraph must be *weighed into the calculation*, i.e., such loses should be returned to the credit side of the enterprise's balance sheet as a matter of bookkeeping" (p. 28, emphasis supplied).

administrative judgment. But whatever technique is chosen it must be employed consistently throughout the entire operation of valuation. We do not say that the Commission must approach the problem *intra* the Act or *ex* the Act as the Commission purports to have done in the instant case. Either course consistently followed could, we think, lead to just and appropriate valuations. *No particular, specific approach is to be nailed to the Commission's head. The Commission must, however, approach the problem of valuation with a full view of all the pertinent factors employing the same scales and the same measure throughout.*" (Emphasis supplied.)

It is thus only if the Commission itself elects to adopt the approach of valuation "ex the impact of the Act", that the problems of which Petitioners complain arise at all; and even in such event the Court's language does not justify the exaggerated complexity which Petitioners insist [fol. 145] upon attributing to the fair and consistent approach besought by the Court.[21]

---

[21] Thus, in their Main Brief Counsel for the Commission embarked upon an involved exposition of "Account 107" and "Account 100.5" items in an effort to impress this Court with the "speculative morass" created by Judge Leahy's reference to the loss sustained by Engineers in connection with Puget Sound (see our Main Brief, pp. 87-88). Now Petitioner comes forward with a new barrage of "speculative conjectures" with reference to the Puget Sound loss in an asserted "demonstration" of the "time consuming and well nigh impossible" task which it is alleged this Court's Opinion has imposed on the Commission (Commission petition, pp. 22-26). Once again we are impelled to suggest that the various arguments advanced on this score "have little bearing on the question except insofar as they may serve the purpose of *creating an atmosphere of pseudo-complexity*" (Main Brief, p. 87).

Analysis of the new arguments establishes that Petitioner is unable to controvert the finding of this Court and the District Court that the Commission allowed only 3% of the common stock of Puget Sound to Engineers on the assumption that future earning power would be somewhere between $2,657,000 and $3,083,000 per year whereas Puget's earnings

[fol. 146] Furthermore, Petitioners' concentration upon the alleged difficulties of "computing" the losses resulting from divestments required by Section 11 of the Act, places an unduly restricted emphasis upon "the factors which have come to existence because of the impact of the Act" [22] which this Court and the District Court had in mind as having been credited to the investment value of the preferred at the expense of the common. Thus Judge Leahy, in his "*care-*

---

for the past several years have averaged in excess of $5,000,000 per annum (Court's Opinion, p. 28). From this very fact alone it is axiomatic that if the Act had not compelled the drastic recapitalization of Puget at the low point in its earnings, Engineers would have realized far more on this investment than it was permitted by the Commission's orders. Apart from the Act there was nothing to compel the immediate recapitalization of Puget, and an unchallenged offer of proof before the District Court established that the equity interest which Engineers was forced to surrender for approximately $774,000 had a current realizable cash value of $10,000,000 (Main Brief, p. 88).

Petitioner's further argument that there is "an ever present possibility" that Puget's properties may be sold to Bonneville Administration or may be acquired by condemnation by local public bodies, not only fails to establish that such events would necessarily cause further loss to Puget's stockholders but on the contrary suggests that the stockholders may thereby be enabled to recoup a large measure of past losses sustained. Indeed, reputable investment advisory services are presently urging the purchase of Puget's securities primarily on the basis of the enhancement that may be realized if either a sale or condemnation takes place.

It must again be pointed out that this Court did not require the amount of such losses as Puget to be "computed", nor did the District Court, which stated: "It is not necessary to determine this amount with exactitude" (R. 307a). Moreover, it is significant that Petitioner does not even make reference to Engineers' losses in such stark and simple instances as El Paso Natural Gas, where the $4,000,000 sacrifice (Court's Opinion, p. 28) has now increased to more than $6,000,000.

[22] This Court's Opinion, p. 28.

ful and far-reaching examination of the relevant factors",[23] laid great stress upon the approximately $24,500,000 of earnings which had accrued to the interest of the common stockholders since the adoption of the Act, and which had been left in the system largely to provide for the liquidation which Section 11 dictated.[24] This was indisputably one of the highly important factors which came into existence "*because* of the impact of the Act", yet the preferred stockholders and the Commission blandly appropriated this vast amount withheld from the *common* in order to provide for the liquidation necessitated by the Act, in determining the so-called investment value of the *preferred* "*ex* the impact of the Act."[25]

[fol. 147] 2. The Commission experienced no difficulties in considering the "pertinent factors and equities" prior to adoption of its new "investment value" doctrine.

Petitioners further complain of the "burden" imposed upon the Commission by this Court's admonition that:

> "All pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached by the approach *ex* the Act or the approach *intra* the Act" (p. 30).

In the light of Petitioners' plaints as to "the legal irrelevance" and "administrative impracticability" of according consideration to the factors mentioned by this Court, as well as to such factors as the issue price and past market

---

[23] This Court's Opinion, p. 25.

[24] Findings of Fact 34, 35 and 47 of the District Court (R. 306a, 312a).

[25] See Finding of Fact 47 (R. 312a):

> "The favorable effect upon the values estimated by Badger for the Engineers' preferred stocks, of the large amount of earnings which have accrued to the equity of the common stockholders of Engineers and have been retained within the system under the circumstances referred to above (Paragraphs 34 and 35) is clearly evident in the importance attributed by Badger to the large amount of liquid assets and cash in the Engineers' system, and to the high ratio of 'net quick assets to prior obligations.'"

history and low investment rating of the preferreds referred to by Judge Leahy, it may once again be pointed out [26] that for a period of some five years the Commission's decisions consistently accorded such factors detailed consideration; indeed, they accorded such factors *controlling weight*. These decisions of the Commission, uniformly approved and enforced by the courts, scarcely bear out Petitioners' present contentions either as to the "legal irrelevance", or the "administrative impracticability" of according consideration to such factors. Nor is there room for an argument that these decisions were superseded by the *Otis* decisions, since many of them were issued by the Commission *subsequent* to the Supreme Court's decision in the *Otis* case. Thus, for example, in its *Interstate Power Company* decision, submitted to Judge Leahy for enforcement only a few weeks prior to the Engineers case, the Commission held that owners of *first mortgage 5% bonds of an operating company* were entitled to receive only the par value, notwithstanding the fact that the bonds had been selling at a premium of 3-3½ points above par, the Commission stating:

> [fol. 148] "The bonds were originally sold to the public in 1927, 1928 and 1931 at prices of 97½, 96 and 93, respectively. During most of the years since issuance, the bonds have sold on the market at prices substantially less than par; indeed the bonds never sold as high as par until 1945. In 1937 the bonds sold as low as 32; and as recently as 1940 they sold at a low of 51½. At original issuance and sale of the bonds in 1927, a rating A was assigned them by *Moody's Investors Service*, Standard Statistics rated them B1+. In following years, both ratings were successively lowered to a Moody rating of B in 1938, and all subsequent years, and a Standard's rating of C1 + in 1940 and all subsequent years." [27]

---

[26] See discussion in our Main Brief at pp. 60-70, inclusive.

[27] *Interstate Power Co.*, H. C. A. R. No. 7143 (Jan., 1947); approved and enforced, 71 F. Supp. 164 (D. C. Del., 1947); cf. also the Commission decisions cited in n. 161 (p. 67) of our Main Brief. And see a Commission decision issued only two weeks ago (*Republic Service Company*, H. C. A. R. No. 8170, April 30, 1948), in which the Commission re-

Yet, the very same factors referred to by the District Court in the instant case, pointing to *an even more speculative caliber* for the Engineers' preferreds,[28] were wholly ignored by the Commission in its decision; and Petitioners now seek to contend that this Court has imposed upon the Commission an onerous task which is "legally irrelevant" and "administratively impractical", in requiring such factors to be considered.[29]

[fol. 149] III

The argument that remand to the Commission will be prejudicial to the common stockholders.

1. The proceedings should not be remanded to the Commission, but for reasons very different from those urged by Petitioners.

Petitioners warn that:

> "* * * to require a remand * * * is to require a statement in different terms of what the Commission has already found. Delay in complying with such a requirement would impose an added burden of expense upon the common stockholders whose rights the Court seeks to safeguard, since the common stockholders bear the costs of maintaining the escrow funds,

---

affirmed an allowance of only par to holders of debentures, *emphasizing their past market history and original issue price* (p. 9).

[28] See detailed comparison set forth in n. 169 (p. 70) of our Main Brief.

[29] While the decisions of the Commission above referred to did not discuss the subject of losses sustained by the various holding companies in complying with the Act (a subject which is naturally one of some delicacy for the Commission) we believe the preceding discussion demonstrates that Petitioners' fears as to the onerousness of this task must evaporate once it is understood that the Court was not insisting upon a precise "determination" and "computation" of the amount of such losses, but merely a general recognition of the existence of this factor as among those to be "weighed into the calculation" in considering the equities.

regardless of whether the preferred or common stockholders ultimately prevail in this litigation."[30]

With respect to the contention that remand of these proceedings to the Commission will result in regrettable delay at the expense of the common stockholders, we are obliged to agree; *although for reasons very different from those suggested by Petitioners.* Indeed, if not for our anxiety to avoid aggravating the delay, we ourselves would previously have requested a rehearing limited to the final portion of the Court's opinion dealing with the necessity of a remand of these proceedings to the Commission.[31] For while we recognize the force and validity of the general proposition enunciated by the Court that a District Court may not place into effect a Section 11(e) plan amended [fol. 150] by the District Court in important respects not passed upon by the Commission, we urge that in the instant case the Commission itself took the position that if the District Court's disapproval of the premium payments was legally valid remand of the proceedings to the Commission would be neither necessary nor desirable. Indeed, Commission Counsel *urged* Judge Leahy *not to remand the plan to the Commission* if he disapproved the premium payments, but merely to require an escrow fund covering the premiums and expenses to be set up pending appellate review of the legal soundness of Judge Leahy's decision.[32]

---

[30] Commission petition, pp. 15-16 (footnote reference omitted).

[31] In view of the fact that this delay has now ensued as the result of the filing of Appellants' petitions for rehearing, we respectfully request that the Court treat this portion of our answer as in substance a cross-petition for rehearing on this limited aspect of the Court's opinion, and that the time for filing may be deemed enlarged to the extent necessary to meet the requirements of Rule 35 of the Court's rules.

[32] Thus, at the hearing before the District Court on Feb. 17, 1947, when Mr. Tucker, counsel for Engineers, stated that if the Court was unable to approve the plan in its entirety, "it goes back to the Commission" (R. 281a), Mr. Slater, Commission Counsel, stated to the Court:

"If your Honor please, I hesitate to do so, but we must disagree with the statement just made by Mr.

This course was fully consistent with the *express provisions* of the Commission's Amendatory Order of February 11, 1947 (R. 165a), in which the Commission approved payment to the preferred holders of $100 per share, and of any additional amounts which might be decreed "by the District Court or any appellate court" (R. 174a); and the Commission subsequently approved and joined in presenting to the District Court the escrow agreement annexed to the Court's decree which explicitly provides that the money [fol. 151] in the escrow fund *shall be released and paid over to Engineers* upon proof that a final decree of the Commission or of a Court having jurisdiction determines that the preferred holders are not entitled to receive more than $100 per share plus accrued dividends (R. 328a). Judge Leahy having followed the procedural course urged by the Commission, and this Court having affirmed Judge Leahy's determination holding the payment of the premiums unfair and inequitable, we respectfully submit that the order of the District Court should have been affirmed, rather than ordering the proceedings remanded to the Commission.

While recognizing that even the Commission may lack the power to alter by waiver, stipulation or estoppel the statutory requirements for approval of a Section 11(e) plan by both the Commission and the enforcing Court, we submit that the action of the Commission referred to above constituted *effectual approval* by the Commission of the

---

Tucker. As we view this escrow, it is a two-way escrow. The Commission or the preferred stockholders might appeal in the event that this Court should determine only one hundred dollars is payable. The common stockholders have indicated they would appeal if the Court agreed with the determination of the Commission. But certainly the reorganization process and equity powers of this Court can't be so inflexible that this Court can't by appropriate order approve those portions of a plan which are clearly separable and in no way impinge on the controverted portions of a plan. * * * It is just silly to upset ten-elevenths of this plan, at least that, if not ninety-nine-one hundredths, simply because there is a disagreement as to a segregated small portion in relation to the whole of what we are doing here. * * *" (R. 281a).

plan as amended to provide for payment of the preferred holders of $100 per share, subject only to judicial review as to the legal authority and correctness of the District Court's determination that payment of the premiums was not consonant with the standards of fairness and equity.

Thus, subject only to this further judicial check on the premium point (which this Court has now supplied) *the statutory requirement for approval of the plan by both the Commission and the enforcing Court had been satisfied.*[33]

[fol. 152] If it be urged that this procedure was not characterized by a sufficiently rigid formalism, we submit that flexible and somewhat informal procedure of the type outlined above is sometimes necessary in the course of a com-

---

[33] See Commission petition, p. 5 (note 1) where, after a somewhat oblique statement of the issue, it is conceded: "* * * the Commission has *already* contingently approved an *alternative allocation* of cash to preferred stockholders *at the amount of the liquidation preference* if as a result of the processes of review in the District Court and on appeal therefrom this should be judicially determined fair and equitable." (Emphasis supplied.)

Clearly, throughout the proceedings it has been the understanding of the parties that if this Court upheld the authority and reasoning of the District Court in disapproving payment of the premiums, remand of the proceedings to the Commission would be neither desirable nor necessary: as Commission Counsel stated to this Court in their Reply Brief (p. 3):

> "* * * we believe it follows that if appellees are right in assuming $100 a share to be the proper measure of the preferred stockholders' claim, then there are no considerations of colloquial equity upon which the Commission would rely as a basis for according an increased participation to the preferred stockholders."

And similarly, Home Insurance Co. stated in their Main Brief (p. 25):

> "* * * the Commission has already evaluated all the relevant factors considered by the Court. No useful purpose would be served by remanding the case to the Commission under the circumstances."

prehensive reorganization in order to conform to the spirit of the Supreme Court's admonition that:

> "These reorganizations may be attained only through properly coordinated action between the Commission and the Court."[34]

2. The drastic change in money rates has now made impossible on any basis an award of more than $100 per share of preferred.

As we stated at the outset of our discussion on this point (*supra*, p. 21) our agreement with the contention that remand of these proceedings to the Commission will result in prejudicial delay, entirely at the expense of the common stockholders, is predicated on very different reasoning from that advanced by Petitioners. In essence, Petitioners seek to argue that upon remand the Commission might merely [fol. 153] restate "in different terms" its finding that the preferred holders are entitled to the premiums. Not only does such a suggestion flout both letter and spirit of this Court's opinion, including the Court's pointed statement that "* * * *we do not believe that such a finding could be supported on the present record*",[35] but it seems indeed little short of disingenuous in the face of the further drastic changes in money rates which have occurred since the case was submitted to this Court, *rendering an award in excess of $100 per share to the preferred holders impossible on any basis.*

---

[34] *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 475 (footnote reference omitted).

See also *Continental Illinois Bank* v. *C. R. I. & P. Ry. Co.*, 294 U. S. 648, where the Court stated (p. 685):

> "Not only are those who institute the proceeding and those who carry it forward bound to exercise the highest degree of diligence, but it is the duty of the Court and of the Interstate Commerce Commission to see that they do. Proceedings of this character, involving public and private interests of such magnitude should, so far as practicable, be given the right of way both by the Court and by the Commission, to the end that they may be speedily determined."

[35] Court's Opinion, p. 30. (Emphasis supplied.)

When the proceeding was still before Judge Leahy, he had occasion to point out the fallacy of the astonishing assumption made by Badger, witness for the preferred stockholders whose views were adopted by the Commission, that the artificially low money rates prevailing at the time of Badger's testimony could be deemed "permanent".[36] Judge Leahy also took judicial notice of the sharp upward revision which had occurred in money rates in the relatively short period which had intervened between Badger's testimony and the Court's findings.[37] And this Court in its opinion referred to Judge Leahy's "cogent finding respecting Dr. Badger's use of interest rates as an aid in fixing values for the preferred * * *," and set out a portion of such finding in the margin.[38]

The course of money rates in the further period which has elapsed since Judge Leahy made these findings has [fol. 154] incontrovertibly established the cogency and expertness of his observation that:[39]

> "A continuance for two or three years of the trend indicated over the past year could substantially reduce or *wholly eliminate* the differential in the current yield rate over dividend rate in the case of preferred stocks of the type of Engineers." (Emphasis supplied.)

This "entire elimination" of the differential in the current yield rate over dividend rate of preferred stocks of the type of Engineers has now taken place. In consequence there has now been *completely wiped out* the *entire basis* on which the Commission held that the Engineers preferreds were entitled to receive amounts in excess of $100 per share. Thus, not only did both the District Court and this Court hold that the Commission's award of the premiums to the preferred holders was erroneous *even assuming the "investment value" found by the Commission,* but we are now confronted with the further fact that even on the basis of the Commission's own reasoning and computations *an "investment value" in excess of $100 per share*

---

[36] District Court Finding of Fact No. 51 (R. 313a).

[37] Finding of Fact of No. 52 (R. 314a).

[38] Court's Opinion, p. 9 and note 9.

[39] Finding of Fact No. 52, R. 314a.

cannot possibly be found for these preferred stocks.[40] [fol. 155] In the light of the foregoing significant developments making it plain beyond cavil that neither the Commission nor the District Court at the present time could

[40] This can be easily demonstrated by the following table showing the increase in money rates compared with those found by Judge Leahy as of the date of his findings, and using the same reference sources (R. 314a):

	March, 1946 (date of Badger's Testimony)	*April, 1947 (date used by Judge Leahy)*	*March 31, 1948*
Federal Reserve Index of Utility Common Stocks	123	107	93*
Yield on Long Term Gov't Bonds	2.09%	2.19%	2.45%**
Yield on "high grade Corporate Bonds"	2.35%	2.49%	2.81%**
Yield on high grade Preferred Stocks	3.42%	3.75%	4.12%***

* Federal Reserve Bull., April 1948, p. 428.

** Federal Reserve Bull., April 1948, p. 426.

*** Standard & Poor's, Trade & Securities, Current Statistics Section, April, 1948, p. 27.

Using the increase in the yield on "high grade preferreds" as a guide, the above table shows that the yield of 3.42% at the time of Badger's testimony has risen to 4.12% at present, or an increase of approximately 21%. Based on the money rates prevailing at the time, Badger contended that the Engineers preferreds would have sold on a 4.6% yield basis "ex the impact of the Act". If an increase in the yield of Engineers preferreds had taken place merely to the same extent as is shown for "*high grade preferreds*", the Engineers preferreds would today sell on a 5.56% yield basis. Since the weighted average of the dividends on the three series of Engineers preferreds outstanding was slightly under 5.40% (the greater portion of the preferred having been of the $5 and $5.50 series), *it is evident that on the average the Engineers preferreds would now sell for something less than $100 per share*, even accepting *arguendo* Badger's estimate of 4.6% for the Engineers preferreds at the time he testified.

Moreover, the increase on the yields of low to medium grade preferreds such as those of Engineers *would neces-*

find that the Engineers preferreds have an investment value in excess of $100 per share, "ex the Act", "intra the Act" or on any basis whatever, it is *doubly surprising* to find [fol. 156] Commission Counsel suggesting that upon the remand the Commission might merely "state in different terms what the Commission has already found".[41] And all

---

sarily be greater than the increase on "high grade preferreds", as Judge Leahy stated (R. 314a), thus indicating a present price for the Engineers preferreds probably in the neighborhood of $90 per share.

Full corroboration of the figures is furnished by consideration of the present yields of the very holding company preferreds which Badger employed in his report in determining the yield for the Engineers preferreds "ex the Act" (see R. 2109a and p. 6 of this Court's Opinion). Of the five holding company preferreds used by Badger, three are presently outstanding (Columbia Gas & Electric having been retired and Wisconsin Electric Power refunded). The following table gives the relevant data regarding the three now outstanding:

	Niagara Hudson Power	*Pacific Public Service*	*Public Service of New Jersey*
Market price used by Badger	$102.75	$26.50	$114.38
Yield found by Badger	4.87%	4.91%	4.37%
Market price 3/26/48	$97.38	$22.50	$105.00
Current Yield	5.14%	5.78%	5.27%

Reference may also be made to *Public Utilities Fortnightly* (April 22, 1948, p. 572) for a list of representative holding company preferred stocks selling on an average yield basis of 6.6%; some of these preferreds are the subject of recapitalization plans currently pending before the Commission.

[41] It is of course axiomatic in equity jurisprudence that the decree of a court of equity speaks "as of the date of entry", and must therefore take account of all material changes which have occurred since the commencement of the proceedings. See *Randel* v. *Brown*, 2 How. 405, 422; *McCabe* v. *Guaranty Trust Co.*, 243 Fed. 845, 849; *Brooks Bros.* v. *Brooks Clothing of California*, 60 F. Supp. 442, 456; *Knight* v. *Wertheim & Co.*, 158 F. 2d 883, cert. den. sub nom. *McGuire* v. *Equitable Office Bldg. Corp.*, 91 L. Ed. 1078, 67 S. C. 1535.

the more so since the Commission several months ago had occasion to take official notice of the sharp changes which have taken place in money rates during the very period here in question, and the significant impact of these changes upon "investment values ex the Act" of holding company preferred stocks. In its Findings and Opinion in *The United Light and Railways Company-American Light & Traction Co. et al.*, issued December 31, 1947 (H. C. A. R. No. 7951), the Commission stated (p. 33):

> "The record upon which the value of $40 (apart from liquidation) was reached, while incorporated in the present record, was made several years ago; while the Commission's findings were issued in May of 1946, *in what has since proven to be the peak of the post-war market.* The market has declined substantially from the highs reached at that time and there has been a material firming of interest and preferred yields. It is apparent that insofar as investment value is derived from an analysis of the current yields of comparable securities, *the investment value of American's preferred has been substantially affected in the interim.* In addition, there have of course been changes in the financial and business aspects of the company which have a direct bearing on the value of the security." (Emphasis supplied.)

In the Joint Answering Brief of Appellees (pp. 15-16) we discussed *seriatim* the various bases of valuation which have been recognized by the Courts in determining the [fol. 157] rights of security holders in liquidations and reorganizations, and showed that none of these methods would have permitted an award to the Engineers preferred stockholders in excess of $100 per share, such as was made by the Commission in this case by the use of its novel and erroneous "investment value ex the Act" doctrine.[42] Now

---

[42] As we had occasion to point out in our Joint Answering Brief (n. 47):

> "This term is a double misnomer because: (1) the process to which it applies does not produce an estimate of 'investment value' in any true sense, but merely of theoretical market value as of a given moment; and (2) in appraising this theoretical market value, no attempt

that it incontrovertibly appears from facts which the Court may judicially notice[43] that *even on the basis of this investment value doctrine of the Commission* an award in excess of $100 per share cannot be made, this would seem pre-eminently a case calling for the application of the well-established principle that:

> "An appellate court in the exercise of its judicial discretion, on reversing a case, may render or direct final judgment where the ends of justice would not be promoted by a new trial."[43a]

In applying this principle to the review of the action of an administrative agency, the Supreme Court stated:

> "If there be substantial evidence relating to such facts from which different conclusions reasonably may be drawn the matter may be and ordinarily, we think, should be remanded to the Commission—the primary fact-finding body—with direction to make additional findings, *but if from all the circumstances it clearly appears that in the interest of justice the controversy should be decided without further delay* the court [fol. 158] has full power under the statute to do so. * * *"[44] (Emphasis supplied.)

---

is made to segregate values which were actually created solely and directly by the Act. Therefore, this formula gives *neither* 'investment value', *nor* value 'apart from the Act'."

[43] See our Main Brief, p. 77, note 182.

[43a] 3 *Corpus Juris Secundum* 1426.

[44] *Federal Trade Commission* v. *Curtis Co.*, 260 U. S. 568, 580; see also *International Shoe Company* v. *Federal Trade Commission*, 280 U. S. 234, 297.

Cf. also *Ecker* v. *Western Pacific*, where the Supreme Court considered and decided an important point which the Court below had not even passed upon, stating:

> "As the matter is fully presented by the petition for certiorari and its decision is essential to a complete review of the District Court we have concluded to consider the question. § 240(a) Judicial Code, 28 U. S. C. § 347; *United States* v. *Bankers Trust Co.*, 294 U. S. 240, 290, 295. Such action is in the interest of expedi-

We respectfully submit that it would be consonant with the foregoing salutary principle, and with the admonitions of the Supreme Court concerning the importance of expediting proceedings of the character here concerned, if the Court saw fit to modify its judgment so as to affirm the order appealed from, and to eliminate the requirement for remand of the proceedings to the Commission.

IV

The argument that the Court's ruling as to the powers of the District Court will create practical difficulties.

The petition of the Commission, while "noting the extent of [their] disagreement" with the Court's holding as to the functions of the enforcement court in connection with a Section 11(e) plan, does not seek rehearing with respect to this portion of the opinion, stating (p. 4):

> "* * * we believe the relevant considerations have already been fully presented and considered and therefore do not seek to present anything further with reference to the issue of the scope of review."

[fol. 159] In the light of the foregoing, we see no need to present further argument on this phase of the decision, notwithstanding the insistence of the other petitioners in again pressing upon the Court the same fallacious arguments[45]

---

tion. *Continental Bank v. Chicago, R. I. & P. Ry. Co.*, 294 U. S. 648, 685. Cf. *Story Parchment Co.* v. *Paterson Co.*, 282 U. S. 555, 567; *Cole* v. *Ralph*, 252 U. S. 286, 290." (318 U. S. 448, 449, emphasis supplied.)

[45] For example, despite all that this Court had to say as to the special functions of the District Court as an equity reorganization tribunal under Section 11(e) of the Act, we note that the Streeter petition (p. 8) continues to argue that the functions of the District Court when called upon to enter its decree finding an 11(e) plan "fair and equitable", are no different from those of an *appellate court* merely reviewing an order of the Tax Court under the rule of the *Dobson* case. In like manner Petitioner Home Insurance continues to argue that the Court's decision in the *Standard Gas & Electric* case narrowly limits the District Court to the status of a review court even though the Court's language in that decision was expressly directed merely to the "*appropriate-*

which the Court rejected in the carefully considered and documented section of its opinion on this phase.

The Commission does, however, express concern respecting the practical difficulties which may result from a sentence in the Court's opinion (which in any event seems *obiter* to the decision in the instant case) as to the power of the District Court to "receive evidence *aliunde* the Commission's record respecting the fairness and equity of a plan".[46]

We think that the fears expressed by the Commission as to the possible adverse effects of the foregoing statement are not justified, particularly in view of the strict limitation carefully specified by the Court that such evidence may be received primarily in aiding the enforcement Court to determine whether the proceedings must be remanded to the Commission. Clearly, a court of equity must always be free, at the very least, to determine whether such change in material facts or circumstances has taken place [fol. 160] since the record was made as to require that it be reopened or supplemented.[47]

We assume that if a party before the enforcement Court sought to present evidence which did not relate to a change of facts or conditions subsequent to the closing of the record before the Commission, and that no satisfactory reason was suggested for the failure to adduce such evidence when the proceedings were before the Commission, the enforcement Court would normally be disinclined to receive such

---

ness" of the "particular remedial measures" required to effectuate Section 11(b), and had no application to the vital standard of "fairness and equity". As this Court well said in its Opinion in the instant case (p. 23) concerning the aforementioned language contained in its *Standard Gas & Electric* decision: "Cf. In re Standard Gas & Electric Co. * * *, in which, however, the question here presented was not in focus." (Emphasis supplied.)

[46] Court Opinion, p. 17.

[47] See cases cited at note 41, supra. It may also be noted that in *Ecker v. Western Pacific R. Co.*, the Supreme Court, although functioning merely as an appellate review court, gave due consideration to figures presented to it by the parties showing change of earnings since the date when the record was closed before the Commission and the District Court (318 U. S. 448, 507-9).

evidence, even though it has the power to do so.[48] Faced with this likelihood, as well as with the respectful consideration which the Commission's findings are invariably accorded in the enforcement courts, we doubt that many litigants will run the risk of intentionally withholding from the Commission evidence deemed important, with a view to producing it in the district court for the first time.

Moreover, in the final analysis, we do not perceive any substantial difference between the language which this Court used at page 17 of its opinion to which the Commission takes so much exception, and that used by Judge Strum of the District Court of Florida which the Commission quotes with strong approval at pp. 3-4-5 of its petition. As we read the quoted language of Judge Strum, he too was of the view that the Court should hear evidence *aliunde the Commission's record* for the purpose of determining whether the proceedings should be remanded to the Commission.[49]

[fols. 161-162] Conclusion

The Court's opinion in the instant case has carefully considered and correctly decided all the important issues in the present appeal, and Petitioners have utterly failed to present any new or valid considerations or arguments to warrant imposing upon the Court the heavy burden of rehearing these voluminous and complex proceedings. On the other hand, remand of the proceedings to the Commission in the light of the objections to remand expressed to the District Court by Commission Counsel, and further in the light of the clear evidence that no amount in excess of $100 per share can now be awarded to the preferred holders on any basis, will unjustifiably further delay the termina-

[48] For example, the record establishes that when the instant proceeding was first argued before Judge Leahy, he inquired of all objectors whether they had previously presented their arguments to the Commission (R. 218a, 222a).

[49] "* * * So, if counsel considers the proposed evidence of such import that it ought to be considered by the Commission, I will hear you on that question for the purpose of determining whether the case should be remanded and referred with the suggestion that this evidence be considered * * *."

tion of this protracted litigation at the expense and to the substantial detriment of the common stockholders. Accordingly, we respectfully request that if any rehearing be granted, it should be limited to the sole issue of whether the Court should modify its decree so as to eliminate the requirement for remand to the Commission, and thereby to affirm the order of the District Court appealed from.

Dated, May 10, 1948.

Respectfully submitted, Alfred Berman, 30 Pine Street, New York, N. Y.; Herbert L. Cobin, 228 Delaware Trust Building, Wilmington 28, Delaware, Attorneys for Central Illinois Securities Corporation and C. A. Johnson, Appellees; Guggenheimer & Untermyer, New York, N. Y., of Counsel.

[fol. 163] IN THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

[Title omitted]

ANSWER TO PETITION FOR REHEARING AND CROSS-PETITION FOR REHEARING BY LUCILLE WHITE, et al.—Filed May 14, 1948

This answer is submitted on behalf of common stockholders, Lucille White and Frances Boehm, in opposition to the petitions for rehearing submitted by all of the appellants. Said petitions are opposed generally on the grounds that all of the arguments presented by the appellants have been fully presented in their briefs and argument before this Court and that, in any event, this Court has fully and carefully considered all of the arguments of the appellants and has rendered a comprehensive and clear decision which requires no clarification by way of rehearing.

[fol. 164] I

The Commission has had full opportunity to meet all of the issues in this case.

A reexamination of the Commission's briefs before this Court establishes beyond question that the Commission has had full opportunity and has taken advantage of that

opportunity to present completely every issue involved in this case. And the clarity and breadth of this Court's opinion discloses a full awareness of the position taken by the Commission.

The two basic issues presented by this appeal, as determined by this Court, are: (a) Did the Commission properly approve as "fair and equitable" within the meaning of Section 11(e) of the Public Utility Holding Company Act of 1935, 15 U. S. C. A. Sec. 79 k(e), cash payments in certain amounts to be made to the preferred stockholders of Engineers Public Service Company; and (b) did the court below err in refusing to approve the plan proposed by the Commission as "fair and equitable", deciding that the cash payments should be in lesser amounts than those set up by the Commission?

In contending that the plan is fair and equitable, the Commission has asserted and still asserts that it has applied the doctrine of equitable equivalents as enunciated by the Supreme Court in the *Otis* case. But this Court has neither misconstrued nor misconceived the arguments of the Commission, and in fact has taken judicial notice of its position (Opinion, p. 5):

> "The Commission asserts that it arrived at the amount to be paid in cash for the preferred stocks by the application of the doctrine of equitable equivalents as enunciated by the Supreme Court in *Otis & Co.* v. *Securities and Exchange Commission* (The [fol. 165] United Light and Power Co.), 323 U. S. 624. It takes the position that it has obeyed the clear mandate of the Act in that it has measured the rights to be surrendered by the preferred stockholders in terms of investment value; that is to say *ex* the Act which itself necessitated the dissolution of Engineers."

What this Court has made abundantly clear, which the Commission refuses to accept, is that the Commission has given consideration to only one of the factors to be considered in arriving at an "equitable equivalent for the rights surrendered" and has failed to consider and give due weight to other factors, which, if considered and weighed by the Commission, would establish that the equitable equivalent of the preferred stock is not in excess of $100 per share.

On this point, this Court clearly stated (Opinion, p. 30):

> "In determining equitable equivalents the Commission must weigh all pertinent factors to the end that the security holder may receive as nearly as may be the equivalent of that which he is giving up. All pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached by the approach *ex* the Act or the approach *intra* the Act. The new doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equitable equivalents enunciated in the Otis & Co. decision."

The argument raised by the Commission on page 3 of its petition for rehearing that it has in fact determined the value of the common stock by establishing the equitable equivalent of the preferred stock and therefore what remained was the value of the common stock on the basis of the Euclidian axiom that the sum of the parts equals [fol. 166] the whole, was fully presented by the Commission and disposed of by both the District Court and this Court. On this point, the District Court in its opinion (R., p. 291a) said:

> "The argument for payment of the premium is comparable to dealing cards off the top of the deck. When full hands (based on theoretical 'investment value') have been dealt to all the senior security holders, the common would merely get what happens to remain. Under the Act, the interest of all investors must be considered. An emphasis on a preferred's rights must not slight the interests of a common stockholder. For if this occurs this is the direct opposite of the arguments utilized in *United Light & Power*, D. C. Del., 51 F. Supp. 217, aff'd 3 Cir., 142 F. 2d 413, aff'd sub. nom. *Otis & Co.* v. *Securities and Exchange Commission*, 323 U. S. 624, where participation was accorded the various security holders in accordance with the standard of colloquial equity."

And this Court in its opinion (p. 26) said:

> "But if values for the securities are to be determined *ex* the Act, it is clear that the Commission should have done so. What the Commission has done

is to consider the investment values of the preferreds *ex* the Public Utility Holding Company Act, i.e., as if the Act had never been passed. But it considered only the preferreds on this basis. It seems to have omitted consideration of the common by a similar standard."

And at page 31:

"The problem is and will remain, until its disposition by the Commission, one of valuation of the securities of Engineers, viz., the preferred and the common."

[fol. 167] The Commission further argues that to reconstitute an eventful decade in the history of the Engineers system would be an impossible task. But no such task has been imposed upon the Commission by this Court. This Court has merely ordered the Commission if it elects to value the securities ex the impact of the Act to value the common on the same basis as it has valued the preferred and, in so doing, to give substantial consideration to the future earning power of Engineers and its subsidiaries.

The clarity of this directive should leave no room for any doubt. On page 26 of its opinion, this Court said:

"But we think it is clear that it (Commission) did not give any substanial consideration to the future earning power of Engineers and its subsidiaries which the Supreme Court has held is one of the fundamental tests for reorganization valuation. See *Consolidated Rock Products Co.* v. *Dubois*, 312 U. S. 510, 526, and *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 565-6. In the instant case the Commission made no attempt to ascertain the future earning power of the system nor to apportion earning power between the preferreds and common based on their respective claims to income as it did in the United Light & Power Company case."

This Court at page 27 also pointed out that the Commission had failed to consider the losses sustained by Engineers by reason of the impact of the Act:

"The anomaly of the Commission's general position is made all the more apparent, we think, by its failure to consider the substantial losses which oc-

curred to Engineers by virtue of divestitures compelled by the Act. * * * We desire to make it clear that we do not criticize, or even suggest criticism of, the Commission because of its orders compelling these [fol. 168] divestitures which were required by the Act. Hindsight demonstrates facts which foresight, however apt or well-informed, may not be able to foretell. But if the Commission is to make valuations ex the Act in respect to the preferreds, it must do likewise in respect to the common."

The argument raised by the Commission on page 28 of its brief that a reexamination of executed transactions constitutes a collateral attack upon past decisions was raised by the Commission in its original brief before this Court. On page 35 of their brief, the Commission said:

"More fundamentally, the district court, by seeking to shift the burden of a sale of assets long after the sale occurred and was approved, seeks to affect collaterally the decisions reached at the time of the sale when they are no longer open to direct attack."

However, there is not the slightest intimation of collateral attack either in the language of this Court's opinion or in its effect. What the Commission overlooks, or refuses to accept, is the decision of the District Court and this Court that it has failed, in its determination of equitable equivalents, to give any weight or consideration, or has given insufficient weight and consideration to certain factors such as the losses sustained by Engineers as the result of the divestitures of Puget Sound and El Paso. The following portion of this Court's opinion should leave no room for any doubt on this score (Opinion, pp. 29-30):

"The difficulty in sustaining the Commission's position in respect to 'investment value', even in so far as the Commission has applied that value, lies in the fact that investment value is and can be only *one* of a series of factors to be used in arriving at equitable equivalents. We conceive that the Commission could make a finding under certain circumstances that in- [fol. 169] vestment value was the equitable equivalent to the security holder. The Commission in the instant case, however, has not made such a finding and we do

not believe that such a finding could be supported on the present record. In determining equitable equivalents the Commission must weigh all pertinent factors to the end that the security holder may receive as nearly as may be the equivalent of that which he is giving up. All pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached by the approach *ex* the Act or the approach *intra* the Act."

Moreover, in stating that such factors should be "considered", this Court did not state or even infer, as petitioners suggest, that they must be determined with anything approaching mathematical exactitude. In other decisions, the Commission has found no difficulty in according consideration to such factors. But now an attempt is made by petitioners to draw a gruesome picture for this Court of the terrible "burden" which such consideration would impose on the Commission.

The argument raised on page 7 of its petition by the Commission that a step by step approach to the reorganization of Engineers was a necessity is wholly irrelevant since this Court went out of its way to point out on page 28 of its opinion, that the past actions of the Commission are not subject to criticism by this Court.

II

The function of the Section 11(e) enforcement court was fully considered by this Court.

The points raised by the Commission concerning the function of the Section 11(e) enforcement court were most fully presented by all the appellants not only before the [fol. 170] District Court but also before this Court. No better reply to the raising of this issue again on the petition for rehearing can be found than in the opinion of this Court. The most exhaustive analysis not only of the Act itself and the judicial determinations thereunder, but also of the legislative history and the Congressional debates preceding the passage of the Act fully set forth in its opinion establishes beyond a peradventure that this Court has given full and complete consideration to all aspects of this issue.

It is interesting to observe how the temper of the Commission's argument has waned. Whereas, in its brief to this Court, the Commission stated (pp. 16-17): "Chaos in the administration of Section 11 would result from sustaining the precedent established by the district court * * *", in its Petition for Rehearing the Commission has in fact eliminated this issue completely (Petition for Rehearing, p. 36) by stating:

> "We have believed and still believe that there has been no real problem in adjusting the complementary roles of the Commission and the courts so long as both apply the same consistent and determinable legal standard of fairness and equity on the same record."

The contention advanced by the Commission (p. 29) that the effect of this decision would be to "place burdens on the enforcement courts which could not conscientiously be discharged without causing great delay" is entirely without foundation and a reflection upon the District Court. We believe and this Court apparently also believes that the District Court is well qualified to pass upon all questions which may arise concerning the enforcement of a plan of reorganization including the question of whether or not new evidence should be accepted, before the case is re- [fo]. 171] manded to the Commission for further consideration. The argument that if objectors are not limited to the administrative record they will be encouraged to dispense with even familiarizing themselves with the administrative record before making their proffers of proof in the District Court" seems to us puerile. Unless objectors familiarize themselves with the administrative record it seems to us that it would be most difficult, if not impossible, to raise objections to the Commission's findings and determinations which would receive any serious consideration from the Court. Furthermore, how can such objectors make an intelligent proffer of proof unless they have first ascertained what proof has been submitted before the Commission. We feel that the District Court is qualified to weed out the obstructionists from those who are sincerely seeking to help determine whether or not a proposed plan is fair and equitable, and the record of the enforcement courts clearly establishes that this is so.

And with particular reference to the case at bar, this

Court has taken judicial notice of the fact that Judge Leahy's opinion is entitled to especial weight by virtue of his familiarity and experience with Section 11 (e) proceedings and plans of reorganization under the Act (Opinion, Note 20).

It is interesting to note that the Commission, now so solicitous concerning the cost to the common stockholders of maintaining the escrow fund which is not invested (Petition for Rehearing, p. 16 and note 12), has refused and still refuses, in a motion now pending before the District Court, to approve the investment of the escrow funds in short term U. S. Treasury bills, which carry interest at 1%, are due in 90 days, and are the practical equivalent of cash.

[fol. 172] Conclusion

We submit that the petitions of appellants for a rehearing should be denied on the ground that all of the points raised in their petitions have been fully presented to this Court both in oral argument and written briefs and on the further ground that this Court has fully considered all of the arguments raised by the appellants and has rendered an opinion which is clear and open to no reasonable misunderstanding.

We desire to support the position of the Central-Illinois Securities Corporation, et al. in their request that the answers to the petitions for rehearing be deemed a cross petition for a rehearing of the question as to whether it is necessary or proper in this case to remand the proceedings to the Commission for further consideration.

Appellants' petitions for rehearing should be denied.

May 12, 1948.

Respectfully submitted, Louis Boehm and Raymond L. Wise, Attorneys for Common Stockholders, Lucille White and Frances Boehm.

Louis Boehm, Raymond L. Wise, William Esbitt, of Counsel.

APPEAL FROM THE UNITED STATES DISTRICT COURT FOR THE DISTRICT OF DELAWARE

ON PETITIONS FOR REHEARING AND ANSWERS THERETO AND ON CROSS-PETITIONS FOR REHEARING

Before Biggs, Albert Lee Stephens and Maris, Circuit Judges

OPINION OF THE COURT—Filed June 11, 1948

By Biggs, Circuit Judge:

Petitions for rehearing, answers thereto, and cross-petitions for rehearing have been filed in these cases. The petition of the Commission by Note 1 asserts that if the

Commission is bound by the District Judge's determination "as to amount" to be paid to the preferred stockholders of Engineers "no remand to the Commission would be necessary, because the Commission [by its amendatory order of February 11, 1947] has already contingently approved an alternative allocation of cash to preferred stockholders at the amount of the liquidation preference if as a result of the processes of review in the District Court and on appeal therefrom this should be judicially determined fair and equitable." The cross-petitions assert that the proceedings should not be remanded to the Commission for a somewhat different reason, specifically because by the amendatory order referred to the Commission approved payment to the preferred stockholders of $1.00 per share, and of any additional amounts which might be decreed "by the District Court or any appellate court. * * *" It is also pointed out by the cross-petitions that the Commission [fol. 177] approved the terms of the escrow agreement and joined in presenting it to the court below for an appropriate order and also that counsel for the Commission before the District Court indicated his belief that those portions of the plan of reorganization which were not subject to attack, should be carried out as has been done.

We are not unmindful of the delay, perhaps of short duration, which necessarily must ensue upon the return of the record to the Commission pursuant to our decree but we are of the opinion that neither the Commission, nor the District Court, nor this court possesses the power to waive the provision of Section 11 (e) providing for approval of a plan of reorganization as fair and equitable by the Commission and by the District Court. Moreover, we cannot treat the Commission's amendatory order of February 11, 1947 or its approval of the escrow agreement as a rejection of the role imposed on the Commission by Congress. The correctness of our position in this regard is demonstrated by the fact that the amendatory order of the Commission provides that the escrow agent may make payment to the preferred stockholders only when the order of the District Court has become final and not subject to appeal. What the Commission intended to effect by the order was nothing more than the establishment of a means for expediting the execution of the plan of reorganization when the approval required by the statute had been attained.

The Commission approved the plan as amended by it, requiring amounts equivalent to redemption premiums to be paid to the preferred, finding this to be fair and equitable. Thereafter it presented the plan to the District Court. The District Court found the plan to be unfair and inequitable and rejected it. We affirmed that decision for the reasons stated in our opinion. The Commission must now proceed to a reconsideration of the problems presented in the light of our opinion or procure the review thereof by the Supreme Court.

The loss which will occur to the common stockholders [fol. 178] by reason of the remand may be lessened to some extent by appropriate investment of the escrow fund. An order will be entered authorizing the court below to take appropriate action on an application for investment of the fund, if such be made to it.

Other questions raised by the petitions for rehearing do not require discussion. Orders will be entered denying the prayers of the petitions and of the cross-petitions.

STIPULATION CONCERNING THE PRINTED RECORD ON PETITION FOR WRIT OF CERTIORARI—Filed August 3, 1948

It is hereby stipulated by and between Roger S. Foster, General Counsel of the Securities and Exchange Commission; Francis H. Scheetz, attorney for The Home Insurance Company, et al., preferred stockholders; Lawrence R. Condon, attorney for Thomas W. Streeter, et al., preferred stockholders; William E. Tucker, attorney for Engineers Public Service Company; Alfred Berman, attorney for Central-Illinois Securities Corporation and C. A. Johnson, common stockholders; and Louis Boehm and Raymond L. Wise, attorneys for Lucille White and Frances Boehm, common stockholders, as follows:

1. The Clerk of the Circuit Court of Appeals shall certify as the transcript of record in the above entitled matter pursuant to United States Supreme Court Rule 38, only the following appendices:

A. Joint Appendix of five (5) printed volumes certified June 27, 1947 by the Clerk of the United States District Court for the District of Delaware as the record on appeal to the Circuit Court of Appeals.

B. Supplemental Appendix of the following proceedings in the Circuit Court of Appeals:

1. Notice of petition dated June 2, 1947 and petition to the Circuit Court of Appeals for stay dated May 29, 1947.

2. Order of Circuit Court of Appeals dated June 2, 1947, denying petition for stay.

[fol. 183] 3. Opinion of the Circuit Court of Appeals filed on March 19, 1948 and orders of same date vacating decree of District Court.

4. Petitions for rehearing filed on behalf of the Securities and Exhange Commission, The Home Insurance Company, et al. and Thomas W. Streeter, et al.

5. Answers to petitions for rehearing and cross-petitions filed on behalf of Central-Illinois Securities Corporation and C. A. Johnson, and on behalf of Lucille White and Frances Boehm.

6. Orders of Circuit Court of Appeals, dated June 10, 1948, authorizing application to the United States District Court for the District of Delaware, for investment of escrowed fund.

7. Opinion of the Circuit Court of Appeals filed on June 11, 1948 and orders of same date denying petitions and cross-petitions for rehearing.

8. Orders of Circuit Court of Appeals, dated July 19, 1948, staying mandates.

II. All proceedings in the Circuit Court of Appeals which are not listed in paragraph IB above shall be omitted from the printed record as matter not essential to a consideration of the questions presented by the petition for the writ of certiorari under the provisions of the United States Supreme Court Rule 38, paragraph 8, and shall not be certified by the Clerk of the Circuit Court of Appeals.

Dated: July 28, 1948.

(S.) Roger S. Foster, Francis H. Scheetz, Lawrence R. Condon, Wm. E. Tucker by Paul D. Miller; Alfred Berman, Louis Boehm and Raymond L. Wise.

No. 226

SECURITIES AND EXCHANGE COMMISSION, PETITIONER

v.

CENTRAL-ILLINOIS SECURITIES CORPORATION, C. A. JOHNSON, LUCILLE WHITE, AND FRANCES BOEHM

PETITION FOR WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

The Solicitor General, on behalf of the Securities and Exchange Commission, prays that a writ of certiorari issue to review a final order of the United States Circuit Court of Appeals for the Third Circuit vacating a decree of the United States District Court for the District of Delaware with directions to enter an order disapproving in part a plan under Section 11(e) of the Public Utility Holding Company Act and to remand to the Commission which had approved the plan.

OPINIONS BELOW

The opinion and judgment of the court below (R. 12), and the opinion denying petitions and cross-petitions for rehearing (R. 138) have not yet been reported. The opinion of the district court is reported at 71 F. Supp. 797 (R. 283a). The findings and opinions of the Commission dated December 4, 1946, and January 8, 1947, have not yet been officially reported but are set forth in the Commission's Holding Company Act Release Numbers 7041 (R. 25a) and 7119 (R. 128a).

JURISDICTION

The judgment of the Circuit Court of Appeals for the Third Circuit was entered on March 19, 1948. Petitions and cross-petitions for rehearing were denied on June 11, 1948. The jurisdiction of this Court is invoked under Section 240 of the Judicial Code, as amended by the Act of February 13, 1925 (28 U.S.C. 347), made applicable by Section 25 of the Public Utility Holding Company Act of 1935, 49 Stat. 803 (15 U.S.C. 79 *et seq.*).

STATUTE INVOLVED

Section 11(e) of the Public Utility Holding Company Act of 1935 provides as follows:

"(e) In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the

Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (*f*) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed."

Section 24(a) of the same Act provides as follows:

"SEC. 24. (a) Any person or party aggrieved by an order issued by the Commission under this title may obtain a review of such order in the circuit court of appeals of the United States within any circuit wherein such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the entry of such order, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall be forthwith served upon any member of the Commission, or upon any officer thereof designated by the Commission for that purpose, and thereupon the Commission shall certify and file in the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do. The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that such additional evidence is

material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which, if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court affirming, modifying, or setting aside, in whole or in part, any such order of the Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347."

QUESTIONS PRESENTED

The holding company which is being liquidated in compliance with Section 11 is solvent. Under its charter, the three classes of preferred stock have call or redemption prices higher than their liquidation preferences. Each of the three classes of preferred shares has an investment value at least equal to the call price. The following questions are presented:

1. Did the Commission properly apply the "fair and equitable" standards of Section 11(e) of the Public Utility Holding Company Act as interpreted in *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, in approving a plan which would pay to the preferred stockholders cash equal to the current going concern value of their shares but not in excess of the call price, where this amount exceeds the inventory liquidation preference of such shares?

2. Where preferred stockholders are accorded the going concern value of their rights surrendered in the liquidation of a holding company pursuant to Section 11 of the Holding Company Act, is the Commission required to reconstitute the history of the company so as to determine whether there have been any losses as a result of divestments or other action taken by the common stock management by reason of the Act, with a view to shifting those losses in whole or in part to preferred stockholders?

3. Where a plan satisfies a preferred stockholder's senior claim in cash and the Commission (a) equates the cash received to the value of the interest surrendered by the preferred, and (b) finds that the residual common stock interest is benefited through the retirement of the preferred, is the Commission required to put a cash value on what the common stockholders should receive and surrender?

4. Where a plan under Section 11(e) of the Public Utility Holding Company Act is enforced

in a district court and there is no dispute as to the sufficiency of the evidence upon which the Commission based its finding of fairness, is the court authorized to reject such finding on the basis of a discretionary weighing of equities without reference to the limitations upon the scope of judicial review which this Court has held apply to a Circuit Court of Appeals in direct review of a plan under Section 24(a) of the Act?

STATEMENT

This case involves a plan filed under Section 11(e) of the Public Utility Holding Company Act of 1935 by Engineers Public Service Company ("Engineers"). The plan contemplated *inter alia* satisfying the claims of Engineers' preferred stockholders in cash as a preliminary to distributing its remaining assets to common stockholders and dissolving. The only substantial controversy before the Commission, and the question upon which the Commission and both courts below have differed, was the application of the "fair and equitable" standard of Section 11(e) to the division of the assets of the company between the preferred and common stockholders. The other aspects of the plan raised no important dispute and have been consummated, reserving the present issue through an "escrow" arrangement which set aside the funds in dispute.[1]

[1] This Court has previously been advised of the partial consummation of the plan as mooting the cases then pending upon cross petitions of the Commission and of Engineers to review the decision of the United States Court of Appeals

Engineers had outstanding three series of cumulative preferred stock of equal rank: 143,451 shares of $5 series, 183,406 shares of $5.50 series, and 65,098 of $6 series. The plan as originally filed by the company proposed to pay all preferred stockholders only the amount of their involuntary liquidation preference, which was $100 a share and accrued dividends for each series of preferred stock. The plan had been formulated by management which was controlled by the common stockholders, and was supported in the administrative proceedings by company counsel. In order to assure an adequate presentation of the preferred stockholders' point of view, the Board of Directors authorized a member primarily interested in the preferred stock (Streeter) to employ counsel partially at the company's expense. There also appeared before the Commission representatives of a group of institutions which held preferred stock (Home Insurance Company, et al). The preferred stockholders' representatives appeared in opposition to the plan and contended that they should receive $105 for the $5 series and $110 for the $5.50 and $6.00 series, amounts which were equal to the voluntary liquidation or redemption prices specified in the charter.

Expert witnesses who testified on behalf of the preferred stockholders and the management

---

for the District of Columbia, 138 F. 2d 936, which upheld in part determinations of the Commission under Section 11(b)(1). That decision was vacated as moot. 332 U. S. 788.

agreed, as Engineers stated in its brief before the Commission, that "the present value or investment worth of these three series of stock, on a going concern basis and apart from the Act, under prevailing yields applied to comparable securities", was in excess of the respective call prices (R. 67a, see also R. 193a). The estimates of value ranged from $106.25 to $111.11 for the $5.00 preferred, from $111.38 to $122.22 for the $5.50 preferred, and from $111.50 to $133.33 for the $6 preferred (R. 66a-67a).

The Commission agreed with Engineers that the proposed liquidation was "caused by the Act and is in that sense 'involuntary' " (R. 61a). This holding accords with a long line of Commission and court precedents under which bonds and preferred stocks have been retired in liquidations required by Section 11 without payment of the call price.[2] Disagreeing with Engineers, the Commis-

Cases involving preferred stock: *Lahti* v. *New England Power Association*, 160 F. 2d 845 (C.C.A. 1); *Buffalo, Niagara and Eastern Power Corp.*, S.E.C. (1945), Holding Company Act Release No. 6083; *Georgia Power & Light Co.*,

sion held that the liquidation, although "involuntary," did not require the preferred stockholders to accept the charter involuntary liquidation preference as the sole measure of their claims. In so holding the Commission relied on this Court's ruling in *Otis & Co. v. S. E. C.*, 323 U. S. 624 (R. 61a). Both courts below agreed that, under the *Otis* case, Engineers' charter provisions were not dispositive of the issues (R. 228, note 2, and R. 34). Having found neither the voluntary nor involuntary liquidation preference dispositive, the Commission determined in accordance with priority rights whether the plan accorded each security holder "from that which is available for the satisfaction of his claim, the equitable equivalent of the rights surrendered" (R. 62a). The Commission found that the preferred had an investment value at least equal to the respective call prices, but treated the call prices as setting "a ceiling." This sum the Commission found to be the equitable equivalent of the rights surrendered, and since the plan did not provide for payments in that amount the Commission disapproved it.

Engineers decided on advice of counsel (R. 1949a) to accept the Commission's findings and amended the plan to provide for the additional payments to the preferred. Two common stock-

S.E.C. (1945), Holding Company Act Release No. 5568, plan approved and enforced, Civil Action No. 133 (M. D. Ga., 1945); *Cities Service Power & Light Co.*, S.E.C. (1944), Holding Company Act Release No. 4944.

holder groups (respondents herein) then appeared in opposition to the amended plan. However, the amended plan was approved by the Commission as fair and equitable to both the preferred and common stockholders.[3] Upon application for enforcement of the plan, the district court, in the exercise of what it considered to be its "affirmative and independent duty" (R. 286a), found that $100 per share was the fair and equitable equivalent of the preferred stockholders' claim and disapproved that portion of the plan calling for a payment of more than $100 per share. This conclusion was reached by the district court despite its acceptance of the Commission's finding that the "present value for these preferreds [is] substantially in excess of the charter liquidating preferences."[4] (R. 290a). The court entered an order approving and enforcing the plan except insofar as it contemplated payments of any amount in excess of $100 per share and accrued dividends to the preferred stockholders.

On appeal by the Commission and preferred stockholders, the Circuit Court of Appeals for the Third Circuit upheld the district court in its

---

[3] —— S.E.C. —— (1947), Holding Company Act Release No. 7119 (R. 128a).

[4] Subsequent to its opinion the court adopted certain findings of fact, in the form presented by the common stockholders, which, while not repudiating the acceptance of the expert testimony as to present value, stressed the possibility that through future increase in interest rates, or decline in earnings, or both, the future value of the preferred stock, if allowed to remain outstanding, might well be substantially less than its present value (R. 310a-315a).

rejection of the Commission's determination that the amended plan was fair and equitable. The court criticized the valuation methods employed by the Commission, and held that even if there was not a "plain abuse of discretion" by the Commission, it was within the province of the district court to reject the Commission's determination. It held that the district court "cannot value the securities, find equitable equivalence therefor and substitute its own estimates for those of the Commission" (R. 39) but can merely veto the Commission's decision. The decree of the district court was accordingly vacated and the case was remanded to the Commission for a fresh determination of the amount which the preferred stockholders should receive.

All appellants filed petitions for rehearing, and in the Commission's case for clarification as well. All appellees filed cross-petitions for rehearing, which were denied in an opinion which declined further to discuss the problems raised by the petitions but which directed the Commission either to "proceed to a reconsideration of the problems presented in the light of our opinion or procure the review thereof by the Supreme Court." (R. 140).

REASONS FOR GRANTING THE WRIT

This case involves issues of substantial importance in the administration of the Public Utility Holding Company Act. Plans which contemplate discharging preferred stockholders'

claims in cash have been proposed to resolve Section 11 problems of a number of major holding companies, and whether the preferred stockholders shall receive the full value of the interest which the plan requires them to surrender, where this is claimed to exceed the involuntary liquidation preference, is an issue involved in at least 5 cases now pending before the Commission. Some $194,200,000 of total preferred stockholders' claims are involved in these cases, of which some $23,260,000 represents the disputed area in excess of the charter involuntary liquidation preference.[5] The problem arises out of the fact that many preferred stock charter provisions provide for an involuntary liquidation preference which is lower than the call or voluntary liquidation price (where the preferred stock is callable), and from the fact that many of such preferred stocks have a dividend rate which is high in relation to current money rates.

I

In determining the value of the rights surrendered by preferred stockholders, the Commission starts with the doctrine of strict priorities

[5] While the escrow device used in this case is available to limit the area of controversy, the confusion which the holding below engenders as to the determination of the total preferred stockholders' claims necessarily tends to complicate the entire processes of working out reorganization plans. Indeed, some of the implications of the holding below confuse the standards applicable even to plans which propose to satisfy preferred stockholders by an allocation of earnings assets rather than cash.

and with the principle that the "rights of stockholders of a solvent company which is ordered by the Commission to distribute its assets among its stockholders may be evaluated on the basis of a going business and not as though a liquidation were taking place." *Otis & Co.* v. *S.E.C.*, 323 U. S. 624, 633. The latter principle has been paraphrased by this Court as "that Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of creditors." *Ibid.* p. 638.

Here, as in *Otis*, the holding company is solvent. Upon analysis of the financial condition of the company and particularly the asset and earnings coverage of the preferred stocks, and comparison in the light of these factors with the market prices of other utility holding company preferred stocks, the Commission found from undisputed evidence that Engineers' preferred stocks had investment values at least equal to the respective call prices of $105, $110 and $110. These call prices were regarded as the "ceiling" upon the values to be accorded to the preferred stocks, since they could be retired at those prices (R. 61a-68a).

In determining that the "fair and equitable" standard of Section 11(e) required payment to the preferred stockholders of the call or redemption prices of their shares, the Commission be-

lieved this result was consistent with, if not compelled by, the decision of this Court in the *Otis* case. In *Otis*, the claim of the preferred stockholders if measured by the liquidation value would have been greater than its existing value as an interest in a going business; in that case, this Court approved valuation of the preferred stockholders' claim as part of a continuing enterprise and refused to apply the liquidating value. In the instant case, in contrast to *Otis*, the liquidating value of the preferred stocks is less than their investment value as interests in a going business (as limited by the call price). Here, the Commission construed the *Otis* case as meaning that the Holding Company Act should not be permitted to mature claims and thereby transform the existing value of a security in a going concern into a matured claim, i.e., a liquidation value, which might be greater or less than such existing value (R. 72a). Since the "existing" value of Engineers' preferred stocks, whether measured by investment value or by the redemption price at which the common stockholders can terminate the preferred stock interest in the business, exceeds the liquidating value, the Commission concluded that the rule of strict priorities requires that the preferred stockholders be paid an amount equal to their redemption prices in order to satisfy their prior claim to the assets and earnings of the company.

1. While the court below has agreed with the Commission that under the *Otis* case the liquida-

tion preference is not dispositive, it has rejected what the Commission regards as the only method of computing the equitable equivalent of the rights surrendered consistent with the doctrine of strict priorities reaffirmed as applicable to Section 11 reorganizations by the *Otis* case. The court below criticized the Commission for failure to ascertain the future earning power of the system and to apportion that earning power between the preferreds and common based on their respective claims to income, "as it did in the United Light & Power case" (R. 35). But that technique is appropriate only where, as under the United Light & Power plan, a new security is being allocated between preferred and common stockholders. The plan here involved—and both courts below held it to be appropriate—contemplates paying off the preferred in cash. Thus, as the court below recognized, the problem was simply to determine "just recompense [in cash] for the security which he [the preferred stockholder] would give up" (R. 38). To the Commission, this meant giving to the preferred stockholder in cash the current value of his stock as ascertained from undisputed evidence. Any valuation formula based upon apportionment of earning power which gave a lesser amount to the preferred stockholders would presumably violate the strict priorities rule as applied in the *Otis* case.

2. Similarly, the court below also criticized the Commission because it made no finding at all as

to the value of Engineers' common stock. Where, as here, the propriety of paying off the preferred stockholders in cash is unchallenged, and the common stockholders receive the residue of Engineers' assets, determination of the dollar value of the common stock would serve no purpose. If the price to be paid to the preferred stockholders for their shares is the price required by law, the common stockholders receive the full economic benefit of the retirement of the preferred and the residual assets—and that is all they are entitled to receive. Under such circumstances, this Court has held that the determination of dollar values is not required. *Ecker* v. *Western Pacific R. Co.*, 318 U. S. 448; *Group of Institutional Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 564-565.

3. The court below held that the Commission erred in valuing the preferred stock "*ex* the Public Utility Holding Company Act, i.e., as if the Act had never been passed", and not valuing the common stock "by a similar standard." The context indicates that the court below regarded the Commission's valuation of the preferred stock on a going concern basis, rather than at the amount of its liquidation preference, as valuing the preferred as if the act had not been passed. From this premise the court reasoned that consistency requires the Commission to value the common stock as if the act had not been passed, i.e., by reconstituting the entire history of the enterprise since 1935, determining, *inter alia*, what divest-

ments were attributable to the act and computing in retrospect what "losses" had occurred where the proceeds of the sales might be found less valuable by today's standards than the divested assets if retained. Thus, the Commission is required to add back such losses "to the credit side of the enterprise's balance sheet" (R. 37) and thus in some way shift all or part of the burden of such losses from the common to the preferred stockholders.[6] We submit that the Commission valued both preferred and common stockholders' interests by a "similar standard" in making sure in each case that the interest received by reason of the plan should have a value at least equal to the interest surrendered.[7] Nor was it inconsistent for the Commission to apply the fair and equitable standard to the plan before it, so as to prevent the plan itself from causing a shift in values from preferred to common stockholders (or vice versa) as those values would exist apart from the plan, without pushing the "ex the act" concept to the extent of attempting to decide how preferred and

---

[6] The opinion below suggests as a possible escape from such a hypothetical reconstitution of Engineers' balance sheet that the Commission may do its valuation "intra the act" which we interpret as treating the preferred stockholders' liquidation preference as dispositive (R. 37). This, however, would in our opinion contravene the decision in the *Otis* case, and apparently the court below agrees (R. 34).

[7] Both of the courts below accepted the hypothesis of losses due to the Act despite the fact that marketwise the common stock increased in value from a low of 1⅛ in 1935 to 36 on February 13, 1946, the latest date covered in the hearings before the Commission (R. 62a-63a, n. 45).

common stockholders would have fared if the Act had never been passed.

It seems clear that any method of shifting to the preferred stockholders losses as determined by such a reconstruction of Engineers' balance sheet would violate the doctrine of strict priorities. It also makes the task of administering the Act one of constantly increasing difficulty whereby each new step in simplifying a holding company system requires a reappraisal of everything that has gone before. The respondent common stockholders have interpreted the opinion below as not requiring a definitive evaluation by the Commission of the precise amount of losses and offsetting gains attributable to the enactment of the Holding Company Act, but as requiring the weighing of such hypothetical losses with other equities in the case (R. 111). This interpretation is close to the concept of "colloquial equities" articulated by the district judge as supplanting in Section 11(e) reorganizations the fixed principle of strict priorities (R. 291a). The district court had stressed as colloquial equities which "looked towards 'non-payment of the premium" (a) that Engineers did not receive as much as $98 per share and the public did not pay initially more than $100 per share for the preferred; (b) the market history of the preferreds; (c) the assumed losses from past divestments; (d) that the present high value of the preferred reflects retained earnings which might have been paid out in dividends to common stock

if the management had not deemed it desirable to conserve cash *inter alia* in anticipation of retirement of the preferred as a step in compliance with Section 11 (R. 289a).[8] The court below restates this theory of the district judge without expressly accepting or rejecting it, and admonishes the Commission to weigh "all pertinent factors and substantial equities" (R. 38) in arriving at the equitable equivalent of the interests surrendered, and makes it clear that a mere financial appraisal of "the investment value" of the interests surrendered is not a sufficient measure of "equitable equivalents".[9] To the extent that the opinion be-

[8] The district judge's rejection of a fixed principle of fairness and equity in favor of an undefinable concept of colloquial equity was further elucidated in a subsequent case in which the same court happened to agree with the Commission's 71 F. Supp. 1003, 1004, 1005 (D. Del), in which the court below stated:

> * * * the test is not simply whether the senior security holders, in their order of preference, get the equitable equivalent of the rights surrendered as they would in a reorganization case where insolvency obtains, i.e., the test exemplified by Group of Institutional Investors et al. v. Chicago, Milwaukee, St. Paul & Pacific R. R. Co., 318 U. S. 523, * * * but whether all classes of stockholders are getting fair and equitable treatment based on notions of colloquial equity.
>
> * * * * * * *
>
> * * * I wish to re-emphasize that once the charter provision [on liquidation] is regarded as not controlling, the relative rights of the various security holders are determined by the applications of standards of colloquial equity.

finding as to fairness. See In the matter of cities Service Co.

[9] The Commission, of course, recognizes the propriety of applying the sanction of subordination or limitation to cost. Cf *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194, rehearing denied, 332 U. S. 783. Here, however, there was no suggestion of inequitable conduct on the part of the preferred stockholders who did not even have voting control.

low does rest upon the necessity for including such imponderables in the "fair and equitable" standard, it brings to the valuation process a scope of discretion that is without standards, for the innumerable hypotheticals which might be constructed with equal justification will place the Commission and perhaps the enforcement court in an almost wholly arbitrary realm.

II

The court below held that under Section 11(e) a district court must, like "an equity reorganization tribunal", exercise a full and independent judgment as to the fairness and equity of the plan, and, conversely, that such a court is not limited in its role as is a circuit court of appeals under Section 24 of the Act. Asserting that this was "a question of law which, we think, goes to the heart of the instant controversy", the court below recognized that its conception of the function of the district court was in conflict with decisions of the First and Eighth Circuits in *Lahti* v. *New England Power Ass'n*, 160 F. 2d 845, 858, and *Massachusetts Mutual Life Ins. Co.* v. *S.E.C.*, 151 F. 2d 424, 430, respectively. The court below rejected as not controlling, the principle enunciated by this Court in *S.E.C.* v. *Chenery Corp.*, 332 U. S. 194, 207, in which a Commission order issued under Section 11(h) was reviewed under Section 24, that the review function is at an end "when it becomes evident that the Commission's action is based upon

substantial evidence and is consistent with the authority granted by Congress."

The court based its interpretation of the role of the district court under Section 11(e) upon the language of that sub-section read in the light of other reorganization statutes, and upon certain excerpts from the legislative history of the Act and statements by Commission officials. The Commission agrees with much of what the court below states concerning the intention of the Congress to have the Section 11(e) court function as an independent check upon the Commission's determination that a plan is fair and equitable and also that the respective roles of Commission and enforcement court should be in general similar to the relationship under Section 77 of the Bankruptcy Act between the Interstate Commerce Commission and the reorganization court. Thus, even in uncontested proceedings the Commission has consistently taken the position that the district court must be satisfied affirmatively that the plan is "fair and equitable." The Commission has also taken the position that the "opportunity for hearing" prescribed in connection with proceedings in the district court extends to persons who did not appear in the administrative proceeding.[10]

[10] The district court's supervision of the execution of the plan serves as a further safeguard, the significance of which may depend on the nature of the plan: Section 11(e) provides "that the court shall have jurisdiction to appoint a trustee", which could be the Commission, to "hold or adminis-

We believe, however, that the Court below has misapplied the analogy to Section 77 of the Bankruptcy Act and has erred in assuming that that analogy authorized the district court to reject the Commission's finding with respect to the instant plan on discretionary grounds which would not be open to a Circuit Court of Appeals upon direct review of a similar order under Section 24(a) of the Act.

The following anomalous consequences would flow if the construction by the court below should prevail: (a) while Section 24(a) and Section 11(e) are alternative ways of submitting to judicial scrutiny a plan theretofore approved by the Commission, the scope of review in the two proceedings would be radically different; (b) where after affirmance of the Commission's approval order by a Circuit Court of Appeals it becomes necessary to seek enforcement in a district court it may be urged that the enforcement court has discretion to reject the findings which the Circuit Court of Appeals has affirmed;[11] (c) the breadth of dis-

---

ter, under the direction of the court and in accordance with the plan" the assets involved. Thus far Section 11(e) plans have not involved substantial discretion as to execution and have been administered by corporate officers under the direction of the court.

[11] We question whether even the court below would push its conception of the independent responsibility of the district court this far. Section 24(a) provides that upon the filing of a transcript the reviewing Circuit Court of Appeals "shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part," and that the judg-

cretion conferred on the district court, unless limited by exercise of equally broad revisory powers in the Circuit Courts of Appeals and in this Court, would preclude uniform administration of the statute and make the treatment of a nation-wide groups of security holders depend upon accidents of venue; (d) to the extent that the district judge is vested with a discretion to check the Commission but not to prescribe the standard which shall govern the Commission's disposition of the case there would be a possibility of deadlock resulting from conscientious disagreement.

The importance of the issue as to the scope of review and the practical difficulties raised by the decision below as to that issue, are interrelated with the question of whether there is any room at all in the application of the fair and equitable standard for the special or colloquial equities emphasized by the courts below. For these reasons and because of the conflict of decision between the Circuit Courts of Appeals, it is important that this Court determine the scope of the powers vested in the district court by Section 11(e).

---

ment of the court "shall be final" subject to review upon certiorari. In the only instance where a district court has considered a plan theretofore affirmed by a Circuit Court of Appeals, the district judge deemed himself limited to inquiring into developments subsequent to the order which the Circuit Court of Appeals had affirmed. See *In re Columbia Oil & Gasoline Corp.*, Civ. Action No. 290 (D. Del. 1942, unreported).

CONCLUSION

For the reasons stated, this petition for a writ of certiorari to the Circuit Court of Appeals for the Third Circuit should be granted.

Respectfully submitted,

PHILIP B. PERLMAN,
Solicitor General.

ROGER S. FOSTER,
General Counsel,
Securities and Exchange Commission.

Questions presented	2
Statement	4
Summary of argument	17
Argument	22
I. The Commission properly interpreted and applied the fair and equitable standard of Section 11 (e) in the light of the undisputed facts	22
A. The Otis case upholds the Commission in applying the doctrine of full priority by valuing preferred stock on a going-concern basis	22
B. The principle of strict priority applies to the entire bundle of preferred stockholders' rights, including going-concern values in excess of involuntary liquidation preferences	28
C. Contrary to the holding of the Court of Appeals the Commission's valuation of Engineers' preferred stock gave adequate consideration to the future earning power of Engineers	35
D. The Commission's finding that the plan accorded preferred stockholders no more and no less than fair compensation for the surrender of their prior claim, and that it was beneficial to the common to retire that prior claim in cash, was adequate support for its conclusion that the plan was fair to common stockholders	43
E. The Court of Appeals erred in its criticism of the Commission for allegedly valuing "the preferred ex the Public Utility Holding Company Act, i. e., as if the Act had never been passed" but omitting "consideration of the common by a similar standard"	46
(1) The court's concept of valuation as if the Act had never been passed	
(2) The hypothesis of losses attributable to the Act	53

817447—48——1

Summary of argument—Continued
I. The Commission properly interpreted—Continued
E. The Court of Appeals erred—Continued
(3) Impracticability of reconstituting Engineers balance sheet as if the Act had never been passed
a. Puget Sound reorganization
b. El Paso Natural Gas Co. divestiture
(4) The irrelevance of the issue of losses
F. The miscellaneous "colloquial equities" upon which the district court relied and which the circuit inferentially considered appropriate in determining the equitable equivalent of what was surrendered are likewise irrelevant to such a consideration
(1) The issue price and past market history
(2) Dividend history
II. Both courts below and the Commission correctly refused to treat the involuntary liquidation preferences specified in the charter of Engineers as controlling
III. The court below erred in holding that the district court's independent responsibility for approval of the plan includes a power to reject the results of the Commission's valuation on the basis of a discretionary weighing of imponderable "colloquial" or "special" equities
A. Section 11 (e) grants to the district court a scope of review similar to that exercised in the district court under Section 77 of the Bankruptcy Act
B. The scope of review under Section 77 and Section 11 (e)
C. The issue of fairness in this case, if not a pure issue of law, falls within the area where finality attaches to the Commission's determination
D. To construe Section 11 (e) as conferring on the district court a valuation function coordinate with that of the Commission would make the statute unworkable
Conclusion
Appendix A: Pertinent provisions of the Public Utility Holding Company Act of 1935 and Section 77 of the Bankruptcy Act

v.

SECURITIES AND EXCHANGE COMMISSION, ET AL.

ON PETITIONS FOR WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT

BRIEF FOR THE SECURITIES AND EXCHANGE COMMISSION

OPINIONS BELOW

The opinion and judgment of the court below (R. 12), and the opinion denying petitions and

cross-petitions for rehearing (R. 138) are reported at 168 F. 2d 722. The opinion of the district court is reported at 71 F. Supp. 797 (R. 283a). The findings and opinions of the Commission dated December 4, 1946, and January 8, 1947, have not yet been officially reported but are set forth in the Commission's Holding Company Act Release Nos. 7041 (R. 25a) and 7119 (128a).

JURISDICTION

The judgment of the Circuit Court of Appeals for the Third Circuit was entered on March 19, 1948 (R. 41). Petitions and cross-petitions for rehearing were denied on June 11, 1948 (R. 138). The Commission petition for a writ of certiorari was filed August 16, 1948, and granted on October 25, 1948 (R. 143). The jurisdiction of this Court is invoked under 28 U. S. C. 1254 made applicable by Section 25 of the Public Utility Holding Company Act of 1935, 49 Stat. 803 (15 U. S. C. 79 *et seq.*)

STATUTE INVOLVED

The applicable provisions of the Public Utility Holding Company Act of 1935 and of Section 77 of the Bankruptcy Act are set forth in Appendix A, *infra*.

QUESTIONS PRESENTED

The holding company which is being liquidated in compliance with Section 11 is solvent. Under its charter, the three classes of preferred stock

have call or redemption prices higher than their involuntary liquidation preferences. Each of the three classes of preferred shares has an investment value at least equal to the call price. The following questions are presented:

1. Did the Commission properly apply the "fair and equitable" standards of Section 11 (e) of the Public Utility Holding Company Act as interpreted in *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, in approving a plan which would pay to the preferred stockholders cash equal to the current going concern value of their shares but not in excess of the call price, where this amount exceeds the involuntary liquidation preference of such shares?

2. Did the Commission and the courts below properly hold that under the *Otis* case the involuntary liquidation preference of the preferred stocks is not a controlling determination of what the preferred stockholders should receive under the instant plan?

3. Where a plan under Section 11 (e) of the Public Utility Holding Company Act is enforced in a district court and there is no dispute as to the sufficiency of the evidence upon which the Commission based its finding of fairness, is the court authorized to reject such finding on the basis of a discretionary weighing of equities and without reference to the generally recognized

limitations upon the scope of judicial review of policy and fact finding functions of the agency?

4. If the Commission erred, is remand necessary under the circumstances of this case?

STATEMENT

This case involves a plan filed under Section 11 (e) of the Public Utility Holding Company Act of 1935 by Engineers Public Service Company ("Engineers"). The plan contemplated *inter alia* satisfying the claims of Engineers' preferred stockholders in cash as a preliminary to distributing its remaining assets to common stockholders and dissolving. In addition to $14,650,000 in cash and U. S. treasury securities, Engineers' assets consisted chiefly of 99.8 per cent of the common stock of Virginia Electric and Power Company ("Virginia"), all of the common stock of Gulf States Utilities Company ("Gulf States"), and all of the common stock of El Paso Electric Company ("El Paso"). The only substantial controversy before the Commission, and the question upon which the Commission and both courts below have differed, related to the application of the "fair and equitable" standard of Section 11 (e) to the treatment accorded the preferred and common stockholders. The other aspects of the plan raised no important dispute and have been consummated, reserving the

present issue through an "escrow" arrangement which set aside the funds in dispute.[1]

Engineers had no debt outstanding, but had three series of cumulative preferred stock of equal rank: 143,451 shares of $5 series, 183,406 shares of $5.50 series, and 65,098 shares of $6 series. The plan as originally formulated and filed by the company's management, which was controlled by common stockholders,[2] proposed in

[1] This Court has previously been advised of the partial consummation of the plan as mooting the cases then pending upon cross petitions of the Commission and of Engineers to review the decision of the United States Court of Appeals for the District of Columbia, 138 F. 2d 936, which upheld in part determinations of the Commission under Section 11 (b) (1). That decision was vacated as moot. 332 U. S. 788.

[2] Counsel had advised Engineers' directors that—

"Although, as will appear, I am unable with assurance to advise you that the premium is not payable, I have no hesitancy in advising you that, as directors, I think you should, for your own protection, take the position that the premiums are not payable. This is so because if you should, as a Board, voluntarily pay the premiums and it should later, as the law on the subject develops further, be determined that the premiums were not payable, it is possible that you might incur liability to the common stockholders on the ground of waste of assets" (R. 1725a).

One director, Kellogg, who agreed that preferred stockholders should receive only $100 per share objected that "the Board should honestly apply their best judgment to the case without fear that their good faith would be questioned" (R. 1962a). President Barnes agreed with counsel that if "there is any doubt as to whether the preferred stockholders are entitled to a premium, the Directors would be guilty of wasting the assets if they voluntarily paid the premium" (R. 1965a).

general to pay preferred stockholders only the amount of their involuntary liquidation preference, which was $100 a share and accrued dividends for each series of preferred stock, to distribute the remaining assets to the common stockholders,[3] and to dissolve.[4] In order to assure an adequate presentation of the preferred stockholders' point of view, the Board of Directors authorized a member primarily interested in the preferred stock (Streeter) to employ counsel partially at the company's expense. That director and members of his family are the petitioners in No. 227. There also appeared before the Commission representatives of a group of institutions which held preferred stock (Home Insurance Company, et al., petitioners in No. 243). The preferred stockholders' representatives appeared in opposition to the plan and contended that they should receive $105 for the $5 series and $110 for the $5.50 and $6.00 series, amounts which were equal to the voluntary liquidation preferences and the redemption prices, specified in the charter. The possibility

[3] Gulf States was to be distributed pursuant to a rights offering program entitling Engineers' common stockholders to one share of Gulf States for each share of Engineers common held at a subscription price of $11.50 per share.

[4] At first Engineers proposed, in the alternative, that after paying off the preferred it would dispose of its interests in Gulf States and El Paso and merge with Virginia. The merger alternative was removed during the hearings on the plan.

that Engineers would be required to pay the preferred amounts equal to the voluntary liquidation preference and redemption price of the stock had been recognized from the start, and it was likewise recognized that it was advantageous from the common stockholder's point of view to go forward with the plan irrespective of how that issue might be ultimately determined (R. 719a, 723a, 807a).

All the testimony adduced, by both the preferred stockholders and management, valued the preferred stocks on a going concern basis at figures in excess of their voluntary liquidation preferences and redemption prices. Dr. Ralph E. Badger, an expert witness called by the preferred stockholders, in an exhaustive and detailed analysis (R. 2088a), concluded that, apart from their call provisions, and on the basis of quality and yield, the three series of preferred should be valued at $108.70, $119.57, and $130.33, respectively. Even the president of Engineers, Mr. Barnes, testified that the preferred stocks would have been refinanced and retired by call if it were not for the impact of Section 11, and that on a going concern basis the stocks should sell above their redemption prices (R. 522a, 658a–663a). Barnes agreed that apart from the impact of Section 11, and taking into account the redemption prices, the fair value for the preferreds, meaning "what a willing buyer

would pay and what a willing seller would take in today's market for such securities", would be somewhat above the redemption prices (R. 522a). Barnes referred to possibilities of inflation, depression, government competition, adverse changes in regulatory policy, or developments in the field of atomic energy which might in the future cause Engineers' preferred stocks to sell below "this top level". These factors, he conceded (R. 525a), "are common to the utility industry generally * * * so that present price levels of securities reflect the extent to which the investing public is presently appraising these hazards. * * *" Although Badger and Barnes characterized the preferred stocks differently, Badger using the term "medium grade" (R. 1133a) and Barnes using the term "closer to a low-grade preferred" (R. 1140),[5] they

[5] In the context of their testimony it is clear that both witnesses were characterizing as "high grade" preferred stocks having such a low risk factor as to sell upon a yield basis approaching high grade, long term bonds. Badger expressed the opinion in the light of the then current yields for other preferred stocks which he regarded as comparable that a proper yield for the Engineers preferred, absent a call price, would be 4.6% (R. 1062a–1063a, 2118a). His valuation figures given in the text are the mathematical results of applying this yield basis. Badger referred to a Standard Statistics report on the yield of high grade bonds disclosing that they had dropped from a 5.28 per cent basis in 1932 to a 2.7 per cent basis in 1945, and that the yields on high grade preferred stocks had dropped from a 6.13 per cent basis in 1932 to a low level of 3.65 per cent in 1945, pointing to individual high grade preferred stocks selling to yield as low as 3½ per cent (R. 1017a). Badger also testified to his belief

agreed, as Engineers stated in its brief before the Commission, that "the present value or investment worth of these three series of stock, on a going concern basis and apart from the Act, under prevailing yields applied to comparable securities" was in excess of the respective call prices (R. 67a, see also R. 1211a, 1953a). Other evidence in the record also confirmed the position of the preferred. For example, the financial statements disclosed that, as of June 30, 1945, each share of preferred stock had an asset coverage of $218.11.[6] From the point of view of income which the Commission emphasized; the average coverage of fixed charges and preferred dividends by the system over the five years preceding 1945 was 1.4 times and preferred dividend requirements were earned an average of 1.5 times over the same period on a corporate basis (R. 64a).

Applying the Holding Company Act standards, which required the payment to the stockholders to be the fair and equitable equivalent of what was surrendered, the Commission considered all the charter rights being surrendered by the pre-

---

that the low money rates which were an element in his valuations were likely to continue in the foreseeable future. (R. 1064a). This prophecy was disputed by Engineers. The Commission did not prophesy as to the future course of the money markets since it directed its inquiry to an evaluation of the Engineers preferred as of the time its decision was rendered.

[6] Even if the entire unrestricted surplus were used to pay dividends to the common stock the preferred would still have an asset coverage of $194.91.

ferred, including the right to receive annual dividends of $5, $5.50, or $6.00 per share in perpetuity or until redemption or the liquidation of the company, the remoteness of the possibility of involuntary liquidation in view of the asset coverages and equity value of the stock, and the right to $105 or $110 per share, depending on the series, in the event of voluntary liquidation or redemption. The Commission determined, in accordance with the undisputed testimony, that the current worth of the preferred, or its "investment value" on a going concern basis, was at least equal to the respective call prices.[7] It thereupon concluded, on the basis of its own analysis of the record, that it was not fair and equitable to pay the preferred any less than the call prices, which fixed a "ceiling" upon their claims. The Commission did not find it necessary to determine what the preferred stocks would be worth in the absence of a call price.

The common stock was then considered under the same standards of the Act, and as a residual equity interest, with a right to assets or dividends

[7] The figures before the Commission covered actual earnings through June 1945. At the time of oral argument before the Commission, September 5, 1946, counsel for Engineers advised the Commission that there had been no material change in the earnings picture, and that the management's estimates of earnings for the year 1946, which were slightly higher, and which "the Commission can consider * * * admissions against interest," had proved on the conservative side in the light of experience (R. 1282).

only after the preferred was satisfied. It was determined that the plan, in according to the common the entire interest in the enterprise after the retirement of the preferred stock, satisfied those standards. The Commission noted that "the fair and equitable" standard being one of absolute priority "requires that full compensation be given the senior securities before any payment or participation is permitted to the junior securities," making it necessarily fair to the common, in the absence of other circumstances, to give them everything that was left after according fair treatment to the preferred (R. 73a). The Commission found that "the retirement of the preferred stock will be of immediate benefit to the common stockholders" (R. 69a).[8] The Commission found it unnecessary, however, to place a dollar valuation upon the interest the common stockholders received and surrendered.

In considering the charter rights of the preferred stock, the Commission agreed with Engineers that the proposed liquidation did not make applicable the charter voluntary liquidation preferences as dispositive of preferred stockholders' claims since the proposed liquidation was "caused by the Act and is in that sense 'involuntary'"

[8] The management had made it clear that they regarded the plan as desirable from the point of view of the common stockholders whether or not it should be held necessary to pay the preferred amounts equal to their voluntary liquidation preferences redemption prices (R. 719a, 723a, 807a).

(R. 61a).[9] This holding accords with a long line of Commission and court precedents under which bonds and preferred stocks have been retired in liquidations required by Section 11 without treating such a liquidation as necessarily requiring payment of the call price.[10] The Commission rejected Engineers' contention that because the liquidation was not "voluntary", the charter involuntary liquidation preferences should be treated as the exclusive measure of the preferred stockholders' claims. In so holding the Commission relied on this Court's ruling in *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, at p. 638, "that Congress did not intend that its exercise of power to simplify should mature rights created without regard to the possibility of simplification of system structures which otherwise would arise only by voluntary action of the stockholders, or involuntarily, through action of creditors" (R. 61a). This conclusion was accepted by both courts below (R. 288a, note 2, and R. 34).

Engineers had urged that losses had resulted from previous dispositions of property required by the Act and that the payment of anything in excess of $100 a share to the preferred would for that reason operate as a "windfall" such as the

[9] Commissioner Hanrahan, concurring in the result, expressed the opinion that the liquidation was voluntary and that the voluntary liquidation preferences were dispositive of the issues (R. 140a–141a).

[10] The pertinent authorities are discussed at p. 79, *infra*.

Otis case sought to avoid. The Commission rejected the factual basis for this hypothesis in view, *inter alia*, of the vast improvement in market value and investment position of Engineers common stock since the passage of the Act (R. 72a, n. 55). In fact, independent analysis by members of the investment industry indicated that the common stock would be the chief beneficiary of the dissolution of Engineers and the elimination of the preferred (R. 1990a, 2023a). In any event, the Commission regarded the issue as to losses in prior transactions as irrelevant. It understood the *Otis* case as holding only that the Act was not intended "to mature claims and thereby transform the existing value of a security in a going concern into a matured claim which might be greater or less than such existing value"[11] (R. 72a).

Engineers decided on advice of counsel (R. 1949a) to accept the Commission's findings and amended the plan to provide for the additional payments to the preferred. Two common stockholder groups (both are respondents in Nos. 226, 227, and 243 and one is petitioner in No. 266) then appeared in opposition to the amended plan.

[11] The Commission noted that the precise issue in the *Otis* case was whether preferred stockholders should benefit at the expense of the common stock by treating the liquidation preference as matured, whereas in the instant case the issue was whether common stockholders should receive a windfall by being permitted to retire preferred stock at less than its going concern value (R. 72a).

The amended plan was approved by the Commission as fair and equitable to both the preferred and common stockholders.[12] Upon application for enforcement of the plan, the district court, in the exercise of what it considered to be its "affirmative and independent duty" (R. 286a), found that $100 per share was the fair and equitable equivalent of the claim of each series of preferred stock, and disapproved that portion of the plan calling for a payment of more than $100 per share. This conclusion was reached by the district court despite its acceptance of the Commission's finding that the "present value for these preferreds [is] substantially in excess of the charter liquidating preferences"[13] (R. 290a). The district court rejected the conception that the amount of cash to which the preferred stockholders were entitled should be determined on the basis of a valuation of (or the investment value of) what they surrendered by the plan. Instead it construed the *Otis* case as determining participation in accordance with a standard of

[12] — S. E. C. — (1947), Holding Company Act Release No. 7119 (R. 128a).

[13] Subsequent to its opinion the court adopted certain findings of fact, in the form presented by the common stockholders, which, while not repudiating the acceptance of the expert testimony as to present value, stressed the possibility that through future increase in interest rates, or decline in earnings, or both, the future value of the preferred stock, if allowed to remain outstanding, might well be substantially less than its present value (R. 310a–315a).

"colloquial equity." (R. 291a). Various non-valuation criteria were weighed to determine whether or not they "look toward non-payment of the premium" (R. 289a). The facts cited were (a) the issue price and market history (R. 289a); (b) that past divestments required by the Act occasioned losses and were a hardship on the common stock (R. 290a); (c) that the present high value of the preferred reflects retained earnings representing "past sacrifices" by the common stock (R. 291a). As we note in the argument, some of the factors emphasized by the district judge are relevant to appraising the present value of the preferred and to that extent were considered by the Commission. The district court, however, having agreed with the Commission's findings as to the present value of the preferred on a going concern basis, regarded these factors as significant in determining that it was not fair in a colloquial sense to give the preferred stockholders the full going concern value of the interest which the plan required them to surrender.[14]

[14] The district judge's rejection of a fixed principle of fairness and equity in favor of an undefinable concept of colloquial equity was further elucidated in a subsequent case in which the same court happened to agree with the Commission's finding as to fairness. See *In the Matter of Cities Service Company*, 71 F. Supp. 1003, at pp. 1004, 1005 (D. Del), in which the court below stated:

"* * * the test is not simply whether the senior security holders, in their order of preference, get the equitable equiva-

The court entered an order approving and enforcing the plan except insofar as it contemplated payments of any amount in excess of $100 per share and accrued dividends to the preferred stockholders. It also approved the proposed escrow agreement whereby additional amounts were set aside for preferred stockholders if as a result of an appeal they should be held entitled to the larger amounts which they claimed and which the Commission had approved. (R. 318a.)

On appeal by the Commission and preferred stockholders, the Circuit Court of Appeals for the Third Circuit upheld the district court in its rejection of the Commission's determination that the amended plan was fair and equitable, but held that the district court "cannot value the securities, find equitable equivalents therefor and substitute its own estimates for those of the Commission" (R. 39). The decree of the district court was accordingly vacated and the case was remanded to the Commission for a fresh determination of the amount which the preferred

---

lent of the rights surrendered as they would in a reorganization case where insolvency obtains, i. e., the test exemplified by *Group of Institutional Investors, et al.* v. *Chicago, Milwaukee, St. Paul & Pacific R. R. Co.*, 318 U. S. 523, * * * but whether all classes of stockholders are getting fair and equitable treatment based on notions of colloquial equity.

* * * * * *

"* * * I wish to re-emphasize that once the charter provision [on liquidation] is regarded as not controlling, the relative rights of the various security holders are determined by the application of standards of colloquial equity."

stockholders should receive. The court neither expressly approved nor disapproved the conception of the district judge that "colloquial equities" rather than strict priorities should govern in Section 11 (e) reorganizations. It did, however, indicate that it was proper for the district judge in the exercise of his independent judgment to weigh as reasons for rejecting a plan approved by the Commission the various elements which the district judge had characterized as "colloquial equities." Apparently, the Commission on remand would be required in some fashion to appraise these "equities."

All appellants filed petitions for rehearing and in the Commission's case for clarification as well, which were denied. All appellees filed cross-petitions for rehearing, directed to the holding that the case should be remanded to the Commission. These petitions were also denied.

SUMMARY OF ARGUMENT

I

The Commission properly accorded Engineers preferred stockholders the going concern value of their interests. It is not disputed that the Commisson properly approved a type of plan under which the preferred stockholders surrendered their investment for cash, and the common stockholders received the entire residual assets. Both courts below agreed with the Commission that under *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, the

involuntary liquidation preferences of $100 per share were not determinative of the preferred stockholders' claims, and both courts below likewise upheld the Commisson's determination that the value of the preferred stocks on a going concern basis was at least equal to the amount of the redemption prices.

The *Otis* case holds that the principle of strict priority applies under Section 11 (e) in determining the rights of stockholders of a solvent company, and that the preferred stockholders are entitled to the going concern value of their stock. Full compensation must be given for the entire "bundle" of rights surrendered, including the preferential dividend claims as well as the liquidation preferences. Under the principle of the *Otis* case the preferred is entitled to this going concern value whether it is more or less than the amount to be received on liquidation. The holdings of the courts below are contrary to the rule of full priority insofar as they permit diminution of what the preferred stockholders would otherwise receive by reason of "colloquial" or "special" equities which relate neither to the appraisal of the financial value of the interests surrendered, nor to the imposition of sanctions for inequitable conduct.

The Commission's findings of present value, which the courts below accepted, took into account the risk that the future value of the preferred stock, if it remained outstanding, might be less

than its value as of the time when the preferred stockholders were required by the plan to surrender their investment. This appraisal of the risk factor, which was conceded by the Engineers management, necessarily took into account the future earning power of Engineers although it did not require a precise forecast of the extent that future earnings might exceed what was necessary to maintain preferred stock dividends.

According the preferred stockholders no more and no less than their full priority rights and giving everything else to the common stockholders was necessarily fair to the common. In any event, it appeared that the common were benefited by the plan, and to have reduced to a dollar valuation what the common received and surrendered by the plan would have complicated the appraisal of fairness without affording any useful check upon the results reached by the simpler process of focusing attention upon the proper amount of cash payable to the preferred. Contrary to the holding of the Court of Appeals, this method of valuation involved the consideration by a similar standard of the interests of both preferred and common stockholders. It did not involve valuing either the preferred or the common "as if the Act had never been passed." Instead, as in the *Otis* case, the method which the Commission used was that of "giving value to the rights of the preferred in a going concern rather than as if by sale and distribution." *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 635.

The requirement of the court below that the Commission reconstitute the balance sheet of Engineers as it would have been if the Act had never been passed is administratively impracticable and could not affect the result unless, contrary to the rule of strict priorities, the risk of loss in prior transactions is to be shifted from junior to senior security holders. Other colloquial equities such as the issue price and past market history and the dividend history of Engineers are likewise irrelevant to the fair and equitable standard, and insofar as pertinent to the valuation of the preferred on a going concern basis were adequately reflected in the valuations which the courts below accepted.

II

The Commission and the courts below properly followed the *Otis* case in holding that the liquidation preferences of the preferred are not the controlling measure of their rights of participation. The decision in the *Otis* case upholding the Commission's valuation of the preferred stock on a going concern basis rests on the conclusion that Congress did not intend Section 11 plans to accelerate maturities and thereby shift values from one class of security holders to another. It does not rest upon the particular form which the liquidation takes, nor upon whether the holding company being liquidated is a top holding company whose assets consist of stock in an-

other holding company which survives the plan, or a holding company in the first degree, the assets of which consist of operating company common stocks.

III

The scope of judicial review applicable in this case depends we believe, not upon differences between the review function of a court of appeals under Section 24 (a) and a district court under Section 11 (e), but upon the nature of the administrative determination upon review. The question here does not relate to the evidentiary foundation for the Commission's decision, assuming that it followed a proper method of valuation. Whether or not it followed a proper method presents the question of law which we think is the issue in this case.

If, as the court below seemed to assume, the question is not one of law, we submit that the scope of review under Section 11 (e) is limited in the same manner as that applicable to determinations of the Interstate Commerce Commission under Section 77 of the Bankruptcy Act, which embodies a similar statutory scheme. Under this standard administrative determinations of value are sustained if supported by substantial evidence, *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 473; *R. F. C.* v. *Denver & R. G. W. R. Co.*, 328 U. S. 495, 505–509. The court's responsibility for the exercise of independent judgment concerning the plan is a review func-

tion limited primarily, though not entirely, to issues of law. On any theory of review, the court's function does not extend to rejection of policy determinations which are not arbitrary and are within the area of discretion delegated to the agency by the statute.

To whatever extent the review function of the Section 11 (e) court may extend beyond issues of law, its determinations as to what is fair and equitable should be controlling upon the Commission upon remand lest stalemates result from conscientious disagreement between court and agency. Such determinations of the court should likewise be open to full examination on appeal so that there may be uniform nation-wide administration of the fair and equitable standard rather than making allocations dependent upon accidents of venue.

ARGUMENT

I

THE COMMISSION PROPERLY INTERPRETED AND APPLIED THE FAIR AND EQUITABLE STANDARD OF SECTION 11 (e) IN THE LIGHT OF THE UNDISPUTED FACTS

A. *The Otis case upholds the Commission in applying the doctrine of full priority by valuing preferred stock on a going-concern basis*

There was, and is, no dispute that the Commission properly approved as "appropriate to effectuate the provisions of" Section 11 (b) a type of plan under which the preferred stockholders were to be paid in cash whatever amount might be

found fair and equitable and the entire residual assets were made available to the common stockholders.[15] This type of plan was the choice of Engineers' management, elected exclusively by common stockholders. The management regarded this type of plan rather than an allocation plan as advantageous from the point of view of the common stockholders (R. 719a, 723a, 807a). Thus, the basic issue of fairness which the plan tendered to the Commission was how much cash would constitute fair compensation to the preferred stockholders for the compulsory surrender of their investment. The Commission concluded that, under the doctrine of strict priorities, it was fair for the preferred stockholders to receive, and the common stockholders to pay, the undisputed value of that investment, computed on a going concern basis and in relation to the then current yield on investments of comparable risk.

[15] The cash which the plan made available was in part cash already on hand, and in part the proceeds derived from the sale of Engineers' holding in Gulf States Utilities Company pursuant to subscription warrants issued under the plan to Engineers' common stockholders. The subscription warrants were transferable and, since the market price of the stock was higher than the exercise price in the warrants they could be sold by stockholders who might not elect to pay the subscription price. To the extent of such sales it was, of course, the transferees of Engineers' common stockholders who received the Gulf stock free of the preferred stockholders' claim. Common stockholders who sold their warrants and did not contribute cash received in any event common stock of Virginia and El Paso plus the proceeds of the sale of their subscription warrants.

The district court, in applying what it described as standards of "colloquial equity" to determine the amount of cash which would fairly compensate the preferred for the surrender of their rights, apparently did not regard the doctrine of strict priorities as applicable. The Court of Appeals did not use the phrase "colloquial equities" except in summarizing the opinion of the district court. It did refer to the necessity that the Commission consider "all the pertinent factors" (R. 37, 38), and the context indicates that the Court of Appeals considered as pertinent what the district court weighed as "colloquial equities." Since the valuation standards which the opinion of the Court of Appeals imposes on the Commission appear to us also to be in contravention of the principle of strict priorities, we point out at the outset that this Court has unanimously held the doctrine applicable under the Holding Company Act to the reorganization of solvent companies and as between different classes of stockholders. The majority opinion in *Otis & Co.* v. *S. E. C.* 323 U. S. 624, 634, states:

> Like the bankruptcy and reorganization statutes, the Public Utility Holding Company Act, in providing that plans for simplification be "fair and equitable," incorporates the principle of full priority in the treatment to be accorded various classes of security interests. This right to priority in assets which exists between creditors and

> stockholders, exists also between various classes of stockholders.

See also n. 14, p. 634. The dissenting opinion was, if anything, even more emphatic in its assertion that the principle of strict priority applies in Section 11 (e) reorganizations of solvent companies (323 U. S. 624, at 647–648).

The point of difference between the majority and dissenting opinions in the *Otis* case was whether the charter liquidation preference was the measure of the preferred stockholders' rights to which priority should be accorded or whether, as the majority put it, the Commission properly "recognizes and applies the doctrine of full priority by giving value to the rights of the preferred in a going concern rather than as if by sale and distribution" (p. 635). In upholding the Commission as to that issue the majority opinion states (p. 638):

> * * * Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of creditors.

For that reason this Court concluded that the Commission "applied the correct rule of law as to the rights of the stockholders *inter sese*" in that "the rights of stockholders of a solvent

company which is ordered * * * to distribute its assets among its stockholders may be evaluated on the basis of a going business and not as though a liquidation were taking place" (p. 633).

In the *Otis* case the claim of the preferred stockholders, if measured by the charter liquidation preference, would have been greater than its existing value as an interest in a going business. The Commission considered the same principle applicable in the *Engineers* case where, in contrast to *Otis,* the involuntary liquidation value of the preferred stock was less than the undisputed value of its claim as an interest in a going business (as limited by the call price). In other words, the Commission construed the *Otis* case as meaning that Section 11 (e) reorganizations of solvent companies should not mature otherwise inchoate stockholders' liquidation preferences whether the amount of such liquidation preferences might be greater or less than going concern values (R. 72a). Both courts below upheld the Commission's interpretation of the *Otis* case as not making Engineers' involuntary liquidation preference "dispositive" (R. 288a, n. 2, and R. 34).[16] Engineers' common

[16] Since the decision of the court below this Court has had occasion to restate its holding in the *Otis* case as follows (*Schwabacher* v. *United States*, 334 U. S. 182, 199):

"In construing the words 'fair and equitable' in a federal statute of very similar purposes, we have held that although the full priority rule applies in liquidation of a solvent holding company pursuant to a federal statute, the priority is

stockholders still dispute the correctness of this holding, and urge grounds for distinguishing the *Otis* case which the courts below rejected. Nevertheless, in arguing that the courts below erred in their disposition of the valuation issues, we start with the assumption that they properly held the liquidation preferences not dispositive. In Point II, *infra*, pp. 75–84, we answer the common stockholders' contention that the courts below erred in so holding.

Once it is settled that the involuntary liquidation preference is but one factor in valuation, rather than the controlling measure of what Engineers' preferred stockholders are entitled to receive in the reorganization, and that the plan properly provided for a cash settlement with preferred stockholders, we believe it necessarily follows under the doctrine of strict priority that the amount of cash which the preferred stockholders should receive should be equal to the undisputed "present value or investment worth * * * on a going concern basis" or the "in-

---

satisfied by giving each class the full economic equivalent of what they presently hold, and that, as a matter of federal law, liquidation preferences provided by the charter do not apply. We said that, although the company was in fact being liquidated in compliance with an administrative order, the rights of the stockholders could be valued 'on the basis of a going business and not as though a liquidation were taking place.' Consequently the liquidation preferences were only one factor in valuation rather than determinative of amounts payable."

vestment values" of the preferred. If this is the correct rule of law, the Commission's valuation finds clear support in the evidence and indeed rests upon undisputed evidence.[17] We discuss below the various grounds upon which the common stockholders and the opinion below reject the Commission's ultimate conclusion that it was fair to give the preferred stockholder the current going concern value of their investment.

B. *The principle of strict priority applies to the entire bundle of preferred stockholders' rights, including going-concern values in excess of involuntary liquidation preferences*

This Court has held that the principle of strict priority requires full compensation for the entire "bundle of rights" surrendered. *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 528; *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 556. Similarly, the *Otis* case expresses the requirement for "full compensatory treatment," as an alternative expression for the requirement that " 'each' security holder in the order of his priority [shall receive] from that which is avail-

[17] Engineers' counsel themselves conceded this, both in argument before the Commission and in an opinion rendered the directors in connection with Engineers' decision to amend the plan to accept the Commission's view as to what fairness required (R. 67a, 1211a, 1953a). As we show below, the common stockholders' challenge to this valuation is, insofar as it relates to value as of the effective date of the plan, wholly unsupported in fact and basically involves a contention that it was not fair to value the preferred stockholders' claims as of the time they were compelled to surrender them.

able for the satisfaction of his claim the equitable equivalent of the rights surrendered.'" 323 U. S. at 639–640. See also *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448.

Counsel for the common stockholders have attempted to reconcile the decision below with the doctrine of strict priorities by arguing that the involuntary liquidation preference is the measure of the preferred stockholders' claim. See Point II, *infra*. Even where they purport to assume *arguendo* the correctness of the holdings below that under the *Otis* case the involuntary liquidation preference is not dispositive, they insist upon treating any claim on the part of the preferred stockholders to be compensated for loss of values in excess of $100 a share as a right of an ephemeral character not entitled to strict priority, but only to such limited recognition as may commend itself to the discretion of the court. This amounts to arguing that preferred stockholders are entitled to strict priority for their liquidation preference but not to receive the equitable equivalent of their dividend preference. But clearly the dividend preference is as much a part of the contract as the liquidation preference.[18]

[18] However, see Central Illinois' answer to petition for rehearing in the court below (R. 103), which states in part:

"It does not lie in the power of an administrative agency or even of a court of equity to enlarge the *preferential* claim of senior security holders, because such preference is purely a creature of contract. If in a liquidation or reorganization equitable considerations are found to warrant payment to

Common stockholders in the court below compared the preferred stockholders' claim to full compensatory treatment for their right to "excessive dividends" with the claim for interest on interest on corporate debt disallowed by this Court in *Vanston Bondholders Protective Committee* v. *Green*, 329 U. S. 156. We believe there is an obvious distinction, however, between refusing to allow interest on the unpaid interest which is accumulated during judicial administration, and refusing to allow preferred stockholders compensation for deprivation of future dividend claims at rates slightly higher than the going rate for investments of comparable risk. One of the evils of holding company preferred stocks was that their characterization as "preferred" tended to deceive the preferred stock investor by obscuring the extent of the risk factor resulting from the holding company preferred being junior to the operating company preferred stocks as well as to the bonds of the system. The past market history of Engineers' preferreds and the interruption of dividends during depression years illustrates the fact that the original preferred investment involved substantial risk. The fact that the

senior security holders of amounts in excess of the preferential claim established by the charter, such additional amounts do not form part of the *preferential* claim of the senior security holders but merely constitute a supplemental claim which must be balanced against corresponding equitable considerations in favor of the junior security holders." (See also the footnote to the above statement.)

dividend rates on Engineers' preferred stocks can now be characterized as "excessive", reflects improvement in Engineers' financial condition and lowered money rates from which Engineers common stockholders, on any theory, receive the major benefit.[29]

It should be noted that disallowance of interest on interest is a doctrine designed to prevent the misfortune of junior interests from operating to enrich senior security-holders. But allowing preferred stockholders compensation for being deprived of future dividend claims in amounts above the going rate in relation to risk is merely in recognition of a basic implication of the contract that (subject to the redemption price ceiling) the preferred stockholders are to share prosperity, to the extent of their limited dividend, in return for running risks which all too often approach that of common stockholders.

The common stockholders have also urged that recognition of going concern values which exceed involuntary liquidation preferences is unsound

[29] Engineers was benefited by cheap money in refunding operating company preferreds at lower rates. In addition, the value of the operating company common stocks which the plan makes available to Engineers common stockholders reflects the prospective yield on those common stocks, which, as qualified by the risk factor, must be evaluated in relation to the current cost of money. Because of the redemption price ceilings Engineers preferred will, even under the plan as approved by the Commission, obtain only a portion of the value otherwise added by cheap money to their dividend claims.

because recognition of the full going concern value of a high grade non-callable preferred would result in "leaving little or nothing for junior securities possessed of substantial value on the basis of every recognized criterion of reorganization law" (R. 104). This argument ignores the obvious fact that preferred stocks only become "high grade" so as to be valued in the market at rates approaching the yields for high grade bonds when their margin of security, both asset wise and earnings wise, is so substantial as to indicate that a great deal would remain for the common after full satisfaction of the prior rights of the preferred.[20]

Similarly, the district court in its appraisal of colloquial equities drew a distinction between the preferred stockholders receiving back their, or their predecessors', original investment, which approximated the involuntary liquidation pref-

[20] The only actual cases in which the Commission has had occasion to deal with non-callable preferred stocks under Section 11 (e) plans have been cases where, unlike Engineers, the charter limited the preferred to the same amount on voluntary liquidation as on involuntary liquidation. The Commission's valuation took into account the possibility that, apart from Section 11, the enterprise would have been liquidated, voluntarily or involuntarily. See *In the Matter of American Light and Traction Co., et al.*, Holding Company Act Release No. 7951, affirmed on a review petition which did not raise the issue of allocation, November 3, 1948 (C. C. A. 8); *In the Matter of Public Service Co. of N. J.*, Holding Company Act Release No. 8002, approved and enforced, United States District Court for the District of New Jersey, Civil Action No. 11,105 (1948).

rence of $100 a share, and receiving compensation for "the theoretical future deprivation of their present excessive [sic] dividend rate" (R. 291a). Consistent with this approach the district judge "valued" the $5, the $5.50 and the $6 preferred alike, according to each series $100 per share. The Commission's valuation, on the other hand, reflected the differences in the dividend rates on each series of preferred except as the redemption prices imposed ceilings.

The opinion of the Court of Appeals is less clear in distinguishing between the priority to be accorded dividend preferences and the priority to be accorded liquidation preferences.[21] That opinion holds "that investment value is and can be only *one* of a series of factors to be used in arriving at equitable equivalents"; and that "the new doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equitable equivalents enunciated in the Otis & Co. decision" (R. 38). The Court of Appeals also paraphrased the principle of equitable equivalence as one of "just recompense" rather than "full compensatory treatment", indicating that its requirement is not satisfied by a mere financial appraisal. This appears to be in

[21] The Court of Appeals in according the Commission latitude to value either "ex the Act" or "intra the Act", apparently leaves it free to take into account differences of dividend rates if it does value "ex the Act," but couples this with the requirement that the Commission add back losses

line with its upholding the discretion of the district court in the weighing of special or colloquial equities, since none of the special equities adverted to have any relation to the imposition of sanctions for inequitable conduct in connection with the acquisition of claims.[22]

The allowance for such equities by the courts below appears to us to permit that which this Court has repeatedly condemned in the decisions which state the rule of strict priority, namely, the subordination of prior rights for the benefit of junior interests. As this Court has stated "Unless that principle [of priority] is respected, * * * the property of one group will be subtly appropriated to pay the claims of another while lip service is rendered the principles of priority." *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 570.

[22] Since the preferred stockholders did not elect the management of Engineers, and indeed had no voting rights at all, there was and could be no suggestion that inequitable conduct on their part warranted special treatment amounting to less than full recognition of their claim. As we show below, none of the "colloquial" or "special" equities emphasized by the courts below had any relation to the equities which have been held to warrant disallowance, subordination or limitation to cost in such cases as *Taylor* v. *Standard Gas and Electric Co.*, 306 U. S. 307; *Pepper* v. *Litton*, 308 U. S. 295, 307; *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194.

C. *Contrary to the holding of the Court of Appeals the Commission's valuation of Engineers' preferred stock gave adequate consideration to the future earning power of Engineers*

The opinion of the Court of Appeals criticizes the Commission's method of valuation because as the court stated (R. 35):

> But we think it is clear that it [the Commission] did not give any substantial consideration to the future earning power of Engineers and its subsidiaries which the Supreme Court has held is one of the fundamental tests for reorganization valuation. See *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 526, and *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 565–6. In the instant case the Commission made no attempt to ascertain the future earning power of the system nor to apportion earning power between the preferreds and common based on their respective claims to income as it did in The United Light & Power Company case. But if values for the securities are to be determined *ex* the Act it is clear that the Commission should have done so.

The United Light & Power plan (which was involved in the *Otis* case) was a plan to use a single medium of payment, common stock of

Power's sole subsidiary, to compensate both preferred and common stockholders of Power for the surrender of their respective claims against Power. The apportionment of that stock necessarily involved evaluation of the expectation of income (together with the risk factor) from the new security in relation to what each class of security holders received and surrendered. The Engineers plan, however, did not permit any apportionment of earning power to the preferred stock,[23] but settled with the preferred in cash and reserved the earnings assets for the common.

The "earning power" of the cash received could be appraised only in relation to the reinvestment opportunities open to the preferred. They were, of course, free to choose an investment which might yield less but be more secure than what they gave up, or a more risky investment which might promise a higher yield. But the most workable hypothesis for finding a fair equivalent between cash received and the security surrendered under the compulsion of the plan, is that of reinvestment in a security of comparable risk. How much money would it cost the preferred stock-

[23] Some of the earnings assets, *i. e.*, the Gulf States stock, were distributed pursuant to a warrant program under which the common stockholders could either sell their warrants and realize some cash from the distribution or exercise their warrants and receive Gulf States stock upon the payment of $11.50 per share. This distribution was analyzed by the Commission and it was found that the additional investment, if made, would entitle the common stockholder to additional earnings on a pro forma basis of $1.04 per share (R. 71a).

holders to replace their securities with comparable ones? This equation was substantially the basis upon which the valuation witnesses testified as to what a willing buyer and a willing seller would give for Engineers preferred stocks apart from Section 11.

Both Badger and Barnes agreed that on a going concern basis and ex Section 11 a "willing buyer and * * * a willing seller" would so appraise the risk factor of Engineers preferred in relation to its dividend rate, that they would be willing to pay slightly in excess of the redemption prices (R. 522a, 658a–663a). Badger reached his result by comparison of current yields of other similar preferred stocks. He concluded that a proper yield basis for the Engineers preferred was 4.6%. This yield basis represented his estimate of how the investment markets would evaluate the risk of Engineers stockholders not receiving their preferential dividends in perpetuity, disregarding both the impact of Section 11 and the redemption price ceilings. This 4.6% yield basis, or capitalization rate, resulted, as a matter of mathematical computation, in values ranging from $108.70 per share for the $5 preferred to $130.33 per share for the $6 preferred.

In appraising what the preferred stockholders surrendered through the plan, the Commission was dealing with a limited, although prior, claim on earnings and the focus of the Commission's inquiry was, therefore, not the total amount of

Engineers' prospective earnings but the degree of risk that future earnings would be sufficient to maintain the preferred dividend. The Commission, in addition to considering the expert valuation testimony, made its own analysis of the financial data in the record, including the historical earnings record of the holding company system, and the coverage for the preferred dividends. (See especially R. 63a–65a and 86a–101a.) It appeared, for example, that the preferred dividends were covered by earnings 1.6 times on a consolidated basis and 2 times on a corporate basis according to the most recently available 12 months figures (R. 64a–65a). These were among the factors Badger had relied on in his testimony that the risk factor on the preferred was low enough to warrant it selling on a going concern basis (and disregarding the redemption prices) at values ranging from $108.70 per share for the $5 preferred to $130.33 per share for the $6 preferred. The Commission recognized, however, that the common stockholders were free to exercise the redemption privilege as a means of retiring the preferred stock without reference to the reorganization provisions of Section 11, and therefore treated the redemption prices as a ceiling. In view of this holding, it was only necessary for it to find, as the Engineers' management conceded, that the going concern value of the preferreds was at least equal to the

redemption prices[24] (R. 522a, 658a–663a). For the Commission to have attempted a precise forecast of Engineers' future earnings would have in no way advanced its valuation process.

The Court of Appeals noted, apparently without disapproval, that "the District Court expressly stated that it accepted Dr. Badger's values and that in the absence of a showing of changed circumstances it would deem them to be applicable at the time of the hearing" (R. 17). At another point, however, it is stated: "The trial judge also made a cogent finding respecting Dr. Badger's use of interest rates as an aid in fixing values for the preferred deeming the interest rate used by the latter to be too low" (R. 19).[25] Reference is then

[24] Allowing the preferred stockholders the redemption prices of $105 for the $5 and $110 for the $5.50 preferred and $6 preferred involved, as a matter of mathematical computation, allowing to their dividend claims in perpetuity capitalization rates of 4.76%, 5% and 5.45%, respectively. The difference between the lowest of these rates and the 4.6% figure arrived at by Badger illustrates the margin between the Commission's valuation and the Badger testimony accepted by the district court.

[25] The district court did not make any finding that the interest rate used by Dr. Badger was too low by then prevailing standards of the markets. Instead it adverted to a rise in interest rates since the Badger testimony and concluded that (Finding No. 52, R. 314a):

"A continuance for two or three years of the trend indicated over the past year could substantially reduce or wholly eliminate the differential in the current yield rate over dividend rate in the case of preferred stocks of the type of Engineers."

Because of the risk of future adverse changes in interest rates the district court concluded that the current values as

made to one of the court's findings "of fact" to the effect that "the extremely low money rates which resulted in Badger's finding that the preferred stocks of Engineers have an 'investment value' greater than $100 per share, largely reflect artificial factors which are clearly subject to changes at any time and may well be of purely transitory character." (See Finding No. 51, R. 313a–314a quoted in full at R. 19–20, n. 9.)

The possibility of change in interest rates, like the risk that earnings might decline for a variety of causes, was clearly a risk common to the comparable investments with which Engineers preferred stock was compared, and could apply also to any investment the preferred stockholders might make with the cash which they received under the plan.[26] There is no suggestion

found by Badger "are by no means determinative of the investment value of these stocks for any considerable period of time in the future." (Finding No. 54, R. 315a.)

[26] Barnes mentioned five factors which might adversely affect the future price level of the preferreds if they remained outstanding: (1) continued inflation, (2) periodic depressions, (3) possibilities of government competition, (4) adverse changes in the policy of regulatory authorities, and (5) nuclear energy. He did not, however, claim that any of these risks affected the present value of the Engineers preferred, conceding (R. 522a, 525a):

"These adverse factors which I have just referred to are common to the utility industry generally and are no more imminent in the areas served by our subsidiaries than they are generally throughout the country so that present price levels of securities reflect the extent to which the investing public is presently appraising these hazards, but to say that

in the opinions below that the probability of an increase in the cost of money was sufficiently great to warrant the preferred stockholders in maintaining the cash received from the Engineers plan intact to await a more favorable reinvestment opportunity in the future, or that investment yields were likely to rise sufficiently rapidly to compensate for the loss of any interest at all while waiting for an expected drop in the market price of comparable investments. We believe it utterly unrealistic to assume that the average investor would have sufficient percipience to follow such a course ever if it were the subject of accurate forecast by experts.

If it were the preferred stockholders who were insisting upon being paid off in cash, rather than receiving an allocation of operating company common stocks, which would give them, in compensation for the surrender of their prior position, an opportunity to share in earnings beyond their existing preferences, there would be more color of fairness in insisting that the preferred stockholders' participation be related to necessarily fallible estimates as to the future earnings. Even in that event we believe the standard of fairness requires the application of realistic discount factors which compensate for the element of uncertainty in the forecasting process. Here, however, it was the common stockholders' choice

---

these prices reflect reasonably foreseeable future values is obviously not correct as only the future can disclose what these later values may be."

to retire the preferred in cash and the timing was also to a large extent the common stockholders' choice. Under the circumstances, the Commission was, we submit, fully warranted in valuing the preferred in accordance with its cash value as of the date of its determination rather than speculating as to its possible future value.[27]

---

[27] While the district court took official notice that interest rates had changed slightly since the testimony was taken before the Commission he did not find sufficient change to warrant on that ground a rejection of the Commissoin's valuation. The district court and the court below merely referred to interest changes as illustrating the possibility of future interest changes. In the cross petition and in the brief in opposition counsel for Central Illinois adverted to changes in interest rates since the decision of the district court. However, inasmuch as the plan had been consummated shortly after the decision below, and the preferred stockholders were then required to surrender their investment for cash, we believe that any later changes in interest rates would be wholly irrelevant. In any event, such changes in interest rates as have occurred have not been sufficient to render obsolete the Badger valuation testimony, accepted by the district court, in view of the ample margin between the Badger going concern values and the redemption price ceilings fixed by the Commission. Our own computation, based upon market prices on December 14, 1948, shows an average yield at the present time of 4.87 per cent for the securities now outstanding used by Badger as the basis for his comparisons. This calculation was made as follows:

Security	*Price*	*Yield*
Bangor Hydro Electric	150.00	4.67
California Oregon Power	109.00	5.50
Central Illinois Light	104.00	4.33
Consumers Power	103.50	4.35
Georgia Power	104.75	4.77
Kansas Power & Light	103.00	4.37
New Orleans Public Service	98.25	4.83

D. *The Commission's finding that the plan accorded preferred stockholders no more and no less than fair compensation for the surrender of their prior claim, and that it was beneficial to the common to retire that prior claim in cash, was adequate support for its conclusion that the plan was fair to common stockholders*

The Court of Appeals likewise criticized the Commission because it "made no finding as to the 'value' of the common stock" (R. 35). Here again we believe the court below misconceived the nature of the valuation problem presented by the plan.

Since the common stockholders received everything that remained after satisfying the preferred stockholders' prior claim, the Commission merely applied the Euclidian axiom that the sum of the parts equals the whole when it concluded that it was necessarily fair to the common to recognize "the full priority of the preferred stockholders as required by the statute" (R. 73a).

The district court stated (R. 291a):

> The argument for payment of the premium is comparable to dealing cards off the top of a deck. When full hands (based on theoretical "investment value") have been dealt to all the senior security holders, the

Security	Price	Yield
Niagara Hudson Power	97.25	5.14
Pacific Public Service	23.50	5.53
Pennsylvania Power & Light	101.25	4.44
West Penn Electric	105.50	5.69

> common would merely get whatever happens to remain. Under the Act the interest of all investors must be considered.

The Commission, of course, agrees that the interest of all investors must be considered in applying the fair and equitable standard but, as this Court has repeatedly held, they must be considered in the strict order of their priorities, which means that the common gets what is left after the preferred gets the value of its share. There thus is no point to attempting to ascertain the separate value of the common.

It may be urged that the above quoted statement by the district court, and the Court of Appeals' insistence that the Commission make a "finding as to the 'value' of the common stock", reflect merely belief that valuing what the common stock received and surrendered through the plan would afford a necessary check upon the Commission's determination of the investment value of the preferred. With the investment value of the preferred undisputed, however, and expressly accepted by the District Court, we are unable to reconcile such a requirement for duplicate valuation with the holding of the Court of Appeals that "the selection of possible though varying techniques [of valuation] is for the Commission in the exercise of its expert administrative judgment" (R. 37).[28] In any event placing a dollar value

[28] The Commission had checked the fairness of the treatment accorded the preferred by finding that the common

upon what the common stock received and surrendered through the plan could not serve as a check upon the Commission's conclusion as to the amount of cash which it was fair for the preferred stockholders to receive and for common stockholders to pay under the plan. Such a valuation would have involved a process far more speculative than the determinations already made by the Commission[28] and this would be of no value as a check.[29]

---

stockholders were benefited by retiring the preferred at the redemption prices, and this also was undisputed.

[28] Although for purposes of establishing fixed charges and making valuations Subsections 77 (b) (4) and 77 (e) of the Bankruptcy Act, 11 U. S. C. 205 (b) (4) and (e), expressly direct the Interstate Commerce Commission to give due consideration to past, present, and *prospective* earnings, it seems clear that both the Commission and the courts have not deemed it essential that the Commission attempt to make precise forecasts of future earnings as distinguished from forecasting that future earnings will be sufficient to support the new capital structure which the plan provides, or determining that in the light of earnings records plus opinion evidence as to prospective earnings, the new securities allocated to each class are the equitable equivalent of the interests surrendered. See *Western Pacific R. R. Co. Reorganization*, 230 I. C. C. 61, 233, I. C. C. 409, *affirmed sub nom. Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448; *In re Erie R. Co.*, 37 F. Supp. 237, 245 (N. D. Ohio); Note, 51 Yale L. J. 967, 978. The Securities and Exchange Commission has on occasion used as a working hypothesis what it has described as "earnings forecasts." In so doing the Commission has, of course, recognized the limitations upon human foresight and has applied discount factors which recognize the risk that actual earnings may fall short of the "forecast".

[29] It was a drawback, although we believe an unavoidable one, of the valuation technique employed in the *Otis* case that

E. *The Court of Appeals erred in its criticism of the Commission for allegedly valuing "the preferred ex the Public Utility Holding Company Act, i. e., as if the Act had never been passed" but omitting "consideration of the common by a similar standard".*

The opinion below states: "What the Commission has done is to consider the investment values of the preferred *ex* the Public Utility Holding Company Act, i. e., as if the Act had never been passed. But it considered only the preferreds on this basis" (R. 35). We noted in the previous section of this brief that giving the preferred stockholders the value of their prior claim as computed by the Commission and giving the common stockholders the full residual value of the enterprise necessarily involved consideration of both interests by a similar standard. In this section we show:

(1) the Commission did not value either com-

it did require the Commission to appraise the relative treatment of the United Light and Power Company preferred and common stockholders in the light of forecasts of future earnings. The dissenting Commissioner and dissenting Justices relied in part upon the necessarily attenuated character of that valuation process in arguing that the principle of strict priorities required a denial of any participation to the common stock. The majority of the Commission and of this Court, however, concluded that the difficulties of the valuation process did not warrant denial of participation to a common stock which, as a matter of judgment had a legitimate investment value. See 323 U. S. at 632.

mon or preferred stock "as if the Act had never been passed", but merely valued them on a going concern basis, i. e. apart from the reorganization required by Section 11 of the Act;

(2) there is no warrant for *a priori* assumptions, as a matter of judicial notice, that the overall impact of the Act has been to cause losses to Engineers as an accounting entity, or to its common stockholders;

(3) it would be utterly impractical to require the Commission to reconstitute the history of Engineers since the Act with a view to restoring to its balance sheet any ascertainable excess of losses over gains;

(4) if practical, such a process would involve collateral attack on past transactions which the Act intended should be no longer open to reexamination, and in any event could only strengthen the claim of the preferred stockholders, unless contrary to the rule of strict priorities the risk of losses is to be shifted from junior to senior security holders.

(1) The court's concept of valuation as if the Act had never been passed

The court below noted that "the reasoning which moved the Commission is not as plain as it might be" (R. 35). Apparently what misled the court below was merely that the Commission did not rearticulate the reasons it gave and which this Court approved in the *Otis* case, for valuing

the preferred stocks without treating their liquidation preferences as having been matured by the reorganization process. As was explained to the court below in the Commission's petition for rehearing, the shorthand expressions "apart from the Act" or "ex the Act" must be read with the interpolation, "ex [the present reorganization required by Section 11 (b) of] the Act." [31]

The Commission makes two references to the concept in its opinion. The first is by way of quotation from Engineers' administrative brief upon which the Commission relied for its concessions concerning the value of preferred. Engineers agreed that amounts slightly higher than the voluntary liquidation preferences and the redemption prices "are substantially the present value or investment worth of these three series of stock, on a going concern basis and apart from the Act, under prevailing yields applied to comparable securities" (R. 67a). The Commission also states as its reason for treating the redemption prices as imposing ceilings on the preferred stockholders' claims and thus precluding the preferred from receiving their full going concern

[31] This meaning was urged upon the court below in the petition for rehearing, which was the Commission's first occasion to address itself to what it believed was a misunderstanding by that court of its valuation technique (R. 45–50). The Badger valuation which the courts below accepted was expressly explained in Badger's report as "predicated upon the assumption that Engineers Public Service Company shall continue in operation as presently constituted." (R. 2092a. See also R. 1035a–1036a.)

values, that the redemption price "provides a means, apart from the Act, whereby the security can be retired at a maximum price" (R. 67a). Both of these statements involved dealing with Engineers' assets and liabilities as they actually exist as of the date of the plan rather than as they might have been if the Act had never been passed. In determining, however, the equitable equivalence between the rights accorded by the plan and the rights surrendered, the statutory necessity for a reorganization was not permitted by the Commission to affect the valuation of the rights surrendered, as they would have existed apart from the plan. Instead the old securities were valued (in relation to the new) "as though in a continuing enterprise." *The United Light and Power Co., et al.*, 13 S. E. C. 1, 9. Thus, in both the *Engineers* case and the *United Light* case the interest surrendered by the plan was treated, not as a matured claim to a fixed amount of cash, but as an interest in a going business with the possibility, apart from the reorganization required by Section 11, of becoming a matured claim through involuntary liquidation (a remote possibility), voluntary liquidation or redemption. Under either of the latter possibilities the preferred stock of Engineers would have received the amounts provided under the plan as approved by the Commission.

This use of the "*ex* the Act" concept, as a means of equating rights surrendered and rights

received, occurs repeatedly in the Commission's *United Light* opinion and in this Court's opinion in the *Otis* case. Thus, the Commission noted that in bankruptcy or equity reorganizations, where creditors and other claimants are prevented from foreclosing or compelling an actual liquidation, new securities have traditionally been distributed "according to their contractual and other rights determined *as though in liquidation*," and urged that, similarly, where the legislative policy of the Holding Company Act has precluded security holders of a holding company "from maintaining their respective interests in a going corporation," it is consistent with the bankruptcy precedents that those affected "should be given participations according to their contractual or other rights determined *as though in a continuing enterprise*, and that the process of compliance with the statute should not be permitted to mature liquidation preferences. In both instances the measure of participation allowed should compensate for the substantive rights of security holders as they would exist apart from the reorganization or other procedure in question." 13 S. E. C. 1, 9. An alternative statement of the same rationale was that "under the circumstances, fair and equitable compensation will be given to all of the claimants if their rights are measured not in terms of the situation created by the statute but rather in terms of the situation terminated

by it—i. e., as though no liquidation were to take place" (13 S. E. C. 1, 12).

In upholding the Commission this Court stated (*Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 635):

> The Commission recognizes and applies the doctrine of full priority by giving value to the rights of the preferred in a going concern rather than as if by sale and distribution. [See also *Schwabacher* v. *United States*, 334 U. S. 182, 199.]

Elsewhere in the opinion it is stated that "rights of stockholders of a solvent company which is ordered by the Commission to distribute its assets among its stockholders may be evaluated on the basis of a going business and not as though a liquidation were taking place." (Ibid. p. 633.)

We believe that there is nothing in the Commission's or the Court's rationale in the *Otis* case which could be characterized as permitting, or requiring, valuation "as if the Act had never been passed" in the sense used by the court below. The decision on the part of the Commission and this Court to value on a going concern basis, rather than to treat the reorganization process of the Act as maturing liquidation preferences, was premised on the conviction that Congress intended Section 11 to operate without destroying legitimate investment values—i. e. without transferring value from one class of security holders to another. Because of the evidence of this intention in the legislative history

and because "Enforcement of an overriding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders,"[32] this Court concluded that "Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of creditors." 323 U. S. 624, 638.[33]

The *Otis* rationale of determining equitable equivalents in relation to going concern values rather than liquidation preferences did not in that case involve valuing the enterprise with prior divestments reinstated as if the Act had not been passed. Nor did the Commission value either the preferred or common stocks of Engineers on that basis. Thus the real thrust of the Court of Appeals' criticism of the Commission for inconsistency appears to be that since valuation of both preferred and common on the basis of their going concern values is to a limited extent equating what is received to rights which

[32] *Otis & Co.* v. *Securities and Exchange Commission*, *supra*, at p. 637.

[33] In the case of Engineers, liquidation through voluntary action of the stockholders would have resulted in the same payments as resulted from the Commission's valuation since the voluntary liquidation preferences coincided with the redemption prices of the preferred.

would exist apart from the Act, consistency requires the Commission to reconstitute the entire history of the holding company system as if the Act had not been passed.

There is no inconsistency, we submit, in applying a criterion of fairness to evaluate what is received and surrendered in a particular reorganization, and in not reopening prior consummated transactions so as to equate the rights received with what there would have been to surrender if the Act had never been passed.

(2) The hypothesis of losses attributable to the Act

The courts below appear to have taken it for granted that a reconstitution of Engineers' history since the Act would show that Engineers' common stockholders have suffered losses attributable to the Act. This assumption was one of the "colloquial equities" moving the district judge to conclude that in his judgment $100 a share was the proper amount to be paid each series of preferred (R. 290a–307a).[34] The Court of Appeals referred to "losses which were indubitably occa-

[34] The district court stated (R. 288a, n. 2):

"It is, of course, true that once the charter is not accepted as controlling, there is no reason why 100 is the necessary figure for a senior security holder to receive. It may be more or it may be less. But, in this case, after consideration of all factors involved, I conclude that $100 would be fair and equitable, but that the payment of premiums would not be fair and equitable."

sioned to the holding company enterprise by the sale of securities from Engineers' portfolio because of the divestitures required by the Act" (R. 34), but nevertheless decided that while the district court "may reject a plan, it cannot value the securities, find equitable equivalents therefor and substitute its own estimates for those of the Commission" (R. 39). The court stated with reference to the Commission's valuation duties that "if the equitable equivalents for relinquished securities are to be arrived at by the Commission under the doctrine of the *Otis & Co.* case, *ex* the Act, losses of the sort referred to in this paragraph must be weighed into the calculation, i. e., such losses should be returned to the credit side of the enterprise's balance sheet as a matter of bookkeeping" (R. 37).

We interpret the opinion of the Court of Appeals as holding that the Commission must compute in dollars and cents the extent that the overall impact of the Holding Company Act, or at least of Section 11 thereof, may have been harmful to Engineers common stock, in order to take such loss into account in determining how much less the preferred stockholders should receive than their investment values as of the date of the plan. Central Illinois, in its brief in opposition, disputes this interpretation and argues "that the Court had no intention of insisting upon the exact ascertainment and computation of each loss sustained by Engineers, but merely upon giv

ing reasonable consideration to the fact that such losses (without necessity for precise computation) had been sustained" (Brief in Opposition, Pt. IV, p. 34). We do not believe that this is a fair construction of the opinion of the Court of Appeals; for it is clear that the Commission did in its opinion consider the argument that losses had resulted from prior divestments. The Commission specifically found that the prior divestments did not result in the plan taking anything "unfairly" from the common (R. 72a).

The Commission itself rejected the hypothesis that Engineers' common stockholders had suffered losses as a result of the Act, pointing out in support of its view that marketwise the common stock increased in value from a low of 1⅛ in 1935 to 36 on February 13, 1946, the latest date covered in the hearings before the Commission, and that in all of its divestments Engineers had been free in its choice of methods and, within limits, in the choice of time for divestment. While the Commission concedes that it is impossible to demonstrate the relationship between this increase and the statute, the increase is in accord with the basic economic premise adopted by the Congress in passing the Act, namely, that holding companies such as Engineers with widely separated properties are disadvantageous from the point of view of security holders, as well as from the point of view of the public interest, and that their elimination adds rather than subtracts value

from the totality of security holders' interests affected.[35] We believe that experience with the administration of the Holding Company Act has tended to confirm this economic judgment, but, as we show below, we do not believe it practical in the case of the Engineers system or the holding company industry generally to attempt to support this economic judgment by an itemized reconstitution of events, as if the Act had not been passed.

[35] (See Appendix B, *infra*, pp. 129–130, 130–139.) Insofar as the court below has proceeded on the hypothesis that a holding company contributes to the earning power, and therefore to the intrinsic value, of assets which must be divested pursuant to Section 11, this case plainly demonstrates the insubstantiality of the assumption. Engineers' contribution to the management of its underlying subsidiaries was largely limited to financial matters and it seems clear that each of the subsidiaries was capable of operating independently in as economical a fashion as it operated under the aegis of Engineers. And even assuming that there was some economic value to the stockholders in the holding company, it was counterbalanced by the added costs incident to maintaining the separate corporate existence of Engineers and the salary costs of the personnel involved. See *In the Matter of Engineers Public Service Co.*, 12 S. E. C. 41 (1942). Moreover, Congress has repeatedly emphasized that Section 11, by providing the machinery whereby unproductive and unrelated entities may be severed from the system, preserves and increases the value of the enterprise, and has labeled the argument that the divestment process itself will result in loss of value due to forced liquidation "false." S. Rep. 621, 74th Cong., 1st Sess., p. 16. Experience has demonstrated repeatedly that there is a higher break-up value in holding company equities, and that the value of direct ownership in the underlying properties exceeds the value of the holding company stock.

(3) Impracticability of reconstituting Engineers balance sheet as if the Act had never been passed.

Confronted with the task of bringing about a sweeping reorganization of the more than 15 billion dollar industry subject to the Act, the Commission has necessarily adopted a step by step approach. If the Commission had been required to do the entire job of bringing about compliance with Section 11 in one comprehensive order for each holding company system, the issues of fact and law presented would have been so multifarious as to preclude the conclusion of administrative hearings, let alone the subsequent course of judicial review, without making the process interminable. But use of the step by step approach would be without substantial value unless each step could be treated as a unit, to be appraised with finality in its impact upon investors and consumers, and subjected to judicial review only within the time limits prescribed by the statute as applicable to individual Commission orders.

In accordance with this step by step approach and likewise we believe in conformance with universally applicable reorganization practice, the Commission has treated each reorganization plan presented to it as a unit and has applied the fair and equitable standard for the purpose of determining, with respect to the impact of the par-

ticular plan, whether what each class of security holders receives under the plan is the equitable equivalent of the rights surrendered as a result of the plan. In doing so it has invariably, and we believe inevitably, made its appraisal in the light of the then existing assets, liabilities and earning power of the company undergoing reorganization.

The opinion below indicates that the Commission should make use of hindsight to compensate for past decisions based upon necessarily inadequate foresight. The Commission itself has urged that down to the date of actual consummation of a reorganization the reorganization process should be sufficiently flexible to allow for reexaminations of allocations in the light of changed economic conditions. See *Knight* v. *Wertheim & Co.*, 158 F. 2d 838 (C. C. A. 2), certiorari denied *sub nom. McGuire* v. *Equitable Office Bldg. Corp.*, 331 U. S. 818; *In re Standard Gas & Electric Co.*, 63 F. Supp. 876 (D. Del.). Even in this area, however, it is necessary to strike a balance between the desirability of minimizing the risk of unfairness in allocations and the desirability of not making the reorganization process interminable.[36] Wherever this balance is to be drawn in the framework of a par-

[36] Cf. *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 506–509; *Reconstruction Finance Corp.* v. *Denver & R. G. W. R. Co.*, 328 U. S. 495; *Insurance Group* v. *Denver & R. G. W. R. Co.*, 329 U. S. 607.

ticular reorganization proceeding, we believe that only chaos can result from opening up consummated plans and transactions to reevaluation in the light of hindsight, particularly where, as in this instance, the reexamination is not to readjust equities between parties to the transaction but to shift the burden of the impact of the consummated transaction in the relationship *inter sese* of security holders of one of the parties thereto.

a. *Puget Sound reorganization*

Thus the court below would have the Commission reexamine for the purpose of adjusting its impact upon Engineers' preferred and common stockholders a reorganization of Engineers' former subsidiary, Puget Sound Power and Light Corporation, approved by the Commission and the United States District Court for the District of Massachusetts in 1943. This reorganization, which did not affect the debt of the company, cleared up dividend arrears on publicly held prior preference stock through the issuance of additional preference stock, and substituted new common stock for the preexisting (junior) preferred stock and arrears and the old common stock. Engineers received approximately a 3% interest in the new common stock in return for its old holdings of 99.3% of common stock, estimated in the absence of reorganization to be from

18 to 34 years away from dividends. This interest it subsequently sold for $764,765.

The court below points to Puget Sound's net profit as they appear in Moody's Public Utility Manual for the years 1946 and 1947, and holds that since the figures there given exceed the estimates of average future earnings made by the Commission at the time it approved the recapitalization of Puget Sound, the reorganization and subsequent divestment of Puget Sound resulted in a loss to Engineers' common stockholders. Apart from the collateral nature of this attack upon the determinations made in the prior proceedings, we believe the court's computations are based upon a gross oversimplification of the complex problems involved in the Commission's evaluation of Engineers' interest in Puget and of the relationship between Engineers' interest in Puget Sound's earnings in 1943, when the recapitalization was ordered, and its hypothetical interest in those earnings today if no recapitalization had been ordered and the divestment had not occurred.

Indeed, the controversy over Puget Sound's recapitalization plan was concerned chiefly with whether Engineers was entitled to any interest in the new company in view of its junior position as to assets and earnings and the contingent character and remoteness of its interest in future

dividends.[36a] The Commission decided in favor of Engineers in awarding it a three percent interest in the new enterprise, free of prior claims upon income. Moreover, even if the Commission's forecast of Puget Sound's earnings and its actual earnings for 1946 and 1947 were otherwise comparable,[37] it would seem presumptuous to assume that earnings for those two years will represent an average for the system upon which interests in the enterprise should have been allocated.[38] In addition, it appears probable that good business management would have compelled, at some time, the recapitalization of Puget, and there is some possibility that the small interest Engi-

[36a] The book loss of more than $33,000,000 noted by the courts below (R. 19, n. 8) fails to reflect factors not caused by the Act (a) that the book investment (on Puget's books) represented $9,386,982 of write ups and (b) that there were $18,600,705 of dividend arrears. Deducting these two items, the Commission found a minus book value for the Puget common stock of $9,386,982 as of the time of the reorganization. See 13 S. E. C. 226, 232. These findings, offered by Engineers, are part of the unprinted record.

[37] It should be noted that the earnings figures which the court took from Moody's Public Utility Manual reflect (1) a depreciation allowance between $600,000 and $1,000,000 less than that which the Commission found appropriate in making its estimate of net earnings, (2) capital expenditures since 1943, and (3) divestment of certain properties after it ceased to be subject to the Public Utility Holding Company Act.

[38] Puget's president has stated that the gross income figure in 1948 will probably be $1,000,000 less than in 1947. Moody's Public Utility Manual Supplement, Volume 19, Page 1442.

neers could command in such a recapitalized company might have been sold aside from the compulsions of the Act.[39] As an alternative, Engineers might have been persuaded to make a substantial new investment in equity securities of Puget and it would be necessary to estimate the return from that investment as against other possible uses of Engineers' funds.[40]

[39] The book loss acted as a fund from which subsequent capital gains could be deducted. Thus $2,000,000 was used to set off the capital gains arising from the sale of certain assets (Engineers' Ex. 68, R. 1833a). If Virginia and El Paso had been sold about 22 million dollars more would have been available (R. 616a-623a). Secondly, there existed a strong possibility that Puget Sound would be purchased under the law of eminent domain by public power authorities in the State of Washington. In such event it then appeared probable that the interest of Engineers would be valued at much less than $764,765. Finally, the price received was arrived at by arm's length bargaining (R. 72a, n. 55). All of these considerations, none of which are associated with Section 11, undoubtedly weighed heavily with management in connection with their decision to dispose of Puget Sound at a particular time in a particular fashion.

[40] The published financial statements of Puget indicate that its working capital, which was approximately $980,000 on December 31, 1943, showed a deficit of $1,465,000 on December 31, 1947. This factor, plus the inadequate depreciation allowances being made and the reduced earnings forecast may lead to a need for additional financing in the near future. An attempt to recompute the consequences of the Puget reorganization would have to appraise this prospect also and any resulting dilution in the per share earnings attributable to the former Engineers' holdings—or in the alternative, the cost to Engineers in supplying the necessary capital itself.

Again, if it be assumed that the divestment of Puget was the result of Holding Company Act pressure, it would be necessary, if the effect of the Act upon the holding company system is to be calculated, to determine the effect of the withdrawal of the $764,765, which Engineers received from the sale of Puget from Engineers' general funds. These funds, including proceeds of other sales and retained earnings generally, were used to increase Engineers' investment in El Paso and Virginia [41] and to make payments to the preferred stocks of Engineers. It would also be necessary to recompute Engineers' taxes without reference to the tax advantages derived from the sale of Puget.

b. *El Paso Natural Gas Co. divestiture*

The court below also illustrates its determination of "substantial losses which occurred to Engineers" by pointing to a "loss" of "at least $4,000,000" which it states flowed from the divestiture of El Paso Natural Gas Company (R. 36–

[41] Virginia Public Service Company was acquired by Engineers and merged with Virginia Electric and Power Company (Virginia) when the Associated Gas and Electric system was compelled to divest itself of this subsidiary on the ground that its retention in the Associated system violated the standards of Section 11 and elected to accomplish the divestment by sale. Any increase in value gained by Virginia might therefore be termed an increase to Engineers due to the operation of Section 11. *Virginia Electric and Power Company — S. E. C. —* (1944), Holding Company Act Release No. 5021.

37). The history of Engineers' relationship with El Paso Natural Gas goes back to 1931, when Engineers loaned El Paso Natural Gas $3,500,000 and in return received $3,500,000 of bonds and an option to purchase 192,119 shares of its common stock. In 1936, after the passage of the Holding Company Act but prior to Engineers' registration with the Commission as a holding company, it became necessary to exercise this option in order to prevent its expiration. Accordingly, arrangements were effected whereby 57,119 shares of stock were obtained at $25 per share, options to purchase 16,576 were assigned to persons active in the management and financing of El Paso Natural Gas for $125,760, options to purchase 18,424 shares were assigned to Phelps Dodge Corp., and options for the purchase of 100,000 shares were permitted to expire. A five year trust was formed for the purpose of holding and selling the stock acquired by Engineers. These shares of stock were shortly thereafter split three for one, reducing their cost basis to $8.33 per share. Sixty thousand of the new shares were sold in 1936 for $19 per share and sixty thousand were sold in 1937 for $25 per share (R. 1484a-1485a, 1504a). Then, after Engineers registered with the Commission as a holding company, no more shares were sold by the trustee, and at the termination of the trust Engineers took direct title to the remaining 51,357 shares. These shares

were sold in March 1944, at an average price of $29.661 per share (R. 508a–509a).

As a result of these sales in 1936, 1937, and 1944 Engineers realized (in addition to the repayment of the loan), a profit of $2,700,000 from its El Paso Natural Gas investment. Nevertheless, the court below regarded the transactions as involving a loss "indubitably occasioned * * * by the Act" of at least $4,000,000, on the theory that but for the Act Engineers would have sold the shares at a higher subsequent value (R. 34, 37). The timings of these sales were not, however, compelled by Section 11, but were dictated by managerial judgment which must have reflected not only market judgments at the time but the advantage which management expected to derive from the cash proceeds.

The entire argument of losses due to sales of securities in a market lower than the present one presupposes a management so prescient that it will sell its stock holdings at the very peak of the market. Such omniscience, we submit, is not properly attributable to corporate management. Indeed, had the common stockholders who controlled the management of Engineers considered the prospect for appreciation of the El Paso stock disproportionate to prices obtainable, there is no reason why they could not have arranged to dispose of the Engineers' holdings of El Paso Natural Gas under a plan which en-

abled the common stockholders to retain this investment, as was done with the investments distributed under the instant plan.

Moreover, sale of the El Paso Natural Gas stock by Engineers did not preclude common stockholders of Engineers, if they so desired, from retaining an equivalent interest by directly purchasing El Paso Natural Gas stock on the market, or from the underwriting group which purchased it from Engineers. It is conceded, of course, that this would have required a fresh investment by common stockholders since the cash proceeds of the sale were not distributed by Engineers.

Computing the loss of profit that might have been realized if El Paso had been retained and sold at a later time is meaningless without attempting to draw a comparison between the profit Engineers did realize through retention of the cash proceeds of the sale. It is, of course, impossible to earmark the use made by Engineers of cash derived from a particular source. Thus, evaluation of the consequences of the El Paso Natural Gas sales is necessarily merged with a consideration of the over-all benefit to Engineers of the cash derived from a variety of sources including (a) the El Paso Natural Gas sale, (b) other sales, and (c) retention of what could have been declared in common stock dividends. Assuming with the courts below that the transactions by which Engineers realized or retained cash were all attributable to Section 11, it would still be

necessary to compare the hypothetical profits which might otherwise have been realized with the results of utilizing cash resources to build up the system and improve the common stock equity. If, for example, cash had not been so realized and retained, would the Engineers common stock have increased in market value from 1⅛ in 1935 to 37 in 1945, when the plan was filed? This is the utterly speculative type of inquiry which the opinion below appears to require of the Commission.

(4) The irrelevance of the issue of losses

Assuming *arguendo,* that there were losses as a result of the Act and that their existence and amount were ascertainable, the existence of such losses would not warrant according the preferred stockholders under the plan anything less than fair compensation for what they surrendered by the plan. The court below assumed that such losses would as a mere matter of bookkeeping require the Commission to allow preferred stockholders less than their investment value *ex* the plan. The opinion below states "such losses should be returned to the credit side of the enterprise's balance sheet as a matter of bookkeeping" (R. 37). We assume the court meant that such losses should be added to the asset side of the balance sheet. If this were done, however, the effect would be merely to improve the coverage for the preferred and thus strengthen the case

for finding an investment value in the preferred at least equal to the re-emption prices.

It is necessary, therefore, to take the further step of shifting the risk of loss from common to preferred stockholders before such a bookkeeping adjustment can affect the fairness of the plan's treatment of preferred and common stockholders. In other words, the losses must be added back only in computing what common stockholders receive, and not in determining whether preferred stockholders receive the equitable equivalent of what they surrender. Thus, the essence of the requirement of the court below is that the Commission shift from the common stockholders to the preferred stockholders all or a portion of the losses. If, however, the doctrine of strict priorities has any vitality at all, it precludes allowing the junior security holders to use the reorganization process to shift from the junior to the senior security holders the risk of losses from the prior operation of the enterprise. This is so irrespective of whether the management elected by the junior security holders may have had some responsibility for decisions which were a causal factor in producing the losses. The decision in the *Otis* case to value the United Light and Power preferred at its going concern value rather than on the basis of its liquidation preference, did not rest on any theory of requiring senior security holders to share losses which the

Act might otherwise impose upon the junior security holders. Instead it rested upon the Congressional purpose to prevent the very process of reorganization itself from creating a "windfall" by taking from the common stockholders and giving to the preferred stock values which, apart from the reorganization itself, inhered in the common stockholders' charter rights (See *supra*, pp. 28 *et seq.*).

F. *The miscellaneous "colloquial equities" upon which the district court relied and which the circuit inferentially considered appropriate in determining the equitable equivalent of what was surrendered are likewise irrelevant to such a consideration*

In addition to the circumstances surrounding past divestments, which we have already discussed, the district court cited as factors looking toward the nonpayment of the redemption prices of the preferreds the issue price and past market history of the preferreds and the difference between the dividend history of the preferreds and the dividend history of the common. The court below, although it did not refer to these nonvaluation criteria, upheld the right of the district court to reverse the Commission on these grounds, stating that "all pertinent factors and all substantial equities must be considered by the Commission" and concluded that "the District Judge did not err" in this respect (R. 38–39).

(1) The issue price and past market history

The $5 preferred was issued to the public for $100 per share, the $5.50 preferred for $99.50 per share, and the $6 preferred for $100 per share between 1928 and 1930. After the deduction of underwriting spreads it is estimated that the company received between $95 and $98 per share (R. 301a). It was these facts, which did not appear to the Commission to indicate the existence of any unusual circumstances, that the district court characterized as looking "toward nonpayment of premiums" (R. 288a). We believe the Commission, which simply appraised the current worth of the interest held by the preferreds, correctly declined to modify their valuation in the light of factors which might have been pertinent some 16 or 18 years before, when the then current money market had largely determined the issue price and underwriting spread of the preferred stocks. The correctness of this view was recently implied by this Court, *Schwabacher* v. *United States*, 334 U. S. 182, 199, in connection with a controversy over the proper criteria which the Interstate Commerce Commission should apply to determine the interest of a security holder in a merger. It was there said:

> In appraising a stockholder's position in a merger as to justice and reasonableness, it is not the promise that a charter made to him but the current worth of that promise that governs, it is not what he once put

into a constituent company but what value he is contributing to the merger that is to be made good.

The intervening market fluctuations in response to general economic conditions, the passage of the Holding Company Act and the course of progress thereunder, and all such similar circumstances are equally irrelevant in this regard. Nor does the amount for which the stock sold either initially or at some particular period in its history bear upon present value except in the most remote sense, as pointing to factors in the history of the enterprise which should be subjected to analysis. To that extent they were given full consideration by the Commission."[42]

(2) Dividend history

Another colloquial equity emphasized by the district court but not by the Court of Appeals was that "a significant reason why the present preferreds are able to be evaluated at more than

[42] It is interesting to note that if the issue price and market history of the common stock is analyzed on the same basis, it appears that the common stock receives, under the plan, more than "colloquial equities" would entitle them to receive. Thus, the average price at which the common stock was issued was $30.40 per share (R. 1820a). Accepting the value placed upon the interest received by the common stockholders in the Central Illinois brief in the court below of $33.90 (p. 84, n. 202) there appears to be a "bonus" of more than 10 per cent being paid the common by the plan. Comparing the market histories of the two securities we find no significant difference.

their redemption prices is because of retained earnings over a period of years not paid as dividends to the common stockholders" (R. 291a). Since the Court of Appeals omitted reference to this colloquial equity even in its summarization of the district court's reasoning, it may have agreed with the Commission's argument that at least this colloquial equity is irrelevant. On the other hand, the same logic which would require a reconstitution of the balance sheet of Engineers to determine what the balance sheet would have been if the Act had not been passed would seem to point to the necessity of deducting dividends that might have been paid but for the Act.

It is clear on the face of the record that the dividend policy was motivated by considerations dictated by the interests of the common stockholders, and that plans for compliance with Section 11 were a relatively minor factor in their motivation. In the first place, Engineers' witnesses freely conceded that they regarded it as in the interest of the common stockholders, from the point of view of minimizing Federal income taxes, to avoid receipt of dividends and instead to build up the equity value of the common stock upon which they might realize capital gains taxable on a more advantageous basis than dividends.[43]

[43] Engineers' Ex. 16, R. 1390a, shows that 72.54% of Engineers common stockholdings (as of June 30, 1945) were held

Of the $24,300,000 of undistributed earnings which the district court found had accrued to the interest of Engineers' common stockholders, Engineers' officers admitted that dividend "freezes" in the subsidiaries would have permitted only $9,868,000 to have been paid out in dividends. (R. 306a.) This amount roughly corresponded to the idle cash in the system which the management was anxious to apply through the plan to the retirement of preferred stock. The retained earnings, it was testified, "added materially to the value of the Preferred Stock because the funds, together with funds derived from the sale of properties, have been used in part to finance improvements and additions which have increased the earning power of the subsidiaries and in part to retire 60,346 shares of Preferred Stock of Engineers and El Paso of Delaware combined, at an aggregate cost of $5,894,227" (R. 470a). The

---

by some 338 stockholders having in each case holdings of more than 500 shares. Referring to this Exhibit the Secretary of Engineers testified that "these relatively large unit holdings indicate ownership by people of substantial means, many of whom in all probability would prefer to have capital appreciation rather than dividend income * * *" (R. 462a. See also R. 556–557). While that testimony was given with specific reference to the tax impact of the plan it would appear equally relevant to motivation for the dividend policy antedating the plan. Engineers' secretary conceded that the tax factor had a bearing upon stockholders' attitude toward the dividend policy but expressed the opinion that the directors would have accumulated cash to retire the preferred stock "regardless of the tax law" (R. 920a–921a).

various dividend "freezes" were in part concessions made to obtain relatively cheap senior money for the operating companies, and, in the case of Virginia, in part to facilitate the merger with Virginia Public Service Company, which Engineers acquired from the trustees of Associated Gas and Electric Company in a transaction involving a relatively small amount of cash in proportion to the amount of properties acquired."

Assuming that the present relatively strong investment position of Engineers preferred is attributable to the managerial policies which dictated the retention of cash to build up the subsidiaries, nevertheless the plan accords the common stockholders the enhanced value of their residual equity as legitimate compensation for their self-restraint. Moreover, the benefit to the common

[44] Engineers acquired from General Gas & Electric Corporation, a subsidiary holding company of Associated Gas & Electric Corporation, all of the common stock of Virginia Public Service Company and the claim of General Gas & Electric Corporation for certain escrow funds of about $1,165,000 for approximately $2,500,000. Upon acquisition of this stock Virginia Public Service Company was merged into Virginia Electric and Power Company. The Virginia Public Service debt securities were refunded through the issuance of debt securities by Virginia Electric & Power Company, and Engineers made a cash contribution of $2,500,000 to Virginia Electric & Power Company. As a result of these transactions Virginia Electric & Power Company acquired utility property of a gross book value of $52,510,000 and a net book value of $39,197,000 for net cash contributions on Engineers' part totalling $3,835,000. In the *Matter of Virginia Electric and Power Co.*, — *S. E. C.* — (1944), Holding Company Act Release No. 5058.

through building up the value of the subsidiaries, was obviously far greater than the indirect benefit to the preferred. In addition, the margin of coverage for the preferred stock was so substantial that even if the Engineers management had pursued relatively liberal dividend policies it is by no means clear that the resultant diminution of the coverage for the preferred would have brought it below the redemption price ceilings. It should be noted in that connection that the earnings coverage for the preferred which received the principal emphasis in the Badger testimony, and in the Commission's financial analysis, gave no effect to the potential earning capacity of the idle cash and relatively little to so much of the "cash equivalent" as was invested in low yield, short term, government securities.[45]

II. BOTH COURTS BELOW AND THE COMMISSISON CORRECTLY REFUSED TO TREAT THE INVOLUNTARY LIQUIDATION PREFERENCES SPECIFIED IN THE CHARTER OF ENGINEERS AS CONTROLLING

Neither court below accepted the common stockholders' contention that the Commission

[45] It should be noted that even if the entire unrestricted earned surplus as of December 31, 1945, were eliminated in the calculation of the asset coverage of the preferred it would only be reduced from $218.11 per share to $194.91 per share. If the unrestricted earned surplus should be eliminated from the capital account, the percentage of capitalization which the preferred stock represents, the ratio used by the Commission in its analysis, would be increased from 17.5 per cent to 18.3 per cent, less than 1 per cent.

erred in not according controlling weight to the charter involuntary liquidation preference, the district court stating "my present thought is that the rule of Otis & Co. applies . . ." (R. 288a, n. 2), and the Circuit Court stating "Neither the Commission nor the [district] court, in what we consider to have been a proper application of one of the principles enumerated by the Supreme Court in *Otis & Co.* v. *S. E. C.* (*The United Light & Power Company* case), 323 U. S. 624, 637, treated the charter provisions of Engineers as dispositive of the issues presented" (R. 34). Nevertheless, the common stockholders continue to urge that the charter involuntary liquidation preferences should determine the rights of the stockholders in the enterprise (see Central-Illinois petition in No. 266, pp. 5, 22–24).

Recognizing that, in the *Otis* case, the charter provisions were specifically held inapplicable to a dissolution pursuant to Section 11 of the Holding Company Act, the common stockholders contend that the *Otis* case is distinguishable chiefly on the ground that the dissolution of United Light and Power, in the *Otis* case, did not involve a dissolution of all the holding companies in that system. The plan involved in the *Otis* case provided for the dissolution of the top holding company as an initial step in bringing the system into compliance. There remained, under that plan, subsidiary holding companies in a still highly stratified system.

In justification for not treating the charter liquidation provisions as binding, an argument was advanced in that case that under the circumstances the enterprise was continuing in an altered form and without substantial change in the total of the inherent rights of the security holders. Significantly, however, this restrictive analysis of the case, which, if accepted, would have disposed of that issue, was expressly disavowed. This Court made it clear that the *Otis* doctrine did not depend upon the particular form of reorganization or liquidation selected as the vehicle for compliance with Section 11. Instead, the liquidation provisions of the United Light and Power charter were held inapplicable on the ground that Congress did not intend Section 11 to operate to mature charter rights. The Court said (at p. 638):

> *The reason does not lie in the fact that the business of Power continues in another form.* That is true of bankruptcy and equity reorganization. It lies in the fact that Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of creditors. We must assume that Congress intended to exercise its power with the least possible harm to citizens. [Italics added.]

The management of the United Light and Power system and the management of Engineers followed a different sequence of steps in complying with Section 11, probably because of the much higher degree of stratification in the United Light and Power system. However, the sequence of steps ought not to affect rights any more than should the particular method selected for accomplishing each step. Otherwise management, by its choice of procedure, would have the power to give preferential treatment to a particular class of security holders.[46]

Moreover, acceptance of this phase of the common stockholders' argument would permit the common stockholders of a one-story holding company such as Engineers to appropriate to themselves the entire residual value of the company's assets, subject to the necessity of according preferred stockholders only their charter liquidation preference no matter how great the disparity between that liquidation preference and the going concern value of the preferred stockholders' in-

[46] It should be noted that Engineeers, like United Light and Power in the *Otis* case, could have complied with Section 11 by merger or consolidation with a subsidiary. Indeed, this procedure was seriously considered until repeal of the excess profits tax eliminated the tax advantages of such a method of compliance. Engineers' charter expressly provided that a consolidation or merger which "does not substantially impair the rights and preferences of the preferred stock" should "not be regarded as a liquidation, dissolution, or winding up" for purposes of the paragraph defining liquidation preferences (R. 914a, 1413a).

vestment. Conversely, if the value of that one-story holding company's assets is found to be less than the liquidation preference of the preferred stockholders, the argument would permit the wiping out of the common stock despite a finding that, apart from the operation of Section 11, the common stock has a reasonable prospect of sharing in future earnings after satisfying the dividend preference of the preferred stock, including any arrears.

Nor do we believe that any specific language differences between the charter involved in the *Otis* case and the Engineers charter have any vital significance. The Engineers charter was drafted in 1925, four years prior to that of United Light and Power, and even if it be assumed that a charter provision making specific provision for the possibility of a Section 11 liquidation would be controlling, there appears to be no justification in the stereotyped phraseology of the two charters to attributing to the Engineers' draftsmen a greater degree of discernment and prescience.

Finally, common stockholders cite a number of cases in which the Commission approved plans calling for the payment of amounts equivalent only to the involuntary liquidation preferences of the securities involved, and contend that this precluded approval of the Engineers plan on the basis of what is termed "the Commission's new views." (Central-Illinois' petition in No. 266, p. 2?.) It is true that, in many instances, the Commission

has found that the equitable equivalent of a security to be surrendered was only its involuntary liquidation preference.[47] It is equally true, however, that many of these cases have stressed the absence of indication of any investment value in excess of that amount,[48] and other cases have per-

It seems unnecessary, in view of this Court's unequivocal holding in the *Otis* case that Section 11 does not mature liquidation preferences, to defend the challenge to the administrative consistency of the Commission offered by the common stockholders.[50] However, we believe it is entirely clear from the Commission opinions that each case involved a progressive analysis of the problems presented, and that the peculiar problems of each new case were considered in view of the accumulated administrative experience. The instant case involved no more than an application to a new state of facts of the principles developed and foreshadowed by prior holdings.

(1948), H. C. A. R. No. 8550. (Decided after the decision below.) Most of these cases were not approved as part of a Section 11 (e) plan due to their nature, for where management agrees that payment of the redemption price is fair and equitable the normal procedure simply requires a call of the security.

[50] In the *Otis* case itself the petitioner urged that the Commission's decision was inconsistent with the earlier *New York Trust Co.* case, and also that a consistent application of the standard of fairness applied by the Commission might require a payment in excess of liquidation preference to a preferred stock having a high dividend rate relatively free of risk in view of earnings and asset coverage. The Commission pointed out that it had not yet had occasion to deal with this problem, but that "we would scarcely regard it as a valid criticism of the standard of fairness applied in this case, that it might under converse circumstances prevent common stockholders from obtaining through operation of Section 11 a windfall at the expense of preferred stockholders." See Point I 2 (b) of the Government's brief, pp. 49, 54, October Term 1944, No. 81.

New York Trust Co. v. *S. E. C.*, 131 F. 2d 274 (C. C. A. 2), on which the common stockholders have placed their chief reliance, was the first case in which a Section 11 (e) plan called for prepayment of debt at its face value where the indenture contained an option to call the debt at a price higher than the face amount of the debt. It was there held that since the venture had been frustrated by government edict performance of the contract according to its terms was excused. Accordingly, payment of the debt at face amount was permitted prior to maturity. However, this holding does not warrant prepayment of debt at the face amount where it appears the debt would have a value in excess of that amount. See *American Power & Light Co.*, — S. E. C. — (1945), Holding Company Act Release No. 6176. In the case of preferred stock, moreover, what is involved is an ownership interest in the enterprise—not a creditor claim of a definite principal amount against it.

Insofar as there is any issue of constitutionality raised by the plan, we believe it has been resolved by this Court's opinion in the *Otis* case. That portion of this Court's opinion which deals with the possible application of the gold clause cases contains no suggestion of a "constitutional doubt" as to the overriding force of the commerce power if it had been concluded that the charter liquidation preference was applicable but would thwart

the legislative purpose. Insofar as there must be a choice between a restrictive interpretation of a private contract as applied to a situation not specifically envisaged, and a restrictive interpretation of the Congressional purpose to bring about simplification of holding company systems with the least possible harm to investors, it is obvious that it is the Congressional policy, not the private stipulation, which must receive the benefit of the doubt. This at least was the approach of the majority of the Court in the *Otis* case. Only if Section 11 (e) were construed in accordance with the common stockholders' contentions to benefit the common at the expense of the preferred stockholders would there appear to be any serious constitutional issue.

III. THE COURT BELOW ERRED IN HOLDING THAT THE DISTRICT COURT'S INDEPENDENT RESPONSIBILITY FOR APPROVAL OF THE PLAN INCLUDES A POWER TO REJECT THE RESULTS OF THE COMMISSION'S VALUATION ON THE BASIS OF A DISCRETIONARY WEIGHING OF IMPONDERABLE "COLLOQUIAL" OR "SPECIAL" EQUITIES.

The Commission believes that the basic issue in this case is the proper legal standard which should control both the Commission and the district court in their consideration of the plan. We have argued in Points I and II that the Commission applied a proper legal standard in according Engineers' preferred stockholders full compensation for their undisputed going-concern values; that the colloquial or special equities relied on by the

courts below are irrelevant to the fair and equitable standard; and that as the Commission and both courts below held, the involuntary liquidation preferences of Engineers' preferred stocks are not controlling. If this is a correct interpretation of "fair and equitable," neither the Commission nor the district court had any discretion to diminish the participation of the preferred stockholders, inasmuch as they did not dispute (R. 67a and p. 28, *supra*) the Commission's finding as to going-concern value of the preferred, if that were assumed to be the proper test. If, on the other hand, the Commission did not apply the correct rule of law as to the rights of the stockholders, then of course the district court properly discharged its own statutory responsibility in refusing to approve the plan as approved by the Commission.

While the Court of Appeals' criticisms of the Commission's valuation methods seem to us to present issues of law, it did not express them as controlling legal standards, and did not purport to decide whether the Commission's conclusion lacked "any rational and statutory foundation." (R. 21.) Its holding that the district court did not err in finding the plan as submitted by the Commission unfair is qualified with the statement, "Certainly we cannot say that this conclusion was clearly erroneous" (R. 39). The Court of Appeals held that a question of law which "goes to the heart of the instant con-

troversy" is the extent of the power conferred on the district court by Section 11 (e) to reject determinations of the Commission (R. 20). We believe this is a correct statement of the issue only if, contrary to our interpretation, the "fair and equitable" standard of Section 11 (e) lodges in either Commission or court a discretion whether to accord Engineers' preferred stockholders the full going concern value of their interest or something less.

The Court of Appeals held that a district court under Section 11 (e) has a much broader power to reject the Commission's valuations than where the fairness of the plan is presented directly to a Court of Appeals by a petition to review under Section 24 (a) of the Act. Section 24 (a) is the provision of the Act applicable in terms to judicial review by any person aggrieved "by an order issued by the Commission under this title." It expressly provides for review in a Court of Appeals upon the transcript of the record made before the Commission and under the substantial evidence rule.

Commission orders approving plans under Section 11 (e) may be the subject of petitions to review under Section 24 (a), and, indeed, since Section 11 (e) provides for court enforcement of plans only at the request of the proponent company, Section 24 (a) affords the only avenue of review under Section 24 (a), and, indeed, since enforcement. The Section 24 (a) avenue of re-

view has in fact been followed in a number of cases. See *S. E. C.* v. *Chenery Corp.*, 318 U. S. 80; 332 U. S. 194; *New York Trust Co.* v. *S. E. C.*, 131 F. 2d 274 (C. C. A. 2), certiorari denied, 318 U. S. 786, rehearing denied, 319 U. S. 781; *Phillips* v. *S. E. C.*, 153 F. 2d 27 (C. C. A. 2), certiorari denied, 328 U. S. 860. Where a plan by its terms contemplates court enforcement, and the Commission's approval order expressly conditions its authorization to consummate the transactions proposed by the plan upon the entry of an enforcement order under Section 11 (e), direct review of the Commission's order under Section 24 (a) has been held unavailable. *Okin* v. *S. E. C.*, 145 F. 2d 206 (C. C. A. 2); *Lownsbury* v. *S. E. C.*, 151 F. 2d 217 (C. C. A. 3), certiorari denied, 326 U. S. 782.[51]

Thus the proponent company, or rather its management, can, by requesting court enforcement, channel judicial review through the district court, or, by not requesting enforcement, allow objectors to seek review in a Court of Appeals.

[51] The reasons urged by the Commission for this position were in part that Congress could not have intended both avenues of review to be applicable to the same order, and in part that a Commission order which is to be operative only after a subsequent enforcement order of the district court is interlocutory in nature with reference to review elsewhere than in the enforcement court. This was the rationale of the Second Circuit in the *Okin* case. The opinion of the Third Circuit was based upon the *Okin* case. Judge Biggs, however, in a separate concurring opinion, expressed the view that the district court should adjudicate "all questions relating to integration, simplification and the fairness and equity of the plan" (at p. 220).

Such a choice on management's part seems to us consistent with the statutory purpose only if its exercise cannot affect the ultimate allocation of assets between classes of security holders. The latitude for managerial initiative was provided in the hope that "if the compulsions of the act are made sufficiently clear to convince the interlocking lawyers of the holding-company bankers that it can't be evaded or compromised, the legal and economic imagination which put these holding-company combinations together will devise many means of taking them apart." Additional views of Congressman Eicher appended to House Report No. 1318, 74th Cong., 1st Sess., pp. 44, 50.[52]

Management is not likely to be neutral, however, upon the vital issue of the fairness of the allocation. Congress could hardly have intended to permit management to determine the scope of judi-

[52] Management may legitimately desire an enforcement proceeding in order to obtain the protection of a court decree enjoining future challenge to the plan or to preclude state court injunction suits actually threatened. In other situations, depending upon the nature of the plan, it may be thought that Commission approval itself is sufficient protection to the management in carrying forward the plan in the absence of opposition. Again where opposition appears and is prepared to take the case promptly to a court of appeals, district court enforcement may appear unnecessary to obtaining a final determination of the challenge to the plan. Procedural strategy directed to timely consummation of a proper plan would thus clearly accord with the objectives of Section 11 (b) to carry out compliance "as soon as practicable."

cial review of that issue.[53] Management would have such a power if given a choice between a forum in which the reviewing court would be bound by a reasonable Commission decision and a forum in which it would not. It is thus plainly not desirable that the scope of review by a district court under Section 11 (e) be substantially greater than that by a court of appeals under Section 24.

It is our position that the analogy to Section 77 of the Bankruptcy Act, upon which the court below relied, does not warrant reading a widely different scope of review into Section 11 (e) than would apply under Section 24;[54] that the issue in this case, if not a pure issue of law, must be one of policy which would be for the Commission to decide under any theory of the scope of review; and that in any event Congress could not have intended judicial review to check the Commission without imposing a controlling standard to govern its reconsideration of the plan after rejection by a district court.

---

[53] *Cf.* Senate Report No. 621, 79th Cong., 1st Sess., p. 33, p. 143, *infra*, which states with reference to subsections (d), (e) and (f) of Section 11:

"Under these subsections, Commission approval of reorganization plans and supervision of the conditions under which such plans are prepared will make it impossible for a group of favored insiders to continue their domination over inarticulate and helpless minorities, or even as is often the case, majorities."

[54] There are certain procedural differences between enforcement proceedings brought under Section 11 (e) and review

A. *Section 11 (e) grants to the district court a scope of review similar to that exercised in the district court under Section 77 of the Bankruptcy Act*

Section 11 (e) parallels Section 77 of the Bankruptcy Act in providing for an administrative hearing on a plan prior to judicial consideration thereof and a subsequent judicial hearing at which the court must also approve the plan. In contrast with the relatively detailed articulation in Section 77 of the respective functions of the Interstate Commerce Commission and the court, Section 11 (e) deals in two sentences with the Commission's function and in one with the district court's. This brevity of Section 11 (e) makes it necessary to turn to the closest similar arrangement for an understanding of the interrelationship which was contemplated.

The similarity between Section 77 and Section 11 was specifically adverted to in the course of the legislative history of the Holding Company Act. Section 11 (f) of the Holding Company Act, which deals with proceedings in the Federal courts for the reorganization of registered holding com-

by a Court of Appeals under Section 24 (a). These, including the equity court's responsibility in the exercise of an independent judgment to review the Commission's determination even in the absence of articulate opposition, are discussed below. These procedural differences, however, are not such as to permit one standard of fairness to pretail under Section 24 (a) and a substantially different one under Section 11 (e).

panies or subsidiaries "whether under this section or otherwise" (including proceedings for the reorganization of insolvent companies), provides that no plan of reorganization for a registered holding company or a subsidiary in such a proceeding shall "become effective unless such plan shall have been approved by the Commission after opportunity for hearing prior to its submission to the court." It was on this subsection rather than Section 11 (e) that debate was directly focused.

In the course of debate on the Senate floor Senator Borah asked with reference to the above quoted language of Section 11 (f) (79 Cong. Rec. 8845):

> I do not exactly understand that language. Does it mean that the court's jurisdiction with reference to the reorganization, or what shall be permitted by decree of the court, is limited; or is it simply recommendatory to the court?

Senator Wheeler replied:

> We do exactly the same thing at the present time, as I understand, with reference to the Interstate Commerce Commission. A plan for the reorganization of a railroad is supposed to be submitted to the Interstate Commerce Commission for its approval before it is approved by the court. We put this provision in here in practically the same manner, as I recall, as the existing provision with reference to the

Interstate Commerce Commission in the case of railroad reorganizations.

As the Court of Appeals for the Second Circuit has held, the succession of the responsibility in Commission and district court under Sections 11 (e) and 11 (f) are so similar as to make it clear that Congress intended the analogy to apply in both instances. See *Okin* v. *S. E. C.*, 145 F. 2d 206, 208, n. 2 (C. C. A. 2).

The court below agreed that the duties of the Section 11 (e) court with reference to the prior determinations of the Securities and Exchange Commission are similar to those of the Section 77 court with reference to the Interstate Commerce Commission (R. 29, 33). However, we believe the court misinterpreted the scope of review which is exercised by the Section 77 court, and correspondingly misinterpreted the scope of review under Section 11 (e).

B. *The scope of review under Section 77 and Section 11 (e)*

The court below held that both under Section 77 and under Section 11 (e) the District Court is intended to "function as an equity reorganization tribunal with the powers and functions of such a court, and not as a mere review court" (R. 30). This conception was more fully expressed with reference to the Section 77 court (R. 29):

> We are of the opinion that Congress intended the district courts of the United States, within the limitations of the statute, to function as equity reorganization courts. Though the Commission must make the primary determinations respecting the plan, including, in particular, those relating to valuations of railroad securities, the court must exercise its own independent judgment in approving or disapproving the plan whether the court's rulings relate to value, or to some other pertinent subject. See In re Erie R. Co., 37 F. Supp. 237, 243–245, aff'd, 6 Cir. 133 F. 2d 730, cert. den. 320 U. S. 748.

Similarly, the court concluded with reference to Section 11 (e): "that Congress intended to lay substantially the same duty on the court in the second instance as it imposed on the Commission in the first." (R. 24.) The court also held (R. 33–34):

> The [district] court may not substitute its valuations for those of the Commission *but it may reject* valuations made by the Commission in fulfilling its, the court's statutory function in determining whether the plan is fair and equitable. The court of course may not act capriciously in rejecting valuations made by the Commission nor may the Commission act with caprice in valuing securities. The judicial process is brigaded with the administrative process of the Commission but this does not mean that the court in the field allocated to it

> by Congress is not to exercise its independent plenary judgment as an equity reorganization tribunal upon every matter relating to the fairness and equity of the reorganization.
>
> * * * The findings and conclusions of the Commission were not binding upon the learned District Judge though, as was proper, he treated them with respect. * * * [Italics supplied.]

In so holding, we believe the court below misinterpreted the scope of review of the Section 77 court, and misconceived what is meant by the exercise of an "independent plenary judgment" to reexamine administrative findings.

This Court decided in *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 473 that as to matters of valuation and allocation the Section 77 court reviews the determinatons of the Interstate Commerce Commission under the substantial evidence rule.

> The language chosen leaves to the Commission, we think, the determination of value without the necessity of a reexamination by the court, when that determination is reached with material evidence to support the conclusion and in accordance with legal standards. It leaves open the question of whether in reaching the result the Commission had applied improper statutory standards.

Counsel for Central Illinois, while not challenging the view that Section 11 (e) was intended

to parallel Section 77, urged in the court below that "clearly [this view] represents the most favorable view of the Commission's jurisdiction which the legislative history permits since Section 77 contains express provisions (entirely absent from Section 11 (e)) conferring on the Interstate Commerce Commission exclusive powers over 'valuation of the debtor's property'." (Brief, pp. 16–17.) In that connection reference was made to subsection (e) of Section 77, quoted at 318 U. S. 472, which provides in part:

> If it shall be necessary to determine the value of any property for any purpose under this section, the Commission shall determine such value and certify the same to the court in its report on the plan.

It will be noted that the language adverted to does not expressly make valuation an "exclusive" function of the Interstate Commerce Commission. Section 11 (e) is less explicit than Section 77 in spelling out subsidiary steps in the process by which both agency and court reaches the conclusion that a plan is "fair and equitable", but in specifying that the district court "after notice and opportunity for hearing, shall approve such plan as fair and equitable. * * *"[35] Section

[35] The court below said with reference to this language (R. 24):

"The words employed respecting the respective duties of Commission and court are so alike that we must conclude that Congress intended to lay substantially the same duty on the court in the second instance as it imposed on the Commission in the first."

11 (e) closely parallels what is specified in subsection (e) of Section 77:

> After such hearing, and without any hearing if no objections are filed, the judge shall approve the plan if satisfied that: (1) it complies with the provisions of subsection (b) of this section, is fair and equitable, affords due recognition to the rights of each class of creditors and stockholders, does not discriminate unfairly in favor of any class of creditors or stockholders, and will conform to the requirements of the law of the land regarding the participation of the various classes of creditors and stockholders; * * *

quoted by this Court at 318 U. S. 464. Nevertheless, the judge's task under Section 77 was held to be a mere review function with reference to the Interstate Commerce Commission's valuation.[56]

---

[56] Conversely, in dealing with subsection (c) (2) of Section 77, where the statute is explicit concerning the Interstate Commerce Commission's responsibility for fees but not as to judicial review thereof, the traditional relationship between fact-finding agency and court has been implied. The provision in question provides:

> * * * "the trustee or trustees and their counsel shall receive * * * such compensation as the judge may allow within a maximum approved by the commission." *Cf.* subsection (8) dealing in similar language with compensation and reimbursement of other persons.

As to this, the Court held in *Reconstruction Finance Corp. v. Bankers Trust Co.*, 318 U. S. 163, 170:

> "Our conclusion is that the function committed by the law to the Commission is the ordinary one reposed in a fact find-

An even more explicit provision in Section 77 for judicial reexamination of the Interstate Commerce Commission's determination is the provision of Section 77 (e) that a plan which allows nothing to particular classes of stockholders or creditors need not be submitted to them if the worthlessness of their claims is found by the Commission "and the judge shall have affirmed the finding." With respect to that language the opinion in the *Western Pacific* case states (at pp. 478–479):

> The specificity of the direction for reexamination of the Commission's action points to a wider scope of review than an inquiry as to whether statutory standards for valuation have been followed * * * But we think the requirement of affirmation of the exclusion of claimants does not require an independent appraisal of the valuation which ordained their elimination. The court properly affirms the Commission, when it finds no legal objection to the Commission's use of its own valuation to determine whether particular claimants are entitled to participate in the reorganization. For example, there may arise controversies over the priority of the validity of claims. A Commission finding involving such problems would require an independent examination and an affirmation by the court.

---

ing body and that its findings, supported by evidence, may not be disturbed by a court."

The opinion of the Circuit Court of Appeals, which this Court reversed, had indicated that the district court in deferring to the Commission's knowledge of valuation matters may have misconceived its function since "the court is not concluded by any determination made by the Commission, but may, and must, exercise its own independent judgment; and this is true whether such determination relates to value or to some other subject." *In re Western Pacific R. Co.*, 124 F. 2d 136, 140 (C. C. A. 9), quoted at 318 U. S. 448, 466. This language, which this Court rejected, is strikingly similar to the views expressed by the court below (R. 33–34, p. 93, *supra*).[37] The holding in the *Western Pacific* case that Commission findings as to value are subject to the usual rules governing judicial review was reaffirmed in *R. F. C.* v. *Denver & R. G. W. R. Co.*, 328 U. S. 495, 505–509, in which this Court said:

> The basic problems of railroad reorganization under § 77 of the Bankruptcy Act have been so recently considered by this Court in the *Western Pacific* and *Milwaukee* cases that only a summary reference to their conclusions attacked by respondents need to be made now. * * * The agencies employed by Congress to accomplish

[37] The common stockholders relied below on *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523; but nothing in that case, decided the same day as the *Western Pacific* case, is in any way inconsistent with the latter decision.

> reorganizations under § 77 were the Interstate Commerce Commission and the courts. The answer reached by Congress was that the experience and judgment of the Commission must be relied upon for final determinations *of value* and of matters affecting the public interest, *subject to judicial review to assure compliance with constitutional and statutory requirements*. This was the interpretation of all members of this Court from the language of the act and the evidence of congressional purpose in the hearings, reports and discussion. To the courts, Congress confided the power to review the plan to determine whether the Commission has followed the statutory mandates of subsection (e), 318 U. S. at 477, and whether the Commission had material evidence to support its conclusions. 318 U. S. at 477; concurring opinion at 512. [Italics supplied.]

The courts of appeals have likewise construed the holdings of this Court as making the role of the Section 77 judge in relation to Commission valuations and allocations that of applying the substantial evidence rule. See *In re New York, New Haven & Hartford R. Co.*, 147 F. 2d 40, 46–47 (C. C. A. 2), certiorari denied, 325 U. S. 884; *Chicago, Rock Island & Pacific Ry. Co.* v. *Fleming*, 157 F. 2d 241 (C. C. A. 7), certiorari denied, 329 U. S. 780, 811.

The opinion of the court below (R. 21-22) quotes specific statements from the legislative history concerning the anticipated relationship of district court and Commission under Section 11. While the holding of the court does not appear to rest on these quotations, some of them appear to us to give an incomplete picture of the legislative background. Accordingly, we set forth in full in Appendix B the entire discussion of the mechanism of Section 11 in the Senate Report from which the excerpts quoted in the opinion below are taken, and also the entire Senate debate on certain amendments to Section 11 (f) which the opinion quotes in part.[58] Read in context, the references in the committee report to the anticipated advisory function of the Commission relate to the Commission's status as a party to proceedings or as a court-appointed trustee, administering plans or properties, rather than to the court's reexamination of a plan theretofore approved by the Commission in an administrative hearing. The debate over the respective functions of Commission and court, and the amendments prompted thereby, reflect a controversy as to whether there should be any limitation upon the reorganization court's tra-

[58] The debate mentions only Section 11 (f), but, as the opinion below notes, there were corresponding provisions of subsections (d) and (e) of the bills relating to the court's duty to appoint the Commission sole trustee which underwent corresponding revision.

ditional discretion as to the choice of a trustee. There is no indication in the entire debate of any difference of opinion concerning the desirability of giving the Commission the same power with reference to approval of reorganization plans as was accorded the Interstate Commerce Commission under Section 77.

Apparently the court below was misled by references to the function of the reorganization court to exercise an "independent judgment", both in the opinions of this Court dealing with Section 77 of the Bankruptcy Act and in Senator Wheeler's statement comparing Section 11 (f) of the Holding Company Bill with Section 77: "In other words, there is really a double-check upon the plan, and final determination rests as in the past in the courts." See Appendix B, *infra*, p. 152, quoted by the court below (R. 22–23). But the decisions of this Court under Section 77 of the Bankruptcy Act have found ample scope for the exercise of "independent judgment" by the reorganization court without holding that the court's responsibility for valuation and allocation approximates the initial fact finding function of the Interstate Commerce Commission. See especially the *Western Pacific* and *Denver and Rio Grande* cases discussed *supra*, pp. 94–99.[59]

[59] We believe it significant that the court below did not refer to the *Western Pacific* decision, but relied only upon a district court ruling in the *Erie* case prior to the *Western Pacific* case (R. 29). Moreover, as we read the opinion of

As this Court said in *St. Joseph Stock Yards Co. v. United States*, 298 U. S. 38, 53, in dealing with a suit to set aside a rate determination under the Urgent Deficiencies Act:

> * * * this judicial duty to exercise an independent judgment does not require or justify disregard of the weight which may properly attach to findings upon hearing and evidence. On the contrary, the judicial duty is performed in the light of the proceedings already had and may be greatly facilitated by the assembling and analysis of the facts in the course of the legislative determination. Judicial judgment may be none the less appropriately independent because informed and aided by the sifting procedure of an expert legislative agency.

The reorganization court, of course, has an independent responsibility for all issues of law. The *Western Pacific* opinion give as an example; "there may arise controversies over the priority or the validity of claims", 318 U. S. at 479. Again, the *Milwaukee* case (*Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. at 568) held that it was for the district court to resolve a dispute as to whether certain properties were subject to the

---

the master which the district court adopted in the *Erie* case, it held that exercise of independent judgment in determining whether the plan complies with the requirements of Section 77 involves merely a review of the prior determinations of the Interstate Commerce Commission to see whether they were in accordance with accepted legal standards and supported by material evidence (37 F. Supp. 237, 244, 245, 247).

after acquired property clause of the General Mortgage.[60]

A traditional function and responsibility of the reorganization courts, as developed in the equity receivership cases, is to exercise "an informed, independent judgment" as to all matters arising in the reorganization. See *National Surety Co.* v. *Coriell*, 289 U. S. 426, 436; *First National Bank* v. *Flershem*, 290 U. S. 504. While this concept developed in situations where there was no administrative agency charged with responsibility for protecting security holders against possibly inadequate, or at least not disinterested, representation, this judicial function survives in part, and gives the court a broader function than the mere determination of questions of law, under both Sections 77 and 11 (e).

Thus, within limits, the district judge has responsibility to take evidence to decide whether the record on which the agency acted has become stale as a result of changing economic conditions. See *R. F. C.* v. *Denver & R. G. W. R. Co.*, 328 U. S. 495, 521–22; *Insurance Group* v. *Denver & R. G. W. R. Co.*, 329 U. S. 607, 611. Inquiries as to matters of law or fact may be made on the court's own motion or at the behest of objecting parties

[60] See also *In re New York, N. H. & H. R. Co.*, 147 F. 2d 40 (C. C. A. 2), where the Court of Appeals reversed both the district court and the Commission for making an allocation on the basis of negotiations by the conflicting groups rather than on the basis of an exercise of the Commission's own valuation function.

who, by ordinary appellate standards, might be precluded from raising a question. For example, in *Comstock* v. *Group of Investors*, 335 U. S. 211, the Interstate Commerce Commission had given no consideration at all, because the point had not been raised before it, to the argument that securities of a parent holding company should be subordinated to otherwise junior holdings of public securities in view of evidence of mismanagement allegedly similar to that involved in *Taylor* v. *Standard Gas and Electric Co.*, 306 U. S. 307. This Court held the district court might, in its discretion, consider these objections for the purpose of determining whether the circumstances warranted a remand to the Commission.[61]

[61] The Court indicated (at pp. 227–8) that the objection should have been voiced before the Commission in the first instance and that "to by-pass the Commission and make the court the original forum for such contentions is not to be encouraged." It was nevertheless held that—

"In view of the functions cast upon the court in such cases, we cannot say that it may not, in its discretion, consider objections on their merits even though they have not been presented to the Commission. Some circumstances might be disclosed to indicate a remand for their consideration by the Commission. They might indicate that the courts would withhold approval, not out of deference to the objecting parties' rights but because of the broad responsibility laid upon the court for the equity and fairness of the plan as a whole. The court will be diligent to protect itself and the public from approval of unfair plans, even by default, and may take for its own use evidence no party would have a right to force upon it. The court below evidently considered the circumstances of this case to warrant such inquiry into the merits, and we do not inquire whether the discretion was wisely exercised."

As the court below noted, the Commission itself has emphasized the "independent duty" of the Section 11 (e) court (R. 23–24). In cases arising under Section 11 (e) the Commission has consistently taken the position that the enforcement court has an independent responsibility to scrutinize the plan even in the absence of opposition, or where the opposition might be belated from the point of view of ordinary review proceedings. In the *Otis* case there had been no opposition to the plan in the administrative hearings, and the United Light and Power Company on that ground resisted the standing of Otis & Co. to appear in the district court in opposition to the plan and to appeal from the adverse order. In both instances the Commission supported the standing of Otis & Co., with the *caveat* that their grounds of opposition related to an issue fully raised before the Commission in the dissenting opinion of Commissioner Healy and in fact basic to the obligations of both Commission and court in respect to examination of the plan. Accordingly, it was not, in the Commission's view, a case where the nature of the opposition amounted to "ambushing" the Commission as was urged by United Light and Power. *Cf. Comstock* v. *Group of Investors*, 335 U. S. 211, 227, *supra*; *Tagg Bros.* v. *United States*, 280 U. S. 420, 443–444; *Manufacturers Railway Co.* v. *United States*, 246 U. S. 457, 488–490.

As a general rule, of course, we believe the district court which receives an application under Section 11 (e) to enforce a plan approved by the Commission exercises a review function and must proceed on the basis of the administrative record.[62] However, there have been instances under the Holding Company Act, where, as in cases under Section 77, additional testimony has been taken to determine whether the case should be remanded to the Commission.[63] See *In re North-*

[62] In an oral opinion by Judge Biggs, sitting as a District Judge, *In the Matter of Midland United Corporation* (D. Del. 1944), and 11 (f) proceeding, he stated this rule as follows:

"I have also reached the conclusion that that adjudication must be based upon the entire record before the S. E. C. and on nothing more unless (a) it be shown that the situation of the debtor has so altered since the case was before the S. E. C. that it would be unfair and inequitable to proceed with the plan. * * * Or (b) where the S. E. C. has denied, or it is alleged that they have denied, due process of law in refusing to receive testimony or in denying a hearing. * * *"

See also *In re Jacksonville Gas Co.* (Unreported, D. Fla.), an 11 (e) proceeding quoted at R. 67.

[63] In an early proceeding in the Third Circuit where the Commission's order had been affirmed on review prior to its consideration in a Section 11 (e) enforcement proceeding, Judge Kirkpatrick held that the enforcement proceeding "is essentially a review proceeding." He noted that the specifications of the substantial evidence rule in Section 24 and the limitation of the Section 24 court's review to issues raised before the Commission "furnishes some basis for the argument that the scope of the hearing before this Court is broader." See *Application of Securities and Exchange Commission*, 50 F. Supp. 965 (D. Del.). It was held that the court could take evidence as to developments since the Commission acted but the particular proffer was rejected as irrelevant.

ern States Power Co. (unreported, August 30, 1948, D. Minn.) where additional evidence was received with reference to a contention, ultimately rejected by the Court, that the valuation data relied on by the Commission was stale.[9]

Whether the review function generally exercised by the district court should be based upon the substantial evidence rule or some other evidence weighing rule has been less sharply focused inasmuch as most of the controversies have turned upon issues of law. Nevertheless, both the First and Eight Circuits have given consideration to that issue and reached conclusions, contrary to that of the court below that the substantial evidence rule applies. *Lahti* v. *New England Power Association,* 160 F. 2d 845, 850 (C. C. A. 1); *In re Laclede Gas Light Company,* 57 F. Supp. 997 (E. D. Mo.), affirmed *sub nom. Massachusetts Mut. Life Ins. Co.* v. *S. E. C.,* 151 F. 2d 424 (C. C. A. 8), certiorari denied, 327 U. S. 795.

The district court's supervision of the execution of the plan also serves as a further safeguard

[9] In one case the district court received testimony, and on the basis thereof found unsubstantiated charges by a minority stockholder that the company which proposed the plan in question had been "coerced" by the Commission's staff. *In re United Gas Corp.,* 58 F. Supp. 501 (D. Del.), affirmed, 162 F. 2d 409 (C. C. A. 3). See also *In re Electric Bond and Share Co.,* 73 F. Supp. 426 (S. D. N. Y.), affirmed, 161 F. 2d 978 (C. C. A. 2), where it was charged that the objector had been deprived of due process of law in the administrative hearing.

against abuse of minority stockholders, the significance of which may depend on the nature of the plan; Section 11 (e) provides that "the court shall have jurisdiction to appoint a trustee," which could be the Commission, to "hold or administer, under the direction of the court and in accordance with the plan" the assets involved. Thus far, however, Section 11 (e) plans have not involved substantial discretion as to execution, and have been administered by corporate officers under the direction of the court.[65]

The above are examples of situation in which the district court acts independently and in other than a reviewing capacity. They leave ample room for the exercise of independent judgment without empowering the court to determine *de novo* matters of discretion or policy which the Commission has decided. As to such matters under Section 11 (e) as under Section 77, we submit the courts are not to overturn reasonable Commission findings.

C. *The issue of fairness in this case, if not a pure issue of law, falls within the area where finality attaches to the Commission's determination*

As we have previously argued, whether to reorganize on the basis of going concern values or

[65] It appears that Congress was concerned to safeguard against untimely dispositions if for any reason distribution in kind did not prove feasible and conceivably this might take place under Section 11 (e) plans as distinguished from

involuntary liquidation preferences seems to us to present an issue of law. If that issue in its present context is not already settled by the *Otis* case, we believe that this Court should now decide it as a matter of law. We do not ourselves urge the doctrine of administrative finality in support of the Commission's resolution of this issue.[55]

Addressing ourselves to the hypothesis, however, that the issue is one of discretion in the application of statutory policy, then we believe that discretion is lodged by the Act in the Commission and not in the district courts. The statutory policy emphasized by this Court in the *Otis* case, and upheld by the courts below as well as the Commission, is that the operation of Section 11 should not result in a shift of values from one class of security holders to another. If this policy is not to be effectuated intuitively on the basis of "colloquial equities", the controversy seems to relate primarily to whether inquiry should be confined to the operation of the particular plan before the Commission or should include a re-appraisal of all past transactions as if the Act had never been passed. While we have argued

---

Section 11 (d) enforcement proceedings, or dispositions subject to Commission scrutiny under Section 11 (d). See Appendix B, p. 142.

[55] What the going concern value was would present a question of valuation as to which we believe the Commission's reasonable judgment would be binding. See *Western Pacific* case, *supra* p. 94). But the courts below did not disagree with the Commission as to this (R. 17).

that such a re-appraisal is, as a matter of law, inappropriate, we believe that the Commission, which has had to grapple with the past transactions and can best appraise the situation in relation to the over-all problem of achieving compliance with Section 11, is best equipped to decide whether the technique of retroactive revaluation is administratively feasible. As this Court has held, "the relation of remedy to policy is peculiarly a matter for administrative competence." See *Phelps Dodge Corporation* v. *N. L. R. B.*, 313 U. S. 177, 194.

Whether or not, as the Section 77 analogy indicates, the substantial evidence rule is generally applicable to the reexamination by a Section 11 (e) court of the prior determinations of the Commission, we believe that any policy functions which may have been delegated by the Congress are, because of their quasi-legislative character, inherently a function of the Commission rather than the courts. Exercise of such functions is subject to review for arbitrary or irrational exercise, but not because of judicial disagreement with policy determinations of the agency. See *National Broadcasting Co.* v. *United States*, 319 U. S. 190, 224, 225; *Federal Security Administrator* v. *Quaker Oats Co.*, 318 U. S. 218, 228; *Opp Cotton Mills* v. *Administrator*, 312 U. S. 126; *United States* v. *George S. Bush & Co.*, 310 U. S. 371; *American Tel. & Tel. Co.* v. *United States*, 299 U. S. 232; *Houston* v. *St. Louis Independent Packing Co.*,

249 U. S. 479; Final Rep. of the Att'y General's Comm. on Ad. Proc. 115–20.

The court below posed the issue of the scope of judicial review in terms of the applicability to the instant case of what this Court said in *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194, 206–207, to the effect that unless the conclusions of the Commission lack "any rational and statutory foundation" they should not have been disturbed by the court below, for the "'fair and equitable' rule of Section 11 (e) * * * [was] inserted by the framers of the Act in order that the Commission might have broad powers to protect the various interests at stake * * * The very breadth of the statutory language precludes a reversal of the Commission's judgment save where it has plainly abused its discretion in these matters." This standard of review was rejected as inapplicable under 11 (e) because of the district judge's "independent" responsibility. (R. 31, 33.)

The point on which this Court divided in the *Chenery* case was whether the Commission was arbitrary, absent a prospective rule, in limiting to cost management purchases in the course of the reorganization, or whether within this area Congress had delegated to the Commission a discretion to proceed case by case as well as by rule. The Commission's decision was sustained as an authorized "judgment based upon public policy" (332 U. S. 194, 209). Once it be con-

cluded that a particular Commission decision does rest upon a policy judgment within an area delegated to it by the Congress, we believe it clear that neither a Section 24 court nor a Section 11 (e) court can have jurisdiction to set it aside."

While we believe the court below gave the wrong reason for rejecting the applicability of the *Chenery* case, acceptance of our main argument leads to the same conclusion. We believe the statute does not delegate to either Commission or the courts authority to exercise a policy judgment whether to accord security holders full compensation for rights surrendered. As to that the critical policy judgment has been made by the Congress in incorporating into Section 11 (e) the words of "fair and equitable." See *Case* v. *Los Angeles Lumber Products Co.*, 308 U. S. 106.

D. *To construe Section 11 (e) as conferring on the district court a valuation function coordinate with that of the Commission would make the statute unworkable.*

The opinion below states (R. 33–34):

> The court may not substitute its valuations for those of the Commission but it

---

"Compare what was said in the first *Chenery* case, 318 U. S. 80, 94:

> "If the action rests upon an administrative determination—an exercise of judgment in an area which Congress has entrusted to the agency—of course it must not be set aside because the reviewing court might have made a different determination were it empowered to do so."

> may reject valuations made by the Commission. * * * The court of course may not act capriciously in rejecting valuations made by the Commission nor may the Commission act with caprice in valuing securities.

The decision of the court below remanding the case to the Commission contemplates that the Commission should exercise a fresh valuation function, taking into account the criticisms by the Court of Appeals of its initial valuation. As previously argued, we believe these criticisms raise issues of law and that this Court should resolve the question of law thereby posed. To the extent, however, that the opinion below rests upon the holding that the valuation function of the district court in the second instance is virtually coordinate with that of the Commission in the first instance, and that the district court's rejection of the Commission's valuation is upheld because the appellate court cannot hold the conclusion of the district judge "clearly erroneous" (R. 39), the ruling of the court below sets forth no controlling authority to govern the Commission upon remand. Instead, so long as there is no caprice in the difference of views between the Commission and the district court, each can thwart the other without there being any method of resolving conscientious disagreement as to what is "fair and equitable."

We believe that Congress could not have contemplated any such impasse, and that so to hold is to ignore the mandate of Section 1 (c) that all the provisions of the Act are to be interpreted "to meet the problems and eliminate the evils as enumerated * * * and to provide as soon as practicable for the elimination of public-utility holding companies except as otherwise expressly provided in this title." To avoid such a deadlock, we believe that, whatever authority the district court may have to check the Commission, its rulings as to what is "fair and equitable" should bind the Commission on remand. Conversely, the authority of the district court to reject the Commission's determinations should be no broader than its power to impose controlling directions on remand.[38]

[38] The opinion below recognizes that, the Engineers plan having been substantially executed, the only issue which could be open to the Commission on remand is how much, if any, of the escrowed cash goes to Engineers' preferred stock (R. 39, 40). Where a plan has not been executed at all the refusal of the district court to affirm because the Commission erred in determining the issue of fairness might warrant a reexamination of the type of plan. And, of course, we recognize that the Commission can have a new administrative function to perform in the determination of what is "fair and equitable" where the court's ruling is that the Commission did not properly discharge its administrative function. *Cf.* the first *Chenery* case, 318 U. S. 80.

It is likewise necessary in the interest of uniform administration of the statute, that in so far as the Commission's methods of valuation be rejected, the rejection not depend upon varying conceptions and discretion of individual district judges. This requires that where the district judge disagrees with the Commission his determinations not be binding on the appellate court unless "clearly erroneous" but be subject to full reexamination on appeal.

In suggesting that the district judge's disagreement with the Commission is not to be reversed unless "clearly erroneous" (R. 39), the court below refers to Rule 52 of the Rules of Civil Procedure. That rule, however, is concerned with due regard for the district judge's opportunity "to judge of the credibility of the witnesses," and appears to reflect primarily a policy of respecting the determinations of the initial trier of the facts. While the fact-finding function in connection with reorganizations is, of course, concerned more with the drawing of inferences than weighing credibility, we believe Rule 52 points more to the desirability of district judges upholding agency fact findings, than to their having an unreviewable discretion to disregard them.

CONCLUSION

Whether this Court agrees with the Commission that it applied a proper legal standard in valuing the preferreds or with the common stockholders that a proper legal standard requires the preferreds to be paid only their involuntary liquidation preference, we believe the plan need not be remanded to the Commission. Under either of these circumstances the Commission will have no further valuation function to perform.

However, if this Court agrees with the courts below that "colloquial equities" should be weighed by the Commission, it would be necessary to remand the proceedings for such a determination. Pursuant to such a remand the Commission would, of course, be confronted with a rather nebulous concept of equities to be weighed, and would have no guidance concerning the amount of weight to be attached to each of the equities considered unless the opinion of this Court should provide more specific criteria than does the opinion below. In the absence of such specific criteria we believe the opinion of the Commission already indicates that in its own judgment the weight to be attached to the equities mentioned by the courts below would not affect its valuation and consequently remand would serve no useful purpose.

For the reasons stated, we believe the court below should be reversed and the plan approved by the Commisson should be enforced.

Respectfully submitted.

DECEMBER 1948.

APPENDIX A

Pertinent Provisions of the Public Utility Holding Company Act of 1935 and Section 77 of the Bankruptcy Act

Section 11 (e) of the Public Utility Holding Company Act of 1935 (49 Stat. 803, 15 U. S. C. 79 *et seq.*) provides as follows:

> (e) In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of sec-

tion 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed.

Section 24 (a) of the same Act provides as follows:

SEC. 24. (a) Any person or party aggrieved by an order issued by the Commission under this title may obtain a review of such order in the circuit court of appeals of the United States within any circuit wherein such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the entry of such order, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall be forthwith served upon any member of the Commission, or upon any officer thereof designated by the Commission for that purpose, and thereupon the Commission shall certify and file in the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part. No objection to the order of the

Commission shall be considered by the court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do. The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which, if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court affirming, modifying, or setting aside, in whole or in part, any such order of the Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

Section 77 (c) of the Bankruptcy Act (11 U. S. C. 205 (c)) provides as follows:

(c) Upon the certification of a plan by the Commission to the court, the court shall give due notice to all parties in interest of the time within which such parties may

file with the court their objections to such plan, and such parties shall file, within such time as may be fixed in said notice, detailed and specific objections in writing to the plan and their claims for equitable treatment. The judge shall, after notice in such manner as he may determine to the debtor, its trustee or trustees, stockholders, creditors, and the Commission, hear all parties in interest in support of, and in opposition to, such objections to the plan and such claims for equitable treatment. After such hearing, and without any hearing if no objections are filed, the judge shall approve the plan if satisfied that: (1) It complies with the provisions of subsection (b) of this section, is fair and equitable, affords due recognition to the rights of each class of creditors and stockholders, does not discriminate unfairly in favor of any class of creditors or stockholders, and will conform to the requirements of the law of the land regarding the participation of the various classes of creditors and stockholder; (2) the approximate amounts to be paid by the debtor, or by any corporation or corporations acquiring the debtor's assets, for expenses and fees incident to the reorganization, have been fully disclosed so far as they can be ascertained at the date of such hearing, are reasonable, are within such maximum limits as are fixed by the Commission, and are within such maximum limits to be subject to the approval of the judge; (3) the plan provides for the payment of all costs of administration and all other allowances made or to be made by the judge, except that allowances provided for in subsection (c), paragraph (12) of this section, may be paid in securities provided for in the

plan if those entitled thereto will accept such payment, and the judge is hereby given power to approve the same.

If the judge shall not approve the plan, he shall file an opinion, stating his conclusions and the reason therefor, and he shall enter an order in which he may either dismiss the proceedings, or in his discretion and on motion of any party in interest refer the proceedings back to the Commission for further action, in which event he shall transmit to the Commission a copy of any evidence received. If the proceedings are referred back to the Commission, it shall proceed to a reconsideration of the proceedings under the provisions of subsection (d) of this section. If the judge shall approve the plan, he shall file an opinion, stating his conclusions and the reasons therefor, and enter an order to that effect, and shall send a certified copy of such opinion and order to the Commission. The plan shall then be submitted by the Commission to the creditors of each class whose claims have been filed and allowed in accordance with the requirements of subsection (c) of this section, and to the stockholders of each class, and/or to the committees or other representatives thereof, for acceptance or rejection, within such time as the Commission shall specify, together with the report or reports of the Commission thereon or such a summarization thereof as the Commission may approve, and the opinion and order of the judge: *Provided*, That submission to any class of stockholders shall not be necessary if the Commission shall have found, and the judge shall have affirmed the finding, (a) that at the time of the finding the corporation is insolvent, or that at the time

of the finding the equity of such class of stockholders has no value, or that the plan provides for the payment in cash to such class of stockholders of an amount not less than the value of their equity, if any, or (b) that the interests of such class of stockholders will not be adversely and materially affected by the plan, or (c) that the debtor has pursuant to authorized corporate action accepted the plan and its stockholders are bound by such acceptance: *Provided further*, That submission to any class of creditors shall not be necessary if the Commission shall have found, and the judge shall have affirmed the finding, that the interests of such class of creditors will not be adversely and materially affected by the plan, or that at the time of the finding the interests of such class of creditors have no value, or that the plan provides for the payment in cash to such class of creditors of an amount not less than the value of their interests. For the purpose of this section the acceptance or rejection by any creditor or stockholder shall be in writing, executed by him or by his duly authorized attorney, committee, or representative. If the United States of America, or any agency thereof, or any corporation (other than the Reconstruction Finance Corporation) the majority of the stock of which is owned by the United States of America, is a creditor or stockholder, the interests or claims thereof shall be deemed to be affected by the plan, and the President of the United States, or any officer or agency he may designate, is hereby authorized to act in respect of the interests or claims of the United States or of such agency or other corporation.

The expense of such submission shall be certified by the Commission and shall be borne by the debtor's estate. The Commission shall certify to the judge the results of such submission.

Upon receipt of such certification, the judge shall confirm the plan if satisfied that it has been accepted by or on behalf of creditors of each class to which submission is required under this subsection holding more than two-thirds in amount of the total of the allowed claims of such class which have been reported in said submission as voting on said plan, and by or on behalf of stockholders of each class to which submission is required under this subsection holding more than two-thirds of the stock of such class which has been reported in said submission as voting on said plan; and that such acceptances have not been made or procured by any means forbidden by law; *Provided*, That, if the plan has not been so accepted by the creditors and stockholders, the judge may nevertheless confirm the plan if he is satisfied and finds, after hearing, that it makes adequate provision for fair and equitable treatment for the interests or claims of those rejecting it; that such rejection is not reasonably justified in the light of the respective rights and interests of those rejecting it and all the relevant facts; and that the plan conforms to the requirements of clauses (1) to (3), inclusive, of the first paragraph of this subsection: *Provided further*, That if in any reorganization proceeding under this section, the United States is a creditor on claims for taxes or customs duties (whether or not the United States has any other interest in, or claim against, the debtor, as creditor

or stockholder), no plan which does not provide for the payment thereof shall be confirmed by the judge except upon the acceptance, certified to the court, of a lesser amount by the President of the United States or the officer or agency designated by him pursuant to the provisions of the preceding paragraph hereof: *Provided further*, That if the President of the United States or such officer or agency shall fail to accept or reject such lesser amount for more than ninety days after receipt of written notice so to do from the court, accompanied by a certified copy of the plan, the consent of the United States insofar as its claims for taxes or customs duties are concerned shall be conclusively presumed. If the judge shall confirm the plan, he shall enter an order and file an opinion with a statement of his conclusions and his reasons therefor. If the judge shall not confirm the plan, he shall file an opinion, with a statement of his conclusions and his reasons therefor, and enter an order in which he shall either dismiss the proceedings, or, in his discretion and on the motion of any party in interest, refer the case back to the Commission for further proceedings, including the consideration of modifications of the plan or the proposal of new plans. In the event of such a reference back to the Commission, the proceedings with respect to any modified or new plan shall be governed by the provisions of this section in like manner as in an original proceeding hereunder.

If it shall be necessary to determine the value of any property for any purpose under this section, the Commission shall determine such value and certify the same to the court in its report on the plan. The

value of any property used in railroad operation shall be determined on a basis which will give due consideration to the earning power of the property, past, present, and prospective, and all other relevant facts. In determining such value only such effect shall be given to the present cost of reproduction new and less depreciation and original cost of the property, and the actual investment therein, as may be required under the law of the land, in light of its earning power and all other relevant facts.

APPENDIX B

EXTRACTS FROM THE LEGISLATIVE HISTORY OF SECTION 11

Extracts from S. Rep. 621, 74th Cong., 1st Sess., pp. 11–17:

4. SECTION 11.

As has been pointed out above, the purpose of section 11 is simply to provide a mechanism to create conditions under which effective Federal and State regulation will be possible. It is therefore the very heart of the title, the section most essential to the accomplishment of the purposes set forth in the President's message.

There has been much misunderstanding of the provisions of this section in the bill originally introduced (S. 1725). It has erroneously been called a "death sentence" upon all public-utility holding companies. It has erroneously been charged that it would confiscate the investment of the public in the utility industry. For these reasons particular explanation of this section appears in this report.

In its present form the section has been extensively rewritten. In general terms its purposes and effect can be stated substantially as follows:

(1) The "elimination" provided for in section 11, is simply a requirement that within 5 years (with certain permissible extensions) the presently existing public-utility holding companies must choose either—

(*a*) To turn themselves into investment trusts by making legal arrangements which

will deprive them of the control of the management of operating electric and gas companies in which they have investments, or

(*b*) To rearrange or reduce their holdings in operating companies, if necessary, so that each holding company will control the management of only a single system of operating companies, which single system is not mixed up with any extraneous businesses, such as real estate, hotels, and operations in foreign countries, and is either (*x*) predominantly intrastate, or (*y*) geographically and economically integrated in contiguous States, the laws of which will not permit merger into a single operating system.

(2) The title requires that a holding company be permitted to hold only a single system of operating companies in order to break down dangerous and unnecessary nation-wide financial interlockings in the essentially local operating utility business; to break down the concentration of the economic and political power now vested in the power trust; to reduce utility enterprises to a size and power which can successfully be regulated by local and Federal regulatory commissions; to rearrange the relationships between operating and holding companies on a functional basis so that intelligent regulation is possible; to confine the operations and the interest of each public utility system to the actual utility business of a given region so that the system will have to work out a modus vivendi with the population of that region.

Private utilities with their legalized monopolies are chartered to serve public ends. A far-flung disjointed system is independent and absentee so far as any partien-

lar community in its system is concerned. Its management has the problems of no one community for its exclusive consideration. It derives a great portion of its power and its profits from outside sources over which the community has no control. It can never be successfully regulated by the community it serves. It is a breeder of bad public relations.

An operating system whose management is confined in its interest, its energies, and its profits to the needs, the problems, and the service of one regional community is likely to serve that community better, to confine itself to the operating business, to be amenable to local regulation, to be attuned and responsible to the fair demands of the public, and more often to get along with the public to mutual advantage. A regional system, with each company confined to consolidation of its own territory, will offer no chance for the territorial raids at fantastic prices with which for 15 years competing holding company systems disturbed the operating business. Essentially local systems will tend to operate utilities rather than to play with high finance; and essentially local enterprise is far less likely to accumulate a disproportion amount of political and economic power.

All the advantages of large-scale operation and centralized financing claimed for present-day holding companies can be obtained when a holding company holds a single integrated system of operating companies or when a number of operating units are merged into the legal unit of a single large operating company.

Opponents of the title argue that a holding company should be permitted to hold more than one integrated system of operat-

ing companies because of the advantages of diversification of risk such a holding company can offer investors in its own securities. The answer to that argument is as follows:

(*a*) Experience has shown that there is no important actual diversification of economic risk either in the operations or the securities of present-day holding companies. The securities of those holding companies which claim to be most diversified have actually had the worst investment records; their own best securities are bonds secured by liens on specific operating properties. The argument of diversification of risk is an attempt to justify as a matter of economic principle, the accumulation of unrelated operating properties in a completely accidental way for immediate reasons of financial opportunism.

(*b*) Diversification of risk is a matter of investment judgment to be undertaken by the individual investor or an investment trust, not by those actually controlling and managing operating companies. "* * * The holding company in the past has confused the function of control and management with that of investment and in consequence has more frequently than not failed in both functions. * * * An investment company ceases to be an investment company when it embarks into business and management. Investment judgment requires the judicial appraisal of other people's management." (President's message of Mar. 12.)

(*c*) Even if the argument of diversification were sound, it is outweighed by the political and general economic desirability of breaking up concentrations of financial power in the utility field too big to be effec-

tively regulated in the interest of either the consumer or the investor and too big to permit the functioning of democratic institutions.

(3) A presently existing utility holding company can become an investment trust under the title by enfranchisement of independent holders of securities, by "sterilization" of a portion of the voting rights of the securities held by the holding company itself, by abandonment of proxy practices and interlocking directorates, or by divestment of a portion of holdings, etc., until it has satisfied the Securities and Exchange Commission that it has divested itself of control of the management of operating gas and electric companies. For many holding companies the simplest method may be the giving of voting rights to presently disfranchised independent holders of securities in operating companies in sufficient degree to satisfy the Securities and Exchange Commission that the holding company, despite its ownership of securities in operating companies, does not control the management of such companies.

(4) A presently existing utility, holding company with widely scattered holdings may continue to control the management of subsidiary operating utility companies if, within the period permitted by the section, it rearranges or reduces them to obtain a single integrated system.

(*a*) *Voluntary readjustment.*—Substantially such holding companies are given 5 years (with certain permissible extensions) in which to rearrange their affairs in their own way, on their own initiative, utilizing their present connections with investment banking houses for the flotation of new and refunding issues to buy and sell properties

and their present interrelationships with each other for the purpose of arranging exchanges of properties.

The Securities and Exchange Commission and the Federal Power Commission are expressly directed by the title to make a study of rearrangement possibilities to aid such rearrangement on a voluntary basis during the next 5 years. There has been a very pronounced voluntary movement on the part of the better companies in the last 10 years to dispose of outlying properties and to rearrange their properties into integrated systems. There are many forces at work in the industry which, given the machinery and the encouragement of legislation, will undertake to set their houses in order to enlighten self-interest in the same way that groups in the field covered by the Securities Exchange Act have undertaken reforms without compulsion within the framework of that act. Among those forces are new scientific developments, new distributions of financial power, the interests of investment banking houses in salvaging situations they have "sponsored", Government holdings of utility securities taken as collateral for Government loans, and the sheer necessity of reorganization, entirely independent of this title, in many holding company situations.

Section 11 provides that plans for the voluntary readjustment of the affairs of holding companies to conform with the section may be presented to the Federal courts at any time and that in such cases those courts may exercise in the furtherance of such voluntary plans all the extraordinary powers such courts have been accustomed to exercise when called upon under the Sher-

man and Hepburn Acts to effect compulsory corporate readjustments required by the public policy expressed in those acts.

The committee is of the opinion that careful consideration should be given to the advisability of amending the revenue acts to encourage voluntary corporate reorganization for the purposes of simplifying holding company structures, eliminating unnecessary complexities therein, and otherwise complying with the policies underlying holding company legislation. Such amendments should be considered not only in relation to the stamp and transfer taxes but to the income taxes as well. Naturally, any exemptions provided for these purposes should be limited to the needs of such purposes. The committee has taken no definite action on this matter because of the parliamentary procedure which may be construed to require such an amendment of the revenue act to originate in the House, but it definitely recommends concurrence by the Senate in any such amendment originating in the House.

With intelligent cooperation between the commissions, the Federal courts, Federal taxing policy, and the utility interests themselves, practically the entire operation of transformation and arrangement of those holding companies in which investors have anything left to save can be completed prior to the end of 5 years. Where the corporate structure of companies is simple, compliance with the bill will be comparatively simple. Where the corporate structure is complicated and confusing, as is the case with some holding companies, reorganization is inevitable irrespective of legislative compulsion.

(b) *Compulsory readjustment.*—In the case of those holding companies which at the end of the 5 years may not have completed for themselves the task of transformation into an investment trust or of rearrangement of their properties into a single integrated system, the Securities Commission is given power to take them into the Federal courts to require compliance with the title in one or the other way. The process of compulsory divestment of control is left to the Federal courts, without time limit, for the application of the technique worked out in the dissolutions under the Sherman Act and the Hepburn Act (commodities clause).

The title provides that during all court processes the Securities and Exchange Commission shall act as an impartial expert economic adviser and administrative assistant to the courts. That expert assistance will enable the courts to save time and expense in the solution of essentially economic and administrative problems for which in the Sherman Act cases it had no assistance except that of opposing counsel. But the courts can take such time as they deem advisable to dispose of assets without sacrifice.

Time taken in a dissolution proceeding should not injure the investor because the going-market prices of securities in the securities market anticipate in advance the break-up value which any particular security will have at the end of a dissolution proceeding. As a matter of fact, the valuation which the market places on holding companies securities today is but a rough calculation or prediction of the break-up value of an interest in the holding company's conglomeration of interests in op-

erating properties. During any process of reorganization under this title the market's appraisal of values is likely to be more accurate and reliable than at present because of the focusing of attention upon the down-to-the-rail assets which make up the real value of holding company securities.

(5) The reorganization of holding companies which are not necessary for the operation of geographically integrated operating systems will not adversely affect the credit of the utility industry.

(*a*) There may be some instances where the regional holding company, tying together small plants and small distributing areas, has in the past helped to draw capital into the actual industry. But the giant holding companies, by and large, have not drawn money into capital improvement and expansion of the industry but have utilized their investors' funds for the purchase of utility properties already built. Even after the holding company became a dominant factor in the utility industry, credit and investment were obtained for the industry directly through the operating companies rather than through the holding companies. It has been in the securities of the operating companies that insurance companies and savings banks have placed the bulk of their utility investments. They have wisely chosen the tested and secured obligations of the operating companies, and not the so-called "diversified securities" of the holding companies, based on slender and speculative equities.

The President pointed out in his radio address—

"Power production in this country is virtually back to the 1929 peak. The operating companies in the gas and electric utility

field are by and large in good condition but under holding company domination the utility industry has long been hopelessly at war with the industry and with public sentiment."

It is the existence of the unnecessary holding company and not the threat of its elimination that menaces the credit of the utility industry. The holding company advocates have spoken a great deal about the capital flowing into the utility industry while under the domination of the holding company. But they have made no effort to show how much of the investors' money used to purchase holding company securities ever went to build or improve utility properties. Dr. Harold G. Moulton, president of the Brookings Institution, in a recent book entitled "The Formation of Capital", states that very little of the money invested in holding-company securities went into productive capital. Moulton writes:

"The amount of securities floated by investment trust and public-utility holding companies in the years 1924 to 1930, inclusive, was as follows:

Year	Investment trusts	Public-utility holding companies	Year	Investment trusts	Public-utility holding companies
1924	$44,700,000	$246,300,000	1928	$1,026,000,000	$1,104,000,000
1925	208,500,000	401,900,000	1929	2,951,000,000	1,039,000,000
1926	96,600,000	532,900,000	1930	401,700,000	647,600,000
1927	418,700,000	883,500,000			

"Such issues served to confuse the true economic picture. They added to the volume of security offerings; but the funds procured were employed almost entirely in the purchase of corporate securities already outstanding. Instead of adding to productive capital, these financial operations merely served to multiply the number of

pieces of paper (shares of stock) constituting claims to existing properties. Ordinarily such a diluting process might be expected to depreciate the value of each piece of paper outstanding; but owing to the fact that the money was used mainly to buy existing securities it served instead to boost their prices."

The assertion that holding companies provide indispensable credit facilities for operating companies does not stand up against the statistical proof that the credit of operating companies in these days of depression—and depression days are the only true test of credit worthiness—is far better than the credit of holding companies. A recent report of the Federal Power Commission shows that the average quotations in November 1934, for 121 issues of operating company bonds listed as legal investments for trustees in the State of New York were 6.6 points higher than in September 1929. Recent prices have been even higher than those of last November. The selling prices of these investments, made solely on the credit of the operating company, contrast sharply with the low prices obtaining for holding company securities.

Before the House committee, Dr. David Friday, the economist for the utility interests, testified that with companies the size of Detroit Edison, Commonwealth Edison of Chicago, and Southern Edison of Los Angeles, "the holding companies are not necessary at all." According to this testimony, the supercredit and supermanagement of a holding company are not needed for companies in large cities. It is equally unnecessary to superimpose a giant holding company upon an economically integrated system of small plants which in the aggre-

gate afford the same conditions of self-sufficiency as the operating unit in the large city. Title I encourages the building up and strengthening of compact systems of related operating units even to the extent of providing exemption for a holding company if it is necessary for the functioning of such a system. Sound operating units or regionally integrated systems, not the giant holding companies, provide the real and only enduring basis of credit for the utility industry.

(*b*) An argument has been given widespread currency by the opponents of the title that the elimination of the giant holding companies will demoralize the market for all operating securities because many operating-company securities will be thrown upon the market by the giant holding companies in the course of their dissolution. The argument is premised on the false assumption that the proposed title will cause the dumping or forced liquidation of securities by the giant holding companies. As has been explained above, the title does not require the dumping or forced liquidation of securities. Such disposition as may be necessary can be accomplished by reorganization which will equitably redistribute securities among existing security holders. Insofar as there may be some redistribution of the securities of operating companies through investment banking channels, this will not result in a substantial net increase in the supply of utility securities on the market because for every block of operating securities distributed there will be a corresponding block of holding-company securities retired. The net effect of such changes will be to strengthen the market for utility securities

generally by replacing holding-company securities with sound operating-company securities. Such operations, primarily of a refunding nature, should strengthen rather than weaken the credit of operating companies.

The market for operating-company securities will be no longer adversely affected by the disrepute into which holding-company securities generally have fallen. The individual investor in present-day holding companies should come out of any reorganization process under the title with far better securities than those with which he went into it. He should get a security which represents an actual down-to-the-rails investment in a regulated local operating company, or, at most, a regulated regional holding company. He should get a security which will bring him, instead of paper stock dividends, all the legitimate cash dividends the operating company can pay—not what is left of them after high salaries, large fees, bonuses to holding-company officers and bankers, and the purchase of securities at exorbitant prices from corporate insiders. In short, the individual investor should receive the kind of a security he thought he was buying in the first place. The actual clearing up, through clean reorganizations, of the tangle in which holding-company finance has left the industry and those who have invested in it, can reestablish a confident, stable market for good utility securities. But a frightened policy of refusing to take hold of the obvious political and financial difficulties of the industry will only generate even greater future difficulties.

Extracts from S. Rep. 621, 74th Cong., 1st Sess., pp. 32–34:

SECTION 11. SIMPLIFICATION, REORGANIZATION, AND DISSOLUTION OF HOLDING COMPANIES

Subsection (a) makes it the duty of the Commission to examine the corporate structure of every company in the holding company system of a registered holding company, the relationships among such companies, and the character of their interests and properties, to determine the extent to which unnecessary complexities may be removed, voting power fairly and equitably distributed among security holders, and the properties in a holding company system confined to those necessary or appropriate to the operations of a single geographically and economically integrated public utility system.

Subsection (b) makes it the duty of the Commission after notice and opportunity for hearing, (1) after January 1, 1938, (see subsection (c) below for possibility of extension), by order enforceable only in the Federal courts of equity, to require each registered holding company, and each subsidiary company thereof, to divest itself of any interest in or control over property or persons to the extent that the Commission finds necessary or appropriate to limit the operations of the holding company system of which such company is a part to a single geographically and economically integrated public utility system and to such business as is reasonably incidental or economically necessary or appropriate to the operations of such system; (2) after January 1, 1938 (with the same possibilities of extension) to require each registered hold-

ing company, and each subsidiary company thereof, to be reorganized or dissolved whenever the Commission finds that the corporate structure or continued existence of such company unduly or unnecessarily complicates the structure of the holding company of which it is a part, or unfairly or inequitably distributes voting power among the holders of securities, or is detrimental to the proper functioning of a single geographically and economically integrated public utility system; and (3) promptly after January 1, 1940, to require each registered holding company to take such steps as the Commission finds necessary or appropriate to make such company cease to be a holding company, except that the Commission is directed to permit a registered holding company to continue to be a holding company if such company obtains from the Federal Power Commission a certificate that the continuance of its holding company relation to subsidiaries is necessary, under the applicable State or foreign law, for the operation of a geographically and economically integrated public utility system serving an economic region in a single State or extending into two or more contiguous States or into a foreign country.

Subsection (c) provides that in any order under subsection (b) the Commission shall fix the time within which such order shall be complied with, not later than 1 year from the date of such order, but the Commission may, for good cause shown, extend such time for an additional period not exceeding 1 year.

The foregoing provisions are designed to produce a gradual and orderly elimination of the unnecessary utility holding com-

panies and the simplification of the capital structures and a fair distribution of voting power of those companies which are permitted to continue. Existing holding companies will be obliged (i) to divest themselves of any interest in properties not appropriate to a geographically and economically integrated public-utility system, or (ii) to cease to be holding companies by divesting themselves of all control over the public-utility companies in which they are interested and become investment companies, or (iii) to distribute their securities and assets equitably among their security holders. Precedents under the Sherman Antitrust Act and under the Hepburn Act demonstrate that the necessary corporate adjustments can be made without forced liquidation or the sacrifice of legitimate investment values.

Subsections (d), (e), and (f) outline the procedure whereby the reorganization plans must be approved by the Commission and carried out under the supervision of the Federal courts. The court is to take technical jurisdiction of the assets involved and appoint the Commission sole trustee or receiver to administer the assets as a trust estate for the benefit of the persons interested therein as their interests may appear. By these provisions it is intended to give the Commission the complete supervisory power which is essential to the elimination of the present wasteful practices in corporate reorganizations. It also ensures to investors that their properties will not be needlessly sacrificed but will be conserved by the Commission and the court until a satisfactory reorganization can be arranged. If a company is solvent, the court could continue the payment of

interest and in appropriate cases dividends until a prudent reorganization is effected. Subsection (e) expressly authorizes a holding company subject to the approval of the Commission and the court to work out a plan of reorganization to make unnecessary the issuance of an involuntary order for its reorganization by the Commission, and the Commission and the court are authorized to approve any plan so worked out voluntarily by a holding company as the Commission and the court might order under their compulsory powers. Thus the voluntary reorganizations of the holding companies might be facilitated by the recognized powers of a court of equity to make such equitable allocations of general liens and priorities as may be necessary to make it possible for the companies to comply with the policy of the statute (*Continental Insurance Co.* v. *U. S., Reading Co. et al.* 259 U. S. 156). If a company is insolvent or unable to pay its debts, the Commission is empowered by subsection (f) to institute proceedings for the reorganization of the company under section 77B of the Bankruptcy Act; in such proceedings also, the Commission could have itself appointed sole trustee. Under these subsections, Commission approval of reorganization plans and supervision of the conditions under which such plans are prepared will make it impossible for a group of favored insiders to continue their domination over inarticulate and helpless minorities, or even as is often the case, majorities. Fees, expenses, and remuneration paid in connection with any such reorganization, whether under section 77B of the Bankruptcy Act or otherwise, are

made subject to the approval of the Commission.

Subsection (g) makes it unlawful for any person to solicit any proxy, power of attorney, or deposit of securities for or against any reorganization plan, except under the following circumstances. The plan must either have been prepared by the Commission or submitted to it by a person having a bona fide interest in the reorganization. A copy of the report made by the Commission on the plan and other plans submitted to it or an abstract of such report approved by the Commission must accompany each such solicitation. The Commission may, by its rules, regulations, or orders, prescribe other terms of the solicitation which it considers necessary or appropriate in the public interest or for the protection of investors or consumers. It is expressly provided that no person shall be prevented from appearing before the Commission or any court through an attorney or proxy. This subsection is designed simply to assure that a security holder will have a fair opportunity to consider concrete proposals on their merits with full and fair disclosure of all material facts before he is pressed to register his vote on a reorganization plan or to tie himself irrevocably to a plan which in the future may develop to be unfavorable to him and to involve great expense on his part.

These provisions are framed to bring back to the investor such property interest as he may have in the underlying properties owned by the holding company. They destroy and confiscate no property, but they remove the confusing corporate devices and contrivances which have con-

fused the investor and in many cases have been used to deprive him of the fruits of his investment.

Extracts from Congressional Record, Vol. 79, 74th Cong., 1st Sess., pp. 8844–8845:

REGULATION OF PUBLIC-UTILITY HOLDING COMPANIES

The Senate resumed consideration of the bill (S. 2796) to provide for the control and elimination of public-utility holding companies operating, or marketing securities, in interstate and foreign commerce and through the mails, to regulate the transmission and sale of electric energy in interstate commerce, to amend the Federal Water Power Act, and for other purposes.

Mr. WHEELER. Referring now to page 49, I move to amend by striking out lines 8 to 25, inclusive, and substituting therefor the following.

The PRESIDENT pro tempore. The amendment will be stated.

The CHIEF CLERK. On page 49 it is proposed to strike out lines 8 to 25, both inclusive, and down to and including the word "appointed" in line 2, page 50, and to insert in lieu thereof the following:

"(f) In any proceeding in a court of the United States, whether under this section or otherwise, in which a receiver or trustee is appointed for any registered holding company or any subsidiary company thereof, the court shall have power, and, at the request of the Commission, it shall be the duty of the court to constitute and appoint the Commission as sole trustee or receiver subject to the direction

and orders of the court, whether or not a trustee or receiver shall heretofore have been appointed."

Mr. WHEELER. In other words, we greatly liberalize that section, because as it read before it provided that, if, in the judgment of the Commission, any registered holding company or any subsidiary company thereof was insolvent or unable to pay its debts, the Commission should have the power to institute proceedings for reorganization of such company under section 77B of the Bankruptcy Act. This amendment takes from the Commission the power to go into court and ask that a company be placed in the hands of a receiver because it is insolvent or because it cannot pay its debts. We simply say to the court now, "In the event you appoint a receiver, then upon the request of the Commission you shall appoint the Commission such receiver, but the Commission shall be subject to the rules and orders of the court."

The reason for these provisions is that it has been a notorious fact, as we all know, and as the Chairman of the Judiciary Committee [Mr. ASHURST] especially knows from his investigations, that a racket has existed in the matter of these receiverships. The section as amended, we believe, provides for the protection of investors in companies in the event they go into the hands of receivers—registered holding companies or their subsidiaries, companies which are engaged in interstate commerce—and only those companies—and that the Commission shall act as receiver and shall be subject to the direction and orders of the court.

Mr. BORAH. Mr. President——

The PRESIDENT pro tempore. Does the Senator from Montana yield to the Senator from Idaho?

Mr. WHEELER. I yield.

Mr. BORAH. I understand the sole effect of the amendment is to make it obligatory upon the court to appoint the Commission as trustee or receiver in case the court adjudges the parties bankrupt.

Mr. WHEELER. The purpose of the amendment is to make it clear that when the court appoints the Commission trustee or receiver, the Commission is to be subject always to the direction and orders of the court; and it is further designed to take away the power of the Commission to investigate bankruptcy proceedings under section 77B. The provision as it stands at the present time has been greatly criticized in some of the advertisements of some of the holding companies. They have held it out that what we were seeking to do was to take them over and have them condemned, thrown into receivership, and that the intention was to have the Government take them over. Of course, no such intention was in mind at all. All that was intended was exactly what we are doing here now for the protection of the investors. We have even taken from the Commission the right to go into court and ask that the company be placed in the hands of receivers. So that with this amendment, only if the court orders the company into receivership can the Commission ask that it shall be appointed as receiver or trustee.

Mr. HASTINGS. Mr. President, will the Senator from Montana yield?

Mr. WHEELER. I yield.

Mr. HASTINGS. My recollection of the section, without having read it for a day or

two, is that under the bill as reported by the committee the Commission itself could make application to the court if, in its judgment, any registered holding company or any subsidiary company thereof was insolvent or unable to pay its debts?

Mr. WHEELER. That is correct.

Mr. HASTINGS. Then the bill provided that, having made the application to the court, the court was compelled to appoint the Commission trustee, and then that there could be no reorganization except the kind of reorganization suggested by the Commission itself. In other words, under the bill we have the Commission itself, which has no monetary interest in the matter, and which makes application for the bankruptcy proceeding, given power to have itself appointed trustee and then itself propose the plan of reorganization. I should like to know what changes the amendment makes in those three respects?

Mr. WHEELER. The amendment completely changes the first of those three things, because, in the first place, it takes away from the Commission the right to go into court and ask the court to appoint a receiver.

Mr. HASTINGS. That is the important matter.

Mr. WHEELER. Yes. As I say, the provision was not intended as it has been interpreted; but I can readily understand how, in view of the language, it might raise a fear in the minds of some people, and they might say, "The Commission may throw us into receivership and be appointed receiver, and then have a reorganization plan", and so forth. They might say, "It is an inducement for the Commission to throw us into the hands of a re-

ceiver"; but the Senator from Delaware will agree with me that this language changes the whole situation.

Mr. HASTINGS. Of course it is a little difficult to follow the language and remember it when one has not the amendment before him; but let me make an inquiry. The Senator says the amendment removes the first objection, which I think was the most serious one.

Mr. WHEELER. Absolutely.

Mr. HASTINGS. Does the amendment leave the other two provisions? As I remember, the Senator said it does provide that the Commission shall be named trustee or receiver by the court.

Mr. WHEELER. That is correct.

Mr. HASTINGS. Does it in any way affect the persons who may suggest the plan of reorganization?

Mr. WHEELER. No. I will say to the Senator from Delaware that another Senator is talking to me about that subject, and we are trying to work out an amendment. On that last point of who may suggest the plan of reorganization, section 11 is quite clear that the suggestion may come from any interested person. It is not limited to the Commission's own plan, so long as the plan is eventually approved by the Commission. All we are seeking to do in this whole section is to protect persons who have invested their money from a racketeering receivership, such as the Senator well knows has taken place in many cases throughout the country, and particularly as was investigated by the Judiciary Committee of this body, under the leadership of the Senator from Arizona [Mr. ASHURST].

The PRESIDENT pro tempore. The ques-

tion is on agreeing to the amendment offered by the Senator from Montana.

The amendment was agreed to.

Mr. BORAH. Mr. President, I desire to ask the Senator from Montana a question.

On page 50, beginning with line 2, the bill provides as follows:

"In any such proceeding a reorganization plan for a registered holding company or any subsidiary company thereof shall not become effective unless such plan shall have been approved by the Commission after opportunity for hearing prior to its submission to the court."

I do not exactly understand that language. Does it mean that the court's jurisdiction with reference to the reorganization, or what shall be permitted by decree of the court, is limited; or is it simply recommendatory to the court?

Mr. WHEELER. We do exactly the same thing at the present time, as I understand, with reference to the Interstate Commerce Commission. A plan for the reorganization of a railroad is supposed to be submitted to the Interstate Commerce Commission for its approval before it is approved by the court. We put this provision in here in practically the same manner, as I recall, as the existing provision with reference to the Interstate Commerce Commission in the case of railroad reorganizations.

Mr. HASTINGS. Mr. President, in that connection, if it be true that no reorganization plan can be considered except that which is suggested by the Commission, why is it necessary to put in the language "Shall not become effective unless such plan shall have been approved by the Commission after opportunity for hearing prior to its submission to the court"? My understand-

ing is that the Commission is the only body which can submit a reorganization plan.

Mr. WHEELER. Oh, no; the Senator is wrong about that.

Mr. HASTINGS. A plan may be submitted by somebody else?

Mr. WHEELER. Absolutely. The Commission may submit a plan if it sees fit to do so, or some private individual may submit a plan; but the idea is that if some private individual submits a plan, exactly as in the case of railroad receiverships at the present time, it shall first be approved by the Commission.

Mr. STEIWER. Mr. President, will the Senator yield?

Mr. WHEELER. I yield.

Mr. STEIWER. In respect to the language which is now under discussion, at the top of page 50, has there been urged upon the committee, or brought to the attention of the chairman, the contention that that language would oust the court of its jurisdiction, and, therefore, be objectionable?

Mr. WHEELER. To what language does the Senator refer?

Mr. STEIWER. The language to which the Senator from Idaho [Mr. Borah] has just called attention, near the top of page 50.

Mr. WHEELER. No; I do not think it would oust the jurisdiction of the court. I think there is no question that Congress would have the power to say that the court shall, when it appoints a receiver, appoint the Commission receiver, because, after all, the court is a statutory court, and we have the right to say that before this plan is approved by the court it shall be approved by the Commission. Furthermore, this is a mere matter of Congress providing the administrative machinery surrounding re-

ceiverships, and in no way usurping any judicial powers. The judicial functions remain, as always, in the court.

If I am not mistaken about the matter, we employ exactly that procedure in railroad reorganizations at the present time; and the only complaint we have had has been that the Interstate Commerce Commission has been too lenient, and has approved a number of plans which should not have been approved.

Mr. STEIWER. I make no contention about the matter at this time, but it occurs to me that provision might be subject to the objection that it would oust the jurisdiction of the court.

Mr. WHEELER. The Senator from Indiana [Mr. Minton] has called my attention to the fact that the provision does not oust the jurisdiction of the court at all, because the court has to approve the plan even though the Commission approves it. In other words there is really a double check upon the plan, and final determination rests as in the past in the courts.

Extracts from Congressional Record, Vol. 79, 74th Cong., 1st Sess., pp. 8936–8941:

Mr. MCKELLAR. Mr. President, I have another amendment which I do not believe we have entirely agreed upon.

On page 52 of the reprint of the bill, beginning at line 12, subsection (f), the language has been amended to read as follows:

"In any proceeding in a court of the United States, whether under this section or otherwise, in which a receiver or trustee is appointed for any registered holding company, or any subsidary company thereof"—

And I call especial attention to the language I am now going to read—

"the court shall have power, and, at the request of the Commission, it shall be the duty of the court, to constitute and appoint the Commission as sole trustee or receiver, subject to the directions and orders of the court."

That language is an improvement on the language of the original bill; but I desire to suggest to the chairman of the committee that in lines 15, 16, and 17 the words "shall have power, and, at the request of the Commission, it shall be the duty of the court to" be stricken out, and the word "may" inserted, so that, if amended, it will read as follows:

"In any proceeding in a court of the United States, whether under this section or otherwise, in which a receiver or trustee is appointed for any registered holding company, or any subsidiary company thereof, the court may constitute and appoint the Commission as sole trustee or receiver, subject to the directions and orders of the court."

I offer that amendment, Mr. President. I hope the Senator from Montana will accept it; and I will say to him that I should then be perfectly willing to offer the suggested amendment which the Senator handed me a few moments ago, which would accord with the words I have just offered.

Mr. WHEELER. Mr. President, let me say to the Senator from Tennessee, referring to his tendered amendment, that the purpose of the amendment on page 52 as it stands at the present time is to do just exactly what the Senator from Maryland [Mr. Tydings] a moment ago said should

be done; that is, that in this bill we should do everything possible to protect investors under a reorganization plan.

When a reorganization plan is offered, if the utilities can go to some one of the Federal judges and pick out a receiver or a trustee who is friendly to them, they can perpetrate a fraud and a racket upon the investor.

I appreciate the fact that the Senator from Tennessee is absolutely in sympathy with the purpose expressed in this bill; and, as I understand, the only thing the Senator is afraid of is that the court may say, "I have the power and the right to appoint anybody. I wish to appoint as receiver or trustee, and the Congress of the United States has not any right to limit my discretion in appointing a trustee or receiver."

Remember that under the language of the bill we say that the Commission shall be appointed. Of course, that means that when the Commission shall be appointed receiver, it will pick out either one of its members or some one of its officers to administer the trusteeship or receivership.

Mr. CLARK. Mr. President, will the Senator from Tennessee yield to me for the purpose of asking a question?

Mr. MCKELLAR. Yes; I yield to the Senator from Missouri.

Mr. CLARK. Does the Senator from Montana know any reason on earth why Federal Commissioners appointed by the President and confirmed by the Senate necessarily have a higher standard of honor, or a higher standard of any sort, than a Federal judge appointed by the President and confirmed by the Senate?

I must say to the Senator from Montana that I cannot go along with him in

this statement that somebody may sneak in to one of the Federal judges. Somebody is just as likely to sneak in to a member of the Federal Securities Commission.

Mr. MCKELLAR. Mr. President, I understand and fully appreciate the argument of the Senator from Missouri; but that is not exactly the matter to which I am attempting to direct my remarks. Here we have a nominal jurisdiction granted to the court to appoint a receiver, but actually the Commission can appoint whomsoever it pleases. If this language, "shall have power, and, at the request of the Commission, it shall be the duty of the court, to" be stricken out, and the word "may" inserted in lieu thereof, I have no doubt in the world that the court will invariably confer with the Commission before it makes an appointment.

I desire to say to the Senator from Montana that, in my judgment, if he attempts to give authority to the Commission to appoint the trustee, or to appoint itself trustee, while ostensibly giving that authority to the court, it is sure to bring about trouble. I really believe the Senator from Montana will make a great mistake if he does not accept language that will bring about a reasonable settlement of this matter in conformity with the well-known principles of law and practice in such cases.

I do not agree with the Senator from Montana that Federal judges are dishonest or corrupt. If they appointed somebody in the interest of these companies, they would be acting fraudulently and corruptly. So far as I am concerned, I am a great believer in the court; and I think it is most essential to leave this provision

in the nature of an advice or a direction to the court, but not make it the duty of the court to appoint the Commission. By the way, I think the paragraph would be very much stronger if it provided for the appointment of some member of the Commission. When the Commission itself is appointed, it may mean the office boy, or it may mean a member of the Commission. We do not know who it will be. It is a "cat in a bag."

Mr. CLARK. Mr. President, will the Senator yield?

Mr. MCKELLAR. Yes; I yield.

Mr. CLARK. The principle of the bill is not to vest any discretion in the Federal courts, but to vest every and any sort of discretion in the Securities Commission.

Mr. MCKELLAR. The Members of the Senate, in view of their recent experience, ought to know that it is a dangerous thing for one branch of the Government to trespass upon the rights of another branch.

Mr. BARKLEY. Mr. President, will the Senator yield?

Mr. MCKELLAR. Yes; I yield.

Mr. BARKLEY. I appreciate the force of what the Senator says. Of course, this is an administrative duty of the court. It is not like telling the court how to decide the law, or as to equities among investors, or how a reorganization shall be brought about. The appointment of receivers is an administrative matter which is performed by courts.

Mr. MCKELLAR. Why not take away from the courts the right to appoint a receiver and vest it in the Commission?

Mr. BARKLEY. I think Congress has the power to direct a court which is its creature

with respect to the appointment of receivers.

Mr. CLARK. Mr. President, if the Senator will yield——

Mr. BARKLEY. Just a moment. Another thing that enters into the matter is, to avoid, as the Senator from Montana has repeatedly said, the appointment of outsiders, or insiders, as a matter of fact; and that is no reflection on the integrity of the court. We all know how frequently these things come about. Application is made to the court for the appointment of a receiver or a trustee——

The PRESIDENT pro tempore. The time of the Senator from Tennessee on the amendment has expired.

Mr. CLARK. Mr. President, I claim the floor in my own right on the amendment.

The PRESIDENT pro tempore. The Senator from Missouri is recognized on the amendment.

Mr. CLARK. I should like to reply to what the Senator from Kentucky has said, if the Senator from Tennessee will permit me to do so.

Mr. MCKELLAR. I shall be very glad to have the Senator do so.

Mr. CLARK. Then I shall be very happy to permit the Senator from Tennessee to consume the rest of my time, because I have been trespassing on his time.

I think the Senator from Kentucky has misstated the theory of a receivership. The theory of a receivership is that the insolvent property is intrusted to the jurisdiction of the judge, the head of the judicial system in that jurisdiction.

Mr. MCKELLAR. Mr. President, will the Senator yield?

Mr. CLARK. I yield.

Mr. MCKELLAR. I imagine the framing of this particular language was brought about—indeed, I am rather inclined to think the chairman of the committee told me it was—because of many scandals in the appointment of receivers. We all know that that has taken place; but with this language changed as I propose to change it, a repetition of such scandals would be almost impossible.

Mr. CLARK. Mr. President, if the language which the Senator has proposed to insert in the bill is offered as a result of just criticisms or unjust criticisms of Federal receiverships, the remedy is to change the law, and, if necessary, to change the Constitution so as to make it easier to impeach or to remove Federal judges who misuse their offices.

The whole theory of a receivership is that the insolvent estate is put into the hands of a judge; and when a receiver is appointed, according to the theory of the law as it has always been up to the time this particular measure came along, the theory has been that the receiver was merely the agent of the court, for whom the court was responsible, over whom the court exercised the ultimate control; and we all know that judges have been impeached, and once in a while a judge has been convicted, because of the acts of his receivers.

Mr. MINTON. Mr. President, will the Senator yield?

Mr. CLARK. In just a moment. This proposition, Mr. President, is simply to restrain the discretion of the judge, as the Senator from Kentucky [Mr. BARKLEY] very well said, to make his office a mere administrative one, removing all responsibility whatever from the judge.

Mr. BARKLEY. Mr. President, if the Senator will yield, let me say that the bill does not do that.

Mr. CLARK. Mr. President, I insist that it does do that. I shall be glad to yield to the Senator from Kentucky in just a moment. I wish, first, to finish this thought.

This proposition is to do away with the whole principle of agency of the court, which the whole receivership theory has always been.

Now I yield to the Senator from Kentucky.

Mr. BARKLEY. The language which has been included in the amendment of the Senator from Montana negatives the very suggestion, because, after the appointment of the Commission as receiver, it is subject to the directions and orders of the court.

Mr. CLARK. In other words, Congress is to appoint an agent and then hold the Federal court responsible for the acts of the agent. This is the Senator's proposition, as I understand. I agree with the Senator from Tennessee that the present form of the section is a very great improvement over the original section.

Mr. MCKELLAR. There is no question about it.

Mr. CLARK. But the Senator wants a Federal judge to appoint an agent, and he may be any agent the Commission may nominate. He may be the office boy, as the Senator from Tennessee said, or he may be any sort of a young lawyer. The court appoints the Commission, and then the Commission sends out an emissary to act as its agent.

Mr. WHEELER. Mr. President, will the Senator yield?

Mr. CLARK. I yield.

Mr. WHEELER. Let me say to the Senator that this does not change the bill in any way. There is a precedent for it at the present time in a law which was enacted during a recent session of the Congress. In applying the rule to the reorganization of railroads, we provided that when a petition was filed with the Federal court, the court should make a selection from a panel. We did not provide that he had to appoint a receiver, but that if he appointed a receiver he had to make his selection from a panel furnished him.

Mr. CLARK. I am very familiar with that act, and I have very grave doubt as to its constitutionality, so far as any compulsion on a judge to select a trustee from a panel is concerned. Nevertheless, that is essentially a different proposition from the one before us.

Mr. WHEELER. The same principle applies, for the reason that these courts are statutory courts. When the Senator talks of its constitutionality, I reply that there cannot be any question as to its constitutionality.

Mr. MCKELLAR. I am not sure that the Senator is right about that.

Mr. WHEELER. There is no question about the constitutionality of it. There may be some question about the wisdom of the policy.

Mr. CLARK. I did not say a word about the constitutionality. The Senator is putting words into my mouth which I did not use. I said I had very grave doubt as to whether the act to which the Senator referred, compelling a Federal judge to appoint trustees from a particular panel, is constitutional; and I do have grave doubts

as to its constitutionality. That is essentially a different proposition, and entirely immaterial to the argument now being made.

Mr. WHEELER. These courts are constitutional courts. The only jurisdiction they have is what the Congress of the United States has granted them, and one of the powers Congress has granted to these judges is, under the equity procedure, to appoint trustees and receivers under certain circumstances. If we have the power to give them that authority we have the power to limit their jurisdiction with reference to it.

I myself felt that the bill as it originally came before us, where it provided that the Commission could throw companies into bankruptcy, was too broad, and I worked out with the Senator from North Carolina [Mr. BAILEY] an amendment, which was offered and which has been adopted.

Mr. CLARK. That amendment has been adopted?

Mr. WHEELER. Yes.

Mr. MCKELLAR. There is an amendment to the amendment here.

Mr. WHEELER. An amendment has been adopted which the Senator from North Carolina and I worked out. I have no interest in the matter, and nobody else has, except that, so far as it is humanly possible, we want to protect the investors who, the utility people say, will be ruined. I know, as a matter of fact, that one of these companies which has been one of the worst in the United States will probably apply to the courts in a very short time for a receivership or trusteeship for the purpose of reorganizing, because it is in such shape that that must be done. I know just as well as

that I am standing here that if that is done they expect to go into the Federal court and undertake to have trustees and receivers appointed, and without casting any reflection upon any court, we do not need to do that. The Senate of the United States, under the leadership of the Chairman of the Judiciary Committee of the Senate, has been investigating receiverships from one end of the country to the other, and every Member of the Senate who has followed the investigation knows that there has been wide-spread scandal.

Mr. CLARK. Mr. President, as the Senator knows I am not in agreement with a great many things which have happened in connection with the Federal courts; but I emphatically and violently disagree with the Senator from Montana in his belief that a commission set up in Washington is necessarily infallible, and will always be pure, and will always be superior to the wisdom of any Federal judge.

A few years ago, during the administration of the late President Wilson, the Federal Trade Commission was set up. The original personnel of that Commission was particularly designed and appointed for the purpose of carrying out the purposes of the Federal Trade Commission Act. In fact, several members of the Commission first appointed to the Commission had participated in the drawing of the act. As I understand, it is contemplated that if the measure before us shall be enacted, some of the men who have participated in drafting it will be appointed on the Securities Commission, which up to date has done exceedingly well.

President Wilson died; the party which sponsored the Federal Trade Commission

Act was defeated and driven from power, and one of the first acts of President Harding was to appoint on the Federal Trade Commission Mr. William E. Humphrey. I do not wish to reflect on Mr. Humphrey, who is dead. As a matter of fact, he was a personal friend of mine in his lifetime, when he served in the House of Representatives. But his whole conception and his whole idea of the function of the Federal Trade Commission was diametrically opposite to that of the President who had recommended the establishment of the Federal Trade Commission, and the Representatives and Senators who had led the fight for its creation. He proceeded completely to reverse the whole theory of the function of the Federal Trade Commission.

I see a man in the press gallery at this moment who took an interview from Mr. Humphrey in which Mr. Humphrey specifically said, "What the hell do you think I was appointed for?" In other words, he was appointed for the sole purpose of reversing the entire intent and purpose of the Federal Trade Commission Act.

I say that I very violently disagree with the theory of the Senator from Montana and of the other sponsors of the bill that any sort of a commission functioning from Washington, through emissaries, or agents, or attorneys, is to be preferred in its discretion to a Federal judge, appointed to one of the very highest honors in this country, appointed by the President usually after careful and most meticulous selection, and confirmed by the United States Senate.

Mr. McKellar. Mr. President, will the Senator yield?

Mr. Clark. I yield.

Mr. McKELLAR. In line with what the Senator is saying, I should like to repeat something I think I mentioned on the floor of the Senate the other day: The representative of a commission now in existence in Washington came to the Capitol to see about a bill being considered before the Committee on Post Offices and Post Roads, of which I am chairman, and he brought with him a man who had charge of the particular department concerned with the bill. From the way he acted and from what he said I judged that the latter gentleman was not connected with the commission at all, but represented the companies which were interested.

The PRESIDING OFFICER (Mr. Hatch in the chair). The Senator from Tennessee has already exhausted his time.

Mr. McKELLAR. I am speaking in the time of the Senator from Missouri.

The PRESIDING OFFICER. The Senator from Missouri has also exhausted his time.

Mr. McKELLAR. Then I will speak in my own right.

The PRESIDING OFFICER. The Senator's time has expired.

Mr. McKELLAR. I have time on the bill.

The PRESIDING OFFICER. The Senator from Tennessee is recognized on the bill.

Mr. HASTINGS. Mr. President, will the Senator yield?

Mr. McKELLAR. I yield.

Mr. HASTINGS. Let me call the attention of the Senator from Tennessee to the last four lines of paragraph (f), which we are now discussing, in response to the suggestion that the Commission is to be appointed receiver because of the bad conditions which have been developed in connection with the appointment of receivers. Most

of those criticisms are due to the compensation allowed receivers. But in the very bill before us it is provided that the Commission shall be entitled to such reasonable compensation for its services as trustee or receiver in any proceeding as the court may allow. I should like to inquire how that relieves us under any condition of the trouble we have experienced in the past.

Mr. McKELLAR. Mr. President, I may say that I hope to have those lines stricken out, because I think that is an open invitation to bring about the very state of scandal of which the Senator from Montana, the chairman of the committee, spoke a few moments ago, and I do not think such a provision ought to be in the bill.

Mr. GORE and Mr. CLARK addressed the Chair.

The PRESIDING OFFICER. Does the Senator from Tennessee yield; and if so, to whom?

Mr. McKELLAR. I yield first to the Senator from Oklahoma.

Mr. GORE. I rose to say to the Senator from Delaware that I intend to move to strike out the language to which he has referred and the whole provision. I think it would be a nest of scandal and ought not to be in the law.

Mr. CLARK. If those lines remain in the bill, would not the language authorize any Federal judge who happened to be particularly amenable to Federal influence to mulct the stockholders or the security holders of any of these companies in any sum that a commission might wish to pay any agent who was sent out?

Mr. McKELLAR. I think the language is very unfortunate, and I very much hope the chairman of the committee will be

willing, as I believe he will be, to strike it out.

Mr. WHEELER. Mr. President, will the Senator yield to me?

Mr. MCKELLAR. I yield.

Mr. WHEELER. I was interrupted, but I believe the Senator was referring to the compensation feature.

Mr. MCKELLAR. Yes; as provided on page 57.

Mr. WHEELER. The intention was not to provide for the payment of compensation but for the payment of expenses. The Senator from Oklahoma [Mr. GORE] called my attention to it, and I said to the Senator from Oklahoma that I thought the most the commission ought to be paid was simply the actual expenses they incurred.

Mr. CLARK. Will the Senator from Tennessee yield?

Mr. MCKELLAR. I yield.

Mr. CLARK. If the Commission should choose to appoint a lawyer and pay him $100,000 a year to act as attorney for the Commission in the receivership of some company, and the court chose to approve it, that would bring back every vicious practice that has ever been complained of and many more.

Mr. MCKELLAR. I agree with the Senator from Missouri entirely. I think it would invite trouble of the kind which it is desired to avoid, and I am quite sure, knowing the chairman of the committee as I do, that he will not insist on that language remaining in the bill.

Mr. WHEELER. If it is desired to strike out the words "The commission shall be entitled to such reasonable compensation for its services as trustee or receiver in any proceeding as the court may allow",

I am quite willing to have them stricken out.

Mr. McKELLAR. I move that the language in lines 15, 16, 17, and 18 on page 53 of the bill be stricken out.

Mr. BARKLEY. Mr. President, there is an amendment pending. Another cannot be offered until the pending amendment shall have been acted upon.

Mr. GORE. I wish to express my hearty concurrence in that amendment. I had intended to make that motion. I discussed this matter with the chairman of the committee last week, and he indicated not only a willingness but a desire that this language should be modified, and that nothing more than expenses should be allowed. I think even expenses should be limited.

Mr. WHEELER. Has that motion been acted on?

Mr. McKELLAR. It has not been acted on.

The PRESIDING OFFICER. The parliamentary situation is as follows: There is pending an amendment offered by he Senator from Tennessee which has not been acted on.

Mr. McKELLAR. If it is not in order, I ask to withdraw my previous amendment.

The PRESIDING OFFICER. Without objection, the amendment is withdrawn.

Mr. McKELLAR. I now wish to say to the chairman of the committee and to the Senate that I am very anxious to vote for this bill, but I am also anxious that it be a constitutional measure. I have talked it over with the Senator from Montana a number of times. The language on page 52 which I ask to have stricken out is as follows:

"The court shall have power, and, at the request of the Commission, it shall be

the duty of the court, to constitute and appoint the Commission as sole trustee or receiver."

I think that language ought to be eliminated. The courts are going to construe this bill; the courts are going to determine what this bill means; and we are here saying to the courts, "We have no confidence in you. Ordinarily it is true you appoint receivers, but we are going to take this power away from you. We are going to invade your province and take this power away from you." I do not think we ought to pass such legislation. I do not think by this bill we ought to slap the courts in the face.

I believe in courts. Sometimes they do wrong, of course; they sometimes fail to do what they ought to do. They are not perfect; but neither are commissions perfect. From my experience with commissions and with courts, I believe I would rather trust the courts.

Mr. WHEELER. What the Senator wants to do is to strike out the language:

"The court shall have power, and at the request of the Commission, it shall be the duty of the court"—

And so forth?

Mr. MCKELLAR. And insert the word "may", so as to indicate that is what Congress wants to be done, but not control the court or undertake to control the court.

Mr. WHEELER. I will be willing to take that language to conference.

Mr. MCKELLAR. I thank the Senator, and I hope the amendment will now be voted on, and then I will offer the amendment which I have just withdrawn.

Mr. GORE. Mr. President, I wish to suggest an amendment which I think the Senator from Tennessee will accept.

Mr. MCKELLAR. Is that with reference to the pending amendment striking out the language I have just indicated?

Mr. GORE. No.

Mr. MCKELLAR. Will the Senator let that amendment be voted on first?

Mr. GORE. I wish to insert the words, "The Commission or any member thereof."

The PRESIDING OFFICER. The pending amendment will be stated.

The CHIEF CLERK. In the original copy or print of the bill——

Mr. CLARK. Mr. President, which is the original copy? We have had so many copies of this bill that it is difficult to know just what copy is being referred to.

Mr. MCKELLAR. Let us have the language stated, and then we will know which copy is being used.

The CHIEF CLERK. On page 50——

Mr. CLARK. Mr. President, is the clerk reading from the original copy, S. 2796, or the reprint?

Mr. WHEELER. The clerk is reading from the original bill.

The PRESIDING OFFICER. The bill before the Senate is S. 2796, reported May 13, calendar day May 14, 1935.

Mr. MCKELLAR. If the clerk will read the language, I am quite sure we will be able to tell from which copy of the bill he is reading.

The CHIEF CLERK. On page 50, line 22, it is proposed to strike out—

"The Commission shall be entitled to such reasonable compensation for its services as trustee or receiver in any proceeding as the court may allow."

Mr. CLARK. I suggest to the Senator from Tennessee that the language of that entire section has been somewhat changed by the latest amendment.

Mr. BARKLEY. Mr. President, we are dealing with the original bill without these italicized amendments. They were printed for the convenience of Senators, but in the RECORD we are considering the original bill.

Mr. CLARK. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. CLARK. Do I understand on page 52 of the latest print the language in italics—

"In any proceeding in a court of the United States, whether under this section or otherwise"—

and so forth, has not been adopted by the Senate?

Mr. BARKLEY. It has been adopted. We agreed Friday to print the amendments in the bill which had been adopted, so that Members could see what had been acted upon, but in the consideration of the bill as a matter of record for the Journal we must consider, I suppose, the original bill, and the changes in it, without regard to these amendments.

Mr. MCKELLAR. In order to obviate that difficulty, if the Senator from Missouri will let us vote on the motion to strike out the language referred to on page 53, then I will ask for a reconsideration so we can vote on the other amendments.

Mr. WHEELER. Mr. President, I wish to address myself to the Senator from Tennessee [Mr. MCKELLAR] and the Senator from Missouri [Mr. CLARK]. If this language is changed to "may" and is agreed to, would the Senator have any objection

to putting in the bill a provision—this language was just called to my attention by the Senator from Washington [Mr. SCHWELLENBACH]—to the effect—

"*Provided*, That before the court shall appoint any receiver, or trustee it shall notify the Commission of the fact that it is about to appoint such receiver or trustee."

Mr. CLARK. I would not have the slightest objection to that, and more than that, I think that such an amendment ought to be adopted. The Commission ought to be made a party, given the right to be heard, given a standing in court, but it should not be made mandatory on the court to accept the Commission's ukase.

Mr. MCKELLAR. I think the language which the Senator from Montana himself has suggested, which he showed me a while ago, will cover that point.

"In any proceeding in which the Commission is appointed trustee or receiver the Commission shall designate a member or officer thereof to carry out the directions or orders of the court."

Why would that not cover it?

Mr. WHEELER. No; it would not quite cover it.

Mr. MCKELLAR. If the Senator will change it, I am quite sure we can agree on it.

Mr. CLARK. Mr. President, will the Senator from Tennessee yield?

Mr. MCKELLAR. I yield.

Mr. CLARK. If I understand the intention of the Senator from Montana, it is that in any proceeding in which a receiver is applied for, before the receiver shall be appointed the Commission shall be notified and given an opportunity to be heard.

Mr. McKELLAR. I have no objection to that.

Mr. BARKLEY. That amendment ought to be worked out carefully.

Mr. McKELLAR. That can be done later.

Mr. CLARK. That amendment should be carefully drafted.

Mr. WHEELER. I will work it out, Mr. President. That is the language which the Senator from Washington [Mr. SCHWELLENBACH] suggested to me.

Mr. CLARK. Yes.

Mr. GORE. Does that mean that the court is to appoint someone else than the Commission or a member of the Commission?

Mr. McKELLAR. No.

Mr. GORE. I wish to suggest that the Senator include in the final draft some amendment including compensation which shall be paid receivers, whether appointed by the court or whether the Commissioners act as receivers.

Mr. McKELLAR. I think the best way is to let this language be stricken out, as proposed in the pending amendment, and then if there is other language offered it can be taken up later.

Mr. GORE. That will require a motion to reconsider.

Mr. McKELLAR. I ask that a vote may be had upon the pending amendment.

Mr. HASTINGS. May we have the amendment stated?

The PRESIDING OFFICER. The amendment will be stated.

The CHIEF CLERK. It is proposed on page 50, line 22, to strike out the words—

"The Commission shall be entitled to such reasonable compensation for its services as trustee or receiver in any proceeding as the court may allow."

Mr. BORAH. Mr. President, what copy is the clerk reading ffom?

Mr. MCKELLAR. Mr. President, the language is exactly the same in whatever copy the Senator has. The language has not been changed at all.

Mr. STEIWER. In one copy it appears on page 53.

Mr. BORAH. The clerk said "page 50."

Mr. MCKELLAR. It is on page 53 in one copy and on page 50 in the other.

Mr. BORAH. May we have the amendment again stated?

The CHIEF CLERK. It is proposed, on page 50 of the print which has no amendments on it, line 22, to strike out the following language:

"The Commission shall be entitled to such reasonable compensation for its services as trustee or receiver in any proceedings as the court may allow."

The PRESIDING OFFICER. Is there objection to the amendment of the Senator from Tennessee?

Mr. BORAH. I have no objection to the amendment, but I should like to know where it is in the bill.

Mr. MCKELLAR. I will show it to the Senator. It appears on page 50 of the original draft of the bill.

The PRESIDING OFFICER. Without objection, the amendment is agreed to.

Mr. MCKELLAR. Mr. President, I move to strike out, on page 52, lines 15, 16, and 17, the words:

"shall have power, and, at the request of the Commission, it shall be the duty of the court to"—

and insert the word "may."

Mr. BARKLEY. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. BARKLEY. Has the Senator secured reconsideration of the vote by which this amendment was adopted on Friday?

Mr. MCKELLAR. Is that necessary?

Mr. BARKLEY. Yes.

Mr. MCKELLAR. I ask unanimous consent to reconsider the vote by which this amendment was adopted on Friday for the purpose of offering my amendment.

The PRESIDING OFFICER. The Senator from Tennessee asks unanimous consent that the vote by which the amendment was agreed to on Friday be reconsidered. Is there objection? The Chair hears none, and the vote is reconsidered.

Mr. MCKELLAR. Now, Mr. President, ask that the clerk state the amendment.

Mr. HASTINGS. May I suggest to the Senator that it seems to me the Senate ought either to agree to follow the original bill which was reported by the committee or to follow the bill as reprinted.

Mr. MCKELLAR. In this case we have to take the reprinted bill, because my amendment is in the form of an amendment to an amendment which was adopted the other day by the Senate.

Mr. CLARK. I think the Senator is in error as to that. I think the bill, with the amendments thereto, was reprinted for the convenience of the Senate, and that, in considering the bill, the Senate should refer to the original bill.

The PRESIDING OFFICER. The Chair will state that the original bill is used at the desk. The amendment offered by the Senator from Tennessee will be stated.

The CHIEF CLERK. On page 49, on motion of Mr. Wheeler, the following amendment was agreed to:

"(f) In any proceeding in a court of the United States, whether under this section or otherwise, in which a receiver or trustee is appointed for any registered holding company or any subsidiary company thereof, the court shall have power, and, at the request of the Commission, it shall be the duty of the court to constitute and appoint the Commission as sole trustee or receiver subject to the direction and orders of the court."

In that amendment, the vote on agreeing to which has been reconsidered, Mr. McKellar proposes to strike out the words, "shall have power, and, at the request of the Commission, it shall be the duty of the court to" and insert the word, "may", so as to read:

"the court may constitute and appoint"—

And so forth.

Mr. GORE. Mr. President, I ask the clerk to read the words following the word "constitute."

The Chief Clerk read as follows:

"Constitute and appoint the Commission as sole trustee or receiver, subject to the directions and orders of the court."

Mr. GORE. I move to amend by inserting after the word "Commission" the words "or any member thereof." I do that merely in the interest of simplifying the mechanics of the procedure.

Mr. WHEELER. I hope that will not be done, because I think it is much better that the Commission be appointed and then the Commission may select one of its own members. I have worked that out with the

Senator from Tennessee and we agreed upon an amendment which is satisfactory, and I think it is much better, if I may say so, not to add the words suggested by the Senator from Oklahoma.

Mr. McKellar. I think it will cover the very point the Senator from Oklahoma has in mind.

Mr. Gore. Very well; I am not familiar with the amendment; and, in view of that statement, I will withdraw mine. My assumption was, however, that the Commission would recommend one of its members to the court and that such member would be appointed. My purpose was to simplify the machinery.

Mr. Steiwer. Mr. President, I merely wish to observe that if the amendment suggested by the Senator from Tennessee shall be agreed to, the difficulty, partially if not entirely, disappears because it is simply permissive. The court is not bound to appoint the Commission. It may then appoint the Commission or any member of the Commission or possibly more than one member of the Commission, if the court, in its judgment, should deem it wise to do so. So if the amendment shall be agreed to by the Senate, the difficulty suggested by the Senator from Oklahoma will no longer exist. I think that affords an argument in behalf of the amendment of the Senator from Tennessee.

The Presiding Officer. The question is on the amendment of the Senator from Tennessee to the amendment of the Senator from Montana.

The amendment to the amendment was agreed to.

Mr. McKELLAR. Mr. President, the chairman of the committee suggested in conference with me——

The PRESIDING OFFICER. The question now is on agreeing to the amendment as amended.

Mr. McKELLAR. Before that is done, let me say that the amendment I am about to suggest is an amendment to that section. I will ask the Senator from Montana, if he desires to have inserted the following words?—

"In any proceeding in which the Commission is appointed trustee or receiver the Commission shall designate a member or officer thereof to carry out the directions and orders of the court."

Mr. WHEELER. I think that would be a good provision.

Mr. McKELLAR. I offer the amendment which I ask the clerk to state.

The PRESIDING OFFICER. The amendment will be stated.

The CHIEF CLERK. On page 50, after line 24, it is proposed to insert:

"In any proceeding in which the Commission is appointed trustee or receiver the Commission shall designate a member or officer thereof to carry out the directions and orders of the court."

Mr. BARKLEY. Mr. President, I suggest that the word "may" be used instead of the word "shall." It might be possible in some cases that the whole Commission might desire to act.

Mr. McKELLAR. I have no objection to that modification.

The PRESIDING OFFICER. The Chair is advised that the parliamentary situation is

such that the amendment now offered by the Senator from Tennessee does not relate to the amendment of the Senator from Montana, which has been amended. Therefore, the last amendment offered by the Senator from Tennessee, is not properly in order at this time.

Mr. McKELLAR. The section has been reconsidered, and is still reconsidered.

The PRESIDENT pro tempore. The Senate only reconsidered the amendment.

Mr. McKELLAR. I ask unanimous consent that the section may be reconsidered, in order that I may present the amendment.

The PRESIDING OFFICER. The entire section does not have to be reconsidered. The question now properly before the Senate is on agreeing to the amendment of the Senator from Montana as amended by the amendment of the Senator from Tennessee. When action shall have been taken on that, then the Senator from Tennessee may present the amendment, and it will be in order.

Mr. BARKLEY. Let us agree on the amendment as amended.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Montana as amended by the amendment of the Senator from Tennessee.

The amendment to the amendment was agreed to.

Mr. McKELLAR. Now I offer the amendment to which I have referred.

Mr. LONG. The amendment is now unnecessary, is it not?

The PRESIDING OFFICER. The question now is on the amendment offered by the Senator from Tennessee, which the clerk will state.

The CHIEF CLERK. On page 50, after line 24, it is proposed to insert the following:

"In any proceeding in which the Commission is appointed trustee or receiver, the Commission may designate any member or officer thereof to carry out the directions and orders of the court."

Mr. HASTINGS. Mr. President, may I suggest to the Senator from Tennessee that it seems to me that is a very objectionable amendment. The suggestion is made that the court, as I understand, may appoint, but is not required definitely to appoint, the Commission to act as receiver.

Mr. MCKELLAR. The amendment does not require the appointment of the Commission; but if the court should appoint the Commission, the Commission could select the person on motion to the court.

Mr. HASTINGS. Of course, the court could appoint anybody who had authority under a statute or otherwise to go and do the particular job for the Commission. In other words, it would make it certain that any careful court under no circumstances would appoint the Commission. I am not opposed to compelling them to appoint the Commission.

Mr. WHEELER. Mr. President, if there is any objection to the amendment of the Senator from Tennessee, let me say that I do not care anything about it at all, and I am perfectly willing that the amendment shall not be adopted. I have no interest in it.

Mr. MCKELLAR. If there is any objection to it, I will not insist upon it. The amendment was just a part of the agreement I made with the chairman of the committee.

Mr. WHEELER. If there is any objection to it, I will ask the Senator from Tennessee to withdraw it.

Mr. MCKELLAR. I withdraw the amendment.

The PRESIDING OFFICER. The amendment is withdrawn.

Mr. CONNALLY. Mr. President, I desire to offer two amendments, which I ask to have lie on the table.

The PRESIDING OFFICER. The amendments will be received, printed, and lie on the table.

Mr. GORE. Mr. President, the withdrawal of the amendment of the Senator from Tennessee raises a point which I suggested a few moments ago, that the amendment offered by the Senator from Tennessee should be so amended that the court could appoint either the Commission or any member of the Commission. Then the commissioner appointed by the court would be an agency or officer of the court. The amendment just withdrawn would have enabled the Commission when once appointed by the court virtually to have selected the receiver for the court. It seems to me it would simplify the proceedings if the court were invested with the discretion of appointing as receiver either the whole Commission or any member of the Commission, it all being permissive, because I am not certain that we can dictate to the court whom it shall select as receiver.

The PRESIDING OFFICER. The bill is still before the Senate and open to amendment.

Extracts from the Congressional Record, Vol. 79, 74th Cong., 1st Sess., p. 8943:

Mr. BONE. Mr. President, I have just reentered the Chamber, and I understand that a moment ago an amendment was adopted which restricts the appointment of a receiver in insolvency proceedings, or rather prevents the naming of the Commission as trustee or receiver. I regret

that has been done. I feel that some of my brethern may live to regret it.

The Associated Gas & Electric Co., one of the largest outfits in the country, is now facing insolvency proceedings. This movement may result in the naming of one of the men connected with that organization as trustee or receiver. If there be any untoward results arising from such a receivership, this body will surely have to answer for it to the people of the country. The thing will smell to high heaven if they pursue the method so frequently pursued in cases of that kind. We might as well be advised now. If the Associated Gas & Electric Co. should get into trouble and there should be a scandal, I want Senators to remember what I say now on the floor of the Senate today, because I am going to remind them of it. This might easily project itself into a situation that would be a national scandal. We should allow the Government through its own agency to handle the matter if it reaches the stage of receivership.

We had a Federal judge before us not long ago under impeachment proceedings, and we have seen how tainted and corrupt some of these receivership matters may be. When a judge appoints a trustee or a receiver, he frequently names one of his own friends, and then he has a friend practicing law before him. There is not a lawyer in this body who has not seen that thing occur time after time. We almost impeached a Federal judge for doing that identical thing. He should have been impeached. I voted for his impeachment. I think a court ought to be in a class with Caesar's wife—above reproach, above suspicion—and some of our courts have not been above

reproach or above suspicion. If there is any scandal connected with this Associated Gas affair, Members of the United States Senate who voted to remove vital receivership control from the hands of the Commission are going to have to bear their share of the moral obloquy resulting from that proceeding, if the poor security holders are rooked, and we might have done something to prevent it, and did not.

Mr. LONG. Mr. President, I did not understand we struck out the appointment of the Commission as trustee or receiver. I understand we merely changed the word "shall" to "may."

Mr. BONE. I want the people of the country to know, after years and years of maladministration of the affairs of these companies, that we come here now with a bill to try to correct some of the abuses, and step by step by this process of attrition, we are tearing the heart out of the bill.

Mr. LONG. Let us quit tearing.

Mr. BLACK. Mr. President, I desire to ask the Senator from Washington a question. Is that the amendment which changed the word "shall" to "may"?

Mr. BONE. Yes.

Mr. BLACK. Does not the Senator, from experience and observation of his own, know that if it is left to the court to appoint receivers, the court will never appoint Government agencies where those agencies are already drawing their salaries from the Government? The natural result and the inevitable result would be that in all instances the receiver in the future, as in the past, will be someone whom the court wants to appoint. Is not that correct?

Mr. BONE. That is the record which has been disclosed by one of our Senate committees. The receivership racket all over the country has become a stench. It is a reproach to our system of administering the law. If Associated Gas cracks up and a bad smell emanates from the receivership, they must not walk away from their responsibility, but they must step up and shoulder it like men. We have tried to secure a form of receivership in these cases that would remove the evils and weaknesses of the present system, and apparently we have failed through this amendment.

Mr. BORAH. Mr. President, I do not know that I understood the Senator as to which particular amendment he was discussing. To what amendment did the Senator refer?

Mr. BONE. I understood the amendment had been adopted which struck out of the bill the requirement that the Commission itself should act as receiver. I think that is wrong.

Mr. BORAH. I did not understand that the Senate struck out the provision that the Commission might be appointed, but my understanding was that it was made discretionary. Is that correct?

Mr. BONE. That is correct.

Mr. WHEELER. Let me say to the Senator that in line with what the Senator from Washington [Mr. SCHWELLENBACH] called attention to, and what I called the attention of two or three Senators to a moment ago, I propose to add a proviso saying that in any such proceeding the court shall not appoint any person other than the Commission as trustee or receiver without notifying the Commission, and giving it an

opportunity to be heard before making any such appointment.

That is in accordance with the suggestion of the Senator from Washington [Mr. SCHWELLENBACH], and two or three other Senators. I think it is very helpful to the bill, and will prevent the court from just stepping in and appointing somebody offhand, without giving any consideration at all to the matter. The Commission will have a right to be heard on the matter.

Is there an amendment pending at the present time?

The PRESIDING OFFICER. There is no amendment pending at the present time.

Mr. BORAH. Mr. President, do I understand that the Senator has offered that amendment, or that he will offer it?

Mr. WHEELER. I am going to offer it in a few moments.

Extracts from the Congressional Record, Vol. 79, 74th Cong., 1st Sess., p. 8944:

Mr. WHEELER. Mr. President, I send to the desk an amendment of which I spoke a moment ago, and which I have just worked out. It is to add certain language after the word "appointed", on page 50, line 2:

The PRESIDING OFFICER. The Senator from Montana offers an amendment which will be stated.

The CHIEF CLERK. On page 50, line 2, after the word "appointed" and before the period, it is proposed to insert:

"And in any such proceeding the court shall not approve any person other than the Commission as trustee or receiver without notifying the Commission and giving it an opportunity to be heard before making any such appointment."

Mr. McKELLAR. Mr. President, is that the amendment which the Senator has worked out?

Mr. WHEELER. That is the amendment I have worked out, as suggested.

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT

BRIEF FOR THE SECURITIES AND EXCHANGE COMMISSION IN REPLY TO BRIEF OF CENTRAL-ILLINOIS SECURITIES CORPORATION AND CHRISTIAN A. JOHNSON, RESPONDENTS-PETITIONERS [1]

Central Illinois argues that "the District Court was not required to disturb, and did not disturb, any

[1] Pursuant to stipulation the briefs of petitioners in Numbers 226, 227, 243, and 266 were exchanged simultaneously. These briefs set forth the arguments of the Commission, of

factual finding of the Commission" (p. 125); that its "disagreement * * * with the Commission was basically a disagreement as to applicable legal principles" (p. 16); and that because the district court properly held as a matter of law $100 a share to be the proper payment to each series of the preferred, there should be no remand to the Commission as required by the decision of the Court of Appeals. Nevertheless, Central Illinois' brief makes no effort to support the legal theory of the district court that, under the *Otis* case, "standards" or "notions" of colloquial equity, rather than strict priorities, should determine a proper allocation;[2] does not dispute that the doctrine of the strict priorities ap-

---

the preferred stockholders and of the Central-Illinois group of common stockholders, in respect to both the petitions and cross petitions. The other group of common stockholders, Lucille White and Francis Boehm, respondents in Numbers 226, 227, and 243 did not file a cross petition. We do not anticipate receiving their brief in time to reply herein to any of their arguments, which may differ from those already stated in the brief filed on behalf of Central Illinois.

[2] Central Illinois insinuates that the Commission and the preferred stockholders invented the term as a derogatory epithet, referring (p. 107n) to the "derisive statements of petitioners in the Court below that the District Court has sought to substitute 'notions of colloquial equity' for the strict priority standard,"; Cf. Central Illinois' statement (p. 17) that the "District Judge ascertained a number of factors * * * corroborative of his view that payment of the premiums to the preferred would result in unfairness and inequity in a 'colloquial' sense, as well as in its technical statutory sense;". That the District Judge himself characterized his approach as one of colloquial equity and did so in all seriousness is shown by the quotations from his views in our main brief (pp. 14–15, 53, 71–72).

plies in Section 11 (e) reorganizations and in fact relies upon that principle (Point V, p. 106); does not repeat its earlier argument to the effect that, if the entire bundle of preferred stockholders' preferential rights could properly be valued at any amount in excess of the involuntary liquidation preference, the excess is entitled to only such recognition as may commend itself to the chancellor's discretion;[3] makes virtually no effort to support the theory of the court of appeals that in determining equitable equivalent "ex the Act" the Commission should value on the basis of a balance sheet reconstituted as if the Act had never been passed and with past losses returned to the credit of the enterprise;[4] and develops as its main argument a thesis which both courts below declined to adopt—that, despite the *Otis* case, the preferred stockholders' liquidation preferences are dispositive.[5]

---

[3] See I B of our main brief, pp. 28–34, and especially p. 29, n. 18 quoting from Central Illinois' former position.

[4] See our main brief, Point I E, pp. 46–75, and compare the statement in Central Illinois' brief in opposition (Point III, p. 34) that the Court of Appeals had not intended the Commission on remand to make a "precise computation" of such losses, but merely to give "reasonable consideration to the fact that such losses * * * had been sustained."

[5] An appeal to fireside equities is interwoven with other arguments apparently by way of color and not as any overt formulation of a standard which by itself should furnish a guide to either court or Commission. Because of the factual distortions involved in this indirect argument of colloquial equities we note below our disagreement with numerous parenthetical observations of this character.

In support of this basic legal argument, and in support of the court of appeal's criticism of the Commission for failure to forecast future earnings accruing to the common stock if Engineers continued, Central Illinois advances two interrelated economic arguments. First, it is asserted that because of the alleged economic advantages of retaining Virginia, Gulf and El Paso under a holding company, and because of the leverage advantage to the common stockholders of renting the preferred stockholders capital at an average cost of 5.4%, or perhaps less, something of value disappeared in the liquidation of the holding company for which common stockholders should be compensated before the preferred get more than their liquidation preferences. The second economic argument is that the preferred stocks, if valued on a going concern basis, should not have been valued in relation to the then current yield of investments of comparable risk but that such a "transient market value" should have been rejected by the Commission for a "long term" or "average" value.

We deal first with Central Illinois' economic arguments.

I. REPLY TO THE ARGUMENT THAT VALUE DISAPPEARED IN THE LIQUIDATION OF ENGINEERS UNDER THE PLAN

Central Illinois argues (p. 116, n. 1) that the common stockholders sustained through the plan "deprivations attendant upon entirely giving up the holding company form of organization, the

financial advantage of filing consolidated tax returns. * * * the centralized expert service organization, the leveraged capital structure and the recoupment of past losses which such structure would produce in an economic upswing."

Similar assertions occur throughout its brief. See, for example, the statement (p. 13) that the Commission made no effort to determine "what each class of security holders was losing by the liquidation;" its reference (p. 18) to "further deprivations incident to the liquidation '[that] would necessarily fall on the common stockholders (R. 307a–308a)"; the reference (p. 114) to the fallacy of the Commission's "implicit assumption that if the preferred stockholders sustained a deprivation" from the retirement of the preferred "the common stockholders necessarily became the beneficiaries of that deprivation." Indeed, this is the major thesis of Point VI (pp. 114–123) of Central Illinois' argument.

A. LEVERAGE

In developing this argument Central Illinois mainly stresses loss of leverage. The term "leverage" is used to illustrate the advantage which results to owners of a junior investment if the earnings upon the total capital invested in the enterprise are at a higher rate than the interest cost

[6] The record reference is to the district court's findings concerning losses to common stockholders prior to the plan.

or preferred dividend cost of obtaining senior capital.[7] Central Illinois purports to demonstrate this advantage mathematically by pointing out that apart from the liquidation required by Section 11 the common stockholders could continue to use $39,000,000 of preferred stockholders' capital at an average rental charge of 5.40%, on the basis of existing dividend preferences, or, through refunding, on the basis indicated by the Badger testimony, at only 4.6% It is asserted that, on the other hand, the common stockholders could have obtained a return of 12½% from the use of these funds. From this it is argued that value, to the common stockholders at least, disappeared in the liquidation of Engineers in an amount at least equal to the return obtained from paying in the neighborhood of 5% for senior capital and realizing 12½% from its use (Central-Illinois brief, pp. 117–118). Apart from the element of exaggeration in the hypothesis of a current 12½% return,[8] the argument involves the

[7] A related aspect of leverage involves, of course, magnification in its impact upon the junior security holder of any rise or decline in the value of the total capital at stake.

[8] The eight times earnings figures used by Central-Illinois represent the ratio between market prices of El Paso, Gulf States, and Virginia on August 1, 1947 and estimated earnings for those companies. It should be noted that the average "yield" based upon current dividend rates of those companies is 6.96%. Central Illinois also refers to the Public Utilities Fortnightly issue of December 2, 1948 for a "list" of stocks purchasable at eight times earnings. That list discloses average yields of 7.1% for one group and

obvious fallacy of ignoring what the common stockholders would have been required to risk by keeping the Engineers preferred stocks outstanding.

Central Illinois argues elsewhere that the risk of Engingers not earning enough to cover even the preferred dividends were such as to make it proper to characterize the preferred as a "low grade" investment rather than "medium" (Brief 12–13, 76. See our main brief p. 8).[9] Regardless of the proper characterization, the testimony that a willing buyer and a willing seller would value the preferreds on a 4.6% yield basis, as compared to yields of less than 3% on high grade long term

6.1% for the other group of stocks. The average price-earnings ratio is not eight times but 13 times for one group and 10.3 times for the other group.

[9] Actually, Badger's characterization as "medium" was in comparison to operating company preferreds which he regarded as medium grade from the point of view of earnings and asset coverages. Barnes' characterization as "low grade," and nearer to a common stock in quality, was by comparison with operating company stocks. In a further attempt to undermine the Commission's findings of fact, despite the concession that the District Judge did not disturb them, Central Illinois (pp. 12–13) refers to the Standard & Poor's rating for Engineers preferred. This rating was as of September 11, 1944, shortly prior to the abandonment of such quality ratings for preferred stocks as "meaningless." The service continued however, to give ratings from the point of view of over-all desirability of the investment, and characterized the Engineers preferred as "Ab–A" which means above average and is, therefore, a high rating from the point of view of desirability. See R. 1844a, 2120a.

bonds, is recognition of a substantial risk factor. Any decline in earnings which would prevent full payment of the preferred dividend would, of course, stop common dividends altogether. If the common stockholders had been free to retain the preferred stock in the picture—and had elected to do so—they would have been required to leave as security for the preferred stockholders' prior claim all but the amount of the distributable earned surplus, instead of withdrawing therefrom the valuable equity which they received under the plan when they acquired direct ownership of the operating company common stocks. Thus common stockholders, in addition to paying the "rent" for the preferred stockholders $39,000,000 of senior capital, would have been required, had Engineers not been liquidated, to continue to risk as security for the preferred stockholders' prior claim a junior equity having a much larger market value, as indicated by Central Illinois' own figures of the market value as of the date of distribution of what they received under the plan (pp. 101–102): $88,768,149 less the $22,000,000 paid in the exercise of the Gulf Warrants or a net of $66,768,148 or $34.96 per share.[10]

A great deal was heard of the advantages of

[10] The value which common stockholders would have been required to leave in was $66,768,149 less whatever amount the common stockholders might have withdrawn in dividends, which obviously was not the full amount of the consolidated earned surplus in view of subsidiary dividend freezes. Possibly, not even the amount of the unrestricted surplus could

"leverage" in the lush days of holding company promotions, but the fact that leverage works both ways was dramatically illustrated in the collapse of market quotations for holding company common stocks which preceded the passage of the Act. See Hearings Before Committee on Interstate and Foreign Commerce on H. R. 5423, 74th Cong., 1st Sess. (1935) at p. 2090. Engineers' common stockholders have had their own dramatic experience with the disadvantage of leverage in declining markets, or in the event of other unfavorable developments. The common sold as low as 1⅛ in 1935 and again as recently as 1942 at a low of 1¼, as compared with 36 on February 13, 1946 (R. 63a) and the $34.96 market valuation of what was received under the plan.[11]

Congress has concluded that the extreme leverage which results from introducing senior securities at the holding company level—in addition to such stratification as occurs at the operating company level—is unsound and involves undue speculation from the point of view of the holding company common stockholders as well as other security holders.[12] We submit that the Commis-

have been withdrawn in view of pressure to provide for the expanding plant requirements of subsidiaries and the possible reluctance of large common stockholders to realize income taxable as dividends rather than as capital gain (see our main brief, p. 73).

[11] See *supra*, p. 8. See also the chart of common stock fluctuations since 1930 (R. 1361a).

[12] S. Rep. No. 621, 74th Cong., 1st Sess., p. 4; H. Rep. No. 1318, 74th Cong., 1st Sess., p. 2.

sion was entitled to follow the legislative judgment to the extent of concluding that in giving up the rental of the preferred stockholders' senior capital, whether at the rate of 5.4% or 4.6% per annum, Engineers' common stockholders did not give up a value disproportionate to the risk from which they were thereby relieved, and that despite loss of leverage the common stockholders benefited from the plan.[13] Stated in different terms, since the common stockholders had more capital at risk than the preferred, there is no basis for concluding, so far as the leverage element is concerned, that money spent by the common stockholders to discharge the preferred stock's prior claim would be disadvantageous as a business matter, and hence the Commission properly found the plan beneficial to the common.

B. OTHER ALLEGED DISADVANTAGES TO THE COMMON FROM THE LIQUIDATION OF ENGINEERS

The alleged advantages of diversification and centralized management involve nothing more

[13] A very different aspect of valuing "leverage" was presented by the United Light and Power plan in the *Otis* case, where there were large arrears on the preferred and no present asset value for the common. The charter right of the common to hang on in the hope of future earnings catching up with arrears was found by the Commission to be worth something, although concededly difficult to value. But there, unlike the situation presented by the Engineers plan, the common stockholders had nothing to risk by hanging on, since they were already far below zero on the basis of asset valuation.

than a repetition of arguments fully considered and rejected by the Congress in passing the Act. See e. g. S. Rep. 621, pp. 32–34 (Appendix B to our main brief, p. 140). Here the common stockholders actually acquired through the plan the same diversification they had prior to the plan to the extent that they exercised the Gulf purchase warrants, and could have obtained a similar diversification without any new investment of cash by selling enough of the Virginia and El Paso stock to make a proportionate investment in Gulf.[14] Again, if the independent managements of the operating companies should conclude that there is enough to be gained by pooling certain of their servicing requirements they are free under the Act to organize a mutual service company. See Section 13. Moreover, the argument of Central-Illinois as to loss of economies from centralized management is similar to the argument which the Commission had rejected in the Section 11 (b) (1) case, a ruling which Engineers had not contested in its proceeding to re-

[14] Central-Illinois also refers to the lost diversification incident to divestments which preceded the plan. Apart from the fact that the prior divestments were relatively unimportant as compared to the subsidiaries remaining at the time of the plan, emphasis upon such prior divestments involves the fallacy of either weighing colloquial equities or attempting to reconstitute Engineers' balance sheet as if the Act had never been passed and shifting the incidence of loss in prior transactions contrary to the rule of strict priority. See our main brief pp. 22–28 and 67–69.

view the 11 (b) (1) order and which it made no attempt to retry in the plan hearings.[15]

The argument that liquidation deprived Engineers common stockholders of the tax benefits of filing consolidated returns is either sheer fantasy or requires speculation as to future tax laws. As of the time of the plan it was testified that there was no tax advantage from filing consolidated returns commensurate with the cost of keeping Engineers alive though, of course, if Engineers were kept alive it was deemed advantageous to consolidate (R. 611–624, 833–837). Under existing tax laws filing separate returns for Engineers and its subsidiaries would have resulted in an effective tax of 5.7% of the intercorporate dividends (tax rate of 38% after allowing an 85% credit for dividends). Under the presumably more favorable alternative of consolida-

[15] In the Section 11 (b) (1) proceeding, review of which was mooted by the plan, Engineers failed to satisfy the Commission that there would be a loss of "substantial economies" within the meaning of Section 11 (b) (1) (A) through failure to retain a holding company over the alternative combinations of Virginia with Savannah Electric and Power or Gulf with El Paso (the latter finding being merely advisory since Virginia's electric properties were listed as the "single system"). It would seem to follow *a fortiori* that there would be no loss of substantial economies in the separation of the more widely separated combination of the two largest subsidiaries, Virginia and Gulf. No evidence was taken on that issue, however, since the non-retainability of that combination rested on the Commission's interpretation that clause B of Section 11 (b) (1) required the single and additional systems to be in the same geographic area.

tion, the tax on intercorporate dividends does not apply but 2% of the consolidated income is payable for the privilege of consolidation. On the basis of the earnings of $10,629,724 reported by Virginia, El Paso, and Gulf States for the twelve months ending June 30, 1947, which Central-Illinois assumes *arguendo* constitute prospective "normal earnings," there would be an annual tax saving alone of $212,594 to the common stockholders, which would accrue through the dissolution of Engineers.

Under wartime excess profits taxes much larger savings were attributable to consolidation, largely as a result of utilizing the higher invested capital base of the holding company. Central Illinois suggests that such taxes may be restored. We offer no prediction, but in any event this was a possibility not in contemplation when the Engineers plan was consummated.[16] Moreover, we deem it highly questionable whether the Commis-

[16] It was proposed to retain this benefit, at least in part, under the plan originally filed with the Commission which contemplated the possibility of merging Engineers with Virginia. After the repeal of the excess profits tax this feature was eliminated because the tax advantage appeared to have disappeared, and because it was thought that elimination of the merger alternative would remove a possible legal advantage to the preferred stockkholders in arguing against the management's proposal to limit them to their involuntary liquidation preferences. See our main brief, p. 78, n. 46. If it should turn out that the common stock management outsmarted itself in this litigation strategy, we fail to see how the Commission could fairly visit the consequences upon the preferred.

sion could properly assume as a long term matter that Congress would offer a tax bonus to keep alive the holding companies which it is the policy of Section 11 of the Holding Company act to eliminate.[17]

II. REPLY TO THE ARGUMENT THAT THE COMMISSION'S APPRAISAL OF THE "INVESTMENT VALUE" OF THE PREFERRED STOCKS WAS DEFECTIVE BECAUSE BASED UPON "TRANSIENT MARKET VALUES"

We have shown in our main brief (pp. 7–8; 35–42) that both preferred stockholder and company witnesses testified that on a going-concern basis a willing seller and a willing buyer would value Engineers preferred stocks at slightly in excess of the redemption price and that Engineers' president conceded that such a valuation fully reflected the risk factor as the "investing public is presently appraising these hazards" (R. 525a). We have also shown (pp. 36–37) that

[17] The National Power Policy Committee concluded its recommendations with the suggestion that simplification of holding companies should be stimulated by partial removal of the then exemption under the Revenue Act for dividends received by corporate holding companies and affiliates on the securities of public utility companies and other holding companies. See Senate Report 621, 74th Congress, 1st Sess., p. 60. The Senate Interstate Commerce Committee also recommended the granting of tax exemptions to facilitate voluntary compliance with Section 11 but did not attempt to include such provisions in the Act itself. See S. Rep. No. 621, p. 14. See our main brief, Appendix B, p. 133. Subsequently, the Congress adopted Supplement R of the Internal Revenue Code specifically designed to relieve against realization of capital gains through reorganizations to comply with Section 11.

since the possibility of change in interest rates or other factors affecting the general level of security values would apply to any new investment which preferred stockholders might make with the cash received under the plan, the only fair basis for compensating them for the compulsory surrender of their investment was in accordance with the then cash value of the interest surrendered. The risk factor as appraised by the valuation witnesses and the Commission took into account both the risk that the preferred stockholders might not receive their full preferential dividends and the uncertainty as to the future cost of money.[18] The Badger testimony, which was accepted by the district court, appraised the risk factor on a basis which, apart from the redemption price ceilings, accorded the preferred stocks values substantially above the redemption prices. The Commission, from its own analysis of the investment quality of the preferred, found values on a going-concern basis at least equal to the redemption prices. Granted that the Commission, because it has the statutory responsibility for making its own valua-

[18] Barnes in conceding that a willing seller and a willing buyer would value the preferred at slightly above the redemption prices did not claim that the investing public collectively was wrong in its current appraisal of the risk factor as applied to similar investments. He merely pointed out, what was implicit in the recognition that there was a risk factor, that in the event of unfavorable future developments the preferred stocks might at some future time, if continued outstanding, be worth less than they appeared to be worth then.

tion, might have placed a different appraisal on the risk factor from that made by the valuation witnesses, and might have differed also from the collective judgment of the market place applicable to similar investments, we submit that the Commission's valuation is not to be condemned as irrational merely because it coincided with the judgment of the witnesses and of the general market.[19]

The Commission's appraisal did not, as Central-Illinois argues (p. 81), ignore the historical fact that the securities with which Engineers preferred stocks were compared had sold in times past upon a much higher yield basis, or that current low yields for similar securities were related to government fiscal policies which may have "artificially" lowered interest rates, and which may change. The risk of change in money rates was, as we have seen, simply one of the factors entering into the over-all appraisal of risk. Nor was it of controlling significance that, with the

[19] Central-Illinois points out that the Commission in other cases has consistently rejected the market price of the very securities subject to the reorganization as a test of what constitutes fair and equitable treatment of such securities (pp. 90–91). The obvious reason for this rule is that the market price of the security undergoing reorganization reflects to a substantial degree the market's expectations of the treatment to be accorded such securities in the reorganization. This does not mean, however, that if the market should happen to forecast accurately the kind of treatment which the Commission concludes to be fair then the Commission must necessarily reach a different valuation.

redemption prices tending to fix a ceiling for the preferred, any future change in value could be only in one direction: downward. With the preferred stocks yielding from 5 to 6% as compared to a yield of less than 2% upon relatively risk-free investments such as long-term governments (and yields approaching zero on short-term government securities), the chance of obtaining the relatively favorable return from Engineers preferred stocks up to the date of call at some unpredictable future time, was obviously a factor to be weighed against the risk of lower markets in the future.[20]

Central-Illinois attempts to undermine the district court's acceptance of the Badger valuation testimony by arguing (p. 84) that the district court only accepted his testimony subject to the inherent weaknesses of his method of valuation. But the inherent weakness of the method, as spelled out by Central-Illinois in its brief and as expressed in the district court's findings (drafted by Central-Illinois), involves nothing more than spelling out what is implicit in any attempt to make a valuation of an investment in relation to the risk factor: that there is a risk, or possibility,

[20] It is not uncommon for bonds and preferred stocks to sell in the markets above a currently applicable call price either because investors are willing to take a chance that the call will not be exercised in the immediate future or even, when its exercise appears relatively certain, because then the senior security approaches the characteristics of a short-term investment.

of adverse developments in the future. The district court did not say that the Badger appraisal of risk (equivalent to a 4.6% capitalization rate applied to the preferred dividends) was too low as an appraisal of the risk. It was merely "found" that because of the element of risk the preferred stocks *might* be worth less in the future. See our main brief, p. 39, n. 25. Thus the inherent weaknesses of the Badger testimony, and of the Commission's appraisal, as emphasized by Central-Illinois, involved merely the inherent limitations of human foresight. The possibility that tomorrow's judgment may be different from today's is no reason why, whoever has the responsibility for the valuation, should not make as fair a current appraisal as is humanly possible.[21]

[21] We show in our main brief (p. 42, n. 27) that there is no basis for concluding that changes in the cost of money since the Commission's decision would in themselves warrant according the preferred stockholders less than the liquidation preferences and that any changes since the date of consummation are irrelevant. Central-Illinois makes the ambiguous observation (p. 81, n. 2) that equity speaks as of the time of the decree. If this means that up to the time the preferred stockholders were compelled to part with their investment there would be warrant for reexamining the Commission's valuation in the light of more recent developments, we agree. If it means that developments thereafter are to be taken into account, Central-Illinois' theory would deprive the preferred stockholders of the dividend on their investment while leaving them still subject to the risk of being stockholders in the enterprise.

III. REPLY TO THE ARGUMENT THAT THE INVOLUNTARY LIQUIDATION PREFERENCES OF THE PREFERRED ARE DISPOSITIVE

Petitioner's arguments that the involuntary liquidation preferences are the controlling measure of the amount payable to the preferred largely involve a reargument of the *Otis* case. As we show in our main brief (pp. 47–53), the *Otis* case upheld the Commission in "giving value to the rights of the preferred [of United Light and Power] in a going concern rather than as if by sale and distribution." Central-Illinois argues (1) that as a matter of interpretation of Engineers' charter the liquidation preference is controlling; (2) that application of the Commission's rationale to debt might result in a cash payment of less than the face value of the debt while still according a participation to junior interests; (3) that giving value to the rights of the preferred in a going concern, despite the liquidation of the corporate entity, involves "indulging in the baldest fiction" (p. 63), and (4) that valuing the preferred on a going-concern basis was inconsistent with earlier Commission precedents, notably *New York Trust* v. *S. E. C.*, 131 F. 2d 274 (C. A. 2), certiorari denied, 318 U. S. 786, rehearing denied after the *Otis* case, 319 U. S. 781. While the argument as to inconsistency seems to us to prove at most that the *Otis* case may have rejected some of the reasoning of earlier decisions made in different contexts, Central-Illinois' at-

tempt to convey the impression that the Commission's decision in the instant case was a novel departure from the principles of the *Otis* case itself amounts to arguing that the principle of the *Otis* case is a one-way street, applicable only where it is advantageous to common stockholders to accord preferred stockholders a going-concern value amounting to less than the liquidation preferences, but inapplicable where those going-concern values are worth more than the involuntary liquidation preferences. In addition, the effort is made to distinguish the *Otis* case on the ground (1) that this, unlike Otis, is an "authentic" liquidation, and (2) that here the preferred stockholders are to be paid in cash. The first of these alleged distinctions largely involves the fallacious economic assumption discussed *supra* pp. 4, *et seq.* that value disappeared in the liquidation of Engineers. The second involves the anomalous contention that where the common stockholders, through their control of the management, elect to pay senior securities off in cash, the measure of what is surrendered, for the purpose of equating it with the cash received, is different from the measure of the interests surrendered where the method of compensation is through an allocation of securities.

A. ARGUMENTS BASED UPON THE CONSTRUCTION OF ENGINEERS' CHARTER

Central-Illinois argues (p. 24) that what is taking place is clearly a "liquidation, dissolution, or wind-

ing-up of this corporation," and that since the liquidation is taken in view of the compulsion of Section 11 it is not voluntary and therefore is necessarily covered by the charter provisions applicable to liquidations which are not "voluntary". This argument closely parallels the reasoning of the vigorous dissenting opinions of Commissioner Healy and of Chief Justice Stone in the *Otis* case. It was rejected by the majority of the Commission and of this Court in the Otis case, in view of their conclusions that the charter was not adopted in contemplation of the reorganization provisions of Section 11. It was also concluded that the Congress in requiring the simplification of holding company systems, including the liquidation of uneconomic holding companies, did not intend to permit the reorganization to destroy legitimate investment values by causing a shift in the relative rights of the various classes of security holders in the going concern. Maturing the liquidation preferences of solvent companies would, of course, result in such a shift of values. As the opinion of this Court states (323 U. S. 638):

> * * * Where pre-existing contract provisions exist which produce results at variance with a legislative policy which was not foreseeable at the time the contract was made, they cannot be permitted to operate * * *.

The Engineers charter was adopted in 1925 (four years earlier than the United Light and

Power charter involved in the *Otis* case), yet Central-Illinois argues (pp. 42–43) that because of the then current agitation concerning the "power trusts" the security holders are to be taken as having contemplated the adoption, some ten years later, of the reorganization provisions of Section 11. A significant answer to this argument is the statement of William E. Tucker, counsel for Engineers and a draftsman of the charter. This statement, made in an earlier proceeding when it appeared that application of the *Otis* test might place a going-concern value on the preferred of less than $100 a share, was that a Section 11 type of liquidation was not contemplated at the time of the drafting of the charter. See R. 256 (a), 1211 (a), 1731 (a).[22]

B. ALLEGED INCONSISTENCY OF THE COMMISSION

1. *The Federal Water case*

Central Illinois' argument that consistency with the Commission's holdings in other cases required the Commission to treat Engineers' involuntary liquidation preference as the sole measure of the preferred stockholders' claim is largely an argument made and rejected in the *Otis* case itself. Central Illinois notes (p. 50, n. 1) that "the Commission itself early recognized that the distinction between 'liquidation' of the enterprise * * * and a mere alteration in the senior security hold-

[22] See *Streeter* brief, p. 96.

ers' investment in a continuing enterprise", referring to the allocation aspects of *Federal Water Service Corp., et al.*, 8 S. E. C. 893, 907–912 (decided March 24, 1941). This case involved what was in substance a recapitalization, substituting a single class of common stock for the previously outstanding stocks of Federal Water Service Corp., and took the form of a merger with a wholly-owned subsidiary. It contains the first rationalization of the approach followed by the Commission in the *Otis* case, as well as of the contrary views of Commissioner Healy. The majority opinion did contain a dictum, squarely rejected in the *Otis* case, that if Section 11 had required liquidation of the holding company, as distinguished from a simplification of its corporate structure, then, as in bankruptcy, the Commission should treat the liquidation preference as matured by the Act. The fact is, however, that this dictum was rejected both by the Commission and this court in the *Otis* case.

2. *The New York Trust case and the theory of frustration*

Central Illinois' major example of alleged inconsistency on the Commission's part is its decision in the *United Light and Power* debt retirement case (10 S. E. C. 1215), decided February 25, 1942, affirmed *sub nom. New York Trust Co.* v. *S. E. C.*, 131 F. 2d 274 (C. A. 2), or slightly more than two years prior to the later *United Light*

and Power decision upheld by this Court in the *Otis* case. As in its brief in opposition, Central Illinois distorts the problem which this debt retirement presented to the Commission in an effort to convey the impression that application of the approach followed by the Commission in the instant case would have resulted in payments to United Light's bondholders in excess of face amount. Central-Illinois refers (p. 54) to "interest rates of 6% and 6½%, rates so lucrative that the debentures had been selling at a premium above par." The footnote upon which Central Illinois bases this statement clearly indicates that the premium of a maximum of 1½ points above par, which was being paid shortly prior to the Commission's decision, after the necessity for the liquidation of Power had been established by a prior unchallenged order and when there was a claim to a 9-point premium at stake in the proceeding, was attributable to the pendency of the plan and was not a measure of the going-concern value of the debentures. The footnote reads as follows (10 Sec. 1227, n. 27):

> All the debentures were originally sold to the public during the years 1923 to 1925 at prices ranging between 90 and 95. From 1931 to 1940 market quotations were constantly below par reaching as low as 25 for a time in 1933. Since 1940 and especially since our order of March 20, 1941, for the liquidation and dissolution of

Power, market quotations have been close to and sometimes as much as 1½ points above par.

Central-Illinois quotes frequently, and extensively, from the brief of the Commission in *New York Trust Company* v. *S. E. C.*, in which the Commission's decision was rationalized in terms of the legal theory of frustration, but neglects to refer to an alternative point in the Commission's argument that "there is, however, ample indication in the record that the debenture holders have not suffered any loss of investment value, but have indeed been benefited by the liquidation proceedings and the proposed retirement of the debentures as an incident thereto." This argument was premised upon a concession on the part of the New York Trust Company, indenture trustee, that the 9% redemption premium was claimed "because 'there is not in the record a factual basis for any other measure' (Pet. Br. 33)", and was followed by an argument based upon indicia in the record that the debenture holders had a position of substantial risk. (Commission brief in C. A. 2, pp. 30–33).

It may be conceded that the reasoning of the Commission in the *New York Trust* case has not been precisely followed thereafter. That was a unanimous decision despite the cleavage in point of view between Commissioner Healy and the other Commissioners which had already developed, as indicated by the dissent in the *Federal Water*

case—and both Commisioner Healy and the majority were able to cite the case thereafter as upholding their respective positions. See the subsequent *United Light and Power* allocation case, 13 S. E. C. 1, 9, n. 15, and for the dissenting view, p. 28.[23] Cases subsequent to the *United Light and Power* debt retirement case, in which debt claims have been retired at their face value or preferred stocks have been paid off at amounts equal to their involuntary liquidation preferences, have expressly rested on an analysis of the investment position of the security being retired and a finding that face amount or involuntary liquidating preference amounts to full compensation for that going concern value.[24] If, as Central-Illinois

[23] As we note in our main brief (p. 82, n. 50), the alleged inconsistency of the earlier decision, and of the decision of the Second Circuit affirming the Commission in *New York Trust Company* v. *S. E. C.* was fully dealt with in the Government's brief in the *Otis* case and it was then recognized that the Commission's approach might result in appropriate cases in payments in excess of liquidation preferences.

[24] See the cases cited in our main brief, pp. 80–81. That this approach had developed even prior to the *Otis* case is illustrated by the statement in the Government's brief in that case (pp. 52–53) that in decisions since the *New York Trust* case approving prepayment of debt without a premium the Commission predicated its decision upon "an appraisal taking into account interest rate, maturity date, and risk factor incident to the particular debt security," citing (in n. 37) the following: *North Continent Utilities Corporation*, Holding Company Act Release No. 4686, p. 12 (November 18, 1943), plan enforced in *In re North Continent Utilities Corporation*, 54 F. Supp. 527 (D. Del. 1944) (emphasizing meager

asserts (p. 64, n. 1), arguments made by the senior security holders in the cases subsequent to United Light and Power for realization of going concern values in excess of liquidation preferences, those contentions were rejected, not as irrelevant, but as unsubstantiated on the facts. This view of Commission precedents was recognized by the district court (R. 288a, 292a). In fact, contrary to the statement in Central Illinois brief (p. 17), the district court did not conclude on the basis of the cases denying premiums that the Commission's approach here "contravened firmly rooted decisions of at least four circuit courts of appeals and many district courts, as well as a long line of decisions of the Commission itself."[25]

The doctrine, upon which Central Illinois places so much emphasis (pp. 55, 66, 122), that frustration by operation of law excuses performance in accordance with the letter of a contract, appears to us to be helpful, only to a limited extent, in arriving at a fair and equitable solution of problems under Section 11 (e). The doctrine is rele-

---

earnings coverage, unfavorable market history and doubts as to ability to meet maturity five years hence); *Consolidated Electric and Gas Company*, Holding Company Act Release No. 4900, pp. 4–7 (February 21, 1944), plan enforced in *In re Consolidated Electric and Gas Company*, 55 F. Supp. 211 (D. Del. 1944)."

[25] As Central Illinois points out (p. 17, n. 2), the district judge in upholding prior Commission determinations that premiums were not payable had expressly envisaged a contrary result upon proof of "a different fact situation." See *In re North Continent Utilities Corp.*, 54 F. Supp. 527.

vant in showing that junior security holders should not be required to compensate senior security holders, or vice versa for the "disappointed expectation" of not receiving the letter of their contract rights, where to do so would make the process of compliance with the statute result in a windfall to one class of security holders at the expense of another. Thus, the Commission supports the common stockholders and disagrees with the argument in the Streeter brief (pp. 147–154) concerning the alleged unfairness of terminating the preferred stockholders' dividend claims upon a payment (or tender) of $100 on account of their claims while leaving to future litigation the determination as to whether anything in excess of $100 a share might be held fair and equitable.[26]

[26] The Streeter argument as advanced in support of motions for a stay and pressed to a more limited extent in the brief in this Court is that the preferred stockholders were entitled to retain their investment and to continue to accrue preferential dividends at the full charter rate, although concededly in excess of what was fair compensation for the risk, pending a definitive determination by Commission and Court as to the amount of the preferred stockholders' claim. Acceptance of this view would have involved either compelling the company to delay any efforts to secure the cash necessary to retire the preferred, or to keep idle cash equal to the entire amount of the preferred stockholders' claim pending resolution of the dispute. We believe that the same logic which relieves the preferred stockholders of the literal application of the liquidation preference, relieves the common stockholders of the literal application of the preferred stockholders' dividend preference which, by the charter, continues applicable until preferred stockholders acquire the full amount necessary to discharge their claim.

But the doctrine of frustration furnishes no automatic formula for determining what is an appropriate substitute in all cases for strict performance of the letter of the contract. The formula of rescission advanced by Central Illinois would, in a case like *Otis*, require the wiping out of a common stock which has a legitimate expectation of participating in future earnings where present assets are insufficient to restore what was paid in by the preferred. In the present case it would take from preferred stockholders the excess of their going concern value over the amount paid in. Moreover, the analogy purports to be derived from the way in which the law of contracts deals with contracts which are wholly executory. The charter of Engineers can hardly be regarded as an executory contract as of the time of the plan since the preferred stockholders have had their investment subject to the risk of the enterprise for over twenty years.

C. THE ARGUMENT THAT APPLICATION OF THE COMMISSION'S RATIONALE MIGHT RESULT IN A PAYMENT TO A DEBT HOLDER OF LESS THAN FACE AMOUNT

The Commission has never had occasion to deal with the problem posed by Central Illinois of compensating in cash long-term debt carrying an interest rate lower than the current cost of money. The converse situation typically results from the fact that most of the outstanding holding company debts were issued at a time when invest-

ment yields were much higher than today. Moreover, Central Illinois' illustratic of cutting down the bond holder in proportion to the extent that the interest rate might be below the yield on comparable securities, entirely ignores the factor of the date of maturity of the debt. Insofar as the illustration poses the possibility that the interest rate would be low by reason of the risk factor, it may be noted that cash is not likely to be available to discharge a bond not secured to a substantial degree.

A corporate bond, of course, has two aspects. During its life it is an investment contract. At maturity it becomes a claim to a fixed amount of money, to wit, its face amount. During its life a valuation of such a bond must turn upon an appraisal of its investment characteristics; and preeminent among these, of course, is the fact that it will ripen into a mature debt. Therefore, whether or not the conception of a bond as a debt equal to its face amount, as distinguished from an investment contract with a number of features, may influence the Commission's thinking when it is actually confronted with the case Central Illinois poses, we do not venture to predict.[27] Conceiv-

[27] *Georgia Power & Light Company*, Holding Company Act Release No. 5568, cited by Central Illinois, page 93, is, as its statement of the case illustrates, a case where the preferred stock having a liquidation preference (including arrears) of $162.25 as of June 30, 1944, received only $150.00 as the "equitable equivalent of the preferred stockholders' rights". Central Illinois argues that this withholding was directly

ably, in dealing with a bond of relatively short maturity, with no unusual characteristics, the Commission might be more inclined to emphasize the debt concept than in dealing with a bond of long term maturity, having an unusually low interest coupon or perhaps having its interest payable only if earned. As Central-Illinois notes, the Commission has dealt with the converse situation in the American Power and Light case, where payments in excess of face amount were accorded to relatively well secured debentures having a remote maturity (See Central-Illinois brief, p. 64). See Holding Company Act Release No. 6176. Any objection to the instant decision of the Commission on the assumption that it forecasts such the result supposed by Central-Illinois and on the further assumption that the result is objectionable would apply, of course, with equal force to the decision in the *Otis* case.

D. THE ARGUMENT THAT IT IS FICTITIOUS TO COMPENSATE THE PREFERREDS FOR THEIR RIGHTS IN ENGINEERS AS A GOING CONCERN

In urging that the Commission indulged in the "baldest fiction" when it valued the preferred on a going concern basis, Central Illinois necessarily

---

contrary to the instant case but, so far as we are aware, the only distinction is that in that case the preferred stock, which was in arrears with respect to dividends, was not valued by the Commission on a going concern basis at an amount equal to its liquidation preference, which, of course, was less than its redemption price.

levels the same charge at the decision of this Court in the *Otis* case. Once it is recognized that a liquidation resulting from the impact of the Holding Company Act does not mature the liquidation claims, or limitations, of the securities of the corporation, the argument that the Commission is indulging in a fiction in valuing the rights of Engineers stockholders on a going concern basis is revealed as nothing more than rhetoric. The valuation of the rights surrendered must, as in the *Otis case*, or in any reorganization, necessarily be based on a valuation of the old securities in the enterprise as it was, for those are the rights surrendered.[28] Thus, in a recapitalization it is neces-

[28] If the plan contemplates a new corporation to carry on the old business, the old securities are valued as if the old corporation continued in existence. If the plan contemplates addition or subtraction of assets the old securities are valued as if the business operations continued with the existing assets. If the plan contemplates liquidation of a holding company and distribution of its assets among existing security holders, whatever weight may be given (by reason of tax savings, for example) to the prospective disappearance of the holding company in valuing the new securities, the old securities are valued as if the holding company continued in existence. On the other hand, the process of valuing the rights surrendered by a plan does take into account, for their impact on prospective earnings, any changes which could be effected, apart from the reorganization itself: for example, the possibility of refunding at a saving in interest or dividend claims, outstanding securities of the company or its subsidiaries not affected by the plan. In some instances the very securities which are dealt with in the plan itself might have been refunded apart from the plan, and in that event this possibility is also relevant to the valuation process.

sary, in determining whether that which is received is the equitable equivalent of the rights surrendered, to value the old security for the purpose of comparing it with the new, according to what it would be worth if there were no recapitalization. Similarly, where a merger occurs the old security must necessarily be valued on the basis of what its prospects would have been if there were no merger for the purpose of comparison with the rights tendered under the merger.[28a] Similarly, in a liquidation required by Section 11, the technique of appraising the rights surrendered by the plan necessarily involves appraising them

[28a] While, as *Schwabacher* v. *United States*, 334 U. S. 182, holds, the federal test is controlling, it should be noted that the state law merger cases relied on by Central-Illinois (p. 36, n. 1) do not support its position; in fact, *Matter of Fulton*, 257 N. Y. 487, 178 N. E. 766, 769, laid down an "investment value" test quite similar to the allegedly novel test of the Commission in this case, stating:

> It will be readily appreciated that the appraisers should have considered the investment value of the stock which is largely determined by the rate of return, the security afforded that the dividends will be regularly paid, the possibility that dividends will be increased or diminished, the selling price of stocks of like character, the amount of preferred stock in comparison with the common stock, the size of the accumulated surplus applicable to the payment of dividends, the record of the corporation, and its prospects for the future.

American General Corp. v. *Camp*, 190 Atl. 225, 229 (Md.), held that there was no going concern value for the preferred stocks dealt with since "the net earnings of the corporations from dividends and interest were too scant to justify a basis for capitalization."

on a going concern basis, i. e., as if the liquidation or reorganization did not occur.[29]

E. THE EFFORTS TO DISTINGUISH THE *OTIS* CASE

In our main brief (pages 76–79), we deal with Central-Illinois' argument that the *Otis* case applies only where it is a top holding company which is liquidated and where its liquidation leaves a surviving holding company controlling the same operating companies. We there show that this court expressly rejected a rationale which would have limited its decision to such a situation. Central-Illinois makes the further argument that paying the preferred stockholders off in cash makes the present liquidation unlike that in *Otis* an "authentic one." If this distinction is sound, however, it means that the common stockholders have the power, by deciding whether to pay the preferred off in securities or in cash, to give the preferred either the full going concern value of their interest or something less.

[29] Central-Illinois notes that in an advisory report under Chapter X, the Commission has taken the position that the proper measure of participation for a non-callable 7% preferred stock is not the investment value of the security but its liquidation preference. See matter of *Childs Company* Corporate Reorganization Release No. 67, quoted by Central-Illinois, page 36, n. 2. This position, however, is entirely consistent with the distinction which the Commission made in the *United Light and Power* (Otis) allocation case to the effect that bankruptcy reorganizations, unlike those under Section 11, do result in maturing liquidation preferences. See our main brief, p. 50.

Central-Illinois attempts to escape this obvious weakness of its argument by urging further that payment in cash even at the involuntary liquidation preferences gives the preferred stockholder more than what is fair because it gives him more value than he would get under an allocation plan. This possibility is illustrated by references to instances in which the market value of securities received by bondholders or preferred stockholders under allocation plans were, at the time of distribution, substantially later than the Commission's decision, less than their liquidation preferences (pp. 89–90). Of course, inherent in an allocation plan which offers a security holder a participation in future earnings in exchange for a prior but limited preferential claim is the possibility that the security holder may acquire something the market may at some time appraise at less than his old liquidation preference. But in giving up his preferential position the preferred stockholder under such a plan acquires an opportunity to gain in return for the greater risk.

The Commission never had occasion to determine what percentage of Engineers' assets would be allocable to the preferred stock under an allocation plan for the simple reason that the management, in accordance with its conception of the interests of the common stockholders, desired to retain the assets of the enterprise exclusively for the common stockholders. We believe it obvious,

however, that the Commission, in view of the risk factor, would not have made the absurd allocation suggested by Central-Illinois (page 101). In any event, we fail to see how fairness permits the common stockholders to exclude the preferred stockholders from any participation in future earnings and, at the same time, requires the Commission to burden its cash appraisal with the risk of what they might have lost under an allocation plan. This, like so many aspects of the Central Illinois position, rests upon the wholly untenable premise that the form of the plan and the manner of satisfying the rights to be surrendered thereunder can, in some mystic and fictional manner, affect the value of the rights which are to be surrendered.[30] Once it is recognized, as this Court has so often recognized, that the rights to be surrendered must be valued, by looking at the securities embodying them, as securities in the preexisting enterprise, this like the rest of the attempted distinctions of the *Otis* case falls by its own weight.

IV. REPLY TO CENTRAL-ILLINOIS' ARGUMENTS CONCERNING SCOPE OF REVIEW

We believe that our main brief fully covers Central-Illinois' argument concerning the scope of review except for its suggestion that no prac-

[30] Thus, it is Central-Illinois which seeks to confuse "the medium of payment with the mode of determining the amount of payment." *Cf.* Central-Illinois brief p. 92.

tical difficulties would result from treating the Commission and the district court as having coordinate valuation functions. Central-Illinois urges that there could not be an enforcement proceeding in a district court after affirmance by a court of appeals. As a matter of fact, the issues which the Commission considered settled by this Court's decision in the second *Chenery* case have actually been reopened in the United States District Court for the District of Delaware in connection with a proceeding to enforce a plan for the liquidation of Federal Water and Gas Corporation. In that proceeding Chenery, et al. argue (1) that the determinations in the prior review proceeding were not a conclusive adjudication of their rights of participation, and (2) that in view of the decision of the Court of Appeals in the *Engineers* case, the district court should exercise an "independent judgment" as to the fairness of the earlier plan. Nor is it true, as Central-Illinois argues (Br. 145), that "the Commission has established the practice [in the case of Section 11 (e) plans cutting across stockholders' charter rights] of expressly conditioning its approval of such plans upon District Court enforcement."[31] The Commission does endeavor to ascertain, prior to its decision, whether enforcement will be requested, to

[31] This is not to say that the Commission would permit dissenters to exercise state law appraisal rights inconsistent with the plan whether or not enforcement is requested. *Cf. Schwabacher* v. *United States*, 334 U. S. 182.

avoid the confusion which would otherwise result in the event of simultaneous challenge to its order in a court of appeals under Section 24 (a) and in a district court in an enforcement proceeding.[32] See our main brief p. 87.

CONCLUSION

We, therefore, believe it clear that the Commission applied proper legal standards to the valuation of the preferred stocks which should not be reduced because of imaginary deprivations which the common stockholders allege they suffered from compliance with Section 11 of the Holding Company Act.

Respectfully submitted.

CENTRAL-ILLINOIS SECURITIES CORPORATION, C. A. JOHNSON, LUCILLE WHITE, AND FRANCIS BOEHM,

Respondents.

No. 266.

CENTRAL-ILLINOIS SECURITIES CORPORATION, AND CHRISTIAN A. JOHNSON,

Petitioners,

v.

SECURITIES AND EXCHANGE COMMISSION, THOMAS W. STREETER, ET AL., THE HOME INSURANCE COMPANY, ET AL.,

Respondents.

BRIEF FOR THE HOME INSURANCE COMPANY AND TRADESMENS NATIONAL BANK AND TRUST COMPANY.

OPINIONS BELOW.

The opinion and judgment of the Court of Appeals for the Third Circuit (R. 12), and the opinion denying petitions and cross-petitions for rehearing (R. 138) are

reported at 168 F. 2d 722 (C. A. 3, 1948). The opinion of the District Court is reported at 71 F. Supp. 797 (D. C. Del., 1947) (R. 283a). The findings and opinions of the Commission dated December 4, 1946, and January 8, 1947, have not yet been officially reported. They are set forth in the Commission's Holding Company Act Release Nos. 7041 (R. 25a) and 7119 (R. 128a).

JURISDICTION.

The jurisdiction of this Court is invoked under Section 240 of the Judicial Code, as amended by the Act of February 13, 1925, 43 Stat. 938 (28 U. S. C. 347), made applicable by Section 25 of the Public Utility Holding Company Act of 1935, 49 Stat. 835 (15 U. S. C. 79y). The judgment of the Court of Appeals for the Third Circuit was entered on March 19, 1948. Petitions and cross-petitions for rehearing were denied on June 11, 1948. The petition of The Home Insurance Company, et al. for a writ of certiorari was filed August 16, 1948, and granted on October 25, 1948.

INTEREST OF PETITIONERS.

The Home Insurance Company and five affiliated companies, namely, City of New York Insurance Company, National Liberty Insurance Company of America, The Homestead Fire Insurance Company, The New Brunswick Fire Insurance Company, and The Georgia Home Insurance Company, and Tradesmens National Bank and Trust Company, collectively, were the owners of 7400 shares (having a stated value of $740,000) of preferred stock of Engineers Public Service Company (Engineers). In June, 1946, Engineers consummated in part a plan pursuant to Section 11 (e) of the Public Utility Holding Company Act of 1935. Under the plan each of the petitioners received payment of $100. per share plus accrued dividends on account of its shares of preferred stock, and retained under the plan and accompanying escrow arrangement a claim for such additional amount as may ultimately be found payable on

its shares of preferred stock. On June 1, 1948, the four affiliates first above-named were merged into The Home Insurance Company as the surviving Corporation, and on June 30, 1948, The Home Insurance Company acquired by purchase the assets of the fifth affiliate, thereby succeeding to the surviving claims of the five affiliates as preferred stockholders of Engineers.

STATUTES INVOLVED.

The applicable provisions of the Public Utility Holding Company Act of 1935 and of Section 77 of the Bankruptcy Act are set forth in the Appendix hereto.

QUESTIONS PRESENTED.

Engineers, a solvent holding company registered under the Holding Company Act, filed a plan under Section 11 (e) of the Act providing for payment of cash amounts equal to the voluntary call prices of the several series of preferred stocks in exchange for the surrender of the preferred stocks. The plan also provided for the distribution of the remaining assets of Engineers to the common stockholders and the dissolution of Engineers. The Securities and Exchange Commission found the plan fair and equitable to all stockholders. In enforcement proceedings under Section 11 (e) the District Court found the plan inequitable and disapproved payment to the preferred stockholders of any amounts in excess of $100. per share plus accrued dividends, basing its finding in this respect on what the Court termed "colloquial equity." The Court of Appeals sustained the District Court in its disapproval of the plan, but held that the District Court erred in not remanding the case to the Commission for revaluation of the preferred stocks with due consideration for factors which the District Court found pertinent. The following questions are presented:

1. Is the charter involuntary liquidation preference of the preferred stocks controlling as a matter of law?

2. If the involuntary liquidation preference is not controlling as a matter of law, did the Commission properly apply the fair and equitable standards of Section 11 (e) of the Act in approving as part of a plan payment to preferred stockholders of cash equal to the current going concern values of their shares not exceeding the voluntary call prices therefor?

3. Where the Commission finds a plan filed under Section 11 (e) of the Act to be fair and equitable to the persons affected thereby and such finding is based on substantial evidence and has rational foundation in law, may a district court reject such finding on the basis of a discretionary weighing of equities, independent of and without regard for the generally recognized limitations upon the scope of judicial review of policy and fact finding functions of the administrative tribunal?

4. Is remand necessary under the circumstances of this case, and, if so, what are the guiding principles or criteria upon which reconsideration is to be based?

STATEMENT.

The net collective effect of the opinions and findings of the District Court and the Court of Appeals in this case is to take something of value from the preferred stockholders and give it to the common stockholders on the basis of irrelevant considerations and in violation of equitable principles already found by this Court to be applicable to reorganizations under Section 11 (e) of the Holding Company Act. While the Court of Appeals has ordered the case remanded to the Commission for reconsideration and revaluation of the preferred stocks, it has done so upon specifications which indicate that the amounts payable to the preferred stockholders under the plan must be scaled down by some amount, if not to the level of $100. per share reached by the District Court. Furthermore, the Court of Appeals has defined the respective roles of the Commission

and the District Court in proceedings under Section 11 (e) to be virtually co-ordinate in all areas of fact-finding, regardless of the special competence of the Commission in such areas and particularly in the area of valuation. So long as the District Court does not act capriciously, it may continue to reject valuations made by the Commission until it is satisfied. Thus the stage is set for an impasse in any situation where there may be reasonable differences of opinion in the selection and evaluation of facts.

In view of the shackling effect of these conclusions on the administrative process and the valuation methods of the Commission generally and particularly in this case, a history of the steps leading up to the present awkward situation and summaries of the related portions of the opinions of the two Courts are appropriate preludes to any appraisal of the Commission's findings.

The Plan and Its History.

At the inception of the proceedings under Section 11 (e) of the Act, Engineers had outstanding three series of cumulative preferred stocks of equal rank: 143,451 shares of $5 dividend series, callable at $105 per share; 183,406 shares of $5.50 dividend series and 65,098 shares of $6 dividend series, each callable at $110 per share.

Initially Engineers filed a plan providing for the satisfaction of the claims of its preferred stockholders in cash at the rate of $100 per share plus accrued dividends, distribution in kind of its remaining assets, which consisted principally of common stocks of operating utility companies, to the common stockholders, and dissolution of Engineers. Engineers then contended that the preferred stockholders were not entitled to anything more than the involuntary liquidation preference of $100 per share as a matter of law or equity, and provided separate machinery in the plan for resolving the question of any additional payment.

After hearing and argument, the Commission found the proposed payments to preferred stockholders inadequate and disapproved the plan. The Commission held that the involuntary liquidating preference of the charter was not controlling, and that the preferred stockholders were entitled to amounts equal to the voluntary redemption prices of the preferred stocks as representing the going concern values and equitable equivalents thereof. Thereupon Engineers, acting on the recommendation of its counsel (R. 1949a—Eng. Ex. 89, Int. R. 1291a), amended its plan to provide for the cash payment of these larger amounts to the preferred stockholders. In order to obtain the balance of cash needed to pay off the preferred stockholders, the amended plan provided that Engineers would distribute to its common stockholders negotiable purchase warrants for purchase of common stock of one of its operating subsidiaries and sell in the open market the shares not purchased under the warrants. At this stage two common stockholder groups (the respondents in Nos. 226, 227, and 243) appeared in opposition to the amended plan and carried on with the contentions previously advanced and then abandoned by the management of Engineers.

The Commission approved the amended plan as fair and equitable to all stockholders and at the request of Engineers applied to the District Court for enforcement of the plan. The District Court approved the plan, except for any allowance to preferred stockholders in excess of $100 per share and accrued dividends, and entered an order enforcing the plan as amended by it. Engineers deposited in escrow an amount sufficient to pay the difference between the call prices of the preferred stocks and $100 per share plus an interest allowance on any deferred payment, and the portion of the plan so approved was consummated, subject to reservation of the disputed issue.

Summary of the Opinion, Findings of Fact and Conclusions of Law of the District Court.

Chronologically the District Court (1) filed its opinion, (2) entered specific findings of fact and conclusions of law supplementing its opinion,[1] and (3) entered its order disapproving payment to the preferred stockholders of anything in excess of $100 per share plus accrued dividends and enforcing the plan with that limitation (R. 2a, 3a). The Court expressly adopted as its findings of fact and conclusions of law the findings and conclusions of the Commission (R. 25a, 128a), except insofar as such findings and conclusions relate to or bear upon the allowance or payment to the preferred stockholders of any amounts in excess of $100 per share and accrued dividends and are inconsistent with the opinion or any of the other findings or conclusions of the Court filed with its order (R. 320a).

The rationale of the opinion is as follows: (1) under Section 11 (e) a district court has the affirmative duty to determine whether a plan approved by the Commission is fair and equitable; (2) the quantum of participation of various security holders is determined by application of

---

[1] These findings and conclusions were prepared in the first instance by the common stockholders and present an approach substantially different from the approach in the opinion. In the opinion the Court used certain off-setting factors to scale down the going concern values found by the Commission, whereas in the subsequent findings the Court started with the premise that payment of the maximum amount originally contributed by the preferred stockholders or their predecessors, without deduction for any underwriting expenses or discount (approximately $100 per share), is fair and equitable, and then held that there were no special facts or circumstances in connection with the issuance of the preferred stocks or their subsequent history, or the relationships of the preferred and common stockholders, which would create any equitable circumstances warranting payment to the preferred stockholders of amounts in excess of $100. per share plus accrued dividends (R. 316a).

fair and equitable standards to particular fact situations; (3) the amount payable to preferred stockholders on an involuntary liquidation terminating the holding company enterprise is only one of several factors in determining the relative rights of security holders[2]—the inquiry is one of relative rights based on "colloquial equity"; (4) while the Court accepts the present values for the preferred stocks for the three series as given by Dr. Badger, an expert witness, these values are not controlling because the plan itself does not propose to give these amounts to the preferred stockholders[3] and this factor is offset by other factors, namely: (a) Engineers received less than $100 per share for the preferred stocks, (b) the market history of the preferred stocks shows an average price much below $100 per share, (c) in order to comply with the Act, many assets of Engineers were sold for less than the carrying value on Engineers' books and many of the securities thus disposed of subsequently increased in market value and capitalized earning power greatly in excess of amounts realized by Engineers, (d) the retention of earnings applicable to common stock, that is, earnings in excess of preferred dividend

---

[2] While the Court favored this view and proposed to follow it in this case, it refrained from deciding the point and in practice appears to have given the charter provision considerable if not controlling weight. For discussion see Point 1 (a), *infra*, pp. 22, 23.

[3] Dr. Badger's opinion is that, absent the call feature, the preferreds would be worth per share $130.33, $119.57, and $108.70, respectively, for the $6, $5.50, and $5 series, which represent a 4.6% capitalization of the dividend rates, and that with the call feature, the preferreds have fair investment values of $111.50, $111.38, and $106.25, the small excess over the corresponding call prices of $110, $110, and $105 being allowed for the time required to effect a call. (R. 2118a—Pfd. St. Ex. 29-A, Int. R. 1205a). The Commission cut the fair investment values down to the exact equivalent of the call prices and the amended plan adopted the Commission's values.

requirements, is one of the reasons the preferred stocks are able to be evaluated at more than their redemption prices, (c) payment of $100 per share plus accrued dividends will give the preferred stockholders every dollar which the common contracted to pay them, approximately $190 ($100 per share plus dividends from date of issue) for every $100 which they or their predecessors initially invested in the enterprise, and the present preferred stockholders are not entitled to additional compensation for the termination of a "lucrative" dividend rate which the preferred stockholders have received and which is presently "excessive"; and (5) the payment of anything in excess of $100 per share plus dividends would not satisfy fair and equitable standards "by a wide margin" (R. 287a).

The opinion was supplemented and amended in certain particulars by fifty-four findings of fact and nine conclusions of law. The conclusions of law (R. 315a) do not materially alter the position of the Court as stated in its opinion, except for the reversal of the approach noted above (p. 7, footnote 1). The findings of fact (R. 294a) are in some instances actually conclusions of law. They are grouped according to purpose and content under captions as follows:

Nos. 1-2. *Procedural Facts* (R. 294a).

Nos. 3-16. *Background.* These findings are designed to show that the diversified enterprise represented by Engineers will be completely terminated by the plan and that the dissolution of Engineers and retirement of the preferred stocks are directly and wholly the consequence of the frustration accomplished by the Act and orders thereunder (R. 294a-295a). They underlie conclusions of law Nos. 1 to 4.

Nos. 17-21. *Charter Provisions.* These findings paraphrase the related charter provisions and state that Engineers has not called and redeemed, and does not propose to call and redeem, its preferred stocks; that the proposed

payments to the preferred stockholders are not payments in voluntary dissolution or reduction of capital, but result from the Act and the Commission's orders, which in turn effect a governmental frustration of the enterprise (R. 299a-300a). They underlie conclusions of law Nos. 4, 5, and 8, and may be used by the common stockholders as the basis for argument that the proposed liquidation is an involuntary liquidation within the meaning of the charter, although the Court avoided any conclusions of fact or law in this respect (No. 9, R. 317a).

Nos. 22-26. *Issuance and Sale of Preferred Stocks and Market History thereof.* These findings set forth the issue prices, underwriting costs, market prices, and dividend record of the preferred stock. The Court qualifies its findings on market prices by stating in effect that market prices in the early period (1928-1938) must be considered in the light of the warrants and conversion features of the preferred, and in recent years (1939-1944) in the light of the extensive market purchases of preferred by Engineers and other extrinsic factors such as the Commission's American Power & Light debenture decision (Holding Company Act Release No. 6176, — S. E. C. — 1945) wherein premiums were awarded senior security holders for the first time. The Court does not define the other extrinsic factors to be considered nor evaluate their effective candlepower for the student of colloquial equity (R. 301a-303a). These findings presumably underlie conclusions of law Nos. 5, 7, and 8.

Nos. 27-29. *Market Purchases by Engineers of Preferred Stocks and Commission's Restrictions with Respect thereto.* These findings show that Engineers purchased about 12,000 shares of its preferred stocks in the open market in 1939 and 1941 at prices ranging from $69 to $87¾ per share; that in 1943, when the preferreds were selling within a price range of $61-$74 per share, the Commission denied Engineers permission to purchase 35,000 shares of preferred; and that in 1944, when the preferreds

were selling in the nineties, the Commission authorized Engineers to use $4,000,000 for purchase of preferreds and Engineers purchased 25,560 shares at an average price of $99. The Court states that the Commission's reason for the 1943 refusal was the necessity for Engineers to file a comprehensive plan to satisfy Section 11 (b), and also cites the view of Commissioner Healy in a concurring opinion that a reduction of capital would take place within the meaning of the charter provision for involuntary reduction of capital, inferring (the Court says) that the preferred stockholders were entitled to the involuntary liquidating price of $100 per share plus accrued dividends (No. 27). The Court also cites the Commission's statement that purchases in 1944 under the circumstances, (one circumstance being that the preferreds were selling close to $100 per share) would not be unfair to the "security holders" of Engineers. These market purchases benefited both preferred and common stockholders (R. 303a-305a). The relation of these findings regarding prior Commission action to any particular conclusion of law is not apparent unless they constitute some of the factors which the Court found relevant and impelling in its conclusion No. 7.

Nos. 30-36. *Market and Dividend History of the Common Stock.* These findings set forth the net issue prices, market prices, and dividend record of the common stock; statistics regarding the amount of earnings retained in the enterprise, free earned surpluses, and effect of such retention on the financial position (R. 305a-307a). The findings on retained earnings are integrated in the Court's "colloquial equity" (R. 291a) and presumably underlie conclusions of law Nos. 5, 7 and 8.

Nos. 37-38. *Losses Sustained by Engineers in Making Divestments.* Here the Court finds that Engineers sustained substantial losses on many of the properties sold in compliance with divestment orders; that the losses were caused by the Act; and that the brunt of the losses has

fallen, and necessarily must fall, upon the residual claimants, the common stockholders, because "the preferred stockholders have received their dividends . . . at the full rate contracted for and are now to receive the full principal amount to which they are entitled." The Court also finds, by taking judicial notice of subsequent increases in the earnings of Puget Sound Power & Light Company, that the earnings estimated by the Commission for reorganization purposes and the increases in market prices for utility common stocks subsequent to 1944 make it plain that Engineers investment in Puget Sound came to have a realizable cash value substantially higher than the amount realized. The Court states that substantial book losses were also sustained on other sales, some but not all of which are designated (R. 307a-308a). These findings are a little more specific than the general finding of losses in the Opinion (R. 290a) and enter into the "colloquial equity." Presumably they also underlie conclusions of law Nos. 5, 7, and 8.

Nos. 39-40. *Additional Contributions to Be Made by Common Stockholders to Carry Out Plan.* The Court recognizes the conceded fact that Engineers needed about $26,000,000 to carry out the plan and proposed to raise $22,000,000 through the sale of common stock of Gulf States Utilities Company and $3,800,000 by advance dividends from subsidiaries payable on condition that no further dividends may be paid by the subsidiaries for certain specified periods, the longest of which ends June 15, 1948. The Court finds that the plan requires that common stockholders make up this deficiency ($26,000,000) and undergo the risk of possible declining markets.[3] The Court also found that, if its decision is sustained on appeal, the escrow fund will go to the common stockholders, less interest that might have been

[3] This is not correct. The plan provided that common stockholders could exercise their purchase warrants or sell them as they saw fit (R. 105a-107a).

earned and all fees and expenses incurred in the present litigation (R. 308a-310a). No relation of these findings to any of the conclusions of law is discernable.

Nos. 41-54. *Evidence as to "Present Investment Value of the Preferred Stock."* It is difficult to present a summary of these findings. They include principally excerpts from the testimony of Dr. Badger and citations of facts, some outside the record, and arguments in an effort to discredit his opinion on the fair investment values of the preferred stocks. The Court states that the record establishes that as of the time of Badger's testimony his investment values do not represent investment values of the preferred stocks in the past and are not determinative of the investment values thereof for any considerable period of time in the future; that there are many factors of a potentially adverse character and the extent to which the investment value of preferred stocks of the character of those here involved can decline is very great. The Court states that the extremely low money rates currently affecting investment values reflect artificial factors which are clearly subject to changes at any time and may be purely transitory (R. 310a-315a). Since the Court accepted Dr. Badger's values, assumed them to be applicable at the time, May 15, 1947, in the absence of a showing of changed circumstances (R. 290a), filed its findings of fact on May 29, 1947, and directed these findings at the potential for future change, the role, if any, of these findings in the conclusions of law is not discernable.

It should be noted that the Court did not find as a matter of fact or law that a liquidation brought about by Section 11 (b) is the kind of involuntary liquidation which the parties had in mind when the charter provision regarding involuntary liquidation was adopted in 1925.

It is not possible to discover from the Court's opinion, findings of fact and conclusions of law the extent to which the several factors deemed relevant by the Court entered

into its ultimate conclusion or how such factors were evaluated. The composite effect was to absorb exactly the excess of the going concern value of the preferred stocks over the involuntary liquidating preference of $100 per share plus accrued dividends, regardless of the differences in dividend rates and call prices of the three series. These differing basic factors presumably weigh exactly the same on the scales of colloquial equity.

Summary of Opinion of the Court of Appeals.

The gist of the opinion is that a district court in a proceeding under Section 11 (e) must exercise its independent plenary judgment as an equity reorganization tribunal in every matter relating to the fairness and equity of the plan; the court is not bound by the findings and conclusions of the Commission as an administrative tribunal, and while a district court may not substitute its valuations for those of the Commission, it may reject valuations even though based on substantial evidence; in this case the District Court Judge weighed the numerous elements involved in the case on his own scales, and in the exercise of his independent judgment, arrived at the conclusion that the plan was not fair and equitable; the charter provisions regarding involuntary liquidation are not dispositive of the issues presented (*Otis & Co. v. S. E. C.*, 323 U. S. 624, 637); the weight and emphasis applied by the District Court and the Commission to the various factors in the case go to two primary considerations on which the two tribunals differed, namely, (1) the Commission did not determine and apportion the earning power of the enterprise between the preferred and common stocks based on their respective claims as it did in the *United Light & Power Company* case (*Otis & Co. v. S. E. C.*, 323 U. S. 624), and (2) the Commission failed to consider and give effect to losses said to have been sustained by Engineers on previous divestitures compelled by the Act; conceivably under certain circumstances investment value could be the

equitable equivalent to the security holder, but the Commission has not made such a finding in this case and the Court does not believe that such a finding could be supported on the present record; the Commission must consider and weigh all pertinent factors and all substantial equities whether equitable equivalents are to be reached by an approach *ex* or *intra* the Act; the *new* doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equitable equivalents enunciated in the Otis case; the District Court did not err in disapproving the payments to the preferred stockholders, or at least its conclusion was not clearly erroneous; however, the District Court cannot amend the plan and enforce it and the record should have been remanded to the Commission for further and appropriate action; the problem is and will remain, until its disposition by the Commission, one of valuation of the securities, viz., the preferred and common stocks. (R. 13, particularly R. 33-40)

In passing the Court of Appeals recognized that its conclusion as to the function of a district court and the scope of review in proceedings under Section 11 (e) conflicts with decisions in other circuits, citing *Lahti v. New England Power Ass'n.*, 160 F. 2d 845, 858 (C. A. 1, 1947), and *Massachusetts Mutual Life Ins. Co. v. S. E. C.*, 151 F. 2d 424, 430 (C. A. 8, 1945), affirming *In re Laclede Gas Light Co.*, 57 F. Supp. 997, 1004 (D. C. Mo. E. D., 1944), cert. denied 327 U. S. 795. It distinguished its own decision in *In re Standard Gas & Electric Co.*, 151 F. 2d 326 (C. A. 3, 1945), cert. denied 327 U. S. 796, by saying the question here presented was not in focus in that case. (R. 31-32)

Assuming then, as we contend and the Commission and Court of Appeals have agreed,[4] that the involuntary liquidation preference prescribed by the charter is not controlling, the present dispute centers mainly on the difference in the standards and concepts of relevance applied by

[4] For the position of the District Court see Footnote 2, *supra*, p. 8, and the discussion under Point 1 (a), *infra*, pp. 22, 23.

the Commission on the one hand and the District Court on the other hand, with the Court of Appeals upholding the District Court in this respect apparently on the theory that it must do so if the conclusions of the District Court are not clearly erroneous. The indications are that the Commission must in some undefined way satisfy the District Court in terms of colloquial equity, and in the process weigh the losses and find a dollar value for the common stock if the valuation is to be made under the doctrine of the Otis case (R. 37).

The ultimate questions, therefore, are whether the factors which influenced the District Court to reduce the payments are relevant, whether the Courts are correct in holding or indicating that the Commission failed to consider any relevant factors or give them due weight, and finally, whether the District Court was justified in rejecting the Commission's valuation.

Summary of the Findings and Opinion of the Commission.

The findings and opinion are contained in two documents: (1) Release No. 7041, dealing with the original plan and entered December 4, 1946 (R. 25a-101a); and Release No. 7119 dealing with the amended plan and entered January 8, 1947 (R. 128a-141a).

The second release adds nothing of importance to the issues on appeal except for the findings that the amended plan removes the features in the original plan which the Commission found objectionable, that the objections to the treatment of the preferred stocks being advanced by the common stockholders was zealously presented by the company (as it was), and that the Commission saw no reason to change its previous findings (R. 133a-135a). Also Hanrahan, C., in a concurring opinion, held that the action of Engineers constituted a voluntary call, entitling the preferred stockholders to the call prices (R. 140a-141a).

In its first release, the Commission furnishes a description of Engineers' system, including plant, capital, as-

set and liability position, and earnings; the prior proceedings, including prior purchases by Engineers of its preferred stocks; and a description of the plan. The Commission found the plan necessary insofar as it provides for the disposition of El Paso Electric Company and Gulf States Utilities Company, and dissolution of Engineers, but objected to certain mechanics which would result in substantial delay in effecting compliance with the Act.

The important findings relate to the fairness of the plan (R. 59a-73a). The Commission found that the preferred stock, instead of providing valuable leverage for the common, had become a financial burden; the company had accumulated from previous property dispositions and retained earnings a large reserve of idle cash, which was yielding no return, and ordinarily a company in that position would voluntarily redeem the preferred; while the proposed dissolution was due to the Act, the preferred claim would not thereby be matured and the charter provision would not be controlling; the security holder must receive, in the order of his priority, the equitable equivalent of the rights surrendered. Consideration was then given to the applicable charter specifications, the issue prices, the dividend record, the corporate and consolidated capitalization and surplus, the market history, the earnings available for preferred dividends from 1937 to 1945, the testimony of Dr. R. A. Badger, an expert witness, and D. C. Barnes, president of Engineers, on the many economic and market factors bearing on the value of the preferred stocks. The Commission noted that the sale of Puget Sound Power and Light Company in 1943 and 1944 strengthened the earnings of the company. It noted that Badger and Engineers concurred in the view that the values or investment worths of the preferred stocks, on a going concern basis and apart from the Act, under prevailing yields applied to comparable securities, exceeded the call prices. The previous losses were considered and held irrelevant. The contention that the preferred stockholders should

share the losses was rejected as was the contention that the payment of anything in excess of $100. per share would be a windfall for the preferred stockholders.

In conclusion the Commission found that fair and equitable treatment to the preferred stockholders would require the payment of amounts equal to the call prices as representative of present value of the preferreds on a going concern basis, and that such treatment would also be fair to the common stockholders. Thus it clearly appears that the Commission regarded these investment values as the equitable equivalents of the preferred stocks and was not substituting a new doctrine for that of the Otis case as the Court of Appeals concluded.

SPECIFICATION OF ERRORS.

The Court of Appeals erred:

1. In holding that the Commission did not apply proper standards and techniques and failed to consider and weigh all the relevant factors in its valuation of the preferred stocks.

2. In holding that the District Court may reject the findings of fact and valuations of the Commission based on substantial evidence without regard for and independent of the generally recognized limitations upon the scope of judicial review of policy and fact finding functions of the administrative tribunal.

3. In not reversing the order of the District Court insofar as it disapproved payment to the preferred stockholders of the additional amounts provided in the plan and in not directing the District Court to approve such payment in accordance with the provisions of the escrow agreement.

4. If remand was proper, in not furnishing to the Commission principles or criteria for determining the weight to be given to the colloquial equities.

OUTLINE OF ARGUMENT.

Our contentions on this appeal are:

(1) The Commission properly applied the fair and equitable standards of Section 11 (e); valuation of the preferred stocks on a going concern basis with full priority was proper; and the Commission's valuations of the preferred stock are based on the consideration and weighing of all relevant factors,

(2) The Court of Appeals erred in holding that the District Court may reject valuations of the Commission based on consideration of all relevant factors and supported by substantial evidence,

(3) Assuming that the involuntary liquidation preference in the charter is not controlling as a matter of law, the findings of the Commission are binding on the District Court, and there is no basis for remand to the Commission.

Argument.

PREFACE.

At the time of consummation of the plan in June, 1947, the preferred stocks were valuable securities carrying dividend rates ranging from $5. per share to $6. per share and call prices ranging from $105. per share and $110. per share. They had been selling in the market at prices close to their call prices (R. 1391a-1393a, Eng. Exs. Nos. 26, 27, 28, Int. R. 463a-464a), and it was conceded that they would sell slightly above the call prices were it not for the Holding Company Act and these proceedings (R. 522a, 658a-663a). It was also conceded that the present value or investment worth of the preferreds, on a going concern basis and apart from the Act, under prevailing yields applied to comparable securities, was in excess of the respective call prices (R. 67a, 1211a, 1953a). An expert witness, Dr. Badger, testified that a proper yield for the preferreds, absent a call price, would be 4.6% and that on the basis of quality and yield, the values for the three series would be $108.70, $119.57, and $130.33 respectively (R. 2118a). The Commission as an expert tribunal found that under such circumstances and were it not for the Act, a company would ordinarily redeem the preferred stocks (R. 60a), and that the investment or going concern values were at least equal to the call prices (R. 67a-68a). These findings are supported by substantial evidence and are undisputed.

The District Court would deny the preferred stockholders compensation in excess of the involuntary liquidation preference of $100. per share, although that contract provision is not controlling, and the Court of Appeals, while not affirming the District Court's valuation, has told the Commission to try again to satisfy the District Court under ground rules which give to the District Court a continuing right of veto so long as it does not act capriciously and is not clearly erroneous in its conclusions. Questions

of relevance, weight and emphasis are involved. On this basis the preferred stockholders can only win if they obtain the unanimous vote of two tribunals on the facts. The special competence of the Commission in the area of valuation is subordinated to some permissible margin of error in the District Court. This contrasts strangely with the stature of findings of the Commission on direct appeal to the Court of Appeals under Section 24 (a), in which case the Court would be bound by the findings of fact by the Commission if based on substantial evidence.

Consequences so unusual, so contradictory, so burdensome, suggest error. The errors are readily discernible. We do not mean to rest the case for the preferred stockholders solely on the doctrine of administrative finality in the area of fact-finding. We contend that the District Court's rejection of the findings of the Commission was based on non-relevant factors and that all relevant factors were properly considered and weighed by the Commission. But we also contend that when all relevant factors have been considered and weighed by the Commission and the statutory standards have been applied in a proceeding under Section 11 (e), the findings of the Commission should not be rejected because the District Court differs with the Commission as to weight and emphasis.

POINT 1.

THE COMMISSION PROPERLY APPLIED THE FAIR AND EQUITABLE STANDARDS OF SECTION 11 (e).

(a) Valuation of the Preferred Stocks on a Going Concern Basis With Full Priority Was Proper.

Basic to this proposition are the questions whether the involuntary liquidation preference in the charter is controlling as a matter of law, and if not, on what basis should the preferred stocks be valued.

The Commission undertook to value the bundles of rights represented by the preferred stocks as senior securities of equal rank, entitled to priority over the common stock. The valuations were intended to be as of the time the preferred stockholders were compelled to surrender their stocks. It valued the preferreds in relation to the enterprise at a going concern and with regard for current yields on investments of comparable risk. It treated the involuntary liquidation preference as a factor to be considered but not a controlling one.

This procedure is fully authorized by the decision in *Otis & Co. v. S. E. C.*, 323 U. S. 624, wherein this Court held that the power to simplify corporate structures under Section 11 of the Act does not mature rights; that on dissolution pursuant to the Act, the rights of stockholders of a solvent company may be evaluated on the basis of a going concern and not as though a liquidation were taking place; and that full priority shall be accorded classes of securities according to their contractual preferences. In view of the comprehensive discussion of this question in the brief filed by the Commission in its appeal (No. 226), we will not argue this legal proposition further in this brief, and instead will direct the attention of the Court to some important departures from these principles by the District Court and the Court of Appeals.

The District Court at first seems to have agreed that the charter provision was not controlling. It expressed the thought that the rule in the *Otis* case applies, and stated that it preferred to consider the charter provision as one of several factors in determining the relative rights of the various security holders (R. 288a, including footnote 2). Later, however, the Court stated that it had reached no conclusion on the point, that in any event the preferred stockholders are not entitled to receive any amount in excess of $100 per share plus accrued dividends on the basis of all relevant considerations, and that the charter provision, if taken into account, constitutes an additional factor

supporting the conclusions reached (R. 317a, Conclusion of Law 9). When, however, the Court embraced "colloquial equity" and weighed the equities as it conceived them, the involuntary liquidation preference appears to have become a ceiling for the compensation to the preferred stockholders or at least a major premise underlying Court's rejection of the findings of the Commission. Subsequently, the Court cited its decision in this case for the proposition that the charter provision is not controlling. *In re Cities Service Company*, 71 F. Supp. 1003 (D. C. Del. 1947).

Initially the District Court accepted the investment values of Dr. Badger and, in the absence of a showing of changed circumstances, assumed that they were applicable at the time the opinion was filed, May 15, 1947 (R. 290a). The Court, however, turned its back on these accepted values and held that they were not controlling because the plan did not propose to give these amounts to the preferreds (R. 290a). This does not appear a valid reason for departure since the plan did rely on the investment values as a basis for paying the call prices for the preferreds in accordance with the finding of the Commission. The high level of the investment values represented the underlying strength of the preferreds and their capacity to absorb adverse market conditions or increases in money rates.

The District Court gave another reason of great significance. It held (R. 291a) that "fairness and equity do not require that the preferred stockholders be paid an additional $3,200,000. for the theoretical future deprivation of their present excessive dividend rate, for in each case the inquiry is one of relative rights based on colloquial equity. In short, there is no reason why the preferreds should get additional compensation for the termination of the lucrative dividend rate which the preferreds have received, when this termination results wholly and directly from frustration of the enterprise by governmental edict." This can only mean that the dividend rates are high in relation to the

rates on other preferred stocks of comparable quality and to money rates generally. The Court used the current low money rates to challenge both the fairness of the preferred contracts and valuations related to them. Thus at the outset, "excessive dividend rates" in relation to low money rates and frustration of the enterprise became basic reasons for rejecting the valuations of the Commission. Thereafter the Court viewed the problem primarily as one involving "payment of a premium" (R. 288a-291a), and forthwith decided that no premium should be paid. The Court characterized the payment of a premium as "comparable to dealing cards off the top of the deck" (R. 291a). Having disavowed any priority for the preferred stocks, the Court then fell back on the gross amount received by Engineers on the original issue of its preferred stocks, viz. $100 per share, as the maximum to which the preferred stockholders are entitled (R. 289a). Since each series will be paid the same amount regardless of differences in dividend rates and call prices, it is clear that the Court was not valuing the preferred contracts in relation to asset position or earning power of the enterprise.

The Court of Appeals clearly held that the involuntary liquidation provision was not controlling and to this extent followed the Otis case (R. 34). It credited both the Commission and the District Court with having treated the charter provision as but one factor to be employed in determining the values of the preferreds (R. 34-35), overlooking the substantial effect given by the District Court to the involuntary preference through the method or approach actually used by that Court.[5]

Also, when the Court of Appeals upheld the disapproval of the District Court as not being clearly erroneous, it too abandoned the doctrine of strict priority and in effect directed the Court to give consideration and weight to factors adverse to the senior position of the preferreds.

---

[5] See discussion on this point *supra*, pp. 22, 23.

What both Courts overlook is the fundamental nature of the common stock. They seem to approach the problem as if the plan involved recapitalization on the basis of a single class of common stock, whereas the objective of the plan according to the testimony of D. C. Barnes, President of Engineers, was to "preserve, as far as possible, the interests of the common stockholders in companies in which they choose to invest, leaving to them the decision as to when and if they should sell their interest. One-stock plans were considered and rejected because of the conclusion that the inevitable changes in future market values would make whatever allocation was adopted ultimately inequitable to one class or the other" (R. 627a). He believed that the management should make it possible for the common stockholders through the medium of an appropriate plan to continue their investment if they desired to do so (R. 627a). (See also R. 719a, 723a, 807a.) This was accomplished under the present plan by retiring the preferred stocks for cash and handing over to the common stockholders the Company's interest in its operating utilities. Instead of continuing to share this earning power with the preferred stockholders, the common stockholders sought to retain it for themselves on as favorable basis as they could. This was accomplished in part by company purchases of preferred stocks in the market with the cash obtained from sales of properties (R. 38a-40a), and finally by retirement of the preferred stocks under the plan. The management was willing to compensate the preferred stockholders in the amounts found equitable by the Commission to gain this advantage for the common stockholders.

The situation is comparable to the experience in *In re Standard Gas & Electric Co.*, 59 F. Supp. 274 (D. C. Del. 1945), reversed and remanded in *In re Standard Gas & Electric Co.*, 151 F. 2d 326 (C. A. 3, 1945). There, in proceedings under Section 11 (e), a plan was approved for the satisfaction of notes at par by payment partly in cash and partly by distribution of portfolio stocks in subsidiary companies. Subsequent to approval and before consumma-

tion of the plan, the portfolio stocks appreciated in value to such an extent that the company was permitted to abandon the plan and redeem the notes at voluntary call prices in excess of par. *In re Standard Gas & Electric Co.*, 63 F. Supp. 876 (D. C. Del. 1945).

In the Engineers case the combined portfolio strength as expressed in terms of senior stocks was recognized by the Commission at the outset, and the company acquiesced in payment of amounts equal to the call prices because it saw benefit to the common stockholders in so doing just as did the management of Standard Gas & Electric Company when it abandoned its plan and decided to redeem its notes. Certainly in the application of the fair and equitable standards under Section 11 (e), there is no substantial difference between filing a plan which provides for compensation of preferred stockholders at values equal to call prices as representing the equitable equivalent of senior participation in the enterprise and a voluntary exercise of a call for redemption. Under the doctrine of the Otis case, a voluntary call for redemption could not be permitted if the call price exceeded the equitable equivalent of the bundle of rights of the security being redeemed. In one way or another the senior security holders are compensated according to their priorities.

(b) The Commission's Valuations of the Preferred Stock Are Based on the Consideration and Weighing of All Relevant Factors.

The Court of Appeals' criticisms of the findings and procedures of the Commission are as follows: (1) while the selection of techniques is for the Commission in the exercise of its expert administrative judgment and it may properly approach the problem of valuation either *ex* or *intra* the Act, the Commission must employ the chosen technique, scales and measures consistently throughout the entire operation of valuation with a full view of all the pertinent fac-

tors, which it did not do (R. 37); (2) a valuation *ex* the Act requires valuation of both the preferred and common stocks based on future earning power and apportionment of earning power to the two classes of stock as was done in the *Otis* case (R. 35); (3) in any valuation *ex* the Act, losses realized on divestments compelled by the Act must be weighed in the calculation—"returned to the credit side of the enterprise's balance sheet as a matter of bookkeeping" (R. 37); (4) investment value is and can be only one of a series of factors to be used in arriving at equitable equivalents, and while conceivably investment value could be the equitable equivalent, the Commission has not made such a finding and the Court believes no such finding could be supported on the present record (R. 38).

Beyond the four elements just mentioned, the critical import of the opinion is not clear. The Court finds that the weight and emphasis applied by the District Court go to the two primary criticisms described in clauses (2) and (3) of the preceding paragraph (R. 35); and that the District Court made a "cogent finding respecting Dr. Badger's use of interest rates as an aid in fixing the valuations for the preferred deeming the interest rate used by the latter to be too low" (R. 19). Our study of the opinion reveals no other appraisal of the relevance of the various factors which entered into the "colloquial equity" or influenced the District Court in reaching its decision. One can only presume that the lack of clear error on the part of the District Court applies to the influencing factors as well as the result.

As stated above, we contend that the factors influencing the District Court in rejecting the valuations of the Commission and the factors influencing the Court of Appeals to remand for revaluation are inapplicable as a matter of law. Inapplicability turns on consideration of undisputed facts. As a beginning, we refer to the Summary of the Findings and Opinion of the Commission appearing at pages 16 to

18 in this brief for an enumeration of the many factors considered and weighed by the Commission in reaching its conclusions. The sufficiency of the evidence to support the findings of the Commission cannot be fairly disputed. We are here concerned with questions of relevance and emphasis, and, as we see it, a misconception by the Court of Appeals of the techniques employed by the Commission.

Valuation of Common Stock. The Court of Appeals holds that under the doctrine of the *Otis* case, the Commission is bound to value the entire enterprise in terms of some common denominator and then apportion that value between the preferred and common stockholders. It is difficult to see wherein such a procedure would lead to any different result in this case. There would still be the problem of compensating the preferred stockholders for their senior position in the assets and earning power. Whatever the economic strength of the senior position may be, it is nevertheless subject to the voluntary call factor, and the wisdom of imposing a ceiling on the high intrinsic values at the call price level is amply demonstrated in the experience in the *Standard Gas & Electric Company* case where the call was voluntarily exercised for the benefit of the common stockholders (*supra*, p. 26). Under these circumstances the valuation of the preferred necessarily resulted in a valuation of the common, and the Commission expressly found that the allocation of the residual assets to the common stockholders was fair and equitable.

Future Earnings. In the *Otis* case, the problems were to determine what kind of a capital structure the earning power of the enterprise would support and whether the earning power was sufficient to cover the annual dividends and dividend arrearages of the preferred stocks and leave some earning power for allocation to the common stockholders. While estimates of earnings are helpful, they are no substitute for demonstrated earning power. Here the Commission did determine earning power in terms of the

coverage of the annual dividends on the preferred stocks in the light of the risk factor. What is more important, the common stockholders could and would have refunded the preferred stocks at a much lower rate and improve their own earning power.

Low Money Rates. As previously pointed out, the District Court considered the preferred stockholders as enjoying "excessive dividend rates" and this characterization was necessarily related to the current low money rates (*supra*, pp. 23, 24). It was not related to any weakness in the earning power of the enterprise. This "equity" apparently influenced the District Court in turning away from a valuation of the preferred stock contracts. Although the District Court accepted the investment values as found by Dr. Badger, in the absence of a showing of changed circumstances, and therefore necessarily accepted the valuations made by the Commission, the Court of Appeals interprets the finding of the District Court to mean that Dr. Badger used too low an interest rate in fixing his values for the preferred stocks (R. 19, n. 9). All that the District Court found in substance was that there are some artificial factors in the current money rates and that the rates are subject to change. The important fact is that there could be a substantial increase in the then current money rates without affecting the market value or intrinsic value of preferred stocks entitled to sell on a 4.6% yield basis. Furthermore the Commission was dealing with a valuation as of the time the preferred stockholders were compelled to surrender their claims. While undoubtedly the District Court is entitled to change its mind, one is reminded that in the *Standard Gas & Electric Company* case the same District Court allowed an increase in compensation to noteholders on the basis of estimated improvement from $12,500,000 to $30,000,000 in the "current active market value" of the related portfolio stocks (63 F. Supp. 876, 877). If the Court of Appeals means that a District Court is entitled to reject

the valuation of the Commission because of a differing view as to the import of current money rates, such a conclusion is clearly in conflict with its conclusion that valuation is a problem for the Commission.

Previous Losses. The District Court's consideration of losses on divestment only scratched the surface, never recognized the complex elements involved, ignored the gains on other divestments and tax savings, the effect of purchases of preferred stocks out of proceeds of sales; it created an equity in favor of common stockholders on the basis of speculative assumptions. Even assuming it were possible to reconstruct such a synthetic enterprise, no one could ascertain its earning power. The Court did not evaluate this factor because it could not do so, but, nevertheless, something of value was charged to the preferred stockholders on this account.

While Engineers realized an important loss on the sale of its interest in Puget Sound Power & Light Co. in 1943-4, the Commission found that the sale strengthened the earnings of Engineers (R. 64a, 65a) and that the indications are that the carrying value on the books of Engineers was excessive and not that the sales price was low (R. 72a, n. 55). The fact is that the earnings of Puget Sound had fallen off substantially and by May, 1938, the dividend arrearages on preferred stock publicly held were approximately $12,500,000. Public power projects threatened its future. Then it was that Engineers' directors, anticipating a substantial loss in Puget Sound, established a reserve of $35,000,000 to provide for losses which they believed had accrued at that date in investments in subsidiaries, although such losses had not been taken (R. 1517a-1518a). When the total actual loss on Puget Sound ($33,320,519) became known in February, 1944, $29,297,000 of the loss was charged to the reserve created in 1938 for the purpose (R. 1608a). The Commission found these alleged losses to be an irrelevant factor, the strong implication being that the Engineers System was better off for the pruning.

Issue Prices. If net issue prices have any relevance, it could only be in the case of unseasoned securities, and the stocks in this case were seasoned. Nevertheless, the District Court used the net issue prices as a beginning point for valuation and decided to allow the preferred stockholders a bonus equal to the underwriting expenses and discount on issue as the net compensation for other factors, thereby arriving at the stated values and involuntary liquidating prices of $100 per share (R. 289a, 301a). Thus, the preferred stocks are "couriers with baggage" and the stockholders who acquired their preferred stocks after the initial seasoning inherited liabilities from years ago. Issue prices are certainly too remote to have any relevance.

Market History. The District Court holds that the market history affords affirmative support to the non-payment of premiums (R. 289a). The Commission considered the market history and the dividend record (R. 62a, n. 45). Again, while the District Court has the right to change its mind, we submit that the Court was on sounder ground when it held irrelevant the fact that the notes which were the center of controversy in the *Standard Gas & Electric* case (59 F. Supp. 274, 281) sold at discounts for long periods of time. It held that "market values (were) especially unreliable in (that) case because some of those engaged in buying and selling notes were of the view that such securities were under the cloud of the Act because they believed it created uncertainties." "A shrewd noteholder is only interested in the 'intrinsic value' behind his claim and in the amount of earnings coverage" (p. 281). Market history, of course, has a certain relevance in the valuation process, but to take something of present value away from the preferred stockholders on the strength of unrelated factors is inequitable.

Market Purchases of Preferred Stocks. The use which the District Court makes of the purchases of preferred

stocks is not evident beyond the fact that they are thrown into the hopper. The Court, as did the Commission, recognized that many factors affected the past history. Regarding purchases, the Court appears to be influenced by the fact that the Commission, in connection with past applications (1943-44) by Engineers for leave to acquire its preferred stocks, indicated that acquisitions at price levels slightly under the involuntary liquidation prices of $100 per share would not be unfair to the "security holders." The purpose of the Court's finding of facts in this respect (R. 303a, 304a) presumably is to suggest that it was not unfair in June, 1947 to limit the preferred stockholders to the involuntary liquidating prices, although the Commission in those earlier proceedings was dealing with open market purchases from stockholders who wished to sell and not with any valuation for the purposes of an equitable plan to be imposed upon all security holders. The evolution of the Commission's findings and views on this subject are to be found in its Findings and Opinions on the five successive applications of Engineers for permission to acquire blocks of its preferred stocks in the market for cash or by exchange, namely: 4 S. E. C. 615 (1939); 9 S. E. C. 84 (1941); 12 S. E. C. 804 (1943); 14 S. E. C. 237 (1943); and Holding Company Act Release, No. 4997 — S. E. C. — (1944). By February, 1942, the Commission perceived that piecemeal acquisitions of preferred stocks at a time when complete uncertainty existed as to management's policies, methods, and timing, in complying with Section 11 (b) created a potentiality for harm to preferred stockholders (12 S. E. C. 804, 813). The Commission stated that the major factors then present were absent in its 1939 and 1941 opinions (p. 810, n. 10); and that under the circumstances, it believed that at a minimum the "fair and equitable" standard requires a reasonable relation between the proposed acquisition prices and the treatment which might reasonably be accorded the preferreds under a comprehensive plan, which treatment, how-

ever, will depend on conditions existing at time the plan is approved (pp. 813-4). The Commission expressly noted Engineers' argument that even if compliance with Section 11 (b) results in a liquidation, the proper standard for the adjustment of rights of preferred stockholders is not the liquidation preference on involuntary liquidation or liquidation in bankruptcy but the fair value of their expectations in the absence of any such proceedings, taking into account their liquidation preferences as but one of many factors, and the Commission expressly refrained from answering the question pending a clearer basis for considering a purchase program. In the second 1943 opinion (14 S. E. C. 237, 244), the Commission said that as the amount receivable by the preferred stockholders in a purchase or exchange program tends to approach the maximum claim of the stock, the likelihood of unfairness is diminished, and approved an exchange program as fair and equitable at that time in the light of stated facts. Commissioner Healy dissented on the ground that re-acquisitions under the circumstances were involuntary reductions of capital and that the proceeds from the sale of assets should be applied pro rata to all preferred stockholders, but the majority of the Commission did not take that view (14 S. E. C. 237, 246; see also 12 S. E. C. 804, 816). In the 1944 opinion (Release No. 4997, p. 6) the Commission noted that the current market prices of the preferred stocks were close to the involuntary liquidation prices and stated that under the circumstances the proposed re-acquisition is not unfair to the security holders of Engineers. Engineers was free to utilize the money in other ways.

The Commission had come to realize that Engineers was in a position to take advantage of security prices far out of line by reason of uncertainties created by the management itself and found it necessary to impose some reasonable safeguards on the right of repurchase available to Engineers under the charter. The Commission only said that if was not unfair to security holders to permit Engi-

neers to make purchases at prevailing price levels which were then close to the involuntary liquidating preference. If a purchase program had been proposed under the circumstances existing after 1944 and were appropriate, presumably the Commission would have authorized purchases at prices not exceeding the voluntary redemption prices.

Retained Earnings. The retained earnings have been treated as if they represented a sacrifice on the part of the common stockholders, which was being unfairly used to the advantage of the preferred stockholders. The District Court found that as of June 30, 1945 the free earned surpluses were $2,773,000 for the subsidiaries and $7,095,000 for Engineers, a total of $9,868,000 or approximately $5 per share of common stock outstanding (R. 306a). The Commission found that Engineers' cash reserve of about $14,650,000 (estimated to be about $16,824,000 by the end of 1946) was accumulated from previous property dispositions and retained earnings; that instead of providing valuable leverage for the common stock, this cash reserve had become a financial burden; that companies in such a position ordinarily would call and redeem preferred stock; that Engineers' management pursued a policy of withholding dividends on common stock until satisfied that the system had made all the adjustments required under the Act (R. 59a-60a, 69a). The undisputed testimony is that retained earnings and proceeds of sales not reflected in the present cash reserves have been invested in the enterprise, or frozen in connection with purchases of other property or refunding operations, or used for purchases of preferred stocks (R. 306a). The use of earnings to help finance improvements and acquisitions of property is a normal and well-understood operation and one that was espoused by Engineers from the outset for the very purpose of strengthening the enterprise and improving the leverage of the common stock. The management felt from the beginning that it would be to the advantage of the stockholders to retire

the preferred stocks out of earnings. These policies inevitably improved the investment values of the surviving stocks (R. 921-922a; Annual Reports, Engs. Exs. No. 37A-37T inclusive, particularly pp. 1648-9a; 1691-2a, 1697a, 1714-5a, 1434a, 1444a, 1462a, 1481-2a; 1501a, 1517-8a, 1537a, 1552-4a, 1571-2a, 1588-89a, 1606a, 1612-3a, Int. R. 482a, 500a).

There is no evidence to sustain a contention that the management pursued an inequitable dividend policy and the Court attempts no such finding. There is considerable evidence that the management and the common stockholders were entirely satisfied with the policy of not distributing earnings for income tax reasons, particularly since the accumulation of earnings would be reflected in increased market prices (R. 98-9a, 920-1a). The Court merely argues that the distribution of those earnings would have reduced Dr. Badger's fair investment values, but it makes no attempt to show that such withdrawal would have reduced those investment values below the call prices. Furthermore, the Commission took the earned surpluses into consideration in valuing the rights of the common stockholders.

(c) Conclusion on Point 1.

Reverting to our starting point, we do not see wherein the Commission ignored or failed to weigh any relevant factors or was inconsistent in its approach or use of its scales and measures. The shares of preferred stocks which survived the purchasing program of the Company had, in June, 1947, an undisputed going concern or investment value equal to their call prices. The financial strength underlying the preferred stocks was reflected in the common stock, which was in a position to enjoy the full benefit of all appreciation, as contrasted to the preferred stocks, which were limited by their call features. We submit that the valuations of the Commission integrate all relevant factors and properly represent the equitable equivalents of the claims of the preferred stockholders as a matter of law, on the basis of the undisputed evidence and without

resort to any doctrine of administrative finality. In any event, we submit that the reasons advanced by the District Court for rejecting the valuation of the Commission are not sufficient to override its findings in the field of valuation since its findings are supported by substantial evidence and have rational foundation in law.

POINT 2.

THE COURT OF APPEALS ERRED IN HOLDING THAT THE DISTRICT COURT MAY REJECT VALUATIONS OF THE COMMISSION BASED ON CONSIDERATION OF ALL RELEVANT FACTORS AND SUPPORTED BY SUBSTANTIAL EVIDENCE.

(a) The Statutory Duty and Stature of Findings of the Commission Under Section 11 (e) of the Act.

The Commission has the duty under Sections 11 (d) and 11 (e) of determining whether plans for compliance with Section 11 (b) are fair and equitable to the persons affected thereby. It also has the duty under Section 11 (f) of passing upon all reorganization plans for registered holding companies or subsidiaries thereof in proceedings in courts of the United States, whether under Section 11 or otherwise; and such plans may not become effective unless approved by the Commission after hearing prior to submission to the court. The phrasing of the three sections in this respect varies, but the import is the same.

Under Section 11 (e), the Commission has the further duty, *if requested by the company*,[6] to apply to a court in accordance with Section 18 (f) to enforce the plan, which the court must do if it finds the plan fair and equitable and appropriate to effectuate the provisions of Section 11. Section 11 (d) differs in this respect in that the aid of the court is necessarily invoked by the Commission to enforce its orders under Section 11 (b), and the court must find

[6] Italics supplied.

any plan for disposition of assets of the respondent company fair and equitable before using its enforcement powers.

It is desirable to note here that, while normally plans submitted under Section 11 (e) would not reach a circuit court of appeals except through enforcement proceedings in a district court under Section 18 (f) and appeal in accordance with Section 25, it is possible for a plan to reach the circuit court of appeals for review directly on appeal from the Commission under Section 24 (a). Section 24 (a) expressly provides that findings of fact by the Commission, if supported by substantial evidence, shall be conclusive on appeal. There is nothing in the Act requiring court enforcement of a Section 11 (e) plan unless the company requests it, and such a plan may be approved by the Commission and consummated without court aid. If a plan does not provide for court enforcement or the company does not request the Commission to enforce the plan in a district court before the appeal period prescribed by Section 24 (a) has expired, an aggrieved person must take a timely appeal under Section 24 (a) to protect himself. Then, unless enforcement proceedings are subsequently taken and the circuit court sees fit to dismiss the appeal in deference to the procedure provided by Sections 11 (e) and 18 (f), the circuit court would have to determine the fairness of the plan. Such was the situation in *Phillips v. Securities and Exchange Commission*, 153 F. 2d 27 (C. A. 2, 1946), cert. denied 328 U. S. 860, where the Court of Appeals reviewed a plan of The United Corporation on direct appeal by a stockholder. The appellate court approved the plan as fair and equitable, holding that the conclusions of the Commission were justified under all the circumstances and well within the sphere of its peculiar competency.[7]

[7] For cases holding that appeals under Section 24 (a) are not proper where enforcement proceedings are pending in a district court or the plan provides for such proceedings, see *In re Securities and Exchange Commission* (*Otis & Co.*,

Since the quality of the Commission's findings of fact will not be affected by the course of the appeal and the need for expert findings is, presumably, no greater or less in the district courts than in the circuit courts of appeal, the reason for any difference in effect in the district court is not apparent. The express provision in Section 24 (a) was inserted to make certain that the established rule regarding findings of fact of administrative bodies applies in the circuit courts of appeal on direct appeals under Section 24 (a). Certainly it affords no valid basis for contending that the rule should be any different in the district courts.

While, therefore, both the Commission and the reviewing court have the duty of determining whether a plan is fair and equitable, their functions in this respect differ. Congress could not properly require a district court as a court of equity to lend its processes to enforce a plan which is unfair and inequitable, but, on the other hand, Congress recognized that the problems presented by such plans are complex and require a division of labor and special competence to evaluate the fairness of a plan in its several aspects.

What would be an appropriate division of labor between the Commission and a district court in Section 11 (e) proceedings? We venture to state it simply in the face of the volumes that have been written about the respective functions of administrative tribunals and courts.

The special competence of the Commission lies in comprehending the problems, investigating the facts, selecting facts according to their relevance and importance, evaluating facts, and reaching ultimate conclusions in accordance with applicable equitable principles. The Commission has the front line problem of discerning whether any fact or combination of facts invoke any special principles of law

---

Intervenor), 142 F. 2d 411 (C. A. 3, 1944); *Okin v. Securities and Exchange Commission*, 145 F. 2d 206 (C. A. 2, 1944); *Lounsbury et al. v. Securities and Exchange Commission et al.*, 151 F. 2d 217 (C. A. 3, 1945).

or equitable considerations and then applying such principles and considerations with due weight and with regard for the inter-play of factors in complex situations, exercising its discretion where it has a choice. It has the duty of making an equitable valuation of the whole according to its judgment. Whatever this process is labeled, it is basically within the competence of the Commission and the function of the court in this instance should be defined with regard for the wide powers granted the Commission to do the job.

The special competence of the courts lies in determining whether applicable principles of law have been violated or disregarded by the Commission in the equitable evaluation of a plan and whether the facts found by the Commission are supported by substantial evidence. While Section 11 (e) gives the court the independent duty of determining whether plans are fair and equitable before lending its aid to enforcement, its function in this respect is necessarily circumscribed. In the division of labor Congress never intended that the court should reach over into the area reserved for the skills of the Commission and substitute its judgment for that of the Commission, provided the Commission's findings and conclusions have a rational basis in fact. A problem of attitudes is involved; the function of the court is invested with the attitude which it should have toward the findings and conclusions of the Commission in its field. There are many definitions of proper attitudes of courts toward findings of administrative bodies or agencies. They range from the most liberal to the skittish, depending, perhaps, upon the field of activity and the particular type of administrative unit involved. However that may be, we are here concerned with the proper attitude of the court in relation to the findings of an expert commission operating in a highly specialized economic field.

The Court of Appeals for the Third Circuit had occasion to consider this question in *In re Standard Gas &*

Electric Co., 151 F. 2d 326 (C. A. 3, 1945), wherein the District Court had overruled the decision of the Commission approving payment of notes partly by exchange of portfolio stocks. The immediate question was whether payment in property rather than cash was fair and equitable. The Court of Appeals commented as follows (p. 331):

> "It can be set out as a well established rule of administrative law that the action of an expert administrative body in determining the particular remedial measures demanded in an individual case is not to be overturned by court action unless the administrative body has lost sight of the law. The more technical the subject matter before the administrative tribunal, the more reluctant the court should be, we think, in disagreeing with it on a matter which is a question of judgment. The subject matter of this Act is highly technical. It seems to us that it is unlikely that Congress, in vesting authority to handle reorganizations of great public utility empires under the statute, would give the expert less power than bodies for easier and less complicated pieces of work unquestionably have. In other words, we think the wide grant of power given by Congress to the Commission carries with it the authority to the Commission to fix the form of reorganizations, subject to court control if the Commission departs from the law. We do not think that the District Court or appellate court is to substitute its notion of practical expediency for that of the Commission."

The foregoing appears to be the minimum of reluctance applicable here. Other cases hold that a finding by the Commission that a plan is fair and equitable cannot be upset by the court unless it is shown to be without rational basis in fact or predicated on a clear-cut error of law. *Massachusetts Mutual Life Insurance Co. v. Securities and Exchange Commission*, 151 F. 2d 424, 430 (C. A. 8, 1945);

Lahti v. New England Power Ass'n., 160 F. 2d 845, 850 (C. A. 1, 1947); *American Power & Light Co. v. Securities and Exchange Commission*, 329 U. S. 90, at 112-3.

While this Court was not passing on the powers and duties of a Section 11 (e) court in the second Chenery case, *Securities and Exchange Commission v. Chenery Corp.*, 332 U. S. 194, the matters under consideration expressly related back to the application of the "fair and equitable" standards of Section 11 (e) and the standards of "what is detrimental to the public interest or the interest of investors or consumers" under Section 7 (d) (6) and 7 (e). The case had gone to the Court of Appeals on direct appeal from the Commission under Section 24 (a) of the Act. This Court did not expressly allude in its opinion to the provisions of Section 24 (a) regarding the binding effect of the findings of the Commission as to the facts, if supported by substantial evidence. In general terms this Court held that the very breadth of the statutory language precludes a reversal of the Commission's judgment save where it has plainly abused its discretion in the matters under consideration. The Court hold that its duty was at an end when it became evident that the Commission's action was based upon substantial evidence and was consistent with the authority granted by Congress; that the facts being undisputed, it was free to disturb the Commission's conclusion only if it lacked rational and statutory foundation (pp. 207, 208).

(b) The Statutory Duty and Powers of the District Court Under Section 11 (e) of the Act.

Section 11 (e) of the Act authorizes the Commission, at the request of a company, to apply to a district court in accordance with Section 18 (f) to enforce and carry out the terms and provisions of the plan. If upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and appropriate to effectuate the provisions of Section 11, the court

as a court of equity may take exclusive jurisdiction and possession of the company and the assets.

The Court of Appeals interpreted this to mean that a Section 1, (e) court must exercise its full and independent judgment as to the fairness and equity of a plan (R. 33). "The judicial process is brigaded with the administrative process of the Commission, but this does not mean that the (district) court in the field allocated to it by Congress is not to exercise its independent plenary judgment as an equity reorganization tribunal upon every matter relating to the fairness and equity of the reorganization. . . . It was the duty of the (district court) to function as an equity reorganization tribunal within the limitations prescribed by the Act" (R. 34). "Any question which goes to the issue of what is fair and equitable may be raised and must be passed upon" (R. 32). The district court may not act capriciously or substitute its valuations for those of the Commission, but, in the performance of its statutory duty, it may reject valuations made by the Commission (R. 34).

In reaching this conclusion the Court of Appeals relied on what it conceived to be the role of a district court in proceedings under Chapter X and Section 77 of the Bankruptcy Act, citations from the legislative history of the Holding Company Act, and the traditional role of an equity reorganization tribunal. It is frequently easy to find in legislative debates statements which seem to support a particular interpretation of proposed statutory language. Also, it is easy to fall into error when the debates have been prolonged and voluminous as they were in the case of the adoption of the Holding Company Act. The Commission in its brief has thoroughly covered the subject and we believe fully demonstrated wherein the Court of Appeals erred in these three respects. We will not attempt here to cover the ground again and will confine our effort to a supplementary observation.

At the time of the adoption of the Holding Company Act in 1935 the substantial evidence rule was firmly estab-

lished in law, and it is reasonable to suppose that the proponents of the Act had it in mind. It is unreasonable to suppose that they intended to brigade the administrative and judicial processes in such a way as to give the court a veto power in all areas or sterilize the special competence of the Commission. Normally the respective roles of the administrative tribunal and court are independent, but, nevertheless complementary. These principles are recognized in the decisions of this Court respecting reorganization proceedings under Section 77 of the Bankruptcy Act and roles of the Interstate Commerce Commission and the courts thereunder. See *Ecker v. Western Pacific R. Corp.*, 318 U. S. 448; *Group of Investors v. Milwaukee R. Co.*, 318 U. S. 523; *Old Colony Boudholders, et al. v. N. Y. N. H. & H. R. Co.*, 161 F 2d 413 (C A. 2, 194.). We submit that in 1935 the substantial evidence rule had beconie a normal incident to statutory designs such as the Holding Company Act and that application of the rule should be denied only upon the clearest mandate. There is no such mandate in that Act.

As a corollary, it is the Commission and not the Court which should be given the benefit of any doubt in resolving questions of techniques, relevance, feasibility, weight and emphasis. Suppose a case where neither the Court nor the Commission was "clearly erroneous" in its conclusions in such areas. Which tribunal should prevail? Suppose consideration of losses were relevant and feasible and there is evidence warranting a finding by the Commission that a particular loss was irrelevant as in the case of the Puget Sound loss. Should the Court prevail because its discretion might reasonably lead to the opposite conclusion? Seldom will one find complete concurrence in such complex problems. From time to time the Commission would have to appease reasonable doubts of a considerable number of judicial minds, and every objector will have two chances, two days in court on the same level. The Commission

would never know where it stood until the last doubt were resolved.

(c) Assuming That the Involuntary Liquidation Preference in the Charter Is Not Controlling as a Matter of Law, the Findings of the Commission Are Binding on the District Court.

This, we think, is self-evident. There is substantial evidence to support the findings. Insofar as the considerations of the District Court have any relevance to valuation, they have been considered and weighed. Under these circumstances the Court of Appeals would be bound by the findings of the Commission had the case gone to it on direct appeal under Section 24 (a) of the Act and we submit that in this case "respect" for the findings of the Commission means acceptance by the District Court.

CONCLUSION.

The Court of Appeals should be reversed, and the District Court should be directed to approve and enforce the plan as approved by the Commission and in accordance with the escrow agreement.

Respectfully submitted,

FRANCIS H. SCHEETZ,
Attorney for The Home Insurance Company, et al., Petitioners-Respondents.

December 22, 1948.

APPENDIX.

Section 11 (d), (e) and (f) of the Public Utility Holding Company Act of 1935 (15 U. S. C. § 79k (d), (e) and (f) provides as follows:

"(d) The Commission may apply to a court, in accordance with the provisions of subsection (f) of section 79r of this chapter, to enforce compliance with any order issued under subsection (b). In any such proceeding, the court as a court of equity may, to such extent as it deems necessary for purposes of enforcement of such order, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction, in any such proceeding, to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer under the direction of the court the assets so possessed. In any proceeding for the enforcement of an order of the Commission issued under subsection (b) the trustee with the approval of the court shall have power to dispose of any or all of such assets and, subject to such terms and conditions as the court may prescribe, may make such disposition in accordance with a fair and equitable reorganization plan which shall have been approved by the Commission after opportunity for hearing. Such reorganization plan may be proposed in the first instance by the Commission, or, subject to such rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization.

"(e) In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed.

"(f) In any proceeding in a court of the United States, whether under this section or otherwise, in

which a receiver or trustee is appointed for any registered holding company, or any subsidiary company thereof, the court may constitute and appoint the Commission as sole trustee or receiver, subject to the directions and orders of the court, whether or not a trustee or receiver shall theretofore have been appointed, and in any such proceeding the court shall not appoint any person other than the Commission as trustee or receiver without notifying the Commission and giving it an opportunity to be heard before making any such appointment. In no proceeding under this section or otherwise shall the Commission be appointed as trustee or receiver without its express consent. In any such proceeding a reorganization plan for a registered holding company or any subsidiary company thereof shall not become effective unless such plan shall have been approved by the Commission after opportunity for hearing prior to its submission to the court. Notwithstanding any other provision of law, any such reorganization plan may be proposed in the first instance by the Commission or, subject to such rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization. The Commission may, by such rules and regulations or order, as it may deem necessary or appropriate in the public interest or for the protection of investors or consumers, require that any or all fees, expenses, and remuneration, to whomsoever paid, in connection with any reorganization, dissolution, liquidation, bankruptcy, or receivership of a registered holding company or subsidiary company thereof, in any such proceeding, shall be subject to approval by the Commission."

Section 18 (f) of said Act (15 U. S. C. § 79r (f)) provides as follows:

"(f) Whenever it shall appear to the Commission that any person is engaged or about to engage in any acts or practices which constitute or will constitute a violation of the provisions of this chapter, or of any rule, regulation, or order thereunder, it may in its discretion bring an action in the proper district court of the United States, the district court of the United States for the District of Columbia, or the United States courts of any Territory or other place subject to the jurisdiction of the United States, to enjoin such acts or practices and to enforce compliance with this chapter or any rule, regulation, or order thereunder, and upon a proper showing a permanent or temporary injunction or decree or restraining order shall be granted without bond. The Commission may transmit such evidence as may be available concerning such acts or practices to the Attorney General, who, in his discretion, may institute the appropriate criminal proceedings under this chapter."

Section 24 (a) of the same Act (15 U. S. C. § 79x) provides as follows:

"Any person or party aggrieved by an order issued by the Commission under this title may obtain a review of such order in the circuit court of appeals of the United States within any circuit wherein such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the entry of such order, a written petition praying that the order of the Commisison be modified or set aside in whole or in part. A copy of such petition shall be forthwith served upon any member of the Commission, or upon any officer thereof designated by the

Commission for that purpose, and thereupon the Commission shall certify and file in the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do. *The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive.*[1] If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. *The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which, if supported by substantial evidence, shall be conclusive,*[2] and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court affirming, modifying, or setting aside, in whole or in part, any such order of the Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347)."

---

[1] Italics supplied.

[2] Italics supplied.

Section 77 (e) of the Bankruptcy Act (11 U. S. C. § 205 (e)) provides as follows:

"(e) Upon the certification of a plan by the Commission to the court, the court shall give due notice to all parties in interest of the time within which such parties may file with the court their objections to such plan, and such parties shall file, within such time as may be fixed in said notice, detailed and specific objections in writing to the plan and their claims for equitable treatment. The judge shall, after notice in such manner as he may determine to the debtor, its trustee or trustees, stockholders, creditors, and the Commission, hear all parties in interest in support of, and in opposition to, such objections to the plan and such claims for equitable treatment. After such hearing, and without any hearing if no objections are filed, the judge shall approve the plan if satisfied that: (1) It complies with the provisions of subsection (b) of this section, is fair and equitable, affords due recognition to the rights of each class of creditors and stockholders, does not discriminate unfairly in favor of any class of creditors or stockholders, and will conform to the requirements of the law of the land regarding the participation of the various classes of creditors and stockholders; (2) the approximate amounts to be paid by the debtor, or by any corporation or corporations acquiring the debtor's assets, for expenses and fees incident to the reorganization, have been fully disclosed so far as they can be ascertained at the date of such hearing, are reasonable, are within such maximum limits as are fixed by the Commission, and are within such maximum limits to be subject to the approval of the judge; (3) the plan provides for the payment of all costs of administration and all other allowances made or to be made by the judge, except that allowances provided for in subsection (c), paragraph (12) of this section, may be paid in securi-

ties provided for in the plan if those entitled thereto will accept such payment, and the judge is hereby given power to approve the same.

If the judge shall not approve the plan, he shall file an opinion stating his conclusions and the reason therefor, and he shall enter an order in which he may either dismiss the proceedings, or in his discretion and on motion of any party in interest refer the proceedings back to the Commission for further action, in which event he shall transmit to the Commission a copy of any evidence received. If the proceedings are referred back to the Commission, it shall proceed to a reconsideration of the proceedings under the provisions of subsection (d) of this section. If the judge shall approve the plan, he shall file an opinion, stating his conclusions and the reasons therefor, and enter an order to that effect, and shall send a certified copy of such opinion and order to the Commission. The plan shall then be submitted by the Commission to the creditors of each class whose claims have been filed and allowed in accordance with the requirements of subsection (c) of this section, and to the stockholders of each class, and/or to the committees or other representatives thereof, for acceptance or rejection, within such time as the Commission shall specify, together with the report or reports of the Commission thereon or such a summarization thereof as the Commission may approve, and the opinion and order of the judge: *Provided,* That submission to any class of stockholders shall not be necessary if the Commission shall have found, and the judge shall have affirmed the finding, (a) that at the time of the finding the corporation is insolvent, or that at the time of the finding the equity of such class of stockholders has no value, or that the plan provides for the payment in cash to such class of stockholders of an amount not less than the value of their equity, if any, or (b) that the interests of such

class of stockholders will not be adversely and materially affected by the plan, or (c) that the debtor has pursuant to authorized corporate action accepted the plan and its stockholders are bound by such acceptance: *Provided further,* That submission to any class of creditors shall not be necessary if the Commission shall have found, and the judge shall have affirmed the finding, that the interests of such class of creditors will not be adversely and materially affected by the plan, or that at the time of the finding the interests of such class of creditors have no value or that the plan provides for the payment in cash to such class of creditors of an amount not less than the value of their interests. For the purpose of this section the acceptance or rejection by any creditor or stockholder shall be in writing, executed by him or by his duly authorized attorney, committee, or representative. If the United States of America, or any agency thereof, or any corporation (other than the Reconstruction Finance Corporation) the majority of the stock of which is owned by the United States of America, is a creditor or stockholder, the interests or claims thereof shall be deemed to be affected by the plan, and the President of the United States, or any officer or agency he may designate, is hereby authorized to act in respect of the interests or claims of the United States or of such agency or other corporation. The expense of such submission shall be certified by the Commission and shall be borne by the debtors' estate. The Commission shall certify to the judge the results of such submission.

Upon receipt of such certification, the judge shall confirm the plan if satisfied that it has been accepted by or on behalf of creditors of each class to which submission is required under this subsection holding more than two-thirds in amount of the total of the allowed claims of such class which have been reported in said submission as voting on said plan, and by or on behalf

of stockholders of each class to which submission is required under this subsection holding more than two-thirds of the stock of such class which has been reported in said submission as voting on said plan; and that such acceptances have not been made or procured by any means forbidden by law: *Provided*, That, if the plan has not been so accepted by the creditors and stockholders, the judge may nevertheless confirm the plan if he is satisfied and finds, after hearing, that it makes adequate provision for fair and equitable treatment for the interests or claims of those rejecting it; that such rejection is not reasonably justified in the light of the respective rights and interests of those rejecting it and all the relevant facts; and that the plan conforms to the requirements of clauses (1) to (3), inclusive, of the first paragraph of this subsection (e): *Provided further*, That if in any reorganization proceeding under this section, the United States is a creditor on claims for taxes or customs duties (whether or not the United States has any other interest in, or claim against, the debtor, as creditor or stockholder), no plan which does not provide for the payment thereof shall be confirmed by the judge except upon the acceptance, certified to the court, of a lesser amount by the President of the United States or the officer or agency designated by him pursuant to the provisions of the preceding paragraph hereof: *Provided further*, That if the President of the United States or such officer or agency shall fail to accept or reject such lesser amount for more than ninety days after receipt of written notice so to do from the court, accompanied by a certified copy of the plan, the consent of the United States insofar as its claims for taxes or customs duties are concerned shall be conclusively presumed. If the judge shall confirm the plan, he shall enter an order and file an opinion with a statement of his conclusions and his reasons therefor. If the judge shall not con-

firm the plan, he shall file an opinion, with a statement of his conclusions and his reasons therefor, and enter an order in which he shall either dismiss the proceedings, or, in his discretion and on the motion of any party in interest, refer the case back to the Commission for further proceedings, including the consideration of modifications of the plan or the proposal of new plans. In the event of such a reference back to the Commission, the proceedings with respect to any modified or new plan shall be governed by the provisions of this section in like manner as in an original proceeding hereunder.

If it shall be necessary to determine the value of any property for any purpose under this section, the Commission shall determine such value and certify the same to the court in its report on the plan. The value of any property used in railroad operation shall be determined on a basis which will give due consideration to the earning power of the property, past, present, and prospective, and all other relevant facts. In determining such value only such effect shall be given to the present cost of reproduction new and less depreciation and original cost of the property, and the actual investment therein, as may be required under the law of the land, in light of its earning power and all other relevant facts."

ON PETITIONS FOR WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT

BRIEF OF RESPONDENTS CENTRAL-ILLINOIS SECURITIES CORPORATION AND CHRISTIAN A. JOHNSON, IN OPPOSITION

Opinions Below

The opinion and judgment of the Court below (R. 12) and the opinion denying petitions and cross-petitions for rehearings (R. 138) are reported at 168 F. 2d 722. The

opinion of the District Court is reported at 71 F. Supp. 797 (R. 283a), but its detailed Findings of Fact and Conclusions of Law (R. 293a-317a) are not reported. The Findings and Opinions of the Commission dated December 4, 1946 and January 8, 1947 have not yet been officially reported but are set forth in the Commission's Holding Company Act Releases Nos. 7041 (R. 25a) and 7119 (R. 128a).

Jurisdiction

The judgment of the Circuit Court of Appeals for the Third Circuit was entered March 19, 1948, and its judgment denying petitions and cross-petitions for rehearing was entered June 11, 1948. The jurisdiction of this Court is invoked under Section 240 of the Judicial Code, as amended by the Act of February 13, 1925 (28 U. S. C. 347), made applicable by Section 25 of the Public Utility Holding Company Act of 1935, 49 Stat. 803 (15 U. S. C. 79 *et seq.*).

Statute Involved

The provisions of Sections 11(e) and 24(a) of the Public Utility Holding Company Act of 1935, 49 Stat. 803, 15 U. S. C. 79a, *et seq.*, are set forth in the Appendix, *infra*, pp. 37-38.

Questions Presented

1. Where a federal statute compels the complete and final termination of a holding company system and of the investments of all security holders therein, are the common stockholders required to indemnify the preferred stockholders against the possibility that upon reinvestment of their funds elsewhere the latter may receive dividends at the somewhat lower rates then current?

2. Was the District Court, in performing its statutory duties under Section 11(e) of the Public Utility Holding Company Act, required to accept the Securities and Exchange Commission's interpretative legal conclusions: (a) disregarding well-settled judicial principles held applicable by the Commission and numerous courts to forced retirement under the Act of senior securities, and (b) fictionally "measuring the rights" of the preferred stockholders (but not of the common stockholders) "as though in a continuing enterprise", even though incontrovertibly the entire enterprise has come to an end?

3. Were the District Court and the Circuit Court of Appeals, in performing their respective functions, required to accept as conclusive of the rights of all security holders in a final liquidation a finding by the Commission of the "value" of the preferred stocks based merely on their hypothetical market price as of a given moment "apart from the impact of liquidation under Section 11", and in disregard of all the other impacts of the statute and their vital bearing on such "value"?

Statement

In our cross-petition heretofore filed,[1] there is set forth a comprehensive Statement of the Case, which we respectfully request be deemed incorporated herein by reference in order to avoid unnecessary duplication.

Notwithstanding the hardship which the additional delay and expense will impose on the common stockholders,[2] we

---

[1] *Central-Illinois Securities Corporation and Christian A. Johnson, Petitioners* v. *Securities and Exchange Commission, Thomas W. Streeter, et al., The Home Insurance Co., et al.*, No. 266, October Term, 1948. The earlier date required for filing of the cross-petition rendered unfeasible its joinder with this brief, but the two documents are intended to be supplementary to one another.

[2] Under the Commission's decision, all expenses and costs in connection with all phases of the proceedings and litigation relating to the plan must be borne by the common stockholders (R. 72a-82a).

would not question the desirability of review by this Court if the Commission's decision in this case threatened to set a pattern for future decisions in dissolutions under the Holding Company Act; but we venture to suggest that as a practical matter the sharp upward revisions in money rates generally and in public utility preferred stock yields in particular have rendered the principal questions raised by the petitions virtually moot, not alone for the time being but for the foreseeable future.

However reluctant the Commission may be to face the fact, the "investment value ex the Act" doctrine has been swept away with the temporary war's-end stock market boom which engendered it. This factor, even apart from the basic fallacies in the doctrine pointed out by the two Courts below, which respectively have had more judicial experience with orders and plans under Section 11 than any other District and Circuit Courts in the country,[3] and which have hitherto consistently upheld the Commission's determinations, strongly supports the view that the issues precipitated by the Commission's decision in this case are not likely to prove recurrent, and certainly not in the form here presented.

---

ARGUMENT

I. REVIEW OF THE CIRCUIT COURT'S ORDER AS REQUESTED BY PETITIONERS IS NOT PRESENTLY APPROPRIATE.

We are confronted at the outset with the crucial and authoritative data presented to the Circuit Court and included in the present record (R. 122-123) which establishes that the Engineers preferred stocks if presently outstanding would have an "investment value" (employing this term in the very sense used by the Commission) not in excess of $90-$95 per share. In its application to the instant case, therefore, this changed "value" *of itself* is decisive of the only ultimate issue; viz., whether the preferred stockholders are entitled to receive amounts in excess of the $100 per share plus dividends already paid to them. Consequently, even if this Court found it possible to uphold the Commission's "investment ex the Act" doctrine as applied in this case, and were also to hold that the Courts below were wrong on every issue, no additional amounts could be found payable to the preferred stockholders on the basis of the Commission's own rationale and formula for which Petitioners here contend.[4]

[4] It is beyond dispute that the changes in applicable money rates and yields which occurred subsequent to the issuance of the Commission's opinions have a crucial bearing on "investment values" as determined in this case by the Commission. A final decree cannot be entered without consideration of these vital changed factors, since the decree of a court of equity speaks "as of the date of entry" and must therefore take account of all material changes which have occurred since the commencement of the proceedings: *Randel* v. *Brown*, 2 How. 405, 422; *McCabe* v. *Guaranty Trust Co.*, 243 Fed. 845, 849; *Brooks Bros.* v. *Brooks Clothing Co. of California*, 60 F. Supp. 442, 456; *Knight* v. *Wertheim & Co.*, 158 F. 2d 883, *cert. den. sub. nom. McGuire* v. *Equitable Office Bldg. Corp.*, 331 U. S. 818. Nor is there any basis for a contention that these changes had been envisaged and taken into account by the Commission; concurrent findings of both Courts below incontrovertibly establish that the Commission's determination was based merely on "values" as of May, 1946 and that

If this vital factor does not render the case technically moot, it at least renders it "unripe" for review here in the light of the character of the Circuit Court's order. That order did not, by its terms, finally determine the rights of any of the parties to these proceedings, but instead remanded the proceedings to the Commission for further consideration of factors relating to the valuation of the preferreds and the common (R. 39-40). The remand will also afford opportunity for appropriate consideration of the impact of the changed money rates. These are questions which properly should be determined before this Court is called upon to pass on underlying issues of law which, we submit, will become academic in the light of such factual determinations; cf. *Republic Natural Gas Co.* v. *State of Oklahoma*, 334 U. S. 62.[5]

Apart from the untimeliness of review now, we also submit that on the merits the decision below is entirely correct, except in requiring remand of the proceedings to the Commission. This latter requirement, although fraught

---

no consideration whatever was given to future trends or possible changes (Circuit Court, R. 17; District Court, R. 310a-315a).

In a more recent opinion the Commission itself stated concerning "investment values" determined as of this very period:

> "* * * the Commission's findings were issued in May of 1946 *in what has since proven to be the peak of the post-war market.* The market has declined substantially from the highs reached at that time and there has been a material firming of interest and preferred yields. It is apparent that insofar as investment value is derived from an analysis of the current yields of comparable securities, *the investment value of American's preferred has been substantially affected in the interim.* In addition, there have of course been changes in the financial and business aspects of the company which have a direct bearing on the value of the security" *(United Light and Railways Co.—American Light & Traction Co.*, Holding Company Act Release No. 7951, p. 33, Dec. 31, 1947; emphasis supplied.

[5] This decision, though dealing with "finality" of the judgment of a state court, contains reasoning wholly applicable to the instant case. See also *Robertson and Kirkham, Jurisdiction of the Supreme Court* [1936], Section 116, for the proposition that ordinarily the writ will not issue to review a judgment of the Circuit Court of Appeals unless it is final.

with substantial prejudice to respondents for the reasons set forth in our cross-petition, represents in essence an act of deference to Petitioner Securities and Exchange Commission, of which surely Petitioners have no valid cause to complain, since under the circumstances of this case the Circuit Court should have wholly affirmed the District Court's decree.[6] The threat of complexities and uncertainties in the administration of the Act which Petitioners profess to find lurking in certain phrases of the opinion below will be found, upon examination, to reflect primarily subtle exaggerations of portions of the Circuit Court's language. Similarly, the asserted conflict among the Circuits will be found actually non-existent.

II. THE CIRCUIT COURT CORRECTLY HELD THAT THE DISTRICT COURT UNDER SECTION 11(e) IS NOT A MERE "REVIEW COURT". THERE IS NO CONFLICT AMONG THE CIRCUITS:

Despite their emphatic assertions that the Circuit Court erred in interpreting the functions of the District Court under Section 11(e), it is significant that Petitioners have not even ventured to join issue with the Court's detailed and searching analysis of the pertinent statutory provisions (R. 24-34). Nor have Petitioners found it possible to throw any different light on the legislative history, painstakingly marshalled and set forth by the Court (R. 21-24), establishing beyond doubt that Congress intended with respect to Section 11(e) plans affecting stockholders' rights that the traditional powers of the District Court as an equity reorganization tribunal should not be materially "diminished or encroached upon by the functions allotted to the Commission under the law" (R. 22); and that the role of the Commission with respect to plans requiring judicial enforcement under Section 11(e) was envisaged primarily as

[6] See discussion at pp. 24-30 of our cross-petition (No. 266).

that of "expert economic adviser and administrative assistant" to the Courts (R. 22), as compared with the broader role confided to the Commission under the numerous other provisions of the Act.[7]

Indeed the Commission's petition asserts (p. 22) that the Commission is in agreement with much of what the Circuit Court stated as to the independent role of the District Court, a position markedly different from that which it took before the Circuit Court, but more consistent with the views which it has repeatedly expressed in its reports to Congress and testimony before Congressional Committees to which the Court's opinion makes pointed reference (R. 23, 30). But having made this strategic obeisance to its own recorded statements, the Commission proceeds to urge in effect that the District Court's "independent" judgment may be employed to approve, but never to disapprove, the Commission's conclusions; in short, the District Court's "independence" must always end at the precise point where disagreement with the Commission begins.

The Commission seeks to accomplish this result by requesting this Court to drastically amend the statute in order to *ingraft* the substantial evidence rule embodied in Section 24(a) upon Section 11(e), so as to make the findings of the Commission binding upon the District Court if supported by evidence. Even if it were possible to disregard the violence to the statutory scheme and fixed Congressional purpose pointed to by the Circuit Court, such an

[7] There is an obvious and clear distinction in the statutory scheme between Sections 11(d) and (e) and the remaining sections of the Act. The latter embody the fundamental regulatory and administrative functions of the Commission; as to which its judgment was intended to have the full scope normally confided to administrative agencies. Sections 11(d) and (e), on the other hand, constitute in effect a "self-contained reorganization statute" (as the Commission itself has stated, note 11, *infra*) which is merely *ancillary* to effectuation of the primary statutory objectives embodied in Section 11(b), and which relies on the traditional powers and expert techniques of the District Courts as equity reorganization and anti-trust tribunals (Cf. Circuit Court Opinion, R. 21-23).

amendment would not aid Petitioners' position in the instant case. For the findings of the Commission which Section 24(a) states shall be conclusive if supported by substantial evidence, are "findings *as to the facts*". There is no contention here, and there could not be, that the factual findings of the Commission were contravened by those of the District Judge, particularly since almost all the facts recited by the latter (and fully affirmed by the Circuit Court[8]) are also referred to in the Commission's findings and opinions. The conflict between the District Court and the Commission related primarily to the *legal conclusions* to be drawn from those facts.[9]

Recognizing this, Petitioners are compelled to the further and even more drastic contention that the enforcement court must similarly be bound by the Commission's *legal conclusions*. But even this extreme position would not enable Petitioners to prevail in the instant case because the "essence of the holdings of both Courts below was that the Commission's *conclusions* are without substantial evidentiary or legal basis; or, stated in the restrictive terms for which Petitioners contend, that they "lack rational or statutory foundation".

That such holdings of the Courts are correct, and in fact unassailable, will be demonstrated in subsequent portions of this brief. Initially, however, it must be observed how feeble is the reed on which Petitioners are obliged to hang their momentous argument for judicially fusing Sections 11(e) and 24(a). It is significant that the sole deci-

---

[8] With respect to the weight which attaches in this Court to the concurrent findings of two Courts below, see *Comstock* v. *Group of Institutional Investors*, 335 U. S. 211, 214, and decisions there collated.

[9] We assume that questions of nomenclature are not properly to be deemed questions of fact. Thus, although the District Judge accepted the Commission's finding that the preferred stocks had a "value" as of May, 1946, as found by the Commission, he was unable to accept the descriptive title "investment value ex the Act" for values which were primarily transient *market* values as of a particular moment. (See discussion *infra*, pp. 21-24.)

sion to which the Commission refers for support of this proposition is an unreported case in the District Court of Delaware dating back to the early stages of Section 11(e) programs, and that the Commission has failed to explain why this is, as it admits, "the only instance" of its kind.[10] Moreover, the Commission has not called to the Court's attention the more recent and authoritative decisions throwing a very different light on the subject. We refer to *Okin* v. *S. E. C.*, 145 F. 2d 206 (C. C. A. 2, 1944), remanded 325 U. S. 840, and *Lownsbury* v. *S. E. C.*, 151 F. 217 (C. C. A. 3, 1945), *cert. den.* 326 U. S. 872, where the Commission urged upon the Courts that "the statutory scheme renders inapplicable the general review provisions of Section 24(a)" with respect to Section 11(e) plans cutting across stockholders' charter rights; that in recognition of this statutory scheme the Commission has established the practice of expressly conditioning its approval of such plans upon District Court enforcement; and that Circuit Courts of Appeal wholly lack jurisdiction under Section 24(a) to review such Commission orders.[11]

---

[10] See Commission Petition, p. 24, note 11. In its brief in this Court in *Okin* v. *S. E. C.*, 325 U. S. 840 (No. 601, October Term, 1945), the Commission had occasion to explain (p. 14, note 9) the extraordinary circumstances under which this case arose.

[11] Thus, in its brief in this Court in opposition to certiorari in the *Lownsbury* case, *supra* (No. 1245, October Term, 1944), the Commission stated:

> "Congress contemplated that reorganization techniques should be available for compliance with Section 11(b) orders, and subsections (d) and (e) are in many respects a self-contained reorganization statute with provisions defining the respective reorganization functions of court and agency which are comparable to the relationship between the Interstate Commerce Commission and the courts prescribed in the previously enacted Section 77 of the Bankruptcy Act. Section 11(f) provides for a similar allocation of function as between the Commission and a reorganization court where the court's reorganization jurisdiction stems from sources other than the Holding Company Act" (p. 7).
>
> * * * * * *
>
> "An order of the Commission approving the plan, which is to be operative only if subsequently approved by a district

Having successfully urged these views upon the Second and Third Circuits, and upon this Court in its briefs in opposition to certiorari, it scarcely seems admissible for the Commission to now argue that Sections 24(a) and 11(e) are merely "alternative ways" of reviewing Section 11(e) plans expressly conditioned, as was Engineers', upon District Court approval and enforcement; and that "the substantial evidence rule" of Section 24(a) should be forcibly propelled into Section 11(e), which the Commission previously urged is "a *self-contained* reorganization statute", and orders of the Commission thereunder "stand on an entirely different footing from the ordinary order of the Commission for which the review provisions of Section 24(a) were evidently intended".[12]

Even wholly apart from these inconsistencies, the Commission's argument is clearly devoid of merit. A Circuit Court of Appeals reviewing a Commission order under Section 24(a) is not called upon to enter its own decree as a court of equity enforcing a plan upon all security holders without their consent. A District Court under Section 77(e) of the Bankruptcy Act (which the Commission's petition *asserts* performs a statutory role "in general similar" to that of a Section 11(e) Court[13]) can scarcely be thought to function as a mere "review" court. Certainly, support for such a view cannot be derived from the decisions of this Court under Section 77(e) of the Bankruptcy Act, in which the Court has distinguished carefully between its own role as a review court and the wholly different role of the District Court, stating, for example:

> "* * * Since such a determination rests in the realm of judgment rather than mathematics, there

court pursuant to subsections (d) and (e) or under some independent source of jurisdiction recognized in subsection (f), stands on an entirely different footing from the ordinary order of the Commission for which the review provisions of Section 24(a) were evidently intended. * * *" (p. 9).

[12] Cf. note 11, *supra*.

[13] Commission petition, p. 22.

> is an area for disagreement. *But we are not performing the functions of the District Court under Section 77(e). Our role on review is a limited one.* It is not enough to reverse the District Court that we might have appraised the facts somewhat differently. If there is warrant for the action of the District Court, our task on review is at an end."[14] (Emphasis supplied.)

The spectre which Petitioners seek to conjure up with respect to the possibility of "stalemates" between the Commission and the District Courts (a spectre even more applicable to other reorganization statutes)[15] derives no substance from the Commission's experience with Section 11(e) plans in the Courts either prior to or subsequent to the decision in the instant case.[16] On the contrary, it

---

[14] *Group of Institutional Investors* v. *Milwaukee R. R. Co.*, 318 U. S. 523, 564. See also the recognition accorded in *Comstock* v. *Group of Institutional Investors*, 335 U. S. 211, in both the majority opinion (p. 227) and that of the minority (p. 236) to the special functions of the district courts under Section 77(e).

[15] Thus, plans under Section 77 of the Bankruptcy Act not only require the approval of the Interstate Commerce Commission and the District Court, but also of every class of security holders affected. Such security holder approval is also required with respect to plans under Section X of the Bankruptcy Act, where the Commission also plays an active role and frequently carries to the appellate courts for review decisions of the district courts in conflict with the Commission's views. Cf. *S. E. C.* v. *U. S. Realty & Improvement Co.*, 310 U. S. 434.

[16] It is pointed out in the opinion of the Circuit Court that the Commission had submitted some sixty-three Section 11(e) plans to the District Courts for enforcement, all of which have been carried out, and that Judge Leahy had passed upon twenty-seven of those plans. Subsequent to the Circuit Court's decision in the instant case Judge Leahy has passed on nine additional Section 11(e) plans, all of which he has approved and enforced. Prior to the *Engineers* decision, in fulfilling his "independent duty" Judge Leahy had concurred in the conclusions of the Commission in every plan presented to him with the sole exception of a single phase of one plan. The Third Circuit reversed, holding that since the question related to the "appropriateness" of the "particular remedial measures" required to effectuate Section 11(b), the Commission's judgment

is very plain that the danger is less that the District Courts will seek to usurp the Commission's functions than that they will tend to abdicate their own.

This is demonstrated by the very decisions to which Petitioners point as establishing a "conflict among the circuits" in relation to the instant case.[17] Such conflict does not in fact exist. Those decisions involved appeals to Circuit Courts from decrees of district courts which *approved and enforced* Section 11(e) plans previously also approved by the Commission. Thus, the Circuit Courts were in each instance reviewing plans bearing the *concurrent approval of both* the District Court and the Commission, and the Circuit Courts' opinions refer repeatedly to the findings of the Court below as well as to those of the Commission. The specific language in the opinions as to the weight to be attributed to the Commission's findings[18] has reference to the complaints of the appellants that the District Judges had "abdicated" their statutory duties by accepting the Commission's findings and determinations without according them an adequate independent check. The holdings of the appellate courts that the district courts were *entitled* in the exercise of their discretion to attach great weight to the Commission's findings obviously cannot be construed as holdings that the district courts are *required* in performing their statutory functions to ap-

should prevail (*In re Standard Gas & Electric Co.*, 151 F. 2d 326, 331). However, subsequent events established the correctness of the District Judge's fears that fluctuating markets would render the plan unfair; and as a result the Commission itself concurred in the view that the claims of the senior security holders should be discharged in cash. (See *In re Standard Gas & Electric Co.*, 63 F. Supp. 876.)

[17] Commission petition, p. 21; Streeter petition, pp. 17-20.

[18] Petitioners place great emphasis on the statement of the Circuit Court in the instant case that the cited decisions "look the other way" (R. 31). It is evident that the Circuit Court's statement was made on the basis of the quotations from the cited opinions set forth in Petitioners' briefs, rather than an independent analysis of the decisions themselves.

prove and enforce determinations of the Commission which they deem erroneous.[19]

In the instant case the Circuit Court went very far in enjoining upon the district courts the limitations of their statutory role, emphasizing that such courts may not substitute their own values or estimates for those of the Commission, nor "act capriciously in rejecting valuations made by the Commission" (R. 34, 39).[20] Indeed, as is indicated by our cross-petition, we believe it went too far in applying these principles in the particular context of this case. Subject only to this exception, we submit that the Circuit Court's conclusions as to the respective functions of the district courts and the Commission are not only unassailable on the basis of statutory analysis and legislative history, but, contrary to Petitioners' suggestions, their effects will prove highly salutary.[21] By contrast,

---

[19] Moreover, it is to be noted that in the cases referred to by Petitioners the determinations accepted by the District Court, and of which appellants complained, related largely to such involved factual issues as the normal prospective earning power for the reorganized enterprise, and were thus questions of entirely different import from those on which the District Court and the Commission differed in the instant case.

[20] Cf. *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 279, quoted at p. 19 (note 18) of our cross-petition.

[21] The beneficial effect of this decision in its practical operation is evidenced by the recent decision of the District Court of Minnesota, *In the Matter of Northern States Power Company*, decided August 30, 1948. Holding that the Circuit Court's decision in the *Engineers* case did not preclude him from attaching great weight to the Commission's determinations as to earning power and allocation, the District Judge fully upheld them; but only after making a careful check of their correctness in the exercise of his "independent duty". The same course was followed, and the same result was reached, by the District Court of Maine, *In the Matter of American & Foreign Power Company*, decided September 16, 1948.

The fact is that there has not been a single instance of a refusal by a District Court to approve and enforce a Section 11(e) plan, or any portion thereof, since the decision in the instant case.

Petitioners' contentions would effectually strip security holders of a highly important portion of the protection which this Court has asserted they are assured under the statute, stating:

> "Any plan of divestment or reorganization, moreover, must be carefully scrutinized by *both* the Commission and the enforcing court, *thus enabling the assertion and protection of all shareholders' rights.*" *North American Co.* v. *S. E. C.*, 327 U. S. 686, 709. (Emphasis supplied.)

III. THE DECISION BELOW WAS WHOLLY CORRECT ON THE MERITS.

A. The Commission's rationale lacked legal, equitable or rational foundation.

(1) It is important at the outset to fix firmly in mind the Commission's rationale in holding that the Engineers' preferred stockholders were entitled to receive the redemption prices, aggregating $3,200,000 in excess of the liquidation preferences specified in the corporate charter. The Commission did not find, or even suggest, that the retirement of the preferred stocks constituted in letter or spirit a call and redemption within the purview of the redemption provisions of the charter. Instead, it found that the complete and final liquidation of the Engineers' enterprise was necessitated by the Act, and was involuntary. This is conceded by the Commission's petition (p. 9), which further concedes that a long line of Commission and court decisions uniformly hold that redemption premiums may not be claimed or paid under such circumstances in consonance with the "fair and equitable" standard of Section 11(e) (see cases cited at p. 9, note 2, of Commission's petition).

The Commission held that the redemption premiums should be paid on the Engineers' preferreds solely because the dividend rates of these stocks were in excess of the

then prevailing preferred stock yields and money rates and for that reason the stocks would have had a "value" approximating the redemption prices *if* the Act had not compelled the retirement of the preferred stocks and the dissolution of the enterprise. We defer for the moment discussion of the significance of this admittedly fictional hypothesis in order to examine the asserted "values". Initially it is to be observed that the very same "value" factor was also present in most of the non-premium cases cited by the Commission at page 9 of its petition, and was invariably held irrelevant by the Commission and the courts. Thus, in the leading case in which the non-premium principle was enunciated, the Commission had squarely before it the contention of debenture holders that wholly apart from any contractual rights to the redemption premiums [22] they should as a matter of "fairness and equity" receive amounts in excess of the face amount of their bonds because they were being deprived prematurely of a valuable investment bearing interest rates of 6% and 6½%, rates so lucrative that the debentures had been selling at *a premium above par* despite the imminence of retirement. The Commission replied to this contention as follows:

---

[22] In rejecting the claim of the debenture holders that they were entitled to the redemption premiums under the terms of the indenture, the Commission stated:

> "We believe that the obligation to pay a premium was intended to arise only when the company was to continue as a going concern, for the payment thereof is in the nature of compensation payable by the company (i.e., its stockholders) to the debenture holders for depriving the latter of their investment. In a going concern, the stockholders may be deemed to benefit from the elimination or reduction of the debt effected by the redemption, and the premium may be regarded as the prearranged amount payable by them for such benefit.
>
> "But here the company does not continue as a going concern. There is no question of free choice or election. The company by virtue of congressional mandate is to terminate its existence. Power must liquidate not only its debt but its stock. The rights of debenture holders and stockholders alike to retain their respective investments, are cut off" (*The United Light & Power Company*, 10 S. E. C. 1215, 1221).

"It seems to us *a complete answer* to this argument that the termination of the investments of debenture holders and stockholders alike has been brought about by the act of a sovereign power—in this case a congressional mandate. We think the debenture holders have established no right to receive such compensation here at the expense of the stockholders, whose rights we must also consider." *The United Light & Power Co.*, 10 S. E. C. 1215, 1228. (Emphasis supplied.)

On appeal, the Second Circuit affirmed the Commission's order, holding that the doctrine of frustration of the enterprise was applicable.[23] Thereafter, this doctrine was consistently applied by the Commission and the courts in the numerous cases involving retirements of bonds and preferred stocks of holding companies required to liquidate in whole, or merely in part.[24] In virtually all these cases the securities had dividend or interest rates and an investment caliber as high or higher than those of the Engineers' preferreds. It was similarly contended that by reason of the prevailing low money rates these securities would have a "value" in excess of their par or stated amount if they had been permitted to remain outstanding; indeed, many had actually been selling at substantial premiums. It was found, however, "a complete answer" that the retirement of the securities was compelled "by Act of the Sovereign", and that the asserted deprivations were "consequential".[25]

---

[23] *New York Trust Co.* v. *S. E. C.*, 131 F. 2d 274, cert. den. 318 U. S. 786, rehearing den. 319 U. S. 781.

[24] Not less than four different Circuit Courts of Appeals and many District Courts have passed on the question and have uniformly held the premiums not payable; the cases are collated at note 21 (p. 21) of our cross-petition.

[25] Cf. *The United Light & Power Co.*, 10 S. E. C. 1215 (quoted *supra*); *New York Trust Co. v. S. E. C.*, *supra*. See also the decision of Judge Leahy approving and enforcing the Commission's decision in *Consolidated Electric & Gas Co.*, 55 F. Supp. 211, 215.

Nor can it be urged that the validity of these decisions was in any way affected by the *Otis* decision, since two of the non-premium decisions are there cited with approval (323 U. S. 624, 638), and many non-premium decisions have been rendered by the Commission and the Courts subsequent thereto.

It is a curious and anomalous circumstance that in applying the Commission's new "investment ex the Act" doctrine to require premiums to be paid to the Engineers preferreds the Commission's findings and opinions in the instant case avoided even the slightest reference to the long and deeply-rooted series of decisions discussed above. Granting *arguendo* that the Commission is not bound by the doctrine of *stare decisis* or by its consistent administrative interpretation [26] of the "fair and equitable" standard of Section 11(e) for which over a four-year period it repeatedly asked and unfailingly received full judicial approval, there remained for the Courts below at the very least (even on the basis of the restrictive "review" standard for which petitioners contend) the duty of determining whether the Commission's new "investment value ex the Act" as here applied was compatible with established legal principles and the statutory intent. The Courts' conclusions that this issue must be determined in the negative were, we submit, virtually ineluctable.

Let it be assumed for purposes of the present discussion that, contrary to our firm contention, the liquidation provisions of the Engineers charter are not "controlling" in this liquidation,[27] and indeed that they may even be ignored as completely as the Commission ignored them. The problem of what shall take place when an enterprise is frustrated by governmental action, or by other super-

---

[26] We presume that the doctrine of "consistent contemporaneous construction" is invoked only to uphold statutory interpretations by administrative agencies (Cf. *U. S.* v. *American Trucking Associations*, 310 U. S. 534, 549), but not to challenge them.

[27] As is stated more fully in our cross-petition in No. 266 (p. 27, note 31), we continue to maintain that these charter provisions are in fact controlling in respect of the type of final liquidation which both Courts below have found has here taken place; that the pertinent provisions of the Engineers charter are significantly different from those considered in *Otis* and are wholly applicable to this liquidation; that their overriding is not reasonably necessary to the effectuation of the fundamental Congressional objectives in enacting the Statute, and is violative of the Fifth Amendment of the Constitution.

vening events not contemplated by the parties, had been the subject of searching inquiry and repeated adjudication in the courts for decades prior to passage of the Holding Company Act.[28] The essence of these adjudications has been authoritatively formulated as follows:

> "Since there is no fault on either side, the loss due to impossibility or frustration must lie where it falls. *Neither party can be compelled to pay for the other's disappointed expectations.*"[29] (Emphasis supplied.)

The Commission's new doctrine is the very antithesis of this principle, for it holds that the common stockholders must compensate the senior security holders for the future deprivation of the high dividend rate which the latter have been receiving, even though admittedly this termination is caused wholly and directly by an Act of Congress passed to "effectuate an overriding public policy" (*Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 637). It is not disputed that as of the moment of liquidation the preferred stockholders had received every dollar of dividends at the full rate stipulated in the charter, and that the cash payment of $100 per share returned to such holders the *maximum* amount which they or their predecessors had paid into the enterprise.[30] But it is contended (and the Commission

---

[28] See 6 *Williston on Contracts* (Revised Edition, 1938), Section 1938 *et seq.*

[29] American Law Institute, *Restatement of the Law of Contracts*, Section 468 (comment on sub-section 3, p. 887).

More than forty years before enactment of the statute, the doctrine of frustration of the enterprise had been held determinative of the rights of stockholders of a corporation dissolved by compulsion of law (*Lorillard* v. *Clyde*, 142 N. Y. 446); and as has been indicated above, from the time of the earliest cases under the Holding Company Act the Commission and the courts recognized the applicability of this doctrine.

[30] Two of the issues were sold to the public at the time of issuance for $100 per share, and the third at $99.50 per share, although the company actually received on the average something less than $96 per share for all three issues. The $5 series carried the privilege of conversion until 1938 into common stock, a feature which

held) that simply because the preferred stockholders upon reinvestment in allegedly comparable preferred stocks might henceforth receive dividends at a somewhat lower rate based on the then current money rates, the common stockholders must *indemnify* the preferred for the future deprivation of their more desirable dividend rate despite the fact that this deprivation was compelled by the very federal statute which had also decreed liquidation of the entire enterprise and mandatory termination of the investments of all stockholders. Such a contention does not seem to us, any more than it did to the Courts below,[31] to rest on

---

obviously had substantial value independently of the preferred (large amounts of this stock were converted into common at an average price of $52 per share in 1928-1929, a period where the common sold as high as $79¾). The $5.50 series (sold to the public at $99.50 per share) carried a warrant giving the holder a "call" on common stock over a 10-year period (District Court Finding No. 22, R. 301a). It is thus evident that in paying approximately $100 the original purchasers of these stocks were paying something *less* than $100 for the stock alone, since the conversion features and warrants had substantial value in their own right.

As to those who purchased subsequent to the initial issue, it is to be noted that the market price of all three issues from date of issuance until virtually the date of retirement ranged between $63-67, *averaged over the entire period* (Commission's opinion, R. 62a-63a). The record establishes that turnover during the period of depressed prices (particularly during the years when the preferreds were selling in the range of $10-$15 per share) was extremely heavy. Over the entire period, the turnover ratio of the $5 series was 335%; of the $5.50 series, 215%; of the $6 series, 195% (see Engineers Exs. 26-28, R. 1391a-1393a).

[31] "The preferred stockholders will receive every dollar which the common contracted to pay them, with the result that the preferred will have gotten back approximately $190 for every $100 which they, or their predecessors, initially invested in the enterprise. *But fairness and equity do not require that the preferred stockholders be paid an additional $3,200,000 for the theoretical future deprivation of their excessive dividend rate* * * *. In short, there is no reason why the preferreds should get additional compensation for the termination of the lucrative dividend rate which the preferreds have received, when the termination results wholly and directly

a foundation which is either legal, equitable or rational in any valid sense.

(2) These deficiencies are all the more apparent when it is considered that the asserted deprivation of the preferreds' "valuable" dividend rate was at best "theoretical", as Judge Leahy stated (note 31, *supra*), and in actual fact wholly *illusory*. For the "investment value ex the Act", determined by the preferreds' witness Badger and adopted by the Commission, not only did not represent values "apart from the Act" (since they depended upon and reflected such vital "Act" factors as the large retained earnings withheld from the common holders to provide for this liquidation required by the statute, as the Courts found,[32]) but neither were they in any legitimate connotation "*investment*" values at all.

Although this Court has cogently warned that "value is a word of many meanings",[33] it is difficult to conceive of a term less apt than that of "investment value" to characterize the results reached by the "valuation" process on

---

from frustration of the enterprise by governmental edict" (District Court opinion, R. 291a; emphasis supplied).

Cf. Circuit Court opinion (R. 36):

"Under the plan the common stock is excluded from the holding company enterprise as effectively as are the preferred for the common under the plan will receive participation only in operating companies. *The fact is that the enterprise is at an end both for preferreds and common.* The Commission apparently has disregarded this fact which supplies the substantial differences between the instant case and the United Light & Power Company reorganization" (emphasis supplied).

[32] District Court (R. 306a, 469a-481a), Cf. Circuit Court (R. 37):

"The difficulty with the Commission's position in this connection * * * lies in the fact that while it has attempted to appraise the preferreds (as distinguished from the common) *ex* the Act, its basis for valuation, insofar as it has composed one, lies in factors which have come to existence because of the impact of the Act."

[33] Douglas, J., in *Group of Investors* v. *Milwaukee R. R.*, 318 U. S. 523, 540.

which the Commission here relied. That valuation process established nothing more than the fact that by reason of the unprecedentedly low money rates then prevailing as compared with the relatively high dividend rates which inferior grade holding company preferred stocks (such as Engineers admittedly were) have always necessarily borne, such stocks were momentarily selling at market prices in excess of their par or face amount.[34] Continuance of such market prices for any period in the future would depend predominantly upon the future level of basic money rates and yields for inferior grade preferred stocks of this type. The record of the proceedings before the Commission establishes that time and again witnesses emphasized that the then prevailing money rates primarily reflected artificial factors such as the Government's "pegging operations" which were subject to drastic revision at any time and ultimate abandonment; that the current stock market prices stood at post-war "boom" levels which could not be expected to prevail indefinitely, and especially so in the case of inferior grade preferred stocks such as those of Engineers; and that the future course of earnings of the system if permitted to remain in existence was fraught with many factors of a potentially adverse character. Finally it was emphasized that whereas developments of a favorable nature could not possibly enhance the "value" of the Engineers preferreds beyond the redemption prices, which imposed an absolute ceiling, unfavorable developments in any one of the elements above discussed would inevitably produce a decline in market price, the extent of which could be very large indeed, as the past history of the

[34] Thus, to the extent that Badger's report considered the investment characteristics of the Engineers preferreds, it showed them to be at best a low "medium grade" holding company preferred. But inasmuch as other inferior grade preferreds were currently selling at prices above par, Badger concluded that the Engineers preferreds would have a comparable market value as of that time (May, 1946). He acknowledged that such prices reflected primarily the unprecedentedly low money rates, which, in his opinion, were "permanent" (R. 1054a-1068a, 1085a-1086a). The sharp changes in money rates and preferred yields commenced shortly thereafter.

Engineers preferreds demonstrated (R. 522a-525a, 661a-674a, 1133a-1140a).[35]

The Commission completely ignored this testimony, and made no finding whatever either as to the future course of earnings or of money rates and yields relative to the Engineers preferreds if permitted to remain outstanding. Scarcely was the ink dry on the Commission's decision when market prices broke sharply, the "pegs" were lowered on Government securities, and interest rates and preferred stock yields commenced the sharp upward climb still in progress, and which has already reduced to below $100 the value the Engineers preferreds would have if outstanding (R. 122). Thus, while insisting that values must be determined "as though in a continuing enterprise" and "apart from the necessity for liquidation", the Commission *actually* valued the preferred stocks merely at the amount of their hypothetical market prices as of an assumed liquidation date. This paradoxical result not only demonstrates how misleading is the term "investment value ex the Act" to characterize the "values" determined for the Engineers preferreds, but also underscores the treacherous nature of the Commission's entire fictional doctrine. For the Commission was necessarily aware that if the Engineers plan related to the mere reorganization of a continuing enterprise, then values must be determined prospectively on a going-concern basis;[36] but although professing to adopt the fiction of a going concern *apart* from the neces-

---

[35] As has been indicated, the Engineers preferreds sold as low as $10-$14 per share for all series during the depression years, and as recently as 1942 sold at $40-$47 per share (R. 1391a-1393a).

[36] Cf. *Consolidated Rock Products Co.* v. *Dubois*, 312 U. S. 510, 526; *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 565-6; *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 632.

In other decisions the Commission has expressly recognized that values for reorganization purposes must be determined prospectively, and has rejected market values as a criterion. Thus in *Washington Ry. and Electric Co.*, Holding Company Act Release No. 7410 (May 1947), the Commission stated (p. 27): "However, we have never considered market values as determinative of the fairness of a Section 11(e) plan."

sity of liquidation, to the extent that it attempted to determine values (an attempt which was limited solely to the preferred stocks) the Commission contented itself with attempting to determine merely market values as of a particular moment preceding the final and complete liquidation which it recognized was in fact actually taking place.

B. Neither "the strict priority principle" nor the *Otis* decision furnish support for the Commission's rationale in the instant case.

(1) Petitioner's efforts to masquerade the Commission's "investment value ex the Act" doctrine in the guise of the strict priority principle and the *Otis* decision cannot withstand examination. *The strict priority principle is not at issue in this case.* From the outset, Engineers' plan by its very terms provided that the preferred stockholders would receive full payment of their entire claim in cash before the common stockholders would receive any participation. The basic issue at all times was the *amount* of that claim, and the mode of its determination. The Commission's view that the preferred stockholders should receive $3,200,000 in excess of the liquidation claim specified in the corporate charter surely finds no support in the bankruptcy and equity reorganization decisions which have enunciated the strict priority principle, since in such decisions the amount of the priority is invariably determined solely by reference to the contract provisions as embodied in charter or indenture. We are aware of no decisions, and Petitioners have referred to none, where it has been held that senior security holders in equity or bankruptcy reorganizations may validly receive amounts *in excess* of their contract claims.[37] By contrast, numerous are the

[37] Cf. Judge L. Hand, in *Knight* v. *Wertheim & Co.*: "We cannot agree that the debenture holders had as yet any legally protected interest in the property *beyond the principal and accrued interest of their bonds* which could be weighed against the shareholders' interest.

decisions holding that preferred stockholders are not entitled to receive their full liquidation claim where the reorganization takes the form of a merger or consolidation.[38] In *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, this Court, with specific reference to "the devices of merger or consolidation" (p. 637), held that the mere reorganization and simplification of the *continuing* United Light holding company system proposed by the plan there under review would not be permitted to "mature" liquidation preferences merely because such reorganization had "as an incident to it the dissolution of *one company in a holding company system*".[39] To have permitted the preferred holders to demand immediate payment of their liquidation preference of $164 per share would have wiped out completely the common stockholders who concededly had a measurable interest in the continuing holding company enterprise, and would have bestowed a "windfall" on the preferred at the expense of the common.[40] Clearly this decision, which was expressly limited to the "narrow legal point" there involved,[41] furnishes no support for the contention that even

---

If in fact they had relied upon sharing in an equity in the property above that amount, it was without warrant of law and constituted no reason for depriving the shareholders of whatever chance might remain of realizing upon their property." 158 F. 2d 838, 843; *cert. den. sub nom. McGuire* v. *Equitable Office Bldg. Corp.*, 331 U. S. 818. (Emphasis supplied.)

[38] Cf. *Chicago Corp.* v. *Munds*, 172 Atl. 452; *Root* v. *York Corp.*, 50 Atl. 2d 52; *American General Corp.* v. *Camp*, 190 Atl. 225, 230. In the decision last named, it was squarely held that premiums were not payable; and in *Matter of Fulton*, 257 N. Y. 487, the New York Court of Appeals reduced to $100 (the par value) the only instance disclosed by our research of an award in excess thereof.

[39] 323 U. S. 637. (Emphasis supplied.)

[40] "Enforcement of an overriding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders. * * * We must assume that Congress intended to exercise its power with the least possible harm to citizens" (323 U. S. 624, 637-8; emphasis supplied).

[41] 323 U. S. 624, 625.

in the case of simplification of a continuing enterprise in which retirement of preferred stocks is held necessary to comply with the Act, the preferred stockholders may demand cash payment not only of *the full matured liquidation claim* but also of substantial additional amounts.

But, above all, the *Otis* decision reflects the determination of this Court and the Courts below (the very ones which also passed on the case at bar) [42] to cut through surface technicalities and pierce to the substantive realities of the question. The very essence of the *Otis* decisions in all three Courts was the refusal to apply *liquidation* standards to a mere *simplification* and *reorganization* of a continuing holding company system.[43]. The Court's recent decision in *Schwabacher* v. *U. S.* was a reaffirmation of that same insistence upon dealing with realities by refusing to hold that matured liquidation claims were the measure of dissenting stockholders' rights in a *continuing* railroad enter-

---

[42] Judge Leahy's opinion in the *United Light & Power (Otis)* case is reported at 51 F. Supp. 217, and that of the Circuit Court (per Judge Biggs) at 142 F. 2d 411.

[43] The Commission's brief in this Court in the *Otis* case strongly emphasized that a mere reorganization of a continuing holding company system was there involved, stating (p. 71):

> "Finally, in no realistic sense is there occurring *in this case* a dissolution of a business enterprise which should call for the application of a charter liquidation provision. As the opinion of the majority of the Commission discloses, the preferred and common stockholders of power have been the residual co-owners of a vast public-utility system controlled through Power, the top holding company, and Railways its principal *subholding company subsidiary*. These stockholders will continue to remain the residual owners *of the same public utility system.* * * * *In essence therefore, while Power is being dissolved the enterprise is not.*" (Emphasis supplied.)

Similarly, Professor Dodd, whose article is referred to in the majority opinion of this Court (p. 630) had repeatedly stressed the mere simplification of a continuing holding company system involved in the *United Light* case. Dodd, *Holding Company Act Recapitalizations* (1944), 57 Harv. L. Rev. 295, 308, 313.

prise augmented by merger.[44] Yet here Petitioners seek to rely on these decisions for justification in applying wholly *fictional* (and erroneous, as has been shown) *reorganization* standards to an incontestably authentic and final *liquidation*.

This Court's opinion in the *Otis* case pointed out (323 U. S. 632) that the Commission's findings there had correctly recognized and treated the United Light system as a continuing enterprise, had carefully estimated the system's future earning power, had determined that in approximately fifteen years the preferreds' dividend arrears would be entirely eliminated, and the common holders would thereafter have an interest of $2,858,000 annually in the earnings of the continuing system; and had embodied the respective claims of the preferred and common stockholders, as thus evaluated, in an allocation formula.[45] It is plain on its face that this process could have no valid application to the complete and final liquidation of the entire enterprise, as the Commission recognized in the instant case by not attempting to estimate future earning power or to evaluate the interests of the two classes of stockholders. Yet the Commission now asserts that the *Otis* decision requires the rights of the stockholders to be measured "as though the enterprise continues" *irrespec-*

---

[44] "*Since the federal law clearly contemplates merger as a step in continuing the enterprise* it follows that what Michigan law might give these dissenters on *a winding up or liquidation* is irrelevant except insofar as it may be reflected in current values for which they are entitled to an equivalent. It would be inconsistent to allow state law to apply a liquidation basis to what federal law designates as a basis for continued public service" (*Schwabacher* v. *U. S.*, 334 U. S. 182, 200, emphasis supplied).

[45] It can be mathematically demonstrated that if the formula used in the *Otis* case to determine the respective rights of the preferred and common stockholders had been employed by the Commission in the instant case, the Engineers preferred stockholders would have received portfolio securities having a cash value of approximately $75 per share of preferred instead of the $100 cash actually paid to them.

tive of the fact that it does not;[46] and it further asserts that after measuring the rights of the preferred stockholders on this concededly fictional basis it need go no further because the common holders are merely entitled to receive whatever remains, *if anything*.

The cold, grim reality which confronts the common stockholders once the preferred have been generously treated on this fictional basis was recognized by both Courts below. In the instant case the existence of the redemption provision served to limit to $3,200,000 the premiums which the common holders were required to pay to the preferreds on this fictional hypothesis. But if the Engineers' preferreds were non-callable senior securities (such as are not unusual among utility holding companies),

---

[46] It may be noted that certain of Petitioners apparently now seek to argue that the Engineers enterprise has not terminated because as an incident to the liquidation common stocks of three operating companies still owned by the holding company were distributed as a liquidating dividend to the Engineers common stockholders (for one of which the common stockholders paid $22,000,000 in cash). But, as this Court has had occasion to emphasize, a holding company is much more than a portfolio of securities: "North American is more than a mere investor in its subsidiaries" (*The North American Co. v. S. E. C.*, 327 U. S. 686, 701). It is axiomatic that the very essence of the holding company enterprise is concentrated control, accompanied by pyramiding and leverage (Cf. *American Power & Light Co. v. S. E. C.*, 329 U. S. 90). The dissolution of Engineers has wiped out all these along with the system, as concurrent findings of both Courts below establish.

Distribution of portfolio assets as a liquidating dividend is, of course, a normal incident of many corporate liquidations, and is in no sense distinguishable from total sale of the assets for cash and distribution of the latter. In fact, sales for cash were made by Engineers of virtually all of its assets other than the stock of these last three companies (as has been stated, the system comprised 17 electric, gas and transportation companies, in addition to holding companies, at the time the Act was passed). The substantial volume of sales on the Stock Exchange since the stocks of the three remaining subsidiaries were distributed establishes that many common stockholders have sold their stocks to obtain cash. Per contra, preferred holders who considered these stocks desirable, have been and are, in a position to purchase them freely on the Stock Exchange with the cash paid to them on retirement of the preferreds.

approximately $5,000,000 would have had to be paid on the basis of Badger's determination. And if a holding company has outstanding, as many do, bonds and several issues of non-callable preferred stocks, it is evident that virtually the entire equity of the common stockholders could be siphoned off in payment of the so-called "investment value" of the senior securities. In this way *little or nothing* might be left for common stocks possessed of substantial intrinsic value on both an asset and earning-power basis which, under all recognized reorganization principles, would ensure them large participations.

As Judge Leahy pointed out, such a doctrine is the *very antithesis* of the basic principle enunciated in the *Otis* decision, that "enforcement of an overriding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders" (323 U. S. 637).[47] The Circuit Court fully agreed that the Commission's one-sided fictional approach failed to achieve that "equitable" equivalence of the rights surrendered which is of the very essence of the *Otis* decision; but the Court bent over backwards to ensure the Commission virtually *untrammeled latitude* in the choice of techniques, so long as they are employed consistently and in a manner calculated to produce an equitable result.[48]

---

[47] "The argument for payment of the premium is comparable to dealing cards off the top of a deck. When full hands (based on theoretical 'investment value') have been dealt to all the senior security holders, the common would merely get whatever happens to remain. Under the Act the interest of all investors must be considered. An emphasis on a preferred's rights must not slight the interests of the common. For if this occurs this is the direct opposite of the arguments utilized in United Light & Power *, * *" (R. 291a).

[48] "The selection of possible though varying techniques is for the Commission in the exercise of its expert administrative judgment. But whatever technique is chosen it must be employed consistently throughout the entire operation of valuation. We do not say the Commission must approach the problem of valuation *intra* the Act or *ex* the Act as the Commission purports to have done in the instant

Surely no Court could have gone further in yielding deference to the principle of administrative discretion, short of complete judicial abdication.

(2) In an effort to deflect attention from the palpable windfall which the Commission's decision bestowed upon the preferred holders at the expense of the common in contravention of the principles of the *Otis* case, Petitioners infer there are countervailing "economic benefits" which the common stockholders derived as the result of the forced retirement of the preferred.[49] The only basis suggested for this contention is a sentence in the Commission's opinion to the effect that "the retirement of the preferred stock will be of immediate benefit to the common stockholders" (R. 69a), a sentence which illuminates further the inconsistencies and paradoxes flowing from the Commission's fictional doctrine. For, examination of the context in which this statement appears makes it incontrovertibly plain that the Commission merely recognized that the impact of Section 11 on Engineers had been so severe, and the degree of governmental frustration of the enterprise so great, that the preferred stock had been transformed *as the result of the Act* into a burden for the common stockholders, instead of the valuable advantage it had formerly constituted and would at present constitute if not for the Act.[50]

---

case. Either course consistently followed, could, we think, lead to just and appropriate valuations. No particular specific approach is to be nailed to the Commission's head. The Commission must, however, approach the problem of valuation with a full view of all the pertinent factors employing the same scales and the same measure throughout" (R. 37).

[49] Cf. Commission Petition, pp. 6, 17.

[50] The Commission's own words foreclose argument on this point. It stated (R. 59a):

> "The reduction of the Engineers holding company system from its previous size and diversity to a single operating company necessitates a commensurate contraction of its financial structure. Engineers' outstanding preferred instead of providing valuable leverage for the common, has become a burden."

Even in the face of the sacrifices and partial liquidation imposed on Engineers during the decade following passage of the Act, it would still have been highly advantageous to the common stockholders if they had been permitted to retain their enterprise alive and to continue the preferred stock outstanding.[51] But again the Act intervened to impose upon them the further and final requirement—the complete dissolution of the remainder of the enterprise. Under these circumstances, to refer to the "benefits" conferred by the Act upon the common by reason of the retirement of the preferred stock which the Act alone had transformed from a valuable asset into a burden (as the Commission itself stated) at best partakes of the character of an "exercise in semantics", as Judge Leahy aptly observed. [52]

IV. PETITIONERS' CONTENTIONS THAT THE COURT BELOW REQUIRED LOSSES TO BE "COMPUTED" AND "SHIFTED TO THE PREFERRED STOCKHOLDERS" ARE DEVOID OF MERIT.

Petitioners' contentions that the Commission is required by the opinions of the Court below to "compute" the losses sustained by Engineers in complying with the Commission's divestment orders and to "shift" such losses to the preferred stockholders [53] is a palpable misconstruction of

---

[51] Many sound utility operating company stocks can be purchased at a price equal to 8 times current earnings, or equivalent to approximately 12½% on cost. If not for the Act, Engineers' common holders would have been free to retain the capital of the preferred holders without any limitations of time at an overall cost of approximately 5.40%, while realizing some 12½% upon this capital; or in the alternative, the common stockholders had the option of calling the preferred stock and replacing it with preferred carrying an even lower dividend rate (cf. Judge Leahy's finding, R. 311a-312a).

[52] R. 311a; quoted *in extenso* at p. 25 (note 27) of our cross-petition in No. 266.

[53] Commission Petition, p. 19; Streeter Petition, p. 35; Home Insurance Petition, p. 12.

the Court's holding on this subject. Since it was the theory of the Commission that the preferred stockholders were entitled to receive premiums based on valuations "*ex* the Act", it was unquestionably pertinent to point out that for more than ten years there *had been* such an Act, and that the common stockholders had sustained many losses and deprivations in the process of complying with it. No suggestion was made that the preferred stockholders should share these losses and deprivations, but merely that they should not be permitted to impose additional ones by demanding payment of a $3,200,000 bonus on the theory that the existence of the Act and its requirement for complete liquidation should now be ignored.

The record establishes, and the Courts found, that for the common stockholders the Act had been an unblinkable reality indeed. Yet the common stockholders had at all times safeguarded the preferred against the slightest loss, and had met their obligations to the preferred meticulously and promptly, except for a short period of dividend arrears, which was quickly thereafter compensated. In consequence, the preferred stockholders have been paid every dollar promised to them, and have received in the aggregate approximately $190 for every $100 (or less) which they or their predecessors invested in the enterprise.[54] But when it was contended that "fairness and equity" require that the contract limitations be disregarded and that the preferred stockholders be paid an additional $3,200,000 for the theoretical *future* deprivation of their lucrative dividend rate, surely it was relevant on the basis of every equitable consideration for courts of equity to insist that some consideration also be given *at this stage* to the deprivations of the common. When courts are urged to

[54] R. 303a. The common stockholders, on the other hand, after having gone without any dividends continuously for some 16 years, realized in the liquidation an amount barely approximating the average sum actually received by the Company for the common stock, and equal to only 40% of the prices paid by common stockholders who purchased at the market high in pre-depression years (R. 305a).

disregard contractual limitations in order to reach results alleged to be *more equitable*, they can scarcely be asked to function with one eye blindfolded and the other half shut. Only recently Mr. Justice Murphy had occasion to emphasize this principle in the context of a corporate reorganization, stating, "*Equity looks in all directions.* Only in that way can the various interests in the corporate community be adequately protected." [55]

In like manner, courts of equity could not countenance the appropriation for the benefit of the preferred, in valuing them allegedly *ex* the Act, of the more than $24,000,000 of earnings which accrued to the equity of the common stockholders and were left in the enterprise in order to provide for the liquidation compelled by this very Act.[56] These earnings of the common stockholders thus having accrued while Engineers was in effect in *custodia legis*, it would be even less fair and equitable to add them to the "value" of the preferred stocks upon which the common stockholders are then required to pay premiums than was the claim for double interest which was disallowed in *Vanston Bondholder's Committee* v. *Green*, where Mr. Justice Black stated for the Court: "Such a result is not consistent with equitable principles." [57]

Petitioners' arguments that the Commission is required to undertake the onerous task of "computing" losses and "reconstructing the enterprise" rest upon an overly ingenuous interpretation of the Circuit Court's language. The Court did *not* state that such items must be "computed", but merely that they must be "*weighed into the calculation*"; a phrase which, along with the term "bookkeeping", was obviously intended figuratively and not

---

[55] *Comstock* v. *Group of Institutional Investors*, 335 U. S. 211, 238. (Emphasis supplied.)

[56] District Court Findings Nos. 34, 35, 36, 47 (R. 306a, 307a, 312a). Cf. Circuit Court Opinion (R. 37).

[57] 329 U. S. 156, 167.

literally.[58] It is thus evident that the Court had no intention of insisting upon the exact ascertainment and computation of each loss sustained by Engineers, but merely upon giving reasonable consideration to the fact that such losses (without necessity for precise computation) had been sustained. Moreover, the Court emphasized that even this relatively simple task was not mandatory upon the Commission unless it elected to determine values "ex the impact of the Act"; in such event, the Court held,[59] logic and consistency would be violated if the Commission took into consideration in valuing only *the senior securities* "ex the impact of the Act", favorable factors created by the deprivations and sacrifices imposed upon the common stockholders by this very same Act.

It is particularly significant, in the light of Petitioners' plaints as to the legal irrelevance and administrative impracticability of according consideration to such factors as the issue price, past market history and low investment rating of the preferreds that for a period of some five years the Commission's decisions consistently accorded such factors detailed consideration; indeed, they accorded such factors virtually controlling weight.[60] Nor is there room for an argument that these decisions were superseded by the *Otis* decisions, since many of them were issued by the Commission subsequently. Thus, for example, in the *Interstate Power Company* decision, submitted to Judge Leahy for enforcement only a few weeks prior to the *Engineers* plan, the Commission held that owners of *first mortgage 5% bonds* of a public utility operating company were entitled to receive only the par value, *notwithstand-*

---

[58] "* * * if the equitable equivalents for relinquished securities are to be arrived at by the Commission under the doctrine of the *Otis & Co.* case, ex the Act, losses of the sort referred to in this paragraph must *be weighed into the calculation*, i.e., such losses should be returned to the credit side of the enterprise's balance sheet as a matter of bookkeeping" (R. 37; emphasis supplied).

[59] See note 48, *supra*.

[60] See the non-premium decisions discussed *supra*, pp. 17-19.

ing that the bonds had been selling at a premium of 3½ points above par, the Commission stating:

> "The bonds were originally sold to the public in 1927, 1928 and 1931 at prices of 97½, 96 and 93 respectively. During most of the years since issuance, the bonds have sold on the market at prices substantially less than par; indeed the bonds never sold as high as par until 1945. In 1937 the bonds sold as low as 32; and as recently as 1940 they sold at a low of 51½. At original issuance and sale of the bonds in 1927, a rating A was assigned them by *Moody's Investors Service,* Standard Statistics rated them B1+. In following years, both ratings were successively lowered to a Moody's rating of B in 1938, and all subsequent years, and a Standard's rating of C1+ in 1940 and all subsequent years." [61]

Yet *the very same factors* pointing to an *even more speculative caliber for the Engineers preferreds* [62] were wholly

---

[61] *Interstate Power Company,* Holding Company Act Release No. 7143 (Jan., 1947), approved and enforced 71 F. Supp. 164 (D. C., Del., 1947); cf. also recent decisions in *Republic Service Company,* Holding Company Act Release No. 8170 (April 30, 1948) and *Lehigh Valley Transit Company,* Holding Company Act Release No. 8445 (August 18, 1948), in which the Commission held that payment of par without premiums was fair and equitable to debenture holders, emphasizing their past market history and original issue prices and deeming irrelevant the 9 point premium at which the *Lehigh* bonds had sold in recent years.

[62] Thus, in order to sell the Engineers $5 and $5.50 preferreds in 1928 at prices comparable to those of the Interstate Bonds, it was necessary to attach warrants and conversion rights (since expired) having a substantial independent value. The Interstate Bonds were never in default of interest; the Engineers preferreds were in arrears of dividends over a period of four years, during most of which the dividends were not even earned. The Engineers preferreds sold as low as $10 per share in 1933, as low as $14 per share in 1935; and as recently as 1942 sold as low as $40-$47 per share (R. 1391a-1393a). They never attained par until 1944, when large scale market purchases by Engineers forced them up. Standard & Poor's Investment Service rated them C** at the end of 1944 (the last year in which it rated preferred stocks), which rating was defined as "Preferred stocks with erratic dividend records, and which can be expected to make payments only under favorable conditions" (R. 1844a).

ignored by the Commission in its decision; and Petitioners now seek to contend that the Courts below have imposed upon the Commission a legally irrelevant and administratively onerous task in requiring such factors to be considered.

CONCLUSION

The sharp upward revisions which have taken place in interest rates and preferred stock yields subsequent to the date of the testimony relied upon by the Commission in determining the so-called "investment value" of the Engineers preferred stocks foreclose the possibility that any amounts may be found payable, beyond those already paid, pursuant to the decree of the District Court, even if Petitioners were to be upheld in their contentions that the Commission's rationale was valid and the holdings of the Court below were wrong on every issue. However, the Circuit Court's decision was entirely correct on the merits, for all the reasons hereinabove stated, except in requiring the remand to the Commission. By reason of the remand, there is as yet no final determination of basic issues or of the rights of the parties.

The petitions for certiorari should be denied. If, however, the Court concludes otherwise, our cross-petition (No. 266) should also be granted.

Dated: September 20, 1948.

APPENDIX

Sections 11(e) and 24(a) of the Public Utility Holding Company Act of 1935, 49 Stat. 803, 15 U. S. C. 79a et seq. provide as follows:

"SECTION 11(e): In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed."

"SECTION 24(a): Any person or party aggrieved by an order issued by the Commission under this title may

obtain a review of such order in the circuit court of appeals of the United States within any circuit wherein such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the entry of such order, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall be forthwith served upon any member of the Commission, or upon any officer thereof designated by the Commission for that purpose, and thereupon the Commission shall certify and file in the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do. The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the Court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which, if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court affirming, modifying, or setting aside, in whole or in part, any such order of the Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347)."

MEMORANDUM OF RESPONDENTS LUCILLE WHITE AND FRANCES BOEHM IN OPPOSITION TO THE APPELLANTS' PETITIONS FOR WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT.

Opinions Below

The opinion and judgment of the court below (R. 12) and the opinion denying petitions and cross-petitions for rehearing (R. 138) are reported at 168 F. 2nd 722. The opinion of the District Court is reported at 71 F. Supp. 797 (R. 283a). The findings and opinions of the Commission dated December 4, 1946, and January 8, 1947, have not yet been officially reported but are set forth in the Commission's Holding Company Act Release Nos. 7041 (R. 25a) and 7119 (R. 128a).

Questions Presented

1. In connection with the final liquidation of a holding company compelled by the Public Utility Holding Company Act, was the District Court under Section 11(e) of the Act required to approve as "fair and equitable" mandatory payment by the common stockholders to the preferred stockholders of $3,200,000 in excess of the latter's charter and book claim on the ground that the alleged theoretical market value of the preferred stocks at the time when certain so-called "expert" testimony was given concerning such value "absent the Holding Company Act" was the correct and sole criterion for measuring the claims of such stockholders?

2. Was the District Court, in performing its affirmative and independent duty to consider and find whether a proposed plan which has been approved by the Securities and Exchange Commission is fair and equitable, required to accept as conclusive of the rights of all security holders in a final liquidation a finding by the Commission of the "value" of the preferred stocks based merely on their alleged hypothetical market value as of the time of the giving of the aforesaid testimony "apart from the impact of liquidation under Section 11", or was the District Court justified in finding on the basis of the undisputed evidence in the record before the Commission that $100 per share plus accrued dividends was the equitable equivalent of the rights surrendered by the preferred stockholders?

3. Did the Circuit Court of Appeals properly affirm the determination of the District Court in its finding that the payment of $3,200,000 to the preferred stockholders in excess of the latter's charter and book claim was not "fair and equitable"; and that the alleged "investment value" of the preferred stock "absent the Act" was not the sole test in determining the equitable equivalent of the rights surrendered by the preferred stockholders?

Statement

Prior to the adoption of the Public Utility Holding Company Act of 1935, Engineers owned and controlled approximately fifteen electric, gas and transportation companies operating throughout the United States. The Securities and Exchange Commission ordered Engineers to dispose of all its properties except the common stock of one subsidiary, Virginia Electric and Power Company.

Engineers filed a plan under Section 11(e) of the Act proposing the complete and final liquidation of Engineers and the entire holding company system. In its opinion with respect to the plan, the Commission made the following formal finding:

> "We find that the presence of Engineers would unduly complicate the structure of the system and that it would, therefore, come within the prohibition of Section 11(b)(2). Accordingly, we find that the proposal to dissolve Engineers is 'necessary' to effectuate the provisions of Section 11(b) of the Act."[1]

Notwithstanding this square finding that the liquidation was compelled by the Statute, the Commission required the plan to be amended to provide for payment to the preferred holders of the full amount to which they would have been entitled under the Charter on a *voluntary* redemption or *voluntary* liquidation.[2] The Commission rea-

---

[1] R. 48a. Chairman Caffrey, in his separate concurring opinion stated: "Engineers 'voluntary' proposal did no more than forestall the necessity for action by the Commission. * * * It is the operation of Section 11 and not mere managerial discretion that has brought about the liquidation" (R. 139a, 140a).

[2] That is, $105 per share plus accrued dividends for the $5 series and $110 per share for the $5.50 and $6.00 series. These amounts aggregate $3,200,000 in excess of the $100 per share to which the preferred stockholders are entitled in liquidation (whether whole or partial) which is not "voluntary" (See Charter, R. 1412a).

soned that the Charter provisions should be disregarded, and that the preferred holders must be paid the price at which their stock would sell on the market "ex the impact of the Act", or as though the company were not required to liquidate or dissolve.

The Commission in its opinion referred to the "value" of the preferred stock computed on the foregoing basis as the "investment value" or "fair investment value",[3] terms which are quite misleading. The Commission then went on to say that this "investment value" was not challenged, and that it was in fact "conceded" by the witnesses for the company.[4] Appellants in their briefs in this Court have similarly reiterated time and again that the values accepted by the Commission were "undisputed". Such statements draw a heavy veil over large and significant portions of the evidence contained in the record. The company witnesses did indeed agree that in the boom market then current, the preferred stocks of Engineers would probably have sold close to their redemption prices if the company were not required by Section 11 to complete its liquidation and to dissolve.

Under such circumstances, these witnesses asserted, Engineers would have taken advantage of the extraordinarily low money rates to call and redeem the preferred stocks, replacing them with others carrying a much lower dividend rate with substantial resulting benefit to the common stockholders. *But the forced liquidation of Engineers rendered such action impossible.* Moreover, they testified, on the basis of intrinsic investment qualities the Engineers preferred stocks could by no means be said to have a "fair value" equal to the redemption prices because they were essentially speculative securities which would decline sharply as soon as current "boom" economic conditions

---

[3] Commission Opinion, R. 67a.

[4] *Ibid.*

fell off. In substantiation of these views, the witnesses pointed to the past market history of these preferred stocks, and they discussed in considerable detail potential adverse economic factors which cast a dark cloud over the future of the stocks if they remained outstanding for any substantial length of time.[3]

No indication of this extensive testimony and evidence is even suggested by the Commission in its Opinion or by appellants in their briefs. The assumption by the Commission and the other appellants, therefore, that the "going concern" value of the preferred stock was at least equal to the redemption price of the stock is wholly unjustified.

When the plan was presented to the District Court for enforcement, the objecting common stockholders contended that on the basis of the foregoing factors, as well as on the basis of applicable legal principles, the Commission was not justified in requiring the common stockholders to pay to the preferred any amounts in excess of $100 per share plus accrued dividends. The legal questions before the District Court were threefold: (1) whether the charter liquidation provisions limiting the preferred holders to $100 per share plus dividends in the event of a liquidation "not voluntary" could be overridden; (2) whether, even if the charter liquidation provisions were not controlling, the long line of decisions consistently holding that amounts in excess of par value were not to be paid on senior securities retired under the impact of the Statute, were now to be reversed; (3) whether, in any event, the theoretical market value at which such senior securities might have sold at the time of liquidation, assuming that liquidation had not taken place, was the sole and conclusive criterion to be employed in measuring the claims of the senior security holders, with the junior equity holders simply taking whatever happened to remain.

---

[3] R. 522a-525a.

The District Court concluded that even if the charter liquidation provisions were not controlling, the preferred holders were not entitled to receive amounts in excess of $100 per share plus dividends on the basis of the same legal and equitable principles which had consistently led the courts for years to deny call premiums on senior securities retired pursuant to the statutory mandate. In those cases too it had been contended by the affected security holders that if they were not entitled to "premiums" as such, they should receive amounts "measured by the premiums" to compensate them for relinquishing securities bearing a dividend or interest rate in excess of the current "going rate", but the Commission and the Courts had consistently rejected such contention on the ground that the retirement was dictated by an Act of Congress over which the company and its stockholders had no control.

The District Court found no legal support for the view that the theoretical price at which the senior securities might sell had the enterprise continued, must be accepted as the controlling criterion; and it found that adoption of such a standard would be neither realistic nor equitable in its application to the final and complete liquidation of the enterprise which was here taking place. However, the Court envisaged that there might be cases in which valid equitable considerations would justify payment to preferred stockholders of amounts in excess of the par value of their securities. The District Court, as a court of equity, therefore carefully examined the record to ascertain whether any such factors were present, and concluded:

> "No special facts or circumstances in connection with the issuance of the preferred stocks or their subsequent history, or the relationships of the preferred and common stockholders, create any equitable

---

Conclusions of Law 3-8, R. 316a-317a.

considerations warranting the payment to the preferred holders of amounts in excess of $100 per share plus accrued dividends; and careful examination of all the relevant facts impels the conclusion that payment to the preferred stockholders of such excess amounts would not be warranted or justified."[1]

The Circuit Court of Appeals, after an exhaustive and thorough analysis of the Public Utility Holding Company Act and its legislative history, held that "the district court must function as an equity reorganization tribunal with the powers and functions of such a court, and not as a mere review court" (R. 30). The Court rejected the contentions of the Commission that unless the conclusions of the Commission lack rational or statutory foundation they may not be disturbed by the Section 11(e) court, or that the District Court may not reverse the Commission's decision save where the Commission has plainly abused its discretion (R. 34). The Circuit Court held that the findings and conclusions of the Commission are not binding upon the District Judge though, as was proper, he should treat them with respect. (R. 34).

The Circuit Court found that the Commission ascribed "investment value" to the preferreds but failed to make a similar approach to the common (R. 34) and that in applying the "investment value" test to the preferreds, it has misunderstood the principle of "equitable equivalents" enunciated by the Supreme Court in the *Otis & Co.* case in that investment value is and can only be one of a series of factors to be used in arriving at equitable equivalents (R. 38). The Circuit Court stated that "the new doctrine of investment value presently urged by the Com-

---

[1] Conclusions of Law No. 7, R. 316a-317a. Cf. also Opinion, R. 292a.

mission may not be substituted for the doctrine of equitable equivalents enunciated in the *Otis & Co.* decision" (R. 38) and held that the District Judge did not err when he found that the plan submitted by the Commission was unfair and inequitable (R. 39).

The Circuit Court found that the District Court erred in only one particular, *viz.*, in not remanding the record to the Commission for further and appropriate action (R. 39). The Circuit Court vacated the decree and remanded the cause with the direction to enter an order disapproving the plan as not being fair and equitable within the purview of Section 11(e) of the Act and to return the record to the Commission to the end that it may take such action as the facts and the law may require (R. 40).

Reasons for Denying the Writ

The decision of the Circuit Court of Appeals in this case is not in conflict with the case of *Otis & Co. v. S. E. C.*, 323 U. S. 624, nor with the proper application of that decision to the facts in this case.[8] No practical difficulties or administrative burdens have been created by the decision of the Court below. On the record in this case, the District Court and the Circuit Court of Appeals were justified in ruling that the plan approved by the Commission was not "fair and equitable," and that portion of the Circuit Court's opinion concerning the division of functions between the Commission and District Court is supported by legislative and judicial authority and is not in conflict with other circuit courts.

---

[8] Although respondents contend that the decision of the Circuit Court in this case is not in conflict with the *Otis* case, respondents have maintained and will maintain, if certiorari is granted, that the charter provisions in this case are controlling and that the overriding of these charter provisions is a violation of the Fifth Amendment.

In contending that the plan, as approved by it, is fair and equitable, the Commission asserts that it has applied the doctrine of equitable equivalents as enunciated by the Supreme Court in the *Otis* case. Having determined that the theoretical market value or "investment value" of the preferred stocks was at least equal to the call price, the Commission proceeded to the erroneous conclusion that the call price was the equitable equivalent of the rights surrendered by the preferred stockholders, and that whatever is left is the equitable equivalent of the rights surrendered by the common stockholders.

This error is apparent throughout the argument of the Commission. For example on page 16 of its petition, Counsel for the Commission said:

> "Thus, as the court below recognized, the problem was simply to determine just recompense (in cash) for the security which he (the preferred stockholder) would give up (R. 38). To the Commission, this meant giving to the preferred stockholder in cash the current value of his stock as ascertained from undisputed evidence."

A brief analysis makes the fallacy of the Commission's position most apparent. Having determined the so-called "investment value" of the preferred stock, it has loosely applied the language of this Court in the *Otis* case to argue that it has followed the reasoning of this Court. The *Otis* case, however, did not establish the principle that the "investment value" of a stock was necessarily its equitable equivalent.

In the *Otis* case, this Court at page 633 said:

> "We reach the conclusion that the Securities and Exchange Commission applied the correct rule of law

as to the rights of the stockholders inter sese. That is to say, when the Commission proceeds in the simplification of a holding company system; the rights of stockholders of a solvent company which is ordered by the Commission to distribute its assets among its stockholders may be evaluated on the basis of a going business and not as though a liquidation were taking place."

The Commission has erroneously interpreted this to mean that value on the basis of a going concern means "investment value". In the *Otis* case, the Commission estimated the future earning power of the system and apportioned such earning powers between the preferred and common stockholders based on their respective claims to income. In Engineers, the Commission has completely failed to apply the same standards and techniques employed by it, and approved by it in the *Otis* case.

This failure on the part of the Commission and the novelty of its new "investment value" technique were so apparent as to cause the Circuit Court to remark (R. 37):

> "In conclusion upon this point we state that in our opinion the Commission in attempting to apply the 'investment value' test to the Engineer"s preferreds, even to the limited extent hereinbefore indicated, has misunderstood the principle of 'equitable equivalents' enunciated by the Supreme Court in the *Otis & Co.* case."

And again (R. 38):

> "The new doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equitable equivalents enunciated in the *Otis & Co.* decision."

The Commission in its petition (pp. 14 and 16) has unjustifiably stated that its finding of investment value or

current market value was based upon "undisputed evidence." This finding by the Commission, however; was almost exclusively based upon the testimony of one Badger whose "study" entirely omitted any consideration of the future earning power of Engineers and its subsidiaries. Furthermore, an examination of the findings of fact by Judge Leahy[9] concerning the testimony of Badger discloses not only that the statement of "undisputed value" is without factual foundation, but also that on the factual record in this case, there is no basis for a finding that the investment value of the preferred stock exceeds $100 per share.[10]

The paramount question in both the *Otis* case and the Engineers is what is the full compensation to be paid to the preferred stockholders. It is that question which the Commission has studiously avoided by insisting that it has applied the doctrine of strict priorities. Not until this question has been determined does the question of strict, full or absolute priorities apply under the Holding Company Act. If the equitable equivalent of the rights surrendered by the preferred stockholders is at least equal to the call price, as the Commission maintains, then payment of the call price to the preferred stockholders before any payment is made to the common stockholders satisfies the doctrine of full priority. But if the equitable equivalent of the rights surrendered by the preferred stockholders does not exceed $100 per share, as found by the District Court and the Circuit Court of Appeals, then payment of $100 per share to the preferred stockholders

---

[9] R. 310a-315a.

[10] R. 38. "We conceive that the Commission could make a finding under certain circumstances that investment value was the equitable equivalent to the security holder. The Commission in the instant case, however, has not made such a finding and *we do not believe that such a finding could be supported on the present record.*" (Italics supplied.)

before any payment is made to the common stockholders satisfies the doctrine of full priority."

What the Commission has done was to substitute so-called "investment value" for "equitable equivalents". Had the Commission evaluated "investment value" as merely one factor and taken into consideration *all* of the factors necessary to be weighed to arrive at "equitable equivalents" it would have come to the same inescapable conclusion arrived at by the courts below, *viz.* that the "value" of the preferred stocks did not exceed $100 per share.[12]

The Commission further argues that the decision of the Court below requires the Commission to reconstitute the entire history of the Company since 1935 and would make the task of administering the Act one of constantly increasing difficulty. This argument is a misinterpretation of the decision of the Circuit Court; for no such task has been imposed upon the Commission.

All that the District Court and the Circuit Court of Appeals intended to hold, as is apparent from a reading of their opinions, was that the substantial sacrifices which the Engineers and its common stockholders had been required to make in order to comply with the determination of the Commission to divest themselves of subsidiaries which they would otherwise have held, should have been taken into consideration in determining the fairness of giving to the preferred stockholders their call premium,

---

[11] Note statement of the Commission in its brief to the Circuit Court of Appeals (p. 16):

"Having found that the preferred stocks had a value equal to their call prices, the Commission *then* applied the doctrine of full priority which this Court and the Supreme Court held applicable in the *Otis* case."

[12] See footnote 10, *supra*.

as though Engineers had voluntarily redeemed the preferred stock. As the District Court aptly said (R. 290a) "Further, it is unnecessary to decide whether these values (as testified by Badger) would more than offset the other factors previously considered and consequently justify the payment of a premium, for in this case this factor is neutralized and rendered impotent by several other considerations. What the plan overlooks is that this is not a one-way argument but a two-way argument. The necessity and impact of the plan which makes the preferreds give up this present enhanced value also works to the detriment of the common. In order to comply with the divestment orders, many of the assets of Engineers were sold for less than the carrying value on Engineers' books, and many of such securities thus disposed of subsequently increased in market value or capitalized earning power greatly in excess of the amounts realized by Engineers upon their sale." The Court of Appeals (R. 38) said, "In determining equitable equivalents the Commission must weigh all pertinent factors to the end that the security holder may receive as nearly as may be the equivalent of that which he is giving up. All pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached by the approach ex the Act, or the approach intra the Act. The new doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equitable equivalents enunciated in the *Otis & Co.* decision."

It is quite clear from the above extracts of the opinions of the District Court and the Circuit Court of Appeals, that the only burden which the Courts below intended to impose on the Commission, was the obligation to take into consideration the substantial losses suffered by the common stock in the compliance by Engineers with the orders of the Commission. There was no intention on

the part of the Courts below to impose on the Commission the duty to reconstitute the financial history of Engineers for a period of years and to demonstrate with mathematical accuracy the exact impact upon each class of stock of the losses sustained as a result of the divestiture orders.

It is interesting to note that in no other case has the problem of evaluating the equitable rights of the preferred and common stocks of a public utility holding company created a serious problem or insuperable burden for the Commission. If any problem has been created in this case, it is due solely to the novel theory of "investment value" now introduced for the first time by the Commission. And in introducing this new theory, the Commission has run into conflict not only with its own past decisions and the decisions of the Courts,[13] but finds, for the first time in its history, that both a District Court and a Circuit Court of Appeals have refused to accept as "fair and equitable" a plan approved by the Commission.

II

The Commission concedes that a Section 11(e) district court has the affirmative and independent duty to consider and find whether a proposed plan is fair and equitable (p. 22 of its brief). It states:

> "The Commission agrees with much of what the court below states concerning the intention of the

[13] Payment of premiums to senior security holders at the expense of the junior holders held not required in reorganization under Section 11(e) of the Act in the following cases: *New York Trust Co. v. S. E. C.*, 131 F. 2d 274 (C. C. A. 2, 1942), cert. den. 318 U. S. 786, rehearing den. 319 U. S. 781; *City National Bank & Trust Co. v. S. E. C.*, 134 F. 2d 65 (C. C. A. 7, 1943); *Massachusetts Mutual Life Insurance Co. v. S. E. C.*, 151 F. 2d 424 (C. C. A. 8, 1945), cert. den. 327 U. S. 796; *In Re Standard Gas & Electric Co.*, 151 F. 2d, 326 (C. C. A. 3, 1945).

Congress to have the Section 11(e) court function as an independent check upon the Commission's determination that a plan is fair and equitable and also that the respective roles of Commission and enforcement court should be in general similar to the relationship under Section 77 of the Bankruptcy Act between the Interstate Commerce Commission and the reorganization court. Thus, even in uncontested proceedings the Commission has consistently taken the position that the district court must be satisfied affirmatively that the plan is 'fair and equitable'."

The Commission, however, takes issue with the Circuit Court's holding that the Section 11(e) district court is not limited in its role as is a circuit court of appeals under Section 24 of the Act. The Commission states (Petition p. 21): "* * * The court below recognized that its conception of the function of the district court was in conflict with decisions of the First and Eighth Circuits in *Lahti* v. *New England Power Ass'n*, 160 F. 2d 845, 858, and *Massachusetts Mutual Life Co.* v. *S. E. C.*, 151 F. 2nd 424, 430, respectively."

In this connection, however, the Circuit Court merely said (R. 31): "That there are decided cases which *look* the other way and these are entitled to great consideration." It is perfectly apparent that neither of these cases is in actual conflict with the opinion of the Circuit Court in this case. In both the Lahti case and the Massachusetts Mutual case, *supra*, the plan had been approved by the Commission *and by the District Court*. Under these special circumstances, the review by the Circuit Court is completely different from the review by the Circuit Court in the Engineer's case where it must consider the function of the District Court *vis-a-vis* the Commission. In the Lahti and Massachusetts cases the Circuit Court was acting only as a review court and was bound by the findings of fact of both the District Court and the Commission. In

the instant case the District Court was not merely a review court but was charged by Congress, as the Commission admits, with the obligation to act "as an independent check upon the Commission's determination that a plan is fair and equitable".

It is significant that the Commission, which now urges this Court to determine the scope of the powers vested in the district court by Section 11(e) as a matter of prime importance, had practically eliminated this issue in the Circuit Court of Appeals in its petition for rehearing (p. 36) when it said:

> "We have believed and still believe that there has been no real problem in adjusting the complementary roles of the Commission and the courts so long as both apply the same consistent and determinable legal standards of fairness and equity on the same record."

The stress of appellant's arguments concerning the substantial evidence rule is based upon that portion of Section 24(a) of the Act which provides:

> "The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive."

Appellants seek to read this portion into Section 11(e) of the Act and to have it apply to the independent examination which the district court is required by Congress to make to satisfy itself as to the fairness of a plan which the Commission itself admits Congress intended "as an independent check upon the Commission's determination that a plan is fair and equitable (Petition, p. 22). But if a district court were not permitted to inquire into the facts upon which the Commission based its determination, how could it make an "independent check" or be "satisfied affirmatively" that the plan is fair and

equitable? This the Commission does not attempt to explain.

It should be pointed out, moreover, that there is no dispute involved in this case concerning the facts. The question always has been, and still is, on the facts in the record, what are the conclusions to be drawn from those facts? It was as to those conclusions that the District Court disagreed from the Commission, as it had a right and duty to do. The District Court's decision and findings, and the affirmance thereof by the Circuit Court, in no instance contravened any finding of fact of the Commission. They merely reached different conclusions as to the equitable and legal principles applicable with respect thereto, as has been recognized by the Commission.[14]

All references by appellants to the power of the District Court to receive evidence "aliunde the record",[15] are of course dicta, since no evidence was actually received by the District Court in this case, and this point is entitled to no consideration on [illegible] petition.

Conclusion

No confusion or uncertainty exists or has been created by the decision of the Circuit Court of Appeals concerning the functions of the Commission and the District Court in the enforcement of a Section 11(e) proceeding. The Circuit Court properly rejected the "investment value"

---

[14] Reply Brief of Commission in the Circuit Court of Appeals (p. 23):

"Thus, the only basis for the rejection by the District Court of the plan as approved was its disagreement with the Commission's conclusion that fairness and equity requires that the cash received by the preferred stockholders be measured by the current value of the interests surrendered. We believe that that disagreement is upon an issue of law which this Court should determine."

[15] Petition of Thomas W. Streeter, et al., p. 23.

theory of the preferred stock as the sole criterion for determining its equitable equivalent.

The petitions for a writ of certiorari to the Circuit Court of Appeals for the Third Circuit should be denied.

REPLY MEMORANDUM FOR CENTRAL-ILLINOIS SECURITIES CORPORATION AND CHRISTIAN A. JOHNSON

The Memorandum for the Securities and Exchange Commission dated October, 1948, does not oppose the granting

of our cross-petition, but takes issue with various contentions set forth therein and in our brief in opposition in Nos. 226, 227, and 243. We address ourselves briefly to certain of the Commission's arguments.

1. The Commission's Memorandum does not deny, nor could it, that the Commission's determination of the "value" of the Engineers' preferreds was based upon market prices and preferred stock yields as of the period March-May, 1946. It also concedes, as it must, an "admitted change" in market conditions since that time (Commission Memo., p. 6). But it characterizes as a "gross exaggeration" our statements that the Engineers' preferreds if still outstanding would have a present market value of not more than $90-$95 per share. It then goes on to state that the computations of the authors of the Memorandum "show an average yield at the present time of 4.82% for the securities used by Badger as a basis of his comparisons and now outstanding", as compared with the 4.6% yield estimated by Badger and accepted by the Commission. It is thus suggested that the total increase which has taken place in the yields of preferred stocks comparable with those of Engineers is somewhat less than 5%,[1] and that the Engineers' preferreds would therefore still have a market value in excess of $100 per share.

The utter incredibility of this contention is easily demonstrated. It will be noted that no documentation whatever is offered in support of these alleged "computations". In contrast, the authoritative data on which we relied for our statements as to the present value of the Engineers' preferreds is presented in clear and full detail (R. 122-3). The figures therein set forth are not subject to hypothesis or argument, for they are of such irrefutable and official char-

[1] An increase from the yield of 4.6% used by Badger to the 4.82% yield now suggested in the Commission's memorandum would represent an increase of approximately 4.8%.

acter that courts will unhesitatingly make them the subject of judicial notice.[2] The Federal Reserve Bulletin is used to establish the changes in public utility common stock prices and in bond yields, and Standard & Poor's "Trade & Securities Manual" the changes in preferred stock yields. These authorities attest that yields of "high grade" preferred stocks had increased from an average of 3.42% as of the period of Badger's testimony, to 4.12% as of the period of our petition for reargument in the Circuit Court, or an increase of approximately 21% (R. 122). This increase applied to the 4.6% yield basis claimed by Badger for the Engineers' preferreds, incontrovertibly establishes a 5.56% yield basis *at best* for the Engineers' preferreds and thus a market value of less than $100 per share (R. 122).[3]

The Commission's Memorandum (note 2, p. 7) points out that these figures are as of March, 1948, as though to suggest that they are not valid at the present time. In fact, the latest figures are even more conclusive. Standard & Poor's "Trade & Securities Manual" for September, 1948, shows that "high grade" preferred stock yields further increased from 4.12% as of March to 4.20% as of September, 1948.[4] Thus, the increase of 21% as of March has now increased to 22.8%, establishing a current yield basis for the Engineers' preferreds of not less than 5.65% as compared

---

[2] See, for example, the extent to which this Court relied upon similar official sources in *Insurance Group* v. *The Denver & Rio Grande W. R. Co.*, 329 U. S. 607, 616-619.

[3] Since the weighted average of the dividend rate on all three series of the Engineers' preferreds was slightly under 5.40% (R. 122), a yield basis in excess thereof would necessarily mean that the stocks would have a current market value of less than $100 per share. Badger had predicated his conclusion, which the Commission adopted, that the Engineers' preferreds had a value of more than $100 per share upon his opinion that they would sell on a yield basis of *less* than 5.40% (viz., 4.6%) if the Act had not required their retirement.

[4] Standard & Poor's Trade & Securities, Current Statistics Section, September, 1948, p. 27.

with the 5.56% for the earlier month. Moreover, since the Engineers' preferreds were not "high grade" preferreds but at very best "medium grade", as the Commission's Memorandum concedes (p. 6), it is axiomatic that the extent of the increase in their case must be even greater.[5] Yet, in the face of these facts, Commission Counsel in their Memorandum offer the Court the bald assertion that their own undisclosed "computations" show an increase of *less than 5%* from the 4.6% yield basis assumed by Badger and the Commission.[6]

2. We submit that these contentions of Commission Counsel serve only to strengthen our argument that review of these causes by this Court at the present time is not appropriate,[7] when important factual questions remain to be determined which may well (and we assert assuredly *will*) render the legal issues wholly academic. Commission Counsel argue in reply that their own computations establish to *their* satisfaction that the case has not yet become academic. But a factual question of this importance is not one which at this stage should turn upon bare assertions of Counsel. If the change in the value of the Engineers' preferreds is in fact less than 5% as Commission

[5] Cf. District Court Finding No. 52 (314a): "The increase in yields on low to medium grade preferreds must necessarily be even greater than the increase on high grade preferreds and high grade bonds."

[6] Not only did Badger repeatedly and emphatically affirm the *permanence* for future years of these "values" which he attributed to the Engineers' preferreds and of the then current money rates on which they were predicated (R. 2066a, 1019a, 1085a), but the *only* possibility of change which he envisaged was the possibility of the money rates and yields going *even lower* (R. 1085a-1086a). Similarly, in adopting Badger's conclusions, the Commission neither envisaged nor allowed for the possibility of any increase whatever in money rates or preferred stock yields over those current at the time of Badger's testimony.

[7] See pages 3-7 of our brief in opposition in Nos. 226, 227 and 243.

Counsel contend rather than upwards of 20% as we have urged on the basis of official records, the Court is entitled to a determination by the Commission to that effect before embarking upon the task of reviewing extensive legal issues which authoritative figures strongly indicate have become devoid of all significance. Unsupported assertions by Counsel are scarcely an adequate substitute for the expert finding which the Commission itself is entitled to make only on the record after notice and hearing.[8]

This is particularly true in the light of the crucial bearing of the changed values which are here being disputed upon the Commission's entire case. For these changes do not go to factors which are merely tangential to the legal issues involved in this case, and which may appropriately be determined subsequent to the Court's decision on the legal issues. These values go to the *very heart of the Commission's case,* and are wholly apart from the basic fallacies in the Commission's entire *rationale* pointed out by the Courts below. If we, rather than Commission Counsel, are correct in our version of the changes, the Commission's "investment value ex the Act" doctrine is stone dead of natural causes; *and this Court in now undertaking to pass upon the legal validity of that doctrine will be performing merely a post-mortem autopsy.*

3. Although the Commission argued before the District Court and the Circuit Court that there was no necessity for a remand to the Commission, Commission Counsel now assert that "we see no escape from the requirement of a remand to the Commission" (Commission Memo., p. 4). If that contention is valid, it renders denial of the petitions

[8] As we have previously pointed out (p. 5, note 4 of our brief in opposition in Nos. 226, 227, 243), the Commission itself has already formally found in another case, after consideration of the record, that preferred stock "investment values" determined as of precisely the same period as the determination of those of Engineers, have subsequently been *substantially adversely affected.*

for the writ at the present time *all the more appropriate*, in order to permit determination of the factual questions which will definitively establish that the legal issues are moot. Cf. *Republic Natural Gas Co.* v. *State of Oklahoma*, 334 U. S. 62.

Summary of Argument	23
ARGUMENT	
PART ONE	
IN A GENUINE LIQUIDATION SUCH AS TOOK PLACE HERE, THE "FAIR AND EQUITABLE" STANDARD REQUIRED THAT THE PREFERRED STOCKHOLDERS BE LIMITED TO $100 PER SHARE, PURSUANT TO THE CHARTER PROVISIONS, CONTROLLING PRECEDENTS, AND CONSTITUTIONAL LIMITATIONS	33
I. Where a genuine liquidation has taken place, as here, the "fair and equitable" standard of Section 11(e) does not permit payment to stockholders in excess of the amounts authorized by the provisions of the corporate charter specifically applicable to such liquidation	33
A. The "fair and equitable" standard of Section 11(e) is predicated upon adherence to contractual rights	34
B. The liquidation of Engineers and the retirement of the preferred stocks came squarely within the purview of those provisions of the charter limiting the preferred stockholders to payment of no more than $100 per share	37
C. Nothing either ruled or said by this Court in the *Otis* case alters the command of the "fair and equitable" standard that the contractual relationship be strictly enforced	45
II. Even if Engineers' dissolution pursuant to the Plan under consideration is deemed not to have been within the purview of the charter liquidation provisions, the "fair and equitable" standard as interpreted in a long series of Commission and Court decisions precluded the payment to the preferred stockholders of more than $100 per share	51
III. Construing the Act as the Commission has construed it—to authorize disregard of applicable charter provisions and well-established legal and equitable principles—would raise serious constitutional questions	67

Page

PART TWO

IF THE RIGHTS OF THE STOCKHOLDERS WERE TO BE VIEWED AS "IN A CONTINUING ENTERPRISE", THE COMMISSION'S "INVESTMENT VALUE EX THE ACT" DOCTRINE AS HERE APPLIED WHOLLY FAILED TO MEASURE THE EQUITABLE EQUIVALENTS OF SUCH RIGHTS. THE COMMISSION'S DOCTRINE, MOREOVER, CONTRAVENED THE STRICT PRIORITY PRINCIPLE AND WAS OTHERWISE FALLACIOUS 72

IV. The Commission did not in fact evaluate the stockholders' rights or securities on the basis of a continuing enterprise. On such basis, the preferred holders would have been entitled to no more than $100 per share, and probably less 72

A. The so-called "Investment Value" as determined by the Commission represented merely transient market value at a specific moment 73

B. The doctrine of equitable equivalents does not permit the use of a momentary market price to measure the "rights" of the preferred stockholders. On any other than a transient basis, the Engineers' preferreds could not be valued at more than $100 86

C. Application of the *Olis* formula required an examination of the correlative rights of the preferred and common stockholders. Evaluation of these correlative rights would have resulted in payment to the Engineers' preferred of less than $100 per share 98

V. The Commission's "investment value ex the Act" doctrine as applied in the instant case is repugnant to the strict priority principle and to every concept of fairness and equity 106

A. The Commission's rationale sounds the death knell of the strict priority doctrine 106

B. Impact of the "present investment value" on the equity stockholders 110

VI. The Commission's rationale was otherwise fallacious. The liquidation of Engineers entailed no "transfer of values" to the common, but only imposition of additional losses 114

A. The Commission confused "frustration" with "appropriation" 114

B. Petitioners' contention that the common stockholders derived "economic benefit" from the retirement of the preferred is frivolous 120

PART THREE

Page

THE DISTRICT COURT DID NOT EXCEED ITS STATUTORY FUNCTIONS. THERE WAS NO VALID BASIS FOR REMANDING THE PROCEEDINGS TO THE COMMISSION 124

VII. The District Court did not exceed its powers in subjecting to independent examination the Commission's conclusion that the plan was fair and equitable 124

A. Internal evidence from the Act itself 126

B. The function of the District Court in equity reorganizations and bankruptcies 129

C. Legislative history of the Act 133

D. The Commission's interpretations of the Act prior to this case 136

E. Other authorities 141

VIII. There is no valid basis for remanding this case to the Commission 148

A. Procedural Aspects 149

B. Substantive Aspects 153

SECURITIES AND EXCHANGE COMMISSION, THOMAS W. STREETER, et al., THE HOME INSURANCE CO., et al.

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT

BRIEF OF CENTRAL-ILLINOIS SECURITIES CORPORATION AND CHRISTIAN A. JOHNSON, RESPONDENTS-PETITIONERS

Opinions Below

The opinion and judgment of the Court below (R. 12) and the opinion denying petitions and cross-petitions for

rehearings (R. 138) are reported at 168 F. 2d 722. The opinion of the District Court is reported at 71 F. Supp. 797 (R. 283a), but its detailed Findings of Fact and Conclusions of Law (R. 293a-317a) are not reported. The Findings and Opinions of the Securities and Exchange Commission dated December 4, 1946 and January 8, 1947, have not yet been officially reported, but are set forth in the Commission's Holding Company Act Releases Nos. 7041 (R. 25a) and 7119 (R. 128a).

Jurisdiction

The judgment of the Court of Appeals for the Third Circuit (R. 41) was entered March 19, 1948, and its order denying petitions and cross-petitions for rehearing (R. 140) was entered June 11, 1948. Petitions and cross petitions for writs of certiorari were filed on August 16 (Nos. 226 and 227), August 24 (No. 243) and September 8, 1948 (No. 266), and granted October 25, 1948. The jurisdiction of this Court is invoked under Section 240 of the Judicial Code as amended by the Acts of February 13, 1925, and June 25, 1948 (28 U. S. C. 1254), made applicable by Section 25 of the Public Utility Holding Company Act of 1935 ("the Act"), 49 Stat. 803 (15 U. S. C. Sec. 79a et seq.).

Statute Involved

The provisions of Section 11(e) of the Act, the statutory provision directly applicable here, are set forth in Appendix A, *infra*, pp. 159-165, together with the pertinent provisions of other sections of the Act referred to in this brief.

Questions Presented

1. Whether the "fair and equitable" standard contained in Section 11(e) of the Act authorized the Securities and Exchange Commission to award senior security holders premiums in contravention of applicable charter provisions and constitutional limitations, when under the compulsion of the Act the holding company enterprise was finally terminated and the senior security holders were paid out in cash.

2. Whether, assuming that the charter provisions were not applicable, the "fair and equitable" standard contained in Section 11(e) of the Act authorized such premiums in violation of settled legal principles repeatedly held applicable by the Commission and the Courts.

3. Whether, if the Act is found to authorize the payment to preferred stockholders, in appropriate circumstances, of sums representing the "equitable equivalent of rights surrendered", such "equitable equivalents" can be determined by appraising the "investment value" of the preferred stocks on the basis of transient market prices, and without regard to the correlative "investment value" of the common stock.

4. Whether the District Court was authorized under Section 11(e) of the Act to determine, and properly determined in this case, not only that the Securities and Exchange Commission erred in measuring the "equitable equivalents" which the preferred stockholders claim to be entitled to receive in exchange for the rights they surrendered, but that on any possible proper measure of those "equitable equivalents" on this record, $100 per share is the maximum to which the preferred stockholders are entitled.

Statement

Introductory

In essence, this litigation involves a dispute concerning the disposition of a fund of approximately $3,200,000 (plus $400,000 interest) paid into a bank in escrow by Engineers Public Service Company ("Engineers") pursuant to arrangements consummated during the proceedings before the United States District Court for the District of Delaware. The proceedings in the District Court related to a plan for the dissolution of Engineers pursuant to Section 11(e) of the Act, which dissolution has now been substantially carried out. The ultimate question at issue is whether this fund should be paid over to the former holders of the preferred stock of Engineers or should remain in the residual assets of the Company, to be distributed among the common stockholders. The Securities and Exchange Commission in effect held for the preferred stockholders; the District Court, while approving and enforcing the remainder of the plan, held for the common stockholders on this point. Upon appeal by the Commission and two groups of preferred stockholders,[1] the Court of Appeals for the Third

[1] In the District Court the Commission acts primarily as the statutory agent of the company in applying to such court for approval and enforcement of the company's plan, since Section 11(e) provides that the Commission may make such an application *only* upon the request of the company. The refusal of the company to appeal from the District Court's order therefore raised a question as to whether the Commission's statutory agency had not been revoked, and as to its right to assume the role of appellant. However, respondents advised the Court of Appeals that they did not press this question since they recognized that the issues were of importance in the administration of the Act and the Court would doubtless wish to be informed of the Commission's views.

Circuit agreed with the conclusion of the District Court that the disapproved portion of the plan was unfair and inequitable, but held that the proceedings should be remanded to the Commission. The appellants in the Court below petitioned for writs of certiorari with respect to the Court of Appeals' determination that the disapproved portion of the plan was unfair and inequitable, and this Court granted the writs (Nos. 226, 227, 243). Certain holders of common stock of Engineers who were appellees in the Court below (herein referred to as "Respondents") petitioned for a writ with respect to the Court of Appeals' requirement for the remand of the proceedings to the Commission, which petition the Court also granted (No. 266). This petition was supported by another group of common stockholders, sometimes referred to as the "Boehm-White Group".

Respondents Central-Illinois Securities Corporation and C. A. Johnson, on whose behalf this brief is submitted, are the owners of 5,000 and 1,000 shares of Engineers common stock, respectively.[1] They advised the Commission of their objections to the proposal to pay the preferred stockholders the amounts here in dispute as soon as the proposal was made (R. 2148a), and they appeared in the District Court and participated throughout the proceedings therein and the subsequent appeal, in their own behalf and in a representative capacity on behalf of all other common stockholders of Engineers (R. 153a).

[1] Central-Illinois Securities Corporation, a Delaware corporation, is a publicly owned investment company registered under the Investment Company Act of 1940. It has 200,000 shares of preferred and 309,202 shares of common stock outstanding, owned by more than 2,100 stockholders residing throughout the United States.

The Plan and Necessity Therefor

The plan filed with the Commission by Engineers in September, 1945, was submitted in order to effect final compliance with a series of mandatory orders previously issued against Engineers by the Commission under Section 11(b) of the Act. These orders required Engineers to divest itself of one after another of its subsidiaries until only one, Virginia Electric and Power Company, should remain.[1] In addition, Engineers was formally warned by the Commission that unless it filed a "comprehensive plan" for complete compliance with these Section 11(b)(1) orders as well as for "readjusting its capital structure" to conform with the standards of Section 11(b)(2), it faced the likelihood of mandatory enforcement action by the Commission under Section 11(d) of the Act.[2]

The cumulative net effect of these Section 11(b)(1) orders, when taken in combination with the provisions of Section 11(b)(2) as interpreted by the Commission in

---

[1] These orders are reported in the published decisions of the Commission as follows: *Engineers Public Service Co.*, 9 S. E. C. 764 (1941); 10 S. E. C. 904 (1941); 12 S. E. C. 41, 268 (1942). The United States Court of Appeals for the District of Columbia, on Engineers' petition for review, in part affirmed and in part reversed certain of the Commission's orders (*Engineers Public Service Co.* v. *S. E. C.*, 138 F. 2d 936 [App. D. C. 1943]). This Court in 1944 granted certiorari (322 U. S. 723, 1944), but the death of Chief Justice Stone apparently left the Court without a quorum and unable to issue a decision. The case was dismissed as moot by order of this Court (332 U. S. 788) pursuant to stipulation and joint motion of counsel entered into following entry of the decree of the District Court in the instant case approving and enforcing Engineers' plan, except as to the premium payments.

a series of decisions upheld by the Courts, was to require the complete and final dissolution of Engineers and its entire holding company system.[1] The plan submitted by Engineers accordingly proposed that Engineers and the remaining portion of its system would be wholly liquidated and dissolved.

As of the time the plan was submitted, the Engineers' system had been reduced to only three operating companies in the course of Engineers' compliance with various of the Commission's divestment orders, as compared with the 17 electric, gas and other utility and non-utility companies which had comprised Engineers' system at the time of the enactment of the Public Utility Holding Company Act.[2] The three remaining subsidiaries were Virginia Electric and Power Company ("Virginia"), Gulf States Utilities Company ("Gulf States") and El Paso Electric Company ("El Paso"), in all of which Engineers owned merely the common stock.[3] The Commis-

---

[1] Engineers as a holding company having only a single subsidiary would be devoid of economic and functional utility—or, in the Commission's parlance, "an economic monstrosity" (R. 47a). The Commission has repeatedly held that such a holding company is offensive to the standards of Section 11(b)(2), and must be dissolved. See, *National Power & Light Co.*, 9 S. E. C. 978; *North American Light & Power Co.*, 10 S. E. C. 924, discussed in *City National Bank and Trust Co. of Chicago* v. *S. E. C.*, 134 F. 2d 65 (C. C. A. 7); *Standard Power & Light Corp.*, 11 S. E. C. 689; *American Power & Light Company*, 11 S. E. C. 1146, aff'd 141 F. 2d 606 (C. C. A. 1st) and 329 U. S. 90. Cf. *Northern New England Company*, Holding Company Act Release No. 8401 (1948) at p. 6.

[2] Engineers Ex. No. 37-C, p. 67, R. 1478a. Of these seventeen companies, nine were direct subsidiaries of Engineers, and eight were indirect subsidiaries.

[3] The common stocks of these operating companies represented only 20-30% of the total capitalization of each company. All three companies have large amounts of bonds and preferred stocks outstanding with the general public.

sion's outstanding Section 11(b)(1) orders expressly required divestment of the stocks of both Gulf States and El Paso.

Engineers' capital structure consisted of common stock and preferred stock, the latter all having a stated book value of $100 per share (increased in 1938 from $96 per share, R. 301a) but being divided into three series carrying different dividend rates ($5, $3.50 and $6), and all being entitled in the event of liquidation, dissolution, winding up or any "reduction of its capital stock, resulting in any distribution of its assets to its stockholders" to $100 per share plus accrued dividends in preference to any payments to the holders of the common stock. However, if such liquidating acts were "voluntary", the preferred holders would, in addition, be entitled to the redemption premiums of each series (i.e., $5 per share for the $5 series, and $10 for the others). Under the provisions of the charter, the preferred stocks were callable at any time at the option of the company upon payment of these redemption amounts, and the company had the right at any time to repurchase shares of its preferred stock at prices "not exceeding" the redemption prices.[1]

Engineers' plan, so far as here material, provided in substance: (1) that the common stockholders of Engineers should initially pay $22,000,000 in cash into Engi-

---

[1] The pertinent provisions of the charter (Engineers Ex. 33, R. 1403a *et seq.*) are set forth in Appendix B, *infra*, pp. 166-7. It is to be observed that the charter expressly provided that in the event of liquidation, dissolution, winding up, etc., upon payment of the amounts stated above, the holders of the preferred stock "shall be entitled to no further participation in such distribution", and that the holders of the the common stock "shall be entitled to receive, *pro rata*, all of the remaining assets of this corporation available for distribution to its stockholders" after paying or making provision for the aforesaid amounts payable to the holders of the preferred stock.

neers' treasury;[1] (2) that this money plus treasury cash on hand (representing the proceeds of other property sales and retained earnings), supplemented by a short-term bank loan, would be used to effect the retirement of all the preferred stock of Engineers at $100 per share, plus dividends, to the date of payment; (3) that promptly thereafter, the common stocks of El Paso and Virginia would be distributed among the 13,000 common stock holders of Engineers[2] as a final liquidating dividend; and thereupon Engineers, as well as the system's service company "Epsco", would be dissolved.

Commission Decision

In its Findings and Opinion issued December 5, 1940, the Commission found that the dissolution of Engineers was an involuntary dissolution made necessary by the mandatory provisions of Section 11 of the Act, stating:

> "We find that the presence of Engineers would unduly complicate the structure of the system and

[1] This was to be accomplished by the issuance to the common stockholders of warrants entitling such stockholders to purchase one share of Gulf States common stock at $14.50 per share, for each share of Engineers common owned. In effect, therefore, this constituted a special assessment on the common stockholders for the privilege of receiving one of their company's assets in liquidation. If the stockholder did not exercise the warrant he would forfeit his *pro rata* share of the Gulf States stock thus distributed. He might, however, realize a small amount if he sold the warrant.

[2] There are 1,999,968 shares of Engineers common stock outstanding, of which the largest single holder of record owns approximately 90,643 shares (Engineers Ex. 43; R. 1769a). The record establishes that this block of stock is actually beneficially owned by a substantial number of separate individual owners (R. 561a-570a). It may further be noted that this same record stockholder was also among the largest owners of all three series of preferred stocks (Engineers Exs. 40, 41, 42, R. 1762a, 1763a, 1767a).

that it would, therefore, come within the prohibition of Section 11(b)(2). Accordingly, we find that the proposal to dissolve Engineers is 'necessary' to effectuate the provisions of Section 11(b) of the Act" (R. 48a).

The Commission further found that the Act required the dissolution to be carried out forthwith, and disapproved one feature of the plan which would tend to delay somewhat the final step in liquidation.[1]

Despite its finding that the dissolution of Engineers and its system was not voluntary, the Commission held that the company must pay the preferred stockholders the redemption premiums which the charter provided were payable only in the event of a voluntary liquidation or redemption. The Commission refused to approve the plan until the company amended it to provide for the payment of such premiums (R. 84a-85a). These premiums totalled $3,204,795 in excess of the amounts specified by the charter as payable to the preferred holders in the event of liquidation, dissolution, winding-up or "reduction of * * * [the corporation's] capital stock, resulting in any distribution of its assets to its stockholders."

In reaching this result, which was directly contrary to a long line of Commission and Court decisions,[2] the Commission's initial postulate was that *Otis & Co. v. S. E. C.*, 323 U. S. 624, established the proposition that

---

[1] "We have found that the continued existence of Engineers would unduly complicate the system. The Act requires that unnecessary entities be eliminated 'as soon as practicable'. Under these circumstances, the desire of stockholders to withhold income and thereby realize capital gains cannot justify ignoring the plain dictates of the Act" (R. 59a).

[2] See p. 55, note 3, *infra*.

charter liquidation provisions were not controlling in any liquidations under the Holding Company Act, but were merely one factor to be taken into account (R. 61a-62a). It thereupon disregarded these charter provisions entirely.

The amount which the preferred stockholders must receive, the Commission held, was "the investment value of their stock on a going-concern basis", and as though no liquidation were taking place (R. 67a-68a). The Commission noted that two witnesses (Badger, a witness on behalf of certain preferred holders, and Barnes, president of Engineers) had testified that on a "going-concern basis" and "if there were no Holding Company Act, or if the Act were to be repealed today" (R. 67a) they believed Engineers' preferred stocks would sell on the market at or about their redemption prices and would probably be called and redeemed by the company.[1] The Commission thereupon stated that it was "apparent", and "not seriously challenged", that "the preferred has an investment value at least equal to the respective redemption prices", and it held that this was the amount they must be paid (R. 67a-68a).

No mention was made by the Commission of Barnes' repeated and emphatic testimony that such "values" largely reflected the inflated stock market prices current

[1] Barnes, one of the two witnesses referred to, pointed out that "if there were no Holding Company Act, or if the Act were to be repealed today" so that Engineers were not compelled to liquidate, it would, of course, take advantage of the current low money rates to replace its outstanding preferred stock with preferred stock carrying a much lower dividend rate, thereby benefiting the common stockholders substantially (R. 522a, 663a). The Commission's opinion made no reference to this portion of Barnes' testimony.

at that moment,[1] and could by no means be deemed the "fair value" of the stock for any representative period of time in the light of its poor past record and future uncertainties (R. 522a-526a; 1138a-1140a). Despite the fact that the amounts to which the Commission held the Engineers' preferreds entitled were admittedly the maximum which could be awarded if the stock were the highest grade of "gilt-edge" security, no mention was made by the Commission of Badger's admission that the Engineers' preferreds were not "high grade" but at best "medium grade" (R. 1133a, 1185a); nor of Barnes' testimony that on the basis of the criteria customarily employed by financial analysts they are "closer to a low-grade preferred" (R. 1133a, 1140a); nor of the evidence establishing that during the period the preferreds were outstanding they were accorded by the leading independent analysts an investment rating of only C**,

[1] The testimony of Badger and Barnes was given at various times over the period December 1945 through February 1946, at which time stock market prices (including those of public utilities) stood at the highest point since 1931. Barnes warned "we are in a boom period" (R. 667a) and stressed its temporary nature. The Federal Reserve Bank Index of utility stock prices which stood at 130 in June 1946 subsequently declined to 94 by the end of 1947, indicating an average decline of about 28% (cf. Federal Reserve Bulletins: January 1947, p. 64; January 1948, p. 76).

In a more recent decision, the Commission itself stated concerning "investment values" determined as of this very period:

> "* * * the Commission's findings were issued in May of 1946 *in what has since proven to be the peak of the post-war market.* The market has declined substantially from the highs reached at that time and there has been a material firming of interest and preferred yields. It is apparent that insofar as investment value is derived from an analysis of the current yields of comparable securities, *the investment value of American's preferred has been substantially affected in the interim*" (*United Light and Railways Co.-American Light & Traction Co.*, Holding Company Act Release No. 7951, p. 33, Dec. 31, 1947; emphasis supplied).

defined as "Preferred stocks with erratic dividend records which can be expected to make payments only under favorable conditions" (R. 1844a-1845a).[1]

Although the Commission purported to be determining the "investment value" of the preferred stock on a going-concern basis", and "as though no liquidation were taking place", in fact its valuation technique departed sharply from accepted methods of valuation in reorganization proceedings and from that approved by this Court in *Otis v. S. E. C.*, 323 U. S. 624. The Commission made no effort to appraise the value of Engineers' stock, either preferred or common, in long range terms. It did not even attempt the characteristic estimate of the prospective earning power of the system[2] in an effort to establish what each class of security holders was losing by the liquidation of the company. It sought merely to de-

[1] In an earlier portion of its opinion, the Commission did summarize statistically evidence in the record establishing that the preferred stocks had been in arrears of dividends for several years and had sold for considerable periods of time as low as $10-$14 per share for all series, and that the overall market price through the entire period from the time of issuance to the date of the testimony was only $63-$67 per share for all series (R. 62a); but no reference was made to these factors at the point where the Commission discussed the so-called "investment values".

Similarly, although the Commission's computations showed that these preferreds were actually a speculative *junior security* (being junior to 66.2% of the system's capitalization, R. 64a), no allusion to the significance of this factor is to be found anywhere in the opinion; nor is allusion made to the significance of the slim coverage for charges and dividends over the past decade (R. 64a) nor of the fact that for several years continuously charges and dividends had not been fully earned.

These omissions are particularly noteworthy in view of the fact that in the long line of decisions in which the Commission theretofore had refused to approve payment of premiums upon retirement of senior securities, it had repeatedly stressed all of these very factors. (See decisions cited, p. 55, notes 3 and 4, *infra*.)

[2] Cf. *Consolidated Rock Products Co. v. DuBois*, 312 U. S. 510, 526; *Group of Institutional Investors v. Milwaukee R. Co.*, 318 U. S. 523, 565-6.

termine how much should be paid to the preferred stockholders as the "equitable equivalent" of their rights on a "going concern basis", and "apart from the impact of the Act", viewing the preferreds' rights as though they were something absolute, and unrelated to the correlative rights which the common stockholders would have in such a "going-concern".

Moreover, in evaluating the "rights" of the preferred stockholders on this unilateral basis, the Commission merely accepted Badger's estimate of the hypothetical market prices at which the preferred stocks would have sold at the time of his testimony, assuming liquidation were not to take place. But Badger's "expert opinion" as to the theoretical market price of the Engineers' preferred stocks "apart from the impact of the Act", which the Commission adopted, was not based on the intrinsic merit of this stock as an investment, but admittedly upon the unprecedentedly low *money rates* then prevailing. Because of these low money rates Badger contended that Engineer's high dividend preferred stocks would have an enhanced market value, if the Act did not compel their retirement.[1] The Commission's opinion accorded no con-

[1] With respect to the then prevailing money rates (which he employed without modification in "valuing" the Engineers' preferreds) Badger testified "* * * yields on preferred stocks are at the present time the lowest which they have been in the history of our country, or, conversely * * * the prices of such stocks are at the highest levels ever experienced. The permanency of this situation will depend on the permanency of low interest rates" (R. 2065a). Not only did Badger repeatedly and emphatically affirm the "permanence" of these unprecedentedly low money rates on which he predicated the "values" of the Engineers' preferreds (R. 2066a, 1019a, 1085a), *but the only possibility of change which he envisaged was the likelihood of money rates and yields going even lower* (R. 1085a-1086a). Several months from the time this testimony was given money rates and preferred stock yields commenced the sharp upward climb, and preferred stock prices the concomitant decline, which has been in progress ever since (see District Court Finding No. 52, R. 314a, and R. 122, as well as the Commission's own admission quoted *supra*, p. 12, n. 1).

sideration to the instability of those money rates, or to the question of other future developments which might affect the "value" of the preferred stocks, notwithstanding the contentions of the company and Barnes concerning the essentially artificial and transient character of the then current money rates and the various other potentially adverse factors to be taken into account in determining the actual value of those stocks on a "going concern basis".

Further, while allegedly determining values "ex the Act" (apart from the impact of liquidation compelled by the Act), neither the Commission nor Badger made allowance for the many important factors which came into existence directly as the result of this very statutory requirement for liquidation.[1] None of the other drastic impacts of the Act upon the common stockholders received consideration; nor did the Commission attempt to "find" the so-called "investment value" or any other value of the common stock on "a going-concern basis" (apart from the necessity for liquidation) or otherwise.

The District Court's Decision

After consideration of extensive oral argument and briefs by counsel for the Commission and all the other parties, the District Court (to which the Commission had applied pursuant to Section 11(e) for entry of a

[1] For example, no allowance was made for approximately $24,000,000 which had accrued to the equity of the common stockholders of Engineers and which had been withheld from them largely because of the necessity of providing *for this very liquidation* imposed upon them by the Act (R. 306a, 468a-471a; 578a; Engineers Ex. 30, R. 1395a). Instead this entire amount (equivalent to 60% of the preferreds' stated value) was credited to the preferred in determining its so-called "investment value *ex* the Act" (R. 306a, 312a).

decree approving and enforcing the plan) held that the provision of the amended plan for the payment of the amounts in excess of $100 per share (the premiums)[1] was not consonant with the "fair and equitable" standard of Section 11(e), but that in all other respects the plan met the statutory requirements. The Court thereupon followed the course strongly urged by the Commission's attorneys,[2] of not remanding the proceedings to the Commission, but instead, of approving and enforcing the plan except as to the premium payments, and requiring the latter to be deposited in an escrow fund approved by the Commission pending review of the District Court's determination. The Commission's opinions had expressly advocated this course (R. 75a, 136a), and its order of February 11, 1948 (R. 165a), had provided formal advance approval for it.

The disagreement of the District Court with the Commission as to the premium payments was basically a disagreement as to applicable legal principles. The Court regarded as erroneous and devoid of judicial support the Commission's thesis that the rights of security holders of a holding company enterprise which is being entirely and definitively liquidated pursuant to governmental edict should be approached on the purely fictional hypothesis that "the enterprise continues", and the claims of the preferred holders (but not the common) measured "on a going-concern basis", and "as though there were no Holding Company Act or as if the Act were to be repealed

[1] Following the issuance of the Commission's opinion of December 4, 1946, refusing to approve Engineers' plan unless amended to provide for payment of the premiums, the company duly amended its plan in the manner required by the Commission (R. 128a).

[2] R. 257a-261a, 281a-282a.

today." (R. 292a, 311a, 315a-316a).[1] The District Court was of the view that this recently evolved "investment value ex the Act" doctrine, as sought to be applied by the Commission in the case at bar, contravened firmly rooted decisions of at least four circuit courts of appeal and many district courts, as well as a long line of decisions of the Commission itself (R. 288a, 292a).[2]

Upon examination of the record which had been filed by the Commission with the Court, the District Judge ascertained a number of factors of which the Commission's opinion gave little or no inkling and which he found strongly corroborative of his view that payment of the premiums to the preferred would result in unfairness and inequity in a "colloquial" sense, as well as in its technical statutory sense; that Badger's "values" were largely "market" values (R. 301a) admittedly dependent upon

[1] It may be noted that the District Judge (Judge Leahy) had been the first court to pass upon and approve the United Light plan, subsequently upheld by this Court in *Otis & Co. v. S. E. C.*, 323 U. S. 624, the decision relied upon in the instant case by the Commission as support for the proposition here rejected by the District Court. Judge Leahy's cogent understanding of the issues involved in the *Otis* case is attested by his decision therein (51 F. Supp. 217, D. Del., 1943). Similarly, Judge Biggs, who wrote the Court of Appeals' opinion in the instant case, was also the author of that Court's opinion in the *Otis* case (*In re Securities and Exchange Commission [Otis & Co.]*, 142 F. 2d 411, C. C. A. 3, 1944).

[2] Decisions cited at p. 55, notes 3 and 4, *infra*. Judge Leahy had himself repeatedly and uniformly upheld the Commission's determination that such premiums were not payable, although envisaging that a contrary view might possibly be justified upon proof of "a different fact situation" (*In re North Continent Utilities Corp.*, 54 F. Supp. 527, D. Del.). As the Court of Appeals had occasion to point out (R. 30, 39) Judge Leahy, commencing with the earliest enforcement cases under the Act and continuously ever since, has had exceptionally specialized experience with Section 11(e) reorganizations, the Commission having applied to him for approval and enforcement of almost 50% of all Section 11(e) plans which have been brought to the courts for enforcement.

continuance of governmental "pegging operations" designed to hold money rates to the artificially low level considered desirable because of the exigencies of governmental war financing (R. 313a-314a); that on the basis of the inherent investment qualities of the stocks, they were admittedly not "high grade" but rather "*medium* medium grade" or "low grade" (R. 311a); that even such inherent value as they possessed was in substantial part due to the more than $24,000,000 of earnings which the common stockholders had left in the enterprise to provide for the liquidation commanded by the Act (R. 306a); that the company had sustained heavy losses and sacrifices in carrying out the Commission's Section 11(b)(1) divestment orders, and that such losses had fallen, and further deprivations incident to the liquidation would necessarily fall, on the common stockholders (R. 307a-308a); that the common stockholders had gone without dividends or return of any kind for 15 years while the preferred stockholders received full payment of their dividends over the entire period, aggregating approximately $90 per share (R. 302a, 306a); that in order to pay the preferred holders their full liquidating claim in cash the common stockholders would be required in connection with the liquidation to contribute an additional $22,000,000 cash, and to "mortgage" the assets distributable in the liquidation by advance payment of dividends (R. 308a-310a); that the common stockholders like the preferred stockholders were forced to relinquish continuance of the holding company enterprise in which they had invested (R. 311a, 312a, 316a).

The Court summed up its conclusions by formally finding that the enterprise in which the preferred and common stockholders of Engineers had invested had been frus-

trated and terminated by governmental action (R. 316a); that there was no valid basis for hypothesizing a "continuing enterprise" or "going concern" (R. 292a, 316a); that the Commission's "investment value ex the Act" doctrine as applied in this case was not only unsound and unrealistic in theory but inequitable and erroneous in application (R. 292a, 316a-317a). It held in the light of its "careful examination of all the relevant factors" that payment to the holders of the preferred stocks of Engineers of any amounts in excess of $100 per share plus accrued dividends would not be warranted or justified; would be unfair and inequitable to the holders of Engineers' common stock; and would contravene the "fair and equitable" standard of Section 11(e) of the Act (R. 317a).[1]

The Decision of the Court of Appeals[2]

The Court of Appeals rejected the Commission's contention that the District Court under Section 11(e) should be deemed a mere review court which must bow to the Commission's conclusions unless they wholly lack "any

[1] The District Judge stated that he found it unnecessary to conclude whether the charter liquidation provisions *per se* foreclosed any amounts in excess of $100 per share plus dividends, because "the conclusion is reached that the preferred stockholders are in any event not entitled to receive any such excess amounts on the basis of all the relevant considerations, even if the charter provision is not itself controlling. Said charter provision, however, if taken into account, constitutes an additional factor supporting the conclusions reached, as above stated" (R. 317a).

[2] Following the entry of the District Court's order, notice of appeal to the Third Circuit Court of Appeals was filed by the Commission and the two groups of preferred stockholders, one of which sought to stay consummation of any portion of the plan. The Commission joined in opposing the stay, which was denied in turn by the Dis-

rational or statutory foundation" (R. 21, 34),[1] and held, after careful analysis of the statute and its legislative history, that a Section 11(e) Court must exercise its independent judgment as to the fairness and equity of a plan (R. 23, 33). It found that the District Judge treated the Commission's findings "as was proper * * * with respect" (R. 34), and commended his "careful and far-reaching examination of the relevant factors" (R. 34). It held that the Commission, in failing to take these important factors into account, had reached an inequitable and erroneous result (R. 38).

With respect to the Commission's attempted reliance on the *Otis* decision, the Court of Appeals agreed with the District Court that the liquidation of the Engineers system was a complete and definitive termination of the enterprise, and thus differed materially from the mere simplification of a continuing holding company system involved in the *Otis* decisions (R. 36).[2] It held that even if it was permissible under these circumstances to measure security holders' rights on the fictional hypothesis of a "going concern" without regard to the liquidation which was in fact taking place under compulsion of the Act (i.e., "ex

---

trict Court, the Circuit Court and by Mr. Justice Burton of this Court. Thereupon, the escrow fund was duly established and the other provisions of the plan were consummated, including payment to the preferred stockholders of $100 per share and accrued dividends.

[1] The Court pointed out that the Commission's demand that Section 11(e) courts should be relegated to the position of mere review courts was at sharp variance with the position which the Commission has for many years taken before the courts and before Congress, wherein the independent plenary role of the District Court with respect to 11(e) plans was heavily emphasized (R. 30-31).

[2] As was pointed out, *supra*, (p. 17, n. 1), Judge Biggs wrote the Third Circuit's opinion in the *Otis* case as well as in the case at bar.

the Act"), the so-called "investment value" formula as applied by the Commission in this case to measure only the claims of the preferred holders "ex the Act" failed to produce that "equitable equivalence" for the rights of both classes of security holders which is of the very essence of the *Otis* rationale (R. 38).

The Court of Appeals squarely affirmed the determination of the District Court that the provision of the plan for the payment of the premiums was unfair and inequitable (R. 39, 140). It also found "proper" and upheld the escrow arrangements embodied in the District Court's order (R. 30). Yet, notwithstanding its full approval of the District Court's reasoning and findings, the Court of Appeals concluded that the District Court should have remanded the proceedings to the Commission.

On the question of remand, the Court's reasoning was, in essence, that the disapproval by the District Court of the provision for payment of the premiums effected an "amendment" of the plan which, under the statute, must receive the Commission's approval as well as of that of the Court (R. 39). In addition, the Court of Appeals' opinion suggests that the District Judge engaged in a species of "valuation" in formally finding that payment to the preferred holders of $100 per share plus dividends would be fair and equitable to the preferred and that payment of any additional amounts would contravene the "fair and equitable standard" of Section 11(e), instead of merely holding the premium payments as proposed in the plan unfair and inequitable and remanding the plan to the Commission. Stating that "The problem is and will remain until its disposition by the Commission, one of valuation of the securities of Engineers, viz., the pre-

ferreds and the common" (R. 40), the Court vacated the decree of the District Court[1] and remanded the proceedings to it:

> "with directions to enter an order disapproving the plan as not being fair and equitable within the purview of Section 11(e) of the Public Utility Holding Company Act, and to return the record to the Commission to the end that it may take such action as the facts and the law may require" (R. 40, 41).

Petitions for rehearing were filed by the appellants in the Court below with respect to the Court's affirmance of the determination that the proposed payment of the premiums was unfair and inequitable. Answers thereto and cross-petitions were filed by the appellees (including petitioners) with respect to the requirement for remand to the Commission (R. 97). The Court denied the petitions and cross-petitions, stating in a short opinion its adherence to the views previously enunciated (R. 138).

Specification of Errors

That the Court of Appeals erred:

1. In finding that the District Court, by requiring the premiums to be paid into an escrow fund, had "amended" the plan without the requisite approval of the Commission;

2. In finding that the District Court engaged in a prohibited species of valuation as the result of holding that "fairness and equity" interdicted payment to the

[1] It is clear that the Court intended to vacate only so much of the District Court's decree as related to the premium payments since the remainder of the plan had already been fully consummated.

preferred stockholders of any amounts in excess of $100 per share, rather than merely holding that the plan was unfair and inequitable in proposing to pay the preferred stockholders amounts in excess of $100 per share;

3. In vacating the decree of the District Court instead of affirming it; and

4. In requiring that the proceedings be remanded by the District Court to the Securities and Exchange Commission.

Summary of Argument

I

The term "fair and equitable", as used in Section 11(e) of the Act, is a term of art with a well developed historical meaning. It commands enforcement of the contractual rights and limitations of the security holders. Although it permits transmutation of those rights into equitable equivalents when continuance of the enterprise in reorganized form renders literal compliance with the contract "impossible", it never authorizes aggrandizement of the rights of one class of security holders, or disregard of that class' limitations, for this would necessarily entail invasion of the rights of other classes.

Nothing either said or ruled by this Court in the *Otis* case alters the historical meaning of the term "fair and equitable" and its command for the observance of contract rights. In that case, it was held that the preferred stockholders were accorded their full contractual rights in the form of a carefully measured participation in the earnings of the continuing holding company enterprise.

They were found to have no contractual right to the "acceleration" or "maturing" of their full liquidation claim, since authentic liquidation within the contract contemplation was not occurring. But here the preferred stockholders have claimed, and were allowed by the Commission, $3,200,000 in excess of their full matured liquidation claim despite the fact that the liquidation of the enterprise and the retirement of the preferred stock was squarely within the purview of the charter contract.

Since the plan now being reviewed provided for a complete termination of the enterprise, both of the holding company and of its entire system, and a final distribution in liquidation of the assets to the security holders—as the Courts below found—and since the liquidation was compelled by the Act, and was therefore not "voluntary"—as both the Commission and the Courts below found—it comes squarely within the terms "liquidation, dissolution or winding up" of Engineers' charter as those terms are used in the provision limiting payment to preferred stockholders to $100 per share.

Not only was the liquidation of Engineers an authentic complete dissolution of the entire holding company enterprise as distinguished from the mere "simplification" of a continuing holding company system considered in the *Otis* case, but the Engineers' charter provisions were also significantly different from those involved in *Otis*.

The fact that the Act had not been adopted in 1925, when Engineers' charter was framed, does not detract from the conclusion that it is applicable to this liquidation. At that time legislation to dissolve public utility holding companies was in contemplation, and such proposals were widely known. The specific provision of the Engineers'

charter specifying payment of no more than $100 per share to preferred stockholders if their stock were retired pursuant to a "reduction of its capital stock, resulting in a distribution of its assets to its stockholders", plainly applies to a reduction stemming from the break-up of the "power trusts" contemplated by the Senate at that time.

II

Even if the charter liquidation provisions were deemed not to apply to the liquidation which here occurred, the "fair and equitable" standard embodied in Section 11(e) precludes payment to senior security holders whose securities are being retired by the payment of cash, under the compulsion on the statute, of more than the face amount of their claim. Not only is this the meaning of the term "fair and equitable" in Section 11(e), as construed by the Commission and enforced by the Courts in a long and deeply-rooted series of cases, but the rationale upon which the Commission and the Courts based this interpretation of the statute applies compellingly to the facts of this case.

III

If the "fair and equitable" standard is not construed either to require enforcement of contractual rights or to conform to the manifestly correct prior interpretation thereof given by the Commission and the Courts, pressing constitutional problems are presented. The Commission's claimed power to alter contract rights in this case is neither necessary nor appropriate to accomplish the legitimate congressional purpose in adopting this statute; and the resulting absence of any standards by which to measure the Commission's exercise of its claimed power to alter contractual rights would entail an unconstitutional delegation of power to the Commission.

IV

Assuming that, notwithstanding our previous contentions, the "fair and equitable" standard nevertheless authorized transmutation of the rights of the Engineers' stockholders on a "going-concern basis" into equitable equivalents as was done in *Otis*, the fact is that the determination made by the Commission failed by a wide measure to satisfy such requirements.

In the *Otis* decision the term "investment value" as employed by this Court had reference to the values on a long range basis of both classes of stockholders, predicated upon the relative rights of each class to participate in the prospective earnings of the enterprise. Here the Commission made no attempt to estimate the prospective earnings of the enterprise which it hypothesized as continuing. It accorded no consideration whatever to the correlative rights of both classes of security holders in the theoretical "going-concern". It confined itself to considering solely the "rights" of the preferred stockholders; and although purporting to consider them on a "going-concern" basis, in fact it viewed them as absolutes, wholly unrelated to the correlative rights which the common stockholders had in that going concern.

Moreover, in thus evaluating the "rights" of the preferred stockholders unilaterally, the Commission eschewed normal, long-range values and measured them solely on the basis of market prices of allegedly comparable preferred stocks, as of a specific haphazard moment. At that moment the prices of those preferred stocks avowedly stood "at the highest levels ever experienced". During the years immediately preceding they were sharply lower,

and during the period which has ensued since the valuation testimony was given they have once again dropped to substantially lower levels. They had already commenced their decline and were in the process of further revision before the District Court passed on the plan.

Both Courts below found that the Commission's "investment value ex the Act" doctrine as applied in the instant case utterly failed to produce that "equitable equivalence" for surrendered stockholders' rights which the *Otis* decision commands.

If the Commission had sought to evaluate the rights of the preferred stockholders on any normal long-range basis, whether considered in terms of the past, the future, or both, there was no possible basis for a finding in excess of $100 per share. Moreover, if the rights of both classes of stockholders had been determined on a going-concern basis as was done in *Otis*, it is indisputable that the preferred stockholders would be entitled to considerably less than $100 per share.

V

The "investment value ex the Act" doctrine as here applied by the Commission, involves a dangerous and fundamental perversion of the strict priority principle, which is firmly embedded in the "fair and equitable" standard of Section 11(e).

Applying that doctrine, the Commission held that the preferred stockholders must receive more than their contractual claim in liquidation because their dividend rates were somewhat higher than the then current going rate. It would follow that senior security holders must re-

ceive less than their contract preference if their dividend or interest rate at the date of liquidation is lower than the going rate, irrespective of the fact that more than enough assets are available to pay their contract claim in full. Thus, the holder of a $1,000 bond amply protected by assets but carrying an interest rate of 4% could be required to accept a cash payment of $800 in full satisfaction of his rights if the Commission found that bonds of allegedly comparable quality were at that time selling on a 5% yield basis.

Conversely, this same use of current market prices (for which the term "yield basis" is a synonym) to evaluate the rights of senior security holders when yields on senior securities are low, must necessarily have a drastic impact upon the junior security holders. If a holding company had outstanding (as some do) several issues of nonredeemable senior securities, a Commission order, requiring the common stockholders to pay to the senior security holders the theoretical market prices "apart from the impact of liquidation" and in disregard of prearranged contractual arrangements, might well leave little or nothing for common stocks having substantial values on both an asset and earning power basis.

VI

One of the major fallacies in the Commission's rationale is its implicit assumption that if the preferred stockholders sustained a deprivation by reason of the compulsory retirement of their preferred stock upon payment of $100 per share, the common stockholders necessarily became the beneficiaries of that deprivation. But as this Court has said, "frustration and appropriation are essentially different things."

Even if it were true that "if not for the necessity of liquidation" the market might momentarily have paid a premium for these preferred stocks because they carried dividend rates somewhat higher than the money rates current at the time of Badger's testimony, plainly the common stockholders did not gain these hypothetical premiums when the preferred was retired at par under the compulsion of the Act. Such "premiums" were exclusively a factor of money rates applicable to senior securities such as preferred stocks and bonds. The common stockholders did not receive those preferred stocks which they could reoffer on the market to realize the theoretical premiums. Nor were they or the company permitted to issue any other senior securities so that they might benefit from the retirement of the preferred stocks at a time when money rates were low. Instead, they were required to completely liquidate what remained of the company and the system. And in that dissolution they suffered serious deprivations and losses in addition to those previously sustained.

Indeed, the compulsory retirement of the preferred stock itself constituted a serious deprivation to the common. If not for the Act, the common stockholders would have been free to retain the capital of the preferred without any limitations of time at an overall cost of 5.40%, while realizing some 12% on this capital; or, in the alternative, the common stockholders had the option of calling the preferred stock and replacing it with preferred carrying a lower dividend rate.

This substantial deprivation constituted but one of the many which the common had been forced to bear in carrying out the statutory mandate to liquidate. That liquidation did not commence with the filing of the plan which

was the subject of these proceedings; it merely ended there. The common stockholders had borne the full brunt of the liquidation of the system during the preceding ten years, and had safeguarded the preferred from even the slightest loss or deprivation. The District Court's conclusion that it was not consistent with fairness and equity to require the common to now indemnify the preferred for the "theoretical loss of their disappointed *expectations*" is inescapable under this Court's ruling in *Otis* that "enforcement of an overriding public policy should not have its consequences visited on one class with a corresponding windfall to another".

VII

Even under the narrowest possible construction of the powers of the District Court under Section 11(e) of the Act—the construction contended for by the Commission but overruled by both Courts below—the District Court properly disapproved the plan, since the Commission's approval thereof lacked "rational and statutory foundation" and the Commission had "plainly abused its discretion".

But we submit that, in passing upon a plan presented to it for approval under Section 11(e), the District Court does not sit as a mere "review court" limited to determining whether the Commission's action lacked rational and statutory foundation or whether the Commission plainly abused its discretion. When asked to enter its decree approving and enforcing a plan as "fair and equitable", the District Court sits as a court of equity, clothed with all the powers traditionally exercised by a court of equity, and charged with the duty to decide for itself, independently of the Commission's decision, whether the plan is

fair and equitable. The findings and conclusions of the Commission are entitled to "respect", but they are "not binding" upon the District Court (Biggs, C. J., R. 34). That conclusion is dictated by the plain language of the Act itself; it is reinforced by a consideration of the judicial and legislative context in which the Act was passed; the Commission has repeatedly so construed the Act; and the construction is supported by the existing authorities, including the decisions of both the lower courts in this case.

VIII

The only valid grounds upon which a remand of this case to the Commission can be predicated are either that as a formal matter, even though $100 per share is the most the preferred stockholders may lawfully receive, the Commission must approve the payment of only $100 to them before that portion of the plan can be enforced; or that as a substantive matter, the Commission could, on this record and on a proper rationale, lawfully authorize the payment to the preferred of more than $100 per share. Neither ground is here present.

As a formal matter, the Commission has already given its approval to the payment of only $100 to the preferred should it be decided that this sum is the most they can lawfully receive.

As a substantive matter, $100 per share is the most the preferred stockholders may lawfully receive. This conclusion follows from our contentions that the liquidation which here occurred was within the purview of the liquidation provisions of Engineers charter, and the "fair and equitable" standard requires enforcement of those

charter provisions. It follows also from our contention that even if this is deemed not to have been a liquidation within the purview of the charter, the "fair and equitable" standard precludes payments to senior security holders who are being paid off in cash in the course of a genuine liquidation of more than the face amount of their claims.

Finally, this conclusion also follows from our contentions that, even if under some circumstances the holders of senior securities whose retirement is compelled by the Act may receive the "equitable equivalent" of rights surrendered, the Commission erred in appraising the "equitable equivalents" of the rights here surrendered, and the District Court had the authority to conclude, and properly concluded, that the "equitable equivalents" which the preferred are entitled to receive could not, on this record, exceed $100 per share.

ARGUMENT

PART ONE

IN A GENUINE LIQUIDATION SUCH AS TOOK PLACE HERE, THE "FAIR AND EQUITABLE" STANDARD REQUIRED THAT THE PREFERRED STOCKHOLDERS BE LIMITED TO $100 PER SHARE, PURSUANT TO THE CHARTER PROVISIONS, CONTROLLING PRECEDENTS, AND CONSTITUTIONAL LIMITATIONS.

I. Where a genuine liquidation has taken place, as here, the "fair and equitable" standard of Section 11(e) does not permit payment to stockholders in excess of the amounts authorized by the provisions of the corporate charter specifically applicable to such liquidation.

Both Courts below ruled that the Commission had misconstrued the doctrine of "equitable equivalents" which this Court in *Otis & Co. v. S. E. C.*, 323 U. S. 624, had deemed applicable in measuring the rights of security holders in the particular corporate dissolution there compelled by the Act. The District Court, therefore, did not deem it necessary to pass on the question whether, in contrast to the situation presented in *Otis*, the charter liquidation provisions applied to the liquidation here occurring and should be enforced. It held that the charter liquidation provisions were "but one circumstance looking toward non-payment of premiums" (R. 288a, 317a). The Court of Appeals stated without discussion that, in the light of the *Otis* decision, it considered that the charter liquidation provisions were not "dispositive of the issues presented" (R. 34), although it regarded the liquidation which here took place as significantly different from the one dealt with in *Otis* (R. 36).

Although we are in full accord with the grounds on which both Courts below found the proposed premium payments unfair and inequitable, we urge here, as we did below, that the charter provisions are specifically applicable to this liquidation and must be enforced in deference to the principles of "fairness and equity," and when so applied are dispositive of the issues.

A. The "fair and equitable" standard of Section 11(e) is predicated upon adherence to contractual rights.

If not for the authority which the Commission professes to find in the "fair and equitable" standard of Section 11(e), there could be no question that the distribution of Engineers', assets to its security holders would be required to conform to the mandate of Engineers' charter. The forced dissolution of a corporate enterprise pursuant to an "overriding public policy" has, in no other context, been thought to require any alteration in the applicable charter claims of the security holders on dissolution. Compare *Continental Insurance Co. v. United States*, 259 U. S. 156. The question here, therefore, is whether the "fair and equitable" standard of Section 11(e) authorizes the Commission to alter the applicable charter liquidation rights of one class of security holders at the expense of another when the mandate of the Act requires the termination, rather than merely "simplification" of the holding company enterprise, and the final, rather than intermediate, distribution of its assets to its security holders.

We start with the proposition that the term "fair and equitable" in Section 11(e) of the Act is a term of art embodying the definite concepts which have been evolved for that term in the long history of equity receiverships

and reorganization statutes (*Otis & Co.* v. *S. E. C.*, 324 U. S. 624, 634). Until the *Otis* decision, that history left no doubt that "the touchstone of the 'fair and equitable' standard" was "the recognition of contractual rights" (*Federal Water Service Corp., et al.* 8 S. E. C., 893, 909). The rights of senior and junior security holders alike were held to stem from the contract defining the terms of their joint investment, and "fair and equitable" treatment required those contractual rights to be enforced "strictly" in any reconstitution of the enterprise through "receivership" or "reorganization" (*Case* v. *Los Angeles Lumber Co.*, 308 U. S. 106; *Consolidated Rock Products Company* v. *DuBois*, 312 U. S. 510; cf. *Bailey* v. *Minsch*, 168 F. 2d 635, 637 (C. C. A. 1, 1948) *cert. den.* 69 S. Ct. 83 (1948)).

To be sure, in reorganizations of continuing enterprises —whether solvent or insolvent—the "fair and equitable" standard does not require the payment of cash in satisfaction of security holder claims. (*Case* v. *Los Angeles Lumber Co.*, *supra*, at 117). Such claims may be satisfied by the payment in new securities which are the "equitable equivalent" of the interests being surrendered (*Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 565-566). But the reason for permitting payment in new securities, rather than in the cash required by the literal language of the contract, lies in the fact that the enterprise is continuing; because "practical considerations" might make it "impossible" for the reorganized enterprise to continue if the claims of the senior security holders are paid in cash (*Case* v. *Los Angeles Lumber Co.*, *supra*, at 117), "fairness and equity" authorize the senior security holders to be awarded the "equitable equivalent", in new securities, of their contractual claims.

However, at least in reorganizations, this "equitable equivalent" can never exceed the cash amount of those claims. Compare *Knight* v. *Wertheim & Co.*, 158 F. 2d 838, 843 (C. C. A. 2, 1946), *cert den. sub. nom. McGuire* v. *Equitable Office Bldg. Corp.*, 331 U. S. 818 (1947); *Bailey* v. *Minsch, supra*. And we are not aware of any decisions which even suggest that if, in such reorganizations, security holders are being paid out in cash, they are entitled to payments greater than the amount of their contractual claims applicable to involuntary liquidation or retirement of their security.[1] On the contrary, any such intimation by a litigant has been rejected by the Courts (*Knight* v. *Wertheim & Co., supra; Bailey* v. *Minsch, supra*) and opposed by the Commission.[2]

It is not alone this Court's repeated insistence upon strict enforcement of applicable contractual rights as the core of the "fair and equitable" standard that impels the conclusion that Congress intended applicable charter liqui-

---

[1] Indeed, even in appraisal proceedings incident to mergers where it is recognized that it is the voluntary act of the company which causes the retirement of the dissenting preferred stockholders from the enterprise, it has been held that their involuntary liquidation claim is the maximum which they may receive. *Matter of Fulton*, 257 N. Y. 487, 178 N. E. 766; *American General Corporation* v. *Camp*, 190 Atl. 225 (Md., 1937).

[2] Thus in rendering its advisory report to the District Court under Chapter X of the Bankruptcy Act, the Commission stated in *Matter of Childs Company*, Corporate Reorganization Release No. 67 (Sept. 30, 1946), p. 43:

> "The Trustee has taken the position that participation by the preferred stock is to be measured by its liquidation preference. The preferred stockholders are of the view that they are entitled to the investment value of their securities, which they claim is greater than the liquidation preference, primarily because of the non-callable feature of this preferred stock bearing a 7% dividend. We believe that the Trustee's position is sound."

dation provisions to control in authentic liquidations caused by the Act, although it is plain, as this Court indicated in *Otis*, that Congress intended the term "fair and equitable" as employed in Section 11(e) to carry its traditional and settled meaning. The repeated references to *Continental Insurance Company* v. *United States*, 259 U. S. 156, both in the report of the Senate Committee[1] recommending enactment of this statute and the statements of the proponents of the bill,[2] leave no doubt that at least when a genuine liquidation is compelled by the Act, the impact of this statute was intended to be no different from the impact of other legislation compelling corporate dissolution in the interest of an overriding public policy. The terms of the charter, to which junior and senior security holders bound themselves, mark the outer limits of what the senior security holders may receive in cash.

B. The liquidation of Engineers and the retirement of the preferred stocks came squarely within the purview of those provisions of the charter limiting the preferred stockholders to payment of no more than $100 per share.

The provisions of Engineers' corporate charter authorized the payment to the preferred stockholders of only $100 per share plus accrued dividends "in the event of any liquidation, dissolution, or winding-up of this corporation, or any reduction of its capital stock, resulting in any distribution of its assets to its stockholders"; provided, however, that if such liquidation, dissolution or winding-up or reduction shall have been "voluntary", the preferred stockholders would also receive certain redemption premiums, before any "distribution of * * * [the corpora-

[2] H. R. Rep. 1318, 74th Cong., 1st Sess., pp. 49-50; 79 Cong. Rec. 4607, 8432.

tion's] assets shall be made to the holders of the common stock". The charter further provided explicitly that the preferred stockholders "shall be entitled to no further participation" in the distribution of assets upon liquidation, dissolution or winding-up or reduction of the capital stock accompanied by a distribution of assets, and that "all of the remaining assets of this corporation" are to be distributed to the common stockholders.[1]

In view of the findings of the Commission and both Courts below, there is no question that the liquidation of Engineers embodied in its Section 11(e) plan was dictated by the necessity of complying with Section 11 of the Act, and therefore was not "voluntary" within the meaning of the above charter provisions.[2] Accordingly, the preferred stockholders, having received $100 per share plus accrued dividends, are entitled under the charter to "no further participation in the distribution" of Engineers' assets unless what has taken place is not "a liquidation, dissolution, or winding-up of this corporation or * * * reduction of its capital stock, resulting in any distribution of its assets". Clearly, both in letter and spirit, not merely one of these but all of them have occurred.

---

[1] Appendix B, *infra*, pp. 166-7.

[2] Commission opinion, R. 48a (quoted, *supra*, pp. 9-10) District Court conclusions, Nos. 1-2, R. 315a-316a. Court of Appeals opinion, R. 36. The Commission and Courts have consistently held that reorganizations or liquidations such as this pursuant to Section 11(e) are not voluntary, even though formally "the company * * * takes the initiative in a proceeding under § 11(e)" L. Hand, J., *Public Service Commission* v. *S. E. C.*, 166 F. 2d 784, 787 (C. C. A. 2, 1948), cert. den. 334 U. S. 838; *City National Bank & Trust Co.* v. *S. E. C.*, 134 F. 2d 65 (C. C. A. 7); *In re Standard Gas & Electric Co.*, 151 F. 2d 326, 327 (C. C. A. 3), cert. den. 327 U. S. 796; *Cities Service Power & Light Corp.*, Holding Company Act Release No. 4944; *Consolidated Electric & Gas Co.*, Holding Company Act Release No. 4900, approved and enforced 55 Fed. Supp. 211 (D. Del., 1944).

Although the Commission's opinion did not find, or even suggest, that Engineers' dissolution was not a "liquidation, dissolution or winding-up" within the meaning of the charter, in the courts the Commission's counsel have joined the other respondents in intimating that Engineers' dissolution is not really a "liquidation" because, by the distribution of common stocks of the three operating companies to Engineers' common stockholders [1], the "enterprise" continues in fact, albeit in another form.

The answer to this contention is not only that both Courts below found explicitly that the dissolution of Engineers and the distribution of its assets among its security holders is a complete and final liquidation of the entire enterprise—both of the holding company and of the system [2]—but the barest rehearsal of the facts leaves no doubt as to the correctness of these findings. Engineers, an enterprise which had owned, directly and indirectly, and controlled and managed the activities of seventeen electric and gas utility and non-utility subsidiaries operating in fifteen states, has been completely dissolved. All but three of Engineers' subsidiaries have been sold for cash or liquidated in compliance with the Commission's orders, and this cash, together with the stock of the remaining three subsidiaries, has been distributed to the thousands of security holders of Engineers.

Plainly, the vast holding company, as it existed before the Act, was not a mere formal device through which each

---

[1] Actually only the stocks of Virginia and El Paso were distributed as a liquidating dividend; the common stock of Gulf States was purchased by the common stockholders by payment of $22,000,000 cash on the exercise of the Gulf States warrants. It will also be recalled that the common stocks of each company represent only a minority of the total capitalization of each company (*supra*, p. 7, n. 3).

[2] R. 316a. R. 36.

shareholder became a *pro rata* beneficial owner of shares of stock in operating companies. If all that was desired was ownership of operating utility common stocks, many excellent ones were freely available for purchase by any investor on the various stock exchanges. The stockholders who purchased shares of Engineers invested in a large holding company enterprise whose very essence was centralized control and management[1] of geographically diversified operating companies under the sponsorship of one of the world's oldest and most famous utility engineering firms;[2] that enterprise carried all the advantages associated with such a holding company: a large and expert central service organization,[3] combined mass purchasing power, favorable access to the best sources of finance, a leveraged capital structure, broad economic and geographic diversity,[4] and other significant economic benefits including tax savings resulting from consolidated tax returns.[5]

Instead of their investment in such an enterprise the security holders of Engineers, as a result of this proceeding, have received cash and/or the common stock of three isolated and unrelated operating utility companies. It requires no elaborate argument to demonstrate that termination of their investment in Engineers is no mere reorganization or formal shifting of an investment in an

[4] Engineers Exhibits 37-N, 37-O, 37-P, R. 1648a, 1654a, 1660a; Findings of Fact Nos. 3-6, R. 294a-295a.

[5] See *infra*, p. 96, n. 1.

otherwise continuing enterprise.[1] It is in fact what it is in form—a complete and final liquidation of the enterprise in which the security holders originally invested and a distribution in kind of the assets remaining in that enterprise after a substantial portion of the original assets have been sold for cash.[2] Indeed, if the present dissolution of Engineers is not a complete liquidation of the entire system, it is difficult to envisage what type of dissolution of the company and distribution of its assets—short of a piecemeal sale of the generators and power lines of the subsidiaries—would come within the charter provisions.

---

[1] Cf. *In re Westerfield's Estate*, 82 N. Y. Supp. (2d) 766, — Misc. — (1948). See also, Commissioner Healy, dissenting in *United Light-American Light & Traction Co.*, Holding Company Act Release No. 6603 (1946), p. 41.

[2] Any intimation that this final distribution of portfolio assets constituted some sort of artful device for "continuing the enterprise" in the hands of "controlling" common stockholders must be set down as pure fantasy, devoid of any support either in fact, or in the findings of the Commission or the Courts below. Not only were the larger common stockholders also among the largest holders of the preferred (*supra*, p. 9, n. 2), but the fact is that large amounts of the portfolio stocks distributed in the liquidation have been sold by their original recipients and a substantial additional volume of sales is made each day on the New York Stock Exchange. A tabulation from Standard & Poor's Stock Guide establishes that approximately 800,000 shares of Virginia common and 550,000 shares of Gulf States were sold on the New York Stock Exchange subsequent to distribution and prior to November 30, 1948. These shares necessarily represent a portion of those distributed, since none were outstanding prior to the distribution.

Distribution of portfolio assets as a liquidating dividend is, of course, a common incident of many corporate liquidations. In fact, Engineers attempted to sell one of these three remaining assets for cash, but was unsuccessful in its attempt (Engineers Ex. 37-K, R. 1609a). Under the circumstances, it was only logical for the management of Engineers to distribute the remaining stocks pro rata to the stockholders, in the manner provided by the charter, thus avoiding underwriting and selling expenses, and leaving it to each stockholder to decide whether and when to sell his pro rata share in accordance with his own financial needs and judgment (R. 644a).

It does not detract from this conclusion that the Public Utility Holding Company Act had not been enacted in 1925, at the time when Engineers' charter was drafted. In point of fact, it was widely known at that time that legislative efforts were being made to bring about the curtailment and dissolution of the "power trusts" and "power monopoly" represented by public utility holding companies. By 1924 the halls of Congress and the pages of many sections of the public press resounded to almost continuous attacks upon "the power trust" and the "power monopoly" and demands for remedial action against utility holding companies.[1] Under the pressure of a group of "anti-power trust Senators", led by Senators Walsh of Montana and Norris of Nebraska, the United States Senate in December, 1924, launched the first of a series of sweeping congressional investigations of utility holding companies which culminated directly and proximately in the adoption of the Act.[2] These investigations were ac-

---

[1] Cf. Bonbright & Means, The Holding Company (1932):

"It was in the field of local public utilities that the holding company has reached its highest stage of development, and *it is in this field also that this corporate device has been subject to the most severe criticisms from spokesmen for the public interest*" (p. 190; emphasis supplied).

[2] See Senate Resolution 329, 68th Cong., 2d Sess.; Senate Resolution 83, 70th Cong., 1st Sess.; see, also, recitals in Section 1(b) of the Act.

During the Congressional debates on the Holding Company Act, Senator Wheeler stated:

"* * * let me call the Senate's attention to the fact that this bill is not something new. It is the outgrowth of an investigation which was started in Congress a great many years ago when my colleague, the late Senator Walsh, one of the greatest lawyers who ever served in this body, started the investigation into the holding companies which was continued before the Federal Trade Commission, where for 6 or 7 or 8 years they have been conducting the investigation" (79 Cong. Rec. 8384; 74th Cong., 1st Sess.).

companied by startling events and disclosures whose reverberations were featured almost continuously in the public press of the time.[1]

It is in the light of these widespread public attacks on the power trusts that the language of Engineers' charter assumes particular significance. The charter expressly contemplates a "reduction of * * * [the corporation's] capital stock, resulting in any distribution of its assets to its stockholders". Whatever else such a provision may embrace, it certainly covers both the distribution of portfolio assets pursuant to the compulsion of the anti-trust or other relevant laws curtailing or dissolving the "power trusts" and the sale of subsidiaries under such legal compulsion and distribution to the stockholders of the cash proceeds of such sales. While those who drafted this clause could not have known of the precise form of curtailment of holding company operations ultimately to be embodied in the Public Utility Holding Company Act, it is plain that the clause does cover all such types of system curtailment or liquidation, even *partial*, by force of law.

It is undisputed that Engineers has, pursuant to explicit orders of the Commission, sold a substantial portion of its assets for cash, and has in these proceedings used that cash to retire its preferred stock under the compelling impact of the statute.[2] Hence, even if it be contended that

---

[1] Set forth at the end of this brief as Appendix C, *infra*, pp. 168-175, are a few representative items which appeared in the press of the period. These examples could be multiplied many fold.

[2] See the Commission's admonition to Engineers to reduce its capitalization or face the probability of mandatory action by the Commission under Section 11(d) of the Act, in *The Western Public Service Company*, 12 S. E. C. 804, 808; and the pointed references in the concurring opinion to the "reduction of capital" provision of the charter (pp. 819, 820).

In the light of the Commission's repeatedly announced policies affirmed by the Courts, reduction of the capital of a holding company such as Engineers, whose subsidiaries had large amounts of bonds and preferred stocks outstanding, necessitated the complete

the present proceedings have not produced a complete "liquidation" of the company—a contention itself devoid of all merit—it is nevertheless inescapable that they have produced at least a "reduction of its capital stock, resulting in * * * [a] distribution of its assets to its stockholders". By the explicit terms of the charter such a reduction of capital permits the preferred stockholders to be paid no more than $100 plus accrued dividends.

It is doubtless for these reasons that the Commission did not even intimate, in its opinion, that the existence of Engineers and of its holding company system was not being terminated, or that the enterprise was not being definitively "liquidated". Nor did the Commission, in its opinion, base its conclusion that the preferred stockholders should receive more than $100 per share on any finding that this was not in fact a "liquidation" within the meaning of Engineers' charter. On the contrary, what it said was merely that "the liquidation provisions of the charter" are not "conclusive". Having said that, it proceeded to ignore those provisions completely.[1]

---

elimination of the holding company preferred stocks. Cf. *Commonwealth & Southern Corp.*, 9 S. E. C. 609 (1941), aff'd *Commonwealth & Southern Corp.* v. *S. E. C.*, 134 F. 2d 747 (C. C. A. 3); *Central and Southwest Utilities Co.*, 11 S. E. C. 533, aff'd *Central and Southwest Utilities Co.* v. *S. E. C.*, 136 F. 2d 273 (App. D. C.); *Consolidated Electric and Gas Company*, Holding Company Act Release No. 4900 (1944), approved and enforced, 55 F. Supp. 211 (D. Del., 1944); *Cities Service Power & Light Corp.*, Holding Company Act Release No. 4944, p. 15 (1944).

[1] Since the Commission determined the value of the preferreds solely on the basis of Badger's estimate of the price at which they would have sold on the market if their retirement had not been compelled by the Act (*infra*, pp. 74-86), the amount of their charter liquidation claim was accorded not even the slightest weight. Under the Commission's approach, the amount awarded the preferred would have been no different if the liquidation provision of the charter specified $110 per share in all dissolutions (as certain holding company charters do specify), instead of the $100 actually specified here.

C. Nothing either ruled or said by this Court in the *Otis* case alters the command of the "fair and equitable" standard that the contractual relationship be strictly enforced.

Being unable to find that the present liquidation of Engineers is not within the liquidation provisions of its charter, the Commission, in reliance on this Court's decision in the *Otis* case, and perhaps in *Schwabacher* v. *United States*, 334 U. S. 182, claims the power, on the forced liquidation of a solvent corporation or retirement of its senior securities, to award to senior security holders cash amounts in excess of their contractual claims. Respondents submit that the Commission's reliance on these cases for support of such a proposition is grossly misplaced.

The crucial fact, upon which both the Commission's opinion and this Court's decision in *Otis* rests, is that the holding company enterprise continued essentially unchanged, even though the particular corporation there involved was being dissolved pursuant to the mandate of the Act, as an incident to the simplification of the continuing system. As the Commission repeatedly pointed out, both in its opinion [1] and in its brief in this Court,[2]

---

[1] See *United Light & Power Company*, 13 S. E. C. 1 (1943).

[2] See Brief of S. E. C., October Term 1944, No. 81, at pp. 78-79:

> "Finally, in no realistic sense is there occurring *in this case* a dissolution of a business enterprise which should call for the application of a charter liquidation preference. As the opinion of the majority of the Commission discloses, the preferred and common stockholders of Power have been the residual co-owners of a vast public-utility system controlled through Power, the top holding company, and Railways its principal *subholding company subsidiary*. These stockholders will continue to remain the residual owners of *the same public utility system* * * *. *In essence, therefore, while Power is being dissolved the enterprise is not*" (emphasis supplied).

Similarly, Professor Dodd, whose article is referred to in the majority opinion of this Court (p. 630) had repeatedly stressed the mere simplification of a continuing holding company system involved in the *United Light* case. Dodd, *Holding Company Act Recapitalizations* (1944), 57 Har. L. Rev. 295, 308, 313.

all that happened there was that the top company in a multi-tiered holding company system was eliminated, and its security holders were given the securities of the second holding company in the continuing system in lieu of their holdings in the top company.

Not only was it thus urged, and found, as a fact [1] that both the holding company enterprise and the participation of the preferred stockholders in it continued, but the doctrine which the Commission evolved and this Court approved in that case to measure how a "fair and equitable" distribution of assets was to be achieved, was predicated upon this continuance of the enterprise in fact. "Equitable equivalence" was computed by estimating the future earnings of the continuing enterprise available for each class of security holders—precisely the valuation technique which the continuance of the enterprise required. Cf. *Consolidated Rock Products Co.* v. *DuBois*, *supra*, at 525-526.

Because, in fact, there was no liquidation, fairness and equity did not require the Commission to enforce the charter liquidation rights of the preferred stockholders; in the absence of an authentic liquidation those rights did not come into play.[2] It would not be "fair and equitable"

---

[1] See, e.g., 323 U. S. 628-629, 631-637; 142 F. 2d 411 (C. C. A. 3), 51 F. Supp. 217 (D. C. Del.).

[2] As this Court stated: "There is an argument that if the charter provision applies to this situation it cannot be disregarded and that in such a liquidation 'fair and equitable' would require the distribution of assets only to the preferred. *We do not* reach that question. *The point at issue is whether this charter provision applies*" (323 U. S. 624, 635-636; emphasis supplied).

Apart from the fact that here, unlike *Otis*, a genuine and final termination of the holding company enterprise has occurred, the provisions of Engineers' charter are significantly different from those of the charter involved in the *Otis* case. There is no room here for the argument that the term "involuntary liquidation" employed in cor-

to accelerate or "mature" the liquidation rights of the preferred stockholders at the expense of the common stockholders, since the enterprise and the participation of the preferred therein were to continue and the Commission had expressly found that " * * * the whole future program of corporate simplification and geographic integration of the system * * * will result in an improvement of the investment position of both the preferred and the common stock. That improvement we believe should be shared by the common as well as by the preferred, and the process of securing such improvement in compliance with the Act should not be permitted to destroy existing investment values." [1]

In *Schwabacher* v. *United States*, 334 U. S. 182, as in the *Otis* case, the power of a Commission to transmute preferred stockholders' rights into their "equitable equivalents" was affirmed. But this power was found to exist only because the enterprise which state law would regard as "liquidated" was in fact continuing, augmented

---

porate charters as a term of art is limited to bankruptcy or creditor proceedings, or at least to the types of involuntary liquidation which were foreseeable when the term was inserted in the charter. Engineers' charter does not use the term "involuntary liquidation". It prohibits the payment of premiums on "liquidation", unless it is affirmatively shown that the liquidation was "voluntary". In the second place, as we have stated, the type of retirement of preferred stock here occurring, even without reference to the accompanying liquidation of the company, was itself within the contemplation of the liquidation clause which in addition to the provisions for "liquidation", "dissolution" and "winding-up" provided for "any reduction of [the corporation's] capital stock" resulting in any distribution of its assets to its stockholders, a provision wholly absent from the charter contained in *Otis*.

[1] 13 S. E. C. 1, 19 (1943), quoted in the Commission's brief (*supra*, p. 45, n. 2) at p. 20.

by merger, and the preferred stockholders' investment in that enterprise likewise continued.[1]

Above all, the *Otis* decision reflects the determination of this Court and the Courts below (the very ones which also passed on the case at bar) to cut through surface technicalities and pierce to the substantive realities of the question. The very essence of the *Otis* decisions in all three Courts was the refusal to apply liquidation standards to a mere simplification and reorganization of a continuing holding company system. *Schwabacher* v. *U. S.*, supra, was a reaffirmation of that same insistence upon dealing with realities by refusing to hold that matured liquidation claims were the measure of dissenting stockholders' rights in a continuing railroad enterprise augmented by merger. Yet here the Commission seeks to rely on these decisions for justification in applying wholly *fictional* (and erroneous, as will be shown) reorganization standards to an incontestably authentic and final liquidation.

In sharp contrast to *Otis* and *Schwabacher*, this case involved a genuine liquidation and distribution of assets of an entire holding company system and the final termination of the investment which the security holders had made in it. In terms and in fact, therefore, the liquidation provisions of the corporate charter applied to this situation. And here the preferred stockholders were

---

[1] "*Since the federal law clearly contemplates merger as a step in continuing the enterprise* it follows that what Michigan law might give these dissenters on a *winding up or liquidation* is irrelevant except insofar as it may be reflected in current values for which they are entitled to an equivalent. It would be inconsistent to allow state law to apply a liquidation basis to what federal law designates as a basis for continued public service" (*Schwabacher* v. *U. S.*, 334 U. S. 182, 200; emphasis supplied).

repaid their full investment entirely in cash, rather than being required to accept new securities representing another form of continuing interest in the holding company system, as were the preferred stockholders in *Otis*.

Since the Act compelled the relinquishment by the preferred stockholders of their interest in an enterprise which was being liquidated, and freed them from the risks of a new enterprise, their rights were to be measured as on liquidation, not as though they remained participants in a continuing enterprise.[1] The abrupt impact upon the stockholders of the "overriding public policy" embodied in the Act may render it appropriate for the Commission to transmute the surrendered claims of senior security holders into their "equitable equivalents" when they are forced by the Act to remain part of a continuing enterprise; but nothing in the Act or its history authorizes, or makes it appropriate for, the Commission to enhance the contractual rights of senior security holders when a genuine liquidation compelled by the Act relieves them of all the risks of the continuing enterprise.[2] In those circumstances

---

[1] In plain recognition of the distinction between a senior security holder's continuing interest in a continuing enterprise and his interest when severed from the enterprise by being paid out in cash, Congress, in bankruptcy and reorganization legislation, has provided that senior security holders who are paid off in cash are wholly excluded from voting on the plan of reorganization (Bankruptcy Act, Sec. 77(e); Ch. X, Secs. 179, 222). Because those being severed from the enterprise under the impact of bankruptcy receive in cash the full amount of their retirement or liquidation claim, they are no longer "affected" by the plan under which the enterprise continues, and are not permitted to vote on it.

And the amount of the cash payment is limited to the involuntary liquidation claim or face amount of the security, plus arrears of dividends or interest (cf. *Knight* v. *Wertheim, supra*, p. 36; *The United Light & Power Co.*, 10 S. E. C. 1215, 1225).

[2] Cf. Brief of S. E. C. in *N. Y. Trust Company* v. *S. E. C.*, 131 F. 2d 274 (C. C. A. 2), quoted *infra*, p. 56, n. 1.

"fairness and equity" entitle the senior security holders to no more than is provided for them in the applicable provisions of their charter.[1]

If, as has been stated, the dissolution of Engineers and paying off of its preferred stockholders is claimed not to have been a "liquidation, dissolution or winding-up" of the enterprise (and we submit that it indisputably was), it was beyond cavil at least a "reduction of its capital stock, resulting in * * * [a] distribution of its assets to its stockholders". In either event, what occurred was plainly within the provisions of the charter which limit the preferred stockholders to receiving $100 together "with all dividends accrued or in arrears thereon" and to "no further participation in * * * [the] distribution" of its assets. Under the charter the common stockholders receive "all of the remaining assets". Execution of that charter is the command of fairness and equity.

[1] Indeed, the Commission itself early recognized that the distinction between "liquidation" of the enterprise and of the senior security holders' interest in it, on the one hand, and a mere alteration in the senior security holders' investment in a continuing enterprise, on the other, was embodied in the "fair and equitable" standard of Section 11 of the Act. And the Commission unequivocally asserted that, while because of this distinction it was authorized to transmute into "equitable equivalents" the relinquished prior claims of senior security holders in a going concern in which they were obliged to remain, the "fair and equitable" standard contained no authority for such transmutation in avoidance, if not violation, of contractual liquidation provisions when the enterprise was being liquidated and its preferred stockholders paid off. *Federal Water Service Corp. et al.*, 8 S. E. C. 893, 907-911.

II. Even if Engineers' dissolution pursuant to the Plan under consideration is deemed not to have been within the purview of the charter liquidation provisions, the "fair and equitable" standard, as interpreted in a long series of Commission and Court decisions, precluded the payment to the preferred stockholders of more than $100 per share.

We have contended that because a genuine and final liquidation of Engineers has taken place, the terms of the charter liquidation provisions limit the preferred stockholders to $100 per share plus dividends, and the "fair and equitable" standard requires enforcement of those terms. If, however, notwithstanding this contention it is held that the charter liquidation provisions were not applicable to the instant liquidation, we submit that nevertheless "fairness and equity" interdicted any award to the preferred stockholders of more than $100 per share.

The instant case was not the first in which the Commission was faced with the problem of determining the rights of senior security holders to premium payments upon the forced liquidation of their enterprise or the retirement for cash of their securities, where the contractual provisions were deemed not applicable. When first this question was presented, the Commission concluded that the "fair and equitable" treatment commanded by the Act dictated the application of the established equitable doctrine of frustration—i.e., that frustration of the enterprise by governmental acts or other supervening events not provided for by the parties required "the loss * * * [to] * * * lie where it falls. Neither party can be com-

pelled to pay for the other's disappointed expectations."[1] And, on the other hand, neither party will be permitted to retain moneys paid by the other on account of an executory contract which has been frustrated. This deeply rooted principle, which some forty years before enactment of the Holding Company Act had been held applicable by the courts in determining the rights of stockholders of a corporation dissolved under the compulsion of law,[2] was found by the Commission to be part and parcel of the "fair and equitable" standard of Section 11(e)—in the very liquidation which gave rise to this Court's decision in the *Otis* case. Thereafter this principle has been repeatedly applied by the Commission and by the courts in a long and hitherto unbroken line of decisions.[3]

In the liquidation of United Light & Power Company, the Commission ruled, and was upheld by this Court in the *Otis* decision, that as between the preferred and common stockholders, since both were receiving stock in the continuing enterprise, "fairness and equity" required each to receive the "equitable equivalent" of that which he was being compelled to give up.[4] But the debenture holders, who were being retired from the enterprise by the payment of cash, were held precluded by "fairness and equity" from receiving any added compensation or "equi-

[1] American Law Institute, Restatement of the Law of Contracts, Sec. 468 (Comment on subsection 3, page 887); also see 6 Williston on Contracts (revised ed. 1938), Sec. 1938 et seq.

[2] *Lorillard* v. *Clyde*, 142 N. Y. 456 (1894). In that case the principle was held applicable to a contract in which the junior security holders exercising full control and management of the enterprise specifically guaranteed the future payment of dividends to the senior security holders.

[3] Cases collated, *infra*, p. 55, notes 3 and 4.

[4] *United Light & Power Co.*, 13 S. E. C. 1 (1943).

table equivalent" for the 6% and 6½% claims on future earnings in the form of secure interest payments which they were required to relinquish. However lucrative would have been the return on their investment if permitted to remain outstanding, they were held entitled to receive only the face amount of their securities, which represented theoretically the amount they originally had contributed to the enterprise. In denying the debenture holders' right to receive the premiums to which they were entitled upon voluntary retirement of the debentures before maturity, or added compensation of any kind for the loss of their future high interest payments, the Commission stated:

> "We believe that the obligation to pay a premium was intended to arise only when the company was to continue as a going concern, for the payment thereof is in the nature of compensation payable by the company (i.e., its stockholders) to the debenture holders for depriving the latter of their investment. In a going concern, the stockholders may be deemed to benefit from the elimination or reduction of the debt effected by the redemption, and the premium may be regarded as the prearranged amount payable by them for such benefit.
>
> "But here the company does not continue as a going concern. There is no question of free choice or election. The company by virtue of congressional mandate is to terminate its existence. Power must liquidate not only its debt but also its stock. The rights of debenture holders and stockholders alike to retain their respective investments are cut off." *The United Light & Power Co.*, 10 S. E. C., 1215, 1221 (1942).

The Commission then went on to state (p. 1223):

> "* * * we are impelled to the conclusion that the terms of the debentures and the covering agreements

create no contractual obligation on the part of Power to pay a redemption premium and no right on behalf of the debenture holders to receive such premium. *We further conclude that no such obligation or right exists by virtue of any other recognized legal or equitable principle.*" (Emphasis supplied.)

And in holding that neither legal nor equitable principles entitled the debenture holders to more than the principal amount of their securities, the Commission had squarely before it the contention of the bondholders that, wholly apart from contract rights, they should as a matter of "fairness and equity" receive additional compensation because they were being deprived prematurely of a valuable investment bearing interest rates of 6 and 6½%, rates so lucrative that the debentures had been selling at a premium above par.[1] The Commission disposed of this contention as follows:

"Lastly, counsel for the debenture trustee argues that if the redemption provisions are held inapplicable so that the debentures are treated as being in effect non-callable, some compensation must still be given to the debenture holders for the termination of their investment. The call premium of 9 percent is suggested as *an appropriate measure of such compensation.* It seems to us *a complete answer* to this argument that the termination of the investments of debenture holders and stockholders alike has been brought about by the act of a sovereign power—in this case a congressional mandate. We think the debenture holders have established no right to receive such compensation here at the expense of the

[1] *The United Light & Power Co., supra*, p. 1227, n. 27.

stockholders, whose rights we must also consider." (Emphasis supplied.)[1]

On appeal, the Second Circuit affirmed the Commission's holding and recognized that, at least where contractual provisions were not applicable, the doctrine of frustration of the enterprise was part and parcel of the "fair and equitable" standard (*New York Trust Co.* v. *S. E. C.*).[2] Thereafter, this doctrine was consistently applied by the Commission and the Courts[3] to limit preferred stockholders and bondholders to the face amount of their securities in the numerous cases involving retirements of senior securities of holding companies required to liquidate in whole, or merely *in part*.[4]

---

[1] *Id.* at p. 1228.

[2] 131 F. 2d 274 (C. C. A. 2, 1942), *cert. den.* 318 U. S. 786, *rehearing den.*, 319 U. S. 781.

[3] Not less than four different circuit courts of appeal have passed on the question and have uniformly held the frustration doctrine applicable. See, in addition to the decision of the Second Circuit in the *New York Trust* case, the following:

City National Bank & Trust Co. v. *S. E. C.*, 134 F. 2d 65 (C. C. A. 7, 1943); *Massachusetts Mutual Life Insurance Co.* v. *S. E. C.*, 151 F. 2d 424 (C. C. A. 8, 1945), *cert. den.* 327 U. S. 795; *In re Standard Gas & Electric Co.*, 151 F. 2d 326 (C. C. A. 3, 1945), *cert. den.* 327 U. S. 796. Cf. *Bailey* v. *Minsch*, 168 F. 2d 635 (C. C. A. 1, 1948), *cert. den.* 69 S. Ct. —, 1948.

And in the District Courts, see: *In re Laclede Gas Light Co.*, 57 F. Supp. 997 (E. D. Mo., 1944); *In re North Continent Utilities Corp.*, 54 F. Supp. 527 (D. Del., 1944); *In the Matter of Consolidated Electric & Gas Co.*, 55 F. Supp. 211 (D. Del., 1944); *In re Central States Power & Light Corp.*, 58 F. Supp. 877 (D. Del., 1944); *In re Interstate Power Co.*, 71 F. Supp. 164 (D. Del., 1947).

With respect specifically to retirement of preferred stocks without premiums, see *Cities Service Power & Light Co.*, Holding Company Act Release No. 4944; *Georgia Power & Light Co.*, Holding Company Act Release No. 5568; *El Paso Electric Co.*, Holding Company Act Release No. 5490.

[4] Thus, in *Cities Service Company, et al.* (Holding Company Act Release No. 4944 [1944]) the Commission held the doctrine appli-

Apart from its authoritative command as a part of the texture of the "fair and equitable" standard, the doctrine of frustration offers a peculiarly apt solution for the problem created by the forced retirement of senior securities in the liquidation of an enterprise pursuant to the mandate of the Act, when the provisions of the corporate charter are deemed not to cover such a contingency. In the situation in which "the enterprise continues" so that charter liquidation claims do not come into play and the senior security holders' participation is forced also to continue, there may be sound reasons, as this Court pointed out in the *Otis* case (p. 637), for not restricting either the Commission or the parties to one form of change rather than another. And "fairness and equity" may, in such circumstances, require an equitable adjustment in the relationship of the security holders who are forced to continue as partners in a going enterprise.[1]

---

cable to retirement of the debentures and preferred stocks of a holding company which had not been ordered to liquidate but merely to divest itself of a portion of its properties pursuant to Section 11(b)(1). The same is true of the retirement of the notes and debentures of *Standard Gas & Electric* (*supra*) and of the senior securities in *Consolidated Electric & Gas Company* (Holding Company Act Release No. 4900 [1944]) approved and enforced: *In the Matter of Consolidated Electric & Gas Co.*, 55 F. Supp. 211 (D. Del., 1944). It also held the same doctrine applicable in the case of at least two operating companies which are necessarily continuing enterprises. *In re Laclede Gas Light Co.*, 57 F. Supp. 997 (E. D. Mo., 1944), aff'd *Massachusetts Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. 2d 424 (C. C. A. 8, 1945); *Interstate Power Company* (Holding Company Act Release No. 7143, 1947), approved and enforced. *In the Matter of Interstate Power Co.*, 71 F. Supp. 164 (D. Del., 1947).

[1] As the Commission pointed out in its brief dated August 15, 1942, in the Second Circuit in *New York Trust Company* v. *Securities & Exchange Commission*, 131 F. 2d 274:

> "Admittedly property rights of innocent security holders should be preserved upon the liquidation of a corporation under * * * [the anti-trust laws] * * * or under the present law. The question is what those rights are. [If] * * * capital funds

But when the final termination of the enterprise, or of the senior security holders' interest in it is compelled, and both senior and junior security holders are cut loose from their partnership relationship, each group of security holders is deprived of the reciprocal advantages which its investment in the joint enterprise gave it. Neither class should be permitted to obtain compensation from the other class for the loss of its "disappointed expectations".[1]

In short, a species of rescission by operation of law has occurred[2] and the face amount of the security—which theoretically mirrors the senior security holder's contribution to the enterprise—is all that he is entitled to recover.

---

obtained from the issuance of the securities affected by the dissolution were not returned to the investors but were retained for the use of the successor corporations, * * * the investors would be thus required to accept other securities in different corporations, thereby keeping their investments tied up in other enterprises. [Compensation in those cases] * * * is not given for the loss of their investments, but for the continuation of their investments in successor companies at greater risks" (p. 29).

[1] Despite the fact that the Engineers' common stockholders did not benefit in even the slightest degree, and in fact lost heavily, as the result of the liquidation (*infra*, pp. 116-119) it may be observed that in applying the principle of frustration, the courts have consistently held that "the loss must lie where it falls" as a matter of sound policy even where the other party is unquestionably a beneficiary of the frustration. See, for example:

Omnia Commercial Co. v. *U. S.*, 261 U. S. 502; *The Isle of Mull*, 278 Fed. 131 (C. C. A. 4, 1921), *cert. den.* 257 U. S. 662; *Earn Line S.S. Co.* v. *Sutherland S.S. Co.*, 254 Fed. 126, 134, aff'd *sub. nom.*; *The Claversek*, 264 Fed. 276 (C. C. A. 2, 1920); *Nitro Powder Co.* v. *Canadian C. & F. Co.*, 233 N. Y. 294, 135 N. E. 507. See, also, The Gold Clause decisions: *Norman* v. *B. & O. R. Co.*, 294 U. S. 240; *Perry* v. *U. S.*, 294 U. S. 330; *Holyoke Water Power Co.* v. *American Writing Paper Co.*, 300 U. S. 324; *Smyth* v. *U. S.*, 302 U. S. 329; *Guaranty Trust Co.* v. *Henwood*, 307 U. S. 247.

[2] Cf. *Williston, Contracts, supra*, p. 52, n. 1, at p. 5486, n. 10.

That these are the principles which are embodied in the concept "fair and equitable" as used in the Act is made plain by the Commission's pertinent statement in its brief in the Second Circuit Court of Appeals in *New York Trust Co.* v. *S. E. C.*[1] (*supra*):

> "The petitioner's claim for compensation must, moreover, be considered in the light of *the correlative rights of Power and its stockholders.* Power had the right by contract to use the capital received from the debentures exclusively for itself, subject only to the payment of interest for its use. *The Holding Company Act and the Commission's order pursuant thereto have taken away this right. In these circumstances neither party is entitled to compensation for the loss of their correlative rights.* It is well settled that a promisee is not entitled to compensation for the loss of his bargain when the promisor has been denied his expected benefits under the contract through the impact of a supervening statute [citing cases]. (pp. 26-27).
>
> * * * Under these decisions Power must be considered free from liability to pay interest on the debentures in the future, *or compensation for the loss thereof,* because the statute has deprived Power of any benefits from the use of the capital. The debenture holders must, therefore, accept the premature termination of their rights under the agreements (p. 29).
>
> * * * * * * *
>
> In the instant case *neither Power nor a successor company is retaining, or can retain, the capital obtained from the sale of the debentures for the benefit of the system.* The debenture holders are being

[1] Brief dated August 15, 1942, on behalf of the Securities and Exchange Commission. (Emphasis supplied.)

repaid the principal of and accrued interest on their debentures, *are restored to their original position, and are not compelled to accept the risks of a new enterprise.* Under these circumstances, as we have heretofore shown, the debenture holders are not entitle to anything more" (p. 30).

This rationale, as the District Court specifically found, applies with special force to the facts of this case. Here, as in those other cases denying the payment of premiums to senior security holders, the preferred stockholders have, to be sure, relinquished a preferential claim to future dividends at a rate which they contend was attractive. But that same mandate which deprived the preferred stockholders of those future dividends simultaneously deprived the common stockholders of the valuable right to utilize the preferred stockholders' capital, which constituted the entire consideration for the payment of the dividends. Moreover, in this case, even more demonstrably than in the others, the junior security holders have suffered additional deprivations of a far-reaching character as a result of the statutory requirement to liquidate.

Thus, although throughout the history of Engineers the preferred stockholders have received their stipulated dividends in full, aggregating approximately $90 per share,[1] the common stockholders had received no dividends whatever since 1932 (and a total of less than $5 prior thereto) notwithstanding that since the enactment of the statute in 1935 more than $24,000,000 had accrued

[1] District Court Finding No. 26, R. 303a. The Court pointed out that its figures were as of December 31, 1946; thereafter the preferreds received additional dividends until June 30, 1947, which have enhanced the sum mentioned above.

to the common's interest in earnings, and almost $10,000,000 of this sum had been available for dividends on the common stock.[1] The common stockholders were required to forego all such dividends in order to provide for the adjustments required by the Act, including the statutory requirement embodied in Section 11(b)(2) that the company shrink its capital structure by retirement of the preferred stocks.[2] Since the funds thus accumulated through retained earnings and the proceeds of divestments were not sufficient to meet the contractual claims of the preferred, the common stockholders were required to supply $22,000,000 additional in cash for this purpose, through the exercise of "warrants" entitling them to receive their pro rata share of one of the company's assets in the dissolution.[3]

Moreover, the divestment of subsidiaries required by the Act had, as concurrent findings of both Courts below establish, resulted in large losses to Engineers as a company by compelling it to part with the stocks of subsidiaries at prices considerably under the prices realizable for those stocks if the company had not been required to comply with the Commission's divestment orders.[4] Even where the divestments did not produce an actual

[1] District Court Findings 33-35, R. 305a-307a; Engineers Ex. No. 30, R. 1395a; R. 470a; Cf. Commission Opinion, R. 69a.

[2] District Court Finding 37, R. 307a; Cf. Commission Opinion, R. 69a.

[3] District Court Findings 39-40, R. 308a-309a; Cf. Commission Opinion, R. 41a-43a.

[4] District Court Findings 37-38, R. 307a-308a; Court of Appeals Opinion, R. 34, 36.

book loss as of the time of divestment,[1] they deprived the company of the high earnings of the subsidiaries with which it was compelled to part.[2]

As a result, the common stockholders find themselves in the position of being deprived of the $39,000,000 of capital which the preferred stockholders had contributed for the company's use without any limitation of time,[3] losing the extremely high earnings which the enterprise had received from the investment of that sum,[4] and of having received no dividends for a period of some ten years because of the necessity for accumulating funds to retire the preferred stock under the compulsion of the statute.

---

[1] The Commission recognized that these losses had occurred (R. 72a) but stated it did not "accept the hypothesis" that the Act had caused the losses, since Engineers was free "within limits" to choose the time for divestments. But those "limits" were very stringent indeed. Divestment orders not complied with within one year are subject to mandatory enforcement proceedings, including the appointment of a trustee. See Sections 11(c) and 11(d) of the Act. Although the Commission is authorized to grant an extension "for an additional period not exceeding one year", a corporation which delays in the carrying out of divestments is placed in the position of gambling on the Commission's benevolence or inaction.

The District Court's findings as to the losses were based upon uncontradicted evidence that Engineers would have been able to obtain much higher prices if it had not been compelled to carry out the divestments, or alternatively would have received higher earnings if it had retained the assets (cf. Finding 37, R. 307a-308a). The Court of Appeals having affirmed these "careful and far reaching findings" (R. 34, 36) we submit that these concurrent findings "are final here in the absence of very exceptional showing of error". *Comstock* v. *Group of Investors*, 335 U. S. 211, 214 (1948).

[2] District Court Finding 37, R. 307a, Court of Appeals, R. 36-37.

[3] Cf. Brief of S. E. C. in *New York Trust Co.* v. *S. E. C.*, *supra*, p. 56.

[4] See discussion, *infra*, pp. 117-119, for the highly profitable employment of these funds which was denied to the common stockholders by the mandate of the Act.

On the other hand, the preferred stockholders having received repayment of something more than *the maximum amount* contributed by them or their predecessors to the enterprise[1] as well as dividends at the full contract rate to the date of retirement of the preferred, now demand that the common stockholders pay them an additional $3,200,000, for the relinquishment of their future right, to assertedly high dividends. In a word, the preferred stockholders seek payment for their "disappointed expectations"; and they demand that the common stockholders become indemnifiers of this theoretical

[1] Two of the issues were sold to the public at the time of issuance for $100 per share, and the third at $99.50 per share, although the company actually received on the average something less than $96 per share for all three issues (District Court Findings Nos. 22-23, R. 301a). The $5 series carried the privilege of conversion until 1938 into common stock, a feature which obviously had substantial value independently of the preferred (large amounts of this stock were converted into common at an average price of $52 per share in 1928-1929, a period where the common sold as high as $79¾). The $5.50 series (sold to the public at $99.50 per share) carried a warrant giving the holder a "call" on common stock over a 10-year period (District Court Finding No. 22, R. 301a). It is thus evident that in paying approximately $100 the original purchasers of these stocks were paying something *less* than $100 for the stock alone, since the conversion features and warrants had substantial value in their own right.

As to those who purchased subsequent to the initial issue, it is to be noted that the market price of all three issues from date of issuance until virtually the date of retirement ranged between $63-$67, *averaged over the entire period* (Commission's Opinion, R. 62a-63a). The record establishes that turnover during the period of depressed prices (particularly during the years when the preferreds were selling in the range of $10-$15 per share) was extremely heavy. Over the entire period, the turnover ratio of the $5 series was 335%; of the $5.50 series, 215%; of the $6 series, 195% (see Engineers Exs. 26-28, R. 1391a-1393a).

future deprivation even though the common have themselves suffered great deprivations, both past and future.

If ever a case called for the tempered application of the principle that "neither party is entitled to compensation for the loss of their correlative rights",[1] we submit that this is that case.

By what process of reasoning then, did the Commission come to rule that in this case "fairness and equity" require payment by the common stockholders to the preferred stockholders of $3,200,000 in excess of the maximum capital contribution, charter and book claim of the latter? The Commission reached this result by indulging in the baldest fiction, and asserting a limitless power to determine what "fairness and equity" require. It "hypothesized" that the holding company enterprise was continuing despite the fact that it was not; and although the retirement of their securities for cash relieved the preferred stockholders of the risk of all potential unfavorable circumstances, the Commission held that the preferred stockholders should receive in cash the maximum amount which they could possibly realize under the most favorable circumstances if they remained participants in this hypothetical continuing enterprise.

Reference to the facts found by the Commission and both Courts below in this case, and a comparison of this ruling with the long line of earlier decisions denying the

[1] Brief of S. E. C. in Second Circuit Court of Appeals in *New York Trust Company* v. *S. E. C.*, *supra*, p. 58.

payment of premiums to senior security holders[1] suggests that the Commission's new fictional doctrine was designed to free the Commission not only of the limitations stemming from the contractual arrangements of the parties, but also of the settled principles found in the "fair and equitable" standard of 11(e) by the Commission and the Courts. The resultant power of the Com-

[1] The Commission first qualified its previous rulings that fairness and equity did not entitle senior security holders to the payment of premiums in *American Power & Light Company*, Holding Company Act Release No. 6176 (1945). In a vigorous and cogent dissenting opinion Commissioner Healy sharply challenged the Commission's assertion that its previous rulings were "distinguishable" on the ground that in the earlier cases "no attempt was made * * * to establish that the debenture holders' interest in the companies as continuing enterprises were worth more than the face amount of their claim". In point of fact, in virtually all the earlier cases the security holders both before the Commission [see, e.g., *United Light & Power Co., supra*, p. 54] and the courts [see, e.g., *Re Consolidated Elec. & Gas Co.*, 55 F. Supp. 211 at 215 (D. Del., 1944); *In re Standard Gas & Elec. Co.*, 151 F. 2d 326, 332 (C. C. A. 3, 1945), *cert. den.* 327 U. S. 796] had advanced precisely the same contention with respect to the value on "a going-concern basis" of the investments which they were required to relinquish, and had requested compensation for that alleged value.

The only other occasion prior to the instant case in which the Commission required premiums to be paid to the preferred stockholders was in *United Light-American Light & Traction Company*, Holding Company Act Release No. 6603 (1946), in a 3 to 2 decision; thereafter a motion for reargument was granted and decision was reserved for more than a year. While the decision was thus still pending, the company sought and obtained the Commission's approval to remain in business and to embark on a large new venture. The company thereupon made a voluntary proposal to purchase shares of its non-callable preferred stocks with funds obtained through sale of serial notes carrying a much lower rate of interest. (*United Light-American Light & Traction Co.*, Holding Company Act Release No. 7951 [1947].)

The *American Power & Light* decision, *supra*, was thus the only consummated decision prior to that of Engineers in which the Commission applied its new "investment value ex the Act" doctrine. That decision was not contested in the Courts because, as the president of the company pointed out to the stockholders in the annual report, a paradoxical tax situation arising out of the excess tax provisions then in force made it financially advantageous for the company to

mission to function wholly free of restraints and standards calls to mind Jeremy Bentham's pungent characterization of legal fictions:

> "A fiction of law may be defined—a wilful falsehood, having for its object the stealing legislative power, by and for hands which could not, or durst not, openly claim it—and, but for the delusion thus produced, could not exercise it." [1]

The vice in the Commission's fictional assumption that "the enterprise continues" is not merely in its perversion of the facts here, but in its perversion of established doctrine and the principles laid down by this Court in the *Otis* case. We believe that those principles require the application in this case of "the touchstone of the 'fair and equitable' standard"; the terms of the contract must prevail. But if those terms are deemed inapplicable, then the rationale of the *Otis* case certainly does not justify the abrupt rejection of the principle of "frustration". On the contrary, this Court held in that case that "fairness and equity" permitted the preferred stockholders to receive the "equitable equivalent" of their claim on earnings because they remained investors in a continuing enterprise; but as the reference in *Otis* (at p. 638) to

---

pay the premiums. Consequently, the instant case was the first one in which the Courts were called upon to reverse the long line of non-premium decisions in favor of the Commission's "investment value ex the Act" doctrine, which was and is totally devoid of any judicial support.

Subsequent to its decision in the instant case, the Commission issued one additional decision in which it applied its "investment ex the Act" doctrine (*Pennsylvania Edison Company*, Holding Company Act Release No. 8550, Oct. 15, 1948). That decision, which has not yet been passed on by the Courts, involved a very different fact situation from the Engineers liquidation (*infra*, p. 115, n. 1).

[1] Bentham, A Fragment on Government (Historical Preface to the Second Ed.) 1 BOWRING, BENTHAM WORKS (1843) 243.

New York Trust Co. v. *Securities and Exchange Commission*, 131 F. 2d 274 (C. C. A. 2), *cert. den.* 318 U. S. 786; and *In re Laclede Gas Light Co.*, 57 F. Supp. 997, makes plain, "fairness and equity" did not permit the debenture holders, whose investment in the same company was being "liquidated" by cash payment, to receive a "windfall" in the form of premium payments to which their contract did not entitle them. The Act of the sovereign in frustrating the contract between the senior and junior security holders did not give the former the right to demand or receive added compensation because the investment they were giving up was highly profitable,[1] any more than the junior security holders could be compensated for their reciprocal deprivation of the continued use of the senior security holders' capital. Here, there is not only "no contractual obligation * * * to pay a redemption premium", but the corporate charter explicitly precludes such payment. In these circumstances, even more plainly

[1] It may be observed that the "investment values" of many of the senior securities covered by the decisions referred to above were substantially equal or superior to those of the Engineers' preferreds on the basis of the usual criteria of earnings and assets coverage, market history and dividend or interest record. In the case of the debentures of United Light, for example, bond interest had been regularly earned and paid (as compared to the failure of Engineers to earn or pay dividends on the preferreds for a period of several years). It may further be noted the Commission stated that the market prices of the debentures of United Light in the period 1940-1942 "had been close to and sometimes as much as 1½ points above par" (10 S. E. C. 1227), whereas during those same years the preferreds of Engineers sold as low as $40-$45 per share (Engineers Exs. 26, 27, 28, R. 1391a, 1392a, 1393a). The notes and debentures of Standard held not entitled to premiums *In re Standard Gas & Electric Co.*, 151 F. 2d 326, 332 (C. C. A. 3, 1945) were so well secured that Standard was able to replace them with *bank loans* bearing interest of only 2½% (see *Standard Gas & Electric Co.*, Holding Company Act Release No. 6345 [1946]).

than in that case "no such obligation * * * exists by virtue of any other recognized legal or equitable principle" (*United Light & Power Co.*, 10 S. E. C., 1215, 1223).

III. Construing the Act as the Commission has construed it—to authorize disregard of applicable charter provisions and well-established legal and equitable principles—would raise serious constitutional questions.

If the Commission is upheld either in its assertion that the "fair and equitable" standard authorized it to regard the applicable charter liquidation provisions here present as not "conclusive", or in its attempt in this case to excise the frustration doctrine from the "fair and equitable" standard, pressing constitutional objections arise.

While Congress unquestionably may cut across or sever contractual obligations in an appropriate exercise of its power to regulate commerce, such interference with freely made agreements must be appropriate, if not necessary, to the enforcement of a clearly defined public policy (*Treigle* v. *Acme Homestead Ass'n*, 297 U. S. 189; *Louisville Bank* v. *Radford*, 295 U. S. 555). If, as the Commission contends, the "fair and equitable" standard is not to be given its traditional meaning as a term of art in this statute, we are faced not only with a plainly inappropriate and unnecessary interference with the contract rights of the parties (cf. Stone, C. J., dissenting in *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 648-649), but with a delegation of power to the Commission to alter contractual rights without any standard being furnished to

guide the exercise of that power (cf. *Panama Refining Co.* v. *Ryan*, 293 U. S. 388; *Schechter Corp.* v. *United States*, 295 U. S. 495).

In the first place, as we have shown the Commission's direction to pay premiums to Engineers' preferred stockholders is a command which the Commission in a long series of judicially approved rulings has indicated the "fair and equitable" standard does not authorize it to make. One may assume *arguendo* that the Commission was not rigidly bound by the doctrine of *stare decisis*, or by its own consistent administrative interpretations [1] of the "fair and equitable" standard for which over a four-year period it had repeatedly asked and unfailingly received full judicial approval. But, plainly, a delegation of power which would authorize such flatly contradictory results would not furnish that guidance which it has never been doubted Congress must furnish to administrative agencies to which it delegates powers to regulate the affairs of citizens (cf. *Panama Refining Co.* v. *Ryan; Schechter Corp.* v. *United States, supra*).

In the second place, if the historic command of the "fair and equitable" standard—that contractual rights must be enforced—is no longer binding, it is impossible to ascertain what that term means. The unconstitutional ambiguity of the "fair and equitable" standard, if that standard does not have its historically developed meaning, is demonstrated by an examination of the Commission's action in this case. Thus, a primary consideration upon

[1] With respect to the weight attributed to consistent administrative interpretation, see *U. S.* v. *American Trucking Associations*, 310 U. S. 534, 549; *Federal Trade Commission* v. *Bunte Bros.*, 312 U. S. 349.

which the Commission rested its valuation of the preferred stock here is the dividend rate to which the preferred was entitled by Engineers' charter, and the hypothetical "value" allegedly accorded thereto by the market (see infra, pp. 74 *et seq.*). But if, as the Commission claims, it had the authority to refuse to be bound by the liquidation provisions of Engineers' charter, and in fact, as is plain, it gave absolutely no consideration to the contractual mandate,[1] by virtue of what criterion does any other provision of the charter become entitled to the controlling significance which the Commission here gave the dividend rate?

The dividend rate constituted merely one provision of an integral contract between the stockholders. The obligation of the common stockholders to pay the stipulated dividend rate was inextricably interrelated with the numerous other contractual provisions such as those dealing with conversion, redemption, liquidation, right to issue additional preferred on a *pari passu* basis, etc. It is axiomatic that all these provisions are related to and interwoven with the dividend rate, and all interact upon one another.[2]

---

[1] Compare p. 44, n. 1, *supra*.

[2] See, e.g., McDiarmid, "The Utilities Face A Big Financial Problem" (Public Utilities Fornightly, Jan. 1, 1948, pp. 8-9):

"There is a fairly good chance that utilities might reclaim the interest of institutional investors in their preferreds by concessions as to sinking funds or convertibility. * * *

* * * * * * *

* * * It is noteworthy that in recent weeks two utility preferred stock issues, roughly comparable as to quality, were brought out a day or so apart from each other. One was sold on a 4.4 per cent yield basis but was convertible into common. It was an immediate sellout. The other came on a 4.5 per cent yield basis but was not convertible. It was sold slowly and has since dropped in the market seven points below its offering price."

Thus, the inclusion of a charter provision prohibiting subsequent issuance of preferred stock having an equal claim in earnings and assets with that being issued, or other protective provisions of this type (including special provisions on liquidation) will permit the marketing of a preferred bearing a lower dividend rate; while conversely lack of such features must be compensated by a higher dividend rate. It follows that where an effort is made to alter one of these factors, correlative adjustments must be made in many others; if greater rights on liquidation are now given the Engineers' preferred holders, a retroactive adjustment on the high dividend rate paid during past years is clearly in order.

It is thus evident that attempts to tamper with the correlative rights and obligations integrated in the charter contract between the preferred and common stockholders, inevitably entail acute problems not foreseen or mentioned in the Commission's opinion.[1]

If, as it contends, the Commission is left free by the "fair and equitable" standard to assign differing significance to different "portions of the charter" in its own unguided discretion, attributing one meaning to the stand-

[1] The preceding discussion merely touches on a few of these problems. There are others equally acute. For example, if the charter liquidation provisions are nullified, we come face to face with the settled rule of law that a preferred stock has no preference in liquidation. If the charter is silent the preferred holders merely participate pro rata with the common, share for share, and on such a basis the preferred would realize something less than $50 per share in this liquidation. *Continental Insurance Co.* v. *U. S.*, 259 U. S. 156, 181; 11 *Fletcher, Cyc. Corp.*, § 5303, and 16 *Fletcher, supra*, § 8226. Cf. *Holland* v. *Nat'l Automotive*, 22 Del. Ch. 99, 194 A. 124; *Ellingwood* v. *Wolf's Head Oil Refining Co.*, 38 A. 2d 743 (Del. Sup. Ct., 1944).

and one day and precisely the opposite meaning the next day,[1] respondents submit the delegation of authority is unconstitutional. Before so unbridled a delegation of authority will be imputed to Congress, unmistakable evidence of such an intent must be shown.[2] In this case no such evidence is forthcoming. On the contrary, the legislative history and judicial decisions point to precisely the opposite conclusion.

---

[1] It may further be noted that the Commission had in an earlier opinion plainly indicated that the involuntary liquidation preference of the Engineers' preferred stocks represented "the maximum claim of the stock", a statement consistent with the Commission's long line of non-premium decisions discussed above. In that decision (Holding Company Act Release No. 4997, April 15, 1944, R. 2128a-2138a) the Commission stated (R. 2135a):

> "* * * we pointed out in relation to the earlier case that as the amount to be received by the preferred stockholders tends to approach *the maximum claim* of the stock, the likelihood of any unfairness would be diminished. As noted above, the current market prices of the three series of preferred stocks which Engineers now proposes to reacquire are close to *the involuntary liquidating prices* and under the circumstances we are satisfied that the proposed reacquisition is not unfair to the security holders of Engineers." (Emphasis supplied.)

It cannot be doubted that many preferred stockholders who decided to sell their stock at that time at prices in the 90s (R. 2134a), as well as common stockholders who decided to retain their holdings, were influenced in their actions by this statement, viewed in the light of the Commission's long and unbroken line of non-premium decisions.

[2] *United States* v. *Standard Brewing Company*, 251 U. S. 210, 220; *United States* v. *Bennett*, 232 U. S. 299; *Harriman* v. *Interstate Commerce Commission*, 211 U. S. 407.

PART TWO

IF THE RIGHTS OF THE STOCKHOLDERS WERE TO BE VIEWED AS "IN A CONTINUING ENTERPRISE", THE COMMISSION'S "INVESTMENT VALUE EX THE ACT" DOCTRINE AS HERE APPLIED WHOLLY FAILED TO MEASURE THE EQUITABLE EQUIVALENTS OF SUCH RIGHTS. THE COMMISSION'S DOCTRINE, MOREOVER, CONTRAVENED THE STRICT PRIORITY PRINCIPLE AND WAS OTHERWISE FALLACIOUS.

IV. The Commission did not in fact evaluate the stockholders' rights or securities on the basis of a continuing enterprise. On such basis, the preferred holders would have been entitled to no more than $100 per share, and probably less.

If, notwithstanding our contentions set forth in the preceding portions of this brief, it be nevertheless concluded that in this liquidation "fairness and equity" permitted rejection both of the charter liquidation provisions and of previously formulated and manifestly apt liquidation standards, and authorized transmutation of the rights of the Engineers' stockholders on "a going concern basis" into "equitable equivalents" as was done in *Otis*, then we contend, and propose now to demonstrate, that the determination made by the Commission failed by a wide measure to satisfy such requirements.

Our contentions may be concisely summarized as follows: (a) the "investment value" for which the Commission found the preferred stockholders were to be compensated was nothing more or less than a transient "value" based wholly on market prices as of a specific haphazard date; (b) the doctrine of "equitable equivalents" which the Commission purported to invoke in measuring the

"compensation" to which the preferred stockholders of Engineers were entitled for their stock does not authorize compensation resting upon such essentially accidental "values"; if compensation were to be awarded in terms of average long range values of the preferred stock, no more than $100 could be found as the "equitable equivalent"; and (c), apart from its erroneous reliance upon a transient market "value", the Commission's application in this case of the doctrine of "equitable equivalents" failed to take account of the correlative rights of the common stockholders, which are an essential ingredient of the doctrine of "equitable equivalents" as enunciated by this Court; upon any proper construction and application of the doctrine of "equitable equivalents", the preferred stockholders are entitled to no more than $100 per share.

A. The so-called "Investment Value" as determined by the Commission represented merely transient market value at a specific moment.

This Court has cogently admonished that "*value is a word of many meanings.*"[1] The term "investment value" as used by the Commission in this case is particularly misleading because it carries the connotation given to that term in *Otis* of representing value of a stable, long range character as distinguished from transient "values" or prices which fluctuate from day to day with the vagaries of the market place. But it is precisely the latter type of "value" and not the former, to which the Commission here applied the euphemistic title of "investment value".

It will be noted that the Commission's opinion did not at any point define "investment value" and actually em-

[1] Douglas, J., in *Group of Investors* v. *Milwaukee R. R.*, 318 U. S. 523, 540, quoting Mr. Justice Brandeis.

ployed the term in a variety of verbal combinations. However, in spite of the Commission's indiscriminate use of the varying terms "investment value" (R. 67a), "present investment value" (R. 66a), "fair investment value on a going-concern basis" (R. 67a), and "investment worth on a going-concern and apart from the Act, under prevailing yields applied to comparable securities" (R. 67a), the record makes clear beyond any doubt that the only "value" which the Commission determined was a hypothetical market value of the preferreds based on market prices as of the time when the testimony of Badger and Barnes was given (the first few months of 1946).

That portion of the Commission's opinion dealing with the "value" of the preferred stocks is confined to some six pages (R. 62a-68a) of its sixty-page opinion of December 4, 1946 (R. 25a-85a). After setting forth without comment some statistical material (R. 62a-65a), the Commission turned to a brief discussion of the report of Badger, a witness on behalf of certain preferred stockholders. Summarizing in a few short paragraphs certain of Badger's findings (R. 65a-66a), the Commission stated that Badger's conclusions were not seriously "challenged", and were in fact substantially admitted by the company's president, Barnes,[1] as well as in the company's

[1] Although the Commission's opinion states that "Company witnesses several times testified to the same effect" (R. 67a) Barnes was the only witness on behalf of the company who testified in any way on the subject of values or who discussed Badger's testimony. The testimony of Barnes, who was formally qualified as a valuation expert (R. 1138a), is discussed, *infra*, p. 82. One other company official, Benjamin, merely stated that he agreed with Barnes' statement that the company would have taken advantage of the low money rates by "refunding" the preferred stocks at lower dividend rates, if the Act had not required the company's dissolution and the retirement of the preferreds (R. 965a).

brief. It thereupon reached its conclusory finding: "it is apparent that the preferred has an investment value at least equal to the respective call prices" (R. 67a), a statement which necessarily referred to Badger's conclusions viewed in the light of the alleged admissions of the company.

Badger's evidence consisted of a written report and oral testimony with respect to it.[1] Succinctly stated, Badger's technique for evaluating the preferred stocks consisted in selecting a group of allegedly comparable utility preferred stocks, computing their yields (i.e., the ratio of their dividend rates to their market prices) as of the week ended January 4, 1946, and by applying a similar "yield" to the preferred stocks of Engineers arriving at what was variously termed "their present investment values on a going-concern basis", "fair investment value", or merely "investment value".

Although in the earlier sections of Badger's report there is to be found some analysis of so-called "investment characteristics" of the Engineers' preferreds such as asset and earning coverage (R. 2066a-2076a), it is important to note that this "analysis" did not constitute the basis for Badger's ultimate conclusion respecting "values". Those investment characteristics established, as Badger conceded, that on the basis of intrinsic merit the Engineers' preferreds were of inferior caliber, termed by

[1] Badger's report is set forth at pp. 2057a-2086a of the Record as Preferred Stockholders' Exhibit No. 29. During cross-examination he admitted certain errors and upon his request was given leave to file an amended report (Preferred Stockholders' Exhibit No. 29A, R. 2087a). For Badger's direct testimony, see R. 1009a-1039a; for cross-examination, R. 1040-1189a, Redirect and Recross, 1189a-1205a.

Badger "medium grade".[1] But the purpose for which these investment characteristics were employed by Badger was merely to afford a basis for the selection of allegedly "comparable" securities in order to determine the market prices and yields (i.e., the ratio of dividend rate to market price) at which those securities were selling at that particular moment.[2] Both comparative charts expressly state that "current prices" and "yield" figures were computed on the market prices for the week ending January 4, 1946.[3]

---

[1] Badger's admission that on the basis of intrinsic quality the Engineers' preferreds were not high grade is stated somewhat obliquely as follows (R. 2079a): "The preferred stock of Engineers Public Service Company as well as the preferred stocks of the five public utility holding companies studied for comparative purposes, *must be classed as medium grade preferred stocks*, and should, therefore, sell at yields higher than the yields registered by the high grade preferred stocks." See also specific admission under cross-examination (R. 1133a), and compare Barnes' emphatically expressed view that the Engineers' preferreds were "closer to a common stock or a low grade preferred" (R. 1138a, 1140a).

[2] It may be noted that the preferred stocks employed by Badger for "comparative" purposes were proven in fact not to have been appropriate for such purpose, since all of them had investment characteristics superior to those of the Engineers' preferreds and had been accorded superior investment ratings by the recognized independent investment analysts (cf. Engineers' Exhs. 73, 77, R. 1844a, 1850a-1851a). Moreover, in addition to a list of five holding company preferreds of superior quality as aforesaid, Badger also employed a list of 9 *operating* company preferred stocks (R. 2081a) which are necessarily of superior quality to those of a holding company preferred stock such as Engineers, in view of the fact that they are not preceded by the preferred stock of operating companies and are junior to a smaller amount of senior securities. The company sharply challenged the comparability of these securities (Exhibits and testimony, *supra*); but the Commission did not pass on this issue, presumably since it rested upon the alleged "admission" of Barnes and the company hereinafter discussed.

[3] See Preferred Stockholders' Ex. No. 29, table at R. 2077a (next to last item termed "Current Market, Week Jan. 4, 1946)"; see also table at 2081a, footnote 1 "Unless otherwise marked, prices are average sale for week ending January 4, 1946 as per Commercial & Financial Chronicle".

Badger made no reference to the prices at which these same securities had sold in previous weeks or previous years; he did not suggest that it would be appropriate to employ some sort of median prices and yields computed on the basis of prices covering a representative period of time.[1] Instead he used the prices and yields for the week ending January 4, 1946, without modification or adjustment of any kind; and with respect to the level at which those prices and yields stood, he stated:

> "* * * yields on preferred stocks are at the present time, the lowest which they have ever been in the history of our country, or conversely, * * * the prices of such stocks are at the highest levels ever experienced. The permanency of this situation will depend on the permanency of low interest rates" (R. 2065a).

---

[1] The following table shows the range of prices, during the preceding five years, of three of the five holding company preferred stocks used by Badger for comparative purposes (Moody's, Public Utilities, 1946, p. a66 et seq.) as compared with the prices used by Badger (R. 2077a) in computing their yields:

	Columbia Gas & Electric Moody's, *supra*, p. a69		*Pacific Public Service* Moody's, *supra*, p. a78		*Public Service of New Jersey* Moody's, *supra*, p. a79	
	High	*Low*	*High*	*Low*	*High*	*Low*
5	107½	84	27⅜	22¾	115¾	102⅝
4	93	70	23½	19	103⅞	87½
3	73	37	19¼	14⅛	96¼	75½
2	45½	29	14¼	11¾	86⅜	62
1	72	42⅛	18⅜	10⅛	110	75¾
lger R. 2077a)	105.50		26.50		114.38	

The other two holding company preferreds employed by Badger display a range of prices similar to those shown above (Moody's, *supra*, p. a76, p. a83); but see Badger's note (R. 2077a) as to the deductions which must be made for dividend arrears on the Niagara Hudson Power Preferred. The average yield of all five stocks for the five-year period 1941-1945, computed on their mean price during each year, was 6.3%. Badger used a yield of 4.6% (R. 2111a).

Far from being troubled by the fact that the market prices he was proposing to use were at "the highest levels ever experienced" and preferred yields at "the lowest * * * in the history of our country", Badger went on to express the positive view that such values were "permanent", because they were "predicated on fundamental conditions prevailing in the money markets, conditions which are of a permanent nature" (R. 2066a). Although conceding that the unprecedentedly low money rates were primarily due to the pegging of the Government bond market (R. 1060a), the only possibility of any change in money rates and preferred yields that Badger was willing to envisage was the probability that they would go still lower (R. 1085a-1086a).

Some months after Badger's testimony was given, the Government lowered the support levels at which Government securities had been "pegged", causing the start of the rise in interest rates which has been in progress ever since; and at about the same time stock market prices began to decline. The fall in prices of public utility stocks which then ensued, and thereafter continued, was much sharper than in the case of industrial stocks,[1] due to the fears of investors that the impact on the utility industry of the alternative threats of inflation and deflation might be especially severe, as had been the case following termination of the First World War. Reflecting both this

[1]

	Federal Reserve Index of Industrial Stocks	*Federal Reserve Index of Public Utility Stocks*

adverse outlook and the increase in money rates, the decline in prices and the increase in yields has been particularly great in the case of utility holding company preferred stocks, which are necessarily much more speculative than the preferred stocks of operating companies.[1]

Except for Badger's naked statements of opinion as to the "values" of the Engineers' preferreds and the "permanence" of the then current money rates and yields, the record is entirely barren of any evidence on which the Commission could have based a judgment or finding that the "values" for the Engineers' preferred as found by Badger were of a long range character.[2]

---

[1] For express recognition by the Commission of the substantial increases in public utility holding company preferred yields and declines in market prices which have taken place since the time of Badger's testimony, see quotation from the Commission's opinion in *American Light & Traction-United Light Co., supra*, p. 12, n. 1.

See also p. 95, n. 2, *infra*, for specific figures measuring the extent of the decline.

[2] Any suggestion that the Commission might have given weight *sub silentio* to factors other than the Badger and Barnes testimony discussed in its opinion, is not only negatived by the Commission's own statement that this investment value "is apparent" from the testimony which it had just discussed, but also by examination of the few other factors mentioned, *without comment* in that portion of the Commission's opinion dealing with the value of the preferreds. Only five items will be found there (R. 62a-65a):

1. A statement with respect to the dates and prices at which the preferreds were originally issued. (Cf. District Court Findings 22-23, R. 301a.)

2. Reference to the dividend history, including the fact that dividends were in arrears during a four-year period.

3. A summary of the market history of the preferreds establishing that their market price over the entire period they were outstanding was between $63-$67 per share.

4. A capitalization table establishing that on a consolidated basis common stock and surplus equalled only 16.3%, and that the preferred stock was *junior* to 66.2%, of system capitalization. The Commission's failure to comment on these figures must be considered in

If the Commission in accepting Badger's conclusions as to the "investment value" of the Engineers' preferreds rested upon his judgment as to the "permanence" of those values and the money rates on which they were predicated, then it is evident that the Commission's determination stands exposed as having been no less erroneous than Badger's judgment. Even if Badger's bare statements in this respect (which were challenged and discredited by company witnesses and counsel, see *infra*, pp. 81-82) could be said to constitute "substantial evidence" to support his conclusion, the District Court,

---

light of the fact that the Commission has repeatedly stated that it regards 25% as the minimum acceptable ratio of common stock capitalization, and a 50% ratio of senior capitalization (prior to preferred stock) as the maximum. (See *Interstate Power Company*, Holding Company Act Release No. 7143, p. 18; *Western Light & Telephone Co.*, Holding Company Act Release No. 5902; cf. 13th Annual Report of S. E. C., pp. 88-90.)

5. Two tables (R. 64a-65a) establishing that for the period 1937-1945 Fixed Charges and Preferred Dividends on a consolidated basis were covered by the extremely slim margin of 1.3 times. Moreover, no explanation is offered as to why this table stops with the year 1937. During the three years immediately preceding, "Fixed Charges and Preferred Dividends" were on the average not covered even once (R. 1433a, 1443a, 1461a; cf. Moody's Public Utilities, 1940, p. 1314). Clearly the foregoing items all point in the direction of a value of less than $100 for the preferreds, and therefore cannot be deemed to have afforded a basis for the Commission's determination that the premiums should be paid.

Nor can the use by the Commission of the customary omnibus phrase "upon a full consideration of the entire record" (R. 68a) serve to bestow immunity on its finding. As has been shown, the record is barren of evidence to support the finding other than the Badger and Barnes testimony herein discussed. The use of this type of "talismanic phrase" (*City of Yonkers* v. *U. S.*, 320 U. S. 685, 698) cannot circumvent this Court's admonition that "The grounds upon which an administrative order must be judged are those upon which the record discloses that its action was based" (*S. E. C.* v. *Chenery Corp.*, 318 U. S. 80, 87); Cf. Section 8(b) of The Administrative Procedure Act (5 U. S. C. 1008(b)).

having perceived and pointed out this error,[1] could not, under any view of its duties, enter its decree approving and enforcing the plan.[2]

But if the Commission did not accept Badger's views as to the permanence of the "values" set forth in his report and testimony, then it follows that the Commission merely accepted Badger's conclusions that the Engineers' preferreds had a value approximating the redemption prices based exclusively on market prices as of January 4, 1946 ("the highest they have ever been in the history of our country") and without regard to whether or how much those prices and values might decline in subsequent weeks, months or years. This would mean that not only did the Commission deem irrelevant in determining "investment value on a going concern basis" the entire past history of these stocks on a going concern basis which established an average market price of $63-$67 per share (R. 62a) but it also deemed equally irrelevant their future course if permitted to remain outstanding as part of a continuing enterprise.

That this was indeed the Commission's view is attested by its statement that "no serious challenge was made in the proceeding to Badger's conclusion that 'the fair investment value of the preferreds on a going concern basis'" approximated the redemption prices, and its refer-

ence to the statements of Barnes and the company's counsel in substantiation (R. 67a). For while Barnes and the company counsel agreed "if there were no Holding Company Act or the Act were repealed today" (R. 67a) so that Engineers were not required to go out of business, the preferreds would momentarily have sold at about the redemption prices because of the extremely low money rates, they affirmed time and again with all possible vigor that the unprecedentedly low money rates then current were primarily the result of the Government's "pegging" policies which might be revised at any time (R. 1056a-1060a, 1087a, 1136a-1146a); that the then current market prices also reflected the fact that "we are in a boom period at this time" (R. 667a); that the redemption prices could by no means be considered "a fair value which will be maintained as an average for an indefinite period of time" (R. 522a); that the Engineers' preferred stock if permitted to remain outstanding could not rise higher than the redemption prices, and would be confronted by many adverse factors (discussed with particularity) which would inevitably result in price decreases which the past market history showed were likely to be very great (R. 523a-525a).[1]

---

[1] The Company's Brief to which the Commission's opinion refers is not part of this record, but the oral argument of company counsel before the Commission contains almost verbatim quotations from that brief and establishes that the following was stated by Engineer's Counsel with reference to the "investment value" of the preferreds (R. 1219a):

> "* * * I would like to point out the inequity of placing much emphasis on the so-called present investment value of the preferred stock, ex the Act. That investment value has no such permanence as to entitle it to any considerable weight. Market values are the resultant of two variables—(1) the cost of money, and (2) the risk factor determined largely from earnings. A holding company preferred stock, although a fixed income stock,

Since the Commission's finding that "it is apparent that the preferred stock has an investment value at least equal to the respective call prices" (R. 67a) rests upon the agreement which it found between Badger's evidence and the alleged admissions of Barnes and the company's counsel as to the validity of Badger's conclusions, it is plain that the Commission's findings went no further than these admissions. Consequently, it follows that contrary to petitioners' contention that the Commission evaluated "the rights of stockholders * * * on the basis of a going business and not as though a liquidation were taking place",[1] what the Commission *actually* did was to "value" the preferred stocks alone merely on the basis of market prices prevailing in January-May, 1946, "the highest in the history of our country".

Both the District Court and the Court of Appeals so found.[2] And the District Court, after pointing to various

---

by its very nature is inherently about the most volatile fixed income security in the market. Dr. Badger's claim in his testimony that present market values of preferred stocks are 'as far as one can humanly predict, a permanent level' is extravagant and unrealistic.

Holding company preferred stocks are at the moment close to their all-time peak and under the circumstances of this case, since the premiums are a ceiling on the market values, the values of those preferred stocks have only one way to go and that is downward; and that they will go down and go down considerably, is inevitable. That result is only a matter of time; and it may be soon * * *."

[1] See Commission's Petition for Certiorari (No. 226), p. 14.

[2] District Court Findings 41-54, R. 310a-315a; Cf. Court of Appeals Opinion (R. 17): "We think it is apparent *on a careful examination* of the testimony of the two men that each was testifying to values as of May 1946, ex the Act". (Emphasis supplied.)

other arbitrary and inequitable assumptions by Badger and the Commission (R. 310a-312a),[1] stated:

> "The extremely low money rates which resulted in Badger's finding that the preferred stocks of Engineers have an 'investment value' greater than $100 per share, largely reflect artificial factors which are clearly subject to changes at any time and may well be of purely transitory character" (R. 314a).

After carefully noting the changes in market prices and yields which had taken place since Badger's testimony, and which showed how mistaken were his notions as to "permanence",[2] the District Court posed this cogent question which, we submit, pierces to the heart of the Commission's fallacious valuation:

> "Assuming the correctness of Badger's estimates of the investment values of the Engineers' preferred stock 'on a going concern basis', subject to all the infirmities above referred to, the question still is: *'investment values' for how long?"* (Emphasis supplied.)[3]

Pointing to the fact that the record indicated "that there are other imponderables and variables, aside from the trend of money rates alone, which might affect the future

---

[1] Thus, the District Court pointed out (R. 310a-312a) that in arriving at these theoretical values allegedly "*ex* the Act" based on the then current market prices, neither Badger nor the Commission made any adjustments whatever for the important values attributable directly to the impact of liquidation; accordingly they appropriated for the benefit of the preferred stocks in thus evaluating them, the sums belonging to the common stockholders which had been laid aside specifically for the purpose of carrying out the statutory mandate to retire the preferred stocks and to liquidate (R. 470a, 578a; Engineers' Ex. 30, R. 1395a).

[2] Finding No. 52, R. 314a.

[3] R. 312a, Finding No. 48.

'investment value' of the Engineers' preferreds, measured on the theoretical going-concern basis" (R. 315a), the Court concluded:

> "The record establishes that the investment values of the Engineers preferred stocks found by Badger at the time of his testimony do not represent the investment value of these stocks in the past, and are by no means determinative of the investment value of these stocks for any considerable period of time in the future. Because the preferreds' redemption provision acts as a 'stopper', the future investment value cannot become greater than the call price, but on the other hand may very well become much less. *The record further establishes that there are present many factors of a potentially adverse character*, and that the extent to which the investment value of preferred stocks of this character can decline under adverse conditions is indeed very great" (R. 315a). (Emphasis supplied.)

The District Court thus clearly recognized that two elements, in interaction, would determine the normal, long-range value of the preferred stocks if they remained outstanding as part of a going concern: (1) the future course of earnings of the operating companies, under the impact of foreseeable economic developments; and (2) the future course of money rates applicable to holding company preferred stocks of this caliber. As we have shown, to neither of these factors did the Commission accord even the slightest consideration, notwithstanding the emphatic warnings of the company witnesses and representatives that the exceptionally high earnings and low money rates of that moment rested heavily upon temporary artificial factors incident to post-war economic and financial phenomena. Thus, while insisting that valua-

tion of stockholders' rights must be predicated on the assumption that "the enterprise continues", the Commission determined the "value" of the preferred as though economic conditions, money rates and the enterprise itself were all permanently frozen in their course as of January, 1946—a period which the Commission has itself termed "the peak of the war-time market".[1]

B. The doctrine of equitable equivalents does not permit the use of a momentary market price to measure the "rights" of the preferred stockholders. On any other than a transient basis, the Engineers' preferreds could not be valued at more than $100.

(1) It is scarcely open to question that transient values predicated on the market prices of securities as of a particular haphazard moment cannot be accepted as the measurement of their intrinsic worth, or as the appropriate standard for determining "fairness and equity" or "equitable equivalence" in reorganizations or liquidations.

It is fundamental that in valuation for reorganization purposes earning power and other relevant economic factors must be calculated *prospectively* on a normal going-concern basis, with due regard for the record of the past.[2]

---

[1] Actually, the liquidation of Engineers did not take place until almost a year and a half later, July 21, 1947 (Moody's Public Utilities, 1948, p. 403) and the retirement of the preferred stocks until June 30, 1947.

[2] Cf. *Consolidated Rock Products Co.* v. *Dubois*, 312 U. S. 510, 526: "Since its application requires a prediction as to what will occur in the future, an estimate, as distinguished from mathematical certitude, is all that can be made. But that estimate must be based on an informed judgment *which embraces all facts relevant to future earning capacity* and hence to present worth, including, of course, the nature and condition of the properties, *the past earnings record*, and all circumstances which indicate whether or not that record is a reliable criterion of *future performance*." (Emphasis supplied.)
Cf. *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 565-6.

Consistently with that principle, the term "investment value" as employed by this Court in its *Otis* decision had reference to the values on a long-range basis of both classes of stockholders predicated upon their relative rights to participate in the prospective earnings of the enterprise. Thus, as this Court pointed out, the common stockholders' right to participate in the estimated earnings commencing some fourteen years in the future, established the "investment value" of the common which entitled it to an allocation of approximately 5% of the assets of the company being dissolved. In turn, the preferreds' right to receive all of the prospective earnings for a fourteen-year period until the arrearages of dividends had been eliminated, and a lesser portion of such earnings thereafter, established its right to an allocation of 95% of the assets. It is therefore plain that reliance on market prices as the standard for determining "investment values" on a going-concern basis is both foreign and repugnant to the *Otis* doctrine, which emphasized the traditional reorganization criteria of compensating surrendered rights in terms of prospective earning power.[1]

The Commission has itself stated many times that market values cannot be accepted as a criterion for determining values or measuring equitable equivalents in connection with Section 11(e) plans. Thus, in *Washington Railway and Electric Company*, Holding Company Act Release No. 7410 (May, 1947), the Commission stated (p. 27):

[1] *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 631-633. Cf. also detailed analysis of the valuation technique employed in *Otis* in Circuit Court opinion, *In re Securities and Exchange Comm. (Otis & Co.)*, 142 F. 2d 411, 420-421.

> "However, we have never considered market values as determinative of the fairness of a section 11(e) plan and it is therefore unnecessary for us to make an estimate of the market value either of the presently outstanding preferred stock apart from the possibility of liquidation or of the package of securities which the preferred stock is to receive under the proposed plan."

These words were directed squarely to the question of the standards applicable to evaluating on a "going concern" basis the rights of the preferred stockholders whose stock was being retired in a liquidation compelled by Section 11, only a few months following the Commission's decision in the instant case. The only difference is that the Commission in that decision, as well as in the many others where similar statements are made,[1] did not

---

[1] Thus, in *Northern States Power Co.*, Holding Company Act Release No. 7950 (1948), approved and enforced 80 F. Supp. 193 (N. D. Minn., 1948), the Commission stated in its brief in the District Court (p. 25):

> "* * * current market price earnings ratios, no matter how applied, are normally irrelevant to the question of reorganization values. If it were possible to determine mathematically, on the basis of present markets, that the market value of a given number of shares of Minnesota Company common stock is exactly equivalent to the liquidation preference of the Delaware preferred stock, the equation would immediately be upset as soon as the market would go appreciably up or down. As pointed out by the Commission, to the extent that capitalization rates are important at all, *the pertinent rate to be considered is one appropriate over the long run rather than one based on the market at any given moment.*" (Emphasis supplied.)

In *Community Gas and Power Company*, Holding Company Act Release No. 7131 (January 15, 1947), the Commission replied as follows to the contention of secured debenture holders of a holding company being liquidated (p. 20):

> "In effect, their argument is that the market price on the day of distribution of the securities allocated to them is the conclusive measure of their participation and that they are entitled

use the "present investment value ex the Act" doctrine which it applied in the Engineers' case and which, it has elsewhere conceded, would make hypothetical current market prices of the senior securities "apart from liquidation" the paramount criterion in determining fairness and equity.[1]

If market values were deemed the paramount criterion for determining whether senior security holders have received the equitable equivalent of their claims in liquidations or reorganizations under Section 11(e), the Commission and the courts could hardly have found "fair and equitable" the various plans carried out as recently as during the past eighteen months. Thus the holders of the 6% debentures of Community Gas and Power Company, having a secured and well-covered claim of $1214 per debenture ($1,000 principal amount plus $214 accrued interest), received in the liquidation of the holding company 87 shares of Minneapolis Gas Light common stock, of which the current cash value at date of distribution

to receive securities with a current market value, equal to the face amount of their claim. *With that we cannot agree.*" (Emphasis supplied.).

See discussion in the text on this page of the "equitable equivaents" which these bondholders received. The plan was enforced in he Courts, and this Court denied certiorari: *Community Gas and Power*, 71 F. Supp. 171 (D. Del., 1947); aff'd 168 F. 2d 740 (C. C. A. 3); *cert. den., sub nom. Vanneck* v. *S. E. C.*, 334 U. S. 846.

[1] See quotation from the Commission's opinion in *United Light and Railways Co.-American Light & Traction Co., supra*, p. 12, n. 1, where the Commission stated: "It is apparent that insofar as *investment value is derived from an analysis of the current yields* of comparable securities, the investment value of American's preferred has been substantially affected in the interim." (Emphasis supplied.) As has previously been pointed out, "yields" are computed on the basis of the *market prices* at which the securities are selling as of the time the computation is made, and such "yields" fluctuate directly with the fluctuations in the market prices.

aggregated $1000.[1] The holders of 7% preferred stock of Northern States Power Company of Delaware, having a claim of $110 per share (entitled on redemption to $120), amply covered by assets, received in liquidation of the holding company 10 shares of Northern States of Minnesota common stock and $3.50 in cash, having a total cash value on date of distribution aggregating $88.50.[2] The holders of 6% preferred stock of Wisconsin Hydro Electric Power Co. for their claim of $176.50 received operating company common stock having a cash value of approximately $100.[3] The holders of 7% Prior Lien Preferred stock of North West Utilities Company for their claim of $203 (entitled on redemption to $213) received common stock having a cash value of $165.[4]

In all the foregoing decisions, which are typical, the Commission reached these results by insisting that market values as of the time of liquidation were not significant and that the determining factor was the earnings' claims of the security holders measured against the future earn-

[1] *Community Gas & Power Company*, Holding Company Act Release No. 7131 (1947); approved and enforced, 71 F. Supp. 171 (D. Del.); aff'd 168 F. 2d 740 (C. C. A. 3), *cert. den.* 334 U. S. 846. ing power of the assets to be distributed among the security holders. In each of these cases application of the "investment value ex the Act" formula as here applied would have required payment to the preferred holders of amounts in excess of their liquidation claims, but the Commission rejected such market value criteria as irrelevant and inapplicable. Yet in the instant case the Commission reached its result by insisting that current market value was of controlling significance, and wholly ignoring apportionment of future earning power in evaluating the equitable equivalent of the rights surrendered by both classes of stockholders.

Confronted with the foregoing, Commission Counsel find it necessary to execute a sharp *volte face*. After having stated that the Commission justifies its decision in the instant case on the *Otis* principle which required the rights of security holders to be evaluated on the basis of a going business and not as though a liquidation were taking place,[1] they now assert, in effect, that the Commission was entitled completely to ignore the rights of the security holders on a going-concern basis because, here, liquidation rather than reorganization is taking place and the *Otis* principle is for that reason inapplicable. Thus they state.[2]

> "The court below criticized the Commission for failure to ascertain the future earning power of the system and to apportion that earning power between the preferreds and common based on their respective claims to income 'as it did in the United Power & Light case' (R. 35). But that 'technique is appropriate only where, as under the United Light & Power

[1] Commission Petition (No. 226), p. 14.
[2] *Id.*, p. 16.

> plan, a new security is being allocated between preferred and common stockholders. The plan here involved * * * contemplates *paying off the preferred in cash.*" (Emphasis supplied.)

We freely concede that "paying off the preferred in cash"—$39,000,000 of cash raised in the process of liquidation—is indeed a plain indication that true liquidation and not mere reorganization is occurring, and that the principles applicable to such a liquidation (as discussed, *supra,* and as applied by the District Court) should here prevail. Indeed, that is our major contention in Part I of this Brief. But the Commission cannot have it both ways: it cannot urge that it was justified in ignoring liquidation principles and evaluating rights on the "basis of a going business" as in *Otis,* and at the same time argue that evaluation of rights on the basis of a going business as in *Otis* is not appropriate here because the retirement of the preferred was incident to liquidation.

The contention is specious, as well as inconsistent; for it seeks to confuse the *medium of payment* with the mode of determining the *amount of payment.* If the principle of *Otis* governs and, therefore, stockholders' rights are to be evaluated on the basis of a going business, it is obviously no justification for failing to do so that those rights, once evaluated, are to be satisfied in cash rather than in securities. To be sure, the fact that the preferred stockholders were not to receive new securities rendered unnecessary a determination of whether new securities were the equivalent of the rights surrendered. But the process of determining the value of those *rights,* on a going-concern basis, is no different merely because compensation is to be made in cash rather than securities.[1]

---

[1] Cf. Court of Appeals' Opinion, R. 38.

That determination must be made, as in *Otis*, by evaluating the correlative claims of both classes of stockholders in the prospective earning power of the going concern. And we demonstrate *infra*, pp. 101-2, how different are the results reached if the rights of the Engineers' stockholders are actually evaluated on a going-concern basis in accordance with the principles of *Otis*, which the Commission purported to be following in this case.

Finally, it may be observed that this contention which Commission Counsel now press upon this Court is directly contrary to the Commission's own holding on this very subject in its *Georgia Power & Light Company* decision, approved and enforced by the District Court of Georgia. In that decision, the Commission squarely held that although the preferred stockholders were being paid off wholly in cash, determination of whether such cash payment represented the equitable equivalent of the preferred stockholders' rights must be made on a prospective going-concern basis in accordance with the principles of *Otis* precisely in the same manner as in the other decisions referred to above (*supra*, pp. 89-90) in which senior security holders received new securities rather than cash, and without regard to current market prices or redemption provisions.[1]

---

[1] *Georgia Power & Light Co.*, Holding Company Act Release No. 5568 (1945) approved and enforced, Civil Act No. 133 (M. D., Ga., 1945), where holders of well covered $6 preferred stock of an operating utility company which was continuing in business received $150 cash upon the compulsory retirement of their preferred stock having a liquidation preference of $162.50 and entitled on redemption to $167.50 per share. The Commission stated:

> "* * * the plan before us differs from the plans which were the subjects of our earlier decisions in that it is here proposed, as already indicated, to accomplish the result required by Section 11(b)(2) by terminating all interests of the public holders of

Holdings to the same effect were subsequently made by the Commission in two other cases where senior security holders of *continuing companies* were paid out in cash.[1]

(2) If instead of relying solely on transient market values of a haphazard moment, the Commission had sought to appraise the Engineers' preferreds in terms of their average long-range record,[2] clearly no value in excess of $100 per share could be found, as both Courts below held.[3] Moreover, if it had sought to appraise their *prospective* value on a normal long-range basis and had adequately allowed for only such increase in money rates

---

Georgia's preferred stock by means of a cash payment instead of continuing their interests in the enterprise by means of according them the fair equivalent of their existing rights in the form of new common stock (p. 17).

* * * * * * *

"We turn now to consider whether the cash in the proposed amount of $150 per share accords the public holders of Georgia's preferred stock the equitable equivalent of their bundle of rights *approaching the problem in a manner similar to that employed by us in testing the fairness of a plan of recapitalization with a single class of stock*" (p. 20; emphasis supplied).

[1] *National Power & Light Company*, Holding Company Act Release No. 8445 (1948), p. 16; *Pennsylvania Edison Company*, Holding Company Act Release No. 8550 (1948), p. 10.

[2] Cf. *Schwabacher* v. *U. S.*, 334 U. S. 182, where the Court stated (p. 200): "The Commission considered the stock's *past yield*, present market price, *and future prospects*." (Emphasis supplied.)

The failure of the Commission in the instant case to accord any attention to the past market prices and yields of the Engineers preferreds is all the more notable in the light of the fact that the Commission has repeatedly laid strong emphasis on past market history and original issue prices in the long series of cases involving retirements of senior securities for cash, where the frustration doctrine was applied (*supra*, p. 55, notes 3 and 4).

[3] District Court Findings 48-53, R. 313a-315a; Court of Appeals, R. 38: "* * * we do not believe that such a finding could be supported on the present record".

and preferred yields as have already taken place, it is equally clear that a value in excess of $100 per share could not be found. On the basis of the increase in money rates and yields alone,[1] we submit it is indisputable that the Engineers' preferreds if still outstanding would presently have an "investment value" of less than $100 per share.[2] And *all* tangible indications emphatically point

---

[1] Market prices or "yields" of preferred stocks are, of course, the product of two factors: earnings and money rates. An adverse change in *either* of these factors must adversely affect the market price and yield.

Although the Commission made no attempt to consider the future earning power of the subsidiaries, the rapidity with which changes occur in the earnings of leveraged public utility common stock such as Engineers distributed to its stockholders as a liquidating dividend, is demonstrated by the decrease in earnings of Virginia. The common stockholders of Engineers received 1.45 shares of Virginia common for each share of Engineers common owned, which represented the largest item in the distribution. In 1946 (the year in which the Commission issued its opinion), earnings available for Virginia's common stock were $5,027,740, equivalent to $1.71 per share of common (Moody's, Public Utilities, 1948, p. 745). For the 12 months ended September 30, 1948, earnings available for Virginia's common had dropped to $4,062,427, equivalent to only $1.37 per share on the number of shares then outstanding, and additional shares are now being sold which will further dilute per share earnings (Moody's, Public Utilities, Current Supp.; Vol. 20, p. 1745).

[2] There are contained in the record (R. 122-123) the authoritative figures on the basis of which the Court of Appeals was requested to judicially notice the changes which have taken place in preferred stock yields, and which established that even as of that time (May, 1947) the Engineers preferreds would have had an "investment value" of less than $100 per share. Subsequent developments make this conclusion *a fortiori*, as the following data shows:

Yields on "High Grade Preferred Stock" which stood at 3.42% as of the period of Badger's testimony, at 3.75% as of the date of the District Court's Findings, at 4.12% as of the approximate date petitions for rehearing were presented to the Court of Appeals (see R. 122 for all foregoing), had risen to 4.28% as of October, 1948 (Standard & Poor's, Trade & Securities, Current Statistics Section, November, 1948, p. 27). This represents an increase of 25% in

in the direction of substantial further reductions in the foreseeable future.[1]

It is thus plain that even appraised independently of the rights of the common stockholders, $100 per share represents the *upper limit* of the preferreds' value whether viewed in the light of the record subsequent to Engineers' dissolution or in the light of the entire record prior, as well as subsequent, to dissolution.

(3) If, however, it were to be held that value predicated on current market prices is the proper basis for determining the cash amounts to which the preferred stockholders are entitled in this liquidation, then consideration must also be given to the impact of the changes which

---

the yield of high grade preferreds since the time of Badger's computations.

In recognition of the fact that the Engineers preferreds were of inferior quality, Badger had estimated a yield basis of 4.6%, as compared with the much lower yields then prevailing for high grade preferreds. Applying to this 4.6% yield merely the same 25% increase which has taken place for "high grade preferreds", the present indicated yield for the Engineers preferred would be 5.75%. Since the weighted average of the dividend rate on the three series of Engineers preferreds was slightly under 5.40% (the greater portion of the preferred having been of the $5 and $5.50 series) it is evident that on the average the Engineers preferreds would now sell for less than $100 per share, even accepting *arguendo* Badger's estimate of 4.6% for the Engineers preferreds as of the time he testified. However, the Commission did not pass on Badger's 4.6% estimate (R. 67a-68a).

Moreover, the increase in the yields of low to medium grade preferreds, such as those of Engineers, would necessarily be greater than the increase on "high grade preferreds", as Judge Leahy stated (R. 314a), thus indicating a present price for the Engineers preferreds probably less than $90 per share.

Reference may be made to Public Utilities Fortnightly (December 2, 1948, p. 816), for a list of representative holding company preferred stocks selling on an average yield basis of 6.7%; some of these preferreds are the subject of recapitalization plans currently pending before the Commission.

[1] With respect to the future course of money rates, it is to be noted that the Federal Government is still actively supporting the long-term Government bond market, and that agitation in favor of aban-

have taken place in these values since the date of the valuation evidence on which the Commission predicated its finding. By the time the District Court was called upon to approve the plan, substantial changes in those values had taken place, as the District Judge found (R. 314a). He further pointed out that these changes had not been foreseen or allowed for by Badger,[1] stating:

> "These changes occurring within approximately a year of Badger's testimony do not bear out his views as to the asserted stability and 'permanence' of the low money rates, even if 'permanent' be defined as 'two to three years'. A continuance for two or three years of the trend indicated over the past year could substantially reduce or wholly eliminate the differential in the current yield rate over dividend rate in the case of preferred stocks of the type of Engineers".[2]

---

donment or modification of this policy had recently been greatly on the increase. (See, for example, "Row Over U. S. 'Pegs' in Market Grows", New York Times, December 12, 1948, p. F1, col. 8; "Parkinson Assails Pegging U. S. Bonds", New York Times, Nov. 11, 1948, col. 6, p. 45; Leffingwell, "How to Control Inflation", Fortune Magazine, October, 1948, p. 90 *et seq.*, "Change Advocated in Bond-Peg Policy", New York Times, December 10, 1948, p. L41, col. 8. If any further modification should take place in the Government's present pegging policies, a further increase in money rates and preferred yields must inevitably result.

With respect to foreseeable future changes in earnings, it may be noted that if current proposals for re-imposition of some form of excess profits taxes or for a general increase in corporate tax rates should materialize, the earnings available for the common stock of the three operating companies would immediately be sharply curtailed. Prior to Engineers' dissolution these companies had the advantage of filing consolidated tax returns, which the record establishes saved the stockholders approximately $1,900,000, during the period 1941-1945 alone (R. 611a); this advantage was irretrievably wiped out in the liquidation, along with the many others, (see, *infra*, pp. 117-119).

[1] Compare *Reconstruction Finance Co. v. Denver & R. G. R. Co.*, 328 U. S. 495, 521-522.

[2] R. 314a; and see the Court of Appeals' reference to the Trial Judge's cogent finding respecting Badger's money rates, R. 19.

As we have shown, the further changes in money rates which the District Judge envisaged have already taken place, although in a shorter period of time, with the result that as of the present time (as for some time in the past, R. 122-123) the "investment value" of the Engineers' preferreds is less than $100 per share. It is axiomatic that "the decree of a court of equity speaks as of the date of entry" [1] and a final decree has not been entered in this proceeding. That decree must take account of these material supervening changes, not foreseen or allowed for in the Commission's findings. *Knight* v. *Wertheim & Co.*, 158 F. 2d 838, 843 (C. C. A. 2, 1947), cert. den. *sub nom. McGuire* v. *Equitable Office Bldg. Corp.*, 331 U. S. 818 (1947). Cf. *R. F. C.* v. *Denver & Rio Grande W. R. Co.*, 328 U. S. 495, 521-522. It is evident that if appropriate account is taken merely of the changes which have already occurred, even on the Commission's valuation formula the preferred stockholders could not be found entitled to more than $100 per share.

C. Application of the Otis formula required an examination of the correlative rights of the preferred and common stockholders. Evaluation of these correlative rights would have resulted in payment to the Engineers preferred of less than $100 per share.

(1) Apart from its erroneous reliance upon transient market values, the Commission's determination of the equitable equivalent of the rights surrendered by Engineers' stockholders failed utterly to take account of the correlative rights of the preferred and common. Under the *Otis* formula, determination of rights on a going-concern basis requires consideration of the correlative rights of both classes of stockholders in the going con

[1] See *supra*, p. 81, n. 2.

cern; and on such basis the equitable equivalent of the rights of the Engineers' preferreds was less than $100 per share.

As has been pointed out, the Commission did not evaluate the rights of the common stockholders on the basis of a going concern or otherwise; it merely left the common to receive (upon payment of $22,000,000 additional in cash) whatever remained after paying to the preferred stockholders the amounts awarded them by "maturing" their future claim to dividends on the basis of momentary market values prevailing 1½ years prior to the liquidation, as heretofore discussed.

This process represented the antithesis of the principle enunciated in *Otis*. There the Commission and this Court refused to treat the preferreds' claim as "matured", or to measure the value of the preferred apart from the value of the common in the joint enterprise. Instead, it measured the rights of both the preferred and common in relation to one another on the basis of their proportionate rights to participate in the earnings of the continuing enterprise. As a result, although the prior claims of the preferreds to earnings were strictly maintained, the "value" of the preferred as of the time of liquidation—for which its holders were to be compensated—was carefully delimited in the light of the residual claim of the common to future earnings.

Here, the Commission wholly ignored the correlative rights of the two classes of stockholders. It simply measured the "value" for which the preferreds were to be compensated by reference to current market prices, and concluded that the common should receive whatever is left after the payment of the preferred. Consequently, the rights of the preferred were treated as though they

were "absolutes", wholly independent of and unrelated to the rights of the common. But the very essence of the "going concern" concept is that both classes of stockholders have correlative rights in that going concern. Thus, while the preferred stockholders have a right to specified dividend payments in preference to any payments to the common (a right which is itself dependent on the existence of earnings sufficient to enable the payment of dividends), the latter are entitled, upon payment of such fixed dividends to the preferred, to all the earnings of the enterprise, including the earnings resulting from the employment of the preferreds' capital in the enterprise. Consequently, evaluation of the preferreds' right to the fixed dividend payments without corresponding evaluation of the common stockholders' right to utilize the preferreds' capital which is the consideration for the dividends paid thereon, is not the evaluation of the stockholders' correlative rights "on a going concern basis" which *Otis* contemplated.

(2) It has already been shown that if the Commission had actually evaluated the Engineers' preferred stocks on a normal long range basis instead of on the basis of the peak market prices prevailing in the first few months of 1946, no value in excess of $100 per share could have been found. If, however, the Commission had evaluated the rights of both the common and the preferred stockholders in relation to one another on a going-concern basis in accordance with the formula employed by the Commission and approved by this Court in the *Otis* case, it is certain that the preferred stockholders would have received considerably *less* than $100 per share in cash value.

Here there were no arrears of dividends to delay the participation of the common stock for long years and make necessary employment of a "discount" factor such as was used in *Otis*.[1] Here the claim of the common to participate in earnings beyond the amount needed to meet the preferreds' current dividends was immediate and plenary. Assuming *arguendo* that the earnings of $10,629,724 reported by Virginia, El Paso and Gulf States for the twelve months ended June 30, 1947 (the date closest to the date of distribution of the securities and the dissolution of Engineers) are accepted as prospective "normal" earnings on a going-concern basis, the annual dividend claim of the preferreds would have entitled them to an allocation of not more than 25% of the value of the enterprise,[2] with a current cash value equivalent to approximately $70 per share of preferred stock.[3]

---

[1] See *In re Securities and Exchange Comm.* (*Otis & Co.*), 142 F. 2d 411, 420-421.

[2] Total earnings available for both classes of stockholders as indicated above: $10,629,724 (Moody's Utilities, Advance Supp., Vol. 19, pp. 1904, 1921, 1910).

		Allocation	*Adjusted Allocation**
Annual dividend claim of Engineers' Preferreds (all series)	$2,119,092	20%	25%
Residual earnings for common	8,510,632	80%	75%

* There has been added to the dividend claim of the preferred 25% thereof for "loss of position" (something not considered necessary in the *United Light* decision, but approximately the percentage allowed by the Commission in *Washington Railway & Electric Co.*, Holding Company Act Release No. 7410 and *Northern States Power*, Holding Company Act Release No. 7950).

[3] As shown on the accompanying table, the approximate market value of the stocks of Virginia, Gulf States and El Paso shortly after distribution aggregated $86,768,146. Add thereto $17,000,000 of cash in Engineers treasury prior to dissolution, making total

It will be observed that such a result would have been consistent with the treatment received by senior security holders in the many plans in which the Commission has measured the rights of the security holders on a going-concern basis in accordance with the principles of the *Otis* case (supra, pp. 89-90). In addition, it is to be observed that under this formula the common stockholders would have been spared the necessity of making the $22,000,000 cash contribution through the exercise of the Gulf States warrants, and would in fact have received some $12,000,000 as their pro rata share of the treasury cash accumulated through property dispositions and retained earnings of the common.[1]

---

value of Engineers' assets $103,700,000. Accordingly, the preferreds' allocation of 25% would have an aggregate value of $25,925,000, or approximately $66 for each of the 392,443 shares outstanding.

	*Price Per Share 8/1/47**	*Aggregate Market Value*
Gulf States common (N. Y. Stock Exchange)	15⅝	$29,843,250
Virginia (N. Y. Stock Exchange)	16⅝	47,279,548
El Paso ("over-the-counter")	25¼	9,645,348
(All prices from Standard & Poor's Stock Guide, Sept., 1947, pp. 82, 182, 66)		
	Total	$86,768,146
As of Nov. 30, 1948, aggregate total market value as computed from Wall St. Journal of 12/1/48 was		$83,526,524

[1] It was this treasury cash ($17,000,000) plus the $22,000,000 contributed by the common stockholders through the Gulf States warrants which primarily comprised the $39,000,000 paid to the preferred stockholders.

(3) It is asserted by petitioners that since the common stockholders are the "residual" claimants, they were entitled to receive only whatever remained after paying the preferred holders "the investment value" of their stocks, "on a going concern basis", and that there was accordingly no need for the Commission to evaluate the common's rights on a similar basis—or indeed on any basis. What has been said above points the fallacy of such a contention: to speak of "residual claimants" is to speak in terms of *liquidation*, not in terms of a going concern. It is this very inconsistency which prevades and completely distorts the Commission's rationale. The preferreds' rights were viewed as though the Act did not require liquidation—indeed, as though the Act did not exist. But the common's rights were viewed merely as those of the residual claimants in the liquidation which the Act had in fact compelled, and in consequence of which, losses and deprivations had been sustained by the company and the common stockholders for many years. The liquidation of Engineers did not commence with the plan which is the subject of the instant proceedings; it merely ended there. After having been insulated from all contact with such realities throughout these years, the preferred demanded, and were awarded by the Commission in the final stages of the liquidation, compensation for their *future* high expectations, still "as though there were no liquidation and no Act". Once again the full burden of the unpleasant realities was left for the common stockholders, the "residual claimants". It was precisely to this gross inequity that the Court of Appeals pointed in stating (R. 35-6):

> "What the Commission has done is to consider the investment values of the preferreds *ex* the Public

> Utility Holding Company Act, i.e., as if the Act had never been passed. But it considered only the preferreds on this basis. It seems to have omitted consideration of the common by a similar standard. It made no finding as to the 'value' of the common stock. * * * The result is that the Commission has attempted to value the securities of Engineers both *ex* the Act and *intra* the Act."

If the preferreds' rights are to be viewed as the Commission purported to view them, *ex* the Act—i.e., without taking into account the consequences of the Act—surely neither logic nor equity will permit the common's rights to be measured on a different basis. Consequently, as the Court of Appeals pointed out, the deprivations which the common suffered in consequence of the liquidation, including the divestment of profitable subsidiaries and the long period of withheld dividends, "must be weighed into the calculation" [1] if the rights of stockholders are to be determined apart from the impact of the Act—i.e., "ex the Act". On the other hand, if the rights of the common stockholders are viewed merely as those of residual claimants in a liquidation caused by the Act, then the rights of the preferred must at the very least also be limited as in a liquidation, and without added compensation for their "disappointed expectations"; for, as this Court has stated, "enforcement of an overriding public policy should not have its consequences visited on one class with

[1] (R. 37) The Court of Appeals' statement that such losses must be "weighed into the calculation", like the term "bookkeeping", was obviously intended figuratively, in the sense that the existence of such losses should be taken into account. Petitioners' attempts to distort this statement into a command that each loss must be specifically computed and the "enterprise reconstructed" constitute a transparent device for erecting a straw man with which to grapple.

a corresponding windfall to another". *Otis & Co. v. S. E. C.*, 324 U. S. 624, 637.

It was precisely in the light of these precepts that the District Court appraised the respective rights of the preferred and common stockholders, as its opinion discloses. It pointed out that evaluation of the rights of the preferred on the basis of "investment values ex the Act", without a similar evaluation of the common was contrary to the teaching of *Otis*, stating (R. 291a):

> "The argument for payment of the premium is comparable to dealing cards off the top of a deck. When full hands (based on theoretical 'investment value') have been dealt to all the senior security holders, the common would merely get whatever happens to remain. Under the Act the interest of all investors must be considered. An emphasis on a preferred's rights must not slight the interests of a common stockholder. For if this occurs this is the direct opposite of the arguments utilized in *United Light & Power*, D. C. Del., 51 F. Supp. 217, aff'd 3 Cir., 142 F. 2d 313, aff'd *sub. nom. Otis & Co. v. Securities and Exchange Commission*, 323 U. S. 624. * * *"

On the other hand, if the claims of the preferreds are to be measured "intra the Act", i.e., in the realistic light of the fact that the Act compelled liquidation of the investment of both classes of stockholders, then, as the District Court stated:

> "There is no reason why the preferreds should get additional compensation for the termination of the lucrative dividend rate which the preferreds have received, when this termination results wholly and directly from frustration of the enterprise by governmental edict" (R. 291a).

In short, the District Court, consistently with its statutory duty to determine independently whether the plan was "fair and equitable", appraised the proposed payment of premiums to the preferred stockholders both "intra the Act" and "ex the Act", after a "careful and far-reaching examination" of all the "relevant factors" (R. 34) and "substantial equities" (R. 38) which the Court of Appeals stated must be considered. Its conclusion that the "equitable equivalent" of the rights which the preferred stockholders have surrendered cannot exceed $100 per share plus accrued dividends was, we submit, not only sound but inescapable in the light of the considerations hereinabove discussed.

V. The Commission's "investment value ex the act" doctrine as applied in the instant case is repugnant to the strict priority principle and to every concept of fairness and equity.

A. The Commission's rationale sounds the death knell of the strict priority doctrine.

Just as the Commission's decision and rationale in this case find not support but repudiation in *Otis & Co. v. S. E. C.*, as has been shown, so too petitioners' efforts to pass them off in the guise of the strict priority principle cannot withstand examination. The Commission's doctrine, as applied in this case, involves a dangerous and fundamental perversion of that principle which this Court found to be firmly embedded in the "fair and equitable" standard of Section 11(e): *Otis & Co. v. S. E. C.*, 323 U. S. 624, 634.

This is true notwithstanding that the strict priority principle was not directly at issue in this case in its narrow

technical sense as it applies to senior security holders. Engineers' plan at all times provided that the preferred stockholders would receive full payment of their entire claim in cash before the common stockholders would receive any participation; the basic issue was the *amount* of that claim and the mode of its determination if the contract provisions were to be overridden.[1]

---

[1] In the light of this factor, it is evident how misplaced were the derisive statements of petitioners in the Court below that the District Court had sought to substitute "notions of colloquial equity" for the strict priority standard.

Petitioners having contended that the charter liquidation provisions should not be deemed applicable to this liquidation, the District Court gave careful consideration to "all the factors which have actually been considered in these cases" (R. 292a) in order to determine whether there existed any equitable basis to justify the award of premiums to the preferred stockholders. Starting with the assumption that under the "fair and equitable" standard (R. 287a) the preferred stockholders should not receive less favorable treatment than had been accorded senior security holders under the long line of frustration cases (referred to in the Court's Opinion, R. 287a, 292a), the Court sought to ascertain whether there existed any special equitable factors which here entitled them to receive more favorable treatment. It found that there were not, and that indeed every consideration of fairness and equity, whether in a technical or a non-technical ("colloquial") sense, interdicted the payment of the premiums (R. 292a). Thus, instead of merely resting on the long line of non-premium decisions (*supra*, p. 55, notes 3 and 4), the District Court went out of its way to be certain of observing the basic precept that "it is the function of a court of equity to do equity." *Cf.* Mr. Justice Black: "A Chapter X or § 77B reorganization court is just as much a court of equity as were its statutory and chancery antecedents." (*Vanston Bondholders' Comm.* v. *Green*, 329 U. S. 156, 165); Mr. Justice Murphy: "Equity looks in all directions. Only in that way can the various interests in the corporate community be adequately protected." (*Comstock* v. *Group of Institutional Investors*, 335 U. S. 211, 238); Mr. Justice Frankfurter: "First and last, this is a proceeding in equity, and until a decree consummating a plan of reorganization is finally signed it is the duty of a court of equity not to make itself an instrument of inequity." (*Insurance Group* v. *Rio Grande W. R. Co.*, 329 U. S. 602, 627). *Cf.* also *Pepper* v. *Litton*, 308 U. S. 295; *Taylor* v. *Standard Gas & Electric Co.*, 306 U. S. 307.

The bankruptcy and equity reorganization decisions which have enunciated the strict priority principle surely afford no support for the Commission's determination that the common must pay the preferred $3,200,000 in excess of the preferreds' liquidation claim specified in the corporate charter. As has been shown (supra, pp. 35-36), in such decisions the amount of the priority is invariably determined solely by reference to the contract provisions as embodied in charter or indenture. We are aware of no decisions, and appellants have referred to none, where it has been held that senior security holders in bankruptcy or equity reorganization may validly receive payments in *excess* of their contract claims.[1]

The right of junior security holders to be secure against encroachments by senior holders is an unchallengeable corollary of the strict priority doctrine,[2] dictated not only by considerations of elementary fairness but by the necessity of preserving the integrity of that doctrine even in

---

[1] *Cf.* Judge L. Hand, in *Knight* v. *Wertheim & Co.*: "We cannot agree that the debenture holders had as yet any legally protected interest in the property *beyond the principal and accrued interest of their bonds* which could be weighed against the shareholders' interest. If in fact they had relied upon sharing in an equity, in the property above that amount, it was without warrant of law and constituted no reason for depriving the shareholders of whatever chance might remain of realizing upon their property." 158 F. 2d 838, 843; *cert. den. sub nom. McGuire* v. *Equitable Office Bldg. Corp.*, 331 U. S. 818. (Emphasis supplied.)

Cf. also *The United Light and Power Co.*, 10 S. E. C. 1215, 1225, where the Commission stated: "In liquidation or reorganization proceedings either in bankruptcy or in equity * * * the amount of the claim is based on its face amount plus accrued interest, without regard to any redemption premium."

[2] "Each security holder must be compensated as exactly as he can be for that which he is giving up. *But, though his cup must be filled level to the brim, it must not run over.* This much is plain." (*In re Securities and Exchange Commission* [*Otis & Co.*], 142 F. 2d 411, 419 [C. C. A. 3]. Emphasis supplied.)

its narrow sense. For, if a device be employed to permit the senior security holders to transgress the limitations of their lawful claim on one occasion, the gate will inevitably be opened for reverse transgression of those very limits on other occasions. The "strict priority principle" must then give way to some form of "the relative priority doctrine" which this Court sought in its *Los Angeles Lumber* decision[1] to excise from the law of corporate reorganization.

This danger is not something remote or conjectural, but is the inevitable concomitant of the Commission's determination in the instant case. For here, the Commission held that preferred stockholders must receive more than their contractual claim in liquidation because their dividend rate was somewhat higher than the then current going rate. Surely it follows that senior security holders must receive less than their contract preference if their dividend or interest rate at the date of liquidation is lower than the then current going rate, irrespective of the fact that more than enough assets are available to pay their contract claim in full. Since the Commission applies this same "investment value ex the Act doctrine" to bonds no less than preferred stocks,[2] this means that the holder of a $1,000 bond amply protected by assets but carrying an interest rate of 4% would be required to accept a cash payment of $800 in full satisfaction of his rights, if the Commission found that bonds of allegedly comparable quality were at that moment selling on a 5% yield basis.

---

[1] *Case* v. *Los Angeles Lumber Co.*, 308 U. S. 106.

[2] As has been pointed out (*supra*, p. 64, n. 1), the first case in which the Commission applied its new doctrine involved debentures: *American Power & Light Company*, Holding Company Act Release No. 6176 (1945). Cf. Commissioner Healy's cogent development of this point at pp. 39-41 of his vigorous dissent in that case.

And in this very case, based upon the yields presently prevailing for comparable securities, as has been indicated (supra, p. 95, n. 2), the holders of the 5% and 5½% preferred stocks of Engineers should be required to return a portion of the $100 per share they have already received if the District Court's decree is not ultimately confirmed.

It is scarcely less than a mockery to assert that a doctrine which entails such results is consistent with the strict priority principle. On the other hand, if it be suggested that the charter contract rights will be revived, if need be, to assure senior security *no less* than their contractual claim, then not only does the doctrine stand condemned as "a one way street",[1] but, in addition, all petitioners' arguments here as to the inapplicability of those charter provisions in liquidations under the Act stand revealed as invalid and insincere.

B. Impact of the "present investment value" on the equity stockholders.

The full import of the Commission's doctrine can best be apprehended by considering its application to the liquidation of a holding company having "non-callable" senior securities outstanding. Such securities are not uncommon in the case of utility holding companies,[2] and necessarily

[1] *Cf.* Commissioner Healy dissenting in *American Power & Light Co.* (*supra*, p. 109, n. 2) at p. 39, n. 11.

[2] For example, non-callable senior securities of holding companies are referred to in the following decisions by the Commission: *United Light-American Light & Traction Company*, Holding Company Act Releases Nos. 6603 (1946) and 7951 (1947); *Washington Railway and Electric Company*, Holding Company Act Release No. 7410 (1947); *Public Service Corporation of New Jersey*, Holding Company Act Release No. 8002 (1948); *Philadelphia Company*, Holding Company Act Release No. 8242 (1948). See also Moody's Public Utilities, 1948, pp. a103-a104, for an extensive list of non-callable utility bonds and preferred stocks.

have a market value much higher than senior securities (such as the preferred stocks of Engineers) which are callable at stipulated prices at whatever moment such redemption is advantageous to the company and the equity security holders.[1]

It will be recalled that in the instant case Badger concluded that the "values" of the preferred, if not limited by the charter redemption provision, would have been $107, $118 and $129 per share for the respective series.[2] Therefore, if the Engineers' preferreds were non-callable senior securities, Badger's "present investment values" would have resulted in the requirement that the common stockholders pay premiums of approximately $5,000,000, instead of the $3,200,000 here ordered. And if a holding company had outstanding, as some do, bonds and several issues of non-callable preferred stocks, it is evident that virtually the entire equity of the common stockholders could be siphoned off in payment of the "present investment value" of the senior securities. In this way, little or nothing might be left for the common stock, although

[1] Petitioners' strong emphasis upon the redemption provisions of the Engineers' preferreds might serve to convey the impression that this redemption provision enhanced the value of the preferred stock. In fact, precisely the opposite is true. If there were no redemption provision, the stock would be non-callable, and the preferred holders would have been entitled to retain their relatively high dividend rate when money rates were low, without any limitation of time so long as the company continued in business. Thus, the presence of the redemption provision—allowing as it did refunding by the company of the preferred stock at a time when money rates are low—detracted from rather than added to the value of the preferred. Plainly, as the Court pointed out in *City National Bank & Trust Co.* v. *S. E. C.*, 134 F. 2d 65, 69 (C. C. A. 7): "While it is true that the payment of premium was a form of compensation to the debenture holders, nevertheless the redemption provision was for the benefit of the corporation * * *", to be exercised at its election when money rates were low.

[2] Commission Opinion R. 65a-66a.

such stock might have a very substantial value on both an asset and earning power basis which would entitle it to a large participation under every recognized liquidation or reorganization standard.[1]

It is thus evident that the "investment value" doctrine is, as the District Judge observed, comparable to "dealing cards off the top of the deck."[2] The residual claimants (the common stockholders) might well find that through no fault of their own, and in response to a statutory command to liquidate the enterprise, all the "cards" had been dealt out, leaving no hand or a very incomplete one for them if the predetermined contract limitations are violated.

It may be argued, as it was in the Courts below, that in such circumstances the Commission would avoid this

---

[1] Consider, for example, a corporation with the following relatively simply capitalization:

	Par Value	*"Investment Value"*
6% Bonds (Non-callable)	$20,000,000	(3.5% basis) $34,000,000
7% Preferred Stock (Non-callable)	15,000,000	(5% basis) 21,000,000
Common Stock (Earning power $1,000,000 per annum)	10,000,000	?
Surplus	5,000,000	
	$50,000,000	$55,000,000

In the foregoing case, under a rigid application of the investment value doctrine invoked in this case, the common would be required to pay the senior security holders their "investment value" of $55,000,000, although total assets of the corporation aggregate only $50,000,000. Even if $5,000,000 were sliced off the "investment value" of the senior securities, nothing would still remain for a common stock which had a book value of $15,000,000 and an earning power of $1,000,000 per annum. And, as was pointed out, the capital structure used in this example is relatively simple as compared with that of some holding companies which have several issues of preferreds as well as bonds outstanding.

[2] *Supra*, p. 105.

result by "valuing the enterprise on an over-all basis" and "weighting" the participations of the various claimants. We must assume that the Commission would indeed see the necessity of taking measures to avoid a result so palpably inadmissible. Yet, in the Court below Commission Counsel indicated that non-callable preferred stocks would be entitled to premiums as high as 60-75 percent of their par value.[1] And in the instant case, the Commission did *not* "value the enterprise" on an over-all basis or on any other basis.[2] It merely "valued" the claim of the preferred on the basis of momentary peak market prices and accorded no consideration whatever to the value of the common on a comparable basis or otherwise. The common was simply left to receive whatever remained after the preferred were paid out in accordance with the so-called "investment value ex the Act" formula; and as the District Court correctly apprehended, under this formula little or nothing may remain for valuable common stocks in liquidations compelled by the Act.

---

[1] The Commission's Reply Brief (quoted in our petition for rehearing, R. 104, n. 7) stated:

> "For example, 6% preferred stock would be worth, if non-callable, approximately $175 on a 3.42 per cent yield basis and $160 on a 3.75 per cent yield basis."

[2] Cf. *Consolidated Rock Products Co.* v. *Dubois*, 312 U. S. 510, 520, 524.

VI. The Commission's rationale was otherwise fallacious. The liquidation of Engineers entailed no "transfer of values" to the common, but only imposition of additional losses.

A. The Commission confused "frustration" with "appropriation".

One of the greatest fallacies in the Commission's rationale is its implicit assumption that if the preferred stockholders sustained a deprivation by reason of the compulsory retirement of their stock upon payment of $100 per share, the common stockholders necessarily became the beneficiaries of that deprivation. This embodies essentially the same stark *non-sequitur* which this Court has rejected in enunciating the principle that "Frustration and appropriation are essentially different things." [1]

In concrete terms, what the Commission and the other petitioners contend is that because the market was allegedly willing to pay a premium for preferred stocks similar to those of Engineers by reason of the fact that they carried dividend rates somewhat higher than the money rates current at the time Badger and Barnes gave their testimony, it follows that the common stockholders profited to the extent of these premiums when the preferreds were retired at $100 per share upon the company's dissolution in obedience to the Act. We submit this is tantamount to arguing that if a stock which has a $100 par or stated value on a company's books thereafter attains a market value of $110, the stock-

---

[1] "It is well settled in this Court that, 'Frustration and appropriation are essentially different things.' *Omnia Co.* v. *U. S.* (261 U. S. 502), p. 513" (*U. S. ex rel. T. V. A.* v. *Powelson*, 319 U. S. 266, 282).

holders' potential market gain is the company's loss; or, conversely, that if the market price of the stock drops to $90 per share, the stockholders' loss is the company's gain.

Even if it be assumed *arguendo* that when the Engineers' preferreds were retired the preferred stockholders were deprived of the theoretical opportunity of realizing a premium which the market was allegedly willing to pay for preferred stock dividend rates in excess of the then going rates, no correlative benefits accrued to the common stockholders. The low "yields" on which Badger and the Commission based their determinations had relation only to the yields of preferred stocks and other senior securities. But the Engineers' common stockholders did not receive these preferred stocks which they could offer on the market in order to realize the hypothetical "premiums"; the company was required to completely retire the preferred stocks. Nor were the common stockholders permitted to put out a new issue of preferred stock or other senior securities at the low money rates then prevailing to replace the preferred stocks, and thereby to profit by the forced retirement of the preferred.[1]

[1] It is significant that in the only two decisions subsequent to the instant case in which the Commission applied the "investment value ex the Act" doctrine in connection with the retirement of senior securities, the Commission laid strong emphasis on the fact that the companies there involved were not liquidated but were continuing in business (in one instance augmented by merger), and that in both instances the companies were permitted to replace the retired preferred stocks with other senior securities carrying a much lower money cost than the preferred stocks which were retired. Thus, in *Pennsylvania Edison Company*, Holding Company Act Release No. 8550 (Oct. 16, 1948), the Commission stated (p. 42):

> "The enterprise continues with the additional betterment of closer integration with the properties of Penelec as a consequence of the merger. And Penelec accomplished the financing

On the contrary, the common stockholders were forced to liquidate what remained of their company and to dissolve, and in that dissolution they suffered serious deprivations and losses in addition to those previously sustained.[1]

---

necessary to acquire Pened's assets *through the issuance of securities which in effect replaced the old preferred stock and bonds of Pened at a time when market conditions were highly satisfactory.*" (Emphasis supplied.)

And in the *United Light and Railways Company*, Holding Company Act Release No. 7951 (December 31, 1947), the Commission pointed out that the 6% non-callable preferred to be retired would be replaced by an issue of ten year serial notes carrying an interest charge of only 3⅛%, and stated (p. 37):

> "It may be noted that the common stockholders of American would realize substantial benefits from the elimination of the preferred at a price of $33 per share. To the extent that preferred shares are tendered, there will be a substantial reduction in charges, representing the difference between the present dividend of 6% and 3⅛% interest on the proposed serial notes. The use of debt instead of preferred stock, will also give the company certain tax advantages * * *. Since the payment to the preferred amounts to $8 per share over par * * * the entire excess over par would be equalled through savings in charges in just over five years."

Since the Commission found that these factors were highly significant in appraising the fairness of the premium payments in the plans referred to above, it would seem that petitioners are estopped from even suggesting that their complete absence here is not equally significant respecting the unfairness of the Commission's requirement for payment of the premiums in the instant case.

[1] Thus, in addition to the financial losses suffered in carrying out the Commission's divestment orders (*supra*, pp. 60-61) the common stockholders sustained the further deprivations attendant upon entirely giving up the holding company form of organization, the financial advantage of filing consolidated tax returns (*supra*, p. 96, n. 1), the centralized expert service organization, the leveraged capital structure and the recoupment of past losses which such structure would produce in an economic upswing. Some of these factors have been summarized as follows:

> "As Engineers was constituted prior to the passage of the Act it had * * * the advantages of diversity (which Dr. Badger, the only witness for the preferred stockholders, admits are of value [Dr. Badger, Tr. p. 1495]), the advantages of a non-profit

Indeed, the compulsory retirement of the preferred itself constituted a serious deprivation to the common. Under their contract with the preferred, the common stockholders had the absolute right to the use of the $39,000,000 of capital contributed by the preferred without limitation of time; and without obligation other than to pay the preferred the stipulated dividends when earned. The fact that the dividend rates payable to the preferred might have been somewhat higher than those temporarily current in the money markets in 1945 and 1946 did not make this contract disadvantageous to the common. The same contract gave the common the option to retire the preferred upon payment of the redemption prices whenever the condition of the money market made such a step desirable for the common.

But even apart from this right, it would have been highly advantageous to the common to have been permitted to keep Engineers in existence and to maintain the preferred stock outstanding. The dividend rates being paid to the preferred represented an annual senior money cost, or rental charge, of 5.40% which the common stockholders paid for the use of this $39,000,000 of capital. At the time of the retirement of the preferred, as well as at the present time, many sound util-

---

mutual service organization furnishing services of trained experts (Dr. Badger admits that the Engineers companies have had excellent management [Dr. Badger, Tr. p. 1699]), savings from combined purchasing, sales development and other services, leverage from the inclusion of $40,000,000 of preferred stock in the capital structure (as a preferred stock having no maturity date), a pool of credit available to aid companies whose earnings are temporarily depressed and to help equalize the earnings of the system. As a result of the Act all these advantages have been or must be foregone" (Extract from brief dated August 19, 1946, filed by Engineers with the Commission).

ity operating common stocks were available for purchase at a price equal to approximately eight times current earnings,[1] or equivalent to approximately 12½% on cost. Thus, if not for the Act, Engineers' common stockholders would have been free to retain the capital of the preferred holders without any limitations of time at an overall cost of approximately 5.40% while realizing some 12½% on this capital; or, in the alternative, the common stockholders had the option of calling the preferred stock and replacing it with preferred carrying an even lower dividend rate.[2]

Not only were the common deprived of this perpetual opportunity to retain this large reservoir of capital and to employ it profitably, but, over a period of ten years, they were forced to sell off a large number of the company's assets at a loss in order to comply with the Commission divestment orders,[3] and to retain the proceeds

[1] From the figures set forth in note 3, p. 101, *supra*, it will be seen that the common stocks of the three operating companies distributed in the Engineers liquidation were themselves accorded a market price equivalent to approximately eight times their then current annual earnings (annual earnings $10,629,724, aggregate market price $86,700,000; their present market price is approximately $3,000,000 less [*Ibid.*]). See also Public Utilities Fortnightly, issue of December 2, 1948, at p. 815, for list including many representative utility common stocks purchaseable at eight times earnings and even less.

[2] Cf. District Court Finding No. 46 (R. 311a-312a).

[3] See District Court Opinion, R. 290a; Findings 37-38, R. 307a-308a; Court of Appeals Opinion, R. 36, 37.

Apart from the losses sustained on divestments, the Act put an end to the further growth of the Engineers system which would undoubtedly have resulted in additional large earnings for the common. The record establishes that Engineers was in an excellent position to resume the process of further expansion which the depression had interrupted. One instance of this growth possibility was the option it held giving it the right to acquire control of El Paso Natural Gas Company, an enterprise which was relatively in its infancy in 1930

of those sales and forego all dividend income [1] in order to attempt to accumulate the money required to retire the preferred stock. Since the sums thus realized were still not sufficient for the purpose, the common stockholders were subsequently required to contribute $22,000,000 additional in cash, and to "mortgage" the remaining assets by advance payment of dividends [2] in order to complete the formidable task of raising the money required to retire the preferreds.

Finally, as compensation for all these efforts and deprivations, the common stockholders ultimately realized in the liquidation an amount barely approximating the sum actually received by the company for the common stock,[3] as compared with the approximately $190 paid to the preferred stockholders for each $96 received by the company.[4]

---

when the option was acquired (R. 508a-510a). This company has since become one of the leading natural gas pipe line companies of the country, with total assets exceeding $102,000,000 (Moody's Public Utilities, 1948, p. 661), as compared with $7,000,000 in 1930 (Moody's, 1931, p. 2362); and net income of $283,000 in 1930 had increased to $3,953,000 in 1947 (*ibid.*). Engineers was prohibited by the statute from adding this highly promising enterprise to its system, and was ordered by the Commission to divest itself of all relationship therewith (*Engineers Public Service Co.*, 12 S. E. C. 41). Although Engineers recorded a book profit on this divestment, the record establishes that it was deprived of the opportunity to realize approximately $4,000,000 (which amount has now increased to approximately $7,000,000) additional as measured simply by the market price which the stock subsequently attained (R. 509a). More important, it was forced to forego all the advantages accruing from complete control of one of the country's most dynamic growth situations.

B. Petitioners' contention that the common stockholders derived "economic benefit" from the retirement of the preferred is frivolous.

In the face of these facts it is understandable and significant that petitioners find it necessary to attempt an argument that the retirement of the preferred stocks resulted in countervailing "economic benefit" to the common.[1] The only basis which can be suggested for this contention is a sentence in the Commission's opinion to the effect that "the retirement of the preferred stock will be of immediate benefit to the common stockholders" (R. 69a), a sentence which merely serves to highlight the inconsistencies and paradoxes flowing from the Commission's fictional doctrine. For, examination of the context in which this statement appears, makes it incontrovertibly plain that the Commission merely recognized that the impact of Section 11 on Engineers had been so severe, and the degree of governmental frustration of the enterprise so great, that the preferred stock had been transformed *as the result of the Act* into a burden for the common stockholders, instead of the valuable advantage it had formerly constituted and would at present constitute if not for the Act.[2]

It is indisputable that the preferred stock became a "financial burden" only because the Act itself prevented the company from realizing income on the $39,000,000

---

[1] Petition of the Commission in No. 266, pp. 6, 17.

[2] The Commission's own words foreclose argument on this point. It stated (R. 59a):

> "The reduction of the Engineers holding company system from its previous size and diversity to a single operating company necessitates a commensurate contraction of its financial structure. Engineers' outstanding preferred instead of providing valuable leverage for the common, has become a financial burden."

of capital which that stock represented. Even in the face of the sacrifices imposed on Engineers during the decade following passage of the Act, it would still have been greatly to the advantage of the common stockholders, as we have shown (supra, pp. 117-118), if they had been permitted, free of the Act's restraints,[1] to retain their enterprise alive, to continue the preferred stock outstanding, and to invest the $39,000,000 in the stocks of operating utilities. But again the Act intervened to impose upon them the further and final requirement—the complete dissolution of the remainder of the enterprise. Under these circumstances, to refer to the "benefits" conferred by the Act upon the common by reason of the retirement of the preferred stock which the Act alone had transformed from a valuable asset (as the Commission itself stated) into a burden, *at best* partakes of that bizarre "exercise in semantics" to which Judge Leahy referred in stating (R. 311a-312a):

> "Analysis of the value of the Engineers preferreds on a 'going concern' basis is largely an exercise in semantics, since the Act dictates the dissolution of Engineers and of the entire holding company enterprise, and thus makes impossible the 'going concern'

[1] The inability of Engineers to reinvest the proceeds realized from the sale of assets pursuant to the Commission's divestment orders was due solely to the restrictions contained in the Act. Under Sections 9 and 10, no new acquisitions may be made by a holding company except with the approval of the Commission, which may be granted only in very special circumstances. And the record establishes (R. 448a, 978a) that apart from one relatively modest acquisition in connection with Virginia, Engineers was unable to make any others within the statutory limitations. Cf. *The Western Public Service Company*, 12 S. E. C. 804, concurring opinion, at p. 818: "The management apparently has found no lawful way in which this capital can be reinvested in furtherance of the purposes for which this corporation was created. The fair course is to return it."

in which the preferred and common stockholders engaged to invest. If not for the requirements of the Act, Engineers as a 'going concern' would have been free to take advantage of the present low money markets by calling and redeeming its preferred stocks and replacing them with preferred stocks carrying a lower dividend rate than those now outstanding; it would thus continue to enjoy the leverage advantages of senior capital, but at a substantially lower cost. Under these circumstances, payment of the premiums to the preferred stockholders would have been consonant with the purposes and intent of the charter redemption provision. But the Act has made it impossible for the Company and the common stockholders to avail themselves of these benefits contemplated by the contract, along with the many other advantages which would have accrued to them as a 'going concern, exclusive of the impact of Section 11'."

As has previously been shown (supra, pp. 54-59), prior to the adoption of its "investment value ex the Act" doctrine applied in this case, the Commission had itself recognized and forcefully urged in the courts that "fairness and equity" require consideration of the correlative deprivations which the junior security holders sustain along with the senior security holders in consequence of the retirement of the latter's investments under the impact of Section 11, and that such consideration renders unfair and inequitable the payment of premiums. The Commission's pertinent statement in its brief in *New York Trust Co.* v. *S. E. C.*[1] merits repetition here:

"In the instant case neither Power nor a successor company is retaining, or can retain, the capital ob-

[1] 131 F. 2d 274 (C. C. A. 2), cert. den. 318 U. S. 786, rehearing den. 319 U. S. 781.

tained from the sale of the debentures for the benefit of the system. The debenture holders are being repaid the principal of and accrued interest on their debentures, are restored to their original position, and are not compelled to accept the risks of a new enterprise. Under these circumstances as we have heretofore shown the debenture holders are not entitled to anything more."

Although the foregoing argument was presented to the Second Circuit some years before the Commission's decision in the instant case, the Commission has again recognized the soundness of the basic reasoning therein contained in its two recent decisions referred to supra, p. 115, n. 1, in which it emphasized that payment of the premium was "fair and equitable" to the junior security holders because, *unlike the situation here*, the common stockholders in those cases were permitted to continue their enterprises in existence and to replace the retired senior securities with other senior securities at a much lower rate.

PART THREE

THE DISTRICT COURT DID NOT EXCEED ITS STATUTORY FUNCTIONS. THERE WAS NO VALID BASIS FOR REMANDING THE PROCEEDINGS TO THE COMMISSION.

VII. The District Court did not exceed its powers in subjecting to an independent examination the Commission's conclusion that the plan was fair and equitable.

The Commission contends, as it did in the court below, that unless its conclusion upon the fairness and equity of a plan under Section 11(e) lacks "any rational and statutory foundation", it may not be disturbed by the District Court, and that the Commission's judgment in these matters may not be reversed by the District Court unless "it has plainly abused its discretion". The Court below rejected that contention, and after the most careful analysis of the Act, its legislative history, the relevant authorities and other considerations (R. 20-34), concluded:

> "In the light of the foregoing we cannot hold, as the Commission contends that we must, that unless the conclusions of the Commission lack rational or statutory foundation they may not be disturbed by the Section 11(e) court, or that a reversal of the Commission's judgment by the court may not be effected save where the Commission has plainly abused its discretion. We conclude that it was the duty of the court below to function as an equity reorganization tribunal within the limitations prescribed by the Act. The findings and conclusions of the Commission were not binding upon the learned District Judge though, as was proper, he treated them with respect" (R. 34).

It is our position that even under the most restrictive view of the jurisdiction of the District Court in these matters, its judgment in the present case was correct and should be affirmed, since the conclusion of the Commission that the plan was fair and equitable was without rational and statutory foundation. To reach its determination that the plan as approved by the Commission was not fair and equitable, the District Court was not required to disturb, and did not disturb, any factual finding of the Commission. Virtually all the facts upon which the District Court rested its conclusion had been found by the Commission.[1] No attack was made in the courts below, and so far as we are aware none is made here, by any party, upon the accuracy of the facts recited in the District Court's opinion or in its findings.[1] The District Court differed with the Commission's ultimate conclusion, based upon the admitted and undisputed facts as set forth in the Court's opinion and findings. And, where the *conclusion* of the Commission upon the facts is, as here, either without rational basis or contrary to law, even a "review" court exercising the most limited review functions would have the power to set aside the conclusion.

---

[1] The record establishes that at the hearing before the District Court held May 29, 1947 (R. 384a-349a) the Court invited the parties to suggest any amendments they might wish to the findings, either orally or pursuant to the procedure provided by Rule 52(b) of the Rules of Civil Procedure. Except for several very minor items suggested by Commission Counsel and accepted by the Court (R. 389a), no requests for amendment or contentions as to inaccuracy were made either at that hearing or at any time thereafter. Cf. Rule 52(b), Rules of Civil Procedure.

The Court of Appeals having affirmed the "careful and far-reaching examination of the relevant factors" made by the District Court (R. 34), these findings are "final here in the absence of a very exceptional showing of error". *Comstock* v. *Group of Investors*, 335 U. S. 211, 214.

However, we do not concede that the power of the District Court under Section 11(e) is as limited as the Commission contends it should be. On the contrary, we submit that the District Court and the Court of Appeals were clearly correct in holding that the District Court is required under Section 11(e) to exercise an independent judgment as a court of equity in determining whether a proposed plan is fair and equitable. We think this is clearly demonstrable from the language of the statute itself, from the judicial and legislative history of the words employed in the statute, from the construction which the Commission itself has heretofore placed upon the statute, and from the judicial construction the statute has heretofore received.

A. Internal evidence from the Act itself.

Section 11(e), in outlining the respective functions of the Commission and of the District Court, with respect to a plan submitted by the company, uses substantially identical language in the two instances. As to the Commission the language is:

> "If, after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; * * *."

As to the District Court the language is that if, upon application by the Commission at the request of the company to enforce and carry out the terms and provisions of such plan,

> "* * * the court, after notice and opportunity for hearing, shall approve such plan as fair and equi-

table and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; * * *."

As the Court of Appeals said: "The words employed respecting the respective duties of Commission and court are so alike that we must conclude that Congress intended to lay substantially the same duty on the court in the second instance as it imposed on the Commission in the first". (R. 24). "One may not presume that the same words employed in a single subsection of a statute have dissonant meanings" (R. 25).[1]

It will be observed that, in addition to the findings that the plan is fair and equitable, which both the Commission and the District Court are required to make, the Commission must also find that the plan is "necessary" to effectuate the provisions of subsection (b), and the District Court must find that the plan is "appropriate" to effectuate such provisions. This difference, in defining the respective duties of Commission and Court in relation to the *public* issues involved in the determination of whether the plan conforms to and furthers the aims of the Act, emphasizes the co-ordinate jurisdiction accorded to Commission and Court in relation to *private* interests affected by the plan, namely, whether the plan is fair and equitable to the respective security holders.[2]

---

[1] See *Davies Warehouse Co.* v. *Bowles*, 321 U. S. 144, 150.

[2] Compare the same distinction with respect to the powers of the Interstate Commerce Commission and the district courts under Section 77 of the Bankruptcy Act, discussed, *infra*, at pp. 130-133.

Other provisions of the Act confirm the conclusion dictated by the central provisions above quoted, and serve to differentiate the character of the jurisdiction accorded to the District Court under Section 11(e) from that accorded to the Court of Appeals under Section 24(a), the section which petitioners seek to merge into 11(e). Section 24(a) prescribes that "the findings of the Commission as to facts, if supported by substantial evidence, shall be conclusive." This limitation is pointedly omitted from Section 11(e). Section 11(e), on the other hand, expressly directs that the proceedings in the District Court shall be "after notice and opportunity for hearing", which has been construed to require that notice be given to all security holders who may be affected, many, if not most of whom, will not have appeared before the Commission (R. 26).[1] There is no such requirement with respect to proceedings under Section 24(a); on the contrary, that section provides that no objection to the order of the Commission shall be considered by the Court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do.

We believe it was in recognition of this clear statutory scheme as to the plenary co-ordinate role of the District Court under Section 11(e) that this Court stated:

> "Any plan of divestment or reorganization, moreover, must be carefully scrutinized by both the Commission and the enforcing court, thus enabling the assertion and protection of all shareholders' rights." North American Co. v. S. E. C., 327 U. S. 686, 709.

[1] *In re SEC (Otis & Co.)*, 142 F. 2d 411, 422 (C. C. A. 3, 1944).

B. The function of the District Court in equity reorganizations and bankruptcies.

Passing from the Act itself to consider extrinsic evidence on the meaning of the terms employed, we find that the words "fair and equitable" were "words of art" which had long before "acquired a fixed meaning through judicial interpretations in the field of equity receivership and reorganizations".[1] Shortly prior to the passage of the Act this Court had declared, "Every important determination by the Court in receivership proceedings calls for an informed, independent judgment".[2]

The phrase "fair and equitable" with its "fixed meaning" so well established was carried over into bankruptcy reorganizations under Section 77B[3] and into railroad bankruptcies under Section 77.[4] It has the same meaning as used in the Holding Company Act.[5]

While it must be obvious from a comparison of Section 11(e) of the Holding Company Act with Section 77 of the Bankruptcy Act that the power of the District Court under the former is broader than under the latter statute, it is established that even under the latter statute the District Court is not merely a "review court" which is required to approve a plan of reorganization as fair and equitable unless it finds the determination of the Interstate Commerce Commission to that effect to be lacking in "any rational and statutory foundation".

---

[2] *National Surety Co.* v. *Coriell*, 289 U. S. 426, 436 (1933); *First Nat. Bank* v. *Flershem*, 290 U. S. 504, 525 (1934).

[3] *Case* v. *Los Angeles Lumber Co.*, *supra*.

[4] *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 482 (1943); *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 542 (1943).

[5] *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 634 (1945).

Certain functions are, by Section 77, lodged exclusively in the Interstate Commerce Commission and withdrawn from the jurisdiction of the District Court. Valuation of the debtor's property is one such area where the Interstate Commerce Commission is supreme; the function of the District Court is limited to determining whether the Commission observed statutory mandates.[1] Other matters, such as abandonment of property or forfeiture of leases, where the public interest is dominant, are similarly treated.[2] But these decisions rest upon express language contained in Section 77 of the Bankruptcy Act which has no counterpart in Section 11(e) of the Holding Company Act. This Court has recognized that "the whole scheme of Section 77 leaves no doubt that Congress did not mean to grant to the district courts the same scope as to bankrupt roads that they may have in dealing with other bankrupt estates".[3]

However, in the field where the district courts were granted participation with the Interstate Commerce Commission, the district courts are expected to act *independently* and not as courts of review over the action of the Commission. This is particularly true with respect to claims of priorities among security holders where the interests at stake are mainly private rather than public. In *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448 (1943), where the respective functions of the Interstate Commerce Commission and the District Court were fully considered, this Court said (p. 479):

---

[1] *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 472 (1943).

[2] *Palmer* v. *Mass.*, 308 U. S. 79 (1939); *Smith* v. *Hoboken R. Co.*, 328 U. S. 123 (1946).

[3] *Palmer* v. *Mass.*, 308 U. S. 79, 87 (1939).

"For example, there may arise controversies over the priority or the validity of claims. A Commission finding involving such problems would require an independent examination and an affirmation by the court."

What this Court meant by an "independent examination" is made clear by its discussion on the question of valuation; after pointing out that the statute vests in the Interstate Commerce Commission the function of valuation "without participation by the [district] court", this Court nevertheless stated that "this valuation must be made in accordance with the direction of the statute and as to that valuation is subject to judicial review", which review is "limited in character" and "does not involve an independent examination into valuation" (p. 477).[1]

In *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523 (1943), decided with the *Ecker* case, this Court did not again discuss the respective functions of the Interstate Commerce Commission and the District Court, but the opinion is replete with references to the important functions to be exercised by the District Court in railroad bankruptcies. Repeatedly the Court adverts to and relies upon the fact that the District Court had affirmed certain relevant findings of the Commission.[2] Speaking of the difficulties inherent in bringing two divisional

[1] A similar distinction, made by the District Court in the *Ecker* case, between the review powers exercised by the District Court upon the Commission's valuations on the one hand, and the "independent judgment" exercised by the District Court upon other findings of the Commission on the other hand, was approved by this Court (p. 467).

[2] Pages 537-538, 541, 546-556 *passim*.

mortgages into a new capital structure, this Court observed that, "The question in each case is one for the informed discretion of the Commission *and the District Court*" (p. 564; emphasis supplied), and it differentiated sharply between the functions of the District Court in that respect and the "review functions" of this Court:

> "The District Court satisfied itself that the principles of priority as applied to these facts were respected. See 36 F. Supp. pp. 202-203, 211-212. Since such a determination rests in the realm of judgment rather than mathematics, there is an area for disagreement. But we are not performing the functions of the District Court under § 77(e). Our role on review is a limited one. It is not enough to reverse the District Court that we might have appraised the facts somewhat differently. If there is warrant for the action of the District Court, our task on review is at an end" (p. 564).

Again, speaking on the question whether the plan was "fair and equitable", this Court said:

> "Whether in a given case senior creditors have been made whole or received 'full compensatory treatment' rests in the informed judgment of the Commission and the District Court on consideration of all relevant facts" (p. 566) [1]

In *Comstock* v. *Group of Institutional Investors*, 335 U. S. 211, this Court again recognized the "broad responsibility laid upon the [District] Court for the equity

[1] See also the similar statement that: "The earnings periods to be selected and the methods to be employed in allocating earnings among the various divisions are matters for the informed judgment of the Commission and the District Court" (p. 572).

and fairness of the plan as a whole" in proceedings under Section 77 of the Bankruptcy Act and declared:

> "The court will be diligent to protect itself and the public from approval of unfair plans, even by default, and may take for its own use evidence no party would have a right to force upon it" (pp. 227-228).

The legislative history of Section 77 had previously been traced in *Palmer* v. *Massachusetts*, 308 U. S. 79 (1939). The Court recalled that, "There was a strong sentiment in Congress to withdraw from the courts control over insolvent railroads and lodge it with the Interstate Commerce Commission. Congress stopped short of this remedy" (p. 87).[1]

Bearing in mind that Congress in 1933 refused to lodge with the Interstate Commerce Commission exclusive control over insolvent railroads notwithstanding the more than 40 years of experience which that administrative body had had with every detail of railroad finance and management, it would be surprising indeed if Congress should have intended in 1935, when it enacted the Holding Company Act, to vest greater control over the rights of stockholders in reorganization and liquidations of utility holding companies in the Securities and Exchange Commission, then a newly organized agency with no experience whatever in the regulation of utility holding companies or in corporate reorganizations generally.

C. Legislative history of the Act.

The legislative history of the Holding Company Act bears out the foregoing conclusions. The Senate Committee which reported out the original bill stated:

---

[1] See also *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 468-470 (1943).

"Section 11 provides that plans for the voluntary readjustment of the affairs of holding companies to conform with the section may be presented to the federal courts at any time and that in such cases those courts may exercise in the furtherance of such voluntary plans *all the extraordinary powers such courts have been accustomed to exercise when called upon under the Sherman and Hepburn Acts to effect compulsory corporate readjustments required by the public policy expressed in those acts* * * *. The title provides that *during all court processes the Securities and Exchange Commission shall act as an impartial expert economic adviser and administrative assistant to the courts.* That expert assistance will enable the courts to save time and expense in the solution of essentially economic and administrative problems for which in the Sherman Act cases it had no assistance except that of opposing counsel." [1] (Emphasis supplied.)

Clearly the "extraordinary powers" exercised by the District Courts under the Sherman and Hepburn Acts were the plenary powers of a court of equity; and it was contemplated that the Commission, "as the impartial, expert, economic adviser and administrative assistant to the courts" would not diminish or encroach upon the functions to be exercised by the courts.

The sharp debate which occurred in the Senate around the provision contained in the bill (S. 2796) that would have required the District Court in proceedings under subdivisions (d), (e) and (f) of Section 11 to appoint the Commission as trustee, and which resulted in amending the bill so as to make the duty to appoint the Commission as trustee permissive and not mandatory, brought into sharp focus the Congressional intention that the

[1] Senate Report No. 621, accompanying S. 2796, 74th Cong., First Session, pages 13 and 14; emphasis supplied.

jurisdiction of the District Courts in proceedings under those subdivisions should be the traditional jurisdiction of a court of equity in reorganization proceedings.

Senator Wheeler, who had charge of the bill in the Senate, sought to assure that body that

> "* * * the provision does not oust the jurisdiction of the court at all, because the court has to approve the plan even though the Commission approves it. In other words, there is really a double check upon the plan, and final determination rests as in the past in the courts."[1]

Nevertheless a number of Senators continued to hammer the point:

> "Senator Clark: 'I say that I very violently disagree with the theory * * * that any sort of a Commission functioning from Washington through emissaries or agents, or attorneys, is to be preferred in its discretion to a federal judge appointed to one of the very highest honors in this country, appointed by the President, usually after careful and most meticulous selection and confirmed by the United States Senate * * *.[2] The Commission ought to be made a party, given the right to be heard, given a standing in court, but it should not be mandatory on the court to accept the Commission's ukase.'[3]
>
> * * * * * * *
>
> Senator McKellar: 'I believe in courts. Sometimes they do wrong of course; they sometimes fail to do what they ought to do. They are not perfect; but neither are Commissions perfect. From my experience with Commissions and with courts, I believe I would rather trust the courts.'"[4]

---

[1] 79th Cong. Rec. 8845, 74th Cong., First Session.
[2] p. 8939, Cong. Rec., *supra*.
[3] p. 8940, Cong. Rec., *supra*.
[4] p. 8939, Cong. Rec., *supra*.

Senator Barkley, replying to a previous statement by Senator McKellar, had stated:

> "I appreciate the force of what the Senator says. Of course, this is an administrative duty of the court. It is not like *telling the court how to decide the law, or as to equities among investors or how a reorganization shall be brought about.* The appointment of receivers is an administrative matter which is performed by the courts." [1]

And in the end, notwithstanding the repeated assurances by the proponents of the measure that there was no intention to impinge upon the traditional independence of the district courts as courts of equity in the reorganization proceedings contemplated by subsections (d), (e) and (f) of Section 11, Senator Wheeler found it necessary to agree to the amendment, which was embodied in the statute as finally enacted.[2]

D. The Commission's interpretations of the Act prior to this case.

The Commission itself, prior to this case, has not contended that the District Court in a Section 11(e) proceeding is merely a "review court" which must approve the Commission's determination "unless wholly lacking in a rational or statutory basis". On the contrary, it has constantly stressed the *co-ordinate* role of the District Court. The following examples illustrate the position of the Commission prior to the present case.

In its 10th Annual Report to Congress (dated April 21, 1945) the Commission stated, at pages 65, 66:

---

[1] p. 8937, Cong. Rec., *supra;* emphasis supplied.

[2] See p. 8939, Cong. Rec., *supra.*

"Thus, security holders have the protection of findings as to the fairness and equity of plans by both the Commission and a United States District Court. * * *

* * * * * * *

As has been said, security holders are not required to accept Section 11(e) plans unless they are found fair and equitable by both the Commission and a United States District Court."

At hearings by a committee of the House of Representatives to consider whether the Act required amendment, Mr. Ganson Purcell, then Chairman of the Commission, and Mr. Milton H. Cohen, then Director of its Public Utilities Division, testified as follows:[1]

"Mr. Purcell: As I said, his new interest (the stockholder's) is gaged by his claim under the old security and his treatment must be found by the courts and the Commission to be fair and equitable.

Rep. Henshaw: You say by the courts?

Mr. Purcell: Oh, yes. In a Section 11 proceeding, which is the one most often resorted to by the companies, their plan is filed, and they ask, in almost all instances, that under the provisions of Section 11(e), the Commission seek enforcement of the plan in a district court of the United States. The district court is then required to find under Section 11(e) that the plan is fair and equitable, and proper to carry out the provisions of Section 11(e). That decision of the district court is in turn appealable, and it can be taken to the Court of Appeals and to the Supreme Court of the United States" (p. 873).

[1] Hearings before the Securities Subcommittee of the Committee on Interstate and Foreign Commerce, House of Representatives, on "Operations Pursuant to the Public Utility Holding Company Act of 1935", Part 3 (79th Cong., 2d Sess., 1946).

"Mr. Cohen: The machinery of Section 11(e) of the Act provides that when the Commission finds a plan fair and equitable, it may at the request of the company, apply to an appropriate Federal district court for enforcement of the plan.

Such Federal district court, on the basis of the record made before the Commission, holds full hearings on the plan, including briefs and oral argument, and then such court has the *independent duty* of determining whether the plan is fair and equitable and appropriate to effectuate the provisions of Section 11(b)" (p. 962; emphasis supplied).

Judge Leahy, who had passed on almost half of the 63 Section 11(e) plans presented to the District Courts for enforcement and had thus had the benefit of Commision counsel's presentations frequently over the past six years, stated in his opinion in *Re Interstate Power Co.*, 71 F. Supp. 164, 161 (1947):

"Since one of the earliest cases for Federal district court enforcement under the Act was brought to me for consideration and approval, it has been consistently conceded by all parties, including the various sets of attorneys for the SEC, in this and in all other cases brought to the enforcement court, that a § 11(e) court has the affirmative and independent duty to consider and find whether a proposed plan is fair and equitable * * *."

In opening the argument of the present case in the District Court, Commission counsel conceded that: "* * * it is the independent duty of the Court apart from any objections which may have been filed, to satisfy itself that the plan meets the statutory tests of necessity as well as fairness, * * *" (R. 191a).

In its memorandum submitted to the Court of Appeals in *Lowinsbury* v. *S. E. C.*, 151 F. 2d 217 (C. C. A. 3, 1945), the Commission analogized the relationship between itself and the District Courts with respect to subsections (d), (e) and (f) of Section 11, to the relationship between the Interstate Commerce Commission and the courts under Section 77 of the Bankruptcy Act, and the Commission carefully distinguished between the functions of the District Court with respect to orders made under the three enumerated subsections and the functions of the Court of Appeals in reviewing other orders pursuant to Section 24(a):

> "Congress contemplated that reorganization techniques should be available for compliance with Section 11(b) orders, and subsections (d) and (e) are in many respects a self-contained reorganization statute with provisions defining the respective reorganization functions of court and agency which are comparable to the relationship between the Interstate Commerce Commission and the courts prescribed in the previously enacted Section 77 of the Bankruptcy Act. Section 11(f) provides for a similar allocation of function as between the Commission and a reorganization court where the court's reorganization jurisdiction stems from sources other than the Holding Company Act" (p. 16).

> "An order of the Commission approving the plan, which is to be operative only if subsequently approved by a district court pursuant to subsections (d) and (e) or under some independent source of jurisdiction recognized in subsection (f), stands on an entirely different footing from the ordinary order of the Commission for which the review provisions of Section 24(a) were evidently intended * * *" (p. 17).

Virtually identical statements were made by the Commission to this Court in its brief in opposition to certiorari in the *Lownsbury* case.[1]

In the face of the foregoing, the Commission finds itself constrained to avow:

> "The Commission agrees with much of what the Court below states concerning the intention of Congress to have the Section 11(e) court function as an independent check upon the Commission's determination that a plan is fair and equitable and also that the respective roles of the Commission and enforcement court should be in general similar to the relationship under Section 77 of the Bankruptcy Act between the Interstate Commerce Commission and the reorganization court." [2]

Having thus made obeisance to its own recorded statements, the Commission thereupon nevertheless proceeds to contend that the "independent role" of the District Court under Section 11(e) is no broader than that of a review court under Section 24(a), and that the District Court is bound by the Commission's conclusions unless they wholly "lack a rational and statutory foundation".

This is to give a new and surprising meaning to the term "independent", and one which scarcely seems supported by the careful distinction drawn by this Court between the functions of a review court and the independent role of the District Court in passing on the fairness and equity of plans under Section 77 of the Bankruptcy Act (*supra*, pp. 131-2).

---

[1] *Lownsbury v. S. E. C.*, No. 1245, October Term, 1944, Brief of the Securities and Exchange Commission, pp. 7, 9.

[2] Commission petition, No. 226, p. 22.

E. Other authorities.

Although the precise question here under discussion has not been authoritatively determined, probably because the Commission has never, before this case, contended for the interpretation which it now asserts, there have been expressions in the lower courts recognizing that the District Courts, in passing upon Section 11(e) plans, exercise an independent and plenary equity jurisdiction.

In *Commonwealth and Southern Corp.* v. *S. E. C.*, 134 F. 2d 747, the Court of Appeals for the Third Circuit "took the position that stockholders, whose rights were affected by an order of the Commission directing a public utility holding company to change its corporate structure had a right to a full hearing in the District Court of the United States in which the Commission was seeking approval of the reorganization plan" (R. 32). In *In re SEC (Otis & Co.)*, 142 F. 2d 411 (C. C. A. 3, 1944), the same Court, citing its former decision, again held that the hearing in the District Court under Section 11(e) is not a summary proceeding and that "any person affected by the plan shall have the right to be heard as to whether or not the plan is fair and equitable and appropriate to effectuate the provisions of Section 11" (p. 422). The Court stated further:

> "Moreover, the fact that notice is to be given to the persons affected by the plan shows that the theory of submission to the District Court is substantially similar to that required in respect to plan made pursuant to the provisions of Section 77B, or Chapter X of the Bankruptcy Act" (p. 422).

In *Okin* v. *S. E. C.*, 145 F. 2d 206 (C. C. A. 2, 1944),[1] and again in *Lownsbury* v. *S. E. C.*, 151 F. 2d 217 (C. C. A. 3, 1945), the courts upheld the contentions of the Commission that orders approving plans under Section 11(e), conditioned upon District Court approval (as was the plan in the instant case), are not reviewable by the Court of Appeals under Section 24(a) of the Act because such orders are "merely interlocutory". In the *Okin* case, the Second Circuit concluded that the legislative history of the Act evinced "a congressional intent that the relationship of the Securities and Exchange Commission and the District Court provided for in Section 11, should be 'exactly' the same as that of the Interstate Commerce Commission and the District Court in railroad reorganization under Section 77 of the Bankruptcy Act" (p. 208). And in the *Lownsbury* case, the Third Circuit quoted with approval the above expression and followed the holding of that case.

The opinion of the Court below refers to *Lahti* v. *New England Power Association*, 160 F. 2d 845, 858 (C. C. A. 1, 1947), and *Massachusetts Mutual Life Insurance Co.* v. *S. E. C.*, 151 F. 2d 424, 430 (C. C. A. 8, 1945); as "cases which look the other way, and [which] are entitled to great consideration" (R. 31). We suggest that the Court below was perhaps overstating the effect of those cases. In both of those cases the Court of Appeals was reviewing the decision of a District Court which had *approved* the findings of the Commission, and therefore what the appellate courts said had reference

[1] Remanded on another point, 325 U. S. 840 (1945).

to *concurrent* findings of the Commission and the District Court. Thus, in the *Lahti* case, the Court said:

> "Upon full consideration, within the limited scope of our review, we have concluded that we must accept the judgment of the Commission and of the District Court on this matter" (p. 858).

Neither Court was required to consider the situation where the District Court had disagreed with the conclusion of the Commission that a plan submitted under Section 11(e) was "fair and equitable", and neither Court gave any indication that it would feel itself bound in such case to accept the judgment of the Commission and to reject the judgment of the District Court.

Petitioners rely principally upon *S. E. C.* v. *Chenery Corporation*, 332 U. S. 194. The holding of the Court below that the *Chenery* decision "cannot be deemed to be controlling in the case at bar" (R. 33) is, we submit, indisputably correct. This Court had before it for review a decision of the Court of Appeals of the District of Columbia reviewing an order of the Commission under Section 24(a) of the Act. That section contains the express injunction that "the findings of the Commission as to facts, if supported by substantial evidence, shall be conclusive", a provision which is not found in Section 11(e). This Court in the *Chenery* case was not called upon to consider and did not purport to decide the extent of the powers of a District Court acting under Section 11(e). Moreover, this Court was dealing with an order of the Commission which it considered to be within the administrative discretion entrusted by Congress to the Commission, "a judgment based upon public policy,

a judgment which Congress has indicated is of the type for the Commission to make * * * [a] conclusion [which] rests squarely in that area where administrative judgments are entitled to the greatest amount of weight by appellate courts. * * * the type of judgment which administrative agencies are best equipped to make and which justifies the use of the administrative process" (332 U. S. at p. 209). The reasoning of the second *Chenery* decision is consistent with the decisions of this Court under Section 77 of the Bankruptcy Act which emphasize that determinations upon questions wherein the public interest is paramount, are committed by Congress to the jurisdiction of the Interstate Commerce Commission,[1] but which accord to the District Court independent power in the fields where predominantly private interests are at stake.[2]

The "anomalous consequences" which the Commission suggests would flow if the construction of the powers of the District Court as laid down in this case should prevail[3] are, we believe, mere figments of imagination. Section 24(a) and Section 11(e) are not, as the Commission suggests, "alternative ways of submitting to judicial scrutiny a plan theretofore approved by the Commission"; the Commission itself has contended, and the lower

---

[1] E.g., *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 468 (1943):

> "When the public interest, as distinguished from private, bulks large in the problem, the solution is largely a function of the legislative and administrative agencies of government with their facilities and experience in investigating all aspects of the problem and appraising the general interest."

[2] *Id.* at p. 479.

[3] Commission's Petition for Certiorari, No. 226, pp. 23-24.

courts have uniformly held, that an order like the one here made by the Commission can only be presented to the District Court under Section 11(e) and cannot be reviewed by the Court of Appeals under Section 24(a) prior to the action of the District Court thereon.[1] In recognition of the fact that the statutory scheme renders inapplicable the general review provisions of Section 24(a) with respect to Section 11(e) plans cutting across stockholders' charter rights, the Commission has established the practice of expressly conditioning its approval of such plans upon District Court enforcement.[2] It follows that the two anomalies suggested by the Commission, namely, alternative applications to the District Court and the Court of Appeals or an application to the District Court for enforcement after affirmance of the Commission's order by the Court of Appeals, could not arise.

---

[1] *Okin* v. *S. E. C.*, 145 F. 2d 206 (C. C. A. 2, 1944); *Lowensbury* v. *S. E. C.*, 151 F. 2d 217 (C. C. A. 3, 1945), cert. den. 326 U. S. 782.

[2] Cf. statement of Judge Goodrich in the *Lowensbury* decision, *supra*, at p. 218.

Petitioners attempt to argue that special weight is attributable to the Commission's approval of a plan because District Court enforcement is optional with the company, is also devoid of merit. Some plans do not "affect" stockholders' rights because they are carried out strictly in accordance with charter provisions or pursuant to vote of the stockholders in accordance with the provisions of state statutes. Cf. *Northern New England Company*, Holding Company Act Release No. 8401 (1948) at p. 4. But where the plan cuts across charter rights, District Court approval and enforcement is essential, as the Commission has recognized:

> "In some cases where Section 11(e) plans have been approved by the Commission, the companies are unable to carry them out without obtaining a court order. The Act permits the Commission at the request of the companies to go to court for the purpose of obtaining enforcement of such plans. * * *
>
> * * * As has been said, security holders are not required to accept Section 11(e) plans unless they are found fair and equitable by both the Commission and a United States District Court." (Tenth Annual Report of the Securities and Exchange Commission, p. 66.)

The fear expressed by the Commission that the conferring of discretion on the District Court "would preclude uniform administration of the statute and make the treatment of nationwide groups of security holders depend upon accidents of venue," would, if warranted, be an argument for amending the statute rather than for not enforcing the statute as written. Congress has evidenced a clear intention that the district courts shall exercise an independent judgment in determining whether public utility holding company reorganization plans are "fair and equitable". Indeed, as has been shown, *supra*, pp. 134-5, Congress placed great reliance on the use of the techniques which the *Courts* had employed in carrying out dissolutions under the anti-trust statutes and in equity reorganizations; and had received positive assurance that "there is really a double check on the plan and final determination rests as in the past in the courts".

Like power is exercised by district courts in equity reorganizations, in corporate bankruptcies under Chapter X, and in railroad bankruptcies under Section 77, without untoward consequences to nationwide groups of security holders, and we see no reason why security holders of utility holding companies should be required to look only to the Commission for protection and should be deprived of the benefit of an independent judicial judgment, particularly when it is remembered that *this statute is the only reorganization statute which does not accord to security holders the right to vote upon a reorganization plan.*

The final fear expressed by the Commission, that a vesting of discretion in the District Court to check the Commission would lead to "a possibility of deadlock re-

sulting from conscientious disagreement", is also unfounded, judging from the experience of the district courts and the Interstate Commerce Commission in the administration of Section 77 of the Bankruptcy Act. Under that statute, as this Court has said, the judicial process "is, as it were, brigaded with the administrative process of the Commission".[1] "These reorganizations may be attained only through properly co-ordinated action between the Commission and the Court."[2] In the absence of evidence that the Commission and the courts are engaged in an irreconcilable conflict, this Court will not assume that such a situation will arise. Experience, both before[3] and since[4] the decision of the Court below, does not sug-

[1] *Palmer* v. *Massachusetts*, 308 U. S. 79, 87 (1939).

[2] *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 475 (1943).

[3] The Court below refers to the fact that the Commission had submitted some sixty-three Section 11(e) plans to the District Courts for enforcement, all of which have been carried out, and that Judge Leahy had passed upon twenty-seven of those plans (R. 30, 39). Prior to the *Engineers* decision, in fulfilling his "independent duty" Judge Leahy had concurred in the conclusions of the Commission in every plan presented to him with the sole exception of a single phase of one plan. The Third Circuit reversed, holding that since the question related to the "appropriateness" of the "particular remedial measures" required to effectuate Section 11(b), the Commission's judgment should prevail (*In re Standard Gas & Electric Co.*, 151 F. 2d 326, 331). However, subsequent events established the correctness of the District Judge's fears that fluctuating markets would render the plan unfair; and as a result the Commission itself concurred in the view that the claims of the senior security holders should be discharged in cash. (See *In re Standard Gas & Electric Co.*, 63 F. Supp. 876.)

[4] Subsequent to the Circuit Court's decision in the instant case Judge Leahy has passed on some nine additional Section 11(e) plans, all of which he has approved and enforced.

The beneficial effect of the decision in the instant case in its practical operation is evidenced by the recent decision of the District Court of Minnesota, *In the Matter of Northern States Power Company*, 80 F. Supp. 193 (N. D. Minn., 1948). Holding that the Circuit

gest that the district courts will endeavor to encroach upon the rightful province of the Commission; if anything, the tendency of the courts is all the other way.

VIII. There is no valid basis for remanding this case to the Commission.

The only valid grounds upon which a remand of this case to the Commission can be predicated are either that as a formal matter, even though $100 per share is the most the preferred stockholders may lawfully receive, the Commission must approve the payment to them of $100 (instead of $100 plus premiums) before that portion of the plan can be enforced; or that as a substantive matter the Commission could, on this record and on a proper rationale, lawfully authorize the payment to the preferred of more than $100 per share. Neither ground is here present. As a formal matter, the Commission has already given its approval to the payment of only $100 per share to the preferred if it be decided that this sum is all that the "fair and equitable" standard authorizes. As a substantive matter, $100 per share is the most that "fair and equitable" treatment permits the preferred stockholders to receive.

Court's decision in the *Engineers* case did not preclude him from attaching great weight to the Commission's determination as to earning power and allocation, the District Judge fully upheld them; but only after making a careful check of their correctness in the exercise of his "independent duty". The same course was followed, and the same result was reached, by the District Court of Maine, *In the Matter of American & Foreign Power Company*, 80 F. Supp. 514, 523 (S. D. Maine, 1948).

The fact is that there has not been a single instance of a refusal by a District Court to approve and enforce a Section 11(e) plan, or any portion thereof, since the decision in the instant case, although more than twelve such plans have been passed on by the Courts.

A. Procedural Aspects

What this Court has said as to the importance of expedition, through coordinated procedure between the District Court and the Commission in reorganizations under Section 77 of the Bankruptcy Act, is equally applicable here:

> "Not only are those who institute the proceeding and those who carry it forward bound to exercise the highest degree of diligence, but it is the duty of the Court and of the Interstate Commerce Commission to see that they do. Proceedings of this character, involving public and private interests of such magnitude, should, so far as practicable, be given the right of way both by the Court and the Commission to the end that they may be speedily determined." [1]

And in *Ecker* v. *Western Pacific R.R. Co.*, 318 U. S. 448, the Court stated (p. 475): "These reorganizations may be attained only through properly coordinated action between the Commission and the Court". The Court of Appeals' requirement for remand negates precisely such a coordinated procedure as was employed in this case.

The Commission in requiring the plan to be amended so as to pay premiums, over the objections of the company and the common stockholders, was necessarily aware that there existed no judicial sanction whatever for such premium payments, and that, on the contrary, the Commission itself and numerous Courts, including four different Circuit Courts of Appeals, had consistently and uniformly held over a period of five years that pay-

[1] *Continental Illinois Bank* v. *C. R. I. & P. Ry. Co.*, 294 U. S. 648, 685. See also *Insurance Group* v. *Denver & Rio Grande W. R. Co.*, 329 U. S. 607, 612. Cf. *Federal Trade Commission* v. *Curtis Co.*, 260 U. S. 568, 580; *International Shoe Company* v. *Federal Trade Commission*, 280 U. S. 291, 297.

ment of premiums to senior security holders at the expense of the junior holders could not be required in reorganizations or liquidations under Section 11(e) of the Act in consonance with the "fair and equitable standard" of Section 11(e).[1]

Hence, in an effort to secure the expeditious execution of those portions of the plan which were separable and approved, and to avoid resubmission of the plan to the Commission if such resubmission served only the formality of having the Commission give its approval to a result which the law required, the Commission amended its order in this proceeding (R. 165a-174a). By the amendments the Commission provided for the parties to enter into an escrow arrangement under which the depositary is to pay over to Engineers the principal and interest deposited in escrow "Upon delivery * * * of an opinion of independent counsel * * * accompanied by a certified copy of the order or decree involved, to the effect that * * * an order or decree of any court having jurisdiction, has been entered, has become final and is no longer subject to appeal, which * * * court order or decree determines or finds that the holders of Preferred Stock are not entitled to receive any amounts in addition to the amount of $100 per share plus accrued dividends * * *" (R. 328a).

Underlying this escrow agreement is an important consideration of which the Commission doubtless was aware. If the plan were executed in all respects but that under dispute, $100 per share would be distributed to each preferred stockholder. It would then be impossible as a practical matter for the common stockholders to recover any amounts by which the $100 might subsequently be found to be in excess of "fair and equitable" treatment

[1] *Supra*, p. 55, notes 3 and 4.

for the preferred. It is in the light of its inability to accord the common stockholders "fair and equitable" treatment if such treatment should require the Commission, upon re-examining the rights of the parties, to award the preferred less than $100 per share, that the Commission informed the Court below: " * * * the Commission has already contingently approved an alternative allocation of cash to the preferred stockholders at the amount of the liquidation preference if as a result of the processes of review in the District Court and on appeal therefrom this should be judicially determined fair and equitable." [1]

It is thus apparent that the Commission had given its prior consideration and advance approval to the plan in the form approved and enforced by the District Court's order of May 29, 1947 (R. 318a); and indeed the record discloses that this order was actually drafted and submitted to the District Court for signature by the Commission's attorneys (R. 357a). These circumstances scarcely justify the Court of Appeals' statement that the District Court erred in entering an order approving and enforcing the plan as amended *by it*,[2] and without the Commission's prior consideration and approval.

On the contrary, the procedure followed by the District Court in every particular was that which the Com-

---

[1] R. 44, n. 1, Commission's petition for rehearing in the Circuit Court.

[2] "The Court below, therefore, erred in one particular: *It entered an order approving and enforcing the plan as amended by it.* It was without power to do this. The provisions of Section 11(e) make it clear that the Commission in the first instance must approve the plan and find it to be fair and equitable. If, as here, the district court disagrees with the conclusion of the Commission that the plan is fair and equitable, it must refuse to approve the plan and 'remand' the record to the Commission for further and appropriate action by it" (R. 39). (Emphasis supplied.)

mission in its opinions and orders and by its attorneys in open court,[1] requested and urged the Court to follow, including establishment of the escrow fund and non-remand of the proceedings to the Commission by reason of the Court's disapproval of the premium payments. Although concededly these circumstances do not insulate the District Court's decree from attack if the Commission's actions were in effect "ultra vires", we submit that they do completely refute any suggestion that the Court engaged in a process of amending the plan in respects which procedurally, at least had not received the full concurrence and approval of the Commission, and, indeed, as to which the Commission had not actually been the prime mover.

Nor do we think the procedure urged upon the Court by the Commission can properly be deemed "ultra vires". If the Courts did not find the Commission's new "investment value ex the Act" doctrine consonant with established legal principles and the statutory intent, nothing further remained to be decided; for in such event the preferred holders would necessarily receive payment of only $100 per share plus dividends, in conformance with a long line of Commission and Court decisions. Accordingly, the Commission correctly recognized that the basic issue was one of legal and statutory interpretation, as to which the last word was not in the Commission but in the Courts.[2]

Therefore, in approving as fair and equitable payment of only the liquidation preference in the event the District Court held payment of the premiums unfair and inequi-

---

[1] R. 257a-260a, 281a-282a.

[2] If confirmation be needed for this provision, it is amply furnished by the legislative history of the statute, to which reference was made in the Court of Appeals' opinion (R. 22, 23).

table (and such determination became final for lack of appeal or were affirmed upon appeal), it is evident the Commission was not "waiving" or "rejecting" its statutory role, but was performing it in the only way consonant with reason and the repeated admonitions of this Court for expeditious and coordinated procedure in reorganizations of this character.[1]

Accordingly, unless it is held that the Commission, on a reconsideration, could lawfully award more than $100 plus accrued dividends to the preferred stockholders, formal correctness does not require resubmitting this case to the Commission.

B. Substantive Aspects

We submit that, as we have shown, the Commission may not, on any valid basis, award the preferred stockholders more than the $100 plus accrued dividends which they have already received.

Thus, if the present liquidation comes within the charter provisions, the "fair and equitable" standard limits the preferred stockholders to receipt of no more than the terms of the corporate charter authorize, i.e., $100 per share plus accrued dividends. The same conclusion follows even if the present liquidation is deemed not to come within the terms of the corporate charter, since the judicially approved and correct interpretation of the "fair and equitable" standard precludes the payment of pre-

[1] See p. 149, *supra*. Cf. *Comstock* v. *Group of Investors*, 335 U. S. 211; majority opinion pp. 227-228, minority p. 236.

Rejection of the coordinated procedure followed in the instant case would also entail a special financial burden for the common stockholders. Under the Commission's decision, they are required to bear the entire expense of all phases of the proceedings and the litigation (R. 72a-82a).

miums on preferred stocks which are retired under compulsion of the Act, where holders are paid out in cash and freed from the risks of a new enterprise.

Decision of this case on either of the foregoing grounds would make remand to the Commission obviously unnecessary. However, if the question upon which this case is made to turn is whether the "equitable equivalent" of the rights surrendered by the preferred stockholders is more than $100 per share, the only possible answer is in the negative; and since the District Court so found, upon consideration of the very factors which the Court of Appeals held must be considered, there is no valid basis for remanding the case to the Commission.

Both the District Court and the Court of Appeals agreed that the Commission had erroneously determined the "equitable equivalent" of the rights which the preferred stockholders were here giving up. The Court of Appeals concluded, however, that the District Court had substituted its "valuations" of the "equitable equivalents" for those of the Commission and that it was powerless to do so. Accordingly, it directed the case to be remanded to the Commission. In essence, this conclusion reduces itself to a contention that the District Judge should have worded only negatively what he also worded affirmatively; that he should have held the provision for the payment of premiums "unfair and inequitable" but should not have found affirmatively that the preferred stockholders received "fair and equitable" treatment upon the receipt of only $100 per share plus dividends.

We may assume, without conceding, that had the District Court in fact substituted its "valuations" for those of the Commission and decided, for example, that the "equitable equivalent" of the rights surrendered by the

preferred stockholders was $70 per share, it would have acted beyond its authority. But that is not the case here. The District Court did not make any such "valuation" of the 'equitable equivalent" of the rights surrendered by the preferred stock or substitute any "valuation of its own" for that of the Commission.

What the District Court "valued" was not the preferred stocks but the Commission's "investment value ex the Act" doctrine. In deciding that this doctrine had no warrant in the statute or settled legal principles, it necessarily examined all the factors in this record which could be deemed relevant under any standards recognized in the statute and judicial decisions, and concluded that the "equitable equivalent" of the rights surrendered by the preferred stockholders could not exceed $100. We have shown that an examination of these factors can lead to no other conclusion. Accordingly, we submit that if the District Court had the authority to examine these relevant factors there is no valid basis for remand of this case to the Commission.

It is not necessary to explore the full breadth of the powers of the District Court in order to uphold the exercise of its authority here. The District Judge did not determine that the Commission must award a specific sum to the preferred stockholders; nor has it ruled that while the Commission might fairly and equitably award more than $100 to the preferred, a maximum of $100 was also "fair and equitable" and in its judgment sufficient. In either of those cases it might be contended that the District Court was intruding upon the Commission's legitimate function under the Act. But here the Court has decided only that the Commission could not

lawfully award more than $100; i.e., it has examined the record made before the Commission in order to determine the outer limits of permissible Commission action on that record, and concluded that no more than $100 can "fairly and equitably" be paid to the preferreds.

The District Court's power thus to appraise the Commission's action was plainly within the delegation of jurisdiction contained in Section 11(e). Under that section, as we have shown, the District Court is not a mere "review court". It has all the "extraordinary powers" it has "been accustomed to exercise when called upon under the Sherman and Hepburn Act to effect compulsory corporate readjustments" [1]—the plenary powers of a court of equity. The statute imposed upon the District Judge the "independent duty" [2] to satisfy himself that the plan here submitted was "fair and equitable". We need not insist that in "the realm of judgment", [3] which is governed by the "fair and equitable" standard, the District Court's judgment rather than the Commission's should furnish the "final determination" of what is "fair and equitable". [4] In any case, under the narrowest view, the

---

[1] Senate Report No. 621, accompanying S. 2796, 74th Cong., First Session, pp. 13 and 14, quoted *supra*, p. 134.

[2] Cf. statements of the Commission's representatives before the Congressional Committee considering amendments to the Act (*supra*, pp. 136-7), as well as the statement of Commission Counsel before the District Court in the instant case (*supra*, p. 138).

[3] "Since such a determination rests in the realm of judgment rather than mathematics, there is an area for disagreement. But we are not performing the functions of the District Court under § 77(e)." *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 564; quoted *supra* at p. 132.

[4] Cf. statement of Senator Wheeler (*supra*, p. 135) "* * * there is really a double check upon the plan, and final determination rests as in the past in the courts".

District Court's "extraordinary powers" embrace the authority at least to examine the record made before the Commission and to determine the outer limits of permissible Commission action under the "fair and equitable" standard.

Accordingly, we submit that the Court of Appeals erred in ordering the case to be remanded to the Commission. Since the District Court had the authority to make the "careful and far-reaching examination of the relevant factors" which the Court of Appeals found it made, and properly concluded that the preferred stockholders could not lawfully receive more than $100 per share, there is no function left for the Commission here except formally to approve the payment of $100 to the preferred. This function, as we have shown, it has performed in approving the escrow arrangement.

CONCLUSION

The judgment of the Court below should be vacated with directions to enter an order affirming the decree of the District Court.

Dated, December 20, 1948.

Respectfully submitted,

ALFRED BERMAN,
Attorney for Central-Illinois Securities Corporation and Christian A. Johnson, Respondents-Petitioners.

of Counsel.

APPENDIX A

Pertinent Provisions of the Public Utility Holding Company Act of 1935

SIMPLIFICATION OF HOLDING-COMPANY SYSTEMS

Sec. 11. (a) It shall be the duty of the Commission to examine the corporate structure of every registered holding company and subsidiary company thereof, the relationships among the companies in the holding-company system of every such company and the character of the interests thereof and the properties owned or controlled thereby to determine the extent to which the corporate structure of such holding-company system and the companies therein may be simplified, unnecessary complexities therein eliminated, voting power fairly and equitably distributed among the holders of securities thereof, and the properties and business thereof confined to those necessary or appropriate to the operations of an integrated public-utility system.

(b) It shall be the duty of the Commission, as soon as practicable after January 1, 1938:

(1) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such action as the Commission shall find necessary to limit the operations of the holding-company system of which such company is a part to a single integrated public-utility system, and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public-utility system: *Provided, however,* That the Commission shall permit a registered holding company to continue to control one or more additional integrated public-utility systems, if, after notice and opportunity for hearing, it finds that—

(A) Each of such additional systems cannot be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system;

(B) All of such additional systems are located in one State, or in adjoining States, or in a contiguous foreign country; and

(C) The continued combination of such systems under the control of such holding company is not so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation.

The Commission may permit as reasonably incidental, or economically necessary or appropriate to the operations of one or more integrated public-utility systems the retention of an interest in any business (other than the business of a public-utility company as such) which the Commission shall find necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems.

(2) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such steps as the Commission shall find necessary to ensure that the corporate structure or continued existence of any company in the holding-company system does not unduly or unnecessarily complicate the structure, or unfairly or inequitably distribute voting power among security holders, of such holding-company system. In carrying out the provisions of this paragraph the Commission shall require each registered holding company (and any company in the

same holding-company system with such holding company) to take such action as the Commission shall find necessary in order that such holding company shall cease to be a holding company with respect to each of its subsidiary companies which itself has a subsidiary company which is a holding company. Except for the purpose of fairly and equitably distributing voting power among the security holders of such company, nothing in this paragraph shall authorize the Commission to require any change in the corporate structure or existence of any company which is not a holding company, or of any company whose principal business is that of a public-utility company.

The Commission may by order revoke or modify any order previously made under this subsection, if, after notice and opportunity for hearing, it finds that the conditions upon which the order was predicated do not exist. Any order made under this subsection shall be subject to judicial review as provided in section 24.

(c) Any order under subsection (b) shall be complied with within one year from the date of such order; but the Commission shall, upon a showing (made before or after the entry of such order) that the applicant has been or will be unable in the exercise of due diligence to comply with such order within such time, extend such time for an additional period not exceeding one year if it finds such extension necessary or appropriate in the public interest or for the protection of investors or consumers.

(d) The Commission may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce compliance with any order issued under subsection (b). In any such proceeding, the court as a court of equity may, to such extent as it deems necessary for purposes of enforcement of such order, take exclusive jurisdiction and possession of the company or companies and

the assets thereof, wherever located; and the court shall have jurisdiction, in any such proceeding, to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer under the direction of the court the assets so possessed. In any proceeding for the enforcement of an order of the Commission issued under subsection (b), the trustee with the approval of the court shall have power to dispose of any or all of such assets and, subject to such terms and conditions as the court may prescribe, may make such disposition in accordance with a fair and equitable reorganization plan which shall have been approved by the Commission after opportunity for hearing. Such reorganization plan may be proposed in the first instance by the Commission, or, subject to such rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization.

(e) In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of sub-

section (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed.

(f) In any proceeding in a court of the United States, whether under this section or otherwise, in which a receiver or trustee is appointed for any registered holding company, or any subsidiary company thereof, the court may constitute and appoint the Commission as sole trustee or receiver, subject to the directions and orders of the court, whether or not a trustee or receiver shall theretofore have been appointed, and in any such proceeding the court shall not appoint any person other than the Commission as trustee or receiver without notifying the Commission and giving it an opportunity to be heard before making any such appointment. In no proceeding under this section or otherwise shall the Commission be appointed as trustee or receiver without its express consent. In any such proceeding a reorganization plan for a registered holding company or any subsidiary company thereof shall not become effective unless such plan shall have been approved by the Commission after opportunity for hearing prior to its submission to the court. Notwithstanding any other provision of law, any such reorganization plan may be proposed in the first instance by the Commission or, subject to such rules and regulations as the Commission

may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization. The Commission may, by such rules and regulations or order as it may deem necessary or appropriate in the public interest or for the protection of investors or consumers, require that any or all fees, expense, and remuneration, to whomsoever paid, in connection with any reorganization, dissolution, liquidation, bankruptcy, or receivership of a registered holding company or subsidiary company thereof, in any such proceeding, shall be subject to approval by the Commission.

* * * * * *

COURT REVIEW OF ORDERS

Sec. 24. (a) Any person or party aggrieved by an order issued by the Commission under this title may obtain a review of such order in the circuit court of appeals of the United States within any circuit wherein such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the entry of such order, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall be forthwith served upon any member of the Commission, or upon any officer thereof designated by the Commission for that purpose, and thereupon the Commission shall certify and file in the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part. No objection to the order of the Commission shall

be considered by the court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do. The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which, if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court affirming, modifying, or setting aside, in whole or in part, any such order of the Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

APPENDIX B

Excerpts from the Certificate of Incorporation of Engineers Public Service Company

The Certificate of Incorporation of Engineers provided in pertinent part as follows:

"III. *Preference on Liquidation* etc.[1] In the event of any liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock resulting in any distribution of its assets to its stockholders, the holders of the preferred stock of each series shall be entitled to receive, for each share thereof, an amount equal to $100, together with all dividends accrued or in arrears thereon, plus, in case such liquidation, dissolution or winding up or reduction shall have been voluntary, the fixed redemption premium for such series, if any, before any distribution of the assets shall be made to the holders of the common stock; but the holders of the preferred stock shall be entitled to no further participation in such distribution. * * *"

"IV. *Redemption and Repurchase.*[2] The Corporation may, at its option, at any time or from time to time redeem the whole or any part of the preferred stock or of any series thereof, at a price for each share thereof equal to $100, plus the fixed redemption premium therefor, if any, together with the amount of any dividends accrued or in arrears thereon. * * *"[3]

* * * * * * *

[1] Engineers' Ex. No. 33, R. 1412a.

[2] Engineers' Ex. No. 33, R. 1413a.

[3] By resolutions of the Board of Directors, the fixed redemption premium of the $5 series was fixed at $10 per share for shares redeemed on or before June 30, 1938, and $5 per share for shares redeemed thereafter (R. 1428a). The fixed redemption premiums of the $5.50 and $6 series was fixed at $10 per share (R. 1430a-1431a).

"This Corporation may also from time to time repurchase shares of its preferred stock at not exceeding the price or prices at which the same may be redeemed. * * *"

* * * * * * *

"DIVISION B—THE COMMON STOCK[1]

II. *Distribution of Assets.* In the event of any liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock, resulting in any distribution of its assets to its stockholders, after there shall have been paid to or set aside for the holders of the preferred stock the full preferential amounts to which they are respectively entitled under the provisions of Paragraph III of Division A of this Article Fourth, the holders of the common stock shall be entitled to receive, *pro rata*, all of the remaining assets of this Corporation available for distribution to its stockholders."

APPENDIX C

Excerpts from Typical News Stories Appearing in the Press About the Time the Charter of Engineers Was Being Drafted and the Preferred Stocks Offered for Sale *

From the New York Times, December 30, 1924

ASKS "POWER TRUST" INQUIRY.

NORRIS'S NEW MUSCLE SHOALS MOVE HELD UP BY EDGE.

WASHINGTON, Dec. 29.—The Federal Trade Commission would be directed to investigate an alleged "power trust" under a resolution introduced in the Senate today by Chairman Norris of the Agriculture Committee.

His proposal was incidental to the bitter Congressional fight over Muscle Shoals, during which it has been charged on the Senate floor that a combination of power interests was seeking to dictate the Government's final decision. Senator Norris has been active in opposing the Underwood bill for Government ownership of the Muscle Shoals property, with a provision for its lease to private concerns.

Mr. Norris asked for immediate consideration of his resolution, but Senator Edge, Republican, New Jersey, objected, and it went over for one day under the rules.

---

* This material relates to the discussion at pages 41-43, *supra*, and is submitted as further documentation of our contention that the preferred and common stockholders of *Engineers* could not have been unmindful of the possibility that some form of future governmental action directed against utility holding companies might bring into play the liquidation provisions of the charter.

The charter of *Engineers* was filed and recorded June 23, 1925. The $5 and $5.50 series of preferred stocks were initially offered to the public in March and October of 1928, and the $6 preferred in September, 1930.

The resolution would require an investigation into the ownership of stocks and bonds and the directorates of power companies, and into the interest of manufacturers of electrical supplies, banks and trust companies in the business. The President would be requested to give the investigating committee access to official Treasury records bearing on the subject.

Senator Edge declared that such a far-reaching resolution should not be considered hastily. He said "millions of dollars" would be required to conduct such an inquiry.

NORRIS TO PRESS INQUIRY.

General Electric Action Won't Halt Power Resolution.

Special to The New York Times.

Washington, Dec. 30—Withdrawal of the General Electric Company from public utility ownership will not deter Senator Norris of Nebraska from pushing his resolution providing for an investigation of the so-called power trust. While General Electric is a part of the alleged trust, Mr. Norris and those who agree with him take the position that it is the duty of the Senate to make an inquiry to determine what influences have been at work in behalf of private operation of Muscle Shoals and other similar

* No sooner had the Senate authorized the first Federal Trade investigation of public utility Holding Companies than it was announced that General Electric Company would divest itself of control of the gigantic Electric Bond and Share system. (Cf. *Electric Bond and Share Co. et al.*, 11 S. E. C. 1146, 1163.)

day half an hour before the closing of the Stock Exchange that it would dispose of its holdings in the Electric Bond and Share Company, the common stock of which it owns entirely. The decision of General Electric to separate the public utility end of its business from the manufacturing end was distinctly a surprise to Wall Street, and General Electric stock, which had risen 100 points within the year, advanced sharply to a new high point of 307⅜. Some uncertainty developed as to the possible effect of the retirement of General Electric from the public utility field, and selling carried the quotation down to 296, closing at 297, a net loss for the day of 2⅞.

* * *

projects throughout the country.

Senator La Follette is in sympathy with Mr. Norris' proposal to examine persons who are supposed to have a knowledge of the activities of the power "trust." The Third Party platform, upon which Mr. La Follette ran as a candidate for President in the late election, contained a declaration on the subject of the development of power.

It recommended a policy of Government ownership, stating that Government ownership in Canada had resulted in lower service rates, much lower, it was stated, than provided by private corporations in the United States.

While Senator Norris did not support the Third Party movement, it is known that he is in accord with the views of Mr. La Follette, favorable to the adoption of a Government ownership policy in the handling of all potential water sites to which the Federal Government holds title. The indications are that Senator Norris will press his resolution with a view to making the investigation he has in mind the basis of a Government ownership bill.

The Federal Trade Commission Investigation, Which Culminated in Adoption of the Public Utility Holding Company Act, Was in Full Swing by the Time the Preferred Stocks of Engineers Were Being Offered to the Public

From the New York Times, February 16, 1928

SENATE VOTES, 46-31, FOR POWER INQUIRY BY THE TRADE BOARD

WALSH OF MONTANA, PRESSING FOR SENATE INVESTIGATION, IS BEATEN AFTER BITTER FIGHT.

HOT DEBATE FOR 9 HOURS

GLASS AND BRUCE IN SPIRITED CLASH WHEN THE LATTER ATTACKS MONTANAN.

HUNT FOR ELECTION FUNDS

VICTORIOUS GEORGE AMENDMENT AUTHORIZING COMMISSION TO DIG INTO CORPORATIONS' ACTIVITIES.

Special to The New York Times.

WASHINGTON, Feb. 15.—By a vote of 46 to 31, and over the desperate protest of Senator Walsh of Montana, the Senate tonight referred the proposed "power trust" investigation to the Federal Trade Commission instead of authorizing an inquiry by a special committee of five Senators as proposed by Mr. Walsh.

The final vote came at 9 o'clock tonight after a nine-hour session of acrimonious debate, marked by frequent clashes,

particularly between Senators Glass of Virginia and Bruce of Maryland. Senator Walsh of Montana, many of the Democrats and a large proportion of the Progressive Republicans tried to defeat the motion to hand the inquiry over to the Trade Commission, as proposed by Senator George of Georgia.

Hoping that delay might gain more votes in favor of a Senate investigation, Senator Walsh and his lieutenants endeavored three times to adjourn the Senate. They were defeated in increasingly decisive votes. Senator George and Senator Watson, Chairman of the Senate Interstate Commerce Committee, were willing to agree to give a specific time to vote, but Mr. Walsh refused to consent.

The outcome of the fight was in doubt until the vote was taken, although the advocates of the Trade Commission plan were gaining strength on the preliminary votes.

* * * * * * *

On motion of Senator George, the Senate adopted an amendment directing the Trade Commission to ascertain whether any of the alleged practices referred to in the Walsh resolution "constitute unfair methods in commerce, tend to restraint of trade and commerce or to create a monopoly, or constitute a violation of the Federal anti-trust laws."

The purpose of this, Mr. George said, was to make certain that the commission would carry out the inquiry and make a proper report on the resolution.

The Senate also accepted an amendment by Senator Black of Alabama providing that the sessions of the commission during the investigation should be open to the public. * * *

* * * * * * *

Senator Glass Attacks Bruce

Tonight Mr. Glass accused Mr. Bruce of trying to block the Teapot Dome inquiry, "just as he is trying now", to send the "power trust" investigation to the Federal Trade

Commission. Mr. Glass accused Mr. Bruce of "defending Harry M. Daugherty in glowing language."

The two Senators shouted at each other at the same time, Senator Moses meanwhile banging his gavel. Above the uproar, Mr. Glass could be heard condemning Mr. Bruce for "unkind and vitriolic excoriations" of Mr. Walsh.

Mr. Moses called Mr. Bruce to order twice, but the Maryland man sat down, expressing regret to the Senate that he had seemed to lose his temper. He said he had never defended Harry M. Daugherty, although he had said he admired him for having the courage of his convictions.

The name of Governor Smith was brought into the debate again when Mr. Wheeler asked Mr. Copeland if the New York Governor had not tried to control the power trusts in his State.

SAYS UTILITIES PAID OFFICIAL IN OHIO

Companies' Agent Quoted as Asserting Secretary Took Money for Speeches.

Talk of a $400,000 Fund

"Political" Results Were Sought by Contributions of 100 Organizations.

Washington, July 2 (AP).—Groundwork laid by public utility organizations to prevent "politicians" from conducting an investigation into the industry under the Walsh Senate resolution and widespread methods to influence public opinion by obtaining free publicity in newspapers were revealed today in the **Federal Trade Commission's utility inquiry.**

Documents from the office files of Arthur F. Herwig of Milwaukee, Director of the Wisconsin Public Utility Information Bureau, for the first time disclosed preparations made by the joint committee of National Utilities Associations last year for the proposed Walsh investigation and heretofore unrevealed publicity methods of Ohio utility organizations.

* * * * * * *

The other outstanding development of today's hearing was a report of the meeting of public utility men in Atlantic City, in 1922, in which Ben E. Ling, director of the Ohio Information Bureau, was quoted as saying: "The utility men want news. That is propaganda, of course. That is what they are paying for and the only way to speed our propaganda is by means of speakers."

BRIEF FOR LUCILLE WHITE AND FRANCES BOEHM, COMMON STOCKHOLDERS

Opinions Below

The opinion and judgment of the Court below (R. 12) and the opinion denying petitions and cross-petitions for

rehearings (R. 138) are reported at 168 F. 2d 722. The opinion of the District Court is reported at 71 F. Supp. 797 (R. 283a), but its detailed Findings of Fact and Conclusions of Law (R. 293a-317a) are not reported. The Findings and Opinions of the Securities and Exchange Commission dated December 4, 1946 and January 8, 1947, have not yet been officially reported, but are set forth in the Commission's Holding Company Act Releases Nos. 7041 (R. 25a) and 7119 (R. 128a).

Statute Involved

The provisions of Section 11(e) of the Act, the statutory provision directly applicable here, are set forth in Appendix A, *infra*, pp. 65-71, together with the pertinent provisions of other sections of the Act referred to in this brief.

Statement

Lucille White and Frances Boehm own 1000 shares of common stock of Engineers. They have owned this stock for years.

Prior to the adoption of the Public Utility Holding Company Act of 1935, Engineers owned and controlled approximately seventeen electric, gas and transportation companies operating throughout the United States. The Securities and Exchange Commission ordered Engineers to dispose of all its properties except the common stock of one subsidiary, Virginia Electric and Power Company.

Engineers filed a plan under Section 11(e) of the Act proposing the complete and final liquidation of Engineers and the entire holding company system. In its opinion with respect to the plan, the Commission made the following formal finding:

> "We find that the presence of Engineers would unduly complicate the structure of the system and

that it would, therefore, come within the prohibition of Section 11(b)(2). Accordingly, we find that the proposal to dissolve Engineers is 'necessary' to effectuate the provisions of Section 11(b) of the Act."[1]

Notwithstanding this square finding that the liquidation was compelled by the Statute, the Commission required the plan to be amended to provide for payment to the preferred holders of the full amount to which they would have been entitled under the Charter on a *voluntary* redemption or *voluntary* liquidation.[2] The Commission reasoned that the Charter provisions should be disregarded, and that the preferred holders must be paid the theoretical "investment value", which in practical effect was the price at which their stock might sell on the market on a particular date (which happened to be at about the top of the bull market of 1946), "ex the impact of the Act", or as though the company were not required to liquidate or dissolve.

The Commission in its opinion referred to the "value" of the preferred stock computed on the foregoing basis as the "investment value" or "fair investment value", terms which are quite misleading. The Commission then went on to say that this "investment value" was not challenged, and that it was in fact "conceded" by the witnesses for the company.[3] Appellants in their briefs in this Court and in the Courts below have similarly reit-

---

[1] R. 48a. Chairman Caffrey, in his separate concurring opinion stated: "Engineers 'voluntary' proposal did no more than forestall the necessity for action by the Commission. * * * It is the operation of Section 11 and not mere managerial discretion that has brought about the liquidation" (R. 139a, 140a).

[2] That is, $105 per share plus accrued dividends for the $5. series, and $110 per share for the $5.50 and $6.00 series. These amounts aggregate $3,200,000 in excess of the $100 per share to which the preferred stockholders were entitled in liquidation (whether whole or partial) which is not "voluntary" (See Charter, R. 1412a).

[3] Commission Opinion, R. 67a.

[4] *Ibid.*

erated time and again that the values accepted by the Commission were "uncontroverted". Such statements draw a heavy veil over large and significant portions of the evidence contained in the record. The company witnesses did indeed agree that *in the boom market then current,* the preferred stocks of Engineers would probably have sold close to their redemption prices *if the company were not required by Section 11 to complete its liquidation and to dissolve.*

Under such circumstances, these witnesses asserted, Engineers would take advantage of the extraordinarily low money rates then prevailing to call and redeem the preferred stocks, replacing them with others carrying a much lower interest rate, with substantial resulting benefit to the common stockholders. But the forced liquidation of Engineers rendered such action impossible. Moreover, they testified, on the basis of intrinsic investment qualities the Engineers preferred stocks could by no means be said to have a "fair value" equal to the redemption prices because they were essentially speculative securities which would decline sharply as soon as current "boom" economic conditions fell off. In substantiation of these views, the witnesses pointed to the past market history of these preferred stocks, and they discussed in considerable detail potential adverse economic factors which cast a dark cloud over the future of the stocks if they remained outstanding for any substantial length of time.[1]

No indication of this extensive testimony and evidence is even suggested by the Commission in its Opinion or by appellants in their briefs.

When the plan was presented to the District Court for enforcement, the objecting common stockholders contended that on the basis of the foregoing factors, as well as on the basis of applicable legal principles, the Commission was not justified in requiring the common stockholders to pay

[1] R. 522a-525a.

to the preferred any amounts in excess of $100 per share plus accrued dividends. The legal questions before the District Court were three-fold: (1) whether the Charter liquidation provisions limiting the preferred holders to $100 per share plus dividends in the event of a liquidation "not voluntary" could be overridden; (2) whether, even if the Charter liquidation provisions were not controlling, the long line of consistent decisions holding amounts in excess of par value not payable on senior securities retired under the impact of the Statute, could now be reversed or "distinguished" away; (3) whether, in any event, the theoretical market value at which such senior securities might sell at a particular time, was the sole and conclusive criterion to be employed in measuring the claims of the senior security holders, with the junior equity holders simply taking whatever happened to remain.

The District Court chose not to pass upon the question whether the Charter provisions as to redemption of the preferred stock were controlling. However, it concluded that even if the Charter liquidation provisions were not controlling, the preferred holders were not entitled to receive amounts in excess of $100 per share, plus dividends, on the basis of the same legal and equitable principles which had consistently led the courts for years to deny such additional payments on senior securities retired pursuant to the statutory mandate. In those cases too it had been contended by the affected security holders that if they were not entitled to "premiums" as such, they should receive amounts "measured by the premiums" to compensate them for relinquishing securities bearing a dividend or interest rate in excess of the current "going rate", but the Commission and the Courts had consistently rejected such contentions on the ground that the retirement was dictated by an Act of Congress over which the company and its stockholders had no control.

The District Court found no legal support for the view that the price at which the senior securities would sell,

"as though the enterprise continued", must be accepted as the controlling criterion; and it found that adoption of such a standard would be neither realistic nor equitable in its application to the final and complete liquidation of the enterprise which was here taking place.[1] However, the Court envisaged that there might be cases in which valid equitable considerations would justify payment to preferred stockholders of amounts in excess of the par value of their securities. The District Court, as a court of equity, therefore carefully examined the record to ascertain whether any such factors were present, and concluded:

> "No special facts or circumstances in connection with the issuance of the preferred stocks or their subsequent history, or the relationships of the preferred and common stockholders, create any equitable considerations warranting the payment to the preferred holders of amounts in excess of $100 per share plus accrued dividends; and careful examination of all the relevant facts impels the conclusions that payment to the preferred stockholders of such excess amounts would not be warranted or justified."[2]

The Court of Appeals held that the District Court had the independent duty of passing on the fairness of the plan, that the *Otis* case did not apply to the dissolution of Engineers for the reason that in the *Otis* case there was merely a simplification of a holding company system and not a dissolution of the enterprise, and that the "investment value ex the Act" formula of the Commission was not the proper method of valuing the rights of the preferred stock, and that the Commission had failed to give any consideration to the rights of the common stock, which the Holding Company Act required. The Court of Appeals

---

[1] Conclusions of Law 3-8, R. 316a-317a.

[2] Conclusions of Law No. 7, R. 316a-317a. Cf. also Opinion, R. 292a.

held that upon the record before the Commission and the District Court the payment of call premiums to the preferred stock was unfair and inequitable. However, it directed that the case be remanded to the Commission on the ground that the question of valuation of the securities of Engineers preferred and common stocks must be made by the Commission.

Questions Presented

1. In connection with the final liquidation of a holding company compelled by the Public Utility Holding Company Act, was the District Court, under Section 11(e) of the Act, required to approve as "fair and equitable" mandatory payment by the common stockholders to the preferred stockholders of $3,200,000 in excess of the latter's charter and book claim, on the ground that the theoretical market value of the preferred stocks on a particular date, "absent the Holding Company Act", was the correct and sole criterion for measuring the claims of such stockholders?

2. Whether the District Court was authorized under Section 11(e) of the Act to determine, and properly determined, in this case, not only that the Securities and Exchange Commission erred in measuring the "equitable equivalents" which the preferred stockholders claim to be entitled to receive in exchange for the rights they surrendered, but that on any possible proper measure of those "equitable equivalents" on this record, $100 per share is the maximum to which the preferred stockholders are entitled?

3. If the answer to question 2 is in the affirmative, was it necessary to remand the case to the Commission, when the Commission had already approved the payment of $100 per share to the preferred stockholders in the event that the courts determined that payment of more than that amount would not be fair and equitable?

4. Does Section 11(e) of the Holding Company Act authorize valid Charter provisions to be overridden and cast aside, when such action is not reasonably necessary to carry out the basic objectives of the statute?

5. If an affirmative answer be given to question 3 above, does such a result violate constitutionally protected rights?

Summary of Argument

A Section 11(e) Court has the affirmative and independent duty to consider and find whether a proposed plan, which has been approved by the Commission, is fair and equitable. This principle, which has been consistently espoused by the Commission and the courts, was approved by the Circuit Court after a thorough analysis of the history of the Act. There is no actual conflict in the Circuits with respect to this principle, and no hardship will flow from the practical application of this sound and necessary doctrine.

Under Section 3 of Engineers charter, the preferred stock is entitled to $100 per share in any situation in which it is paid out upon the involuntary termination of the enterprise. Here the termination was compelled by the Public Utility Holding Company Act and the order of the Securities and Exchange Commission, and not by voluntary action of the company. The Commission has so held. The Plan is not a mere corporate simplification as the Plan was in the *Otis* case, but constitutes a complete liquidation and dissolution of Engineers. Under those circumstances, the charter is controlling. It provides without qualification that "in the event of liquidation, dissolution or winding up of this corporation, or reduction of its capital stock, resulting in any distribution of its assets to its stockholders" the preferred stock shall receive $100 per share, but that if such action is voluntary it shall receive the fixed redemption premium provided by the

charter. This provision constitutes a contract between the company and the stockholders. It may not be overridden.

Though Engineers' charter was adopted some years before the passage of the Holding Company Act agitation was already then going on for the dissolution of large public utility holding company systems on the ground that they were inimical to the public interest. It may therefore be fairly said that the possibility of such legislation being enacted was already within the contemplation of the parties. Certainly the broad and sweeping language of the charter was sufficiently comprehensive to include dissolution from any cause whatsoever. The framers of the charter intended to and did cover *all* situations in which the preferred stock might be paid out upon the termination of the enterprise, no matter how such termination may be brought about, including governmental frustration. The charter is unambiguous and covers every possible situation which might bring about the termination of the enterprise. It may not therefore be said that termination by governmental frustration was not intended to be covered by the charter.

Even should it be held that the charter provision may be overridden, we contend that the fair and equitable standard of Section 11(e) of the Holding Company Act does not require or justify the payment of more than $100 per share to the preferred stock. The past market history of the preferred stock; the slim coverage of dividends and fixed charges over a period of many years; the fact that for three years its dividends were in default, that its average market price during the entire period that it was outstanding was about $64 per share, that whatever improvement had occurred in its value had been largely due to the voluntary sacrifices of the common stockholders in foregoing the payment of dividends, though earned, in order to build up cash with which to pay out the preferred stock pursuant to the command of the statute, and the

further sacrifices of the common stock in disposing of valuable assets at great loss in order to raise additional moneys necessary to pay out the preferred stock, all conclusively indicated that under the fair and equitable standard prescribed by the Act the preferred stock was not entitled to more than $100 per share.

The theory upon which the Commission decided that the preferred stock was entitled to call premiums, which under the charter were to be paid only upon a *voluntary* dissolution, was due to a misconstruction of the decision of this Court in the *Otis* case. The Commission held that the *Otis* case does away with the charter provisions of a holding company which is being dissolved under Section 11 of the Holding Company Act and that the rights of the preferred stockholders in such liquidation must be considered without reference to the charter, except in so far as the charter places a ceiling on the amount payable to the preferred stockholders on the voluntary redemption of their stock. We respectfully submit, however, that this Court did not in that case hold that upon a true liquidation of a holding company the charter provisions do not apply. In the Otis case, United Light and Power Company was the top holding company of an extensive utility system with many subsidiaries. Directly beneath it was another holding company known as United Light and Railways Company. The plan of simplification was drawn under the so-called "great grand-father clause" of the Holding Company Act. There was no real dissolution of the business of Power as a going enterprise. The enterprise continued on as before. The only question that was involved was whether Power, the top holding company, should be succeeded by Railways, its sub-holding company, which would receive all the assets of Power. The stockholders of Power became the stockholders of Railways, so that we had in that case purely a corporate simplification which in no way affected the continuance of the enterprise. This Court in its majority opinion laid great stress on that fact,

stating that it was not the intention of Congress that under a mere simplification (when the same result could have been secured by a merger of Power and Railways), substantial rights should be destroyed, and that it was not contemplated that Power's charter should apply to such a situation.

Assuming that the *Otis* case does apply and that Engineer's charter may be overriden and disregarded, we contend that the Commission improperly applied the "fair and equitable" standard of the Holding Company Act in measuring the rights of Engineer's preferred stock. The Commission, disregarding its previous determinations and technique in determining what was the "fair and equitable" equivalent of the rights surrendered adopted a new technique which it called the "investment value ex the Act" formula. In other words, the Commission held that the fair and equitable standard of the Holding Company Act required it to assume that there was to be no dissolution of Engineers, that the enterprise was to continue and that the preferred stock must be valued upon that fictitious assumption. We contend that there is nothing either in the *Otis* case or in the Act which permits such an assumption; that such an assumption is contrary to the facts and that any alleged values based upon such assumption must necessarily be unrealistic and false.

We contend that even under its novel technique of "investment value ex the Act" theory, the Commission did not properly apply the fair and equitable standards prescribed by the Holding Company Act in that it failed to properly measure the investment value of the preferred stock and failed completely to give any consideration to the investment value of the common stock. The Commission, in appraising the so-called investment value of the preferred stock, gave consideration mainly to the testimony of a witness, Badger, who testified to the theoretical value of Engineer's preferred stock as of January, 1946, at a

time when admittedly all stocks including public utility stocks were at their highest and when interest rates were at their lowest. He arrived at his theoretical valuation by comparing Engineer's preferred stock with the current *market prices* of various other utility company stocks, which he said were comparable. His testimony as to the theoretical market value of Engineer's preferred stock is therefore based entirely upon *market prices*, which fluctuate from day to day (Finding 42, R. 310a) and which he took as of a particular day at the top of the post war boom. He gave no consideration to the market prices of the so-called comparable stocks over any substantial period of time before he gave his testimony, nor did he attempt to forecast their earnings or the earnings of Engineers for any period of time thereafter (R. 2077a). He admitted that interest rates at that time were the lowest in the history of the country, and (Finding 49, R. 313a) predicted that such rates would be permanent. He admitted that the current prices of utility preferred stocks were based upon the current low level of interest rates. Since the giving of such testimony interest rates have gone up substantially and the market prices of the "comparable" stocks has dropped considerably (Finding 52, R. 314a). It is apparent therefore that Badger's testimony had no probative force as proof of the *investment* value of Engineer's preferred stock, but that it was purely testimony as to theoretical market value, based upon the condition of the stock market at the time that he testified, which happened to be at the top of the post war stock market boom.

There is no necessity for remand. The legal effect of the proceedings before the Commission and the lower courts was that the Commission gave advance approval to a plan which contained, through the medium of an escrow agreement, alternative provisions. Under the first alternative the preferred were to get their call prices. Under the other alternative the preferred were to get such amount from $100 a share up to the call prices as was judicially approved.

The supplemental opinion and order of January 8, 1947 (R. 428a) of the Commission and its application of January 9, 1947 (R. 4a) submitted an amended plan (with provision for an escrow) to the District Court for enforcement. During the course of the proceedings before the District Court, and before its final order was issued, the Commission at the hearing before the District Court on February 17, 1947, amended its application (R. 162a, 164a). Its amended application, which was granted (R. 163a), submitted the plan in alternative form for approval and enforcement (R. 165a-174a) by the inclusion of the escrow agreement. The escrow provided for such advance approval by containing provisions making it a two-way escrow under which the funds might be awarded either to the preferred stock or to the Company. If the District Court approved the payment of the call prices and all remedies on appeal were exhausted, the escrowee would pay out the call prices to the preferred stockholders (R. 173a) or, in the alternative, the District Court might approve the payment of only $100 per share and when all rights of appeal were exhausted the escrowee would pay the fund back to the Company (R. 174a).

At this point the Commission had submitted the plan to the District Court for approval in alternative form. The Court found $100 to be fair and equitable and adopted in its order (R. 318a-330a) the escrow agreement which the *Commission* had submitted to it (R. 416a-422a).

The legal effect of the foregoing is that the Commission submitted for approval and enforcement a plan with two alternatives, one of which (payment of the call prices) it approved without qualification and the other of which it approved in advance with a condition subsequent, namely, the entry of an order by the Court, no longer subject to appeal, finding it was fair and equitable to pay an amount, from $100 to the call prices, designated in the order. If this Court affirms, there is consequently no need for remand.

POINT I

The District Court has the affirmative and independent duty to consider and find whether a proposed plan is fair and equitable.*

Section 11 (e) of the Public Utility Holding Company Act, provides that "the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of Section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after *notice* and opportunity for *hearing*, shall approve such plan as *fair and equitable* and as appropriate to effectuate the provisions of Section 11, the court as a court of equity, may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located". It will be noted that the statute provides for a *hearing* before the District Court, after *notice*. It also designates the District Court as a "court of equity" in carrying out the plan. If the District Court were limited merely to "carrying out the terms and provisions of such plan", in accordance with the findings of the Commission, there would have been no point in the provision for notice and a hearing, and that the Court may carry out the plan only if it "shall approve such plan as fair and equitable". It is perfectly clear, therefore, that Congress gave to the District Court the duty of inquiring into the fairness of the plan and of forming its own independent judgment thereon.

This conclusion is reinforced by the provisions of Section 24 (a) of the Holding Company Act, which provides for direct review by the Circuit Court of Appeals of an order issued by the Commission. This section provides that "the findings of the Commission as to the facts, if supported by substantial evidence, shall be *conclusive*".

* Italics in all instances supplied by us.

No such limitation was placed upon the power of the District Court in connection with the application under Section 11 (e). It must be perfectly clear, therefore, that in a Section 11 (e) proceeding, it is the duty of the District Court to make an *independent* examination into the question of whether or not the plan is fair and equitable, and the cases so hold.

Okin v. *S. E. C.* (C. C. A. 2, 1944), 145 F. 2d 206;
In re S. E. C. (*Otis & Co., Intervenor*) (C. C. A. 3, 1944), 142 F. 2d 411;
Lounsbury et al., v. S. E. C. (C. C. A. 3, 1945), 151 F. 2d 217.

The foregoing principle, enunciated by Judge Leahy, that "a Sec. 11 (e) court has the affirmative and independent duty to consider and find whether a proposed plan, which has been approved by the Securities and Exchange Commission, is fair and equitable" is not objected to on the part of the appellants.[1] When the District Court, in

[1] Brief for Appellants, Streeter et al., in the C. C. A., p. 16: "We do not quarrel with Judge Leahy's statement that a Section 11(e) court has the affirmative and independent duty to consider and find whether a proposed plan, approved by the Commission, is fair and equitable."

Brief for Appellants, Home Ins. Co., et al., in the C. C. A., p. 14: "While Section 11(e) gives the court the independent duty of determining whether plans are fair and equitable before lending its aid to enforcement, its function in this respect is necessarily circumscribed." (See brief in this Court, p. 39.)

No reference to this principle is made by the S. E. C. due, undoubtedly, to the fact that it has consistently conceded this point.

See, *In re Interstate Power Co., et al.* (D. Del. 1947), 71 F. Supp. 164, where Judge Leahy said (p. 168): "Since one of the earliest cases for federal district court enforcement under the Act was brought to me for consideration and approval, it has been consistently conceded by all parties, including the various sets of attorneys for the S. E. C., in this and in all other cases brought to the enforcement court, that a Sec. 11(e) court has the affirmative and independent duty to consider and find whether a proposed plan is fair and equitable; and consequently such a court must consider whether the senior security holders are to get the 'equitable equivalent' of the rights which they are asked to surrender, *i. e.*, is the plan fair and equitable to the security holders affected by it?"

applying that principal, however, found that the proposed plan, only insofar as it proposed to pay to the preferred stockholders a premium of $3,200,000, was not fair and equitable, then charges that the District Court was trying the matter *de novo*, that the District Court was improperly asserting a greater power than the Circuit Court of Appeals possessed, and that the District Court is improperly substituting its judgment for that of the Commission, were let loose upon the head of the District Judge.

The inference that the District Court was determining this matter *de novo* finds no basis in fact in this case. No new proof was submitted by the common stockholders or considered by the Court. All of the evidence considered by the District Court in arriving at its determination of what was "fair and equitable" in this particular case is derived from the record and extensive hearings before the Commission. How could any court determine whether a plan was "fair and equitable" without an examination of the facts?

The function of the District Court in this respect was succinctly stated in *Electric Bond & Share Co.* (S. D. N. Y. 1946) 70 F. Supp. 426 (Leibel, D.J.):

> "The function of the Court is to approve and enforce the plan of reorganization submitted to it, if it finds such plan fair and equitable and appropriate to effectuate the purposes of the Act. *To do this the Court must examine the plan and the record upon which the Commission's approval of the plan was based.*"

Even in a case where the plan is considered by the Circuit Court of Appeals directly by appeal through Section 24(a), the Circuit Court, although restricted by Section 24(a), must and does consider the facts. Yet when the District Court in the instant case, examines the evidence, and fails to agree with the conclusions of

the Commission, it is charged with conducting a trial *de novo*. (See SEC brief C. C. A., p. 16, footnote 20).

The contention of appellants, Streeter, et al. and Home Insurance Company, et al. that a District Court should have no greater powers, in considering and finding whether a proposed plan is fair and equitable, than the Circuit Court of Appeals, has under Section 24a, finds no support in the decided cases and is directly contrary to the provisions of the Holding Company Act.

Thus in the case of *Okin* v. *Securities and Exchange Commission* (C. C. A. 2, 144), 145 F. 2d 206, the Commission moved to dismiss the petition of Samuel Okin for a review of a Commission order conditionally approving a plan for the reorganization of United Gas Corporation. The petitioner based his right to review on Section 24 (a). The court, in granting the motion of the Commission, said (p. 207):

> "The broad terms of review accorded by Sec. 24 (a) of the Act of course shows a general legislative intent to give parties aggrieved by Commission orders the opportunity to present their case for review to the circuit court of appeals of their own circuit, and there is no exception in terms for orders which must be brought for enforcement to a district court. Thus, the situation here presented appears to be one not directly contemplated by the lawmakers. It seems clear, however, that a rational interpretation of the entire statute must support the Commission's view if all parts of it are to be given due weight and application, and a consistent and workable scheme of enforcement, as well as of review, is to be applied. *The provisions of Sec. 11 compel full review of an order such as this in a district court* for all parties in interest, thus making limited reviews for single parties in interest in other courts quite intolerable

for the conflicts in jurisdiction which must result; and the broad scope of review stated in Sec. 24 becomes in terms inapplicable because of the interlocutory nature of the Commission's action in the circumstances."

* * * * * * * *

And at page 208:

"Which of two probably conflicting orders should prevail is, of course, not made clear; since the *district court has the ultimate responsibility for determining whether the plan is fair and equitable,* it would seem that in final analysis that court must have authority to nullify any opposing action of any other court."

In the case of *In Re Securities and Exchange Commission* (Otis & Co., Intervenor) (C. C. A. 3, 1944), 142 F. 2d 411, the Circuit Court of Appeals, 3rd Circuit, rejected the contention that the hearing before the District Court was a mere "summary proceeding". At page 421, *supra,* this Court said:

"In Commonwealth & Southern Corp. v. Securities and Exch. Com'n, 134 F. 2d 747, 753, we indicated that stockholders whose rights were affected by an order of the Commission directing a public utility holding company to change its corporate structure had a right to be heard in that District Court of the United States in which the Commission was seeking to effect its order; that otherwise those stockholders would be deprived of property without due process of law. It follows that *the proceeding before the District Court cannot be deemed to be a summary one.* Moreover, the fact that notice is to be given to the persons affected by the plan shows that the theory

of submission to the District Court is substantially similar to that required in respect to a plan made pursuant to the provisions of Section 77B or Chapter X of the Bankruptcy Act. True, the issues presented to the District Court are limited to the matters prescribed by the statute but this is the extent of the limitation.'"

In the case of *Lounsbury et al.* v. *S. E. C.* (C. C. A. 3, 1945), 151 F. 2d 217, petitioners, stockholders of the Commonwealth & Southern Corporation, asked the Court for a review of orders of the Commission and for a stay of all proceedings pending review by said Court. The petition for a review was dismissed and the motion for a stay denied. Judge Biggs, in his concurring opinion, stated (p. 219):

"The Commission takes the position that this court is without jurisdiction to review the decision of the Commission, pointing out that effectuation of Commonwealth's plan is conditioned by the terms of the Commission's order upon approval by a majority of each class of stock affected and by a district court of the United States pursuant to Section 11 (e) of the Act; that since the order is so conditioned the petitioners are not 'aggrieved' by it within the purview of Section 24 (a); that the right of the petitioners to test the question of whether the plan is fair and equitable and appropriate to effectuate the provision of Section 11 must be *tried* in a district court."

. . . . . .

"But the important factor insofar as the review machinery of Section 11 is concerned is that Congress intended that if the holding company came into a district court of the United States and jurisdiction

was acquired by that court because of the failure of the company to obey the integration or simplification orders of the Commission or by virtue of the provisions of some other federal statute or law, that court should adjudicate *all* questions relating to integration, simplification and the *fairness and equity of the plan.* In other words, it was the intention of Congress if jurisdiction was vested in a district court, that *that court* and not a circuit court, *should pass on the plan* and determine and execute the course necessary for the integration and simplification of the holding company structure."

In an effort to overcome the effect of the District Court's decision in denying a premium to the preferred stockholders, appellants have attained the height of inconsistency. While on the one hand they concede that the District Court has the affirmative and independent duty to consider and find whether a proposed plan, approved by the Commission, is fair and equitable, on the other hand, they contend that the District Court may not consider the matter *de novo;* that the District Court may not substitute its conclusions for the conclusions of the Commission; that the District Court has no greater powers than the Circuit Court of Appeals under Section 24 (a) as to facts found by the Commission.

Of course, appellants deny that the hearing before the District Court is a mere "summary proceeding" or that the enforcing court is a mere rubber stamp for administrative action—but these arguments lead to no other conclusion than that where the Commission has arrived at its decision, the District Court must blindly approve its conclusions. And to bolster their point, appellants raise the spectre of chaos haunting the administration of the Act if a District Court be permitted to disagree from its conclusions.

The answer, of course, is that when it passed the Holding Company Act, Congress presumably knew that we have District Courts in different parts of the country. Congress, however, saw fit not to give the Commission *exclusive* power to pass on the fairness of a plan of liquidation, but made that power subject to review by the District Court, after notice to the parties and a hearing. Had Congress, in the interest of "finality" and "uniformity" desired to give the Commission *exclusive* jurisdiction and make their findings and decision final, it would have said so, and would not have given to the District Court the power and the duty to hold a hearing to pass on the fairness of the plan, before issuing its enforcement order. Appellant's quarrel, therefore, is with Congress, and not with the Courts below.

Judge Biggs, writing for the Court below, made an exhaustive analysis of Section 11 (e) of the Holding Company Act, its history and interpretation as shown by the debate in the United States Senate, by the interpretation of the Commission itself and by the courts, and by the testimony of a former chairman and former head of the Public Utilities Division of the Commission (R., Vol. VI, pp. 20-35). The Court below called attention to the report of the Senate Committee which reported out the original bill, and which stated that the Federal courts to which plans are presented "may exercise in the furtherance of such voluntary plans all the extraordinary powers such courts have been accustomed to exercise when called upon under the Sherman and Hepburn Act(s) to effect compulsory corporate readjustments required by the public policy expressed in those Acts" (R., Vol. VI, pp. 21-22).

Judge Biggs further referred to the Congressional debates which attended the passage of the Act and stated that "again and again members of Congress demanded and received assurances that the plenary jurisdiction and powers of the District Courts of the United States would

not be diminished or encroached upon by the functions allotted to the Commission under the law" (R., Vol. VI, p. 22). Judge Biggs then referred to the testimony given by Ganson Purcell, a former chairman of the SEC and Milton H. Cohen, a former Director of the Public Utilities Division of the SEC, given before one of the Committees of the House of Representatives, in which Mr. Purcell stated that the security holders' "treatment must be found by the *Courts* and the Commission to be fair and equitable", and that the *District Court* is required to find under Section 11(e) that the plan is fair and equitable. Mr. Milton H. Cohen testified that the District Court "has the *independent duty* of determining whether the plan is fair and equitable. * * *" (R., Vol. VI, pp. 23-24). Judge Biggs then referred to the 10th annual report to Congress of the SEC dated April 21, 1945 in which the Commission said "Thus security holders have the protection of findings as to the fairness and equity of plans by both the Commission and a *United States district court*" (R., Vol. VI, p. 24).

Judge Biggs thereupon turned to the internal evidence contained in the Act itself as to the intent of Congress respecting the functions of a district court and of the Commission. He said "The words employed respecting the respective duties of Commission and Court are so alike that we must conclude that Congress intended to lay substantially the same duty on the Court in the second instance as it imposed on the Commission in the first. Surely, had Congress intended that the District Courts of the United States should exercise only the function of review, other and more appropriate language would have been employed" (R., Vol. VI, pp. 24-25).

The Court below thereupon discussed the phrase that "the Court as a *court of equity* may * * * take exclusive jurisdiction of the holding company's assets * * * for the

purpose of effectuating the plan * * *." It said, "We think that Congress employed the phrase 'as a court of equity' classically, intending to require the district courts in Section 11 (e) proceedings to exercise in connection with the approval or disapproval of a plan the traditional powers of a court of equity in deciding that justiciable issue; that is to say, to administer justice in the traditional manner of a court of equity" (R., Vol. 6, p. 25).

Judge Biggs then points out that the phrase "The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive", contained in Section 24, which provides for direct review by the C. C. A. of orders of the Commission, have been significantly omitted from Section 11(e) (R., Vol. 6, p. 25).

Judge Biggs thereupon points out that the Section 11(e) Court may hear the application for approval of the plan only "after notice and opportunity for hearing" and states "It was the manifest intention of Congress to give all persons who might be affected by the plan a day in court in an equity proceeding" (R., Vol. VI, p. 26).

The Court below then went on to say:

> "It seems improbable to us that Congress intended that the district courts of the United States should be limited to the function of mere review under the Public Utility Holding Company Act, *the only federal reorganization statute by the terms of which security holders are not permitted to vote their approval or disapproval of a proposed plan of reorganization* and to prevent its operation if the holders of the requisite amounts of the securities affected are not in favor of it" (R., Vol. VI, pp. 26-27).

Judge Biggs thereupon exhaustively analyzed the history of the Federal law of reorganization and came to the

conclusion that the same supported his view that a Section 11(e) court must function as an equity reorganization tribunal (R., Vol. VI, pp. 27-34).

The learned Circuit Judge thereupon said:

> "We conclude that it was the duty of the court below to function as an equity reorganization tribunal within the limitations prescribed by the Act. The findings and conclusions of the Commission were not binding upon the learned District Judge though, as was proper, he treated them with respect. He weighed the numerous elements involved in the case, albeit on his own scales, and in the exercise of his independent judgment arrived at the conclusion that the plan was not fair and equitable. The examination made by the District Court of the relevant factors was careful and far-reaching" (R., Vol. VI, p. 34).

With reference to the cases of *Lahti* v. *New England Power Association*, 160 F. 2d 845, 858 (C. C. A. 1, 1947), and *Massachusetts Mutual Life Insurance Co.* v. *S. E. C.*, 151 F. 2d 424, 430 (C. C. A. 8, 1945), which the Court below referred to as looking the other way on the question of the duty of the District Court to make an independent examination of the record and findings of the Commission under Section 11(e), we respectfully submit that neither of these cases is authority for the proposition that the District Court is merely a review court with limited powers. In both of these cases the question raised here, namely, whether the District Court must make an independent examination and affirmatively find the plan to be fair and equitable was not raised. In both these cases the District Court *agreed* with the finding of the Commission that the plan was fair and equitable and the question of the extent of its review of the Commission's decision was not in issue.

POINT II

The *Otis* case does not hold that upon a true liquidation of a holding company the charter provisions do not apply.

Appellants base their case upon the contention that the *Otis*[1] case does away with the charter provisions of a holding company which is being dissolved under Section 11 of the Public Utility Holding Company Act, and that the rights of the preferred stockholders in such a liquidation must be considered without reference to the charter, except insofar as the charter places a ceiling on the amount payable to the preferred stockholders on a voluntary redemption of their stock. An analysis of the decision of this Court in the *Otis* case discloses, however, that it laid down no such rule. In that case, the facts were substantially as follows:

United Light and Power Company was the top holding company of a very extensive utility system, with many subsidiaries. Directly beneath it was another holding company known as United Light and Railways Company. The plan of simplification was drawn under the so-called "great grandfather" clause of the Public Utility Holding Company Act which provides that the Commission shall take action—

> "* * * that such holding company shall cease to be a holding company with respect to each of its subsidiary companies which itself has a subsidiary company which is a holding company. * * *"

It was pursuant to that provision of the Act that this simplification proceeding was brought.

There was no real dissolution of the business of United Power as a going enterprise. The *enterprise* continued on

[1] *Otis & Co.* v. *S. E. C.*, 323 U. S. 624.

just the same as before. The only question that was involved was whether the top holding company (namely "Power") should be succeeded by its sub-holding company (namely "Railways") which would receive all the assets of the top holding company. The stockholders of Power became the stockholders of Railways, so that we had in that case purely a corporate *simplification* proceeding which in no way affected the business of the enterprise itself.[1]

The Commission forcefully presented to the Court below its contention that the *Otis* case relates solely to a corporate simplification. In its brief, Commission counsel stated (pp. 37-38):

> "These stockholders will continue to remain the residual owners of the same public utility system, for the principal result accomplished by compliance with the Commission's order of dissolution has been to crack off one of the corporate shells through which their ownership was held, and to transform their interests into stock in the next corporate shell, Railways. Power is being dissolved, but the enterprise is not."

And the Commission before this Court again stressed the continuing nature of the enterprise when in its brief it stated (p. 78):

---

[1] These points of distinction were well brought out by the District Court (held by Judge Leahy) in its opinion (*In re United Light & Power Co.*, 51 Fed. Supp. 217, 223):

> "There is no real finality to this particular dissolution. Power's shareholders simply transform themselves into holders of common stock of Railways and thus obey the demands of Congress. Power as the head of a holding company system is now declasse by Congressional mandate; the interests of all classes of stock are nevertheless still lodged in a continuing enterprise.
>
> "It is neither an exercise in semantics nor a rejection of labels to consider the present plan little more than a reclassification."

> "*Finally, in no realistic sense is there occurring in this case a dissolution of a business enterprise which should call for the application of a charter liquidation provision.* As the opinion of the majority of the Commission discloses, the preferred and common stockholders of Power have been the residual co-owners of a vast public utility system controlled through Power, the top holding company, and Railways, its principal subholding company subsidiary. These stockholders will continue to remain the residual owners of the same public utility system, for the principal result accomplished by the Commission's order is to crack off one of the corporate shells through which their residual ownership was held and to transfer their interests to the stock of the next corporate utility, Railways. In essence, therefore, while Power is being dissolved, the enterprise is not."

The majority members of this Court apparently agreed with the argument of the Commission, inasmuch as the majority opinion laid great stress on the fact that in the *Otis* case there was no true liquidation of the enterprise but merely a simplification and that under a mere simplification it was not the intention of Congress that substantial rights should be destroyed. The question in the *Otis* case was whether the common stock of "Power", which at that time had an equity in present earnings of over $2,500,000 per year, should be completely wiped out because the SEC had ordered a simplification of the capital structure of the system. That in substance is what this Court, in its majority opinion, stated the question to be. In this connection we should point out that the decision of this Court was by a sharply divided Court,—five to three,—the dissenting judges being Chief Justice Stone, and Justices Roberts and Frankfurter.

An examination of the opinion of Mr. Justice Reed, writing for the majority, will show very clearly the distinction between the *Otis* case and the case at bar. Mr. Justice Reed at page 631 said:

> "The Commission's order of March 20, 1941, for the liquidation and dissolution of Power was a step in the *simplification* of the holding company system which *simplification* was enjoined by section 11(b) (2) of the Act. Satisfaction of the great-grandfather clause might have been obtained in this or other holding company systems by an order for *merger, consolidation* or *recapitalization* between top holding companies or between associate companies in the lower tiers of the corporate hierarchy. *Such procedure would avoid the liquidation of Power.* Cf. Windhurst v. Central Leather Co., 105 N. J. Eq. 621, 149 A. 36; Porges v. Vadsco Sales Corporation, Del. Ch., 32 A. 2d 148, 151. The selection by the Commission of *one* method of system adjustment to accomplish simplification *rather than another is an incident which ought not to affect rights.* The exercise of legislative power by Congress through section 11(b) (2) to accomplish *simplification* as a matter of public policy and the Commission's administration of the Act by dissolution of this particular company results in a type of liquidation which is entirely distinct from the '*liquidation* of the corporation, whether voluntary or involuntary' envisaged by the charter provisions of Power for preferences to the senior stock. * * *"

The Court then went on to say that upon analysis of the holding company system's experience, and upon an estimate of future earnings, the Commission assumed earnings of $6,185,000 annually. Since the annual preferred dividend requirements were $3,600,000 there appeared a balance of $2,585,000 available for the reduction of preferred

stock arrearages of $38,760,000. The Court then went on to say:

> "* * * The Commission noted that if all the assumed earnings materialized and were applied to liquidating the preferred current and deferred dividends, in approximately fifteen years the arrearages would be paid and the common stockholders would be in a position to receive dividends. Furthermore, *only by forced liquidation could the common stock be deprived of its possibility for future earnings.* Only by means of forced liquidation and the receipt of all Railways common, could Power's preferred gain a right to prospective earnings *above* its guaranteed dividends. * * *" (p. 632).

The Court then quoted from the message which the President sent to Congress in connection with the pending Public Utility Holding Company bill (p. 636):

> "'Such a measure will not destroy legitimate business or wholesome and productive investment. It will not destroy a penny of actual value of those operating properties which holding companies now control and which holding company securities represent insofar as they have any value. On the contrary, it will surround the necessary reorganization of the holding company with safeguards which will in fact protect the investor. S. Rep. No. 621, 74th Cong., 1st sess., p. 2.'
>
> "That report urged the same care to investors:
>
> 'Simplification and reorganization of holding company structures, making possible within a reasonable period the practical elimination of the holding company, should be conducted under the Commission's supervision over a period of time to prevent undue losses to security holders from investment dislocations, Id., p. 60'."

The Court then added at page 636:

> "Of course, Congress would wish, in simplifying a holding company system capital structure, to preserve values to investors, not to destroy them."

This Court then went on to say that *simplification* having as an incident to it the dissolution of *one* company in a *holding company system* was not an anticipated "liquidation" within the meaning of Power's charter provision. Mr. Justice Reed said at page 637:

> "We think, however, the charter preference is inoperative in *simplification* under section 11(b) (2). The provision having been adopted in 1929, six years prior to enactment of the Public Utility Holding Company Act, a '*simplification' under this Act, having as an incident to it the dissolution of one company in a holding company system, was not an anticipated 'liquidation'* within the meaning of Power's charter provision. Enforcement of an overriding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders. *Nor should common stock values be made to depend on whether the Commission, in enforcing compliance with the Act, resorts to dissolution of a particular company in the holding company system, or resorts instead to the devices of merger or consolidation,* which would not run afoul of a charter provision formulated years before adoption of the Act in question. The Commission in its enforcement of the policies of the Act should not be hampered in its determination of the proper type of holding company structure by considerations of avoidance of harsh effects on various stock interests which might result from enforcement of charter provisions of doubtful applicability to the procedures undertaken."

In the *Otis* case we have the following factors present, all of which are absent here:

(1) The common stock which the preferred stockholders wanted to wipe out had a very large equity in present earnings, over $2,500,000 a year above preferred dividend requirements. In the present case we seek to wipe out no class of stock.

(2) The *Otis* case was a *simplification* pure and simple, of a holding company system, the cracking off merely of the *top* company of the corporate hierarchy. In the present case we have an actual, bona fide *liquidation* and *dissolution* of the whole *enterprise*.

(3) In the *Otis* case, the stockholders of the top holding company became stockholders of the next sub-holding company. In this case no holding company remains, the *system* is disintegrated.

(4) The *Otis* case involved merely the exchange of stock in a top holding company for stock in a sub-holding company, which had substantially the same assets. In the present case the preferred stockholders are paid out in *cash*, one hundred cents on the dollar.

(5) In the *Otis* case the method chosen by the Commission, for simplifying the holding company system was only one of several methods which might have been adopted, and the same result secured. Had one of the other methods, namely, the device of merger between the top holding company and the sub-holding company been adopted, the requirement of the statute would have been complied with, corporate simplification would have been accomplished and the rights of the common stockholders would have been preserved. We have no such situation here.

It was under those circumstances that the Supreme Court said that that kind of "liquidation" was not contemplated

when Power's charter was adopted six years before the enactment of the Holding Company Act and that, therefore, it did not apply to a mere *simplification*. The Commission had awarded to the common stockholders as their interest in Railways the modest amount of 5½% of the stock of Railways. The majority of this Court said that under those circumstances it was "fair and equitable" that the interests of the common stockholders should not be completely wiped out, but that as the top holding company was perfectly solvent, and as it had present earnings greatly in excess of the amount payable as current dividends on the preferred stock, that some recognition should be given to the common stock. We respectfully submit that this is entirely different from a holding that upon an *actual dissolution* of a holding company *where the enterprise comes to an end,* and where the preferred stockholders are being paid one hundred cents on the dollar of the principal of their claims, as provided by the charter (more than they originally contributed to the enterprise), that under those circumstances the charter provisions have no validity and that the rights of the preferred stockholders are to be considered as though the enterprise continued and no liquidation had taken place.

In their opinion in the *Otis* case this Court said (p. 636):

> "Enforcement of an overriding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders."

If the call premium, amounting to $3,200,000, were to be awarded to the preferred stockholders, that is exactly what would happen here. These preferred stockholders will not receive stocks of fluctuating market value in another company, to be valued at a capitalization of so many times earnings (always a matter of opinion, the times earnings ratio fluctuating with the ups and downs of the stock market), and as to whose value there might be doubt and dispute. They are to be paid in *cash*. They are to receive

more than the amount that the company received from the original preferred stockholders at the time of the sale of the stock to them. In addition, they have received their full dividends, amounting to approximately $90 per share, while the common stockholders were getting nothing during most of this period, although the company had earnings which would have justified the payment of dividends. To require the company (*i. e.*, the common stockholders), in addition to pay to these preferred stockholders a premium of $3,200,000 would indeed be a windfall to the preferred stockholders at the expense of the holders of the common.

In the *Otis* case, the Court was protecting the rights of common stockholders who had a very substantial equity in the earnings of the company, which it was sought to wipe out. It awarded to them a very modest interest in the sub-holding company. In the present case, we have the situation of the preferred stockholders who are not satisfied with receiving everything the charter gives to them but want more than the charter provides, namely a call premium, as though the company was not being involuntarily liquidated but was continuing on as a going business enterprise, and the company had *voluntarily* called its stock. The preferred stockholders say in substance we think the *investment value* of our stock in January, 1946, would have been more than $105 or $110 a share if the company had continued in business, and we want to get that even though the company is compelled to go out of business.

It is a matter of common knowledge that the reason that a call premium is usually provided for in the case of a redemption of either bonds or preferred stock is that such redemptions are usually made in periods of low interest or dividend rates, when the called bonds or stock can be replaced with bonds or stock carrying a lower interest or dividend rate, and it is therefore considered fair, under those circumstances, that the company (which benefits by the redemption) should pay to the holders of the bonds or stock, who are deprived of a favorable investment, a bonus

or premium for the deprivation. In this case, however, no such reason exists. The preferred stock is not being replaced with other stock carrying a lower dividend rate, it is being retired because Engineers, by command of the statute and of the SEC has been required to discontinue business and dissolve. Engineers derives no benefit, but rather suffers a detriment, from the retirement of this stock.

POINT III

The District Court and the Court of Appeals properly found that payment to the preferred stockholders of $100 per share was fair and equitable.

The District Court in performing its affirmative and independent duty to consider and find whether the proposed plan was fair and equitable carefully examined the plan and the record upon which the Commission's approval of the plan was based. The District Court's findings of fact, and the record of the Commission upon which they are based, substantiate beyond any question that the plan approved by the Commission failed to satisfy "fair and equitable" standards. An examination of the record and of the findings of the District Court establishes the following facts:

Upon the sale of the preferred stocks Engineers received less than $100 per share therefrom. On the $5 stock it received only $95 per share (District Court's findings, par. 22, p. 301a).[1] Both the $5 and the $5.50 preferred stocks carried conversion privileges into common, which were apparently considered necessary to secure their purchase by the public, indicating that at the time of their issuance their investment value without the conversion privilege was not equal to the amount for which they were sold to

[1] Page references are to Record.

the public. The $5 series reached a high of $123 in 1929 and a low of $101⅛ in 1935. Its overall average since issuance was $67.16. The $5.50 series reached a high of $109 in 1929 and a low of $11 in 1933 and 1934. Its overall average since issuance was $64.54. The $6 preferred reached its highest market price of $109 in 1945 and sold at a low of $12 in 1933; its overall average since issuance is $62.77 (Finding 24, p. 302a). The District Court found that "the market prices of the preferred stocks in the earlier years must be considered in the light of the warrants and conversion features operative in that period, and in the light of the fact that Engineers common sold as high as $795/8 per share in 1929. The market prices in recent years must be considered in the light of the extensive market purchases made by Engineers, referred to below, and other extrinsic factors such as the Commission's American Power & Light debenture decision (Holding Company Act Release No. 6176) wherein premiums were awarded senior security holders for the first time" (Finding 25, p. 302a.

No dividends were paid on the preferred stock from July 1st, 1933 to July 31st, 1936, but the arrearages were paid off in 1936 and 1937. As of December 31st, 1946 Engineers had paid the following dividends on the preferred stocks:

> $5 series, $86.25 per share. $5.50 series, $93.50 per share. $6 series, $90 per share (Findings 26, pp. 302 and 303a).

There are 1,909,968 shares of Engineers common stock outstanding, owned by more than 13,000 stockholders. The aggregate consideration received by Engineers for such shares was $58,059,512.85 (Finding 30, p. 305a).

From the date of Engineers organization in 1925, down to the retirement of the preferred stock—a period of 22 years—the common stock received cash dividends of only $4.70 per share (Finding 33, p. 305a). If averaged over

this period it would amount to 21¢ per share per annum. If figured on the average price received by Engineers on the sale of the stock of $30.40 per share, it would amount to 7/10ths of 1% per annum as contrasted with the receipt by the preferred stock of from 5% to 6% per annum.

From September, 1935 to the end of 1944 earnings accrued to the interest of the common stockholders of approximately $24,500,000, none of which was distributed. Since that time this amount has necessarily increased (Finding 34, p. 306a).

As of June 30th, 1945, subsidiaries of Engineers had $2,773,000 of free earned surplus and Engineers itself had $7,095,000 of free earned surplus, or a system total of $9,868,000 which could have been declared out in dividends to the common stockholders (Finding 35, p. 306a). Since that time this amount had also increased. This deprivation on the part of the common stockholders has been of substantial benefit to the preferred sockholders (Finding 36, p. 307a).

Engineers sustained substantial losses on many of its properties sold in compliance with the Commission's divestment orders. Its interest in Puget Sound Power & Light Company, which cost Engineers $34,000,000 was sold for only $774,475. A formal offer of proof was made before the Court to establish that the equity owned by Engineers in Puget Sound would presently have a cash value of $10,000,000. Substantial book losses were also sustained by Engineers on the sale of its investment in other subsidiaries. In the case of El Paso Natural Gas Company, whose stock was sold by Engineers pursuant to the order of the Commission, the market price of the stock sold increased by more than $4,000,000 over the price realized (Finding 37, pp. 307a and 308a). The brunt of the losses and deprivations caused by the Holding Company Act has fallen upon the common stockholders (Finding 38, p. 308a).

In order to carry out the plan the common stockholders were obliged to contribute to Engineers the sum of

$22,000,000 through the exercise of warrants to purchase the common stock of Engineers' subsidiary, Gulf States Utilities. In addition, to carry out the plan $3,800,000 were received by Engineers in the form of "advance dividends", paid by Engineers remaining subsidiaries, on condition that no further dividends may be paid by such companies for specified future periods of time extending until June 15, 1948 (Finding 39, p. 309a). The common stockholders who are to receive these stocks were thereby foregoing their future dividends to the extent of $3,800,000.

The claim that the opinion testimony of R. E. Badger as to the "investment value" of Engineers preferred stock, stands uncontradicted, is not borne out by the record. Badger testified that "exclusive of the impact of the Public Utility Holding Company Act of 1935" the Engineers preferred stocks would, at the *time of his testimony* have sold at a 4.6% yield basis (or $108.70, $119.57 and $130.33 respectively ~~for~~ the $5, $5.50 and $6 series), *if the preferred stocks were not subject to call.* In view of the redemption provision he concluded that "the present fair investment values are represented (substantially) by the call price". In connection with his testimony, Badger presented a report on valuation of Engineers preferred stock "as at January 15, 1946" (Ex. 29a, p. 2088a *et seq.*). In that report Badger stated:

> "It does not require an exhaustive presentation of statistics to show that the yields on preferred stocks are, at the present time, the lowest which they have ever been in the history of our country, or conversely, that the *prices* of such stocks are at the *highest* levels ever experienced. *The permanency of this situation will depend on the permanency of low interest rates.* * * *" (p. 2096a).

It is quite apparent, therefore, from Badger's own report that he based his opinion of investment value on market prices of allegedly comparable stocks in a period (Janu-

ary, 1946) when stock prices were at their highest and interest rates were at their lowest. He coupled this with the prediction, *since proven wrong*, that the present level of preferred stock prices is a permanent level. He also based his valuation upon a capitalization of "two year average earnings of the major subsidiaries held by Engineers at December 31, 1944, on the assumption that the equities in these companies were worth 15 times two year average earnings" (R. 2104a). It is a matter of common knowledge, and the Court may take judicial notice of the fact, that since January 1946 there has been a considerable decline in the market value of public utility company stocks (as well as of stocks generally) and that the price earnings ratio at which utility stocks are now valued has declined considerably below the times earning ratio which existed in January 1946. In most instances the ratio now is 8 to 10 times earnings, and in many instances less. In addition, it should be noted that Badger based his opinion on only two years of earnings, namely 1943 and 1944. During this period the country was at war. Abnormal boom conditions prevailed throughout the country and particularly in the territory served by Engineers' important subsidiaries, as in Norfolk, Virginia, where an extensive shipbuilding program was going on. Two years' earnings in any period are insufficient to base an opinion of sound investment value, and certainly not two years of abnormal earnings during a war which caused the greatest boom period that this country had ever experienced.

While Badger termed Engineers preferred stocks as of "medium grade" D. C. Barnes, the President of Engineers, who also qualified as a financial expert, classified them as "closer to a low grade preferred stock". The District Court found that the evidence supports this view (Finding 44, p. 311a). Mr. Barnes further testified that the future price level of these securities,

> "without the impact of the Public Utility Holding Company Act, could move from its present level in

only one direction, since the voluntary redemption price acts as a stopper to prevent any material rise in price over the respective voluntary redemption price, whereas adverse conditions which we are bound to meet from time to time in the future as we have in the past would be reflected in declines in prices from this top level" (p. 523a).

Mr. Barnes then testified to four factors which, in his opinion, might adversely affect the investment value of Engineers' preferred stocks, as follows:

"The factors which might affect the future price level adversely are: (1) continued inflation. The country is now facing wide-spread demands from labor for 30 per cent increase in wages. The former chairman of the War Labor Board has indicated that in his opinion, in a five-year period, wages may be expected to go up as much as 50 per cent.

If any such inflation spiral is in store for us it will affect adversely the market prices for fixed income securities, particularly in regulated industries where there is an inevitable time lag in securing increased rates to cover increased costs.

(2) Periodic depressions. I do not believe that it is possible to develop a regulated economy which will continuously balance supply and demand. When these get out of balance to an extent that causes decreased employment, it is a characteristic of human nature which I do not believe can be changed to conserve resources and limit spending which further aggravates the dislocation of supply and demand.

We have had these cycles periodically in the past and I believe there is every reason to expect a continuance of them in the future. We have expanded our productive capacity in the last six years to provide the requirements of war and have built up a deficit in so doing of some $300,000,000,000.

During this period the supply of goods for civilian requirements has been withheld to a large extent and in the immediate future production to fill this demand may be expected to continue productive activity at a high level.

When this deferred demand has been satisfied we will be faced with the problem of readjusting supply to demand, and in my opinion it is reasonable to expect that during such readjustment we may have another of the periodic depressions.

(3) Possibilities of Government competition. There is agitation in Congress and elsewhere for substantial hydro developments by the Federal Government on rivers not only in areas adjacent to Gulf States Utilities Company, where the Southwestern Power Authority has been organized and is functioning, but also in the territories served by the Virginia Electric and Power Company, where developments have already been approved by Congress on the Roanoke River, although appropriation has not as yet been made.

Further developments have been recommended by the army engineers or studied by them for hydro plants on the James River and the Rappahannock River in Virginia. If such developments follow the pattern of those in the Northwest it will affect adversely the market prices for utility stocks in the areas affected.

(4) Adverse changes in the policy of regulatory authorities. If the principles of rate regulation advocated by some of the more radical exponents of regulation are later adopted by authorities having jurisdiction in the area served by Engineer's subsidiaries, it would also have an adverse effect on securities of companies doing business in those areas" (R. 523a and 524a).

Mr. Barnes has proven to be a far better prophet than Badger. Some of the potential factors to which Mr. Barnes referred have already become realities. Labor has already received wage increases which amount to much more than the 30% that Mr. Barnes referred to. In the light of present conditions the opinion of the former Chairman of the War Labor Board that in a five-year period wages may be expected to go up as much as 50%, has, in the light of what has happened since this testimony was given, been found to be much too conservative. Wages have already advanced more than that. It is a matter of common knowledge, and this Court may take judicial notice of the fact, that while *gross* utility company earnings have increased (owing to the present abnormally high rate of business activity), utility *net* earnings have not kept pace owing to the increases in labor costs, fuel and costs of replacement and repairs. At the present time, we are in the very midst of an acceleration of the "inflation spiral" to which Mr. Barnes referred, and which is already adversely affecting utility company earnings. Thus far we have had three rounds of wage increases granted to organized labor. Labor unions are already demanding a fourth round.

So far as the other factor upon which Badger relied is concerned, namely, low interest rates (which he assumed would be permanent), the record, since he gave his testimony, proves him to have been but a poor prophet. Between March 1946 and March 1947 yields on long term Government bonds had risen from 2.09% to 2.19%. They have since risen to 2.41% (see Weekly Outlook of Standard Statistics Co., a well recognized financial publication, dated Dec. 28, 1948). Highgrade bond yields had risen in the same period from 2.35% to 2.49%. They have since risen to 2.774% as of Dec. 28, 1948 (Weekly Outlook, Standard Statistics). On high grade preferred stocks the average yield had risen from 3.42% to 3.75%. They have since risen to 4.14% (See Weekly Outlook, Standard Statistics,

Dec. 28, 1948). The increase in yields on low to medium grade preferred stocks must necessarily be even greater (Finding 52, p. 314a). It is a matter of common knowledge, and this Court may take judicial notice of the fact, that interest rates generally since March 1947 down to the present time have steadily risen.

In contradiction of the permanence of the utility company stock prices testified to by Badger, we have the fact that the utility common stock average had dropped from $123 in March 1946 to $107 in March 1947. (Finding 52, p. 314a). It has since dropped to $104 (Standard Weekly Outlook, Dec. 28, 1948). Inasmuch as the investment value of a utility holding company's preferred stocks are necessarily dependent upon the value of the utility common stocks held by it, it necessarily follows that such an extensive drop would likewise affect the investment value of the preferred stocks.

The Court found that the investment values of Engineers preferred stocks, testified to by Badger:

> "* * * do not represent the investment value of these stocks in the past, and are by no means determinative of the investment value of these stocks for any considerable period of time in the future. * * *" (Finding 54, p. 315a).

Summarizing the various factors which go to make up the investment value of Engineers preferred stocks we find the following: Prior to the outbreak of the European war, Engineers (on a consolidated basis) barely earned its fixed charges and preferred stock dividends. The ratio was 1 1/10 times for 1937 and 1938 and 1 2/10 times for 1939 to 1942 inclusive. It was not until 1943 and 1944 (the peak of the war effort) that the ratio increased to 1.4 and 1.5 R. p. 64a). The earnings prior to 1937 do not appear to be in the record and were not considered by Badger, but undoubtedly they are unfavorable, inasmuch as En-

gineers, from 1933 to 1936 did not pay dividends on its preferred stocks. On the foregoing record we think it may fairly be said, and the Court was justified in finding, that Engineers preferred stocks were not even of medium grade, as testified by Badger, but were of low grade. That the market so rated them is evident from their violent fluctuations in market price to as low as $11. per share. Surely it can hardly be claimed that preferred stocks which sell in the market at an overall average price since issuance of from $62 to $67 per share are high grade, or even medium grade, preferred stocks. The acid test of the market place has classified them as being of distinctly low grade. The only reason that they sold at or above par recently is because the Company's plan called for their retirement at par, and the SEC required the payment of call premiums in addition.

Furthermore, it should be borne in mind that such investment value as has been attained in recent years by Engineers' preferred stocks was due in large measure to the sacrifices made by the common stockholders in foregoing dividends upon their stock for a period of nine years, although such dividends were earned and might have been paid. It was the retention of these earnings, amounting to approximately $24,500,000, and the reinvestment of a large part thereof in the properties, which increased the investment value of the preferred stocks.

It cannot be denied that the sacrifices which Engineers was compelled to make in the divestment of properties under the orders of SEC, amounting to many millions of dollars, must all necessarily be borne by the common stockholders, inasmuch as the preferred holders have already received par and all dividends, amounting to approximately $190 per share. In contrast to this, we have the meagre cash dividends which were paid to the common stockholders over a period of 22 years of the Company's existence, of $4.70 per share, amounting to an average annual return of 7/10th of 1%. In the face of all this the

preferred stockholders demand their "pound of flesh" by insisting that they must also receive a call premium of $3,200,000, as though the retirement were voluntary and the enterprise were continuing.

We respectfully submit that to grant this demand would be grossly unfair and highly inequitable and unjust. As the Court below so aptly and concisely expressed it in the *Otis* case (142 F. 2d 411, 419):

> "Each security holder must be compensated as exactly as he can be for that which he is giving up. But though his cup must be filled level to the brim, it must not run over. This much is plain."

In its Conclusions of Law, the District Court stated:

> "No special facts or circumstances in connection with the issuance of the preferred stocks or their subsequent history, or the relationships of the preferred and common stockholders, create any equitable considerations warranting the payment to the preferred stockholders of amounts in excess of $100 per share plus accrued dividends; and careful examination of all the relevant factors impels the conclusion that payment to the preferred stockholders of such excess amounts would not be warranted or justified" (R. 316a).

POINT IV

The Commission's newly adopted "investment value ex the Act" formula in valuing securities and arriving at "equitable equivalents" is unsound and leads to unjust results.

Contrary to its practice for years the Commission has in this case evolved a new "technique" in valuing securities by arriving at those values on the theory that the

Holding Company Act" does not exist, or that it had been repealed on the day of valuation, and that the enterprise would continue.[1] It called this the "investment value ex the Act" doctrine. As is illustrated in the present case in practical effect, however, this method merely boils down to valuing the securities on the basis of market prices of allegedly comparable securities as of a given date. Badger arived at his "investment values" by taking a number of allegedly comparable public utility preferred stocks, and ascertained their market prices on a particular date in January, 1946, namely January 4th. Then on the basis of those market prices he computed their yield basis. Then he applied such yield basis to Engineers' preferred stock and came to the conclusion that Engineers should sell on the same yield basis as the allegedly comparable stocks, *i. e.*, 4.6% per annum. In this manner, Badger arrived at the theoretical market values of the three issues of Engineers' preferred stocks.

He did this upon the assumption that there was no Holding Company Act and that Engineers' preferred stocks could not be redeemed. Thereupon he reduced those valuations to the call prices provided in Engineers' charter. In essence, therefore, Badger's valuations rest upon the market prices of the comparable stocks on a particular date in January, 1946. Although the Commission adopted this method of valuation in the Engineers case, it condemned the use of market values as determinative of equitable equivalents in the later case of Washington Railway and Electric Company (decided in May, 1947), H. C. A. R. [illegible] in which it stated:

> "However, we have never considered market values . . . as determinative of the fairness of a Section 11(e) plan and it is therefore unnecessary for us to make an estimate of the market value either of the pres-

[1] See C. C. A. opinion, R. 38.

> ently outstanding preferred stock apart from the possibility of liquidation or of the package of securities which the preferred stock is to receive under the proposed plan."

The learned District Judge refused to adopt the Commission's valuation technique saying:

> "I do not consider the argument advanced as to what these series of preferreds would be worth if there were no Public Utility Holding Company Act. I do not think it profitable to consider an argument based on unreality for there is a Public Utility Holding Company Act. Unless one subscribes completely to the doctrine of foreordination, things might always be different from what they are" (R. 292a).

This novel "investment value ex the Act" theory of the Commission, which in fact does nothing more than employ the market value of comparable preferred stocks at a particular time, not only finds no support in the *Otis* case but is in fact repugnant to the reasoning and basis of the *Otis* case. In that case, in addition to considering and weighing the many factors in the case, the Commission and the courts projected the earnings of the company on a long-term basis to determine the respective rights of the preferred and common stockholders. But in the *Engineers'* case, the Commission not only failed to ascertain the future earning power of the system and apportion earning power between preferred and common, but also measured the rights solely of the preferred without any adequate consideration of the rights of the common.

This failure was so obvious as to cause Judge Biggs, who also wrote the Circuit Court opinion in the *Otis* case, to state in the instant case:

> "But we think it is clear that it (Commission) did not give any substantial consideration to the future

earning power of Engineers and its subsidiaries which the Supreme Court has held is one of the fundamental tests for reorganization valuation. See *Consolidated Rock Products Co.* v. *Dubois*, 312 U. S. 510, 526, and *Group of Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 565-6. In the instant case the Commission made no attempt to ascertain the future earning power of the system nor to apportion earning power between the preferreds and common based on their respective claims to income as it did in *The United Light & Power Company* case. But if values for the securities are to be determined *ex* the Act it is clear that the Commission should have done so. What the Commission has done is to consider the investment values of the preferred *ex* the Public Utility Holding Company Act, *i. e.*, as if the Act had never been passed. But it considered only the preferreds on this basis. It seems to have omitted consideration of the common by a similar standard" (R. Vol. 6, p. 35).

The tortuous nature of the Commission's reasoning and the difficulty it has in attempting to justify its compliance with the standards laid down in the *Otis* case are apparent in its argument that it was not necessary in the *Otis* case to measure the rights of the common as well as the preferred. Thus, in its brief on page 45, footnote 30, it says:

> "It was a drawback, although we believe an unavoidable one, of the valuation technique employed in the *Otis* case that it did require the Commission to appraise the relative treatment of the United Light and Power Company preferred and common stockholders in the light of the forecast of future earnings. * * * The majority of the Commission and of this Court, however, concluded that the difficulties of the valuation process did not warrant denial of participation to a common stock which, as a matter of judgment had a legitimate investment value. See 323 U. S. 632."

It is difficult to determine from this comment by the Commission whether it is blaming itself or the courts for the valuation technique employed in that case. In fact, however, in the *Otis* case the appraisal of the rights of the preferred and common stockholders in the light of the forecast of future earnings, among other factors, was made by the *Commission* initially and approved by all the courts including this Court. And the Court of Appeals which decided the *Otis* case reminded the Commission of this when it said:

> "In the instant case the Commission made no attempt to ascertain the future earning power of the system nor to apportion earning power between the preferreds and common based on their respective claims to income as it did in the *United Light and Power Company* case" (R. Vol. 6, p. 35).

That the current market value is not the sole test and that future earning capacity must be carefully weighed was indicated by this Court in *Consolidated Rock Products Co.* v. *Dubois*, 312 U. S. 510, 526:

> "Since its application requires a prediction as to what will occur in the future, an estimate, as distinguished from mathematical certitude, is all that can be made. But that estimate must be based on an informed judgment which embraces all facts relevant to future earning capacity and hence to present worth, including, of course, the nature and condition of the properties, the past earnings record, and all circumstances which indicate whether or not that record is a reliable criterion of future performance."

Had the Commission applied the rationale of the *Otis* case, it would of necessity have paid the preferred stockholders *less* than $100 per share. In the *Otis* case, the substantial arrearages of dividends and the limited earnings were substantial factors which induced the Commission to

discount the participation of the common stock. But in the *Engineers'* case, there were no arrearages of dividends and the common stockholders were entitled to an immediate participation in earnings above preferred dividend requirements. But instead of applying the rationale of the *Otis* case, the Commission applied solely the new test of "investment value ex the Act" or current market value exclusively for the preferreds, and reasoned that the common stockholders were the residual claimants and therefore entitled only to what was left.

The Court of Appeals called attention to that fact, saying:

> "In the instant case the Commission made no attempt to ascertain the future earning power of the system nor to apportion earning power between the preferreds and common based on their respective claims to income as it did in *The United Light & Power Company* case. But if values for the securities are to be determined *ex* the Act it is clear that the Commission should have done so. What the Commission has done is to consider the investment values of the preferred ex the Public Utility Holding Company Act, *i. e.*, as if the Act had never been passed. But it considered only the preferreds on this basis. It seems to have omitted consideration of the common by a similar standard. It made no findings as to the 'value' of the common stock" (R., Vol. VI, p. 35).

It is perfectly plain that when the Commission valued the preferred stock "ex the Act" and then gave to the common stock merely what remained of Engineers' assets that the Commission had adopted a double standard of valuation. So far as the preferred stock was concerned it valued the same as though the enterprise were continuing. So far as the common was concerned, however, it only gave to that stock what remained after Engineers had been compelled to dispose of various of it subsidiaries at great

loss and had suffered all the other deprivations incident to the liquidation of the system properties, all of which were caused by the fact that it had been commanded by the Holding Company Act to liquidate and dissolve. As the Court of Appeals well said:

> "The fact is that the holding company enterprise is at an end, both for preferreds and common. The Commission apparently has disregarded this fact which supplies the substantial difference between the instant case and The United Light & Power Company reorganizations. In the latter case the security holder participation in the enterprise was shifted from the top holding company to a subsidiary holding company but the holding company enterprise as such continued. In the instant case the Commission ascribed 'investment value' to the preferreds but failed to make a similar approach to the common. The result is that the Commission has attempted to value the securities of Engineers both ex the Act and intra the Act" (R., Vol. VI, p. 36).

POINT V

The liquidation of Engineers provided for in the Plan is not voluntary.

The entire record of the proceedings of Engineers before the Commission establishes beyond doubt that the sale of the holdings of Engineers and the liquidation of the preferred stock is the direct result of the compulsion of the Act, and the liquidation is therefore not voluntary.

Prior to the decision by the District Court, pursuant to orders of the Commission, Engineers had disposed of all of its holdings ordered to be divested except those in Gulf States, El Paso and Virginia, and with respect to the latter two companies, it had disposed of their trans-

portation properties. Subsequent to the decision it distributed to its common stockholders all the stocks owned by it in the three subsidiaries, except a small amount of stock in Virginia, which is being held in trust pending final liquidation. That the dissolution of Engineers was the result of the impact of the Act and obviously not "voluntary" is inherent in the Finding by the SEC that the proposal to dissolve Engingers is "necessary" to effectuate the provisions of Section 11(b) of the Act. The SEC in its Findings and Opinion of December 5, 1946, said (R. 47a):

> "Enginegrs has produced an abundance of evidence showing that once it has disposed of El Paso and Gulf, it will have no reason to continue as a separate corporate entity for it would then be the parent of a single operating company, Virginia. In that situation, Engineers admits that it would be an 'economic monstrosity' and all participants in this proceeding seem to be in agreement with that conclusion. The record does not clearly indicate what it will cost to maintain Engineers after Gulf States and El Paso have been divested. Estimates range from $172,000 to $365,000 a year. The company freely admits that Engineers could in no way justify any such continuing expenditure. Virginia is able to undertake its own financing and service and is large enough to stand independently.
>
> Any functions Engineers might perform should more properly be carried out by Virginia's own management. *We find that the presence of Engineers would unduly complicate the structure of the system and that it would therefore, come within the prohibition of Section 11(b)(2). Accordingly we find that the proposal to dissolve Engineers is 'necessary' to effectuate the provisions of Section 11(b) of the Act.*" (Italics added.)

And in its Summary of Conclusions, the Commission at R. 84a stated:

> "1. We have found those provisions of the plan providing for the disposition of Gulf States and El Paso and for the dissolution of Engineers to be necessary under the requirements of the Act."

Although Commissioner Caffrey concurred in the Supplemental Findings and Opinion of January 8, 1947 on the authority of the *Otis* case, the following portion of his concurring opinion is particularly significant (Holding Company Act Release No. 7119, p. 9):

> "Our orders under Section 11(b)(1) do not preclude a careful investigation of the surviving holding company system under Section 11(b)(2) to determine what action might be necessary (including dissolution of the top company) in order to simplify the system and distribute its voting power equitably. I think that Engineers would have been subject to such a proceeding had it not come forth with a voluntary plan. Engineers' voluntary proposal did no more than forestall the necessity for action by the Commission.
>
> Further, Engineers' decision to liquidate came as a logical step following the necessity to comply with our Section 11(b)(1) orders. It is the operation of Section 11, and not mere managerial discretion that has brought about the liquidation.
>
> Under these circumstances, I do not believe that the liquidation can properly be termed voluntary."

This point was conceded by counsel to the Commission in the hearings before the District Court on February 17, 1947 when he said (R. 196a):

> "The Commission did not dispute that Section 11 impelled the discontinuance and elimination of Engineers as a corporate entity and that the proposed dissolution is involuntary in that sense; * * *"

POINT VI

Payment to the Preferred Stockholders of an amount in excess of $100 per share plus accrued dividends contravenes the charter provisions and impairs the obligation of contract.

The applicable section of the corporate charter of Engineers provides:

> "III. Preference on liquidation, etc. In the event of liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock, resulting in any distribution of its assets to its stockholders, the holders of the preferred stock of each series shall be entitled to receive, for each share thereof, an amount equal to $100, together with all dividends accrued or in arrears thereon, plus, in case such liquidation, dissolution or winding up or reduction shall have been voluntary, the fixed redemption premium for such series, if any, before any distribution of its assets shall be made to the holders of the common stock * * *."

Such a provision for the payment of a fixed amount to the preferred stockholders in the event of dissolution constitutes a contract among the stockholders, which is entitled to constitutional protection.[1]

---

[1] As was said by Mr. Chief Justice Stone in the dissenting opinion in *Otis & Co.* v. *Securities & Exchange Commission*, 323 U. S. 624, at page 645; 65 Sup. Ct. 483, at page 493:

> "Such provisions for priority in a corporate charter constitute a contract among the stockholders, which is entitled to constitutional protection. Bedford v. Eastern Building & Loan Ass'n, 181 U. S. 227, 21 S. Ct. 597, 45 L. Ed. 834; Hopkins Federal Savings & Loan Ass'n. v. Cleary, 296 U. S. 315, 56 S. Ct. 235, 80 L. Ed. 251, 100 A.L.R. 1403; Treigle v. Acme Homestead Ass'n, 297 U. S. 189, 194, 196, 56 S. Ct. 408, 80 L. Ed. 575, 101 A. L. R. 1284, impairment of which is not lightly to be attributed to Congress. No constitutional issue is raised here, but we find no provision of the statute which purports to confer on the Commission, in the exercise of its power to liquidate a corporation, any authority to set aside a lawful stipulation in which the stockholders have joined fixing their relative rights in the event of liquidation."

Bedford v. *Eastern Building & Loan Association*, 181 U. S. 227, 21 S. Ct. 597, 45 L. Ed. 834;
Hopkins Federal Savings & Loan Association v. *Cleary*, 296 U. S. 315, 56 S. Ct. 235, 80 L. Ed. 251, 100 A. L. R. 1403;
Treigle v. *Acme Homestead Association*, 297 U. S. 189, 194, 196, 56 S. Ct. 408, 80 L. Ed. 575.

The majority opinion in the *Otis* case held that the charter provisions were inoperative in "*simplification*" under Section 11(b)(2) and that "the provision having been adopted in 1929, six years prior to the enactment of the Public Utility Holding Company Act, a 'simplification' under this Act, having as an incident to it the dissolution of one company in a holding company system, was not an anticipated 'liquidation' within the meaning of Power's Charter provision" (p. 637, *supra*).

While there may be merit to this point in its application to the facts in the *Otis* case, we have shown that under no circumstances can it be applicable to the facts in the *Engineers'* case where the charter provides that the preferred stockholders should receive a premium *only* if the liquidation was *voluntary* and where the liquidation constituted an actual dissolution of the enterprise. In this connection, the language of the minority opinion in the *Otis* case is particularly appropriate (p. 645, *supra*):

> "* * * we find no provision of the statute which purports to confer on the Commission, in the exercise of its power to liquidate a corporation, any authority to set aside a lawful stipulation in which the stockholders have joined fixing their relative rights in the event of liquidation."

And at page 647:

> "We can find no basis for saying that it is not fair and equitable, both in a technical as well as a general and non-technical sense, to require the stockholders to abide by their agreement in the very circumstances to which it was intended to apply, and there, as we

have said, there is no contention that the contract when made was or is now oppressive, unfair, inequitable or illegal."

The charter constitutes the contract between the corporation and its stockholders. It is wholly unambiguous. It covers every conceivable situation under which the corporation may be liquidated, dissolved or wound up, or its capital stock reduced, resulting in a distribution of assets to its stockholders. It provides that in that event the preferred stock shall receive $100 per share and that in case such "liquidation, dissolution or winding up or reduction shall have been voluntary" the fixed redemption premium shall be paid. We cannot imagine language more plain and unambiguous. There are no qualifications of any kind. The provision applies to any and every situation as a result of which the corporation might be liquidated or dissolved, or its capital stock reduced resulting in distribution of assets.

As we have already said, dissolution of large public utility holding company systems had already been advocated at the time of the adoption of the charter. It may therefore be fairly said that it was within the contemplation of the parties that the company might be dissolved pursuant to some statute to be passed in the future.[1] But whether the

Cf. Bonbright & Means, The Holding Company, at page 49: where reference is made to the danger to holding companies generally and particularly to public utility holding companies of possible dissolution through anti-trust proceedings.

Senate Res. 83, 70th Cong., 1st Sess. (approved Feb. 15, 1928), directing the Federal Trade Commission to make an investigation and to report to the Senate with respect to "(1) the growth of the capital assets and capital liabilities of public utility corporations doing an interstate or international business * * *"

See: "Summary" Report of Federal Trade Commission to the Senate on "utility corporations", Vol. 72-A, p. 5 (Senate Doc. 92, pt. 72A, 70th Cong., 1st Sess.).

The Court is also respectfully referred to Appendix C of the Central Illinois Securities Corporation's brief in this Court, where at pages 168 through 175 Mr. Berman has collated excerpts from the New York Times during the years 1924 and 1925.

possible dissolution of this corporation pursuant to an edict of Congress was foreseen at that time or not is really of no consequence. The important point is that the charter covered any and every liquidation or dissolution of the corporation whether it was by force of law, through bankruptcy or by voluntary action of the stockholders. It is an all inclusive provision and if contracts have any force and meaning it must be applied to the dissolution of Engineers pursuant to an Act of Congress. We respectfully contend that irrespective of any other considerations heretofore discussed that this charter provision must be upheld as valid and enforcible and that it is decisive of the appeal in this case.

POINT VII

There is no necessity for remand. The legal effect of the action of the lower courts was to approve the alternative provision of the plan as to which action the Securities and Exchange Commission had given advance approval on a condition which will be fulfilled if this Court affirms the District Court.

The legal effect of the proceedings up to this point is that the Commission submitted to the District Court for approval a plan which had alternative provisions. A payment of $100 plus premiums for each share of preferred stock was approved as "fair and equitable", by the Commission; or, in the alternative, a plan paying only $100 per share to the preferred was approved as fair and equitable provided the District Court found it to be so, and thereafter there was no reversal of the findings of the District Court.

Under date of October 15, 1945, the Commission issued its notice of filing of plan under Section 11(e), together with its order for a hearing (R. 13a). The plan was divided into three parts. Part II requested the Commission to issue a separate order finding it fair and equitable that no

amount in addition to $100 per share be paid to the preferred (R. 18a). The purpose of splitting the plan into parts was to give the Commission an opportunity to pass separately on the amount to be paid to the preferred stock.

On December 4, 1946, the Commission in its findings and opinion (R. 25a) found that the plan was "necessary" (R. 26a), but that its proposal to pay only $100 per share was unfair to the preferred (R. 26a). The Commission decided that the equivalent of the call prices of $105 for the $5 preferred and $110 for the other preferred issues would be fair and equitable (R. 62a), that the call prices placed a "ceiling" on the amounts the preferred could receive (R. 67a). The Commission refused to grant the motion (R. 1203a), which the company had made to split the plan, but stated it would approve an amendment to provide an escrow arrangement as to any amount in excess of $100 per share in the event the Commission's findings were litigated (R. 75a, 76a). Part I of the plan was conditioned upon court approval and Part II of the plan was conditioned upon Part I being consummated (R. 45a).

The Commission pointed out that in the past it had approved plans where immediate payment was made of the amount conceded to be due and the question of additional amounts payable was reserved for future litigation (R. 74a). Provision was made for an escrow agreement (R. 75a, 76a). *In its summary of conclusions, the Commission said that the objective of the motion for separate orders on the two parts of the plan could be achieved by the creation of an escrow* (R. 85a). No order was entered and Engineers was given thirty days within which to file an amended plan.

Within the time allowed Engineers filed a new plan which proposed to retire the preferred at their respective call prices (R. 102a-116a). The plan had a proposal for an escrow provision in accordance with the Commission's order (R. 107a). The Commission thereupon issued a new

notice of filing of amendment and order and hearing (R. 117a). At the hearing two groups of common stockholders, of which we were one, objected to the payment to the preferred of more than $100 per share.

On January 8, 1947, the Commission issued its supplemental findings and opinion and order (R. 128a-R. 141a). The plan was approved as amended and the device of providing an escrow arrangement was found to be fair and equitable (135a). The Commission filed an application (R. 4a) on January 9, 1947 with the District Court seeking to enforce the amended plan. We filed our objections (R. 155a-157a).

On February 7, 1947 the President of Engineers wrote a letter to the Commission (R. 394a-395a) enclosing a proposed order of amendment (R. 395a-401a) containing a proposed escrow agreement (R. 402a-413a) in which he requested that the Commission amend its order of January 8, 1947 (R. 141a) so as to specify "the transactions which will take place if such escrow is established" (R. 395a) so as to bring the amended plan and the proceedings thereunder within the protection afforded by Supplement R and Section 1808(f) of the Internal Revenue Code. The tax law required that such steps be set forth in an order of the Commission which had become final in accordance with law if the protection were to be availed of.

The Commission on February 11th entered the requested order of amendment (R. 165a-174a) which, among other provisions, *approved in advance* the amendment of the plan so that it could be split and consummated by an alternative method through the use of an escrow (R. 168a-171a). It was provided that sufficient moneys be deposited in a bank pursuant to the provisions of an escrow agreement which would provide, among other things, that if the District Court approved the payment of the call prices and all remedies on appeal were exhausted, the call prices should be paid (R. 173a); or, in the alternative, if the District

Court approved the payment of some part of the escrow but less than the call prices and all rights of appeal were exhausted, then the amount specified by the District Court would be paid to the preferred stock (R. 174a), and the balance returned to the Company.

At the hearing before the District Court on February 17, 1947, the Commission made a motion (R. 162a-164a) to amend its application accordingly. The motion was granted (R. 163a).

At this point the Commission had submitted the plan to the District Court for approval in alternate form.

Engineers stated that in view of the likelihood of appeal by common stockholders, it wished to follow the alternative method (R. 278a). Engineers submitted a form of escrow agreement (R. 408a-413a).

On February 17, 1947, the District Court filed an opinion (R. 283a-292a) deciding that the payment of more than $100 per share to the preferred stock was not fair and equitable and approving the rest of the plan "including the escrow agreement" (R. 292a). In support of its opinion on May 29, 1949, the Court filed its findings of fact and conclusions of law (R. 293a-317a) and said in finding of fact 16 (R. 299a):

> "The Commission gave its advance approval to any arrangement that might be made in the District Court to establish an escrow fund for the premium payments and to permit the main body of the plan to be consummated pending final litigation of the premium question."

At the same time, the Court entered an order approving and enforcing the plan with the alternative provision as approved by it (R. 318a-330a). Annexed to the order as Exhibit 1 was the proposed escrow agreement with the Chase National Bank (R. 324a-330a).

The escrow agreement annexed to the order of the Court after providing for the deposit of sufficient funds to comply with the approved plan in its alternative form went on to describe the conditions under which the deposited funds might be released. Under paragraph 4 (R. 328a), upon delivery to the Chase Bank of an opinion of independent counsel (together with appropriate certified copies of appropriate orders), to the effect that the Commission or any Court having jurisdiction has issued an order, which is no longer subject to appeal, to the effect that the preferred stock is not entitled to more than $100, plus accrued dividends, the Chase Bank is directed to release and pay over to Engineers the sums of money deposited with it under subdivisions (a) and (b) (R. 324a) which were the principal amounts of the premiums, plus interest as provided in the order.

In accordance with this order, the plan has been carried into effect except for the distribution of this fund so deposited in escrow (R. 39-40).

On the appeal of the Commission and the preferred stock holders, the Circuit Court affirmed the District Court in its finding that the alternative plan to pay more than $100 per share to the preferred stock was unfair and inequitable, but reversed the District Court in its adoption of the other alternative of paying only $100 per share to the preferred and directed the return of the proceedings to the Commission for appropriate action.

A review of the above recital of facts together with an examination of the record, reveal beyond dispute that the Commission by its order of amendment dated February 11, 1947 (R. 165a-174a) by its motion of February 17, 1947 (R. 162a-164a) which was granted (R. 163a) in both legal effect and in actual fact sought the enforcement by the District Court of a plan with alternative provisions which the Commission *approved in advance*.

When and if this Court finally decides that the payment of the call price or in the alternative the payment of $100 per share to the preferred is fair and equitable, the function of the Commission will have been completely and properly performed.

The Commission approved one alternative without qualification, namely, the payment of the call price, and it approved the other alternative, namely, the payment of any sum between a minimum of $100 and a maximum of the call price upon a condition subsequent. The condition was the entry of a final order of the Court having jurisdiction and no longer subject to appeal to the effect that it was fair and equitable to pay a designated amount to the preferred. The Commission has said that it has engaged in similar procedure before (R. 74a) and in the interest of not shuttling a plan back and forth between the Courts to the Commission, it is sensible administrative practice.

The Commission having already approved the plan in the alternative, there is therefore no need for remand to the Commission for further proceedings. A direction to the Commission that it enter an appropriate order would suffice.

The District Court did not amend the plan. The only question before the District Court was whether the preferred stockholders were entitled to the redemption premium provided by the Engineer's charter to be paid in the event of a voluntary redemption or liquidation. The rest of the plan was not in dispute, and has already been carried out. The amount of this premium, plus expenses, was deposited in Court subject to the determination of that question. The District Court found that it would be unfair and inequitable to pay such redemption premium.

And in oral argument before the District Court in answer to the statement by Mr. Tucker, counsel for Engi-

neers, that if the District Court did not approve the plan in its entirety, it should go back to the Commission, Mr. Slater, counsel for the Commission, stated (R. 281a):

> "If your Honor please, I hesitate to do so, but we must disagree with the statement just made by Mr. Tucker. As we view this escrow, it is a two way escrow. The Commission or the preferred stockholders might appeal in the event that this Court should determine only one hundred dollars is payable. The common stockholders have indicated they would appeal if the Court agreed with the determination of the Commission. But certainly the reorganization process and equity powers of this Court can't be so inflexible that this Court can't by appropriate order approve those portions of a plan which are clearly separable and in no way impinge on the controverted portions of a plan. * * * It is just silly to upset ten-elevenths of this plan, at least that, if not ninety-nine one-hundredths, simply because there is a disagreement as to a segregated small portion in relation to the whole of what we are doing here."

That the Commission has consistently maintained this position is apparent from its petition for rehearing in the Circuit Court where the Commission stated (R. 44, note 1):

> "* * * the Commission has already contingently approved an alternative allocation of cash to preferred stockholders at the amount of the liquidation preference if as a result of the processes of review in the District Court and on appeal therefrom this should be judicially determined fair and equitable."

The District Court had before it alternative provisions of a plan to approve. It approved one of the alternative provisions.

POINT VIII

There is no merit to the contention of *Streeter, et al.* concerning the Escrow Agreement.

Petitioners Streeter, et al., contend that the escrow is unfair to the preferred stockholders in that it provided for the termination of dividends after the payment of $100 per share, and further that the escrow agreement was effectuated without notice and an opportunity to be heard.

These same contentions were advanced by these petitioners, in an application for a stay, to the District Court, the Circuit Court of Appeals and to Mr. Justice Burton of this Court, and in all cases, the applications for a stay were denied.

The contention that the preferred stockholders are entitled to their full dividend rate until a final determination as to whether or not they are entitled to the call premium is wholly without merit and would violate the "fair and equitable" standard of Section 11(e). The preferred stockholders have been paid $100 per share plus dividends to date of payment and have an interest in the escrowed premium fund with interest thereon at the rate of 4.75 per cent for the $5 preferred, 5 per cent for the $5.50 preferred and 5.45 per cent for the $6 preferred.

If this Court affirms the District Court, the escrowed fund will pass to the common stockholders; and the preferred stockholders will have been fully compensated by their receipt of $100 per share plus accrued dividends. If, on the other hand, this Court should reverse the District Court and the Court of Appeals and hold that the preferred stockholders are entitled to the premium, the preferred stockholders will receive the premium with interest calculated at a rate equivalent to the dividend yield upon the investment value of each series of preferred stock.

The contention of appellants, Streeter, et al. that they have not been afforded an opportunity to be heard on the adequacy of the Escrow Agreement is wholly without merit. Suffice it to say that all parties had a full opportunity to be heard concerning the adequacy of the Escrow Agreement at the hearing before the District Judge on February 17, 1947 and again on May 26, 1947.

It is significant that not only do the other appellants fail to advance these contentions, but in fact the Commission has strongly opposed them. Furthermore, these contentions were advanced by appellants, Streeter, et al., in an application for a stay of consummation of the plan. The application was denied by the District Court, by the Court of Appeals from the bench and by Mr. Justice Burton of this Court at the conclusion of the oral argument.

CONCLUSION

The decision of the District Court should be affirmed, and such part of the decision of the Court of Appeals as directs a remand to the Commission should be reversed.

Respectfully submitted,

LOUIS BOEHM,
Attorney for Lucille White and Frances Boehm, Common Stockholders.

LOUIS BOEHM,
RAYMOND L. WISE,
WILLIAM ESBITT,
of Counsel.

Appendix A

Pertinent provisions of the Public Utility Holding Company Act of 1935

SIMPLIFICATION OF HOLDING COMPANY SYSTEMS.

SEC. 11(a) It shall be the duty of the Commission to examine the corporate structure of every registered holding company and subsidiary company thereof, the relationships among the companies in the holding-company system of every such company and the character of the interests thereof and the properties owned or controlled thereby to determine the extent to which the corporate structure of such holding-company system and the companies therein may be simplified, unnecessary complexities therein eliminated, voting power fairly and equitably distributed among the holders of securities thereof, and the properties and business thereof confined to those necessary or appropriate to the operations of an integrated public-utility system.

(b) It shall be the duty of the Commission, as soon as practicable after January 1, 1948:

(1) To require by order after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such action as the Commission shall find necessary to limit the operations of the holding-company system of which such company is a part to a single integrated public-utility system, and to such other businesses as are reasonably incidental, or economically necessary or appropriate to the operations of such integrated public-utility system; PROVIDED, *however*, That the Commission shall permit a registered holding company to continue to control one or more additional integrated public-utility systems, if, after notice and opportunity for hearing, it finds that—

(A) Each of such additional systems cannot be operated as an independent system without the loss of substantial economies which can be secured by the retention of control by such holding company of such system;

(B) All of such additional systems are located in one State, or in adjoining States, or in a contiguous foreign country; and

(C) The continued combination of such systems under the control of such holding company is not so large (considering the state of the art and the area or region affected) as to impair the advantages of localized management, efficient operation, or the effectiveness of regulation.

The Commission may permit as reasonably incidental, or economically necessary or appropriate to the operations of one or more integrated public-utility systems the retention of an interest in any business (other than the business of a public-utility company as such) which the Commission shall find necessary or appropriate in the public interest or for the protection of investors or consumers and not detrimental to the proper functioning of such system or systems.

(2) To require by order, after notice and opportunity for hearing, that each registered holding company, and each subsidiary company thereof, shall take such steps as the Commission shall find necessary to ensure that the corporate structure or continued existence of any company in the holding-company system does not unduly or unnecessarily complicate the structure, or unfairly or inequitably distribute voting power among security holders, of such holding-company system. In carrying out the provisions of this paragraph the Commission shall require each regis-

tered holding company (and any company in the same holding-company system with such holding company) to take such action as the Commission shall find necessary in order that such holding company shall cease to be a holding company with respect to each of its subsidiary companies which itself has a subsidiary company which is a holding company. Except for the purpose of fairly and equitably distributing voting power among the security holders of such company, nothing in this paragraph shall authorize the Commission to require any change in the corporate structure or existence of any company which is not a holding company, or of any company whose principal business is that of a public-utility company.

The Commission may by order revoke or modify any order previously made under this subsection, if, after notice and opportunity for hearing, it finds that the conditions upon which the order was predicated do not exist. Any order made under this subsection shall be subject to judicial review as provided in section 24.

(c) Any order under subsection (b) shall be complied with within one year from the date of such order; but the Commission shall, upon a showing (made before or after the entry of such order) that the applicant has been or will be unable in the exercise of due diligence to comply with such order within such time, extend such time for an additional period not exceeding one year if it finds such extension necessary or appropriate in the public interest or for the protection of investors or consumers.

(d) The Commission may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce compliance with any order issued under subsection (b). In any such proceeding, the court as a court of equity may, to such extent as it

deems necessary for purposes of enforcement of such order, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction, in any such proceeding, to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer under the direction of the court the assets so possessed. In any proceeding for the enforcement of an order of the Commission issued under subsection (b), the trustee with the approval of the court shall have the power to dispose of any or all of such assets and, subject to such terms and conditions as the court may prescribe, may make such disposition in accordance with a fair and equitable reorganization plan which shall have been approved by the Commission after opportunity for hearing. Such reorganization plan may be proposed in the first instance by the Commission, or, subject to such rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization.

(c) In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and op-

portunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed.

(f) In any proceeding in a court of the United States, whether under this section or otherwise, in which a receiver or trustee is appointed for any registered holding company, or any subsidiary company thereof, the court may constitute and appoint the Commission as sole trustee or receiver, subject to the directions and orders of the court, whether or not a trustee or receiver shall theretofore have been appointed, and in any such proceeding the court shall not appoint any person other than the Commission as trustee or receiver without notifying the Commission and giving it an opportunity to be heard before making any such appointment. In no proceeding under

this section or otherwise shall the Commission be appointed as trustee or receiver without its express consent. In any such proceeding a reorganization plan for a registered holding company or any subsidiary company thereof shall not become effective unless such plan shall have been approved by the Commission after opportunity for hearing prior to its submission to the court. Notwithstanding any other provision of law, any such reorganization plan may be proposed in the first instance by the Commission or, subject to such rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization. The Commission may, by such rules and regulations or order as it may deem necessary or appropriate in the public interest or for the protection of investors or consumers, require that any or all fees, expense, and remuneration, to whomsoever paid, in connection with any reorganization, dissolution, liquidation, bankruptcy, or receivership of a registered holding company or subsidiary company thereof, in any such proceeding, shall be subject to approval by the Commission.

* * * * * * *

COURT REVIEW OF ORDERS

SEC. 24(a). Any person or party aggrieved by an order issued by the Commission under this title may obtain a review of such order in the Circuit Court of Appeals of the United States within any circuit wherein such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the entry of such order, a written petition praying that the

order of the Commission be modified or set aside in whole or in part. A copy of such petition shall be forthwith served upon any member of the Commission, or upon any officer thereof designated by the Commission for that purpose, and thereupon the Commission shall certify and file in the Court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such Court shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part. No objection to the order of the Commission shall be considered by the Court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do. The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which, if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such order of the Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

Appendix B

Excerpts from the Certificate of Incorporation of Engineers Public Service Company

The Certificate of Incorporation of Engineers provided in pertinent part as follows:

"11. *Preference on Liquidation etc.*[1] In the event of any liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock resulting in any distribution of its assets to its stockholders, the holders of the preferred stock of each series shall be entitled to receive, for each share thereof, an amount equal to $100, together with all dividends accrued or in arrears thereon, plus, in case such liquidation, dissolution or winding up or reduction shall have been voluntary, the fixed redemption premium for such series, if any, before any distribution of the assets shall be made to the holders of the common stock; but the holders of the preferred stock shall be entitled to no further participation in such distribution. * * *"

"IV. *Redemption and Repurchase.*[2] The Corporation may, at its option, at any time or from time to time redeem the whole or any part of the preferred stock or of any series thereof, at a price for each share thereof equal to $100, plus the fixed redemption premium therefor, if any, together with the amount of any dividends accrued or in arrears thereof. * * *"[3]

[1] Engineers' Ex. No. 33, R. 1412a.

[2] Engineers' Ex. No. 33, R. 1413a.

[3] By resolutions of the Board of Directors, the fixed redemption premium of the $5 series was fixed at $10 per share for shares redeemed on or before June 30, 1938, and $5 per share for shares redeemed thereafter (R. 1428a). The fixed redemption premiums of the $5.50 and $6 series was fixed at $10 per share (R. 1430a-1431a).

"This Corporation may also from time to time repurchase shares of its preferred stock at not exceeding the price or prices at which the same may be redeemed. * * *"

* * * * * * *

"DIVISION B—THE COMMON STOCK[1]

II. *Distribution of Assets.* In the event of any liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock, resulting in any distribution of its assets to its stockholders, after there shall have been paid to or set aside for the holders of the preferred stock the full preferential amounts to which they are respectively entitled under the provisions of Paragraph III of Division A of this Article Fourth, the holders of the common stock shall be entitled to receive, *pro rata*, all of the remaining assets of this Corporation available for distribution to its stockholders."

I. PETITIONERS' EFFORTS TO CONVEY THE INFERENCE THAT THE INSTANT LIQUIDATION OF ENGINEERS (A) WAS THE VOLUNTARY ACT OF A "COMMON STOCKHOLDER CONTROLLED MANAGEMENT", AND (B) WAS PROPOSED IN ORDER TO FAVOR THE COMMON STOCKHOLDERS OVER THE PREFERRED, FIND NO SUPPORT IN THE RECORD, BUT ARE IN FACT REFUTED BY THE RECORD AND THE FINDINGS OF THE COURTS AND THE COMMISSION 2

A. Engineers was compelled by the Act and the Commission's orders to retire the preferred stocks and to liquidate 3

B. The record conclusively refutes petitioners' suggestions that the plan was formulated in order to favor the common stockholders over the preferred 7

II. PETITIONERS' CONTENTIONS THAT THE "VALUES" OF THE PREFERRED STOCKS AS DETERMINED BY THE COMMISSION WERE "ADMITTED BY THE COMPANY AND UPHELD BY THE COURTS" ARE NOT ONLY REFUTED BY THE RECORD, BUT THE COMMISSION CONCEDES THAT IT RELIED ON AN "ESTIMATE" OF STOCK MARKET PRICES AS OF A HAPHAZARD MOMENT 20

III. PETITIONERS' CONTENTIONS AS TO THE IRRELEVANCE OF THE RETAINED EARNINGS OF THE COMMON STOCKHOLDERS, PAST MARKET HISTORY OF THE PREFERREDS AND THE LOSSES SUSTAINED ON DIVESTMENTS, ARE ERRONEOUS AND IN CONFLICT WITH THE RECORD 28

A. Contentions as to the earnings of the common stockholders retained to provide for the compulsory liquidation 28

B. Contentions respecting losses on divestments 35

C. Contentions as to past market and dividend history of the preferred stocks 47

IV. PETITIONERS' ATTEMPTED EVASION OF THE LONG AND UNBROKEN LINE OF DECISIONS ESTABLISHING THAT THE "FAIR AND EQUITABLE" STANDARD INTERDICTS PAYMENT OF PREMIUMS IN A DISSOLUTION COMPELLED BY THE ACT, CANNOT WITHSTAND EXAMINATION 50

V. PETITIONERS DISTORT THE LANGUAGE AND REASONING OF THIS COURT IN THE *OTIS* CASE 59

VI. THE POWERS OF THE DISTRICT COURT TO DEAL WITH A SECTION 11(e) PLAN ARE CLEARLY BROADER THAN THE REVIEW POWERS OF THE COURT OF APPEALS UNDER SECTION 24(a); THE DISTRICT COURT HERE DID NOT EXCEED ITS POWERS 71

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT

ANSWERING BRIEF OF CENTRAL-ILLINOIS SECURITIES CORPORATION AND CHRISTIAN A. JOHNSON, RESPONDENTS-PETITIONERS

I. PETITIONERS' EFFORTS TO CONVEY THE INFERENCE THAT THE INSTANT LIQUIDATION OF ENGINEERS (A) WAS THE VOLUNTARY ACT OF A "COMMON STOCKHOLDER CONTROLLED MANAGEMENT", AND (B) WAS PROPOSED IN ORDER TO FAVOR THE COMMON STOCKHOLDERS OVER THE PREFERRED, FIND NO SUPPORT IN THE RECORD, BUT ARE IN FACT REFUTED BY THE RECORD AND THE FINDINGS OF THE COURTS AND THE COMMISSION.

In their main briefs, petitioners have, in plain defiance of the record and the findings of the Commission and both Courts below, presented an inaccurate statement of the facts from which the legal issues in this controversy have arisen.

Petitioners have sought by inference and innuendo, not always subtle,[1] to convey the impression that Engineers' plan of liquidation was voluntarily instigated by a management dominated by common stockholder interests, and was contrived primarily for the purpose of removing the preferred stockholders from "the enterprise" in a manner advantageous to the common stockholders. These contentions, and many others of similar import, rest on nothing more substantial than petitioners'

---

[1] See, for example, statement in Brief for Thomas W. Streeter, p. 122:

> "The preferreds were unable to secure this participation due to the fixed attitude of the common which sought at the same time to eliminate the preferreds at a bargain price and keep for the common stockholders all the benefits of the flourishing underlying companies, using the Act as a cloak to accomplish their true objective."

Although the Brief for the Securities and Exchange Commission is somewhat more guarded, it contains a number of statements designed to convey a similar inference. Some of these are discussed *infra*.

imaginations, stimulated by advocates' zeal and motivation. They are devoid of all support in the findings of both Courts, as well as in those of the Commission; and, in fact, are affirmatively refuted by all three.

Indeed, the principal significance of these contentions is the plain demonstration they afford that petitioners deem it inadvisable to rest on the findings and opinion of the Commission in arguing their case here; and that they find it necessary, at this late date to supplement and revise the Commission's findings in an effort to counteract the decisions of the Courts below.

A. Engineers was compelled by the Act and the Commission's orders to retire the preferred stocks and to liquidate.

As we have shown in our main brief (pp. 38-44), the Commission and both Courts below found that, notwithstanding the fact that Engineers' plan was filed under Section 11(e) as a so-called plan of "voluntary" compliance, the dissolution therein proposed resulted solely from the impact of Section 11 of the Act and the Commission's orders thereunder, and was therefore truly involuntary. This accords with a long line of Commission and Court decisions.[1] However, petitioner Streeter argues that the "management and its counsel have consistently urged that the Act did not require the termination of the company's existence", and that "there is no order under 11(b)(2) requiring the liquidation of Engineers."[2] But what Streeter neglects to state is that

[1] See cases cited at note 4, p. 55, and note 2, p. 38 of our Main Brief.

[2] Streeter Brief, pp. 101-2.

the company's contention that complete liquidation of Engineers was not a certainty was advanced in 1943 when Engineers was contesting in the Courts the constitutionality of Section 11 and the validity of the Commission's divestment orders thereunder. When those issues were decided adversely to Engineers' contentions, the management perforce recognized that there was no escape from the fact that Engineers and its entire system must be dissolved wholly and definitively.[1] The Commission had repeatedly held that a holding company devoid of economic justification is offensive to the standards of Section 11(b)(2) and must be dissolved,[2] and the Commission explictly concluded in this case that after Engineers disposed of El Paso and Gulf States as required by the Commission's orders under Section 11(b)(1), the company's continued existence would come within the prohibition of Section 11(b)(2): "Accordingly we find that

---

[1] While Engineers' appeal was pending undecided before this Court (see our Main Brief, p. 6, note 1) the Court upheld the constitutionality of Section 11(b)(1) of the Act in *North American Co.* v. *S. E. C.*, 327 U. S. 686, and of Section 11(b)(2) in *American Power & Light Co.* v. *S. E. C.*, 329 U. S. 90.

Engineers' inability to obtain a reversal of the decision of the Court of Appeals for the District of Columbia, made necessary disposition of all its subsidiaries other than Virginia. Even to a late date in the proceedings respecting the plan, the management continued to hope for a decision which would permit Engineers to remain in existence (R. 808a). But when it became certain that only Virginia could be retained, it was clear that in such circumstances the Act commanded Engineers' dissolution (R. 675a-676a).

[2] See cases cited in our Main Brief, p. 7, note 1.

the proposal to dissolve Engineers is 'necessary' to effectuate the provisions of Section 11(b) of the Act" (R. 48a).[1]

However, even apart from the necessity of complete dissolution, it is indisputable that the divestments which Engineers had already made by 1943 in compliance with the Commission's orders necessitated the retirement of the preferred stocks in order to comply with the provisions of Section 11(b)(2) of the Act. In its opinion in *The Western Public Service Company*, 12 S. E. C. 804, 808 (1943) the Commission admonished Engineers to file "a comprehensive plan", including provision for "the readjustment of the capital structure of Engineers to conform to the revised scope of its operations". In similar situations the Commission has repeatedly held that such "readjustment" requires the complete elimination of all senior securities from the capital structure of the holding company,[2] and that holders of senior securities thus retired under the impact of the Act may not, in consonance with the "fair and equitable standard", receive cash payment of more

---

[1] See also further finding quoted at p. 10, note 1, of our Main Brief.

Cf. concurring opinion of Commissioner Caffrey (R. 139a-140a):

> "I think that Engineers would have been subject to such a proceeding [mandatory dissolution] had it not come forth with a voluntary plan. Engineers' 'voluntary' proposal did no more than forestall the necessity for action by the Commission. * * * "

Cf. also discussion in *American Power & Light Co.* v. *S. E. C.*, 329 U. S. 90, 119-120, as to the propriety of the Commission's deferring entry of a mandatory order if the company tenders compliance with the statutory requirements by filing a bona fide plan under Section 11(e); and see special opinion of Mr. Justice Rutledge at pp. 123-124 concerning the Congressional intent with respect to encouraging the filing of Section 11(e) plans in preference to issuance of mandatory dissolution orders.

[2] See cases cited in our Main Brief, p. 43, note 2.

than the face amount of their securities.[1] In the light of these facts, it is evident that Streeter's contentions are wholly devoid of merit, and, as the Commission's opinion

[1] Thus, in its decision in *Cities Service Power & Light Corporation* (Holding Company Act Release No. 4944), the Commission held the "fair and equitable" standard interdicted payment of premiums upon retirement of debentures bearing an interest rate of 5½%, and three issues of preferred stock carrying dividend rates of $5, $6 and $7 respectively, even though the holding company was permitted to continue in curtailed form. The Commission stated (pp. 15 et seq.):

> "In *The United Light and Power Company, supra*, and in *North American Light and Power Company*, we concluded that similar provisions for payment of redemption premiums were inapplicable when retirement of the securities involved was made necessary by the requirements of Section 11(b). We held that satisfaction of the securities there involved, without payment of redemption premium, was fair and equitable, and in both cases our decision was affirmed on appeal. See also *The United Light and Power Company*, — S. E. C. — (1943), Holding Company Act Release No. 4215, enforced *In re The United Light and Power Co.*, 51 F. Supp. 217 (D. C. Del., 1943), Court order appealed by Otis & Co., Intervenor, to the U. S. Circuit Court of Appeals for the Third Circuit; *North Continent Utilities Corporation*, — S. E. C. — (1943), Holding Company Act Release No. 4686, enforced *In re North Continent Utilities Corp.*, — F. Supp. — (D. C. Del., 1944).
>
> "In each of the cases cited above we had entered an order that the issuer of the securities involved must be liquidated and dissolved by reason of the requirements of Section 11(b). No such order, however, had been entered in *Consolidated Electric and Gas Company*, — S. E. C. — (1944), Holding Company Act Release No. 4900. In prior findings in that proceeding we had found that disposition by Consolidated of its interest in a major subsidiary thereof was necessary to effectuate the provisions of Section 11; that compliance with Section 11(b) would involve substantially complete liquidation of that portion of the enterprise on which the Federated bonds (theretofore assumed and presently proposed to be paid by Consolidated) had a lien; that application of the proceeds of such sale to the retirement of bonds was a necessary consequence of the sale; and that simplification of the security structure of Consolidated by elimination of the Federated bonds was necessary to effectuate the provisions of Section 11(b)(2). In these circumstances,

and brief state, the "liquidation was caused by the Act and is in that sense 'involuntary' ".[1]

B. The record conclusively refutes petitioners' suggestions that the plan was formulated in order to favor the common stockholders over the preferred.

Commission Counsel, although conceding that Engineers' liquidation was compelled by the statute and there-

---

we concluded that payment of the Federated bonds at their principal amount and accrued interest, as provided in the plan of Consolidated, was fair and equitable to the investors affected thereby.

"In the instant case, we have heretofore found, pursuant to Section 11(b)(1), that Power & Light must dispose of its interest in subsidiaries which then constituted over 55% of the consolidated assets of the Power & Light system. Originally controlling a widely scattered empire, Power & Light will be limited by the compulsory provisions of Section 11 to its Ohio properties. As stated above, elimination of all senior securities from the corporate structure of Power & Light is a necessary consequence of such partial liquidation, and is compelled by the provisions of Section 11(b)(2). Over $22,000,000 of the cash that Power & Light proposes to use in paying off its debentures and preferred stock consists of proceeds from the sale of its interests in three subsidiaries, disposed of as part of its program of compliance with Section 11 and our orders thereunder.

"This proceeding differs from those cited above in that a part of the money required to retire the publicly held senior securities is being raised by issuing and selling Notes to banks. We have considered the possibility that payment of premiums should be required on that portion of the publicly held debentures and preferred stock that is being so refunded. We have decided, however, that the distinction is not one of substance. Section 11 compels and the Plan proposes complete elimination of Power & Light's senior securities. Within the limits of this overall compulsion, Power & Light has some freedom of choice as to procedure and timing. We find below that the proposed Notes, which are expected to be of short duration, are an appropriate device for facilitating the required elimination of Power & Light's senior securities, and we do not believe the use of that method rather than some other makes the proposed retirement of any of its senior securities optional or voluntary." (Footnote references omitted.)

[1] S. E. C. Brief, p. 11.

fore was not voluntary, suggest in their brief that the particular form which that liquidation took—i.e., payment of cash to the preferred stockholders rather than an allocation of underlying securities—was chosen by a management "controlled by common stockholders" (p. 5) because it was regarded as "advantageous from the point of view of the common stockholders" (p. 23). Indeed, state Commission's Counsel, so "advantageous" did the management feel this form of plan to be that it was determined "to go forward with the plan irrespective of how that issue [the premiums] might be ultimately determined" (p. 7).[1] Both statements convey unwarranted and misleading implications, and are wholly inaccurate.

(1) To begin with, it must be pointed out that the record references set forth in support of the statement at page 7 and the related footnote at page 11 of the Commission's brief (R. 719a, 723a, 807a), do not in any way support the quoted statement. Examination of the cited pages discloses that in each instance a witness for the management testified that Engineers' board of directors considered it proper and appropriate to provide for the retirement of the preferred stocks by cash payment in the amount of the liquidating preference, and distribution of the residual assets to the common stockholders in dissolution. It was repeatedly testified by the company's officers that such a program was the one which the board of directors, with the exception of Streeter, felt was dictated

[1] This suggestion is reiterated in even stronger language at page 11, note 8, where it is stated: "The management has made it clear that they regarded the plan as desirable from the point of view of the common stockholders whether or not it should be held necessary to pay the preferred amounts equal to their voluntary liquidation preferences and redemption prices."

by the requirement of according the *preferred* holders fair and equitable treatment, without becoming involved in the uncertainties incident to a "one stock" plan.[1] Moreover, the company's president, who is shown by the record to have been a straightforward and candid witness, squarely testified that the common stockholder interests had expressed no desire to receive the stocks of the three underlying companies. He stated (R. 644a):

> "Q. (By Commission Counsel): But in any of your discussions with the large stockholders did they show any preference to retaining their interests in these three operating companies I have just mentioned?
>
> A. No, they did not. That question has never been suggested to me, and until you indicated by your line of questioning of Mr. Benjamin that you thought our policy in this matter may have been

---

[1] Thus, Barnes, president of Engineers, testified (R. 631a):

> "On September 5, 1945, a meeting of the Board was held to authorize the filing of the present plan [providing for payment to the preferred of $100 plus accrued dividends]. At that meeting I called on each director individually to express his opinion, which they did. I do not recall now the particular points made by each director, but I do recall the statements made by Judge Wilson in substantially these words: 'The purpose for which the company was organized has been frustrated by the Holding Company Act and hence the fair thing to do is to return to the preferred stockholders the money which they put into the enterprise.'
>
> The other statements were all favorable to the approval of the plan, with the single exception of Mr. Streeter."

See, also, testimony of Benjamin (R. 724a) that the Board felt that the preferred stockholders were entitled to receive cash payment of their charter liquidating preference, "and that the common stockholders should forego any dividends until the obligation to the preferred stockholders had been satisfied"; and see his further testimony that the Board felt that paying the preferred stockholders in cash was "the clearest way" of meeting the obligation to them, without involving them in "a determination of factors now which may vary considerably in the future" (R. 714a).

> influenced by what you described as the Stone & Webster interests, it was the first time that that thought had ever been put into my mind and I can assure you that I don't think there is any substance in it in fact."

And after Commission Counsel disavowed any intention of making such an intimation (R. 644a-645-a), Barnes stated:

> "I want to make it perfectly clear, definite and emphatic that there isn't anything to the implication that might be carried by that line of questioning" (R. 645a).

As support for the proposition that "the management regarded this type of plan rather than an allocation plan as advantageous from the point of view of the common stockholders",[1] we are referred to the same record citations discussed above (*supra*) in connection with the statement appearing at page 7 and note 8, page 11 of the same brief.

These record references no more support this statement than they did the earlier one. In each of the statements referred to, Benjamin (Secretary of Engineers) stated that the board of directors recognized that the retirement of the preferred stocks might have been accomplished by allocating to the preferred stockholders stock in some of the subsidiary companies; but far from stating that this was not done because it would have been disadvantageous to the common stockholders, Benjamin affirmed that the Board felt such an allocation plan would be complicated and uncertain, and "would require a determination of factors now which may vary considerably in the future. * * * The Board wanted to give the pre-

[1] S. E. C. Brief, p. 23.

ferred stockholders the amount to which they were entitled, and they thought the clearest way of doing it was the plans that they had favored".[1]

(2) The suggestion that the Board might have felt that an allocation plan was apt to prove disadvantageous to the common stockholders is ironical in the light of the fact that, as we have plainly shown,[2] in the various allocation plans which have been consummated under Section 11(e) on a "going-concern basis" the senior security holders have received, in terms of current cash values, amounts far below their charter liquidation preferences. It is universally recognized that such allocation plans tend to favor the interests of the common stockholders, not of the preferred. Cf. *Otis & Co.* v. *S. E. C.*, 323 U. S. 624. However, such allocation plans generally involve very protracted proceedings, and on a number of occasions such plans have had to be brought back from the Courts for revision before the Commission because changed earnings figures and other material changes rendered them unfair or unworkable.[3] At a later point in their brief, Commission Counsel themselves assert the "unavoidable drawback" involved in the valuation

---

[1] Benjamin further testified (R. 714a):

"It was not my understanding that they were seeking to avoid the responsibility or the work involved or the expense of making such calculations. My understanding of their feeling is that they felt that such calculations were necessarily uncertain because of the unknown factors which exist in any situation."

[2] See our Main Brief, pp. 89-90, 100-102.

[3] See *Northern States Power Company*, Holding Company Act Release No. 7950 at p. 6; *Standard Gas and Electric Company*, 63 F. Supp. 876; *Commonwealth & Southern Corp.*, Holding Company Act Release No. 8633, at p. 5; American & Foreign Power Company, New York Times, January 2, 1949, p. f-1, col. 6.

technique employed in one-stock plans which follow the principles of the *Otis* case.[1] Yet they do not hesitate to asperse Engineers' avowed desire to avoid that "unavoidable drawback", or to imply, improperly and incorrectly, that the management in fact avowed a completely different purpose. We have previously demonstrated (Main Brief, pp. 98 et seq.) how much less favorably the preferred would have fared under an allocation plan under the *Otis* formula.

In similar manner, counsel for the Commission suggest that Engineers' management at one time contemplated "a merger or consolidation", and point out that Engineers' charter provided that a merger or consolidation "should not be regarded as a liquidation, dissolution or winding up for the purposes of the paragraphs defining liquidation preferences".[2] Again the implication is that the management believed the preferred stockholders might receive more than the proposed payment of $100 per share plus dividends if the merger procedure were followed. Streeter's Counsel make explicit the suggestion which is implicit in the statement of Commission Counsel.[3] The implication is false, as the record plainly establishes. It was testified that Engineers' management had merely given consideration to the possibility that, *after* disposing of El Paso and Gulf States, Engineers might be merged with Virginia, its one remaining subsidiary, if tax ad-

---

[1] S. E. C. Brief, p. 45, note 30.

[2] S. E. C. Brief, p. 78, note 46.

[3] See Streeter Brief, p. 102: "There are many ways Engineers could have chosen to comply with the Commission's divestment orders. The merger method which was an alternative originally under the plan was scrapped because of the appraisal requirements of state law."

vantages might thereby result. This possibility was abandoned because it was ascertained that no substantial tax advantages would be realized, and because the staff of the Commission urged that dissolution of Engineers itself should be effected.[1]

It scarcely needs to be pointed out that if in fact a management wished to find a way of "short-changing" the preferred stockholders,[2] the merger technique is the classic device for accomplishing that objective.[3] The cases establish that in appraisal proceedings incident to merger, the Engineers preferred stockholders would have been very fortunate if they obtained an award even approaching $100 per share.[4] And the provision in Engineers' charter

---

[1] R. 651a-653a; Barnes testified (R. 653a):

"Q. Then would you say the over-riding weight, then [for abandonment of the 'merger' possibility] was the change in tax circumstances? A. I think so. That, and to meet the ideas of the staff and the Commission."

And Benjamin testified (R. 589a):

"You speak of Engineers continuing as a going concern. Even under the merger alternative there was no continuance of the business of Engineers. It is possible that it would have been merged with Virginia but there was no business of Engineers left. The business of Engineers as a public utility holding company would certainly disappear even under the merger alternative."

[2] Statement of Commission Counsel before the District Court, R. 255a.

[3] See observations by Judge Leahy to this effect in his opinion, *In re United Light & Power Co.*, 51 F. Supp. 217, 223. Cf. *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 637.

[4] It is well settled, for example, that existing market prices are not controlling (*Chicago Corp.* v. *Munds*, 20 Del. Ch. 142, 172 Atl. 452) particularly in a case such as this where the market prices reflected such extrinsic factors as Engineers' concentrated market purchases.

Our research has disclosed only *one instance* in which preferred stockholders were awarded more than the par value plus accrued dividends in an appraisal proceeding. That award was promptly

to which Commission Counsel referred, was obviously intended to *prevent* the preferred holders from receiving as much as their liquidation preference in the event of a merger, not to make possible enhancement of their claims in excess thereof.[1]

This specious "merger" issue raised by petitioners demonstrates once again the vice of their reliance upon a fictional approach to the issues here under consideration. Whatever form was adopted, the plan would have had to accomplish the statutory command for the retirement of the preferred stocks, and the effective dis-

---

reduced to $100 per share by the New York Court of Appeals in the leading case of *Matter of Fulton*, 257 N. Y. 487. The Court held that the preferred stockholders, in the absence of a charter liquidation preference, should be limited to the amount originally paid for their stock, and should be denied the right to share in the corporation's accumulated surplus, all of which was held to belong to the common stockholders. See also *American General Corp.* v. *Camp*, 190 Atl. 225, where it was squarely held that premiums are not payable in appraisal proceedings. This decision was cited with approval by the Commission in *United Light & Power Co.*, 10 S. E. C. 1215, 1226.

See also: *Root* v. *New York Corporation*, 50 A. (2d) 52 (Del. Ch. 1946), in which preferred stockholders having claimed approximately $200 per share (including redemption premiums), the appraiser's award of $90 per share was upheld by the Chancellor; and in the decision of the Delaware Court of Chancery in *Re General Realty & Utilities Corp.* (52 A. 2d 6 [March, 1947]) the Chancellor allowed $108 per share against a claim of $172 (par plus dividend arrears), stating: "* * * the dreary earning and non-dividend record of this corporation cannot be minimized in valuing the shares as stock in a going concern."

[1] See Engineers' Ex. 33, R. 1413a. It will be noted that it is there provided that a consolidation or merger shall not be regarded as a "liquidation, dissolution or winding-up" within the meaning of the paragraph entitling the preferred holders to their liquidation preferences *"provided such consolidation or merger does not substantially impair the rights and preferences of the preferred stocks"*. It is thus plain that in a merger the preferred stockholders could not claim their liquidation preferences unless they could show their rights and preferences had been impaired. Only if they were successful in such a showing could they *receive* the liquidation preference.

solution of Engineers and what remained of its system. As the *Otis* decision teaches, it is less important in what form the plan is clothed than it is to ascertain what it accomplishes. In that case, this Court and the Courts below all stated in effect: You may call your plan a liquidation, but if it accomplishes essentially a mere stock reclassification incident to simplification of a continuing holding company system, we will not apply charter liquidation rights.[1] Similarly, it avails nothing to refer to the Engineers' plan as "a might have been merger", when, in fact, as well as in form, the plan accomplished the complete, authentic and final dissolution of the entire holding company enterprise which the statute commanded. It is this *substantive reality* which must be the controlling factor, and this substantive reality cannot be obscured by specious fictional arguments of the type above discussed.

Equally specious are the suggestions that the preferred stockholders were unfairly treated in being required to accept full payment of their claim in cash, and that they were unable to secure participation "in the flourishing

---

[1] Thus, Judge Leahy, in approving and enforcing the United Light plan, stated:

> "* * * the Commission has caught the nuance in the present situation. There is no real finality to this particular dissolution. * * * the interests of all classes of stock are nevertheless still lodged in a continuing enterprise. * * *
>
> "It is neither an exercise in semantics nor a rejection of labels to consider the present plan little more than a reclassification. If it had donned the formal dress of reclassification by way of merger, the preferred may have been met with the issuance of a new stock with a reduced dividend rate and a wiping out of its dividend arrearage claim. * * *" (*In re United Light & Power Co.*, 51 F. Supp. 217, 223.)

Cf. *Otis & Co. v. S. E. C.*, 323 U. S. 624, 637.

underlying operating companies". The common stocks of the two operating companies distributed in the liquidation, as well as the stock of Gulf States (sold to the common stockholders for $22,000,000 through the warrants technique) were immediately made available for purchase on the leading stock exchanges; and a large volume of trading forthwith ensued.[1] Any preferred stockholder desiring to exchange the $100 per share in hard cash received by him for a participation in the "future growth possibilities" of the distributed operating companies could freely do so at "bargain prices".[2] He may do so today at

---

[1] See our Main Brief, p. 41, note 2; p. 101, note 3.

[2] As we have shown in our Main Brief (p. 118, note 1) the common stocks of the operating companies distributed by Engineers were priced by the market at approximately 8 times their then current annual earnings, and are presently selling, on the average, for approximately 5% less. It may be noted that Badger assumed that they would sell for 15 times annual earnings (Engineers' Ex. No. 29, R. 2072a).

For the $100 in cash received for each share of preferred stock, the former Engineers' preferred stockholder was enabled to purchase shares of the underlying companies *earning $12.50 per annum, as compared with $5.40 average dividend rate formerly received on the preferred stock.* To be sure, the two amounts are not strictly comparable since one represents income from a holding company preferred stock, and the other from the underlying common stock. But the amount allowed by the Commission in allocation plans for such "loss of position" has generally been in the neighborhood of approximately 25%. Thus, the holders of 5% preferred stock of Washington Railway and Electric Company having investment characteristics far superior to those of the Engineers' preferreds (consolidated fixed charges and preferred dividends covered from 2.22 times to 2.96 times over previous eight years, as compared to 1.3 times in the case of the Engineers' preferreds) were held to have received fair and equitable treatment in the form of underlying securities (principally but not entirely, common stock) having an estimated earning power ranging from $6.05 to $6.69 per share of preferred (Washington Railway and Electric Company, Holding Company Act Release No. 7410, p. 26).

Similarly, the holders of well secured 7% preferred stock of Northern States Power Company of Delaware (entitled not only to dividends of $7 per year, but to accumulated arrears of $6.50 per

even lower prices.[1]

The experience of the Commission and the Courts with allocation plans conclusively establishes that senior security holders invariably strongly desire payment of their claims in cash in accordance with the provisions of their charters or indentures, and protest vigorously against an attempt to pay them out in portfolio securities. Cf. *In re Standard Gas & Electric Company*, 59 F. Supp. 274, rev'd 151 F. 2d 326 (C. C. A. 3), *cert. den.* 327 U. S. 796; *In the Matter of Community Gas & Power Company*, 71 F. Supp. 171, aff'd 168 F. 2d 740 (C. C. A. 3), *cert. den. sub. nom. Vanneck* v. *S. E. C.*, 334 U. S. 846. It cannot be doubted that similar vigorous protests would have been forthcoming from the preferred stockholders if Engineers had proposed an allocation of underlying common stocks instead of full payment of their contract claim in cash. It is understandable, however, that petitioners should now seek to imply otherwise, in an effort to justify their demand for an even larger cash payment.

(3) Not only do both the record and the Commission's findings contain nothing to support Commission Counsel's suggestion that the management favored the common stockholders over the preferred, but both the record and

---

share) were held to have been accorded fair and equitable treatment when they received common stock of the underlying operating company having an estimated earning power of $8.60 per share of preferred (Northern States Power Company, Holding Company Act Release No. 7950, p. 37).

There has never been an allocation plan in the history of the Commission in which senior security holders were held entitled to anything approaching the $12.50 per share of operating company earnings which the Engineers' preferred holders were enabled to acquire in exchange for their former $5.40 dividend rate.

[1] Cf. our Main Brief, p. 101, note 3.

the conduct of the management suggest unequivocally that in fact no such favor was intended or produced. In the first place, the record establishes that the more substantial common stockholders were also among the largest holders of the various classes of preferred stocks [1] and that in some instances their direct financial interests would have been more substantially benefitted by the payment of premiums than by their non-payment.[2] In the light of these facts there is small reason to suppose, as Commission Counsel imply, that the management of Engineers would

---

[1] The briefs of Streeter (p. 6) and the Commission (p. 72, n. 43) state that 338 stockholders own some 70% of the common stock, but it is not pointed out that these are *record* owners, among whom are some of the largest brokerage and investment houses in the financial community (see Exs. 43-45, R. 1769a-1770a). These record owners are merely nominees for many individual beneficiaries, and the record establishes (R. 572a, 821a) that there is no way of knowing how many beneficial owners are represented by such record ownership. In any event, it will be noted that Pratt Brothers (the largest record owner of common stock (Engineers' Ex. 43, R. 1769a) is also listed as one of the largest owners of each of the three series of preferred stock (Engineers' Exs. 40-42, R. 1761a-1768a); Brown Bros. Harriman & Co., listed as a large common stockholder, is also one of the largest owners of all three series of preferred, (Engineers' Ex. 44, R. 1772a); J. M. Forbes & Co., one of the large common stockholders, was the largest single owner of the $5.50 preferred (Engineers' Ex. 41, R. 1763a); Edwin S. Webster, Frank Jay Gould, and Brown Bros. Harriman, all large common stockholders, were the three largest holders of $5 preferred (Engineers' Ex. 42, R. 1766a). Many similar correlations will be observed.

[2] Thus, Brown Bros. Harriman & Co. owned a total of 4,557 shares of common stock, and 8,129 shares of the preferred of the various series (Engineers' Ex. 44, R. 1772a). The $3,200,000 representing the aggregate of premiums on the preferred was equivalent to approximately $1.70 per share of common stock, or a total of approximately $7,750 on the common shares owned by this stockholder; total premiums on the preferred shares owned by it would have aggregated approximately $66,500.

Similarly, J. M. Forbes & Co. (alleged to be affiliated with "the Stone & Webster interests", R. 568a) owned 19,131 shares of common, 10,295 shares of $5.50 preferred and 340 shares of $5 preferred. Payment of premiums on the preferred would have resulted in pay-

treat lightly, much less ignore, the valid claims of the preferred stockholders in the distribution of the Company's assets on liquidation.

Moreover, the conduct of the management in this proceeding discloses an attitude of complete impartiality as between the two classes of stockholders. Its failure to dispute the Commission's order in the Courts hardly reflects that bias in favor of the common stockholders which Commission Counsel seek to impute.[1] And the fact that respondents, who have been forced to shoulder the burden of this litigation, were successful in both Courts below, suggests that the issues in this case were not so plainly foreclosed that a management more favorably inclined to the views of the common stockholders would not have felt justified in assuming the burden of asserting these claims.

---

ment to this stockholder of more than $100,000, whereas non-payment would result in receipt of approximately $32,500.

Similar results are shown for the holding of Amoskeag Corp., C. A. England & Co. and Sigler & Co. In the case of other large common stockholders such as Edwin S. Webster and Frank Jay Gould, although the balance is in favor of non-payment of premiums, the difference is relatively inconsequential when allowance is made for the premiums they would have received on their preferred holdings (Engineers' Ex. 40, R. 1772a *et seq.*).

[1] Engineers notified its stockholders that it did not feel warranted in contesting further the payment of the premiums to the preferred stockholders, on the advice of counsel that "courts are reluctant to override such findings by administrative Commissions" (R. 1937a). That this advice of counsel was predicated solely on his views as to the difficulties of obtaining judicial relief, and not upon any changed view as to the unfairness of the Commission's determination, is established by the record (R. 1957a-1959a).

II. PETITIONERS' CONTENTIONS THAT THE "VALUES" OF THE PREFERRED STOCKS AS DETERMINED BY THE COMMISSION WERE "ADMITTED BY THE COMPANY AND UPHELD BY THE COURTS" ARE NOT ONLY REFUTED BY THE RECORD, BUT THE COMMISSION CONCEDES THAT IT RELIED ON AN "ESTIMATE" OF STOCK MARKET PRICES AS OF A HAPHAZARD MOMENT.

(1) Throughout petitioners' briefs runs the constant refrain that "the Commission determined in accordance with the *undisputed testimony* that the current worth of the preferred, or its 'investment value' on a going concern basis, was at least equal to the respective call prices." [1] We believe we have adequately demonstrated in our main brief (pp. 11-15, 73-86) how mistaken and misleading are such contentions. The representatives of the company stated emphatically and repeatedly that the redemption prices *did not* represent the "investment value" or "fair value" of the preferred stocks on a going-concern basis.[2] The fact that the Commission chose wholly to ignore this testimony in its opinion does not accord petitioners the privilege of denying its existence in their briefs before this Court.

What is even more surprising, however, are the following statements in the Commission's brief (p. 18):

> "* * * both courts below likewise upheld the Commission's determination that the value of the preferred stocks on a going concern basis was at least equal to the amount of the redemption prices.
>
> * * * * * *

[1] S. E. C. Brief, pp. 10, 28. Cf. Streeter Brief, p. 109.

[2] See testimony referred to in our Main Brief, pp. 82-3; and see statement of Engineers' Counsel quoted at p. 82, note 1.

The Commission's findings of present value, which the courts below accepted * * *."

Our examination of the opinion of the Court of Appeals discloses no such "acceptance". On the contrary, we find that Court stated (R. 38):

> "The difficulty in sustaining the Commission's position in respect to 'investment value', *even insofar as the Commission has applied that value*, lies in the fact that investment value is and can be only one of a series of factors to be used in arriving at equitable equivalents. We conceive that the Commission could make a finding under certain circumstances that investment value was the equitable equivalent to the security holder. The Commission in the instant case, however, has not made such a finding *and we do not believe that such a finding could be supported on the present record.*" (Emphasis supplied.)

Further evidence that the Court of Appeals did *not* either "accept" or "uphold" the Commission's findings as to values is its statement (R. 19):

> "The trial judge also made a *cogent finding* respecting Dr. Badger's use of interest rates as an aid in fixing values for the preferred *deeming the interest rate used by the latter to be too low.* This finding is set out in the margin." (Emphasis supplied).[1]

[1] Petitioners have made oblique attacks (see S. E. C. brief, p. 14, note 12; Home Insurance Company brief, p. 7, note 1) on the findings of the District Court by reason of the fact that a draft of proposed findings was submitted by respondents to the District Court at its request, in accordance with the customary practice of trial courts and other fact-finding tribunals. We make no comment with respect to these wholly unwarranted attacks, other than to point out that the record establishes that the findings as issued by the Court were not in the form submitted by respondents, having been extensively revised by the Court following their submission (R.

The District Court's finding which the Court of Appeals quoted in its opinion (R. 19, note 9) in turn demonstrated how far the District Court was from "upholding" the Commission's determination that "the value of the preferred stocks on a going concern basis was at least eqtual to the redemption prices". In its opinion, the District Court indicated that it was willing to assume the "values" contended for by Badger because it deemed them irrelevant in the light of the fact that such "values" necessarily reflected elements attributable solely to the liquidation, such as "the retained earnings over a period of years not paid as dividends to the common stockholders" (R. 291a). And in its findings, it again pointed to the fallacious nature of Badger's "values", stating (R. 312a):

> "Assuming the correctness of Badger's estimates of the investment values of the Engineers' preferred stocks 'on a going concern basis', *subject to all the infirmities above referred to*, the question still is: *'investment values'* for how long?"

In short, the District Court recognized Badger's "values" for what they were: estimates of hypothetical, momentary market prices based on the artificial and transient levels as of the time of Badger's study;[1] and the Court expressly *refused* to accept these "values" as the intrinsic invest-

391a), as petitioners' counsel are well aware. Moreover, the Court ordered the findings as revised by it to be exhibited to all counsel in advance of the hearing, and it accorded a hearing to all counsel who wished to be heard with respect thereto (R. 385a-391a). In addition, the Court agreed to entertain any motions which might be submitted under Rule 52(b) of the Rules of Civil Procedure requesting amendments or supplementary findings, and to hold a further hearing with respect thereto (R. 385a); but no such motions or requests were ever submitted.

[1] "It is thus primarily a market value criterion, and is subject to all the problems inherent in predicting future market values" (Finding No. 42, R. 310a).

ment value of the Engineers' preferred on a going concern basis.[1]

It is thus evident that the Commission's determination of the redemption prices as the "investment values" of the preferred stocks on a going concern basis, far from being "accepted" by the company, and "upheld" and "approved" by both Courts, was rejected by each in turn as representing no more than an irrelevant, artificial and transient market appraisal.

Indeed, the Commission's brief in effect concedes that it represented nothing more. In discussing Badger's values, the brief states (p. 37):

> "Badger reached his result by comparison of current yields of other similar preferred stocks. He concluded that a proper yield basis for the Engineers' preferred was 4.6%. This yield basis represented *his estimate* of *how the investment markets would evaluate* the risk of Engineers' stockholders not receiving their preferential dividends in perpetuity, disregarding both the impact of Section 11 and the redemption price ceilings." (Emphasis supplied.)

Reduced to its essence, what this statement concedes is that Badger did not attempt to express his own "expert" judgment as to the value of the Engineers' preferreds based on their intrinsic merit.[2] Instead, Badger allegedly gave "his estimate" of "how the investment market would evaluate" certain factors "in perpetuity". And, as we have shown,[3] he determined how the market would evaluate these factors "in perpetuity" by the market prices of certain allegedly comparable securities

---

[1] Findings Nos. 51-54, R. 313a-315a.

[2] See our Main Brief, pp. 75-6.

[3] Main Brief, pp. 75-9.

on January 4, 1946, without regard to the fact that several weeks or months earlier the market had evaluated these factors very differently.[1]

Moreover, it is, of course, the sheerest nonsense to say that the market price of a stock on a particular day represents the market's evaluation of "the risk of * * * stockholders not receiving their preferential dividends in perpetuity, disregarding the impact of Section 11 and the redemption price ceilings". Market prices on any day reflect an entire congeries of extrinsic factors such as the market's appraisal of what some foreign power may do the next day in Berlin, what action the Government may take in Washington with respect to a dozen different factors (including the prices to which it will "peg" the bond markets), what labor unions will demand at their forthcoming conventions, how the electorate will vote at the polling places, and so forth. And, needless to say, the following day "the markets" may, and generally do, appraise these factors quite differently.

Indeed, it is nothing short of paradoxical that counsel for an expert administrative agency find it necessary to avow that this expert body reached its determination of the "investment value" of the Engineers' preferred stocks on the basis of the "estimate" made by a witness as to how the *markets* would "estimate", as of

[1] Thus, Badger evaluated "how the market would evaluate" the Engineers' preferreds by using a market price as of January 4, 1946 of $105.50 per share for Columbia Gas & Electric preferred stock. Some months earlier the market's "evaluation" of these factors was reflected in a market price for this very stock of $84 per share (Main Brief, p. 77, n. 1). In similar fashion, Badger used a market price of $114.38 for Public Service of New Jersey preferred which some months earlier had sold for 102⅝, and some time subsequent to Badger's testimony declined to $95 (R. 123). See also the record of sharp price fluctuations of the other securities used by Badger (Main Brief, p. 77).

a given haphazard moment, the value of the preferred stocks' theoretical right to future dividends. We venture to doubt that the "expertise" of the stock market as reflected in its day to day "valuations" is the type of "expertise" which Congress intended should be brought to bear in passing on the "fairness and equity" of plans under Section 11(e).[1]

(2) Brief mention may be made of other statements in connection with the "values" of the Engineers' preferreds which may give a misleading impression. At several points in the Commission's brief it is stated that the preferred stocks were found to have an "asset value" of approximately $200 per share, so that even if adjustment were made for the retained earnings of the common there would have remained substantial asset value for the preferred.[2] But it is not pointed out that Badger

---

[1] As we have demonstrated at page 79, note 2, of our Main Brief, the Commission's findings and the record are utterly barren of any other evidence on which the Commission could have based its determination that the preferreds had a "value" equal to the redemption price; and that the few items mentioned by the Commission in its opinion *without comment* all plainly pointed in the direction of a value of less than $100 for the preferreds.

That the Commission relied solely on Badger's estimate of market prices is further demonstrated by the following additional statement in the Commission's Brief (pp. 36-7):

> "But the most workable hypothesis for finding a fair equivalent between cash received and the security surrendered under the compulsion of the plan, is that of reinvestment in a security of comparable risk. *How much money would it cost the preferred stockholders to replace their securities with comparable ones?* This equation was substantially the basis upon which the valuation witnesses testified * * *." (Emphasis supplied.)

It is thus admitted by Commission Counsel that the Commission's rationale in the instant case is predicated on the premise that in a dissolution compelled by the Act, the common stockholders must become the *indemnifiers* of the preferreds' disappointed expectations. And in this case, those expectations were measured solely by market values on *January 4, 1946*, and without regard to any other factor.

[2] S. E. C. Brief, pp. 7, 75, note 45.

calculated this "asset value" merely by taking book figures at face value, and without allowance for inflationary items which regulatory authorities require to be eliminated by amortization or charge off.[1] The record establishes that when adjustment is made for such balance sheet items, the asset value of the Engineers' preferred stocks barely approximated $100 per share.[2]

The Commission's brief admits that the Commission, like Badger, made no attempt to determine the prospective earning power of Engineers on a going concern basis, but argues that the Commission was entitled to rest upon the high earnings of 1945 and 1946.[3] Yet at a later point in this same brief, in discussing the earnings of Puget Sound for the same years to which the Courts below made reference, it is stated (p. 61):

> "* * * it would seem presumptuous to assume that earnings for those two years will represent an average for the system upon which interests in the enterprise should have been allocated."

We think this second contention is a sufficient answer to the first. If the high earnings of the war and immediate post-war period are not acceptable for determining the

---

[1] R. 1096a-1102a.

[2] Engineers' Ex. No. 77, R. 1851a. It is to be observed that similar adjustments in the accounts of the five holding company preferred stocks used by Badger for "comparative" purposes established that their asset values were from 25% to 200% higher than those of the Engineers' preferreds. (Ibid.)

Cf. 10th Annual Report of the Securities and Exchange Commission, pp. 72-3: "Elimination of Inflation in Plant Accounts."

[3] S. E. C. Brief, p. 10, note 7; pp. 35-39.

fairness of an allocation plan under Section 11(e), there certainly was no valid basis for the Commission to rest on them here in determining the "rights" of the preferred stockholders unilaterally; and all the more so in the face of Barnes' warnings that "we are in a boom period" (R. 667a) and that "much of the present market value [of the Engineers' preferred stocks] was attributable to the sacrifices made by the common stock and to war earnings" (R. 630a).[1]

---

[1] See our Main Brief, p. 95, n. 1, with respect to the reduction which has already taken place in the earnings of Virginia, the principal asset distributed to the common stockholders in liquidation.

Cf. *Group of Institutional Investors* v. *Chicago, M., St. P. & P. R. Co.*, 318 U. S. 523, 543:

> "We cannot assume that the figures of war earnings could serve as a reliable criterion for that 'indefinite future'. As some of the bondholders point out, the bulge of war earnings *per se* is unreliable for use as a norm unless history is to be ignored; and numerous other considerations, present here as in former periods, make them suspect as a standard for any reasonably likely future normal year."

III. PETITIONERS' CONTENTIONS AS TO THE IRRELEVANCE OF THE RETAINED EARNINGS OF THE COMMON STOCKHOLDERS, PAST MARKET HISTORY OF THE PREFERREDS AND THE LOSSES SUSTAINED ON DIVESTMENTS, ARE ERRONEOUS AND IN CONFLICT WITH THE RECORD.

A. Contentions as to the earnings of the common stockholders retained to provide for the compulsory liquidation.

In its opinion [1] and findings [2] the District Court gave consideration to the accumulated earnings of the company withheld from the common stockholders to provide for the compulsory liquidation of the enterprise and the retirement of the preferred stocks. It pointed out that these large amounts had an important bearing on the "values" of the preferred stock at the time of liquidation,[3] a factor to which neither Badger nor the Commission accorded even the slightest consideration. Petitioners now contend that this factor was entitled to no consideration, because, contrary to the District Court's findings, the withholding of dividends was motivated solely by narrow self-interest on the part of the common stockholders stemming from tax considerations. Even more, the Commission's brief states that Engineers' witnesses "freely conceded"

[1] R. 291a.

[2] Findings 35-36, R. 306a-307a; Finding 47, R. 312a.

[3] Ibid.

this to have been the case.[1] Commission Counsel's statement is contrary to the evidence, and the entire contention is devoid of merit.

(1) In the first instance, it may be observed that this contention contravenes not only the findings of the District Court as to the reasons why dividends were withheld from the common stockholders (R. 291a, 307a), but those of the Commission itself. In its findings and opinion the Commission found:

> "The management has pursued a policy of withholding dividends on the common stock until it is satisfied that the system has made all the adjustments that will be required of it under the Holding Company Act" (R. 69a).

It then added by way of a footnote:[2]

> "No dividends have been paid on the common since 1932, although earnings have been available since 1938".

It seems strange that the Commission itself should thus have found upon the record that the management withheld dividends from the common stockholders so that the system could make "all the adjustments that will be required of it under the Holding Company Act", whereas Commission Counsel now tell us that the record establishes something quite different. We shall show that the

---

[1] S. E. C. Brief, p. 72:

> "In the first place, Engineers' witnesses freely conceded that they regarded it as in the interest of the common stockholders, from the point of view of minimizing Federal income taxes, to avoid receipt of dividends and instead to build up the equity value of the common stock upon which they might realize through capital gains taxable on a more advantageous basis than dividends."

[2] Note 53, R. 69a.

truth lies with the findings of the Commission and the District Court.

The alleged "concessions" of "Engineers' witnesses" to which the Commission's brief purports to make reference (*supra*, p. 29, note 1) had no relation whatever to the subject of the retained earnings and the management's dividend policy during the ten year period 1935-1945 dealt with in the findings of the Commission and the District Court. The testimony of one witness discussing a phase of the original Engineers' plan as it might affect stockholders in 1945, has been wrenched from its context and distorted.[1] This is in effect disclosed by the footnote which is appended to the text statement (S. E. C. Brief, note 43, p. 72).

This same witness, Benjamin, specifically and repeatedly testified that the management's policy of withholding dividends from the common stockholders over the eight year period antedating the final plan was impelled by the necessity of providing for the liquidation required by the Act (which at first it had been hoped would be only partial, but which later was found must be complete) including the compulsory retirement of the preferred stocks. He testified (R. 577a):

> "* * * the directors of Engineers have adopted a policy of not declaring dividends on the common stock because of the uncertainties due to the Holding Company Act.

[1] Engineers' plan as originally filed with the Commission contained a provision that the common stock of Virginia would not be distributed by Engineers until the remaining phases of the liquidation had been carried out, a period estimated not to exceed three years. Benjamin, secretary of Engineers, testified the management felt that even though this provision of the plan would delay distribution to the common stockholders of this one asset, it was not felt this delay should prove unduly prejudicial to the common stockholders, considering the high taxes on personal income then prevailing (1945, the last year of the war) as compared with the more favorable treatment which they might realize as a capital gain (R. 459a).

Q. (by Commission Counsel): What do you mean by that exactly? A. Well, the future of Engineers has been uncertain because of the requirements of the Public Utility Holding Company Act requiring divestment, and so forth, and the orders of the Commission that have been issued and pending the final work-out of the Plan, this money has been kept in the system rather than having been paid out.

Q. Are you trying to say in effect that the money was being kept in in order to pay out the preferred stockholders? A. That is what the money is going to be used for.

Q. Is that the reason why it wasn't paid out in dividends? A. Yes, I think that was one of the principal reasons".[1]

Benjamin further testified (R. 724a):

"* * * I think the directors felt that, from the discussions that I have heard among them, the preferred stockholders were entitled to receive the

[1] With respect to the manner in which these funds accruing to the interest of the common had benefited the preferred, Benjamin testified (R. 470a):

"A. This shows that the total cash accruing in the system to the interest of Engineers Common Stockholders and not distributed during this period was approximately $24,500,000. Not all of these earnings would have been available for distribution because of restrictions on dividends in some of the subsidiary companies, but the accumulation of these funds within the system because of the requirements of the Public Utility Holding Company Act has added materially to the value of the Preferred Stock because the funds, together with funds derived from the sale of properties, have been used in part to finance improvements and additions which have increased the earning power of the subsidiaries and in part to retire 60,346 shares of Preferred Stock of Engineers and El Paso of Delaware combined, at an aggregate cost of $5,894,227, thereby improving the security of the presently outstanding Preferred Stock. At June 30, 1945, Virginia, Gulf States and El Paso had $2,773,000 of free earned surplus and Engineers, the parent company, had $7,095,000 of free earned surplus or a total of $9,868,000 which could have been declared out in Common Stock dividends. If this amount had been paid out in dividends the consolidated Common Stock and Surplus ratio would have been reduced from 16.13 percent to 12.6 percent."

> amount to which we referred before [$100 plus accrued dividends] and that could be paid off in cash and *that the common stockholders should forego any dividends until the obligation to the preferred stockholders had been satisfied*". (Emphasis supplied.)

Finally, in response to a direct question as to whether tax considerations had played a significant role in the management's policies with regard to withholding dividends, he stated (R. 920a):

> "I think that the management and possibly the directors too realized what the effect would be on the large stockholders in withholding dividends; but *I think the primary reason for withholding dividends was to accumulate in the system the funds to take care of the preferred stock.*" (Emphasis supplied.).

We submit that there is nothing in the foregoing testimony which justifies Commission Counsel in implying that Engineers witnesses conceded that the withholding of dividends from the common stockholders was motivated by the purpose of "minimizing Federal income taxes to avoid the receipt of dividends * * * ".[1] And Barnes, the only other Engineers' witness who testified on this subject, likewise affirmed that the dividends were withheld "because of the uncertainties in connection with what would have to be done under the Public Utility Holding Company Act * * * " (R. 973a).

It is thus evident that in this instance once again, as in the others heretofore discussed, Commission Counsel's present attempt to write an entirely new set of "findings"

---

[1] So far was the Commission itself from agreeing with the contention here advanced by its counsel, that it based its conclusion as to the "benefits" which the common would derive from the retirement of the preferred upon the fact that " * * * *it hastens the day when the common will begin receiving dividend income*" (R. 69a). (Emphasis supplied.)

in their brief cannot prevail where such proffered "facts" contravene the clear evidence in the record, as well as the formal findings made with respect thereto by the District Court and by the Commission itself.

(2) The significance of withholding earnings from the common stockholders in order to meet the command of the statute is not that the common stockholders are entitled to commendation for their forbearance. Its significance is that the District Court was warranted in ruling that basic considerations of fairness required these withheld earnings to be recognized as contributing to the "value" of the preferred stocks in determining whether the common stockholders should be required to pay premiums to the preferred.

Although the Commission had not formally prohibited Engineers from paying dividends to the common stockholders, the statutory command to retire the preferred in the course of either partial or full liquidation placed Engineers in a position such that it would have violated every sound corporate and accounting practice if dividends had been paid to the common stockholders prior to the retirement of the preferred stocks or setting aside assets to meet their claims.[1]

[1] Petitioners seek to argue that only some $10,000,000 of these retained earnings consisted of "free surplus" available for payment of dividends, and that the decision to retain these earnings was a matter of voluntary choice on the part of the common stockholders. But, viewed on any realistic basis, it is indisputable that the operation of the statute dictated retention of the entire $24,552,182 of common stock earnings. From the time of its registration under the Act, Engineers was not a free agent on major policy questions except in such matters as the Commission and its staff might see fit to permit. Thus, approximately $14,500,000 of the common stockholders' earnings referred to above, was "frozen" pursuant to accounting adjustments and indenture provisions which were necessary to meet the Commission's routine requirements as a condition precedent to its approval of various transactions, such as refinanc-

These earnings of the common stockholders thus having accrued while Engineers was in effect *in custodia legis*, it would be even less fair and equitable to add them to the "value" of the preferred stocks upon which the common stockholders are then required to pay premiums, than was the claim for double interest which this Court disallowed in *Vauston Bondholders' Protective Committee v. Green*, 329 U. S. 156, stating (pp. 165-167):

> "It is manifest that the touchstone of each decision on allowance of interest in bankruptcy, receivership and reorganization has been a balance of equities between creditor and creditor or between creditors and the debtor * * *. A Chapter X or Sec. 77B reorganization court is just as much a court of equity as were its statutory and chancery antecedents * * * (p. 165).
>
> * * * first mortgage bondholders would have been enriched and subordinate creditors would have suffered a corresponding loss, because of a failure to pay when payment had been prohibited by a court order entered for the joint benefit of debtors, creditors, and the public. *Such a result is not consistent with equitable principles.* For legal suspension of an obligation to pay is an adequate reason why no added compensation or penalty should be enforced for failure to pay" (pp. 166-167) (Emphasis supplied).[1]

---

ings. None of these restrictions existed prior to the Act or apart from it. Likewise, although the management of Engineers made no attempt to declare out the $10,000,000 of "free surplus" as dividends to the common stockholders, this decision resulted from the circumstance that from the date the statute became effective, Engineers was confronted with the necessity of liquidating either entirely or in substantial part (depending on how drastically the Commission construed Section 11's application to the Engineers system).

[1] Cf. statement of Commissioner Healy, dissenting in *American Power & Light Co.*, Holding Company Act Release No. 6176 (1945), at pp. 57-58:

> "It seems apparent that the strong current position which the majority opinion relies on heavily in arriving at its decision

B. Contentions respecting losses on divestments.

Commission Counsel contend that the Courts below erred in attributing relevance to the losses sustained by Engineers in carrying out those steps in the compulsory liquidation which preceded the filing of the plan for final dissolution. In addition, they unloose a broad barrage of objections[1] which run the gamut of suggesting (a) that there were not in reality any losses; (b) that in any event, such losses may have been offset by countervailing gains; (c) that giving consideration to the existence of these losses involves a "collateral attack" on the Commission's determinations in other proceedings; (d) that such consideration requires the Commission to "reconstitute the enterprise" and compute in "dollars and cents" the effect of such losses, an administratively impracticable task; (e) that in any event such a process involves "shifting to the preferred stockholders all or a portion of the losses". It is our position that these contentions are, one and all, devoid of the slightest merit, and that they constitute an attempt to throw a smoke screen over a phase of the Courts' findings which petitioners find particularly troublesome.

---

mainly resulted from the retention of earnings. To whatever extent the present strong position of the debt is attributable to earnings and asset coverages that exist because of past sacrifices on the part of the stockholders, it seems to me wholly unfair and inequitable now to penalize them further for this conservatism by requiring them to pay a premium to the debtholders whose contract has been punctually observed at all times *'From him that hath not shall be taken away even that which he hath'.*". (Emphasis supplied.)

[1] See S. E. C. Brief, pp. 52-69.

(1) Petitioners' criticisms of the Courts for having found relevant the losses sustained in carrying out the liquidation required by the Act—a subject which petitioners characterize derisively as "weighing colloquial equities"—comes with poor grace from those whose entire argument for the payment of the premiums was based on the contention that the Courts should, in fairness and equity, allow the preferred stockholders to receive $3,200,000 more than their contractual claim, based on alleged values "ex the Act", or "apart from the liquidation required by the Act". When Courts are asked to disregard contractual limitations in order to reach results alleged to be *more equitable*, they can scarcely be asked to function with one eye blindfolded and the other half shut. Only recently Mr. Justice Murphy had occasion to emphasize this principle in the context of a corporate reorganization, stating: "*Equity looks in all directions.* Only in that way can the various interests in the corporate community be adequately protected".[1]

As we have shown in our main brief (103-105) the Courts below correctly grasped the inconsistency which pervaded and distorted the Commission's rationale in this case. The preferreds' rights were viewed as though the Act did not require liquidation—indeed as though the Act did not exist. However the common's rights were viewed merely as those of the residual claimants in the liquidation which the Act had in fact compelled, and in consequence of which, losses and deprivations had been sustained by the company and the common stockholders for many years.

The liquidation of Engineers did not commence with

[1] *Comstock v. Group of Institutional Investors*, 335 U. S. 211, 238 (Emphasis supplied). See also p. 107, note 1 of our Main Brief.

the filing of the plan which is the subject of the instant proceedings; it merely ended there.[1] Throughout the long period during which Engineers has, under the compulsion of the Act, divested itself of valuable subsidiaries, frozen its liquid assets, and denied its common stockholders a share in its earnings, the preferred have been insulated from all contact with such realities. The common stockholders have been forced to bear the consequences of the shocks and dislocations which enforcement of the Act has imposed upon the company. Now, in the final stages of the liquidation, the Commission has imposed upon the common stockholders an added burden—to compensate the preferred for the loss of their claimed *future* high expectations "as though there were no liquidation and no Act".

We do not suggest, nor did the Courts below, that the common stockholders should be compensated for the unhappy consequences which the compulsory liquidation of Engineers visited upon the common stockholders over the past ten years. We do submit, however, that the common stockholders should not be compelled in addition to pay premiums to the preferred for their allegedly disappointed *expectations*; and that therefore the Courts below were wholly correct in holding that fairness and equity require that there be taken into consideration the frustration of

[1] The Commission's brief (p. 48) criticizes the Court below for failing to apprehend that the "shorthand expressions 'apart from the Act', or 'ex the Act' must be read with the interpolation 'ex [the present reorganization required by Section 11(b) of] the Act'." But the Court was not under any *misapprehension* of what the Commission contended: its point was that which has been stated above in the text, namely, that there is neither logic nor equity in ignoring the stages in the compulsory liquidation of the enterprise resulting from the Commission's divestment orders under Section 11(b), which preceded the *final* dissolution embodied in the plan itself.

the common stockholders' interest, in evaluating the alleged frustration of the preferreds' expectations. To fail to do so would visit "on one class" the consequences of the Act, "with a corresponding wind-fall" to another. (*Otis & Co. v. S. E. C.*, 323 U. S. 624, 637.)

(2) That petitioners are not insensitive to the relevance of these considerations, despite their professions to the contrary, is suggested by the assiduity with which they have sought to obscure and becloud the deprivations and losses sustained by the common stockholders. It is suggested at the outset that such losses are "negatived" by the fact that Engineers' common stock had attained a higher market price in 1946, prior to liquidation, than that at which it had sold during the depression years.[1] Such an argument is as irrelevant as it is specious; for it would be very difficult to name the stock of any company, whether utility or industrial, which did not sell in the post-war boom markets of 1945-1946 at far higher prices than those prevailing during the depression of the 1930s. Not a few, indeed, sold as high or higher than they had sold in 1929, instead of at 40% of their 1929 highs as is true of Engineers.[2] Yet from that fact alone it could scarcely be argued with any validity that these companies could not have sustained financial losses in the intervening period.[3]

---

[1] S. E. C. Brief, p. 55.

[2] See District Court Finding No. 31, R. 305a.

[3] The Commission's brief "concedes that it is impossible to demonstrate the relationship between this increase [in market price] and the statute" (p. 55) but nevertheless seeks to imply that there is such a relationship. It may be observed, however, that the improvement in the market price of the Engineers' common manifested a much more significant correlation with the armaments program than with the Holding Company Act. Thus, in 1942, after having had the beneficent effects of the Act for a period of years,

Petitioners next argue that the Courts below were not warranted in finding any relationship between the losses sustained by Engineers in making divestments, and the fact that such losses were sustained in the course of complying with the Commission's divestment orders.

It is asserted, for example, that the approximately $33,000,000 loss sustained by Engineers in connection with Puget Sound is attributable to the fact that this was an ill-advised investment.[1] However, the Courts did *not* base their conclusions on the mere fact that a book loss had been sustained on this divestment, but on the indisputable fact that, absent the compulsion of the Act, a drastic Section 11 reorganization of Puget Sound would not have been forced upon Engineers at a time when Puget Sound's earnings were vastly lower than they were when Engineers made its investment, and vastly

---

Engineers' common sold at a low of 1¼ (Moody's Public Utilities, 1946, page a. 71) approximately the same low figure referred to in the Commission's opinion and its brief as having prevailed in 1935, prior to the operation of the Act. Its entire market increase took place during the four war years, 1942-1945, the same years in which the preferreds rose from lows in the 40's to cross $100 per share (ibid.). During the same period the Dow-Jones index of industrial stocks (not subject to the Holding Company Act) rose from a low of 92 in 1942 to a high of 195 in 1945 (Barrow's Chart of Dow-Jones averages); Dow-Jones index of utilities rose from 10.58 in 1942 to 39.15 in 1945 (ibid.), Standard & Poor's index of investment companies rose from 41.5 in 1942 to 215.7 in 1945 (Investment Weekly Index averages, Standard & Poor's Price Index Record, p. 82).

[1] It has never been questioned, and the record affirmatively establishes, that the cost to Engineers of its investment in Puget Sound was $34,000,000, and that this cost resulted from a completely *bona fide* arms-length transaction. Indeed, the record establishes that approximately $13,000,000 of Engineers' $5.50 series Preferred Stock was issued to former holders of the common stock of Puget Sound in exchange for their equity holdings in Puget Sound (Engineers' Ex. 37-P, R. 1664a). It would thus seem that these preferred stockholders speak with poor grace in reproving Engineers for this "ill-advised" investment (Cf. Streeter Brief, p. 122).

lower than they were by the time of Engineers' liquidation.[1] The District Court noted that it had before it a formal offer of proof proposing to establish "that the equity owned by Engineers in Puget Sound prior to the recapitalization would presently have a cash value of $10,000,000" [2] as compared with the mere $775,000 which Engineers realized upon the sale of its interest in compliance with the Commission's divestment order.[3]

Commission Counsel's conjecture that "it appears probable that good business management would have compelled, at some time, the recapitalization of Puget",[4] does not permit escape from the fact that, if not for

---

[1] The Commission's decision is set forth in *Puget Sound Power & Light Co., et al.*, 13 S. E. C. 226 (1943). It will there be seen that the Commission allowed an allocation to Engineers of only 3% of Puget's new common stock in exchange for its surrender of ownership of 99.3% of the former common stock. This allocation was based on the Commission's determination that the foreseeable future earning power of Puget available for the stocks was somewhere between $2,657,000 and $3,083,000 (pp. 243-244 of the Opinion). As the Court below noted (R. 37), actual earnings for the stock of Puget Sound in 1946 were $5,352,000; and for the 12 months ended June 30, 1947, were $5,067,000.

[2] District Court Finding No. 37, R. 307a.

[3] In our reply brief in the District Court respondents stated (p. 42): "* * * we are impelled at this time to make, and hereby do make, *a formal offer of proof* to establish the foregoing facts by competent and authoritative evidence" (emphasis in original). It was further pointed out that "a supplemental hearing for the reception of such proof need not cause prejudicial delay * * *."

The District Court found it "unnecessary for present purposes" to determine this loss with exactitude (Finding of Fact No. 37, R. 307a) but merely judicially noticed that on the basis of the increased earnings of Puget over those estimated by the Commission, and the subsequent rise in the market prices of utility securities referred to by the Commission itself in its annual reports, Engineers' investment in Puget Sound came to have a realizable cash value substantially higher than that realized by Engineers in consequence of the reorganization and subsequent disposition dictated by the Act. We submit that such a finding is axiomatic, and errs, if at all, on the side of conservatism.

[4] S. E. C. Brief, p. 61.

the Act, Engineers would have been wholly free to retain intact its holdings in Puget Sound until such time as it deemed advantageous for recapitalization or sale; and on that basis the record establishes Engineers could have realized approximately $10,000,000 for the interest in Puget Sound which it was required under the Act's compulsion to surrender for $775,000.

Petitioners' attempts to place emphasis on the statement in the Commission opinion that "in all its divestments Engineers has been free in its choice of methods, and within limits to choose the time of divestment",[1] merely highlights the Commission's attempt to pass lightly over the significant phrase "within limits". As we pointed out in our main brief (p. 61, note 1), those "limits" are stringent indeed. Engineers was ordered by the Commission on July 22, 1941, to dispose of its entire interest in Puget Sound "within one year (see *Engineer's Public Service Company*, 9 S. E. C. 764, 797) and similar orders were issued in 1942 requiring divestment of all assets other than Virginia (12 S. E. C. 41). After one year from the date of the Commission's various divestment order, if not complied with, Engineers was subject to drastic penalties.[2]

We do not quarrel with the propriety of those various orders or with the statutory policy which engendered them. We contend, however, that the effect of those orders in the economic circumstances in which the country and the company found themselves during the years in question, was to impose upon the company losses which it would not otherwise have sustained, and that while the common stockholders must bear the burden of those frustra-

[1] S. E. C. Brief, p. 55.

[2] See Section 11(d) of the Act.

tions they should not also at the same time be saddled with the added obligation of fulfilling the most roseate expectations which the preferred might have enjoyed if the Act had not compelled liquidation. If the preferreds' frustrated "expectations" (which, in any event, as we have shown—Main Brief, pp. 72 et seq.—rested upon a wholly illusory view of continuance of the low money rates current in the early part of 1946) are to be regarded as relevant, then, as the Courts below held, consideration must also be given to the losses and deprivations which the common had sustained in carrying out the earlier phases of the liquidation and the additional ones which the final liquidation has imposed.[1]

Commission Counsel's further contention that Engineers could have distributed to the common stockholder valuable assets such as the stock of El Paso Natural Gas Company of which it was also required to divest itself,[2] is another bald conjecture which cannot withstand examination. At the time Engineers was required to dispose of the El Paso stock, it was not yet determinable whether Engineers would be required to liquidate in whole or merely in part; consequently, no distribution could be made to the common stockholders until this basic issue was determined and "a comprehensive plan" was evolved and approved by Commission and Court for meeting the claims of the senior security holders. In point of fact, Engineers offered El Paso Natural Gas stock to the *preferred* stockholders in a voluntary exchange proposal, which was unsuccessful.[3]

---

[1] Main Brief, pp. 114 *et seq.*

[2] S. E. C. Brief, pp. 65-6.

[3] R. 517a.

It is also contended that the argument with respect to losses on sales of security "presupposes a management so prescient that it will sell at the peak of the market" (S. E. C. Brief, p. 65). But this is a palpable misstatement of the issue. These are not sales which the company made willingly, or in the exercise of managerial judgment. On the contrary, it was repeatedly testified that the management viewed with great optimism the future growth possibilities of the El Paso Natural Gas Company, and would not have parted with this asset or the others, if not for the compulsion of the statute.[1] In that event, the company would have had the benefit of the greatly augmented earnings so long as it retained the assets, or in the alternative it would have realized the much higher prices if it ultimately elected to sell in favorable markets, free from pressure. Invidious references to "hindsight" (S. E. C. Brief, p. 58) merely obscure the fundamental issue. The point is not that "hindsight" shows the Commission to have erred in connection with its earlier Section 11 orders such as the recapitalization of Puget Sound, but that the common have in fact sustained demonstrable losses and deprivations in consequence thereof, and that these factors must be taken into account if consideration is to be accorded to the preferreds claimed "deprivation".

(3) Petitioners attempt a further argument that the losses should be offset by nebulous "tax advantages",[2]

---

[1] R. 508a-510a, 519a, see discussion of the tremendous growth of the El Paso Natural Gas Company at p. 118, note 3, Main Brief.

[2] The only "tax advantage" mentioned is a suggestion in the S. E. C. Brief (p. 62, note 39) that Engineers was able to utilize $2,000,000 of its loss in Puget Sound to realize possible tax ad-

and by the "advantages" accruing from the one acquisition (in connection with Virginia) which Engineers was permitted to make during the ten years it was under the Act.[1] But the record in no way establishes that a profit has resulted, or will result, therefrom. And even assuming *arguendo* that some gain may ultimately result, the fact is that *the Act* did not confer upon Engineers a right to purchase additional properties; that right Engineers previously had without any restrictions whatever. Indeed, the net result of the Act's operation has been to

---

vantages. Assuming, *arguendo*, that this offset the loss to the full extent of the $2,000,000 deducted, this would reduce the net loss on Puget to the "inconsequential" sum of $31,000,000. Further, the record establishes that the dividends received by the preferred stockholders in 1944 were considered non-taxable to them because of the drastic capital loss sustained by Engineers on Puget (R. 1606a).

[1] Petitioners' blatant efforts to magnify this transaction by suggesting that net utility property of some $39,000,000 was acquired for "net cash contributions on Engineers' part totalling $3,835,000" (S. E. C. Brief, p. 74, note 44) must be weighed in the light of the failure to mention that Virginia was further required to issue some $32,000,000 of new bonds and notes, and approximately $10,000,000 of additional preferred stock, all of which ranked ahead of Engineers' investment as holder of Virginia's common stock. See *Virginia Electric and Power Co.*, Holding Company Act Release No. 5021, p. 15.

Similar examples of unwarranted inferences and wholly incorrect figures are to be found in Streeter's brief. For example, it is there stated (Streeter brief, p. 122) that "The company's assets as of January 3, 1945 aggregated $65,765,904 * * * as compared with assets in 1938 of only $60,909,703", for the evident purpose of implying that the Engineers system was larger after the divestments than before. The misleading nature of these figures is indicated by the fact that they fail to give effect to (a) a reserve in the amount of $35,000,000 which had been set up on the 1938 balance sheet (R. 1525a); (b) the increase in capital and earned surplus by approximately $9,000,000, representing a portion of the earnings applicable to the common stock which had been accumulated in order to provide for the liquidation of the corporation (R. 86a and R. 1525a); (c) decrease in investment account from $92,862,000 to $52,328,000 (representing assets liquidated) and corresponding increases in cash and cash items representing the proceeds of liquidated assets and retained earnings. More-

prevent Engineers from acquiring any further properties with the proceeds realized from the compulsory sale of its subsidiaries, as we have previously shown.[1]

All the foregoing arguments are plainly advanced by counsel for the Commission in an effort to impress the Court with the difficulties imposed by the alleged requirement of the Court of Appeals that "the Commission must compute in dollars and cents the extent that the over-all impact of the Holding Company Act, or at least Section 11 thereof, may have been harmful to Engineers' common stockholders * * *" (S. E. C. Brief, p. 54). This entire line of argument rests upon an overly ingenuous interpretation of the Court of Appeals' language. The Court did *not* state that such items must be "computed", but merely that they must be "weighed into the calculation", a phrase which, along with the term "bookkeeping", was obviously intended figuratively and not literally.[2] It is thus evident that the Court had no intention of insisting upon the exact ascertainment and computation of each loss sustained by Engineers, but merely upon giving

---

over, reference to the *corporate* balance sheet to measure the shrinkage in the system is itself misleading, since the system picture can only be gauged on a combined or consolidated basis. As of December 31, 1935 (the year in which the Act was passed) the consolidated assets of the Engineers system totalled $363,825,581 (R. 1475a). In contrast, the combined capitalization of Virginia and El Paso (the two companies whose common stocks were distributed to the common stockholders as a liquidating dividend) aggregated $136,343,500 (R. 31a, 37a), of which the common stocks received by Engineers' common stockholders had a book value of less than $30,000,000 (*ibid.*).

[1] See note 1, p. 121 of our Main Brief.

[2] "* * * if the equitable equivalents for relinquished securities are to be arrived at by the Commission under the doctrine of the Otis & Co. case, *ex* the Act, losses of the sort referred to in this paragraph must be weighed into the calculation; i.e., such losses should be returned to the credit side of the enterprise's balance sheet as a matter of bookkeeping" (R. 37).

reasonable consideration to the fact that such losses (without necessity for precise computation) had been sustained. Moreover, the Court emphasized that even this relatively simple task was not mandatory upon the Commission unless, despite the final termination of the enterprise, it insisted upon evaluating the rights of the stockholders "ex the Act" (i.e., "apart from the impact of liquidation") in order to compensate the preferred stockholders for their theoretical "disappointed expectations".

That Commission Counsel have greatly exagerated the complexity of this task is further demonstrated by the Commission's recent decision in *Pennsylvania Edison Company*, Holding Company Act Release No. 8550 (October 16, 1948), where the Commission, although noting its disagreement with the Court of Appeals in the *Engineers* case, nevertheless gave consideration to the various factors which the Court held should be weighed. It apparently found no difficulty in discussing and evaluating these factors in several short paragraphs of its opinion (p. 42, note 45).

(4) The final contentions of Commission Counsel, to the effect that (a) according consideration to the losses imposed upon the common stockholders in carrying out the liquidation would involve a "collateral attack" upon consummated reorganization p' as such as that of Puget Sound, and (b) such considera n would result in shifting "from the common stockholders to the preferred all or a portion of the losses" (S. E. C. Brief, p. 68), seem to us so patently devoid of merit as to scarcely justify discussion. The legality of the Commission's order in the Puget Sound reorganization is in no way questioned.

To take note of the fact that the investment of Engineers in Puget Sound was virtually wiped out in a reorganization indisputably imposed solely by Section 11 of the Act, is not to make a "collateral attack" upon an "adjudicated question" [1] any more than Engineers' auditors made such a "collateral attack" when they recorded the resultant loss in notes to the corporate balance sheet.[2] To take note of the fact that for the common stockholders liquidation under the Act had been an unblinkable reality for more than ten years—when preferred stockholders demand payment of premiums aggregating $3,200,000 as the equitable equivalent of their rights "apart from the impact of liquidation"—is not to shift losses from the common to the preferred, but merely to prevent the imposition upon the common of additional burdens on the theory that the existence of the Act and its requirement for complete liquidation should now be ignored.

C. Contentions as to past market and dividend history of the preferred stocks.

Commission Counsel's airy dismissal of the past market and dividend history of the preferred stocks as bearing on their "investment value" is in sharp contrast with the Commission's decisions, both prior and subsequent to its decisions in the instant case, invariably have emphasized the past market and dividend history of the senior security being retired by payment of cash. Thus, in approving the retirement of the 5½% debentures, and the

---

[1] See Streeter Brief, p. 121: "Furthermore, such re-examination is contrary to the policy underlying the doctrine of *res judicata* * * *."

[2] Cf. Engineers' Ex. 37-K, R. 1608a.

$5, $6 and $7 preferred stocks of Cities Service Power & Light Corporation, all of which had currently been selling at or above par, the Commission stated:

> "The debentures and preferred stock of Power & Light have never been high grade securities. They were issued at discounts, and between 1931 and July, 1943, the market price never reached 100. Their ratings in the financial services since their issuance indicate that they have uniformly been regarded as speculative securities. * * * "[1]

And far from indicating that there was any question as to the likelihood of these securities continuing to receive their well secured interest and dividend payments if they remained outstanding, the Commission specifically referred to the possible subordination of certain parent company claims which would "tend to diminish the risks attached to the similar securities held by the public" (Id., at p. 17). The Commission nevertheless concluded that "*the equitable doctrines involved* would not require the payment of the redemption premiums under the circumstances of this case" (Ibid.; emphasis supplied). Similar discussions of past market and dividend history are to be found in literally dozens of Commission decisions under Section 11(e),[2] and the Commission has invariably found such histories significant as bearing on the fairness and equity of the refusal to allow premiums. For example,

---

[1] *Cities Service Power & Light Corp.*, Holding Company Act Release No. 4944, at p. 16; see also quotation from the same opinion set forth *supra*, p. 6, n. 1.

[2] See, for example, the decisions collated in our Main Brief, page 55, notes 3 and 4.

in the *Interstate Power Company* decision submitted to Judge Leahy for enforcement only a few weeks prior to the Engineers' plan, the Commission held that owners of *first mortgage 5% bonds* of a public utility operating company were entitled to receive only the par value, notwithstanding that the bonds had been selling at a premium of 3½ points above par, the Commission stating:

> "The bonds were originally sold to the public in 1927, 1928 and 1931 at prices of 97½, 96 and 88 respectively. During most of the years since issuance, the bonds have sold on the market at prices substantially less than par; indeed the bonds never sold as high as par until 1945. In 1937 the bonds sold as low as 32; and as recently as 1940 they sold at a low of 51½. At original issuance and sale of the bonds in 1927, a rating A was assigned them by Moody's Investors Service; Standard Statistics rated them B1+. In following years, both ratings were successively lowered to a Moody's rating of B in 1938 and all subsequent years, and a Standard's rating of C1+ in 1940 and all subsequent years." [1]

Yet the very same factors pointing to an even more speculative caliber for the Engineers' preferred [2] were wholly

---

[1] *Interstate Power Company*, Holding Company Act Release No. 7143 (p. 21, n. 25) (Jan., 1947), approved and enforced 71 F. Supp. 164 (D. C., Del., 1947); cf. also *Lehigh Valley Transit Company*, Holding Company Act Release No. 8445 (August 18, 1948).

[2] Thus, in order to sell the Engineers $5 and $5.50 preferreds in 1928 at prices comparable to those of the Interstate Bonds, it was necessary to attach warrants and conversion rights (since expired) having a substantial independent value. The Interstate Bonds were never in default of interest; the Engineers preferreds were in arrears of dividends over a period of four years, during most of which the dividends were not even earned. The Engineers preferreds sold as low as $10 per share in 1933, as low as $14 per share in 1935; and as recently as 1942 sold as low as $40-47 per share (R. 1391a-1393a). They never attained par until 1944, when large scale market purchases

ignored by the Commission in its decision; and petitioners now seek to contend that the Courts below have gravely erred in deeming such factors entitled to consideration.

Finally, it may be observed that it is recognized as fundamental among authorities in the field of security analysis that the past market and dividend record of a security is entitled to great weight in determining its investment quality.[1]

IV. PETITIONERS' ATTEMPTED EVASION OF THE LONG AND UNBROKEN LINE OF DECISIONS ESTABLISHING THAT THE "FAIR AND EQUITABLE" STANDARD INTERDICTS PAYMENT OF PREMIUMS IN A DISSOLUTION COMPELLED BY THE ACT, CANNOT WITHSTAND EXAMINATION.

In their brief, counsel for the Commission apparently deem it strategic to relegate to an obscure position the long and hitherto unbroken line of decisions in which the Courts and the Commission, over a five year period, have uniformly held that the fair and equitable standard interdicts the payment of premiums upon senior securities re-

---

by Engineers forced them up. Standard & Poor's Investment Service rated them C** at the end of 1944 (the last year in which it rated preferred stocks), which rating was defined as "Preferred stocks with erratic dividend records, and which can be expected to make payments only under favorable conditions" (R. 1844a).

[1] Indeed, authorities in this field point out that even in weighing the investment quality of a corporation's *bonds*, particular attention is accorded to the dividend history of that same corporation's *stocks*. See, for example, GRAHAM & DODD, SECURITY ANALYSIS (1940), pp. 123-4.

See also testimony of Barnes on this subject at R. 661a.

tired under the impact of Section 11.[1] That is, of course, their privilege; but we do not believe the same can be said of the manner in which their brief discussion of and reference to the decisions allegedly relevant, *obscures and gravely confuses the issue.*

We urge that the Court accord this discussion its careful examination. It is as follows (S. E. C. Brief, pp. 79-81):

> "Finally, common stockholders cite a number of cases in which the Commission approved plans calling for the payment of amounts equivalent only to the involuntary liquidation preferences of the securities involved, and contend that this precluded approval of the Engineers plan on the basis of what is termed the 'Commission's new views'. * * * It is true that, in many instances, the Commission has found that the equitable equivalent of a security to be surrendered was only its involuntary liquidation preference.[47] It is equally true, however, that many of these cases have stressed the absence of indication of any investment value in excess of that amount,[48] and other cases have permitted the retirement of senior securities for amounts in excess of the involuntary liquidation preference.[49]" (Original footnote numbers retained.)

---

[1] See decisions in our Main Brief at pp. 51-67, and cases collated at p. 55, notes 3 and 4.

As is pointed out at p. 64, note 1 of our Main Brief, the Commission's first and only departure from this line of decisions prior to the instant case was made at the end of 1945 in the American Power & Light debenture decision (Holding Company Act Release No. 6176), but the issue was not raised in the courts for the special reasons discussed. A second decision, that in *United Light-American Light & Traction Company* (Holding Company Act Release No. 6603) was decided by a 3-2 decision, which was subsequently reconsidered and mooted under the circumstances stated in the note referred to above.

We first direct attention to the last phrase of the quoted statement, "and other cases *have permitted* the retirement of senior securities for amounts in excess of the involuntary liquidation preference", and point out that this statement and the decisions cited in the appurtenant footnote (with certain exceptions to be discussed) have no relationship whatever to the issue in this case. The decisions referred to in footnote 49, with the exceptions hereafter discussed, relate either to voluntary refundings of senior securities in connection with an 11(e) plan submitted by a company which was continuing in existence[1]; or to declarations by continuing operating or holding companies of their intention to refund outstanding senior securities in the normal course of their operations through the exercise of the Company's contractual redemption right, in order that they might replace the retired senior securities with new ones carrying lower rates of interest or dividends. This is what is meant by the obscure sentence appended at the end of note 49:

> "Most of these cases were not approved as part of a Section 11(e) plan due to their nature, for where management agrees that payment of the redemption price is fair and equitable the normal procedure simply requires a call of the security."

In short, after clearly implying in the textual discussion that in many situations analogous to that of the in-

[1] E.g. *In re United Gas Corp.*, 58 F. Supp. 501 (D. C. Del., 1944), which the Commission, in its report to Congress (11th Annual Report, p. 67, note 2), stated was a case in which it held: "that if a senior security could be left outstanding in a recapitalization of a company under Section 11(e) consistently with the requirements of Section 11(b), the retirement of such security, although provided for in a Section 11(e) plan, will be considered as a voluntary exercise of the redemption privilege rendering the call premium payable as such."

stant case, payment of premiums has been found "fair and equitable" by the Commission, buried away at the lower extremity of a long footnote is Commission Counsel's admission that "most of these cases" had nothing whatever to do with a Section 11(e) liquidation, and involved no consideration of the "fair and equitable" standard of that section because they related merely to normal *refunding operations* of continuing enterprises.

However, further confusing consideration of the issue, there have been included, without distinction, in note 49 certain decisions of a somewhat different ilk. For example, there has been included the *American Power & Light* decision (Holding Company Act Release No. 6176) which, as we have previously pointed out,[1] marked the first and only consummated decision prior to that in the instant case, where the Commission applied its new "investment value ex the Act" doctrine in holding that senior security holders were entitled to premiums in liquidations under the Act. Also included are:

> (1) the Commission's *Pennsylvania Edison Company* decision (discussed in our Main Brief[2]), in which the Commission recently ordered payment of premiums in a Section 11(e) reorganization where the Commission emphasized that the enterprise continued augmented by merger, and had been permitted to replace the retired senior securities with others carrying lower dividend rates.[3]

---

[1] See *supra*, p. 51, note 1, and our Main Brief, p. 64, note 1.

[2] Main Brief, p. 115, note 1.

[3] Cf. also *Standard Gas and Electric Company*, Holding Company Act Release No. 6435, also cited in note 49, where after it had been held by the Commission and the Courts that the debenture holders were not entitled under the "fair and equitable" standard of Section

(2) *El Paso Electric Company*, 8 S. E. C. 366, where an operating company in the Engineers system (El Paso of Texas) refunded its outstanding senior securities with others carrying lower charges, and its parent holding company (El Paso of Delaware) was permitted to invite tenders of its outstanding preferred stocks at prices "not to exceed" the redemption prices. Moreover, the Court is not advised of the fact that, several years later when it was found that El Paso of Delaware must be liquidated, the Commission squarely held that it was "fair and equitable" to retire its preferred stocks at their liquidation preferences of $100 per share, rather than the redemption prices of $110 and $115 per share at which the preferred stocks had been selling in the market for some time past.[1]

---

1 (e) to payment of premiums, the company was subsequently permitted to call and redeem its notes and debentures (which carried interest rates of 6%) with proceeds of notes carrying an interest rate of 2½%, when changed conditions required indefinite postponement and complete revision of the reorganization plan of the continuing holding company.

[1] *El Paso Electric Company*, Holding Company Act Release No. 5499 (1944). The Commission specifically noted that on a "going concern basis" the preferred stocks would have a value in excess of $100 per share, but deemed such considerations "unrealistic", stating (p. 89):

> "Solely on an earnings and dividend basis, the Series A preferred stock may well be worth more than $100 per share plus accrued dividends. However, *appraisal of the stock on that basis is unrealistic in view of the charter limitation provision and the non-functional character of the company.*" (Emphasis supplied.)

It may be argued by petitioners, as it was below, that the Commission deemed the liquidation provision of the charter controlling because Engineers had sufficient voting power to dissolve El Paso of Delaware "apart from the impact of Section 11." This argument merely side-steps the issue. Careful reading of the decision will establish that the dispute between the majority of the Commission and the one dissenting Commissioner centered exclusively on the

Although the cases cited in note 48 do contain discussion of the fact that the securities being retired had had a checkered career in terms of their past market and dividend history, it is pertinent to note that, as we have already shown,[1] those factors are the very ones which the Commission chose to ignore in the instant case and which petitioners berate the Courts below for not finding wholly irrelevant. Furthermore, such discussions were advanced by the Commission as subsidiary considerations in reply to the contentions of the senior security holders that the *present* value of their securities, and their *future* value if permitted to remain outstanding, entitled them to receive payment of premiums.[2] For the paramount answer of the Commission and the Courts, as we have shown, is that the "fair and equitable standard" precludes payment of compensation for the "disappointed expectations" arising from the premature termination of senior security holders' investments, when such termination results from the enforcement of the overriding public policy embodied in Section 11 of the Act; or, in the Commission's own words:

> "It seems to us a complete answer to this argument that the termination of the investments of debenture holders and stockholders alike has been brought about

---

question of whether a genuine *liquidation* was taking place (as the term was employed in the charter). The dissenting Commissioner argued that this was not a "liquidation" within the charter meaning, because the underlying portfolio securities were merely transferred to the parent holding company (Engineers) and might thereafter be distributed to its own stockholders. He stressed that the preferred stocks unquestionably had a "fair value" on a going concern basis far in excess of their liquidation claim; but, as has been pointed out, the majority found that a liquidation was taking place within the charter meaning, and consideration of the theoretical "value" of the preferreds "apart from liquidation" was consequently "unrealistic".

[1] *Supra*, pp. 49-50.

[2] See discussion in our Main Brief, p. 66, note 10.

by the act of a sovereign power—in this case a congressional mandate." *The United Light & Power Company*, 10 S. E. C. 1215, 1228.[1]

And to the argument that the stockholders in that case would nevertheless continue to retain their interest in a continuing holding company system, contrary to the situation in the instant case, the Commission stated:

"* * * neither Power nor a successor company is retaining or can retain the capital obtained from the sale of the debentures for the benefit of the system. The debenture holders are being repaid the principal of and accrued interest on their debentures, are restored to their original position and are not compelled to accept the risks of a new enterprise. Under these circumstances, as we have heretofore shown, the debenture holders are not entitled to anything more." [2]

---

[1] It is to be noted that in a number of the Commission's Annual Reports to Congress it called attention to its repeated invocation of this principle. Thus, in its 10th Annual Report the Commission stated (p. 87):

"As noted in the section on 'Integration and Simplification of Holding Company Systems', the Second and Seventh Circuits and the District Court of Delaware in these cases upheld orders of the Commission's determination that it would be unfair and inequitable to the other security holders of the companies to give the debenture holders a premium *or other compensation* for premature termination of their rights in the context of a reorganization or liquidation required by the Act." (Emphasis supplied.)

Cf. 9th Annual Report, p. 41; 11th Annual Report, p. 67.

These assurances were before Congress at the time hearings were conducted by a special committee of the House of Representatives to consider whether the Act required amendment: see, "Hearings before the Securities Sub-committee of the Committee on Interstate and Foreign Commerce, House of Representatives, on 'Operations pursuant to the Public Utility Holding Company Act of 1935'" (79th Cong., 2d Sess., 1946); referred to in our Main Brief at pp. 137-8.

[2] Brief of Commission in *New York Trust Co.* v. *S. E. C.*, quoted in our Main Brief, pp. 58-9.

In the light of these facts, Commission Counsel now advance the suggestion—somewhat diffidently, to be sure—that

> "In the case of a preferred stock, moreover, what is involved is an ownership interest in the enterprise—not a creditor claim * * *" (S. E. C. Brief, p. 83).

In so doing, they urge upon this Court a distinction which the Commission itself has repeatedly found to be of no significance whatever in respect of the principle here under discussion, *since the Commission has repeatedly applied it to preferred stocks as well as to debt securities.*[1] And, as we have pointed out, the only decision prior to the instant case in which the Commission departed from the frustration principle to award premiums under the "investment ex the Act doctrine" was one involving the retirement of "a creditor claim", viz., the debentures of American Power & Light Company.[2]

The two remaining contentions on this subject are equally devoid of merit. It is implied (S. E. C. Brief, p. 82) that this Court's *Otis* decision in effect overruled the principles embodied in the long line of frustration cases, a curious conclusion to draw in view of the fact that, as we have pointed out, the *Otis* decision cites the

[1] Thus, in the very first case in which the Commission squarely spelled out the frustration doctrine, the Commission pointed to its precedent in permitting the preferred stocks of National Power & Light to be retired without payment of premiums (see *The United Light & Power Co.*, 10 S. E. C. 1215, 1226-1227 [1942]); and in *Cities Service Power & Light Corp., et al.*, Holding Company Act Release No. 4944 (1944), the Commission squarely held the doctrine applicable to the retirement of debentures and *three issues of preferred stocks*, without the slightest attempt at any distinction.

[2] *American Power & Light Company*, Holding Company Act Release No. 6176.

frustration cases with approval.[1] Finally, it is in effect suggested the Commission should be permitted to determine the application and meaning of the "fair and equitable" principle as it deems appropriate "in view of the accumulated administrative experience."[2] We submit that when Congress embodied in Section 11(e) the "fair

---

[1] See discussion at pp. 65-67 of our Main Brief. With reference to this same contention which Commission Counsel now advance, Commissioner Healy stated:

> "It is interesting to note that in a Commission memorandum filed in opposition to a motion made by the New York Trust Company to the Circuit Court of Appeals for the Second Circuit to vacate its decree in the *New York Trust Company* case on the ground that it was inconsistent with the *Otis* case, *supra*, the Commission stated:
>
> 'The majority opinion of the Supreme Court in the *Otis* case cites the decision of this court with approval * * *.'"

[2] "However, we believe it is entirely clear from the Commission opinions that each case involved a progressive analysis of the problems presented, and that the peculiar problems of each case were considered in view of the accumulated administrative experience" (S. E. C. Brief, p. 82).

It may be observed that at the time the Commission issued its *American Power & Light* decision applying the "investment ex the Act" doctrine for the first time, Commissioner Healy, who strongly dissented, was the only Commissioner who had been a member of the Commission from the time the Commission commenced administration of the Holding Company Act. Commissioner Healy had, in fact, been one of the persons most intimately connected with the enactment of the Holding Company Act, having been Chief Counsel to the Federal Trade Commission throughout the seven-year utility investigation which resulted in enactment of the statute (see recitals in Sec. 1(b) of the Act) and having been one of the principal witnesses in support of the proposed Act when it was under consideration before Committees of both Houses of Congress (Commissioner Healy actually carried the major burden of supporting the bill before the House Committee; see Hearings on H. R. 5423, Committee on Interstate & Foreign Commerce, House of Representatives, 70th Cong., 1st Sess.).

With respect to the legislative intent, Commissioner Healy has stated:

> "When I signed the Report of the National Power Policy Committee to President Roosevelt [which the President forwarded to Congress along with his message asking enactment of the Holding Company Act], I understood the much quoted

and equitable" standard having a well-settled meaning in the law, it did not mean to give the Commission the power to alter that principle, any more than to alter applicable contract rights, from case to case. Not only is such an intention clearly negatived by the legislative history,[1] but imputing such an intention to Congress would, as we have previously urged, raise constitutional questions of the most pressing character.[2]

V. PETITIONERS DISTORT THE LANGUAGE AND REASONING OF THIS COURT IN THE *OTIS* CASE.

Apart from this Court's decision in the *Otis* case, petitioners point to no authority for the Commission's claimed power to remold the rights of senior security holders whose interests are being retired for cash in a genuine liquidation under the compulsion of the statute. In our main brief (pp. 34 *et seq.*) we have shown that the historical meaning of the term "fair and equitable" implies enforcement of contractual terms and the payment of no more than the liquidating preference to senior

---

references to preservation of investment values to refer to the values of operating company securities in holding company portfolios. I did not then and do not now believe it was intended as a basis for denying the senior security holders their full priority rights or for *compelling common stockholders to pay premiums upon the redemption or retirement of senior securities forced by federal statute. The common stockholder is not responsible for premature termination of the senior security holders' investment or for the premature termination of the common's own investment.* The responsibility for both rests upon the federal statute." (*United Light-American Light & Traction Co.*, Holding Company Act Release No. 6603, pp. 43-44; emphasis supplied.)

[1] Main Brief, pp. 36-7.

[2] *Id.*, at pp. 67-71.

security holders whose "matured" claims are being retired for cash under compulsion of law, and that this meaning was imported into Section 11(e) by Congress. We have shown further that the proponents of the Act contemplated that upon the final liquidation of a holding company system its assets would be distributed, as upon the liquidation of a combination in violation of the Hepburn and Sherman Acts. And this Court so stated in *North American Company* v. *S. E. C.*, 327 U. S. 686, 707. Such liquidations require execution of the contractual liquidation claims of the security holders. *Cf. Continental Insurance Co.* v. *U. S.*, 259 U. S. 156.

(1) In reliance on the *Otis* case, however, petitioners contend (S. E. C. Brief, pp. 22-28) that the "fair and equitable" standard of Section 11(e) entitles senior security holders of all dissolved holding companies to receive the value of their total "bundle of rights" "on a going concern basis" regardless of whether the particular dissolution is merely a reclassification of security holders' interests in a continuing enterprise or is a genuine liquidation; and regardless of whether the security holders are paid off in cash or receive new securities in the continuing enterprise. And, according to petitioners, compensation for the loss of the senior security holders' rights "on a going concern basis" must take account of both the liquidation preference and the preferred claim to earnings (S. E. C. Brief, pp. 28-34).

We have contended (Main Brief, pp. 45-50) that in the *Otis* case this Court decided only that when, in fact, the dissolution of a top holding company results in no more than a reclassification of the interests of security holders in a continuing holding company system, such

a dissolution is in effect a "reorganization" and not a liquidation within the meaning of the corporate charter. Therefore, the claims of the United Light preferred stock holders in that case, having no contractual right to maturation, and being in fact exchanged for other claims in the continuing enterprise, were properly "evaluated" on a "going concern basis", as in a reorganization. To say this, of course, is not to say, as Commission Counsel now contend, that when in fact the enterprise is completely terminated and its assets finally distributed, the rights of the security holders who receive cash payments in the full amount of their liquidation preferences must be augmented by compensation for the surrendered claim to future dividends, on the purely fictional hypothesis that "the enterprise continues".

The Commission's position rests primarily upon a single paragraph of the Court's opinion in the *Otis* case. In that case, the Commission had argued, as a justification for not treating the charter liquidation provisions as binding, that "the enterprise was continuing in an altered form and without substantial change in the total of the inherent rights of the security holders" (S. E. C. Brief, p. 76). The Commission now asserts that this Court "expressly disavowed" that "restrictive analysis" as the ground for its decision in the *Otis* case, and rested its conclusion on the broader ground that senior security holders in dissolutions under Section 11(e) must always be compensated for the loss of their total "bundle of rights" "on a going concern basis"—even though the dissolution is a final termination of the entire enterprise and the seniors are being paid off in cash.

The only evidence to which the Commission points (S. E. C. Brief, pp. 25, 77)—or can point—in support of this view is a quotation from the Court's opinion (at p. 638) reading:

> "The reason does not lie in the fact that the business of Power continues in another form. That is true of bankruptcy and equity reorganizations. It lies in the fact that Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders, or, involuntarily through action of creditors. We must assume that Congress intended to exercise this power with the least possible harm to citizens" (p. 638).

A conclusive answer to petitioner's contention is furnished on the face of the Court's opinion. The Court explicitly stated:

> "There is an argument that if the charter provision applies to this situation, it cannot be disregarded, that in such a liquidation 'fair and equitable' would require the distribution of assets only to the preferred. We do not reach that question. The point at issue is whether this charter provision applies" (pp. 635-6).

In the light of this Court's explicit definition of the narrow "point at issue" in the case, the quotation upon which Commission Counsel rely can hardly have the meaning which they seek to impute. And examination of that quotation in its context[1] establishes that it has

[1] The majority's statement was plainly directed to the statement in the dissent (p. 648). "* * * the Commission in this case is liquidating and dissolving, not reorganizing United, and * * * it is without authority in such a case more than in a reorganization to alter or disregard a contract fixing the priorities of stockholders * * *."

reference solely to an interchange between the majority and the minority as to the reason why charter liquidation provisions are deemed controlling in bankruptcy reorganizations (which involve a continuing enterprise) but were not deemed controlling by the majority with reference to the United Light dissolution, although that also involved a continuing enterprise. We think it is plain beyond dispute that what the majority opinion was stating was that the reason for treating the continuing enterprise there involved differently from a continuing reorganized or bankrupt enterprise, must necessarily have lain in something other than the characteristic which both types of "reorganization" had in common, i.e., continuance of the enterprise. The reason the Court gave for such different treatment was that Congress did not intend the Act to "mature" the security holders' liquidation rights when the only circumstances upon which the security holders had agreed to have their rights matured—i.e., insolvency or final liquidation of their enterprise—had not occurred."

Indeed, an examination of the reorganization process makes this conclusion indisputable. In a reorganization, senior security holders must be compensated in full for the "bundle of rights" they surrender. If this compensation is awarded in the form of new securities in the reorganized company, the senior security holder does not receive the cash which would represent his fully matured claim. Since reorganization "matures" his claim, and he thus fails to receive what he is entitled to get on this maturity—i.e., the cash payment—he is held entitled to receive additional value, as compensation for the loss of the prior claim to earnings for which he is required to substitute a new claim to earnings. It is significant that

if, in fact, he received the cash which would represent his fully matured claim, he is not entitled, in addition, to receive compensation for the loss of his prior claim to earnings. Cf. *Knight* v. *Wertheim & Co.*, 158 F. 2d 838, 843 (C. C. A. 2), cert. den. sub nom.: *McGuire* v. *Equitable Office Bldg. Corp.*, 331 U. S. 818; *Bailey* v. *Minsch*, 168 F. 2d 635, 637 (C. C. A. 1), cert. den. 69 S. Ct. 83; cf. *The United Light & Power Co.*, 10 S. E. C. 1215, 1225.

The reason for this is as apparent as it is sound. The enterprise promised to give the senior security holder either a prior cash payment upon the maturing of his claim, or a prior claim to earnings for so long as such "maturing" did not occur. He was not promised, and in reorganizations he never receives, both priorities simultaneously. In a word, he cannot enjoy his cash maturation priority at a time when there is no maturation. By the same token, once his cash maturation priority has been fully satisfied, he can no longer enjoy, or receive compensation for the loss of, his prior claim to future earnings.

Because the problem presented by the dissolution of the top holding company in the *Otis* situation, like the problem presented by a bankruptcy or equity reorganization, involved only the redistribution of the security holders' interests in a continuing holding company enterprise, both the Commission and this Court analogized the one to the other. Since the dissolution there occurring was not a genuine liquidation and the senior security holders were not being paid out in cash, the only valid occasion for "maturing" their liquidation preference—i.e., paying them $100 per share plus accrued dividends, in cash—had not arisen. Accordingly, the senior security holders were held entitled to be compensated by receiving

the equitable equivalents of the total claims—including prior claims of liquidation and to earnings—which they were surrendering under the compulsion of the statute.

Here, however, we are faced with a wholly different situation. Not only was there a genuine liquidation, but it was a liquidation in which the preferences of the senior security holders were fully met in cash.[1] Under those circumstances, the preferred stockholders, having received their full liquidation preference, are not entitled to receive, in addition, amounts designed to compensate them for the

[1] This distinction was clearly pointed up by Judge Leahy in a decision subsequent to that in the instant case, where preferred stockholders of a continuing holding company system were accorded new securities in a face amount equal to the redemption prices of those which they surrendered. In his opinion in that case (*In re Cities Service Co.*, 71 F. Supp. 1003) Judge Leahy stated (at p. 1005):

> "Even if the 3% debentures were the equivalent of money, I think the payment in a principal amount to include the liquidating premium would be fair and equitable and that this case is readily distinguishable from the Engineers Public Service Co. case. In Engineers payment was made to the preferred stockholders in a 'true liquidation'; the charter provided for no premium in a case of an involuntary liquidation; the market history indicated that the preferred would be treated fairly without payment of the premium; and hardship had been worked on both classes of stockholders as a result of divestment orders. In the matter at bar, there was no distinction made in the charter between voluntary and involuntary liquidation. The record indicates common stockholders have achieved great advantages to the detriment of the preferred and the preferred has generally been abused from non-payment of dividends. Here, there has been no hardship worked on any stockholders as a result of divestment orders, and the preferred stockholders are receiving a lower interest rate as a result of the exchange. * * * Since this is not a true liquidation but is a pseudo-liquidation similar to that involved *In re United Light & Power Co.*, D. C., 51 F. Supp. 217, affirmed *In re Securities and Exchange Commission*, 3 Cir., 142 F. 2d 413, aff'd *sub. nom. Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 65 S. Ct. 483, 89 L. Ed. 511, the problem raised in Engineers (i.e., whether the charter provisions do not control in cases of a true liquidation) and which problem was left open in Engineers, does not arise here."

theoretical loss of future dividends at a rate claimed to have been attractive.

(2) Commission Counsel also contend (Brief, pp. 77-78) that the power to "remold" contractual rights, which it is asserted this Court found Congress had bestowed upon the Commission, can be no narrower in the final dissolution of a holding company system than in any of the initial or intermediate dissolutions which produce a continuance of the holding company system in a less complex form. But the *Otis* case, as we have shown, rested upon a finding that the dissolution there occurring was not a liquidation within the corporate charter, rather than upon a finding that the Commission had the power to remold applicable charter liquidation rights. And, in any event, it is plain that the rationale which vindicates the power equitably to adjust unmatured rights in the initial or intermediate simplification of a continuing holding company system, does not apply when the final act of termination of the system occurs and cash is being distributed to the senior security holders.

Indeed, this has been expressly recognized by the Commission itself in a recent decision in which it discussed the compensation to be accorded to preferred stockholders of a continuing enterprise, augmented by merger. Stating that under "the federal standard" of fairness and equity as embodied in Section 11(e), "primary weight in valuation must be accorded the claim to earnings and the economic position of the security in the enterprise", the Commission then added:

> "This is not to say that in certain situations of bona fide liquidation the charter liquidation prefer-

ences may not be treated as carrying *determinative weight* in applying the federal standard of fairness" [1] (Emphasis supplied.)

Here we have evidence of an awakening awareness by the Commission of the distinction which must be drawn between determining the rights of security holders in a reorganization of a continuing enterprise such as was involved in the *Otis* decision, and determining their rights in the case of a final liquidation of the entire system such as we have in the instant case. Further, this statement evidences the Commission's actual recognition, as distinguished from the arguments of its counsel here, that the *Otis* decision does *not* require or justify disregard of contractual liquidation rights in an authentic liquidation, and evaluation of rights on the fictional hypothesis of a "going concern".

The basis for the distinction now recognized by the Commission, but not by its counsel, between the determination of senior security holders' rights in a continuing holding company system as compared with their rights where final liquidation occurs, lies in considerations of an obvious and cogent nature. When the final step terminating the holding company system occurs and the senior security holders are paid out in cash, they are no longer forced to bear the risks of the continuing enterprise. To be sure, they have lost a claim to future preferential dividends; but they have acquired liquid cash and they are not being confined to an investment embodying the risks of the very system in which they had invested, at the same

[1] *Pennsylvania Edison Company*, Holding Company Act Release No. 8550, p. 37, note 40 (October 16, 1948).

time that they are required to forego the position which they previously had.

(3) Commission Counsel further suggest (pp. 77-78) that if the Commission is powerless to remold the contractual rights of senior security holders on the retirement of those securities for cash in the course of the final liquidation of the system, "the management [of a holding company] by its choice of procedure would have the power to give preferred treatment to a particular class of security holders". Therefore, they argue, the Commission must have the power to prevent the management from favoring one class of security holders over another by choosing one form of dissolution rather than another. There can be no question that the Commission and the Courts have both the power and the duty to cut through formal devices by which a management seeks improperly to favor one group over another.

However, it is one thing to prevent a management from utilizing formally correct channels to effectuate an improper purpose, and it is another to deny to the security holders the effectuation of their charter rights when no such improper purpose is found or can be found. Whatever may be the powers which the *Otis* decision confers upon the Commission to supervise the management's choice among the varied alternatives facing it at the initial or intermediate steps in the lengthy process by which holding company systems are ultimately dissolved, a different problem is presented when the final act in distributing the assets of the system occurs.

At that time there is literally no preference that the management can give. The preferences of the security holders are defined by their charter rights upon liquidation. If the senior security holders are to be paid out in cash, they are entitled to no more than their contract provides. If they are to be paid out in securities, it is the duty of the Commission and the Section 11(e) court to see that the value of the securities which they receive is no greater or less than their contract entitles them to receive on liquidation. To be sure, even then, if it is found that the management, for an improper purpose, selects one form of dissolution—such as a merger—rather than a liquidation, as the device to terminate the system, the Commission and the Section 11(e) court have ample power to frustrate the execution of such purposes. But there is no such finding here. On the contrary, as we have shown, in spite of the determined efforts of the preferred stockholders who are petitioners here to establish in the course of the hearings before the Commission an improper purpose on the part of the management, no such purpose either is suggested by the record or was found by the Commission (supra, pp. 7-19).

(4) Finally it is urged that unless the Commission has the power to remold liquidation preferences, either the preferred stockholders may receive less than the "going-concern value" of their investment or the common stockholders may be wiped out despite a finding that "the common stock has a reasonable prospect of sharing in future earnings" (S. E. C. Brief, p. 78). But in this case the Commission gave no consideration to the common stockholders' loss of their "reasonable prospect of sharing in future earning." Moreover, this contention is simply an-

other way of stating that Congress did not intend the preferences which the security holders had agreed would govern the distribution of assets upon a final liquidation, to apply when such liquidation is compelled by the Act. As we have pointed out, nothing in either the language or history of the Act or in any judicial decisions supports this contention. On the contrary, all the evidence points inexorably to the conclusion which the Commission itself has apparently lately reached (supra, p. 67) that when a bona fide and final liquidation occurs and the security holders are paid out in cash, Congress intended the assets to be distributed in accordance with the agreement of the parties.

In point of fact, the formula used by the Commission in the instant case to compute the "going concern values" for which it claims Engineers preferred should be compensated does not suggest that, if given the power to alter contractual rights, the Commission's exercise of that power will allay the fears that preferred stockholders might receive less than the going concern values which they are forced to surrender, or that the common might be wiped out. Not only would that formula produce precisely the results the Commission purports to seek to avoid, but in this case it has deprived the common of values to which they were entitled under the very reorganization standards the Commission contends should be applicable.[1]

[1] Commission Counsel state that the formula employed by the Commission in this case was based on "the Euclidian axiom that the sum of the parts equals the whole" (S. E. C. Brief, p. 43), and that the Commission was therefore justified in evaluating the rights of the preferred stockholders alone "ex the Act", leaving the common stock-

VI. THE POWERS OF THE DISTRICT COURT TO DEAL WITH A SECTION 11(e) PLAN ARE CLEARLY BROADER THAN THE REVIEW POWERS OF THE COURT OF APPEALS UNDER SECTION 24(a); THE DISTRICT COURT HERE DID NOT EXCEED ITS POWERS.

Our main brief, written before we had received the petitioners' main briefs, attributed to the Commission the contention which it had made in the Courts below that its conclusion upon the fairness and equity of a Section 11(e) plan must be accepted by the District Court unless lacking in "any rational and statutory foundation" or unless the Commission "has plainly abused its discretion" (R. 34). The petitioner Streeter still maintains that stand (Streeter Brief, p. 76). The Commission, however, has substantially abandoned that position. Its retreat, commenced in its petition for certiorari[1] is completed in

---

holders to receive merely whatever might remain. We do not understand that this "Euclidian axiom", whatever its other virtues, was intended to provide an authoritative formula for measuring the relative rights of security holders in either a liquidation or a reorganization under the "fair and equitable" standard. Cf. *Jerome Frank, Mr. Justice Holmes and Non-Euclidian Legal Thinking* (1932), 17 Cornell Law Quart., 568, 573-4 (see quotation at R. 101-2).

In the *Otis* case, the demand of the preferred stockholders for 100% of the assets was entirely consonant with this "Euclidian axiom", since "the sum of the parts equalled the whole"; but the Commission and the Courts held that such a distribution was *not* consonant with the "fair and equitable" standard which governs reorganizations and liquidations under Section 11(e).

[1] "The Commission agrees with much of what the court below states concerning the intention of the Congress to have the Section 11(e) court function as an independent check upon the Commission's determination that a plan is fair and equitable and also that the respective roles of Commission and enforcement court should be in general similar to the relationship under Section 77 of the Bankruptcy Act between the Interstate Commerce Commission and the reorganization court." (Commission Petition No. 226, p. 22.)

its main brief when it agrees with the Court below that the second *Chenery* case (*S. E. C. v. Chenery Corp.*, 332 U. S. 194) is inapplicable to the present case.[1] Other concessions made in the Commission's brief will be referred to presently.

(1) However differently it may be phrased and from whatever angle it may be presented, the fundamental argument advanced by the Commission and the other petitioners on this phase of the case may be condensed as follows: a Commission order approving a Section 11(e) plan may be reviewed either by a District Court under Section 11(e) or by a Court of Appeals under Section 24(a), depending upon the whim of the company; review of Commission orders by the Court of Appeals under Section 24(a) is limited by the substantial evidence rule; there is no reason why the powers of a District Court to deal with a Section 11(e) plan presented to it for enforcement should be broader than the review powers of a Court of Appeals considering such a plan under Section 24(a), but, on the contrary, policy considerations would dictate that the same review standards be applied; therefore the limitations governing the Court of Appeals under Section 24(a) should be read into Section 11(e) and made applicable to the District Courts when they act under the latter section.

The Commission concedes that "A traditional function and responsibility" of the District Courts, as reorganization courts, "to exercise 'an informed, independent judgment' as to all matters arising in the reorganization * * *

[1] "While we believe the court below gave the wrong reason for rejecting the applicability of the *Chenery* case, acceptance of our main argument leads to the same conclusion." (Commission brief, p. 112.)

survives in part, and gives the court a broader function than the mere determination of questions of law" (S. E. C. Brief, p. 103). The examples given to illustrate the admittedly "broader function" serve to limit the concession somewhat, but it seems to us beyond question that the concession, however it is sought to be limited, destroys the argument that the powers of the District Court in passing upon a Section 11(e) plan presented to it for enforcement are no broader than the review powers of the Court of Appeals under Section 24(a) of the Act. Moreover, the Commission concedes (Id. at p. 105) that it has itself "emphasized the 'independent duty' of the Section 11(e) court", as the Court below noted (R. 23-24). Although the Commission again seeks so to limit its concession as to drain of meaning the phrase "independent duty", the concession nevertheless further underscores the divergence between the powers of the District Court under Section 11(e) and the powers of the Court of Appeals under Section 24(a).

Apart from concessions, however, there is a fundamental fallacy in the argument of the Commission and the other petitioners above set forth which destroys its validity. Section 11(e) and Section 24(a) are *not* alternative avenues for judicial review of a Commission order approving a Section 11(e) plan. The Act did not contemplate alternative avenues of review and the Commission, in practice, has not permitted such alternatives.

Subsections (d) and (e) of Section 11 constitute, as the Commission itself has phrased it, "a self-contained reorganization statute".[1] The general review procedure

[1] Commission's brief (p. 16) in *Lauraburn v. S. E. C.*, 151 F. 2d 217, quoted at page 139 of our Main Brief.

provided by Section 24(a) with respect to Commission orders is not necessarily applicable to orders made under Section 11(e). Proceedings under subsection (d) can be brought only in the District Court, and the same is true, of course, as to proceedings under subsection (f), which subsection is generally linked with (d) and (e) as part of the "self-contained reorganization statute". Indeed, since Congress admittedly had in mind the functions exercised by the District Courts under the Sherman and Hepburn Acts and under Section 77 of the Bankruptcy Act, it is evident that the congressional intent was that reorganization plans approved by the Commission under Section 11(e) should go from the Commission to the District Court rather than to the Court of Appeals.

Not only do the structure and legislative history of the Act suggest that the proper and exclusive "avenue" for judicial consideration of 11(e) plans is the District Court rather than the Court of Appeals,[1] but it seems to us that to permit alternative avenues of review would not be in accordance with the scheme of the Act.

The District Court has the facilities for giving notice and a hearing to all parties affected by the plan, whether or not they appeared or participated in the hearing before

[1] The exceptional case may arise where a reorganization proposed by the company under Section 11(e) contemplates steps which are either optional with security holders or dependent upon approval by security holders in strict accord with the provisions of the charter or applicable state statutes. Such a plan would not require District Court approval and, if reviewed at all, would be reviewed by the Court of Appeals. *Phillips v. S. E. C.*, 153 F. 2d 27 (C. C. A. 2), cert. den. 328 U. S. 860, was such a case. Cf. the sequel to this case (*United Corporation*, Holding Company Act Release No. 8396), in which the company's proposal for a *non-voluntary* exchange with its preferred stockholders was expressly conditioned upon District Court approval and enforcement, and the Commission's order of approval was also so conditioned.

the Commission; such practice is not customary in the Court of Appeals. The District Court is equipped to take additional evidence in connection with the plan or objections thereto; the Court of Appeals could not conveniently do so. The District Courts have traditionally been charged with broad responsibilities in equity and bankruptcy receiverships and reorganizations, and in reorganizations made necessary by the Sherman and Hepburn Acts; the appellate courts have never exercised such functions and are not organized to consider or decide the multitudinous administrative problems inherent in such matters. Since it seems desirable, and Congress specified, that notice and a judicial hearing be granted to all interested parties, that additional evidence be taken by the court where necessary, and that the reorganization be carried out under judicial supervision, it follows that the proper court to which Section 11(e) plans should be referred is the District Court and not the Court of Appeals.

In the early days of its administration of the Act and before the procedure thereunder had crystallized, there were some instances in which a Section 11(e) plan was permitted to be reviewed by a Court of Appeals under Section 24(a), but the Commission some years ago adopted the uniform practice of requiring that Section 11(e) plans affecting security holders' rights be conditioned upon District Court approval.[1] Such condition, as the Commission

[1] See the Commission's 10th Annual Report to Congress, and the testimony of Chairman Purcell, quoted at page 137 of our Main Brief; see also *Lownsbury* v. *S. E. C.*, 151 F. 2d 217, 218: "The conditional nature of the Commission's order is apparently a method of so framing its mandate as to avoid the seeming inconsistency involved in sections 11(e) and 24(a) of the statute. If effective, an orderly review following Commission action is provided for through District Court, Circuit Court of Appeals, and possibly Supreme Court, in proceedings in which all parties in interest may be participants."

concedes (S. E. C. Brief, p. 87), precludes direct review of the Commission's order under Section 24(a). *Okin* v. *S. E. C.*, 145 F. 2d 206 (C. C. A. 2); *Lownsbury* v. *S. E. C.*, 151 F. 2d 217 (C. C. A. 3), cert. den. 326 U. S. 782.

This practice of channeling Section 11(e) plans to the District Court, is clearly in accordance with the statutory intent. It disposes of Commission Counsel's fear that management, by dictating whether or not an 11(e) plan shall be enforced in the District Court, could determine the scope of judicial review to which the plan would be subjected (S. E. C. Brief, p. 89).

Our conclusions find support in the concurring opinion of Biggs, C. J., in *Lownsbury* v. *S. E. C.*, 151 F. 2d 217, 221.[1] They are also in accord with the views expressed

[1] After considering the provisions and interrelation of the subdivisions of Section 11, and the close analogy afforded by Section 77 of the Bankruptcy Act (p. 220), Judge Biggs concludes (p. 221):

"I can perceive no more reason for holding that a security holder may avail himself of the review provisions of Section 24(a) when the company has filed a Commission approved plan under subsection (e) of Section 11 than for holding that the security holder is entitled to such a review when a plan approved by the Commission is filed under subsections (d) or (f). It is clear that Congress did not intend that a security holder should have the right to a Section 24(a) review of an order of the Commission approving a plan submitted to a district court pursuant to the provisions of subsections (d) or (f).

"The method, technique or device adopted by the Commission in the instant case in conditioning its order as indicated seems proper and well within the procedural field allotted to the Commission by Congress. Certainly the device adopted can do no harm to the rights of a security holder. The interpretation of subsection (e) by the Commission is entitled to great weight since it is the agency charged by Congress with the administration of the Public Utility Holding Company Act. The fact that subsection (b) expressly provides for a Section 24(a) review while subsections (d), (e) and (f) do not, is also very persuasive. Cf. our decision in Marquis & Co. v. Securities and Exchange Com'n, 134 F. 2d 822, and the circumstances of the cited case."

by this Court in *North American Co. v. S. E. C.*, 327 U. S. 686, 709-710; in sustaining the constitutionality of Section 11(b)(1) as against attack under the due process clause of the Fifth Amendment, this Court relied upon the "statutory and judicial safeguards" incorporated by Congress into the Act against destruction of values through divestment or reorganization, foremost among such safeguards being the requirement that a plan of divestment or reorganization "must meet the standards of fairness and equitableness" and "must be carefully scrutinized by both the Commission *and the enforcing court*, thus enabling the assertion and protection of all shareholders' rights." (Emphasis supplied.)

(2) Apart from its contention that the presence in the Act of both Section 24(a) and Section 11(e) requires that the scope of District Court action under Section 11(e) be restricted so that it shall conform with the scope of Court of Appeals action under Section 24(a), the Commission's brief argues as follows: The power of the District Court under Section 11(e) is "similar" to the power of the District Court under Section 77 of the Bankruptcy Act (S. E. C. Brief, p. 90); the Court below "misinterpreted the scope of review of the Section 77 court, and misconceived what is meant by the exercise of an 'independent judicial judgment' to re-examine administrative findings" (Id., p. 94); the scope permitted to the District Court under § 77, and therefore under Section 11(e) is no broader than the powers given to the Court of Appeals under Section 24(a).

We believe, as we argued in our main brief (pp. 129-133), that because of restrictive language contained in Section 77 of the Bankruptcy Act, which has no counterpart in Section 11(e) of the Holding Company Act, the

power of the District Court under Section 11(e) is broader than its power under Section 77. However, even if that were not the case, we differ with Commission Counsel upon their interpretation of the powers of the District Court under Section 77 as this Court has construed such powers, and we submit that if the powers of an 11(e) court were no broader than the powers of a Section 77 court, the District Court here correctly refused to approve the plan notwithstanding the Commission's prior approval thereof.

Commission Counsel quarrel with a statement contained in our brief in the Court below that the effect of the last paragraph of subsection (e) of Section 77 is to confer upon the Interstate Commerce Commission "exclusive power over 'valuation of the debtor's property'" (S. E. C. Brief, pp. 94-95). It is true, as the Commission brief notes, that the word "exclusive" does not occur in the statute. But the interpretation of the statutory language is not ours; it is the interpretation declared by the majority of this Court in *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, where the Court stated (pp. 472-473):

> "The power of the [district] court does not extend to participation in all responsibilities of the Commission. Valuation is a function limited to the Commission, without the necessity of approval by the court * * * [The court then quotes the statutory provisions.] The function of valuation thus left to the Commission is the determination of the worth of the property valued, whether stated in dollars, in securities or otherwise. One of the primary objects of the bill was the elimination of obstructive litigation on the issue of valuation and the form finally chosen approached as near to that position as seemed to the draftsmen legally possible. Judicial re-examination was not considered desirable."[1]

[1] Footnote references omitted.

Notwithstanding the evident intention of Congress to commit the function of valuation to the Interstate Commerce Commission and to withdraw that function from judicial re-examination, this Court held that the Commission's findings on valuation must nevertheless comply with legal standards and be supported by material evidence (318 U. S. at p. 473). "Another restriction on court action" which this Court cited, basing its conclusion on subsection (d) of Section 77, is "that the determination as to whether the plan is 'compatible with the public interest' rests, as valuation does, with the Commission" (Id., 473). As an example of the kind of question so committed to the Commission, this Court referred to "the amount and character of the capitalization of the reorganized corporation * * * the total amount of issuable securities and the quality of the securities to be issued" (Id., pp. 473-474). And this Court continued: "So long as legal standards are followed, the judgment of the Commission on such capitalization is final" (p. 474).

Thus it appears that even as to the two issues which rest with the Commission, as this Court held, without participation by the District Court, without necessity for District Court approval, and as to which judicial re-examination was not considered requisite by Congress—namely, valuation of the debtor's property and determination whether the plan is compatible with the public interest—this Court nevertheless assigned to the District Court the duty to determine whether the Commission's action was reached in accordance with legal standards and was supported by material evidence. Certainly, as to other issues raised by a reorganization plan, notably the issue whether the plan is "fair and equitable", and issues as to allocation

of securities among creditors and stockholders[1]—as to which issues the District Court is said to exercise an independent judgment—the function of the District Court must be something broader than the duty to determine whether the Commission's decision complies with legal standards and is supported by substantial evidence. Yet the Commission's argument on this point, if accepted, would lead to the conclusion that the District Court's functions upon all issues are limited in the same way—a conclusion directly opposite to that reached by this Court in the *Western Pacific* case.

We indicated in our main brief (p. 131) how this Court contrasted the limited review function of the District Court with respect to issues of valuation and public interest, on the one hand, with its functions of "independent examination" to be exercised on other issues. If "independent examination" means nothing more than reviewing the Commission's findings to determine whether they comply with statutory requirements and are supported by material evidence, the phrase is meaningless. Sensing this, the

---

[1] The Commission's brief (p. 94) states:

> "This Court decided in *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 473, that as to matters of valuation *and allocation* the Section 77 court reviews the determinations of the Interstate Commerce Commission under the substantial evidence rule." (Emphasis supplied.)

The reference to "allocation" is erroneous. This Court held that the substantial evidence rule applies to the Commission's valuation of the debtor's property (relying on subdivision (e) of Section 77), and to the Commission's determination of the total amount and quality of securities to be issued (because that is a matter of "public interest" within the meaning of subdivision (d)). But it did not hold that the substantial evidence rule applies to the Commission's *allocation* of securities among the creditors and stockholders; on the contrary it is implicit in this Court's opinion that such questions are within the area where the District Court is permitted and required to make an "independent examination", and its own finding or affirmation.

Commission struggles to assign some significance to the phrase and to indicate some respects in which a District Court reviewing a Section 77 plan may be said to exercise some degree of independence. It begins with the assertion, "The reorganization court, of course, has an independent responsibility for all issues of law" (S. E. C. Brief, p. 102). That is hardly what this Court meant by the word "independent", as shown by its statement that, "While the public interest phase of capitalization is not to be independently passed upon by the court, the court does have statutory authority to review for obedience to legal standards." (318 U. S. at p. 475).

Recognizing immediately that Section 77 "gives the court a broader function than the mere determination of questions of law" (S. E. C. Brief, p. 103), the Commission proceeds to consider how much broader that function is; but it is willing to commit itself only in two respects: that "within limits, the district judge has responsibility to take evidence to decide whether the record on which the agency acted has become stale as a result of changing economic conditions", and that, "Inquiries as to matters of law or fact may be made on the court's own motion or at the behest of objecting parties who, by ordinary appellate standards, might be precluded from raising a question" (S. E. C. Brief, p. 103). Neither of the examples cited is a true instance of "independent examination". As to the power to take additional evidence, this Court held that the District Court has such power even with respect to a Commission finding of valuation, on which clearly the District Court has only the most limited review jurisdiction:

> "Thus, while judicial review does not involve an independent examination into valuation, it does require that the court shall be satisfied, upon the record before

the Commission, *with such additional evidence as may be pertinent to the objections to the Commission's finding of value*, that the statutory requirements have been followed" (318 U. S. at p. 477; emphasis supplied).

And as to the second example cited by the Commission, even a Court of Appeals reviewing a Commission order under the restrictive provisions of Section 24(a) of the Holding Company Act would, under the provisions of the section, have power to consider objections which, or to hear parties who, by ordinary appellate standards might be precluded.

The Commission has thus failed to suggest any respect in which a District Court, acting under Section 11(e) of the Holding Company Act or Section 77 of the Bankruptcy Act, may be said to exercise "independent examination", if in doing so the Court is to be limited, as the Commission contends, to determining whether the Commission's conclusions are supported by material evidence and are in accordance with legal standards.

Charging that the quotations from the legislative history of the Act, as set forth in the opinion of the Court below, "give an incomplete picture of the legislative background" (S. E. C. Brief, p. 100), Commission Counsel have attached as "Appendix B" to their brief more complete extracts from the Senate Report and the Senate debates (Id., pp. 127-185). But the Commission does not call attention to anything in the Report or in the debates, and we find nothing that alters or qualifies the effect of the portions quoted in the opinion of the Court below or in our main brief. While the debate concerned the question whether the District Court should be required to appoint the Commission as receiver or trustee, as the Court below noted (R. 22), and as we stated in our main

brief (p. 134), it is unmistakably clear from the tenor of the debate that the Senate placed special emphasis and confidence in the role of the courts rather than that of the Commission, and intended that the District Courts should retain their traditional reorganization function. In addition to the excerpts quoted in our main brief, we have reprinted in the margin other portions of the Report and debates which further exemplify that intention.[1]

---

[1] The Senate Report, after summarizing the provisions of subsections (a), (b) and (c) of Section 11, states:

> "Precedents under the Sherman Antitrust Act and under the Hepburn Act demonstrate that the necessary corporate adjustments can be made without forced liquidation or the sacrifice of legitimate investment values." (Quoted in S. E. C. Brief, p. 142.)

The Report continues:

> "Subsections (d), (e) and (f) outline the procedure whereby the reorganization plans must be approved by the Commission and carried out under the supervision of the Federal courts" (Ibid.).

With reference particularly to subsection (e), the Report states:

> "Subsection (e) expressly authorizes a holding company subject to the approval of the Commission and the court to work out a plan of reorganization to make unnecessary the issuance of an involuntary order for its reorganization by the Commission, and the Commission and the court are authorized to approve any plan so worked out voluntarily by a holding company as the Commission and the court might order under their compulsory powers. *Thus the voluntary reorganizations of the holding companies might be facilitated by the recognized powers of a court of equity to make such equitable allocations of general liens and priorities as may be necessary to make it possible for the companies to comply with the policy of the statute* (Continental Insurance Co. v. U. S. Reading Co. et al., 259 U. S. 156)." (Id., p. 143; emphasis supplied.)

In the course of the debate, Senator Wheeler, replying to a suggestion by Senator Steiwer that the provision requiring the court to appoint the Commission receiver might be held objectionable as ousting the court of its jurisdiction, stated:

> "No; I do not think it would oust the jurisdiction of the court. * * * Furthermore, this is a mere matter of Congress providing the administrative machinery surrounding receiverships, and in no way usurping any judicial powers. *The judicial functions remain, as always, in the courts.*" (Id., pp. 151-152; emphasis supplied.)

(3) The Commission's brief concedes that if the Commission "did not apply the correct rule of law as to the rights of the stockholders, then of course the district court properly discharged its own statutory responsibility in refusing to approve the plan as approved by the Commission" (S. E. C. Brief, p. 85); and it argues repeatedly that the "basic issue" in this case is one of law (e.g., pp. 84, 108). We agree, as we argued in Part One of our main brief, that in a genuine liquidation such as took place here the "fair and equitable" standard required that the preferred stockholders be limited to $100 per share because of the corporate charter provisions specifically applicable to such liquidation, because of controlling precedents which compel the same result even if the charter liquidation provisions were not deemed applicable to this liquidation, and because of constitutional limitations which preclude a different result.

The Commission's next argument is "that the issue in this case, if not a pure issue of law, must be one of policy which would be for the Commission to decide under any theory of the scope of review" (S. E. C. Brief, p. 89), and it defines that issue of policy as follows: "whether inquiry should be confined to the operation of the particular plan before the Commission or should include a re-appraisal of all past transactions as if the Act had never been passed" (Id. at p. 109); the Commission concludes that upon such matters of policy its judgment should prevail unless "arbitrary or irrational" (Id., p. 110).

This statement of the disagreements between the Commission and the Courts is patently erroneous. The point at which the District Judge and the Court of Appeals on the one hand, and the Commission on the other, differed

was whether, on the assumption that the preferred stockholders were entitled to be compensated for the rights they surrendered "on a going-concern basis", the Commission correctly determined the "equitable equivalents" of the rights surrendered. This issue both the District Judge and the Court of Appeals decided against the Commission on the ground that, as a matter of law, the Commission used an improper and untenable formula for determining the compensation to which the preferred stockholders were entitled. While the Court of Appeals held that the Commission should have another opportunity to determine on a legally correct formula the "equitable equivalents" which the preferred stockholders should receive, the District Court determined that if a correct formula were used, on the record in this case the preferred stockholders could receive no more than $100 per share. Plainly, insofar as the issue between the Commission and the Courts was whether the Commission applied a legally valid formula to measure the equitable equivalents of the right surrendered by the stockholders under the impact of the statute, a question of law was presented, and the decision of the Courts is authoritative. The only question upon which a difference between the Commission and the Courts would require an exercise by the District Court of its admittedly "broader function than the mere determination of questions of law" (S. E. C. Brief, p. 103) is whether, on a legally correct formula, the facts would permit the result reached by the Commission. We submit that it is precisely at that point that the broader scope which Section 11(e) gives to a District Court comes into play, and that, as in this case, a District Court has the power to determine whether on a correct formula the facts would permit any result other than that which it reached.

(4) Finally the Commission argues, "To construe Section 11(e) as conferring on the district court a valuation function co-ordinate with that of the Commission would make the statute unworkable" (S. E. C. Brief, p. 112); either the Commission's conclusion on fairness and equity should bind the District Court, or the conclusion of the District Court should bind the Commission (Id., p. 114); and "in the interest of uniform administration of the statute" it is necessary that the conclusions of the District Court where he disagrees with the conclusions of the Commission should be subject in turn to full review on appeal (Id., p. 115).

Precisely the same problems of possible conflict between the Commission and District Courts as are here conjured up by the Commission could arise under Section 77 of the Bankruptcy Act; but this Court has not found it necessary either to restrict the independence of the District Courts so as to make them mere courts of review over the determinations of the Interstate Commerce Commission or to enlarge the customary review powers of the Court of Appeals or of this Court so as to make the review powers of the Appellate Courts co-extensive with the District Courts' functions. Instead, this Court has affirmed the difference between the functions of the District Court under Section 77 and the functions of Appellate Courts reviewing the action of the District Court.[1]

Both the District Court and the Commission are bound by the requirement that a plan must conform to the "fair and equitable" standard. If differences arise between the District Court and the Commission as to the meaning or

[1] *Group of Investors* v. *Chicago, M., St. P. & P. R. Co.*, 318 U. S. 523, 564, quoted at p. 132 of our Main Brief.

application of that standard in the context of a particular case, the final decision rests, as always, with the Appellate Courts. It is thus evident that petitioners' arguments concerning the threat of "stalemate" stem primarily from their desire to have the Commission's determinations prevail in an area where Congress intended that security holders would "have the protection of findings as to the fairness and equity of plans by both the Commission and a United States District Court" (10th Annual Report of the Commission, p. 65). Cf. *North American Co. v. S. E. C.*, 327 U. S. 686, 709.

Dated, January 5, 1949.

Respectfully submitted,

ALFRED BERMAN,
Attorney for Central-Illinois Securities Corporation and Christian A. Johnson, Respondents-Petitioners.

	PAGE
Opinions Below	1
Jurisdiction	2
Statute Involved	2
Questions Presented	2
Statement	4
History of Proceedings	4
History of the Company	5
Integration Proceedings	8
Proceedings before the Commission	9
Court Proceedings	14
Summary of Argument	20
Argument	26
I. The Court Below Erred in Holding That the District Court Has the Power to Reject the Commission's Findings and Determinations of Value, Amply Supported by the Record, on the Basis of a Discretionary Weighing of Alleged "Colloquial" Equities and in Disregard of the Doctrines of Substantial Evidence and Administrative Finality	26
A. The Court Below Examined the Legislative History, the Provision of the Act and the Law of Reorganization With a too Jealous Regard for the Judicial Role	29
1. Congress intended the court and the Commission to perform complementary roles and did not intend the section 11(e) court to act as a "classic" court of equity	30
2. Internal evidence in the Act	39
3. Law of reorganizations	52

PAGE

B. The District Court's *De Novo* Approval of an 11(e) Plan Is Not a Prerequisite to Its Consummation 60

C. Section 11(e) Offers a Method of Review Alternative to That Under Section 24(a) ... 68

1. Fortuitous selection of review procedure 69

2. Comparable status of administrative record and relative judicial power in 11(e) and 24(a) proceedings 73

D. The Section 11(e) Court Is Required to Accept the Findings of the Commission Respecting the Fairness of a Plan, If Based Upon Substantial Evidence and Possessing a Rational Basis in Fact and Law, and May Not Substitute Its Own Judgment for That of the Commission 76

II. Involuntary Liquidation Preferences Are Not Controlling 95

A. Charter Liquidation Provisions Are Not Conclusive 96

B. Voluntary Liquidation Preferences Are Determinative, If the Charter Liquidation Provisions Are Operative 99

C. The Involuntary Liquidation Preferences, Even If Applicable, Are Not Controlling in the Determination of a Fair and Equitable Plan 103

III. The Commission Properly Applied the "Fair and Equitable" Standards of Section 11(e) of the Act in Approving as Part of a Plan the Payment to the Preferred Stockholders of Cash Equal to the Current Going Concern Value of Their Shares But Not in Excess of the Call Price

PAGE

Where This Amount Exceeds the Involuntary Liquidation Preference of Such Shares Under the Charter 105

A. The Commission Properly Applied the Principle of Full Priority and the Correct Techniques Under the Fair and Equitable Standard in the Valuation of the Respective Interests of the Common and Preferred Stockholders 107

B. The Court Below Misapprehended the Principles and Techniques as Enunciated in the *Otis* Case and Unwarrantedly Criticized the Commission 112

1. The court below erroneously applied a standard of "colloquial equity" 113

2. The court below erroneously applied a standard of valuation "as if the Act had never been passed" 125

3. The court below erred in requiring dollar valuation of the common stock interest where the preferred stockholders receive cash and the common stockholders, by choice, received the residual assets 128

4. The court below improperly directed the Commission to give greater consideration to earning power and to apportion it 132

5. The court below misconceived the significance of fair investment value 134

6. The court below erred in distinguishing the *Otis* case on the basis of the continuance of the enterprise 138

PAGE

C. The Commission Applied the Proper Standards and Techniques in the Valuation Process. Its Findings Should Have Been Sustained Since Based Upon Substantial Evidence and Possessing Rational and Statutory Foundation, and in Any Event They Were Not Capricious 142

IV. The Court Below Erred in Disregarding an Improper Change in the Plan and Approving Incorrect Procedure Used Therefor, Both Sanctioned by the District Court 147

A. The Dividend Rights of the Preferred Stockholders Should Not Have Been Terminated Under a Fair and Equitable Plan Prior to Receipt of the Full Amount of Current Value of Their Stock as Limited by the Call Prices 147

B. The Court Below Erroneously Sanctioned a Departure From the Statute and the Constitution in Permitting an Amendment or Modification of the Plan to Provide an Escrow Without Notice and an Opportunity to Be Heard 151

V. Assuming *Arguendo* the Unfairness and Inequity of the Plan, the Court Below Properly Vacated the Decree of the District Court and Directed the Remand of the Proceedings to the Commission 154

Conclusion 161

Respondents.

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT.

BRIEF FOR THOMAS W. STREETER, *ET AL.*

Opinions Below.

The opinion of the Court of Appeals (R. 12) and the opinion denying the prayers of the petitions and cross-petitions for rehearing (R. 138) are reported in 168 F. (2d) 722. The opinion of the District Court (R. 283a) is reported in 71 F. Supp. 797. The findings and opinion (R. 25a) and supplemental findings and opinion of the Securities and Exchange Commis-

sion (R. 128a) have not yet been officially reported but are set forth in the Commission's Holding Company Act Releases Nos. 7041 and 7119, respectively.

Jurisdiction.

The judgment of the Circuit Court of Appeals (R. 41) was entered on March 19, 1948. A petition for rehearing (R. 140) was denied on June 11, 1948. The petition of Thomas W. Streeter, *et al.*, for a writ of certiorari was filed on August 16, 1948 and granted on October 25, 1948. The jurisdiction of this Court is invoked under section 240 of the Judicial Code as amended by the Act of February 13, 1925 (28 U. S. C. §347, now §1254 of the revised Title 28 U. S. C.) and made applicable by section 25 of the Public Utility Holding Company Act of 1935 (15 U. S. C. §79y).

Statute Involved.

The applicable provisions of the Public Utility Holding Company Act of 1935 are set forth in Appendix A, *infra*, pp. 163-8.

Questions Presented.

The holding company which is being liquidated in compliance with section 11 is solvent. Under its charter, the three classes of preferred stock have a call or redemption price higher than their involuntary liquidation preference. Each of the three classes of preferred shares has an investment value at least equal to the call price. The following questions are presented:

1. Where a plan under section 11(e) of the Public Utility Holding Company Act is enforced in a dis-

trict court and there is no dispute as to the sufficiency of the evidence upon which the Commission based its finding of fairness, is the district court authorized to reject such finding on the basis of a discretionary weighing of alleged equities and in disregard of the usual limitations upon the scope of review by the doctrines of substantial evidence and administrative finality?[1]

2. Is the involuntary liquidation preference under the charter a conclusive measure of the participation of the preferred stockholders under the instant plan?

3. Did the Commission properly apply the "fair and equitable" standards of section 11(e) of the Act in approving as part of a plan the payment to the preferred stockholders of cash equal to the current going concern value of their shares but not in excess of the call price where this amount exceeds the involuntary liquidation preference of such shares under the charter?

4. Did the court below err in disregarding an improper change in the plan and approving incorrect procedure used in connection therewith both of which were sanctioned by the District Court?

5. Did the court below properly vacate the decree of the District Court and remand the proceedings to the Commission for appropriate action where the plan was disapproved as not being fair and equitable within the purview of section 11(e) of the Public Utility Holding Company Act?

[1] Question 1 may be rephrased alternatively as follows: Is the scope of review by a district court which has been requested to enforce a plan approved by the Commission pursuant to section 11(e) of the Public Utility Holding Company Act so broad that the district court may substitute its judgment as to the fairness of the plan for that of the Commission?

Statement.

History of Proceedings.

A proceeding was instituted in the United States District Court for the District of Delaware by the Securities and Exchange Commission ("the Commission") pursuant to sections 11(e) and 18(f) of the Public Utility Holding Company Act of 1935 ("the Act")[2] to effectuate a section 11(e) plan of liquidation and dissolution filed by the Engineers Public Service Company ("Engineers") with the Commission, which plan, as subsequently amended, was approved by that body on January 8, 1947 (R. 141a).

On May 15, 1947, the District Court filed an opinion (R. 283a) approving the plan except as to that portion of it which proposed to retire the outstanding three series of preferred stocks at amounts equal to the respective call prices fixed by the charter (R. 292a). The District Court found the preferred stockholders entitled to only $100 per share—the amount specified in the charter as payable in the event of involuntary liquidation. On May 29, 1947, the District Court entered its order adopting certain changes in the plan, including the creation of an escrow of the amount in excess of $100 per share and directing the retirement of the preferred stocks at $100 per share and the immediate consummation of the plan as so changed.[3]

---

[2] Act of Aug. 26, 1935, c. 687, Title I §33; 49 Stat. 838, 15 U. S. C. §§79-79z-6, §79k in particular.

[3] The applications by the petitioners herein for a stay of this order of consummation, pending appeal, were denied in turn by the district court on May 29, 1947 (R. 335a), by the United States Circuit Court of Appeals for the Third Circuit on June 2, 1947 (R. 11) and a Justice of this Court on June 4, 1947. Since then the plan has been consummated except for the distribution of the fund deposited in escrow pursuant to the district court order (R. 39-40).

On May 29, 1947,[4] the petitioners filed their appeal from the District Court order in the Court of Appeals for the Third Circuit from which order appeals were also subsequently taken on behalf of the Commission and the Home Insurance group of preferred stockholders. On March 19, 1948, the Court of Appeals filed its opinion (R. 12), affirming the decision of the District Court that the plan as submitted by the Commission was unfair and inequitable but vacating the decree of the District Court approving the plan as amended, with directions to enter an order of disapproval and to remand to the Commission for further and appropriate action by it. On June 11, 1948, the Court of Appeals filed its opinion denying the prayers of the petitions and cross-petitions for rehearing (R. 138).

History of the Company.

Engineers was incorporated in Delaware in 1925 primarily to acquire and own public utility properties.[5] The Engineers system was put together by Stone & Webster, Inc., an engineering firm engaged in the business of supervising operating public utilities, the acquisition of properties for its own account and the issuance and distribution of securities. Its first subsidiary was Virginia Electric & Power Com-

[4] One of the petitioners herein is Thomas W. Streeter, a director and preferred stockholder of Engineers, who dissented from the initial plan as unfair in its proposal to retire the preferred stock at $100 per share. At Streeter's insistence the Board of Directors authorized the preferred stockholders to employ independent counsel to insure that the rights of those stockholders would be adequately represented before the Commission and in the courts (R. 473a).

[5] For a complete history of the formation of Engineers see Federal Trade Commission, *Utility Corporations*, No. 66, Senate Doc. 92, Pt. 66, 70th Cong., 1st Sess., pp. 41, 564-572.

pany ("Virginia") which was acquired from Frank Gould who is now one of the largest common stockholders[6] of Engineers. Successively, between incorporation and December 1928, control was acquired of Key West Electric Co., Eastern Texas Electric Co., El Paso Electric Co. (Del.), Savannah Electric & Power Co., Baton Rouge Electric Co., Ponce Electric Co., and Puget Sound Power & Light Co.

The system sprawled over many states and was composed of a great many separate corporate entities. From the beginning, long before the Act, the management inaugurated a policy of system simplification (R. 1648a, 1464a). In accordance with this same policy after enactment of the Act, Eastern Texas Electric Co.[7] was dissolved and Gulf States was transferred directly to Engineers. Thereupon Baton Rouge Electric Co. and Louisiana Steam Generating Co. were merged with Gulf States.

By 1930, Stone & Webster, Inc. had acquired direct ownership of over 90% of the common stock of Engineers (R. 1686a). In December, 1937, after the registration provisions of the Act had been upheld as constitutional, Stone & Webster distributed its holdings to its own stockholders (R. 1501a). However, this distribution of the common stock did not disturb the control which the Stone & Webster interests exercised over Engineers.[8] Although there are over 12,000 common stockholders, 338 or 2.52% of them own 72.54% of the stock and of this amount the greatest number of shares is owned directly or in-

[6] See Engineers' Exhibit 43, R. 1769a.

[7] Eastern Texas Electric Co. was a holding company controlling the present properties of Gulf States Utilities Co. ("Gulf States") and the Western Public Service Co.

[8] R. 726a-729a. See the lists of officers and directors in the annual reports, Engineers' Exhibit 37-A-37-T, R. 1432a-1641a.

directly by members of the Stone and Webster families (R. 567a-570a).

Of the major subsidiaries acquired by Engineers, all but Puget Sound Power & Light Co. ("Puget"), which represented one-third of the system's properties (R. 1673a), were profitable investments and were still part of the system at the time of the Court's order. These subsidiaries were Virginia, Gulf States and El Paso Electric Co. ("El Paso") which had passed directly to Engineers when its parent El Paso Electric Co. (Del.) was dissolved in 1944. Puget, on the other hand, was a disastrous fiasco as far as Engineers was concerned.[9] The other subsidiaries consisted of small companies which never contributed much, if anything, in the way of earnings to the system and which were ultimately disposed of, on the whole, at a profit to Engineers.

The management, from the outset, had pursued a conservative financial policy with respect to paying dividends on the common stock, recognizing the desirability of building up adequate equities in the subsidiaries as well as in the parent company.[10] Even so in 1936, the Company was forced to write down the common stock from $58,059,513 to $1,909,968 in order to create a capital reserve which would be available to absorb the loss which was evident in the Puget venture and thus to permit the resumption of preferred dividends (R. 1481a). In May, 1938, a reserve of $35,000,000 for losses in investments was created and

---

[9] R. 1608a. See *Puget Sound Power & Light Company*, 13 S. E. C. 226 (1943).

[10] R. 1554a, R. 1666a, R. 1676a, R. 1687a, R. 1713a, R. 1444a. In 1938, C. W. Kellogg, then chairman of the Board of Engineers, wrote that "common stock money is the one final and necessary foundation that makes the whole structure stand up." Kellogg, *Audit of 1937 Electric Utility Business*, Electrical World, January 15, 1938.

as a result there was no earned surplus available for dividends on the common stock. From that time on, although there were earnings applicable to the common stock, the management felt that it was "clearly desirable to accumulate additional earned surplus to improve the stability of the Company before consideration is given to a dividend on the common stock" (R. 1537a), and, in addition, for many years prior to the filing of the plan, dividends on the common stock were withheld because of a desire on the part of the controlling interests for capital appreciation and to avoid payment of high personal income taxes.

Integration Proceedings.

On February 21, 1938, Engineers registered with the Commission and on February 28, 1940, the Commission instituted integration proceedings under section 11(b)(1) of the Act. In 1941 the Commission ordered the Company to dispose of its interests in two subsidiaries. The Company did not contest this order. On September 16, 1942, and October 6, 1942, the Commission issued other divestment orders which were set aside by the Court of Appeals for the District of Columbia, the cause being remanded to the Commission. *Engineers Public Service Co.* v. *S. E. C.*, 138 F. (2d) 936 (App. D. C., 1943) cert. granted, 323 U. S. 723 (1944). Certiorari was granted by the Supreme Court, but disposition was not had because of the lack of a quorum. In the meantime, Engineers disposed of the properties which were the subject of Commission's orders, in the consummation of the plan, approved and enforced by the District Court's order dated May 29, 1947, after the denial of the stay in turn by the two courts below and a Supreme Court

Justice. On October 20, 1947, this Court dismissed the appeals as moot.[11]

Proceedings before the Commission.

On September 10, 1945, during the pendency of an action before this Court to test the validity of the Commission's divestment orders under section 11(b)(1) of the Act, the Company filed a plan (R. 1307a) under section 11(e) of the Act which was designed to effect compliance with those divestment orders and which also provided for the elimination of Engineers although such action had not been required by the Commission.

This plan was the culmination of efforts of the management stemming from about 1941 during which period several types of plans were considered and discarded.[12] Among some of the possible alternatives were liquidating holding companies, distributions in kind, a one stock reorganization, a "package" distribution, a "preferential common" reorganization, a voluntary take down plan, a partial payment plan, and a voluntary exchange plan.

After consultation with the major common stockholders it was decided that the primary objective to be attained was the ultimate elimination of the preferred stockholders from the enterprise so that the common stockholders would obtain direct ownership of the underlying companies.[13] This aim was to be accomplished with two other objectives in view: first, to obtain the greatest possible tax savings for the common stockholders (R. 756a), and second, to stop

[11] 332 U. S. 783 (1947).

[12] R. 475a, 481a, 482a, 675a, 688a, 689a, 691a, 707a, 709a, 715a, 717a, 718a.

[13] R. 583a, 643a, 687a, 719a, 723a.

the accrual of dividends on the preferred stock (R. 446a-448a, 650a).

Accordingly, a plan was fashioned which was split into parts. Part I, among other things, proposed the issuance of transferable warrants to the common stockholders which would permit the acquisition of Gulf States common stock upon the payment of $11.50 per share and thereafter the immediate retirement of the three series of outstanding preferred stocks,[14] at the involuntary liquidation price of $100 per share plus accrued dividends.[15] This retirement of the preferred stock was to be accomplished by a deposit of $100 in cash by Engineers in favor of the stockholder.[16] Subsequent to the retirement of the preferred stock, Part I of the plan proposed the distribution of the remaining assets to the common stockholders.

Part II of the plan was intended to afford a means for permitting the later determination of the question whether the preferred stockholders were entitled to any amount in excess of $100 per share.

Part III of the plan proposed the elimination of Engineers either by way of dissolution or by merger with Virginia (R. 1320a). During the hearings before the Commission the merger alternative was removed by amendment for the stated reason that such a course would no longer result in substantial tax savings. This amendment was filed after it was ascertained that a merger was not to be deemed a dissolution or liquidation of Engineers within the mean-

---

[14] $5 series, $5.50 series and $6 series. Engineers had no debt.

[15] The pertinent charter provisions are set forth in R. 1412a.

[16] The common stockholders who owned preferred were given the option of exchanging the preferred for Gulf States stock (R. 41a). Of course, the exchange of preferred would reduce the cash requirements. The record does not show how many shares were exchanged.

ing of the Charter and, in which event, the statutory appraisal provisions of Delaware or Virginia with respect to the rights of the preferred stockholders might be applicable.[17]

The purpose of splitting the plan into parts was to secure an order from the Commission which would authorize the retirement of the preferred stock and the termination of dividends before the extent of the rights of the preferred stockholders was determined. Director Streeter objected to this splitting device (R. 778a) and the management admitted that if Parts I and II were combined the preferred stockholders would be entitled to dividends until their rights were "finally settled".[18]

Following the termination of extensive hearings before the Commission, counsel for Engineers made a motion (R. 1203a) on January 30, 1946, to separate Parts I and II of the plan and for an order permitting the consummation of Part I.

The preferred stockholders resisted this motion on the ground that the common stockholders had no right to terminate the preferred stockholders' interest in the enterprise pending the determination of the extent of their claims unless the stock were called in accordance with the Charter. The Commission took the motion under advisement.

On December 4, 1946, the Commission issued its findings and opinion (R. 25a, H. C. A. R. No. 7041), in which it found, among other things, that although the plan was necessary to effectuate the provisions of section 11 of the Act, it was unfair to the preferred stockholders in its proposal to retire their stock at $100 per share. The Commission was of the view

[17] R. 495a, 538a, 589a, 590a, 650a, 653a, 712a-714a, 915a.
[18] R. 779a. See also R. 448a, 531a, 649a, 650a, 780a-781a.

that under the principles enunciated in *Otis & Company v. S. E. C.*, 323 U. S. 624 (1945), the preferred stockholders were entitled to the current investment value of their securities and that such value was at least equal to the respective call prices of the three series of outstanding preferreds, namely, $105 for the $5 preferred and $110 for both the $5.50 preferred and $6 preferred. The Commission reached this conclusion after (a) consideration of "all provisions of the charter applicable to the preferred, such as the dividend rate and the call price, as well as the liquidation preferences", (b) analysis of "the financial condition of the company, with particular regard to the asset and earnings coverage of the preferred" (R. 62a), and (c) reference to the undisputed testimony of both the preferred stockholders' and the Company's witnesses that the intrinsic values of the preferred were considerably in excess of the call prices (R. 67a). However, the Commission was of the opinion that the call prices placed a ceiling on the right of the preferred to participate in the distribution of the assets (R. 67a).

The Commission also found that it could not grant the Company's motion to split the plan but stated that it would approve an amendment to provide an arrangement whereby the amount in excess of $100 per share could be deposited in escrow in the event the Company desired to litigate the Commission's findings with respect to the rights of the preferred stockholders (R. 75a). However, in the event of an escrow, the Commission held that the preferred stockholders would be entitled to interest on the escrowed amount as additional compensation for the delay in payment. The Commission stated that if the Company did not amend the plan in accordance with its views, an order disapproving the plan would be entered (R. 73a, 299a).

Within the time specified, Engineers filed a new plan. This plan proposed to retire the preferred at their respective call prices.[19] It contained no splitting device and made no mention of an escrow. Under the terms of the plan the dividend rights of the preferred were to be terminated only upon the receipt of the full call prices.[20]

The Commission thereupon issued its Notice of Filing of Amendment and Order for Argument and Hearing on Plan, as Amended, and Order Reopening Record (R. 417a). This notice was sent to all the stockholders by the Company and in an accompanying letter (R. 1937a.) they were informed that Engineers had decided not to contest the Commission's finding that the preferred stockholders were entitled to the call prices.

At the hearing, two groups of common stockholders who had not previously participated, objected to the treatment proposed to be accorded the preferred. However, no evidence was offered although the record had been reopened for that purpose. Counsel for the Streeter group contended that the plan, as amended, did not accord the preferred stockholders their full rights because it contained no provision for continuing the preferred dividends or even for the additional compensation which the Commission had found should be paid the preferred stockholders in the event of delay (R. 1294a, 1299a).

On January 8, 1947, the Commission issued its supplemental findings and opinion and order among other things (a) approving the plan as amended, (b) direct-

[19] The feature whereby the preferred could be exchanged, at a value equal to the call prices, for Gulf States stock was retained. As before this alternative was available only to common stockholders who also owned preferred and to preferred stockholders who were able to acquire warrants.

[20] R. 105a-106a, 107a-108a.

ing its counsel, in accordance with Engineers' request, to proceed with court enforcement, and (c) finding it fair and equitable to provide an escrow arrangement subject to the enforcement court's jurisdiction in the event of delay due to further litigation (R. 128a, 141a).

Court Proceedings.

In accordance with the Commission's direction, an application (R. 4a) was filed on January 9, 1947, with the United States District Court for the District of Delaware. Prior to the hearing before the District Court, in accordance with a prescribed notice (R. 175a) to all stockholders, written objections were filed to the Commission's application and its findings. Counsel for the Streeter group, alleging the fairness of the plan as presented for enforcement, objected to any change to permit the termination of the rights of the preferred stockholders in the manner suggested by the Commission. The only other objectants were two common stock groups (four stockholders out of over 12,000) which hold 7,000 shares or .3% of the 1,909,968 shares of common stock outstanding. These shares were acquired by these two groups between 1943-1946 (R. 1287a), immediately prior to and during the pendency of these proceedings and subsequent to the Commission's decision in *The Western Public Service Company*, 12 S. E. C. 804, 814 (1943), case where it was publicly announced that it was Engineers' contention that, in the event of the liquidation of Engineers under Section 11 of the Act, the charter liquidation provisions would not govern the rights of the preferred stockholders who would be entitled to the fair value of their expectations absent such proceeding.

On February 7, 1947, the President of Engineers,

apparently without prior authority from the Board of Directors, wrote a letter (R. 271a, 394a) to the Commission requesting that the Commission amend its order of January 8, 1947, so as to permit the consummation of the plan by an "alternative" method and to make the recitals required by Supplement R of the Internal Revenue Code so as to entitle Engineers to certain tax relief.

Pursuant to this request and without notice to the preferred stockholders or an opportunity to be heard thereon, the Commission entered a so-called Order of Amendment (R. 165a) on February 11, 1947, which among other things purported to approve, in advance, the changing of the plan so that it could be split and consummated in a manner similar to that proposed in the original plan[21] by an alternative method through the use of an escrow.[22]

At the hearing before the District Court on February 17, 1947, counsel for the Commission made a motion (R. 162a) to amend its application by incorporating the Order of Amendment. The motion was granted (R. 163a) over the objections (R. 181a) of counsel for the Streeter group whereupon a Supplemental Statement of Objections, directed to the Commission's application, as amended, was filed (R. 177a).

At the hearing, counsel for Engineers stated that it appeared likely that the *common stockholders* would appeal and that Engineers desired to follow the alternative method of effectuating the plan (R. 278a). He submitted to the Court a form of Escrow Agreement (R. 408a) which he stated had been worked out by the Company and the Commission's staff.[23] Counsel

[21] R. 170a-171a.

[22] It is the Commission's view that the Order of Amendment did not constitute an amendment to the plan, R. 169a, 389a.

[23] R. 277a. While the matter was under advisement, counsel for Engineers sent a revised form of Escrow Agreement to the District Court.

for the Streeter group contended that this alternative method constituted a material change in the plan and that the Act required the Commission to afford the preferred stockholders an opportunity for hearing as to the fairness of the changes and the adequacy of the Escrow Agreement (R. 177a-179a).

On May 15, 1947, the District Court filed an opinion in which it concluded "that because of the provision for payment of premium, the plan does not meet the requirements of fairness and equity. With the exception of the payment of redemption premiums, the plan is approved including the Escrow Agreement" (R. 292a). It was the District Court's view that a "§11(e) court has the affirmative and independent duty to consider and find whether a proposed plan, which has been approved by the Securities and Exchange Commission, is fair and equitable" (R. 286a). Stating that the quantum of participation to be allowed the preferred stockholders under §11 was to be measured by standards of "colloquial equity", the District Court found that the investment value of the preferred stock was not controlling but was just one of the elements to be considered and that "after consideration of all factors involved" (including issue price, market history, losses due to divestments, "past sacrifices", etc.); it concluded "that $100 would be fair and equitable, but that the payment of premiums would not be fair and equitable" (R. 288a).

Subsequently, on May 26, 1947, counsel for the Commission submitted a proposed form of order (R. 416a) embodying the alternative method of consummation which had been previously approved by the Commission and elected by the Company for the purpose of being adopted in the event of the likelihood of an appeal by the *common stockholders*. This proposed order treated the plan as "supplemented" to include an escrow agreement and certain incidental

changes and incorporated a revised Escrow Agreement which had been submitted to the District Court *after* the hearing on February 17, 1947.[24]

Counsel for the Streeter group opposed the entry of the proposed order (R. 361a-365a) for the reasons *inter alia* that: (1) the District Court had no power under the Act to enforce a plan which it had failed to approve *in toto;* (2) the District Court had no power to rewrite the plan in the first instance; (3) if the District Court had the power to adopt changes it was required by the Act to give notice and afford an opportunity for hearing; (4) the Escrow Agreement was inadequate to protect the interests of the preferred stockholders; and (5) the plan would be unfair to the preferred stockholders if it terminated their dividends in violation of their rights under the charter.

On May 29, 1947, the District Court entered its findings of fact and conclusions of law (R. 293a) and an order (R. 318a), among other things, (a) adopting the alternative method of consummation via an escrow arrangement, (b) directing the retirement of the preferred stock at $100 per share [despite the Commission's finding that such treatment was unfair] and (c) the immediate consummation of the plan, except for the proposed allowance of the so-called premium. In accordance with this order, the plan has been carried into effect, except for the distribution of the fund deposited in escrow (R. 39-40).

[24] See footnote 23. The record demonstrates that if was never contemplated to follow the alternative method in the event the Court *failed* to approve the plan. Counsel for Engineers stated before the District Court (R. 269a, 280a) that the failure of the District Court to approve the payment of the call prices would prevent the carrying out of the plan. Moreover, the Escrow Agreement attached to the proposed order (R. 424a) was different in this respect from the agreement which had been submitted to the Commission on Feb. 7, 1947 (R. 402a), and to the District Court on Feb. 17, 1947 (R. 408a).

On the appeals filed by the Commission and the Home Insurance and Streeter groups of preferred stockholders, the Circuit Court affirmed the decision of the District Court that the plan, as approved and submitted by the Commission was unfair and inequitable, and vacated the District Court's decree for its error in amending the plan to substitute its own estimates of values and approving and enforcing the plan as so amended. It directed the return of the record for further and appropriate action by the Commission, the remaining problem being one of valuation. The Circuit Court also noted that in view of its denial of the Streeter motion for a stay made shortly after the entry of the District Court's order of approval and enforcement, the plan had been carried into effect except for the payment of the fund deposited in escrow (R. 39-40).

The rationale of the Circuit Court's decision hinges primarily upon two concepts—(1) the function of a section 11(e) court, and (2) the standards of valuation for determining equitable equivalents. With respect to the first concept the Circuit Court concluded that a "Section 11(e) court must exercise its full and independent judgment as to the fairness and equity of the plan" (R. 33) and expressly refused to apply the substantial evidence rule to a section 11(e) proceeding (R. 33), and also refused to follow the principles that "unless the conclusions of the Commission lack rational or statutory foundation they may not be disturbed by the section 11(e) court or that a reversal of the Commission's judgment by the court may not be effected save where the Commission has plainly abused its discretion" (R. 34).

In reference to the standards of valuation, the court below held that "All pertinent factors and all substantial equities must be considered by the Commis-

sion whether equitable equivalents are to be reached by the approach *ex* the Act or the approach *intra* the Act" (R. 38). It stated that the Commission has "misunderstood the principle of 'equitable equivalents' enunciated by the Supreme Court in the *Otis & Co.* case"; that "the new doctrine of investment value * * * may not be substituted for the doctrine of equitable equivalents"; and that "investment value is and can be only one of a series of factors to be used in arriving at equitable equivalents" (R. 38, 39). The court below also criticized the Commission for its alleged errors in (a) failing to give adequate consideration to such "equities" and "factors" as losses occurring to Engineers by virtue of the divestitures compelled by the Act, future earning power, etc.; (b) adopting inconsistent techniques in valuing the preferred "*ex* the Act" and the common "*intra* the Act"; (c) making "no finding as to the 'value' of the common stock"; and (d) disregarding the fact that "the holding company enterprise is at an end; both for the preferred and common", which fact (according to the court below) differentiates the instant case from The United Light & Power Company reorganizations (R. 35, 36).

Petitions for rehearing were filed on behalf of the Commission and the Home Insurance and Streeter groups of preferred stockholders for the reason, among others, to obtain clarification of various aspects of the opinion below relating to the functions of a section 11(e) court vis-a-vis the Commission and the standard of valuation in simplification proceedings. Answers and cross-petitions were filed on behalf of two groups of common stockholders. The court below denied the prayers of the petitions and cross-petitions, stating that "neither the Commission, nor the district court, nor this Court possesses the power to waive the provision of section 11(e) providing for approval of a

plan of reorganization as fair and equitable" (R. 139). It refused to treat the Commission's amendatory order of February 11, 1947 or its approval of the escrow agreement as a rejection of Commission's statutory role—the order (according to the court below) being merely a device to expedite execution of the plan of reorganization after the requisite statutory approval. In view of its affirmance of the District Court's disapproval of the plan as unfair and inequitable, the court below directed the Commission to reconsider the problem presented in the light of its opinion or "procure the review" thereof by this Court (R. 140).

Summary of Argument.

I.

The district court and the Commission exercise cooperative and complementary roles under section 11(e) of the Act. Such view is consistent with the legislative history of the Act and receives support from the language of the Act and analogous reorganization statutes and precedents. That statutory scheme should not be distorted by a judicial urge for power in disregard of the legislative division of function between the Commission and the district court. The section 11(e) court is not, as the court below states, a traditional court of equity; nor for that matter do we contend that it is *only* a court of review. Rather do we urge that the powers of the 11(e) court consist of both equity and review functions.

The Commission and the court, we submit, work cooperatively in the process of simplification. That cooperation envisages the recognition by the district court of the sifting procedure of an expert administrative body and the performance of judicial duty in that light with adequate regard for the findings and

judgment of the Commission. On such approach the district court should sustain and not reject the administrative findings and determination of fairness, as well as value and equivalence, if supported by substantial evidence and having warrant in the record and the law. The district court may not substitute its judgment (except for a plain abuse of discretion) for that of the Commission by its own discretionary weighing of alleged "colloquial" or "special" equities. Therefore, the rejection by the court below of the doctrines of substantial evidence and administrative finality as limitations upon the scope of the district court's power under section 11(e), we contend, is erroneous.

The limitation upon the district court's review function in passing upon a plan under section 11(e) accords with the prevailing authorities under the Act and with the decisional and statutory trends in the general field of administrative law and squares with the corresponding responsibility of the court of appeals under section 24(a) in the direct review of administrative action affecting section 11(e) plans. The recognition of the coordinate roles of the district court and the court of appeals under sections 11(e) and 24(a) respectively, in the light of the Commission's primary responsibility for the approval of all plans regardless of enforcement will greatly facilitate the uniform and expeditious administration of the Act.

II.

The Commission and the courts below properly applied the principle of the *Otis* case that the charter liquidation preferences are not conclusive as to the *quantum* of the participation to be accorded security holders in simplifications or reorganizations under the

Act. The Engineers' charter of 1925 could no more contemplate the action required than the 1929 charter involved in the *Otis* case. Furthermore, *Congress* did not intend the exercise of its power to simplify, to mature the liquidation preferences. That view is equally applicable, regardless of the method of simplification (merger, dissolution, liquidation) or the procedural sequence thereof. The *Otis* case makes clear that the security holders' participations are to be measured on a going concern basis and "not as though a liquidation were taking place". If however, this court should conclude that the charter liquidation provisions are operative, it is then urged that the voluntary liquidation preferences (and not the involuntary) should be determinative under the circumstances of the instant case. In any event, even if the voluntary liquiidation provisions are not determinative, the involuntary liquidation preference, if applicable, must not stand in the way of Congressional objectives and cannot control in the determination of a fair and equitable plan under the statute and the constitution.

III.

The Commission properly applied the principle of full priority and the correct technique under the fair and equitable standard in the valuation of the respective interests of the preferred and common stockholders. Under the plan the Commission approved a cash payment to the preferred stockholders for the surrender of their interests in the Company and the receipt by the common of the residual assets in exchange for their intgrests. In reaching this conclusion, the Commission deemed the charter provisions not conclusive as to the measure of the respective

participations but proceeded with a detailed valuation of the preferred stock on a going concern basis, considering all the provisions of the charter applicable to the preferred, such as dividend rate, call price and liquidation preference, and making a careful financial analysis of the Company with particular regard to the asset and earnings coverage of the preferred. Such approach accords with the principles enunciated in the *Otis* case. Under the *Otis* case, the principle of full priority requires that each security holder receive the equitable equivalent of the rights surrendered on a going concern basis. This bundle of rights must be valued as though in a continuing enterprise or a going concern apart from the reorganization. In the evaluation thereof the liquidation preferences are not matured by the impact of the Act. In both the *Otis* and the instant case, the two classes of stockholders were given the equitable equivalents of their participations on a going concern basis and in neither was the Act permitted to mature the liquidation claim which might be greater or less than the existing values. Contrary to this approach, the court below presumably recognizes the full priority rule but erroneously requires the Commission to measure the respective participations on the basis of a nebulous standard of so-called "colloquial" or "substantial" equities. This ambiguous standard substitutes for the well-defined rights of the security holders such indefinite alleged "colloquial" equities as issue price and market history, retention of earnings and conjectural losses from past divestments under the Act. The views of the courts below stress supposed equities which are both factually unsound and legally unimportant and involve a veering away from elements such as current rights to earnings and assets which

are entitled to primary weight. These substitute criteria for the determination of the respective participations by irrelevant factors extrinsic to the contract rights of the security holders, afford no rational basis for the uniform administration of the Act. In requiring the valuation "as if the Act had never been passed" (R. 35), the court below has not applied the principle of valuation on a going concern basis as enunciated in the *Otis* case. In addition, the valuation directed by the court below makes necessary a retroactive readjustment of profits and losses since the passage of the Act and thus imposes an insuperable burden upon the Commission.

The court below also erroneously required a dollar valuation of the common stock interest where the preferred stockholders receive cash and the common stockholders, by choice, receive residual assets. In the instant case, the Commission valued the preferred on a going concern basis, leaving the residual interest for the common. The preferred stockholders were found entitled, according to the Commission, to amounts at least equal to their redemption prices as the equitable equivalent of the rights surrendered and the common were entitled to the remaining assets in exchange for their rights, there being no need to place a dollar value on the residual interest. In thus valuing the preferred stocks, the Commission has followed the usual technique in valuing senior securities upon retirement unaccompanied by a liquidation of the company, in which event the junior securities receive the residual assets as in the instant case. Dollar valuation would serve no useful purpose in the instant case where the Commission has expressly found that "the plan is fair to the common stockholders" and that the "retirement of the preferred stockholders will be of immediate benefit to the common stockholders".

The Commission has applied the correct technique in the valuation of the preferred in the instant case, where at the choice of the common stock management, the preferred are eliminated by a cash payment. This method of compliance with the Act by the elimination of the preferred by a cash payment, is far different from the situation where an indefinite projection of earning capacity is made and apportioned since they involve the formation of a new company and the allocation of the interests therein. In any event, the Commission took into account such criteria as earning records, asset coverage, earning capacity, etc., all of which provide a proper basis for valuation. The facts of this case amply warrant the conclusion reached by the Commission.

Other criticisms directed by the court below at the Commission are also based upon a misconception of the correct principles and techniques of valuation and consequently are erroneous.

IV.

The court below also committed two other errors. First, it disregarded a change in the plan by the District Court. Over objection, the District Court by its order altered the plan through the creation of an escrow so that the dividend rights of the preferred stockholders were terminated prior to the receipt of the full amount of the current value of their stock as limited by the call prices. Such premature termination is unwarranted. In the second place, the procedure whereby the plan was modified or amended to provide such escrow was irregular in that it was accomplished without notice and an opportunity to be heard. This arbitrary procedure is contrary to the statute and the constitution.

V.

Assuming *arguendo* that this Court concludes that the Commission has erred in its valuation, then the question of remand comes to the fore. On the assumption of a proper disapproval of the plan, the court below correctly directed a remand to the Commission for appropriate action. The District Court has no power to amend the plan and reduce the participation of the preferred stockholders, and then to approve and enforce the plan as so amended. As the issue under such circumstances is one of valuation, remand to the Commission for its determination is necessary.

ARGUMENT.

I. The Court Below Erred in Holding That the District Court Has the Power to Reject the Commission's Findings and Determinations of Value, Amply Supported by the Record, on the Basis of a Discretionary Weighing of Alleged "Colloquial" Equities and in Disregard of the Doctrines of Substantial Evidence and Administrative Finality.

A short recital of the views of the Commission and the two courts below will serve to focus attention upon the issue. After consideration of all charter provisions, financial analysis (R. 62a) and reference to undisputed expert testimony as to the intrinsic values of the preferred, the Commission found that the preferred stocks had current investment values at least equal to their respective call prices[25] and

[25] The undisputed testimony of the expert witnesses indicated that the fair investment values of the preferred were considerably in excess of the call prices but the Commission was of the opinion that the call prices placed a ceiling on the right of the preferred to participate in the distribution of the assets. The effect of the charter provision is discussed in point II below and the valuation process in III below.

that fairness and equity required the payment to the preferred of such amounts on retirement (or $105 for the $5. preferred and $110 for both the $5.50 and $6. preferred) (R. 67a-68a) instead of $100 per share for each series.

On the other hand, the District Court, as examination of its opinion and findings[26] discloses, ignored the Commission's findings with respect to the fairness of the plan and more particularly with respect to its determination of value and equivalence and weighed various alleged "colloquial" equities in its own scales, and, arrived at the conclusion that "because of the provisions for the payment of premium,[27] the plan does not meet the requirements of fairness and equity" (R. 292a). In other words, the District Court shifted emphasis from the group of elements which the Commission considered important to another group of circumstances—alleged "colloquial" equities[28] which the Commission undoubtedly considered but did not deem particularly significant.

On the appeal, the court below held "that a Section 11(e) court must exercise its full and independent judgment as to the fairness and equity of the plan" (R. 33) and sustained the District Court's rejection

[26] It is clear that the District Court rejected "such findings and conclusions of the Commission [that] relate to or bear upon the payments of the premiums or are inconsistent with the Opinion dated May 15, 1947 or with the findings and conclusions of law filed with said Order" (R. 293a-294a). Likewise, it can hardly be fairly claimed that the District Court's findings, Nos. 36-38 (R. 307a-308a) are consistent with the Commission's findings (R. 69a-72a).

[27] This characterization as "premium" merely begs the question, since the charter provisions were deemed not controlling.

[28] The District Court took the position that certain "colloquial" equities such as the issue price of the preferred stocks (its market history), alleged losses due to divestments, the past "sacrifices" of the common stock because of retained earnings, etc., "look toward the non-payment of the premium" (R. 288a *et seq.*).

of the Commission's findings on the basis of its own discretionary weighing of alleged equities in the exercise of its independent judgment (R. 34). Furthermore, it denied the applicability of the substantial evidence doctrine to the Commission's findings and refused to hold that the Commission's conclusions may not be disturbed by a section 11(e) court unless they lack "rational or statutory foundation" or that the Commission's judgment may not be reversed by such court except for a clear abuse of discretion (R. 33, 34).

The issue thus presented may be stated in a variety of ways. One statement of the question is whether a section 11(e) court is free to reject the findings or determination of the Commission, respecting the fairness of a plan (or its valuation of a security interest or the equivalence thereof) when based upon substantial evidence and possessing a rational basis and proper statutory foundation. Stated in another way, it is the extent to which a district court which has been requested to enforce a plan approved by the Commission pursuant to section 11(e) of the Act, may substitute its judgment as to the fairness of a plan for that of the Commission. Stated more narrowly, the question posed is whether a district court in an 11(e) enforcement proceeding is authorized to reject a finding of fairness of the Commission (which is based upon evidence, the sufficiency of which is not in dispute) on the basis of a discretionary weighing of alleged "colloquial" equities, without regard to the limitations upon the scope of review which this Court has held to apply to a court of appeals in direct review under section 24(a) of the Act. Simply put, the dispute in this aspect of the case, affects the treatment to be accorded the Com-

mission's findings or determination of fairness by a section 11(e) court.

Basic to this issue is the relative function of the section 11(e) court[29] vis-a-vis the Commission in passing upon the fairness of a plan. The legislative history, when impartially examined, will, we contend, disclose a Congressional intention to make an extensive grant of power to the Commission and to establish the district court and the Commission in complementary and cooperative roles. This view of the complementary functions of the court and Commission under section 11(e) of the Act is borne out by the provisions of the Act and is consistent with analogous precedents in the law of reorganization. Full force and effect to such cooperative role requires the court to give considerable weight to the action of the Commission, and to sustain the Commission's findings if supported by substantial evidence and having warrant in the record and the law and not to reverse the Commission's judgment except for a plain abuse of discretion. Consequently, we urge that the court below erroneously defined the relative functions of the section 11(e) court and Commission in the light of a strong predilection for the judicial power and erred by rejecting the doctrines of substantial evidence and administrative finality in its delineation of the scope of review by a section 11(e) court.

A. The Court Below Examined the Legislative History, the Provision of the Act and the Law of Reorganization With a too Jealous Regard for the Judicial Role.

The provisions of section 11 as well as its legislative history and the law of reorganizations must *not* be

[29] The court below indicated that a "question of law which * * * goes to the heart of the instant controversy" concerns the "extent of the "power conferred on the district courts of the United States by the Act" (R. 20).

"read * * * through the distorting lenses of inapplicable judicial doctrine".[30] In its approach to the problem of the status of the district court under section 11(e), the court below postulated a premise, to which it strongly adhered, that a "section 11(e) court must function as an equity reorganization tribunal with the powers and functions of such a court, and not a review court" (R. 30), and must exercise the "general equity jurisdiction of the reorganization tribunal" (R. 29). Rigorous adherence to that concept of a traditional equity reorganization court, in the "classical" pattern permeated the views of the court below and caused it to stray outside its province. It examined in this distorted light the legislative history, the provisions of the Act, and the law of reorganization. As will hereafter appear, a proper analysis and review in the foregoing respects, will demonstrate the error of the conclusions by the court below. There evolves the concept of the cooperative role of the Commission and the court under section 11(e), which envisages judicial action aided by the sifting procedure of the Commission and predicated upon the Commission's initial determination.

1. Congress intended the court and the Commission to perform complementary roles and did not intend the section 11(e) court to act as a "classic" court of equity.

Congress has provided the basic outline or machinery in section 11 of the Act for the course the integration and simplification of holding company systems is to take. It established standards of administration and placed in the hands of the Commission the primary responsibility for the development of a fair and equitable plan. Upon examination to

[30] *F. C. C. v. Pottsville Broadcasting Co.*, 309 U. S. 134, 144 (1940).

learn the purpose of its enactment, section 11 reveals the intention of Congress to place simplification under the aegis of the Commission, subject to a degree of participation by the Court. Cf. *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 468 (1943).

Proper perspective of the Congressional division of function between the district court and Commission can more readily be discerned from a survey of the entire legislative history of section 11 of the Act rather than from reference to isolated segments of that history. The original bill (S. 1725)[31] which was introduced on February 6, 1935, was drafted so as to lodge with the Commission the direction of the process of reorganization, with limited participation by the court. The primary role of the Commission and the subordinate status of the court is evident from the provisions of the original bill.[32] That view finds

[31] Title I of the Public Utility Holding Company Bill S. 1725 is identical, except for section numbers, with Title I of the House bill (H. R. 5423), which was also introduced on February 6, 1935, in the House of Representatives by Congressman Rayburn [Hearings Before the Senate Committee on Interstate Commerce (74th Cong., 1st Sess.), p. 49]. It should be noted that Title II dealt with amendments to the Federal Water Power Act.

Subsections (c) and (d) of S. 1725 have been excerpted and included in Appendix "B" below.

[32] In general, section 11 of the original bill provided as follows: subsection (a) required the essential preliminary studies by the Commission of existing holding company systems. Subsection (b) dealt with integration and simplification orders by the Commission after hearings. Subsection (c) authorized the Commission to apply to a federal court for enforcement of its 11(b) orders, permitted the court to take exclusive jurisdiction of the company assets and made it the duty of the court to appoint the Commission as sole trustee and empowered the Commission, with the approval of the court and subject to terms and conditions prescribed by the court, to dispose thereof in accordance with a reorganization plan approved by the Commission after hearing (prepared in the first instance by the Commission or subject to its rules by any *bona fide* interested person). Subsection (d) authorized the Commission to *institute* proceedings for reorganiza-

[Footnote continued on following page.]

support in the analysis of this section of the original bill.[33] After hearings before both the House and Senate committees, the bill was rewritten and a substitute bill introduced (S. 2796). Title I[34] of the Senate version of the substitute bill,[35] which eventually became known as the Public Utility Holding Company Act, added to section 11 the provision for voluntary readjustment, which was apparently patterned after section 77 of the Bankruptcy Act.[36]

The renumbered subsections (d)[37] and (f) of section 11 of the substitute bill, formerly subsections (c) and (d), remained substantially unchanged. The new subsection (e) contained provision for the mandatory appointment of the Commission as trustee, similar to that in subsections (d) and (f) and for like authority in the court and Commission as under subsec-

---

[Footnote continued from preceding page.]

tion under section 77B for any insolvent registered company and required the appointment of the Commission as sole trustee in any such proceeding or otherwise and made the reorganization plan effective only upon the approval by the Commission after hearing and prior to submission to the court (such plan to be prepared in the first instance by the Commission or subject to its rules by any *bona fide* interested party) and subjected the payment of all fees to Commission approval.

Subsections (c) and (d) of S. 1725, which are set forth in Appendix "B", later became subsections (d) and (f) respectively, of the substitute bill, S. 2796 (74th Cong., 1st Sess.) and eventually of the Act.

[33] The analysis of subsections (c) and (d) have been excerpted from the report as contained in the Hearings before the Senate Committee on Interstate Commerce (74th Cong., 1st Sess.), p. 49 and included in Appendix "B" below.

[34] Title II of S. 2796, as did S. 1725, dealt with amendments to the Federal Water Power Act.

[35] The provisions of section 11(d), (e) and (f) of S. 2796 are printed in Appendix "C", *infra*, p. 173 ff.

[36] 79 Cong. Rec. 8845 (74th Cong., 1st Sess.) (Excerpts from the Congressional Debates are included in Appendix "D", *infra*, pp. 180-1).

[37] The phrase "fair and equitable" in reference to a reorganization plan was added to subsection (d).

tion (d), to approve and execute any plan,[38] but otherwise was substantially the same as the finally enacted subsection. This new provision was intended, according to the Senate Report, to provide the machinery for voluntary readjustments, which were "to be carried out under the Commission supervision".[39]

The Senate Report bears out the conclusion that the Commission under the substitute bill, as under the original bill, was to have the dominant role in the reorganization or simplification process and that in this connection subsections (d) and (e) provided alternative methods for readjusting *solvent* registered companies while subsection (f) contemplated the reorganization of *insolvent* ones.[40] It appears from the general introductory portion of the Senate Report on the substitute bill as originally introduced the remedy of divestment[41] was patterned after the "technique" established under the Sherman and Hepburn Acts, that the power of federal courts was to be used to "effect" both voluntary and involuntary readjustments and that "during all court processes" the Commission is "to act as an impartial expert economic adviser

---

[38] The final sentence of subsection (e) of the substitute bill which was omitted from section 11(e) of the Act originally read as follows:

> "* * * It shall be within the authority of the court and the Commission to approve and carry out any plan under this subsection which it would be within their respective authority to approve and carry out under subsection (d) of this section." (Appendix "C", *infra*, p. 175.)

[39] See S. Rep. No. 621 (74th Cong., 1st Sess.), p. 8 (Appendix "C", *infra*, p. 177).

[40] S. Rep. No. 621 (74th Cong., 1st Sess.), p. 33 (Excerpt in Appendix "C", *infra*, pp. 178-9). The Senate Report on the substitute bill follows closely the analysis made as to these provisions in the Report on the original bill.

[41] *North American Company* v. *S. E. C.*, 327 U. S. 686, 707 (1946).

and administrative assistant."[42] These broad preliminary comments must be viewed in their proper perspective within the Senate Report and in the light of the *original provisions of the substitute bill*, and consequently must be read consistently and in a reasonable fashion with the Senate Committee's subsequent detailed statements in its sectional analysis.[43] The sectional analysis, which should by its very nature be certainly controlling, is more explicit as to the relationship of the court and Commission. From that analysis it appears that the Commission possesses the dominant role during the reorganization process both in the formulation and approval of the plan and its participation in the execution as trustee, while the introductory remarks, of general nature, merely refer broadly to the technique used and the court's power to carry out readjustments and the function of the Commission *during* the court process. In this latter connection, it is significant that the statement as to the status of the Commission follows the discussion of compulsory readjustments, covered in 11(d) so that at the very least its implications should be determined by a consideration of the provisions of subsection (d) as well as (e). Furthermore, the reference to the status of the Commission "during all court processes" appears to relate to the secondary function as mandatory trustee, assigned to the Commission under the original provisions of the substitute bill. As both subsections (d) and (e) at the time of the Senate Report provided for the mandatory appointment of the Commission as trustee in connection with the execution of the plan, it would seem that the Commission was intended to be an active participant

[42] S. Rep. No. 621 (74th Cong., 1st Sess.), pp. 13-4 (Excerpt printed in Appendix "C", *infra*, pp. 177-8).

[43] S. Rep. No. 621 (74th Cong., 1st Sess.), p. 33 (Excerpt printed in Appendix "C", *infra*, pp. 178-9).

as administrator or trustee of the company's assets in the course of simplification during the court processes. Consequently, a reasonable and consistent explanation of both passages in the Senate Committee's Report negates any legislative intention that the district court function "as in an original equity proceeding, exercising all the powers and duties inherent in a court of equity" (R. 22) like a district court under the Sherman Act. On the contrary these passages affirmatively reveal the intention that the Commission take a dominant role in the reorganization process, and in any event to act in certain respects in cooperation with the courts.

The Congressional debates and administrative interpretation do not afford such unequivocal support for the view of the court below as to the nature of the section 11(e) court, as the court below indicates. Congressional debate, particularly in the Senate, centered upon the provisions of subsection (f) empowering the Commission to institute proceedings for reorganization of insolvent companies under section 77B of the Bankruptcy Act and making mandatory the Commission's appointment as trustee (both of which were changed by amendment).[44] It was urged that the mandatory duty to appoint the Commission as trustee be changed to give the court discretion in the matter as the court had customarily exercised such administrative function. In the course of debate, Senator Wheeler tried, although apparently unsuccessfully, to convince the Senate that the restriction of the court's power of appointment did not oust the court of jurisdiction "because the court has to approve the plan, even though the Commission approves it," pointing out in addition: "In other words, there is really a double check upon the plan, the final de-

[44] 79 Cong. Rec. 8443-4, 8844-5, 8936-41, 8943 (74th Cong., 1st Sess.)

termination rests as in the past in the courts."[44a] This language, by virtue of the analytical dissection by the court below of the words and phrases therein and the attribution thereto of hidden meanings, is found to evidence the Congressional intention to grant to the district court the "traditional function of a court of equity" (R. 23). The broad sweep of the language is lost by the surgical operation which overlooks the extemporaneous nature of Senator Wheeler's remarks made on the floor of the Senate in the course of debate and consequently subjects them inappropriately to an elaborate analysis requiring the same degree of exactitude that may be justifiably applicable to the provisions of a carefully drafted statute.[45] Obviously the significance of the quoted statement can be completely altered by a shift in the stress upon the words in the sentence. Moreover, it should be noted that even where a court in passing upon administrative action performs its duty on the basis of the doctrine of substantial evidence and administrative finality, the "final determination"[46] rests in the courts, and that the phrase "as in the past" could

---

[44a] 79 Cong. Rec. 8845, 74th Cong., 1st Sess. (Excerpt printed in Appendix "D", *infra*, pp. 180-1.)

[45] Apparently the difficulties of construction are doubled because of the need to interpret not only the provisions of Section 11(e), but also the language in the Congressional debates and reports. Hence doubly appropriate are the remarks of Mr. Justice Frankfurter in *Palmer* v. *Massachusetts*, 308 U. S. 79, 83 (1939), when he cautioned:

> "* * * And so we have one of those problems in the reading of a statute wherein meaning is sought to be derived not from specific language but by fashioning a mosaic of significance out of the innuendoes of disjointed bits of a statute. At best this is subtle business, calling for great wariness lest what professes to be mere rendering becomes creation and attempted interpretation of legislation becomes legislation itself. * * *"

[46] See discussion of "substantial evidence" rule as incorporated in Administrative Procedure Act, *infra*, p. 92, n. 120.

certainly as easily refer to "past" status of the court under "past" administrative law without harking back to historic origins of the court of equity. In plain language without emphasis upon words and phrases and hidden meanings, Senator Wheeler was at the time attempting to assure the Senate that the limitation upon the court's power of appointment was not too significant as in any event the court had to approve the plan before it became effective and hence still operated, as formerly, as a final check upon the Commission. Besides, this meager discussion of the relation of the Commission to the court, which was only incidental to the debates on the mandatory appointment of the trustee under subsection (f), clearly discloses the limited extent of the Congressional consideration of subsections (d) and (e) and is certainly a slender basis upon which to find a Congressional intent to bestow the full traditional equity powers upon the district court under section 11(e). The amendment to provide for judicial discretion in the appointment of a trustee of course affected the secondary function of the Commission with respect to the execution of the plan during the court process, but left untouched its primary function in connection with the approval of the plan. The removal of this restriction upon the power of the 11(e) court did not of itself convert that court into a traditional court of equity.

The administrative interpretation upon which the court below placed its reliance is an inadequate ground for its conclusion. Here again the ambiguous remarks made by former officials of the Commission at recent hearings and equivocal statements appearing in the Commission's Tenth Annual Report to Congress (R. 23-4), provide at best a tenuous support for the conception by the court below of the section

11(e) court as the traditional court of equity with all its powers. In contrast equally ambiguous statements appearing in the records of these same hearings[47] and in the same Annual Report [48] of the Commission characterize the district court as a review court. Accordingly, neither view can justifiably be deemed conclusive one way or the other.

A fair analysis of the entire legislative history, as presented above, which is apparently unaffected by administrative interpretation, discloses that subsections (d), (e) and (f) are interrelated and that the court thereunder is not solely a court of equity nor only a court of review.[49] It is not all white nor all black. It exercises both review and equity functions,

---

[47] Mr. Milton H. Cohen, a former director of the Public Utilities Division of the S. E. C., on whose testimony the court below relied, stated at the same hearing: "The Commission's judgments, of course, are not final; as I pointed out, any plan is subject to *review by the United States district court* which must approve the plan as fair and equitable, and thereafter there is the right of appeal to the United States circuit court of appeals, and in appropriate cases review may be sought in the United States Supreme Court." (Italics ours.) Hearings Before the Securities Subcommittee of the House Committee on Interstate and Foreign Commerce, 79th Cong., 2nd Sess., Part 3, p. 963.

[48] Tenth Annual Report to Congress of the Securities and Exchange Commission, p. 87: "Once proceedings under Section 11 are instituted by the Commission (*or are initiated by the filing of a voluntary plan*), *full hearings* are held in which all interested parties are given the opportunity to present evidence and voice their views before the Commission. *On the basis of the record* before it and the contentions made as to the applicability of the law to the facts, the Commission issues its findings and opinion and order. All such orders are subject to full *judicial review* in the Federal courts." (Italics ours.)

[49] As Mr. Justice Douglas in *Estin* v. *Estin*, 334 U. S. 541, 545 (1948), so aptly said in another connection:

> "* * * But there are few areas of the law in black and white. The greys are dominant and even among them the shades are innumerable. For the eternal problem of the law is one of making accommodations between conflicting interests. This is why most legal problems end as questions of degree."

under section 11(d), (e) and (f), and must work cooperatively with the Commission in the simplification or reorganization process. The function of the Commission and the court complement each other, and do not operate independently of each other.

2. Internal evidence in the Act.

The language of section 11(e) was also read by the court below through "the distorting lenses of inapplicable judicial doctrine". Various inconsistencies and absurdities and the distortion of the statutory scheme result from the conclusion, based on the phraseology of section 11(e), that Congress intended to require "the district courts in Section 11(e) proceedings to exercise in connection with the approval or disapproval of a plan the traditional powers of a court of equity in deciding that justiciable issue" (R. 25). The major items of internal evidence in the Act upon which the court below relied will be considered *seriatim* below and demonstrated to be an erroneous, insufficient or unmeritorious basis for the conclusion of the court below respecting the function of a section 11(e) court.

(a) Subsection (e) which the court below apparently analyzed in isolation[50] from the related subsections (d) and (f) of section 11 provides in part as follows:

> "* * * If * * * the Commission shall *find* such plan * * * [necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan], the Commission shall make an order approving such plan * * *. If * * * the court [* * *] shall *approve* such plan

[50] Cf. *American Power and Light Co. v. S. E. C.*, 329 U. S. 90, 104 (1946).

as fair and equitable and as appropriate to effectuate the provisions of section 11], the court as a court of equity may * * * take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; * * *." (Italics ours.) (Brackets added).

The similarity in the bracketed portion of the quoted language respecting the duties of the court and Commission is deemed by the court below to disclose a Congressional intent to impose the same duty upon both the court and Commission in determining *de novo* the fairness of a plan. However, it should be noted that even from a technical or grammatical approach, the same words are not used to describe the respective functions (as claimed by the court below) since the Commission is required to "find" while the court is to "approve". The word "find" arguably may imply the *de novo* determination of the facts, while the word "approve" seems to mean confirm or ratify—something in the nature of a review function as distinguished from a *de novo* determination. Furthermore, the sequence of events whereby approval is followed by enforcement seems to suggest the operation of the equity power *after* approval. On the other hand, it may be fairly inferred that the language imposed the duty on the court to determine compliance with the statutory standards (appropriateness and fairness), and incidental therewith to examine the Commission's findings for support by substantial evidence. Such construction of the language would establish comprehensive dichotomy (consistent with the legislative history and the trend of the law) whereby the Commission makes findings of facts as to the fairness of the plan and the district court examines the record, to ascertain the existence of substantial foundation therein for such findings and to determine

compliance of the administrative action with the statutory standards. Thus similar language in section 77 of the Bankruptcy Act, after which section 11(e) was patterned, has been construed to authorize a review function in an analogous situation.[51] Moreover, in view of the intertwining[52] of the terms "fair and equitable" with the phrase "appropriate to effecuate the provisions of Section 11" in defining the duty of the court under subsection (e) it is likely that Congress intended the same type of examination by the district court with respect to the Commission's determinations both as to fairness and equity and appropriateness to effectuate provisions of section 11(b).[53] Accordingly, since the Commission's findings relating to "appropriateness" are entitled to the greatest weight[54] and are tested primarily for warrant in law and justification in fact[55] and not on a *de novo* basis by a section 11(e) court, the same test or standard must be applied by that court to the Commission's decision as to fairness and equity.

Nor are "dissonant meanings" ascribed to the basic statutory standards of "fairness" and "appropriateness" as implied by the court below, since the section 11(e) plan must always measure up to these standards when examined by both the Commission and the district court. In this way the statutory standards re-

---

[51] See *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448 (1943) (discussed *infra*, p. 83 *et seq.*).

[52] The same nexus between these two statutory standards is implicit under subsection (d), which provides for district court enforcement of an 11(b) order and the disposition of assets in accordance with a fair and equitable reorganization plan.

[53] Subsection (b) expressly provides for review of its orders under section 24, under which the Commission's 11(b) findings are conclusive if supported by substantial evidence.

[54] *In re Standard Gas & Electric Co.*, 151 F. (2d) 326, 331 (C. C. A. 3, 1945).

[55] *American Power and Light Co.* v. *S. E. C.*, 329 U. S. 90, 112-113 (1946).

ceive the same treatment throughout the subsection, while the function of the district court and the Commission differ primarily in respect to the extent of judicial re-examination of the Commission's determination. Moreover, it is not contended, as the court below implies, that the "district courts of the United States should exercise *only* the function of review" (R. 24-5). (Italics ours.) Rather was it intended that the section 11(e) court exercise the powers of both a court of review and a court of equity, depending upon the issue at stake at the time.[36] The comment of the court below that "more appropriate language could be employed" if a review function had been intended cuts both ways. It can equally be argued that "more appropriate language could be employed" if a *de novo* determination before the district court had been intended.[37]

In this connection the court below also rhetorically questions "why then, must it not be concluded that it was the Congressional intention that the district courts", like the Commission should "exercise an independent and plenary judgment in passing on the fairness and equity of the plan" (R. 25). The answer is that such conclusion is not supported by legislative history and the language of the Act and runs directly counter to Congressional intention, as evidenced in its enactments for the past quarter of

---

[36] The court's powers, like its decrees, may be divisible in nature and partake of functions in different categories, such as review or *de novo*. Cf. *Estin* v. *Estin*, 334 U. S. 541, 545 (1948) (Concept of divisible divorce). Recognition thereof necessarily flows from the superimposition of the administrative agency upon the judicial hierarchy, requiring an accommodation of the latter to the former, somewhat analogous to the accommodation of the independent sovereign states to the full faith and credit clause of the Constitution.

[37] The Commission's determination could have easily been made "advisory" as under section 172 of the Bankruptcy Act (11 U. S. C., sec. 572).

a century, in establishing administrative agencies whose findings are treated as conclusive if supported by substantial evidence and are not subject to *de novo* determination by the courts.[38]

(b) The court below also discovers a "Congressional intention" to require independent, *de novo* reexamination of the fairness of a plan from the following language contained in subsection (e):

> "* * * If * * * the court * * * shall approve such plan * * *, the court as a *court of equity* may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; * * *" (Italics ours.)

The reference to the phrase "court of equity" it should be noted, is made in connection with the grant of "exclusive jurisdiction of the company and its assets wherever located" and would seem to reveal a Congressional intent to vest sole or exclusive control of the company or its assets in a particular court (so as to avoid any jurisdictional dispute) and at the same time to establish the geographical limits of that control. This analysis is not only borne out but is even further clarified by the use of almost identical phraseology in the interrelated subsection (d),[39] in a context completely divorced from any question of court approval or disapproval. From a consideration of both subsections (d) and (e), it would seem that the

---

[38] *F. C. C.* v. *Pottsville Broadcasting Co.*, 309 U. S. 134, 142 ff. (1940); see Cushman, *The Independent Regulatory Commissions* (1941) pp. 474-5.

[39] Subsection (d) provides in part as follows: "* * * In any such proceeding, the court as a court of equity may, to such extent as it deems necessary for purposes of enforcement of such order, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; * * *"

court was to exercise its equity powers in reference to situations outside the zone in which both the Commission and the court are to cooperate by virtue of statutory provision. Thus the section 11(e) court may exercise its equity power to protect its present, future and reserved jurisdiction by injunction.[60] While the powers of the section 11(e) court (except for a possible conflict of jurisdiction[61]) are broad in its relation with other courts, its powers are affirmatively limited in its relation with the Commission, as evidenced by the provisions for the Commission's prior approval of a plan, approval of fees, etc.[62] It is obvious that unlimited power has not been granted to the section 11(e) court.

(c) The court below also refers to the inclusion in section 11(b) of the language that "any order made under this subsection shall be subject to judicial review as provided in section 24". Admittedly these words are "apt for creating a review function", but it is also highly significant that no other subsection or section of the entire Act contains a similar reference, and yet the review of Commission action under many different sections is made nevertheless pursuant to section 24(a), including various phases of the simplification program. Consequently its absence from section 11(e) is no more significant than its omission everywhere else in the Act. It is interesting to note that the provisions of section 11(b) of

---

[60] *Okin* v. *S. E. C.*, 161 F. (2d) 978 (C. C. A. 2, 1947); *In re Standard Power & Light Corp.*, 48 F. Supp. 716 (D. Del., 1943); *Illinois Iowa Power Co.* v. *North American Light & Pow. Cos.* 49 F. Supp. 276 (D. Del., 1943); *In re American Gas & Power Co.*, 55 F. Supp. 756, 761 (D. Del., 1944).

[61] For discussion of overlapping area of jurisdiction between district court under section 11(e) and court of appeals under section 24(a) see *infra*, p. 70.

[62] The powers of the Commission are further considered *infra*, pp. 61-3.

the original and substitute bills, as introduced, do not refer to review under section 24(a), nor do the Senate and House Committee Reports make any comment thereon. On the other hand, the Congressional debates disclose discussion of the vulnerability of section 11(b) orders on the theory of the *Schechter* case, in the absence of any judicial review and mention the reviewability of all orders under section 24(a).[63] Conceivably this explicit reference in section 11(b) to section 24(a) was included in the course of Congressional consideration to eliminate any doubt as to the reviewability of the Commission's 11(b) orders especially since the provisions of section 11(b) (commonly known as the "death sentence" clause) caused a great deal of public furor. The danger of such singling out for special treatment is clearly made apparent in the instant case since the general coverage of the broad language of section 24(a) is thereby rendered ambiguous and may be limited, in an unintended fashion, by a mechanical application of the doctrine of *inclusio unius exclusio alterius*.[64] This principle of statutory construction which is of course to be applied only in the absence of legislative intention should never be used to defeat any clear expression of such intention and accordingly yields in the instant case, in the face of

[63] 79 Cong. Rec. 8946-7 (74th Cong., 1st Sess.).

[64] A similar situation recently arose in connection with the hearings of 1946 on proposed amendments to the Act, one of which was to amend section 11(e) so as to add an express provision for a stay. It was quickly pointed out at the hearing in this connection that section 24(b) contained a general provision for a stay and that the inclusion, by amendment of an express provision for a stay in section 11(e) might be construed to imply its exclusion from all other portions of the statute and so operate to limit the coverage under section 24(b). Hearings Before Securities Subcommittee of House Committee on Interstate and Foreign Commerce (79th Cong., 2nd Sess., pp. 1089-94). Apparently the proposed amendment was never adopted.

the evidence of intention in the Congressional debates[65] to make all final orders of the Commission, and not merely 11(b) orders, reviewable under section 24(a). Hence the observation of the court below as to the reference in section 11(k) to section 24(a), although "interesting", affords no proper basis for determining the scope of section 24(a) nor for its conclusion as to the function of the section 11(e) court.

The absence, moreover, from section 11(e) of the sentence or its equivalent which makes the findings of the Commission as to facts conclusive, if supported by substantial evidence, is not as notable as the court below states. The omission of this sentence does not preclude a section 11(e) court from sustaining the Commission's findings of appropriateness with substantial foundation in the record, as indicated above. Besides, there are many analogous situations in which the doctrine of substantial evidence has been applied without the magical sentence[66] (as will be shown below). This principle has been evolved by recognition of the realities of the situation—the creation of an expert administrative body acting as a trier of the facts and fastens itself upon the relationship between

---

[65] The following colloquy occurred between Senators Wheeler and Borah when the latter inquired as to the appealability of 11(b) orders. [79 Cong. Rec. 8946 (74th Cong., 1st Sess.)]:

"Mr. Wheeler: Yes. Every order which is made by the Commission is appealable to the courts.

"Mr. Borah: That is covered by what section?

"Mr. Wheeler: Section 24(a), line 16, page 83, which reads as follows: * * *

"Mr. Borah: In other words all these orders which would be made with reference to reorganization and so forth would be appealable to the courts?

"Mr. Wheeler: Absolutely."

[66] See cases cited, *infra*, p. 91, n. 117.

the court and the agency as a means for allocating their respective responsibilities.

(d) The use of the phrase "after notice and opportunity for hearing" in section 11(e) is stretched by the court below to signify "the manifest intention of Congress to give all persons who might be affected by the plan a day in court in an equity proceeding" (R. 26). It is difficult to see just how that particular phrase conjures up a "manifest intention" to provide affected parties with "a day in court in an equity proceeding". Strangely enough, that same special significance is not attributed by the court below to the identical phrase appearing in section 11(e) in connection with the proceedings before the Commission. Nor for that matter does the identical requirement of notice and an opportunity for hearing in section 11(b) give rise to any unusual consequence or interpretation. Likewise the logic of the court's analysis when applied to section 11(d) leads to the absurd conclusion that "a day in court in an equity proceeding" is *not* intended to be available to parties affected in section 11(d) enforcement proceedings in view of the absence therefrom of any express provision for notice and hearing before the district court. Such construction would obviously result in a ridiculous situation whereby the two enforcement courts under sections 11(d) and (e) respectively would function differently and possess a different status on the same issue. Such a consequence would be at variance with the legislative history which evidences the interrelationship between these two enforcement courts. Clearly the provision for notice and opportunity for hearing must be implied in section 11(d) for the sake of consistency with section 11(e) and therefore its presence or absence is not necessarily conclusive as to the nature of

the court hearing. Moreover, any innuendo in the quoted phraseology that only an equity proceeding can properly protect the rights of affected parties is unwarranted. In fact, Congress could have completely ousted the district court of jurisdiction and constitutionally lodged sole responsibility for the supervision of the entire simplification process with the Commission, subject to review by the appellate courts.[67] In any event, the courts do not have the sole burden of carrying out the Act as the Commission has been entrusted with a share of that responsibility. Under such circumstances and particularly since all plans must be approved by the Commission while all need not necessarily be the subject of enforcement by the section 11(e) courts, one may question the accuracy of the court's statement that "Many, if not most, of these persons [affected by the plan] will not have appeared before the Commission" (R. 26). No factual or documentary support is furnished for the gratuitous statement made by the court below. Contrariwise, the reverse is more apt to be true, namely, that most of the persons affected by the plan will have appeared before the Commission.[68]

(e) Time and again, as has been indicated, the court below ascertains Congressional intention respecting the function of a section 11(e) court on the basis of unwarranted inferences drawn from insupportable or erroneous premises. This approach is again exemplified by the tenuous and disputable inferences of

---

[67] Such provision for notice and hearing, although present in section 77 of the Bankruptcy Act, has not prevented the district courts from exercising limited review functions on certain issues. See *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448 (1943).

[68] Other equally questionable statements of the court below respecting the receipt of evidence *aliunde* the Commission's record will be discussed, *infra*, at p. 73 *et seq.*

Congressional intention not to limit the district court to a review function, which the court below draws from the absence of a statutory provision for a vote upon a proposed plan. In the language of the court below:

> "It seems improbable to us that Congress intended that the district courts of the United States should be limited to the function of mere review under the Public Utility Holding Company Act, the only Federal reorganization statute by the terms of which security holders are not permitted to vote their approval or disapproval of a proposed plan or reorganization, *and to prevent its operation if the holders of the requisite amounts of the securities affected are not in favor of it*" (R. 26-27). (Italics ours.)

It is apparent that the court below postulates as its basic premise, upon which its inference is based, that all federal reorganization statutes except the Public Utility Holding Company Act permit security holders to vote upon a proposed plan and to prevent its operation by their dissent or veto.

The main thrust of this statement by the court below which is italicized in the quotation, *supra*, relates to the supposed power of dissenting security holders to veto any reorganization plan, and so act as an additional check. That major premise, upon which the court below relied, is erroneous; therefore the inference drawn therefrom respecting the Congressional intention not to limit the district court to a review function is also fallacious. Reference to the Bankruptcy Act discloses that express provision has existed since the adoption of an amendment in 1935[69] to sec-

[69] Act of Aug. 27, 1935, c. 774, 49 Stat. 911, 11 U. S. C. sec. 205.

tion 77 for overriding the vote of dissenters and for authorizing confirmation of a plan despite their rejection, provided in substance that the dissenters receive fair and equitable treatment and are not reasonably justified in their rejection.[70] These "cram down" provisions[71] which permit confirmation by the courts over objection of security holders were recently held within the bankruptcy powers of Congress. *R. F. C.* v. *Denver & Rio G. W. R. Co.*, 328 U. S. 495, 533 (1946). Thus the voting requirement has been relegated to relative insignificance and a mere token existence, at least in railroad reorganizations under section 77 of the Bankruptcy Act, since fair and equitable treatment of dissenters will usually render their rejection without reasonable justification. As

---

[70] Section 77(e) of the Bankruptcy Act [11 U. S. C. §205(e)] provides in pertinent part as follows:

> "Upon receipt of such certification, the judge shall confirm the plan if satisfied that it has been accepted by or on behalf of creditors of each class to which submission is required under this subsection holding more than two-thirds in amount of the total of the allowed claims of such class which have been reported in said submission as voting on said plan, and by or on behalf of stockholders of each class to which submission is required under this subsection holding more than two-thirds of the stock of such class which has been reported in said submission as voting on said plan; and that such acceptances have not been made or procured by any means forbidden by law: *Provided, That, if the plan has not been so accepted by the creditors and stockholders, the judge may nevertheless confirm the plan if he is satisfied and finds, after hearing, that it makes adequate provision for fair and equitable treatment for the interests or claims of those rejecting it; that such rejection is not reasonably justified in the light of the respective rights and interests of those rejecting it and all the relevant facts; and that the plan conforms to the requirements of clauses (1) to (3), inclusive, of the first paragraph of this subsection (e):* * * *" (Italics ours.)

[71] Craven and Fuller, *The 1935 Amendments of the Railroad Bankruptcy Law*, 49 Harv. L. Rev. 1254 (1936).

stated by this court in *R. F. C.* v. *Denver & Rio G. W. R. Co.*, *supra*:

> "* * * If there is a rejection, there is a reexamination of the plan to assure that those who dissent have had fair and equitable treatment. Apparently the reexamination for this treatment does not differ from that for the original court approval under the first paragraph of subsection (e). It does, however, center upon the rights of those who rejected the plan.
>
> * * * *
>
> "* * * If a plan gives fair and equitable treatment to dissenters the elements which make the plan fair and equitable cannot be the basis for a reasonably justified rejection. If only those elements are relied upon, as here, the rejection is not reasonably justified." (328 U. S. 534, 535).

Accordingly, the voting requirement is presently yielding to an expanding concept of the bankruptcy power under the Constitution. In any event, no vote is required where an overriding statutory policy compels the reorganization or readjustment, as under the Sherman and Hepburn Acts. E. g., *Continental Ins. Co.* v. *U. S.*, 259 U. S. 156 (1922). Strangely enough, this precedent is completely disregarded by the court below, although it provided the basic authority for the compulsory and voluntary readjustment provisions of the Act.[72] It may reasonably be concluded in the light of the legislative history and, by analogy to the precedents under the Sherman and Hepburn Acts, that the overriding policy of the Act is the basis of the omission of the voting requirement, particularly

[72] It is of interest to note that the precedents under the Sherman and Hepburn Acts are the bases for the Senate Committee's statement as to the court's power to effect readjustments, upon which the court below relies in an earlier portion of its opinion.

in view of the statutory interpolation in the reorganization process of an expert body, as the Commission, charged with the duty of protecting the rights of investors as well as the public interest. Yet, even if the precedents under the Sherman and Hepburn Acts are not fully decisive, the persuasive analogy of the 1935 amendments to section 77 of the Bankruptcy Act negates the importance of the voting requirement, and renders unwarranted any inference of Congressional intention respecting the function of the district court on the basis of the absence of a veto power of the security holders.

3. Law of reorganizations.

The court below also makes the broad claim that "The history of the law of reorganizations tends to support the view that a Section 11(e) court must function as an equity reorganization tribunal" (R. 27). This claim is not borne out by the precedents in the law of reorganization.

(a) *Precedents under section 77 of the Bankruptcy Act.*

This general conceptualistic approach places primary emphasis upon the historical origins of the reorganization process, and overlooks the recent developments in the law of railroad reorganization under the Bankruptcy Act and the current trends in the field of administrative law. The legislative history discloses that the provisions of section 11 pertaining to the relation of the district court and Commission, in the simplification or reorganization process, were patterned after the provisions of section 77 of the Bankruptcy Act (as distinguished from 77B or Chapter X) affecting the relation of the

Interstate Commerce Commission and the court. This view is reinforced upon examination of the comparable provisions of these two sections.[73] It is recognized that the district courts have definite responsibilities under section 77 of the Bankruptcy Act, and likewise definite limitations upon their action. The status of the district courts under section 77 of the Bankruptcy Act would certainly seem exaggerated, at least by innuendo, in the statement of the court below that "Congress intended the district courts of the United States, within the limitations of the statute, to function as equity reorganization courts." (R. 29). This overstatement of the district courts' position cannot be reconciled with the views of this Court in *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 468 (1943), expressed as follows:

> "* * * Congress outlined the course reorganization is to follow. It established standards for administration and placed in the hands of the Commission the primary responsibility for the development of a suitable plan. *When examined to learn the purpose of its enactment, § 77 manifests the intention of Congress to place reorganization under the leadership of the Commission, subject to a degree of participation by the court.*
>
> "It is clear from the discussions and the statute itself that there was recognition by everyone of the advantages of utilizing the facilities of the Commission for investigation into the many sided problems of transportation service, finance and public interest involved in even minor railroad reorganizations and utilizing the Commission's experience in these fields for the appraisals of values and the development of a plan of re-

[73] The parallel is not unexpected since the railroads and utilities have long been subjected to regulation as industries affected with the "public interest".

organization, fair to the public, creditors and stockholders. *The resulting legislation was an attempted balance between the power of the Commission and that of the court.*" (Footnotes omitted.) (Italics ours.)

Later in the same case, after discussing the limited powers of the district court with respect to issues of valuation and compatibility with public interest, this Court concluded as follows:

> "*Thus limited the district court acts concerning the plans only upon the issues specifically delegated by subsection (e). As to these, its powers are negative. It may veto the plan in its entirety but may improve it only by suggestion.* It becomes a necessary and important factor in railroad reorganization. These reorganizations may be attained only through properly coordinated action between the Commission and the court" (318 U. S. 474-5). (Italics ours.)

Thus this Court analyzes the powers of the section 77 court as negative and not affirmative at least in relation to the Interstate Commerce Commission, contrary to the court below.

Equally questionable is the further statement of the court below with respect to the function of the section 77 court vis-a-vis the Interstate Commerce Commission, on the issue of value, to the following effect:

> "* * * Though the Commission must make the primary determinations respecting the plan, including in particular those relating to valuations of railroad securities, the court must exercise its own independent judgment in approving or disapproving the plan *whether the court's rulings relate to value or to some other pertinent subject.* See *In re Erie R. Co.*, 37 F. Supp. 237, 243-5,

aff'd, 6 Cir. 133 F. 2d 730, cert. den. 320 U. S. 748" (R. 29).

The reliance by the court below upon the *Erie* case, *supra*, is misplaced for the District Court in that case clearly recognizes the limitation upon the scope of its review on a question of value when it states:

> "* * * it is my opinion that the Commission's determination of the value of the properties of the Erie and the Chicago & Erie for reorganization purposes—i. e. the total capitalization—is conclusive unless it clearly appears (1) that the Commission applied improper standards of valuation, or (2) that its finding is wholly unsupported by the evidence (citations omitted) * * *" (37 F. Supp. 244).

In any event the italicized portion of the statement (R. 29, *supra*) by the court below does not square with the views expressed as follows by this Court in the *Ecker* case, *supra*:

> "The power of the court does not extend to participation in all responsibilities of the Commission. Valuation is a function limited to the Commission, without the necessity of approval by the court. * * *
>
> * * * *
>
> "* * * Congress apparently intended to leave the determination of valuation 'of any property for any purpose under this section' to the Commission. The language chosen leaves to the Commission, we think, the determination of value without the necessity of a reexamination by the court, when that determination is reached with material evidence to support the conclusion and in accordance with legal standards" (footnotes omitted) (318 U. S. 472-3).

Thus this Court clearly indicates that "judicial review does not contemplate an independent examination into valuation" by the bankruptcy court under section 77, stating that "valuation is essentially a problem for the [Interstate Commerce] Commission". Likewise the intimations of this Court are to the effect that the scope of review may be wider with respect to issues other than valuation (e. g., exclusion of claimants for lack of value), but does not contemplate an independent *de novo* determination by the district court. Certainly the description by this Court of the functions of the section 77 court cannot be reconciled with the concept of that court, as envisaged by the court below. Accordingly, the expressions of this Court in the *Ecker* and other cases[74] make it impossible to accept the conclusion of the court below with respect to the relation of the Interstate Commerce Commission and the district court under section 77 of the Bankruptcy Act that "the limitations imposed by the statute are *largely procedural,* operative in the respective fields specified by Congress to Commission and court, and *do not substantially circumscribe the general equity jurisdiction of the reorganization tribunal*" (R. 29). (Italics ours.) Therefore, as the premise of the court below respecting the function of a section 77 court, is erroneous, its inference based thereon pertaining to the function of the section 11(e) court must necessarily be fallacious.

(b) *Section 77B and Chapter X are not analogous.*

The reliance by the court below upon the analogy to and the precedents under, section 77B and Chapter X of the Bankruptcy Act for cloaking the section

---

[74] *E. g., Palmer* v. *Massachusetts*, 308 U. S. 79 (1939); *Warren* v. *Palmer*, 310 U. S. 132 (1940). Also see concurring opinion in *Ecker* case, *supra*, 318 U. S. 512-13, 515.

11(e) court with the classical equity powers, has been misplaced. At the outset it must be pointed out that the provisions of section 77B of the Bankruptcy Act are substantially different from those of section 11(d), (e) or (f) of the Act, since the Commission, apart from section 11(f), exercised no functions, under section 77B and the 77B reorganizations were conducted wholly under the supervision and direction of the bankruptcy courts. Therefore, the situation under section 77B is not analogous and so provides no real guidance on the question of the function of the court vis-a-vis the Commission under section 11(e) of the Act.

Similarly, Chapter X (which is the successor to section 77B by virtue of the 1938 amendments to the Bankruptcy Act, known as the Chandler Act) affords no aid to the views espoused by the court below. Far different is the function of the Commission under Chapter X of the Bankruptcy Act than under section 11 of the Act. Its duties and powers under Chapter X are certainly more limited than under section 11. The Commission has itself described its restricted position under Chapter X in the following language:

> "In participating in proceedings under Chapter X of the Bankruptcy Act, the role of the Commission differs markedly from that under the other Acts which it administers. The Commission does not administer Chapter X. It does not initiate the proceedings, hold its own hearings, or adopt Rules and Regulations, but acts, as the representative of investors and as an aid to the Court, in a purely advisory capacity. It has no authority either to veto or to require the adoption of a plan of reorganization or to render a decision on any other issue in the proceeding. The facilities of its technical staff and its impartial recom-

mendations are placed at the services of the judge and the security holders, affording them the views of experts in a highly complex area of corporate law and finance."[75]

Thus, under Chapter X, the Commission upon the referral of a plan has the discretion to prepare a report which in any event is only "advisory". Regardless of the action or inaction of the Commission, the district court is required to determine the fairness of a plan. As there is no division of responsibility between the court and the Commission under Chapter X, the ultimate approval or disapproval of plans is left solely with the district court.

Accordingly, although the court under Chapter X may possess "the full and independent equity powers in the classical pattern of reorganization courts", it is here contended, that the significant dissimilarity between the reorganization provisions of Chapter X and those of section 11, renders inapplicable the analogy of a Chapter X court to the section 11(e) court.

This view as to the inapplicability of the Chapter X concept to determine the relation of court and Commission under section 11, is fortified by the implications of section 172 of Chapter X (11 U. S. C. sec. 572) which makes the Commission's report upon the referral of a plan, only advisory. This proviso relating to the status of the Commission's report under Chapter X, as the court below admits, may support the inference of Congressional intention that the Commission's report under section 11(d), (e) and (f) should be more than "advisory" to the district court

[75] Twelfth Annual Report of the Securities and Exchange Commission, June 30, 1946, pp. 81-2. Such administrative interpretation is entitled to weight by the courts.

in passing upon the fairness and equity of a plan.[76] That inference is strengthened by the express requirement under section 11, for the approval of a plan by the Commission, before its enforcement, which is not required by section 172 of the Bankruptcy Act.

At this point the impact of section 11(f) of the Act upon sections 172 and 174 of Chapter X (11 U. S. C. secs. 572, 574) sheds light upon the status of the court under section 11(e). Thus, it would seem from an examination of provisions of the two statutes that the mandatory requirements of submission to, hearing before, and approval for fairness by, the Commission before submission to the court, stem primarily from the provisions of section 11(f) rather than sections 172 and 174, as the court below seems to imply (R. 28). Such construction would accord with the legislative history of the Holding Company Act and the express provisions of section 11(f), which discloses a Congressional intention to achieve the overriding policy of the Act with respect to both solvent and insolvent registered companies. In effect, section 11(f) would seem to project the Commission into the reorganization of insolvent registered holding companies, whether under Section 77B or its successor, Chapter X, in substantially the same position that the Commission occupies with respect to the readjustment or simplification of solvent registered companies under sections 11(d) and (e). In other words, the status of the S. E. C. under section 11(f) when projected into Chapter X closely parallels that of the I. C. C. under section 77 of the Bankruptcy Act; as section 11(f) is in substance a miniature reor-

[76] R. 28. The Chandler Act, enacted three years after the Holding Company Act, does not evidence a Congressional intention to modify or repeal the provisions of section 11(f). Moreover, it is well settled that repeals by implication are not favored.

ganization statute. Such specific statute as the Holding Company Act, which clearly contemplated the exercise by the Commission of functions in connection with bankruptcy reorganizations of insolvent registered companies, should not be unduly restricted by the general and broad provisions of the Bankruptcy Act, which affect all types of insolvent business corporations. Possibly a consistent construction of the provisions of both acts may be achieved by carefully marking out the different areas of operation by the Commission in terms of the issue at stake—divestment or insolvency. In any event, the accommodation of section 11(f) to the provisions of the Bankruptcy Act must not be made at the expense of the Holding Company Act, and certainly not at the expense of any part of section 11(e). Therefore the views expressed in *In re Midland United Co.*, 58 F. Supp. 667 (D. Del. 1944), which reflect an unwarranted expansion of the Bankruptcy Act rather than the accommodation of, the two acts to each other, must be rejected to that extent. In that case, Judge Biggs, who wrote the opinion for the court below in the instant case, was then sitting as District Judge and was called upon to determine the functions of a district court under section 174 of the Bankruptcy Act in relation to the Commission's function under section 11(f) of the Holding Company Act. He noted the review restrictions contained in section 24(a) of the Holding Company Act, but refused to read them into section 174 of the Bankruptcy Act because the two acts were not in *pari materia*,[77] and expressed the view that the district court under section 174 must exercise its independent judgment in approving a plan. At least the converse should be equally true,

[77] 58 F. Supp. 683, n. 15.

namely that the interpretation placed upon section 174 of the Bankruptcy Act should not be read into section 11(f), and certainly not into section 11(e), of the Holding Company Act. Consequently the *Midland* case in effect represents an unwarranted intrusion of Chapter X of the Bankruptcy Act upon the Commission's function under section 11(f), which the court below now seeks to extend to the Commission's function under section 11(e). Such extension would result in a distortion of the statutory scheme.

In this manner the court below has attempted to pull itself up by its own boot-straps, compound its own erroneous interpretation, and extend unduly the effect thereof. This is but another instance in which the court below has applied unreasonably and mechanically its views as to the classical court of equity to the overlapping provisions of the Holding Company and Bankruptcy Acts.

The status of the Commission under section 11 of the Holding Company Act, as indicated above, provides a striking contrast with its position under Chapter X, and is even more dignified, in certain respects, than that of the ICC under section 77. Thus, while under both section 77 and Chapter X of the Bankruptcy Act the proceeding originates in the district court, the proceedings under the Act, except for insolvency situations within the coverage of section 11(f) which should be accommodated to the provisions of the Bankruptcy Act, are instituted by the Commission and heard, if at all, by the district court upon the administrative record. The Act expressly provides for public hearings before the Commission and the maintenance of appropriate records thereof.[78] On the substantive aspect no plan under

[78] Section 19 of the Act, 15 U. S. C., §79(s) (Appendix "A" *infra*, pp. 166-7).

the provisions of section 11(d), (e) and (f) can become effective without the approval of the Commission after an opportunity for hearing and prior to submission to the court. Under subsection (e) a registered holding company may, subject to the rules and regulations of the Commission, propose the plan, while under subsections (d) and (f) a reorganization plan may be proposed in the first instance by the Commission or subject to its rules and regulations, by a *bona fide* interested party. In connection with the appointment of a trusteee or a receiver under section 11(d), (e) and (f) it appears that the Commission is to be notified and given an opportunity to be heard before the appointment of such trustee or receiver, and cannot be so appointed without its "express consent". Lastly, the Commission may, in accordance with its rules and regulations, require all fees paid in connection with "any reorganization, dissolution, liquidation, bankruptcy or receivership, in such proceeding" to be "subject to approval by the Commission".

The foregoing provisions of the Act establish at one and the same time the restrictions upon the usual powers of a court of equity and the division of function between the court and the Commission under section 11 of the Act. Thus Congress has assigned definite responsibilities to the district court and likewise made a very broad grant of power to the Commission.[79] The whole scheme of Section 11 leaves no doubt that Congress did not mean to grant to the district court the same scope that it may have historically had as a court of equity. In view of the legislative history of section 11 and the extent to which section 11 made judicial action dependent upon

---

[79] *In re Standard Gas & Electric Co.*, 151 F. (2d) 326, 331 (C. C. A. 3, 1945).

approval by the Commission, it would violate the traditional respect of Congress for the administrative processes to imply the power, in a district court, to ignore determinations of value and fairness, by the administrative agency that has received a broad grant of power in the premises. Congress appears to have intended that the judicial functions of the section 11(e) court and the administrative functions of the Commission work cooperatively in simplifications.[80] Accordingly, the district court must not be permitted to exercise its powers independently of the Commission's action and thereby to impinge upon the function of the Commission.

The foregoing analysis discloses that the court below has been viewing the section 11(e) court through the distorting lenses of the inapplicable concept of the traditional court of equity. The legislative history, the provisions of the Act and the law of reorganizations do not support the determination of the court below, except if reviewed in the light of the predilection of the court below for the inapplicable judicial doctrine of the traditional court of equity and apparently an overwhelming desire to protect the judicial power. Such wholesale transplantation of that concept by the court below, which plays havoc with the statutory scheme of section 11, may be attributed to its failure to observe the admonition of this Court in *F. C. C.* v. *Pottsville Broadcasting Co.*, 309 U. S. 134, 142-144 (1940), when, in commenting upon the relation between court and agency under another federal statute, it stated as follows:

> "Courts, like other organisms, represent an interplay of form and function. The history of Anglo-American courts and the more or less nar-

[80] Cf. *Warren* v. *Palmer*, 310 U. S. 132, 138 (1940).

rowly defined range of their staple business have determined the basic characteristics of trial procedure, the rules of evidence, and the general principles of appellate review. Modern administrative tribunals are the outgrowth of conditions far different from those. *To a large degree they have been a response to the felt need of governmental supervision over economic enterprise—a supervision which could effectively be exercised neither directly through self-executing legislation nor by the judicial process.* That this movement was natural and its extension inevitable, was a quarter century ago the opinion of eminent spokesmen of the law. *Perhaps the most striking characteristic of this movement has been the investiture of administrative agencies with power far exceeding and different from the conventional judicial modes for adjusting conflicting claims*—modes whereby interested litigants define the scope of the inquiry and determine the data on which the judicial judgment is ultimately based. Administrative agencies have power themselves to initiate inquiry, or, when their authority is invoked, to control the range of investigation in ascertaining what is to satisfy the requirements of the public interest in relation to the needs of vast regions and sometimes the whole nation in the enjoyment of facilities for transportation, communication and other essential public services. *These differences in origin and function preclude wholesale transplantation of the rules* of procedure, trial and *review* which have evolved from the history and experience of courts. * * *" (Italics ours.)

Due regard for the proper distribution made by Congress of legal authority as between two law-enforcing agencies of government, the administrative

and judicial, is required.[81] Each has been entrusted with its share of the responsibility for carrying out the Act. The section 11(e) court and the Commission are not totally independent and unrelated instrumentalities, but exercise roles complementary to each other and can achieve the objectives of the Act only through cooperative action.[82] That analysis, despite the contrary views of the court below, stems from the language of section 11 of the Act, and is fortified by its legislative history and analogous precedents in the law of reorganizations. Moreover, if the respective roles of the Commission and the section 11(e) court have not been sharply defined in every detail by Congress and must be spelled out by the judicial process, extreme care must be exercised lest in the course of the delineation the respective functions of the Commission and court become confused and distorted. The court below interpolated its notions of policy in the interstices of the legislative provisions and upset the statutory scheme because of a jealous predilection for the judicial role, in complete disregard of the legislative division of functions between the Commission and the section 11(e) court.

The cooperative action envisaged entails a recognition of the proper relation of the court to the Commission and requires the judicial function to be performed in the light of, and with due regard for, the administrative action. By no means does such view contemplate a *de novo* judicial determination and a disregard of the Commission's action. Rather, the scope of the district court's function is to re-examine, on the basis of the administrative record the Commis-

---

[81] *Columbia Broadcasting System* v. *U. S.*, 316 U. S. 407, 441 (1942).

[82] *F. C. C.* v. *Pottsville Broadcasting Co.*, 309 U. S. 134, 142 (1940).

sion's determination of value and fairness to see that it has warrant in the record and in the law. That conclusion, as will be demonstrated below, accords with the correct analysis of interrelated sections of the statute and is supported by a preponderance of the decisions on this question.

B. The District Court's *De Novo* Approval of an 11(e) Plan Is Not a Prerequisite to Its Consummation.

It has been pointed out above that the functions of the 11(e) court are limited by the terms of the statute. Especially significant in this connection is the fact that there is no requirement under the Act for the approval in all instances of the district court prior to the consummation of the plan, while express provision makes mandatory the approval of the *Commission* in every case before a plan can become effective [subsections (d); (e) and (f)]. Such prior approval of the Commission is necessary whether the proceeding originates with the Commission [under 11(d) or (e)] or with the bankruptcy court as contemplated under 11(f) (closely analogous to a railroad reorganization under section 77 of the Bankruptcy Act). Therefore recourse to the district court is had under section 11(e) *only* if the company *in its discretion* requests such action. In fact, *there may never be any approval, but the Commission's. Commonwealth and Southern Corp.* v. *S. E. C.*, 134 F. (2d) 747, 751 (C. C. A. 3, 1943); *Phillips* v. *S. E. C.*, 153 F. (2d) 27, 29-30 (C. C. A. 2, 1946), cert. den. 328 U. S. 860 (1946). Thus, in the *Commonwealth* case, *supra*, the statement was made:

> "* * * If the plan is one which can be carried out by the sole action of the parties thereto no further proceedings are needed."

Similarly, in the *Phillips* case, *supra*, the Second Circuit pointed out:

> "* * * And in the face of the very clearly permissive wording of the statute, we are not disposed to strain for an interpretation of the statute which will force unneeded enforcement proceedings."

In addition, the proceeding before the Commission for the approval of a plan is comparable to a "trial", surrounded, in compliance with the due process requirements of the Constitution, with the usual safeguards of notice and an opportunity to be heard, public hearings and the maintenance of appropriate records.

In view of this limited participation of the district court in the approval of a plan under section 11(e) [and (d)] as contrasted with the affirmative requirement of Commission approval in all instances and the "trial" nature of the proceeding before the Commission, it is submitted that the district court's independent duty in the event of resort to it does not extend to making a *de novo* determination as to the fairness of a plan presented for enforcement.

If a district court in a section 11(e) proceeding is authorized to consider the matter *de novo* and in addition is permitted to substitute its conclusions for the determination of the Commission, and if the court's "independent" judgment in such case is to prevail, there would be little use in retaining the Commission. This process, if permitted, would only duplicate the uncertainty of any particular case and would bring it out at the end of the administrative stage of the proceedings with nothing settled which might not be overruled because a district judge might take a different view of the evidence. After the Commission has spoken, the whole case would still be as open, and

the nature of the ultimate decision as uncertain, as if no proceedings had yet been had. Such a hazard is not one which the security holders ought fairly to be called upon to bear.[83] Congress never contemplated any such result.

C. Section 11(e) Offers a Method of Review Alternative to That Under Section 24(a).

The view as to the limited nature of the functions of a section 11(e) court is fortified by the express provision for direct review by a court of appeals under section 24(a). This division or allocation of the judicial function (for which no analogy exists under section 77 and 77B or its successor, Chapter X, of the Bankruptcy Act) establishes exclusive as well as overlapping areas for the jurisdiction of each court but it is by no means contended that the section 11(e) and section 24(a) courts possess or exercise identical functions.[84] On the other hand, it is seriously urged that these two courts in the overlapping area of their activities exercise a similar review function. Thus in this penumbral zone under sections 11(e) and 24(a), the two courts' functions are coordinate and the proceedings under these sections are alternate avenues for the re-examination of administrative action under section 11 of the Act. Strong support for this conclusion is afforded by virtue of the reliance in both of these proceedings upon the administrative record and

---

[83] See Dickinson, *Administrative Justice and The Supremacy of Law* (1927), p. 202.

[84] Thus while the section 24(a) court reviews a broad variety of rules, regulations and final orders of the Commission (many of which never reached a district court), the section 11(e) court exercises both review and equity powers. In fact the differences in phraseology in sections 11(e) and 24(a) may well be ascribed to the absence of complete identity in the functions to be performed by the two courts. Sections 11(e) and 24(a) are printed in Appendix "A", *infra*, pp. 163-5 and 167-8, respectively.

by a comparison of the relative powers of the respective courts therein.

1. Fortuitous selection of review procedure.

Verbal differences in sections 11(c) and 24(a)[85] may be attributed to the duality or admixture of the functions to be performed thereunder by the respective courts and in any event should be interpreted so as to give recognition to the manifest desire of Congress in establishing an expert body to deal with the varied and complex situations under the Act, to secure a uniform administration of the statute.[86] The ultimate purpose of Congress is to be achieved, if possible, and not be frustrated by blind adherence to mere words. Thus in *U. S.* v. *American Trucking Association*, 310 U. S. 534, 543 (1940), this Court, speaking through Mr. Justice Reed, said:

> "There is, of course, no more persuasive evidence of the purpose of a statute than the words by which the legislature undertook to give expression to its wishes. Often these words are sufficient in and of themselves to determine the purpose of the legislation. In such cases we have followed their plain meaning. When that meaning has led to absurd or futile results, however, this Court has looked beyond the words to the purpose of the act. Frequently, however, even

[85] Section 24(a), applicable to the court of appeals: "Upon the filing of such transcript such court shall have exclusive jurisdiction to *affirm, modify, or set aside* such order, in whole or in part * * *. The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive." (Italics ours.)

Section 11(c), applicable to the district court: "If, upon any such application, the court, after notice and an opportunity for hearing, shall *approve* such plan as fair and equitable * * *." (Italics ours.)

[86] Cf. *Dobson* v. *Commissioner*, 320 U. S. 489 (1943).

when the plain meaning did not produce absurd results but merely an unreasonable one 'plainly at variance with the policy of the legislation as a whole' this Court has followed that purpose rather than the literal words."

Whether an 11(e) plan is tested first by a district court is entirely fortuitous. Of course when an 11(e) enforcement proceeding is pending, a court of appeals will not because of judicial comity, pass upon a petition for review.[87] That situation of potential conflict in jurisdiction[88] implicitly identifies the overlapping area in which the 11(e) and 24(a) courts are coordinate and perform the same function. Furthermore, it is possible that an 11(e) plan may be passed upon by the court of appeals before the district court is requested to enforce the plan.[89] In that

[87] *Phillips* v. *S. E. C.*, 153 F. (2d) 27 (C. C. A. 2, 1946), cert. den. 328 U. S. 860; *Okin* v. *S. E. C.*, 145 F. (2d) 206 (C. C. A. 2, 1944); *Gilbert* v. *S. E. C.*, 146 F. (2d) 513 (C. C. A. 7, 1944); *Lownsbury* v. *S. E. C.*, 151 F. (2d) 217 (C. C. A. 3, 1945).

[88] An analogous instance of potential conflict may occur when petitions for review of the same order have been filed in two different courts of appeal. E. g., *L. J. Marquis & Co.* v. *S. E. C.*, 134 F. (2d) 335 (C. C. A. 2, 1943); *Columbia Oil & Gasoline Corp.* v. *S. E. C.*, 134 F. (2d) 265 (C. C. A. 3, 1943); *Marquis & Co.* v. *S. E. C.*, 134 F. (2d) 822 (C. C. A. 3, 1943). Cf. *Lewis* v. *S. E. C.*, not officially reported, C. C. H. Fed. Sec. Serv., Par. 90,428 (U. S. C. A. 8, 1948).

[89] See *Columbia Gas & Electric Corp.*, H. C. A. R. No. 3885 (1942), aff'd *Marquis & Co.* v. *S. E. C.*, 134 F. (2d) 822 (C. C. A. 3, 1943), plan enforced, *Application of S. E. C.*, 50 F. Supp. 965 (D. Del., 1943); *Illinois Iowa Power Co.* v. *North American Light & Power Co.*, 49 F. Supp. 277, 280 (D. Del., 1943). See also *New York Trust Co.* v. *S. E. C.*, 131 F. (2d) 274 (C. C. A. 2, 1942).

It is understandable that an 11(e) proceeding may follow a 24(a) proceeding as the equity powers of the 11(e) court may still be needed to carry out a plan, whereas the converse is not usual. Possibly to avoid conflicts in jurisdiction, the Commission sometimes conditions its orders of approval upon securing the approval of a district court. See R. 144a and *Lownsbury* v. *S. E. C.*, *supra*.

situation it would be anomalous, if the scope of review were to differ when the procedures thus afforded are alternatives.[90] A security holder's rights should be equal whether he is restricted to a 24(a) review because of the absence of 11(e) enforcement proceedings as in the *Phillips* case or he is relegated to the district court as the result of the Commission's condition attached to its order as here and as in the *Lownsbury* case. Obviously, if the district court's reviewing powers are greater than that of a court of appeals under section 24(a) it would not be true, as has been stated, that the procedural device adopted "can do no harm to the rights of a security holder".[91]

The second *Chenery*[92] case, recently decided by this Court, is an illustration of the different route that an 11(e) plan may take other than by way of the district court. In that case, after a prior remand by this Court,[93] the company filed an application for approval of an amended plan which would have allocated securities in a certain manner. The Commission denied such application by order and a petition for review of such order was entertained under section 24(a). There was no plan to enforce in the district court since the Commission had not approved it. Instead, the fairness of the proposed plan was tested

[90] *United Light & Power Co.*, 51 F. Supp. 217, 220 (D. Del., 1943): "I think it may fairly be argued that the appeal provided by Sec. 24(a) and an opportunity to be heard before the District Court under Sec. 11(e) with the concomitant right to appeal under Sec. 25 to, as here, the Third Circuit Court of Appeals, from the District Court's finding are alternative rights of appeal." See also *In re North Continent Utilities Corp.*, 61 F. Supp. 419, 421 (D. Del., 1945).

[91] 151 F. (2d) 217, 221 (C. C. A. 3, 1945).

[92] *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194, rehearing den. 332 U. S. 783 (1947). See also *New York Trust Co.* v. *S. E. C.*, *supra*, n. 89.

[93] 318 U. S. 80 (1943).

by review in the Court of Appeals for the District of Columbia.

In the present case, if Engineers had persisted in its application for approval of its original plan which proposed to retire the preferred at $100 per share, the Commission would have entered an order denying the application. Then, as in the second *Chenery* case, the Company or a common stockholder could have petitioned directly to the court of appeals for review under 24(a) and the district court would not have been involved. The original plan actually contemplated this procedure (R. 1320a). The mere fact that Engineers elected to abandon its original plan should not put the Commission's order to a different test as to its validity.

Another anomalous situation is possible if there are different standards of review depending upon how the Commission's order is tested. When Engineers dissolved its subsidiary, *El Paso Electric Co. (Del.)*, H. C. A. R. No. 5499 (1944), it filed an application-declaration pursuant to sections 10 and 12 of the Act. Although the Commission applied the standards of section 11, the only way the Commission's order could have been tested would have been by way of section 24(a). Had the Company proceeded in this case as it did with *El Paso (Del.)*, again there would have been no occasion for the District Court to pass on the fairness of the Company's proposals.[94]

As a matter of fact, the plan did not contain a request for court enforcement and without such a request the District Court could not have obtained

[94] This possible mode of procedure was considered by Engineers' counsel, R. 1735a.

jurisdiction.[95] It was only after the matter was taken under advisement by the Commission and after this Court sustained the constitutionality of section 11(b)(1)[96] that the Company requested the Commission to apply for enforcement in the event the plan was approved. It is urged that the purely fortuitous entry of the district court into this proceeding should not be permitted to affect the rights of the preferred stockholders.

2. Comparable status of administrative record and relative judicial power in 11(e) and 24(a) proceedings.

The view that 11(e) and 24(a) proceedings are alternative avenues for the review of a plan is reinforced by reason of their reliance upon the same administrative record and by a comparison of the relative power of the respective courts thereunder. Thus both the proceedings are conducted on the basis of the administrative record, whether by virtue of express statutory provision therefor under section 24(a) or in accordance with the preponderance of decisional authorities under section 11(e).[97] Contrary to the weight of authority are the *obiter dicta*[98] in the opinion below authorizing the receipt of additional evidence by the section 11(e) court. In that connection the court below stated that a section 11(e) court may "receive evidence *aliunde* the Commission's

---

[95] It was not the intention to consummate the plan until the case pending in this Court was decided. R. 1314a. See R. 11a.

Massachusetts Mutual Life Ins. Co. v. S. E. C.*, 151 F. (2d) 424 (C. C. A. 8, 1945), cert. den. 327 U. S. 795; *In re Jacksonville Gas Co.*, 46 F. Supp. 852 (D. Fla., 1942); *In re Eastern Minnesota Power Corp.*, C. C. H. Fed. Sec. Service, Par. 90,339-1 (D. Minn., 1947).

[98] No additional evidence was introduced in the hearing before the District Court.

record respecting the fairness and equity of a plan" and "may decide upon the new evidence and upon that contained in the Commission's record that the plan is unfair and inequitable and remand the proceeding to the Commission for further consideration" (R. 26). Such unlimited reopening of the administrative record is fraught with danger, as it permits in effect a trial *de novo* by the district court and affords an opportunity to obstructionists to make a Roman holiday of these complex simplification proceedings. The delay incident thereto may, in a swiftly moving world and a dynamic economic society, result in a procession of stale records and thus in a complete frustration of Congressional intent. Besides, the ruling of unfairness by the district court on the basis of the additional evidence not heard by the Commission may conceivably be construed as binding upon the Commission, even though such limitation upon it is not intended. Therefore, these dicta permitting the reopening of the administrative record must be rejected as a mistaken reliance by the court below upon the inapplicable concept of the traditional equity reorganization tribunal and repudiated as contrary to the rule uniformly and generally applied by the federal, appellate and lower courts in other circuits, to 11(e) proceedings under the Act (*supra*, n. 97) and implicitly recognized in cases applying the substantial evidence ruling (*infra*, n. 100), and also followed in analogous cases.[99]

Under the majority view, as indicated above, the same rule on hearing additional testimony characterizes both the 11(e) and 24(a) proceedings. Explicit recognition of this identical characteristic of the hearing is found in *In re Electric Bond & Share Co.*,

[99] *E. g. St. Joseph Stock Yards Co.* v. *U. S.*, 298 U. S. 38, 54 (1936).

supra, when the District Court, in quoting from the case of *Laclede Gas Light Co., supra*, said:

> "* * * we can see no more reason for permitting evidence to be offered other than the record made before the Commission in a hearing under Section 11(e) than in a hearing under Section 24(a) of the Act, and especially do we believe this should be the rule when the Court of Appeals may "modify" or "set aside" order of the Commission "in whole or in part" and yet is restricted in the receipt of evidence, solely to send the case back to the Commission to hear such additional evidence. *A reasonable interpretation of the Act does not permit a more liberal rule on hearing additional testimony in case before the Court under Section 11(e) than under Section 24(a) of the Act.*"
>
> "*The province of the District Court in a §11 (e) enforcement proceeding is that of a reviewing authority. Okin v. S. E. C.*, 2 Cir., 1944, 143 F. 2d 206. * * *" (73 F. Supp. 443) (Italics ours.)

The *Laclede* and *Electric Bond* cases, *supra*, also shed light upon the respective powers of the court of appeals under section 24(a) and of the district court under section 11(e) in passing upon the action of the Commission. It is significant that the 24(a) court may "affirm, modify or set aside * * * in whole or in part" any order issued by the Commission, while the 11(e) court can only "approve" or "disapprove" a plan. Thus the 24(a) court has received a broader grant of power for the review of administrative action than the 11(e) court. Consequently, it would seem unwarranted to imply greater power in the 11(e) court than that in a 24(a) court to hear additional evidence and to pass upon a plan. The facts that the 24(a) and 11(e) proceedings are conducted in similar

fashion on the basis of the administrative record and that the 11(e) court has no greater power than the 24(a) court, lend support to the view that these proceedings afford alternative methods of review of the same scope in those areas where their functions overlap. To that extent, the 11(e) and 24(a) courts possess coordinate status and perform a comparable review function.

D. The Section 11(e) Court Is Required to Accept the Findings of the Commission Respecting the Fairness of a Plan, If Based Upon Substantial Evidence and Possessing a Rational Basis in Fact and Law, and May Not Substitute Its Own Judgment for That of the Commission.

The scope of review by the district court under section 11(e) corresponds to that of the court of appeals in direct review under section 24(a). The court of appeals under section 24(a) must accept as conclusive the findings of the Commission if supported by substantial evidence. That same standard of review, we maintain, must be applied by the district court under section 11(e) in passing upon the fairness of a plan.

Uniformly and generally,[100] both before and after

[Footnote continued on following page.]

the decisions below,[101] the other federal appellate and lower courts have applied the principle that the Commission's findings are to be sustained if supported by substantial evidence or unless "shown to be without a rational basis in fact or to be predicated upon a clear cut error of law".[102] Thus, according to the preponderance of judicial authorities, the scope of review by a section 11(e) court is delineated in terms of the doctrines of substantial evidence and administrative finality.

The District Court should not have ignored as it did, the findings of the Commission respecting the fairness of the plan. Such treatment was certainly unwarranted in view of this Court's admonition in

---

In re Jacksonville Gas Co., 46 F. Supp. 852 (D. Fla., 1942).

101 The District Judge's view in the instant case as to his "affirmative and independent duty" to consider the fairness and equity of the plan, which the Circuit Court has in substance adopted, is of relatively recent vintage, and does not square with his own earlier expressions and other decisions within the Third Circuit which are in accord with the majority doctrine of substantial evidence. *E. g.*: *In re Central & South West Utilities Co.*, 66 F. Supp. 690, 693 (D. Del. 1946); *In re Standard Gas and Electric Co.*, 59 F. Supp. 274, 283 (D. Del. 1945), reversed on other grounds, 151 F. (2d) 326 (C. C. A. 3, 1945); *In re United Light & Power Co.*, 51 F. Supp. 217 (D. Del. 1943).

102 *Lahti* v. *New England Power Ass'n*, *supra*.

U. S. v. Morgan, 307 U. S. 183, 191 (1939), to the effect that:

> "* * * court and agency are not to be regarded as wholly independent and unrelated instrumentalities of justice. * * * Court and agency are the means adopted to attain the prescribed end, and so far as their duties are defined by the words of the statute, those words should be construed so as to attain that end through coordinated action. Neither body * * * can rightly be regarded by the other as an alien intruder * * *"

Yet it is not our contention that the enforcing court is a mere "rubber stamp" or "should blandly accept the Commission's findings", but it is urged that the Commission's action is not to be taken as lightly as was done by the two courts below. *Ladd* v. *Brickley*, 158 F. (2d) 212, 216 (C. C. A. 1, 1946), cert. den. 329 U. S. 819 (1947); *In re Northern States Power Company*, 80 F. Supp. 193, 201 (D. Minn. 1948). Thus in the *Ladd* case, *supra*, where this view was recently announced, the Court of Appeals said:

> "* * * No court worth its salt will willingly make itself a rubber stamp for approving administrative Commission action. But the studied conclusion of an expert body which has made a prolonged investigation of a subject from the standpoint of the public interest is to be taken seriously."

Similarly, in the *Northern States Power Company* case, *supra*, the court, refusing to accept "blandly" the Commission's findings, recognizes the consistency

of its exercise of its independent judgment with the substantial evidence doctrine in the following language:

> "I conclude, therefore, that the *exercise of my independent judgment* in passing upon the fairness of the plan to the parties involved must be made in recognition of the experience, skill and facilities of the Commission in considering and appraising the facts before it in the lengthy hearings and voluminous testimony during the past five years. *Due weight should be accorded its findings and conclusions in factual matters where there is substantial evidence in support thereof*" (80 F. Supp. 201). (Italics ours.)

Certainly, the district court's duty is no greater than that which exists where a constitutional question is involved, and yet this court has warned that even in confiscation cases,

> "* * * this judicial duty *to exercise an independent judgment does not require or justify disregard of the weight which may properly attach to findings upon hearing and evidence.* On the contrary, the judicial duty is performed in the light of the proceedings already had and may be greatly facilitated by the assembling and analysis of the facts in the course of the legislative determination. Judicial judgment may be none the less appropriately independent because informed and aided by the sifting procedure of an expert legislative agency." *St. Joseph Stock Yards Co. v. U. S.*, 298 U. S. 38, 53 (1936). (Italics ours.)

It is thus clear that the concept of an independent duty is consistent with the application of the doctrines of substantial evidence and administrative finality, despite the view of the two courts below. Furthermore, it becomes obvious that the use of such phrases

as "affirmative and independent duty" or "independent judgment" or "independent check" are not determinative as to the scope of the judicial duty, but merely pose the issue as to the extent to which a court is free to reject or is required to accept the findings of an administrative agency based upon substantial evidence or possessing rational and statutory foundation. In any event, the significance attributed to that concept by the court below so as to permit rejection of administrative findings in disregard of the doctrines of substantial evidence and administrative finality, is contrary to the weight of authority both in connection with the Act and in the general field of administrative law.

These findings of fairness do not come to the court as the result of agreement between the parties or the action of a special master approving a plan in the common form of reorganization proceeding, but they come following a thorough consideration by the Commission which has a very broad grant of power from Congress in the premises.[103] The expertness of the Commission and the limited authority of the section 11(e) court lend weight to the soundness of the view as to the duty of such court to sustain the Commission's findings having a rational basis in fact.[104] Furthermore the Commission's findings in respect to the value of the preferred claim (with which the District Court disagreed) are "in the realm not of mathematical demonstration, but of forecast, based upon expert analysis and weighting of a complex

[103] Cf. *In re Standard Gas & Electric*, 151 F. (2d) 326, 331 (C. C. A. 3, 1945).

[104] *In re New England Power Ass'n, supra; In re Northern States Power Company, supra; In re Laclede Gas Light Co., supra; In re Eastern Minnesota Power Corp., supra; In re Electric Bond & Share Co., supra* (n. 100).

array of figures, in which the informed judgment of the Commission counts heavily".[105] In this connection in the *New England Power Ass'n* case, *supra*, it was stated:

> "In truth, any court charged with a review of the findings of the Securities and Exchange Commission, in a matter so complex in its nature as is the present proceeding, should accept the findings of the expert body unless it concludes that an error of law has been committed or the findings are of an arbitrary or capricious nature" (66 F. Supp. 382).

Thus in the *Northern States Power Company* case, *supra*, the District Judge noted the opinion below in the instant case, but followed the view of the Eighth Circuit in *Mass. Mut. Life Ins. Co.* v. *S. E. C.*, giving "considerable weight" to the Commission's findings with a rational basis. In recognizing the "soundness of the views of the Eighth Circuit as to the duty of the Section 11(e) court," he said:

> "* * * It is my duty to exercise my own independent and informed judgment in determining whether I should approve the plan as fair and equitable. On the other hand, unless I am reasonably clear that the Commission has erred in its factual findings, I should be hesitant to send the plan back to it for further consideration. *It has had this reorganization before it for some five years.* The questions involved are most difficult and complex because they deal primarily with forecasts for the future, and the appraisal of the immumerable uncertainties and contingent events in the years to come are bound to give rise to difference of opinion. *The Commission is the only tribunal which can finally approve a plan of reorganization under the Act.* The Court is not

[105] *Lahti* v. *New England Power Ass'n*, *supra*, p. 76, n. 100.

vested with any authority to propose a plan, or even make suggestions as to any allocation herein as between the preferred and common stockholders which will be binding upon the Commission. The *limited authority vested in the Court*, which has either to approve or disapprove the plan, would seem to lend weight to the soundness of the views of the Eighth Circuit as to the duty of a Section 11 (e) court *where there is a 'rational basis' for the Commission's findings.* This Court does not have access to the many facilities which the Commission is afforded through its public utility analysts, accountants, engineers, attorneys, etc., whose experience and training in this particular field should signally equip them to aid the Commission in analyzing and appraising the factual considerations which are controlling herein"[106] (80 F. Supp. 201). (Italics ours.)

These same doctrines of substantial evidence and administrative finality, as enunciated above, have been applied to test the Commission's findings of equivalence which are in issue here. Thus, in *Mass. Mutual Life Ins. Co.* v. *S. E. C., supra,* the Court of Appeals for the Eighth Circuit said:

> "Obviously, whether, upon retirement of outstanding bonds in the reorganization * * * payment of principal, accrued interest, *and* redemption premiums is the equitable equivalent of the bondholders' rights depends upon the facts of each particular case. *The proper measure of such equivalence is for the determination of the Commission in the first instance, and its expert skill in appraising the facts to be considered must be accorded due weight by the Court.*

[106] This passage which was quoted in *In re American and Foreign Power Co.*, 80 F. Supp. 514, 522 (D. Me., 1948), was stated by the District Judge "to represent in clearcut fashion the attitude of this court."

> "*Since there is a 'rational basis' in fact for the finding of the Commission and no 'clear-cut' error of law by either Commission or court, we are not inclined to disturb the conclusion* that retirement of the bonds at principal and accrued interest amounts to the 'equitable equivalent of the rights surrendered'" [151 F. (2d) 430]. (Italics ours.)

Similarly in *Lahti v. New England Power Ass'n., supra*, the First Circuit Court sustained the Commission's finding of equivalence saying:

> "Appellants' real challenge is to the correctness of the finding by the Commission and the district court that the plan is fair and equitable to the persons affected by it. *This finding cannot be upset by us unless it is shown to be without rational basis in fact or to be predicated on a clear-cut error of law*" [160 F. (2d) 850-1]. (Italics ours.)

Analogy persuasive in the instant situation is afforded by precedents under section 77 of the Bankruptcy Act (11 U. S. C. § 205). In *Ecker v. Western Pacific R. Corp.*, 318 U. S. 448 (1942), this Court had the occasion to give extensive consideration to the function of the district court vis-a-vis the Interstate Commerce Commission under section 77. The majority and concurring opinions are in agreement that the Interstate Commerce Commission's determination of value and also of compatibility of the plan with the public interest is left to the Commission "without necessity of a reexamination by the court when that determination is reached with material evidence to support the conclusion and in accordance with legal standards" and is to be questioned only as to "whether the Commission acted wholly without evidence arbitrarily or in disregard of recognized criteria"

(318 U. S. 473, 512). Likewise, in *New York, New Haven & H. R. Co.* (D. Conn. 1943), 54 F. Supp. 595, 604, aff'd in part and rev'd in part on other grounds (C. C. A. 2, 1945), 147 F. (2d) 40, cert. den. 325 U. S. 884, 65 St. Ct. 1577 (1945), the court said:

> "As I construe the recent Supreme Court cases referred to above [*Ecker* v. *Western P. R. Co.*, 318 U. S. 448 and *Institutional Investors* v. *C. M. & St. P. & P. R. Co.*, 318 U. S. 523], this finding [value of securities being exchanged] is binding on the Court. The underlying facts were such as to furnish support either for the conclusion reached or for the conclusion contended for. The conclusion adopted was the product of the experienced judgment of the Commission. Certainly the subject matter was one of valuation: the direct issue was the equivalence between the new securities and the old.
>
> * * * *
>
> "'* * * The language chosen leaves to the Commission, we think, the determination of value without the necessity of re-examination by the Court, when that determination is reached with material evidence to support the conclusion and in accordance with legal standards.'"

Similar treatment should be afforded the Commission's determination of value in view of the broader grant of power to the Commission than to the Interstate Commerce Commission or by virtue of the force of statutory analogy and the doctrine of *pari materia*.[107]

Another aspect of the *Ecker* case is relevant to our discussion. Under section 77(e) of the Bankruptcy

[107] See Sutherland, *Statutory Construction* (Horack, 3d Ed.), §5202. Cf. *Merrill* v. *Fahs*, 324 U. S. 308 (1945).

Act, the Interstate Commerce Commission is authorized to eliminate from the reorganization certain claimants if the worthlessness of their claims is found by the Commission, "and the judge shall have affirmed the finding". Although the statute requires re-examination by the district judge of the Interstate Commerce Commission action in this regard, this Court stated:

> "* * * The specificity of the direction for re-examination of the Commission's action points to a wider scope of review than an inquiry as to whether statutory standards for valuation have been followed. * * * But we think the *requirement of affirmation of the exclusion of claimants does not require an independent appraisal* of the valuation which ordained their elimination. The court properly affirms the Commission, when it finds no legal objection to the Commission's use of its own valuation to determine whether particular claimants are entitled to participate in the reorganization" (318 U. S. 478-9). (Italics ours.)

The function of the Commission in the instant case is substantially similar to the Interstate Commerce Commission's duty in the respect just noted in the *Ecker* case. Here, too, it is necessary to determine the participation of the preferred stocks. While in the *Ecker* case the determination was a negative or zero participation, in the instant case the determination was a positive or dollar valuation. Consequently, the determination as to the *quantum* of the participations in both cases should be subject to the same scope of review.

The *Ecker* case is significant to our present inquiry in one further respect in view of its discussion of the extent of re-examination of an issue of fairness. In

this connection the concurring opinion indicates that the court in passing upon the issue of fairness should accord finality to the Commission's action if based upon a "substantial foundation in the facts". The language of the concurring opinion is as follows:

> "* * * * In other cases, where the issue of fairness and equity depends upon the facts disclosed, I think it is the duty of the court to go farther and examine the plan sufficiently to satisfy itself that the rule of absolute priority announced in the *Boyd* Case and in the *Los Angeles Lumber Co.* and *Consolidated Rock Products Co.* Cases has not been violated. In performing this duty the court should accord great weight to the Commission's action. It should require the objector to show that the Commission has failed to respect the doctrine. But it should not accord finality to the Commission's action if there be any evidence to support it. I believe the court is charged by subsection (e) with the duty of determining that, in the allocation of securities in the reorganized company, the Commission has a *substantial foundation in the facts for the* allocation of securities required by the plan it approves"[108] (318 U. S. 515). (Italics ours.)

The acceptance, in the concurring opinion in the *Ecker* case, of the doctrine of substantial evidence for testing the Interstate Commerce Commission's determination of fairness affords a persuasive guide for its application to the present case.

As sections 11(e) and 24(a) are, to the extent indicated above, alternate avenues for the review of 11(e) plans, the scope of review thereunder, it is submitted,

---

[108] The phrase "substantial foundation in the facts" apparently accords with the concept of substantial evidence as contained in section 10(e)(B)(5) of the Administrative Procedure Act. See discussion *infra* at p. 92, n. 120.

should be the same. The standard of review of administrative action applicable under section 24(a) of the Act has recently been restated by this Court in *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194, 207-8, rehearing den., 332 U. S. 783 (1947), in the following terms:

> "The scope of our review of an administrative order wherein a new principle is announced and applied is no different from that which pertains to ordinary administrative action. The wisdom of the principle adopted is none of our concern. * * * *Our duty is at an end when it becomes evident that the Commission's action is based upon substantial evidence and is consistent with the authority granted by Congress.* See *National Broadcasting Company* v. *United States*, 319 U. S. 190, 224.
>
> "We are unable to say in this case that the Commission erred in reaching the result it did. The facts being undisputed, *we are free to disturb the Commission's conclusion only if it lacks any rational and statutory foundation.* In that connection, the Commission has made a thorough examination of the problem, utilizing statutory standards and its own accumulated experience with reorganization matters. * * *
>
> "* * * The 'fair and equitable' rule of §11(e) * * * [was] inserted by the framers of the Act in order that the Commission might have broad powers to protect the various interests at stake. * * * *The very breadth of the statutory language precludes a reversal of the Commission's judgment save where it has plainly abused its discretion in these matters.*" (Italics ours.)

The second *Chenery* case, *supra*, expounds a doctrine of judicial review of administrative action, which, although deemed not controlling in the case at bar by

the court below, we submit, is applicable here and at variance with the lower court's position and affords the correct test of administrative action, whether judicial review occurs *via* section 11(e) as in the instant case, or *via* section 24(a)[109] of the Act as in the second *Chenery* case. Furthermore, that scope of review is the same, according to this Court, even where, assuming *arguendo*, as the court below suggests,[110] the Commission has announced and applied a "new doctrine of investment value" (R. 38) in the evaluation of the rights surrendered in the simplification of a holding company system.

The "weighting of a complex array of factors",[111] based upon expert analysis calls for an economic[112] judgment by the Commission. Such economic determination is entitled to the "greatest amount of weight", as it lies primarily in the informed discretion of the Commission and is a judgment, of the type which the Commission is especially equipped to make, being based upon statutory standards and its own accumulated reorganization experience. The unique role of the Commission under the Act was recognized

---

109 Section 24(a) of the Act [15 U. S. C. §79x(a)] provides in pertinent part as follows: "The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive."

110 It is of interest to note that the court below now considers the second *Chenery* case as not controlling (R. 33) but previously referred to the first *Chenery* case [318 U. S. 80 (1943)] as not precisely apposite, but as showing "the general approach of the Supreme Court to the problems presented by the Act". *In re Securities & Exchange Commission*, 142 F. (2d) 411, 420, n. 22 (C. C. A. 3, 1944).

111 *Lahti* v. *New England Power Ass'n*, *supra*, p. 76, n. 100.

112 It is the function of the Commission to give each class of security holders the "full economic equivalent" of its present holdings in satisfaction of the full priority rule. See *Schwabacher* v. *United States*, 334 U. S. 182 (1948).

by this Court when it stated on a related question in *American Power and Light Company* v. *S. E. C.*, 329 U. S. 90, 112-13 (1946):

> "* * * In dealing with the complex problem of adjusting holding company systems in accordance with the legislative standards, the Commission here has accumulated experience and knowledge which no court can hope to attain. *Its judgment is entitled to the greatest weight.* While recognizing that the Commission's discretion must square with its responsibility, only if the remedy chosen is unwarranted in law or is without justification in fact should a court attempt to intervene in the matter." (Italics ours.)

Under such circumstances, it would seem that Congress intended that the economic judgment of the Commission on which the fairness of the 11(e) plan in the instant case rests should not be disturbed by a district court, by its own discretionary weighing of the factors and in its roving through the evidence to seek support for its own conflicting inferences and conclusions.[113] Highly appropriate is the statement of this Court in *Interstate Commerce Commission* v. *Jersey City*, 322 U. S. 503, 522, 523 (1944), when in passing upon the relative powers and responsibilities of two federal agencies as well as the courts under wartime stabilization legislation, it said:

> "That the weight to be given to stabilization considerations in relation to other factors calls

[113] *Commissioner* v. *Scottish American Investment Co.*, 323 U. S. 119, 124 (1944). As this Court noted with respect to a similar function of a court in reviewing a decision of the Tax Court:

> "* * * The judicial eye must not in the first instance rove about searching for evidence to support other conflicting inferences and conclusions which the judges or litigants may consider more reasonable or desirable."

for an exercise of judgment in any given case is not denied by the Administrator. * * * The opinion of the Administrator is not, as we have pointed out, mandatory on the Commission. *Nor is such an economic judgment the function of the courts unless all that has been established in administrative law concerning the limitation on judicial review is to be thrown overboard. The decision of such a matter by the Commission is clearly not reviewable by a court because it thinks differently of the weight that should be accorded to some factors in relation to others.*

* * * *

"* * * it is not for the Court to set aside, without legislative command, its slow-wrought general principles which protect the *finality* and *integrity of decisions by administrative tribunals.*" (Italics ours.)

Accordingly, the balancing and weighing of the factors is for the Commission to determine and the substitution by the court of its own appraisal thereof would usurp the administrative function.[114]

The view, as enunciated by the majority of courts, that the Commission's findings and determination of fairness[115] under section 11(e), when supported

---

114 Cf. *New York* v. *United States*, 331 U. S. 284, 349 (1947).

115 Since in determining the fairness and equity of a plan the Commission must consider both law and facts, even a conclusion of the Commission on a question of law must be accorded at least great weight if not finality. Mr. Justice Jackson's language in the *Dobson* case regarding the status of the Tax Court's determinations is apropos here:

"* * * In view of the divisions of functions between the Tax Court and reviewing courts it is of course the duty of the Tax Court to distinguish with clarity between what it finds as fact and what conclusion it reaches on the law. In deciding law questions courts may properly attach weight to the decision of points of law by an administrative body having special competence to deal with the subject matter. The Tax

[Footnote continued on following page.]

by substantial evidence or possessing a rational and statutory foundation, are not to be disturbed by the district court, is in accord with the prevailing decisional and statutory trends and authorities in the general field of administrative law.[116] Under the present state of the law, the administrative determinations of a wide variety of governmental agencies and regulatory commissions are uniformly and generally reviewed on the basis of the doctrines of substantial evidence and administrative finality, where the scope of review is not specifically prescribed by statute.[117] These same standards of

---

[Footnote continued from preceding page.]

Court is informed by experience and kept current with tax evolution and needs by the volume and variety of its work. While its decisions may not be binding precedents for courts dealing with similar problems, uniform administration would be promoted by conforming to them where possible." *Dobson* v. *Commissioner*, 320 U. S. 489, 502 (1943).

A similar view is expressed by this court in *Levinson* v. *Spector Motor Service*, 330 U. S. 649, 672 (1947), when it said with respect to certain conclusions of law of the Interstate Commerce Commission:

"As conclusions of law, these do not have the same claim to finality as do the findings of fact made by the Commission. However, in the light of the Commission's long record of practical experience with this subject and its responsibility for the administration and enforcement of this law, these conclusions are entitled to special consideration. * * *"

[117] *E. g.*, *National Broadcasting Co.* v. *U. S.*, 319 U. S. 190, 224 (1943); *Gray* v. *Powell*, 314 U. S. 402, 411-13; *Rochester Telephone Corp.* v. *U. S.*, 307 U. S. 125, 139, 140, 145, 146 (1939); *U. S.* v. *Morgan*, 307 U. S. 183, 199 (1939); *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 473 (1943); *RFC* v. *Denver & Rio G. W. R. Co.*, 328 U. S. 495, 508-9 (1946); *Dobson* v. *Commissioner*, 320 U. S. 489 (1943); *Cardillo* v. *Liberty Mutual Insurance Co.*, 330 U. S. 469, 477-8 (1947). See Stern, *Review of*

[Footnote continued on following page.]

review of administrative action have been codified in the Administrative Procedure Act [118] which has been held declaratory[119] of the existing law of judicial review. It is significant in this connection that the legislative history of the Administrative Procedure Act clearly reveals that the courts' "exercise of their independent judgment" is consistent with their application of the substantial evidence doctrine in the review of administrative action.[120] These codified

[Footnote continued from preceding page.]

Findings of Administrators, Judges and Juries: A Comparative Analysis, 58 Harv. L. Rev. 70, 75, 99 ff. (1944); Stason, *"Substantial Evidence" in Administrative Law*, 89 U. of Pa. L. Rev. 1026 (1940); Brown, *Fact and Law in Judicial Review*, 56 Harv. L. Rev. 899, 921 ff.

[118] Section 10(e)(B)(1) and (5) of the Administrative Procedure Act [60 Stat. 243; 5 U. S. C. §1009(e)(B)(1) and (5)]. Section 10(e)(B)(1) and (5) require the reviewing court to "(B) hold unlawful and set aside agency action, findings and conclusions found to be (1) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law" and "(5) unsupported by substantial evidence in any case, * * * reviewed on the record of an agency hearing provided by statute". The Senate Judiciary Committee has indicated that "The fifth category necessarily limits the substantial evidence rule to cases in which Congress has required an administrative hearing in which the administrative record may be made" (Sen. Doc. No. 248, 79th Cong., 2nd Sess., p. 39 (1946).

[119] *Olin Industries* v. *N. L. R. B.*, 72 F. Supp. 228 (D. Mass., 1947).

[120] Sen. Doc. No. 248, 79th Cong., 2d Sess., p. 279. The House Judiciary Committee states in its report:

> "'*Substantial evidence*' means evidence which on the whole record is clearly substantial, plainly sufficient to support a finding or conclusion under the requirements of section 7 (c), and material to the issues. It is exceedingly important. Difficulty has come about by the practice of agencies and courts to rely upon something less—suspicion, surmise, implications, or plainly incredible evidence. *Although the agency must do so in the first instance, under this bill it will be the duty of the courts to determine in the final analysis and in the exercise of their independent judgment*

[Footnote continued on following page.]

rules as to the scope of review represent the crystallization, by legislation, of the developments in the field of administrative law and consequently afford persuasive support for their application to the instant case.

The force of reason as well as the historical evolution of administrative law impels the conclusion that the determination of the Commission receive the same dignity afforded the rulings of other administrative agencies where the statute is not explicit as to the scope of review. The Commission's action, when tested by every theoretical and practical reason for administrative finality,[121] is entitled to the highest credit in the courts. The Commission is an independent expert body dealing with a subject highly specialized and complex. Its procedures assure fair hearings and its deliberations are evidenced by careful opinions which habitually utilize all guides to judgment available to judges. It is relatively better staffed for its task than the judiciary. Its members not infrequently bring to their task long legislative or administrative experience in their subject. The volume of matters flowing through the Commission keeps its members informed as to the background of the controversies and the effect of the impact of their decisions upon

---

[Footnote continued from preceding page.]

whether on the whole of the proofs brought to *their attention the evidence in a given instance is sufficiently substantial to support a finding*, conclusion, or other agency action or inaction. In reviewing a case under this fifth category the *court must base its judgment upon its own review of the entire record* or so much thereof as may be cited by any party." (Italics ours.)

121 Cf. *Dobson* v. *Commissioner*, 320 U. S. 489 (1943) (Paraphrase). By statute the principle of the *Dobson* case has been rendered inapplicable to decisions of the U. S. Tax Court. (See section 36 of Public Law 773, 80th Cong., 2nd Sess., C. 646, amending section 1141-(a) of the Internal Revenue Code.)

the industry and the administration of the Act. Individual cases are disposed of wholly on records publicly made, in adversary proceedings.

Furthermore, the consideration of a uniform and expeditious administration of the Act demands that the Commission be given all the credit to which it is entitled under the law and that its decisions receive identical treatment. The dispersal of section 11(e) enforcement proceedings to district courts all over the country tends inevitably to produce conflicting decisions and the concomitant lack of uniformity, particularly if every district court is given the power to substitute its judgment for that of the Commission.

Uniform application of the Act can only be accomplished by the coordination of the standards of review under section 11(e) and section 24(a) on the basis of the doctrines of substantial evidence and administrative finality as enunciated by this Court. Such application of these principles of limited review would constitute a reasonable interpretation of the Act, consistent with the legislative history and the Congressional intention; accord with the preponderant judicial authorities passing upon the question under the Act; follow analogous precedents under the law of reorganization; apply the prevailing decisional and statutory authorities in the general field of administrative law; and finally give proper recognition to an expert body possessing a broad grant of power.

II. Involuntary Liquidation Preferences Are Not Controlling.

The Engineers' charter provided in part that "In the event of liquidation, dissolution or winding up * * * or any reduction of its capital stock, resulting in any distribution of its assets", the preferred stockholders in the three series are to receive an amount equal to $100.00 per share, "together with all dividends accrued or in arrears thereon, plus, in case such liquidation, dissolution or winding up or reduction shall have been voluntary, the fixed redemption premiums for such series", before any distribution of its assets to the common stockholders (R. 1412a). In considering this charter provision, three members of the Commission were of the opinion that the dissolution as proposed was neither voluntary nor involuntary within the meaning of the charter (R. 138a), while one commissioner held that it was clearly a voluntary act contemplated by the parties (R. 141a). On the other hand, the District Court preferred "not to definitely decide" the applicability of the charter provision to a "true liquidation" as distinguished from the "fictitious liquidation" involved in the *Otis* case, but "to consider the charter provisions as but one of several factors in determining the relative rights of the various security holders" (R. 287a-288a, 317a). The court below, however, deemed charter provisions as not "dispositive", under a "proper application of one of the principles enunciated" by the Supreme Court in *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 637 (1945) (R. 34).

The issue is thus raised as to whether the charter liquidation provisions are the conclusive measure of the respective participations of the common and preferred stockholders. We shall contend below (A) that the charter liquidation provisions, voluntary and

involuntary, are not conclusive; (B) that if operative, then the voluntary liquidation provisions are determinative; and (C) that the involuntary liquidation provisions, even if applicable, are not controlling in a determination of a fair and equitable plan, under the statute and Constitution.

A. Charter Liquidation Provisions Are Not Conclusive.

The *Otis* case, as the court below indicated, is the answer to any contention as to the applicability of the charter provisions. In the *Otis* case, this Court held that a charter written in 1929 did not as a matter of federal law, contemplate action required by the Act.[122] Surely Engineers' charter prepared in 1925 (R. 1403a) could not have contemplated such action any more than did the charter of the United Light & Power Company. The inapplicability of the Engineers' charter provisions is an *a fortiori* application of the *Otis* principle.

If there were any doubt that the proposed dissolution was not contemplated when the Charter was drafted, that doubt is removed by the contentions of counsel for Engineers in the *Western Public Service Co.* case, 12 S. E. C. 804 (1943), where he urged:

> "When you act under the bankruptcy laws of Chapter X on account of a financial failure, the stockholders must be deemed to have had the financial failure of this organization in mind when they acquired their investment. Section 11

[122] As stated in the *Otis* case:

> "* * * The provision having been adopted in 1929, six years prior to enactment of the Public Utility Holding Company Act, a 'simplification' under this Act, having as an incident to it the dissolution of one company in a holding company system, was not an anticipated 'liquidation' within the meaning of Power's charter provision" (323 U. S. 637).

is not a situation where the company is in financial difficulty in the ordinary sense, and it certainly would be so in our case, because we have no bonds, we have no bank debt, we just have preferred stock. It is an arbitrarily and forced statutory termination of the enterprise, and *it has no relation whatsoever to any factors which the parties could have had in mind when they entered the enterprise*" (R. 256a).[123] (Italics ours.)

The absence of the word "involuntary" from Engineers' charter is of no consequence. The draftsman (R. 256a) of Engineers' charter, its counsel, consistently referred to the provisions regarding the payment of $100 in liquidation as applicable in the event of "involuntary" dissolution.[124] So, too, did the Company in its annual reports before there was any thought of dissolving (R. 1517a). In any event, the dissimilarity in language in these charters is not significant as the dissolution under the Act is distinct from the type of action envisaged under the charter, whether voluntary or involuntary. As stated in the *Otis* case:

"* * * The exercise of legislative power by Congress through Section 11(b)(2) to accomplish simplification as a matter of public policy and the Commission's administration of the Act by dissolution of this particular company results *in a type of liquidation which is entirely distinct from the 'liquidation' of the corporation, whether voluntary or involuntary, envisaged by the charter provisions of Power for preferences to the senior stock*" (323 U. S. 631). (Italics ours.)

It is also clear that any "type" of dissolution, liquidation, etc. "adopted as a matter of administra-

[123] See R. 635a, 1240a.
[124] See for example R. 1211a, 1731a.

tive routine", pursuant to the Act, would not come within the coverage of the charter. In short, the sequence and methods of simplification, such as dissolution, liquidation, merger, consolidation, etc. are procedural details, which do not make the charter provisions applicable. This view finds support in the statement in the *Otis* case, where in distinguishing *Continental Ins. Co.* v. *U. S.*, 259 U. S. 156 (1922), this Court said:

> "* * * We do not feel constrained by its dealing with charter rights as in a normal liquidation to hold that where liquidation is adopted as a matter of administrative routine, the preferences are thereby matured" (323 U. S. 639).

Consequently, any lateral attack upon the *Otis* rule of inoperativeness which seeks to base a distinction upon the supposed continuance or termination of the "enterprise" or "system" is unsound.[125]

An additional reason in support of this conclusion is the fact that Congress, as well as the parties, did not intend the Act (*i. e.*, its exercise of the power to simplify) to render the charter provisions "operative" and mature the charter rights, created without regard to the simplification of system structure. So stated this Court in the *Otis* case:

> "* * * Where pre-existing contract provisions exist which produce results at variance with a legislative policy which was not foreseeable at the time the contract was made, they cannot be permitted to operate * * *" (323 U. S. 638).

---

[125] The court below recognizes that the charter provisions are not "dispositive", but seeks to distinguish the instant simplification from the *United Light & Power* reorganization on the basis of the termination of the enterprise in the former and its continuance in the latter. Such distinction is without merit, as shown below at p. 138 *et seq.*

Such construction, of the charter provisions, based in part upon the contemplation of the parties and in part on the legislative policy "to exercise its power with the least possible harm to citizens" precludes the application of the general rules used to interpret ordinary business contracts such as insurance policies. Consequently, any contention urging the analogy to insurance contracts and the like reflects reliance upon the dissenting opinion in the *Otis* case and must be rejected as but an effort to reargue the majority decision in that case. Similarly resort to factual data to demonstrate the prescience or anticipation of the Act by the draftsmen of the charter is doomed to failure. Reaffirmation of this *Otis* principle of "inoperativeness" in this case is further justified in view of its consistent and continuous application by Commission and court alike over a period, to simplification proceedings under the Act, and is required in order to secure a uniform administration of the Act.

B. Voluntary Liquidation Preferences Are Determinative, If the Charter Liquidation Provisions Are Operative.

We have contended above that the charter liquidation provisions are inoperative under the *Otis* rule, but if this Court should conclude otherwise, then it is our contention that the dissolution or liquidation was the voluntary act of the Company and that consequently the voluntary liquidation preferences are determinative.[126]

[126] We had urged below, *inter alia*, that the liquidation was voluntary within the meaning of the charters and that therefore the voluntary liquidation preferences were controlling. In view of the fact that the amounts proposed to be paid under the Com-

[Footnote continued on following page.]

We now turn to the question of whether the Company's action is voluntary or involuntary within the contemplation of the charter liquidation provisions. While a voluntary filing of a plan for dissolution of the Company under section 11(e) may not mean that such dissolution is voluntary within the meaning of the charter, the corollary is equally true that because action is taken under section 11(e), it does not follow that such liquidation is involuntary within the meaning of the charter. For example, the *El Paso*[127] case was one where a majority of the Commission felt that in the business context in which that company found itself it would and could be dissolved under State law, absent the Act. Consequently, the liquidation (no distinction between voluntary and involuntary) provisions of the charter were held to be controlling. But neither that case, nor any other, held that a company was not bound by its charter provisions if the liquidation proposed was not necessitated by the Act and was within the contemplation of the contracting parties.

The management and its counsel have consistently urged that the Act did not require the termination of the Company's existence. For example, in 1941 when

---

[Footnote continued from preceding page.]

mission's opinion as the "present investment worth" equal both the voluntary redemption prices and the voluntary liquidation preferences, we concurred in the Commission's presentation for the purpose of the appeal to the court below, but expressly reserved our contention that under the circumstances of this case the liquidation was voluntary within the meaning of the charter. In our petition for writ of certiorari, we also indicated our intention to argue this issue as an alternative question.

[127] H. C. A. R. No. 5499. See also Commissioner Caffrey's dissent in *United Light and Power Company*, H. C. A. R. No. 6603 (1946).

Engineers sought permission to acquire 5,000 shares of its preferred stock by tenders, the Commission had occasion to note that "Engineers * * * takes the position that it is not certain that there will be necessarily a liquidation of Engineers Public Service Company".[128] Similarly, Barnes (President of Engineers) testified, in the *Western*[129] case, that the pending Section 11 proceeding was not likely to result in the "liquidation" of Engineers. In the brief which Company counsel filed in the *Western* case, one of the points he urged was that "the pending (11b) proceeding is not likely to result in the liquidation of Engineers". (R. 1241a).

Furthermore, there is no order under 11(b)(2) requiring the liquidation of Engineers and it was certainly not clear that such an order would have been entered as a matter of course if Engineers had not presented the plan now before the Court. Besides, the 11(b)(1) orders pursuant to which Engineers has been allegedly liquidating had been set aside by the Court of Appeals for the District of Columbia. *Engineers Public Service Co. v. S. E. C.*, 138 F. (2d) 936 (App. D. C., 1943), cert. granted, 322 U. S. 723 (1944). Certiorari was granted by the Supreme Court, but disposition was not had because of the lack of a quorum. On October 20, 1947, this Court dismissed the appeals as moot [332 U. S. 783 (1947)], since in the meantime, Engineers had disposed of the properties which were the subject of Commission's orders, in the consummation of the plan, approved and enforced by the District Court's order dated May 29, 1947. In that connection dissolution of Engineers has in fact taken place and the direc-

[128] H. C. A. R. No. 2629, p. 7.
[129] 12 S. E. C. 801, 811 (1943).

tors are constituted trustees pursuant to the provision of section 43 of the Delaware Corporation Law [Del. Rev. Code (1935) §2075] (R. 15 n.4).

The management was also free to select other alternatives of complying with the Commission's requirements. There are many ways Engineers could have chosen to comply with the Commission's divestment orders. The merger method which was an alternative originally under the plan, was scrapped because of the appraisal requirements of state law. Other plans were considered, and discarded because the common stockholders would not get exclusive control over the subsidiaries (R. 583a, 643a, 687a). It would have been simple enough to call the preferred stocks[130] and pay them off but when it appeared that there no longer was any tax advantage by keeping Engineers alive, or by merging it with Virginia & Electric Power Company (R. 1320a) but the common stock management decided to adopt the Delaware voluntary dissolution technique although the procedural requirements are not being observed because the dissolution is to occur under Federal law (Cf. R. 15 n. 4).

We contend that the dissolution of Engineers is entirely a voluntary act of the management both legally and factually and submit that the fact that dissolution is occurring in connection with a plan under section 11(e) is therefore immaterial in this case. Accordingly, the voluntary liquidation provisions of the charter should control and determine the rights of the preferred stockholders.

This view was sustained by Commissioner Hanrahan

[130] It is significant that the Commission noted: "Ordinarily a company in this position would exercise its call privilege and redeem the preferred at its call price" (R. 60a).

(now Chairman) when in his concurring opinion he said:

> "* * * The charter provides for payment of the premiums in the event of a voluntary call or voluntary liquidation and it seems clear to me that, within the meaning of such charter provision, the action proposed by Engineers is 'voluntary.' Consequently it follows that fairness and equity require payment to the preferred stockholders of the prices specified in the charter in the event of voluntary liquidation" (R. 140a-141a).

C. The Involuntary Liquidation Preferences, Even If Applicable, Are Not Controlling in the Determination of a Fair and Equitable Plan.

We have urged above that the charter liquidation provisions are not operative in the instant case, but that if operative, that the voluntary liquidation preferences are controlling. Assuming *arguendo* that this Court rejects both contentions, we then urge that the involuntary liquidation provisions of the charter, even if applicable, are not controlling in the determination of a fair plan under both the statute and the Constitution.

The standard of fairness and equity incorporated in Section 11 (e) of the Act imposes the outer limits upon plans thereunder. By adoption of that standard, Congress has in substance decreed that in achieving the objectives of the Act a plan must not produce unfair results. If adherence to charter provisions, such as an involuntary liquidation clause, has that effect, such provisions may not stand in the way of

the Congressional objectives.[131] However, the threat of the due process barrier of the Fifth Amendment to the Constitution is in the instant case unwarranted. The constitutional question is no more "reached" here than in *Otis & Co. v. S. E. C.*, 323 U. S. 624 (1945). Even if it were, the answer to such argument is found in *American Power & Light Company* v. *S. E. C.*, 329 U. S. 90 (1946) and the *North American Company* v. *S. E. C.*, 327 U. S. 686 (1946).[132] The implication from these cases is clear that where under a plan security holders receive "just compensation"

---

[131] *North American Company* v. *S. E. C.*, 327 U. S. 686, 705 (1946); *Continental Insurance Co.* v. *U. S.*, 259 U. S. 156, 471 (1922). In the *North American* case, *supra*, this Court said:

> "This broad commerce clause does not operate so as to render the nation powerless to defend itself against economic forces that Congress decrees inimical or destructive of the national economy. Rather it is an affirmative power commensurate with the national needs. It is unrestricted by contrary state laws or private contracts. And in using this great power, Congress is not bound by technical legal conceptions. Commerce itself is an intensely practical matter. *Swift & Co.* v. *United States*, 196 U. S. 375, 398. To deal with it effectively, Congress must be able to act in terms of economic and financial realities. The commerce clause gives it authority so to act."

Although the two courts below did not pass upon the constitutional issue in view of their respective decisions, the District Court did indicate that "there is respectable opinion that a contractual obligation may be overridden in any case where necessary to achieve an otherwise constitutional purpose" (R. 288a), and the Circuit Court recognized the need to give "just recompense" as an equitable equivalent (R. 38).

[132] In *American Power & Light Company* v. *S. E. C.*, *supra*, this Court rejected largely on the basis of the *North American* case, *supra*, the argument that section 11(b)(2) may affect the rights of investors and holding companies in violation of the Fifth Amendment, and stated:

> "* * * Nor can we say that §11(b)(2) on its face authorizes or necessarily involves any destruction of any valuable interests without just compensation. The legislative policy and the statutory safeguards pointed out in the *North American* case negative that argument" (329 U. S. 106).

for their interest, the due process requirements are satisfied. The substitution of the equitable equivalent for contract rights surrendered involves no destruction of values but merely a change in the form of investment to another of equal value. Accordingly, neither the Act nor the Constitution forbids payment to the preferred of an amount equal to its redemption price established as the equitable equivalent of the rights surrendered under a fair and equitable plan.

III. The Commission Properly Applied the "Fair and Equitable" Standards of Section 11(e) of the Act in Approving as Part of a Plan the Payment to the Preferred Stockholders of Cash Equal to the Current Going Concern Value of Their Shares But Not in Excess of the Call Price Where This Amount Exceeds the Involuntary Liquidation Preference of Such Shares Under the Charter.

Once having concluded on the basis of *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, that the charter liquidation provisions were not dispositive in the instant liquidation (R. 61a) the Commission determined, in accordance with the principle of full priority, whether the plan accorded each security holder "from that which is available for the satisfaction of his claim, the equitable equivalent of the rights surrendered" (R. 62a). The Commission was of the view that the preferred stockholders were entitled to the current investment value of their securities and found that such value was at least equal to the respective call prices of the three series of the outstanding preferreds, treating the call prices as placing a ceiling upon the preferreds' participation (R. 67a). This conclusion was reached after (a) consideration of "all provisions

of the charter applicable to the preferred such as the dividend rate and the call price, as well as the liquidation preferences", (b) analysis of the "financial condition of the company with particular regard to the asset and earnings coverage of the preferred" (R. 62a), and (c) reference to the undisputed testimony of both the preferred stockholders' and company's expert witnesses, that the intrinsic values of the preferred were considerably in excess of the call prices (R. 67a).

On the other hand, measuring the quantum of participation to be allowed the preferred stockholders under section 11 by standards of "colloquial equity", the district court found that the investment value of the preferred stock was not controlling but merely one of the elements to be considered. It stressed as "colloquial" equities which "looked towards non-payment of the premium" (a) issue prices and market history, (b) retention of earnings, and (c) the alleged losses from past divestments under the Act, after "consideration of all factors involved" and "concluded that $100 would be fair and equitable, but that the payment of premiums would not be fair and equitable" (R. 288a-291a).

On appeal, the court below sustained the District Court, concluding that "All pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached by approach *ex* the Act or *intra* the Act" (R. 38). The court below expressed the view that the Commission had "misunderstood the principle of 'equitable equivalents' enunciated by the Supreme Court in the *Otis & Co.* case", and criticized the Commission (a) for substituting "the new doctrine of investment value" for the doctrine of equitable

equivalents; (b) for allegedly failing to give adequate consideration to earning power and supposed "equities" and "factors" (articulated by the District Court as "colloquial" equities); and (c) for allegedly disregarding the fact that "the holding company enterprise is at an end both for the preferred and common", which fact, according to the court below, differentiates the instant case from the *United Light & Power Co.* reorganization.

The issue is thus posed as to whether the Commission has properly applied the fair and equitable standard of section 11(e) in determining the respective participation for each class of stockholders—preferred and common—or whether the two courts below enunciated the correct criteria in terms of "colloquial equity" or its equivalent, for measuring the extent of the participation of the respective classes of stockholders.

A. The Commission Properly Applied the Principle of Full Priority and the Correct Techniques Under the Fair and Equitable Standard in the Valuation of the Respective Interests of the Common and Preferred Stockholders.

Under the doctrine of the *Otis* case, the words "fair and equitable" have received a technical definition as words of art which import the principles of full priority from the equity receivership and bankruptcy reorganization precedents. The principle of full priority requires such treatment be accorded various classes of security interests so that each security holder, in the order of his priority receives from that which is available for the satisfaction of his claim, the equitable equivalent of the rights surrendered. The entire bundle of rights must be determined as though in a continuing enterprise—a going concern

apart from the pending reorganization. Stated in other words, full compensation must be given to senior security holders for the contract rights surrendered on a "going concern" basis and not on liquidation basis, prior to the payment of junior security holders. These principles have been enunciated in the *Otis* case by this court as follows :

> "Like the bankruptcy and reorganization statutes, the Public Utility Holding Company Act, in providing that plans for simplification be 'fair and equitable', incorporates the principle of full priority in the treatment to be accorded various classes of security interests. This right to priority in assets which exists between creditors and stockholders, exists also between various classes of stockholders. When by contract as evidenced by charter provisions one class of stockholders is superior to another in its claim against earnings or assets that superior position must be recognized by courts or agencies which deal with the earnings or assets of such a company. Fairness and equity require this conclusion. * * * This is the rule applied by the Commission in the simplification of corporate structure. The Commission recognizes and applies the doctrine of full priority by giving value to the rights of the preferred in a going concern rather than as if by sale and distribution * * *" (323 U. S. 634-5).

In evaluating the rights surrendered, the liquidation preferences are not matured by the impact of section 11 of the Act, for as stated in the *Otis* case: "Congress did not intend that its exercise of the power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of

creditors" (323 U. S. 638). Consequently the liquidation preferences are only one factor in valuation rather than determinative of amounts payable, as indicated in *Schwabacher* v. *U. S.*, 334 U. S. 182, 199 (1948), where this Court reaffirmed its views in the *Otis* case and applied them to an analogous situation under the Interstate Commerce Act.

Applying these principles to the instant case, which as in the *Otis* case involved a solvent company, the Commission expressed the view that the liquidation preferences were not "conclusive"; considered all provisions of the charter applicable to the preferred such as the dividend rate, the call price and liquidation preferences; carefully analyzed the financial condition of the Company with particular regard to the asset and earnings coverage of the preferred comparing them in the light of these factors with many other utility operating and holding company preferred stocks (R. 61a-68a). The Commission found upon undisputed expert testimony that the preferred stocks had "an investment value at least equal to the respective call prices" of $105, $110 and $110, which "set a ceiling" thereon (R. 65a-68a) and upon a "full consideration of the record" concluded "that the fair and equitable standard would require the payment of an amount equal to the call prices of the securities plus accrued dividends" (R. 68a).

The conclusion that the Commission reached complies with and is required by the views of this Court as enunciated in the *Otis* case and reaffirmed in the *Schwabacher* case. In both the *Otis* and the instant cases, the two classes of stockholders were given the equitable equivalent of their participation as though in a continuing enterprise. The respective classes receive the existing value of their contract rights *inter*

sese, without regard to simplification process. That approach accords with the conclusion of this Court in the *Otis* case:

> "We reach the conclusion that the Securities and Exchange Commission applied the correct rule of law as to the rights of the stockholders *inter sese*. That is to say, when the Commission proceeds in the simplification of a holding company system, the rights of stockholders of a solvent company which is ordered by the Commission to distribute its assets among its stockholders may be evaluated on the basis of a going business and not as though a liquidation were taking place." (323 U. S. 633).

In neither the *Otis* nor the instant case was the Act permitted to mature the liquidation claims and thereby transform the existing values into matured claims which might be greater or less than such existing values. In the *Otis* case, the claim of the preferred stockholders, which, if measured on a liquidation basis would have exceeded its investment value or existing value on a going concern basis, was not allowed to mature. In the instant case, the preferreds' claim, which, if measured on a liquidation basis,[133] would have been less than its investment value (as limited by the call price), as an interest in a continuing enterprise, was not permitted to mature. In both cases, a windfall or a shift[134] in values from one class

---

[133] As the preferreds in the instant case would receive amounts at least equal to their respective call prices, both on the basis of their investment values and by the operation of the voluntary liquidation preference under the charter, the maturity of involuntary liquidation preference would result in the payment of less than such amounts and consequently in a "windfall" for the common.

[134] *American Power and Light Co.*, H. C. A. R. No. 6176, p. 8 (1945).

to the other had to be avoided—in the *Otis*, to the preferred; in the instant case, to the common. Such is the force of the mandate in the *Otis* case where this Court said: "Enforcement of an overriding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders" (323 U. S. 637). Consequently, the same rule of valuation on a going concern basis must be applied equally in both instances to avoid a windfall, whether the existing value of the interest turns out to be less or greater than the matured liquidation claim. Otherwise, the rule becomes a one way street by which, in section 11 proceedings, the common stockholders could not lose, and the preferred stockholders could not receive their equitable equivalents. Such unilateral operation of the *Otis* rule was certainly not intended. The effectuation of Congressional policy to avoid "windfall" to a particular group as well as the principles of sound administration and equal justice compels the bilateral application of the rule so both classes—common and preferred—may receive the equivalent of their participation "as though in a continuing enterprise instead of in liquidation". Therefore, since in the instant case, the claim of the preferred stockholders, measured as it were, on a going concern basis or at the call price, at which the common stockholders could have terminated their interest in the enterprise by redemption, exceeds their value on a liquidation basis, the rule of full priority requires the payment of amounts at least equal to their respective call prices in order to satisfy their prior claim to the assets and earnings of the Company. Such analysis would squarely accord with the recent restatement of the *Otis* principle in the *Schwalbacher* case in the following terms:

"In construing the words 'fair and equitable'

in a federal statute of *very similar purposes*, we have held that although the full priority rule applies in liquidation of a solvent holding company pursuant to a federal statute, the priority is satisfied by giving each class the full *economic* equivalent of what they presently hold, and that, as a matter of federal law, liquidation preferences provided by the charter do not apply. We said that, *although the company was in fact being liquidated in compliance with an administrative order, the rights of the stockholders could be valued 'on the basis of a going business and not as though a liquidation was taking place.'* * * * *Otis & Co.* v. *Securities & Exchange Commission*, 323 U. S. 624" (334 U. S. 199). (Italics ours.)

B. The Court Below Misapprehended the Principles and Techniques as Enunciated in the *Otis* Case and Unwarrantedly Criticized the Commission.

Misapprehending the significance of the *Otis* case, as discussed above, the court below claimed that the Commission "misunderstood the principle of 'equitable equivalents'" as enunciated by this Court (R. 38) and criticized the Commission in several respects for its alleged failure to apply the proper techniques and principles in valuation. Thus while the court below agreed with the Commission that the charter provisions are not dispositive of the issues presented and that the doctrine of equitable equivalents "includes within its ambit cash for securities as well as securities for securities" (R. 38), it rejected the principles and methods used by the Commission to arrive at the equitable equivalents of the two classes of securities.

1. The court below erroneously applied a standard of "colloquial equity."

Paying merely lip service to the *Otis* principles, the court below has in reality strayed far afield from the rules established by this Court and has announced that "All pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached by the approach ex the Act or the approach intra the Act" (R. 38). This criterion, apart from its nebulous character, represents only a mirage of consistency with this Court's views and in reality, rejects the conception that the phrase "fair and equitable", as used in section 11(*e*) of the Act, imports the principle of full priority as developed in the receivership and bankruptcy reorganization cases. In place of the principle of full priority as discussed above, the court below proposes a variable and uncertain theory of "All pertinent factors and all substantial equities"—apparently similar to the principle of "colloquial equity"[135] by which the District Court in the instant case sought to measure the participation of the security holders. Such nontechnical significance of the phrase "fair

[135] This standard of "colloquial equity" has been articulated on several other occasions in addition to the instant case by the same District Court, *e. g., In re Community Gas & Power Co.*, 71 F. Supp. 171 (D. Del. 1947); *In re Citizs Service Co.*, 71 F. Supp. 1003 (D. Del. 1947). In *In re United Light and Power Co.*, 51 F. Supp. 217 (D. Del. 1943), which eventually became the *Otis* case, the same District Court announced a similar view, suggesting that the "expression 'fair and equitable' should be given its ordinary non-technical meaning". Despite the District Court's statement as to the application of the standard of colloquial equity in the *Otis* case neither this Court nor the Circuit Court adopted any such nebulous theory.

and equitable", resulting as it does in a substitution of indefinite considerations for the well-defined rights of the security holders, is entirely at variance with the technical definition of that expression, as words of art, as defined in the *Otis* and *Schwabacher* cases. That ambiguous standard, enunciated by the two courts, connotes the application of "nonvaluation" or "non-economic" factors in disregard of the implications from the statement in the *Schwabacher* case that "the priority is satisfied by giving each class the full *economic* equivalent of what they presently hold" (334 U. S. 199).

Reference to various "factors" and "equities" which, in the opinion of the court below, merit special consideration, reveals more clearly their lack of merit and their unsoundness. The two courts below gave primary recognition to the following "factors" or alleged "equities": (a) issue price and market history of the preferreds (R. 289a); (b) retention of earnings; and (c) the alleged losses from divestments under the Act. We shall consider in turn the merits of each of these alleged "equities".

(a) *Issue price and market history.*

The two courts below considered significant the issue price and market history of the preferreds (R. 289a, 301a-302a, 305a). The standards of fairness and equity certainly do not require that such weight be attributed to these factors. Rather is it clear that in the absence of fraud, purchase prices do not affect the measure of the security holders' participation under a section 11(e), plan, by analogy to the bank-

ruptcy reorganization precedents.[136] Certainly the issuance of the preferreds at slightly under par or book value does not make it inequitable to give them slightly more for their interest in the enterprise over twenty years later. Such remote factor may have historical interest but little significance. Moreover, if the preferreds' participation is measured quantitatively in terms of the *number* of dollars invested then, it should be equally appropriate to make a qualitative measurement of the dollars invested in terms of their respective *purchasing power* at the time of the Commission's determination. It is unquestioned that the purchasing power of $100 in 1929 at the time of the issuance of the preferred stocks was far greater than its purchasing power on the date of the approval of the plan by the Commission or on the date of its enforcement by the District Court. In any event, the test, as so aptly stated by Mr. Justice Jackson in the *Schwabacher* case in an analogous situation, "*is not what he once put into a constituent company* but what value he is contributing to the merger that is *to be* made good" (334 U. S. 199). That statement puts the factor of issue price in its proper place, without the special significance, which the District Court attributed erroneously to it.

Market history is likewise of little use in determining present values. The historical fluctuation in market prices reflecting changing economic condi-

[136] *In re Pittsburg Railways Co.*, 159 F. (2d) 630 (C. C. A. 3, 1946) cert. den. 329 U. S. 731; *In re Lorraine Castle Apartments Building Corp.*, 149 F. (2d) 55 (C. C. A. 7, 19) cert. den., sub nom., *Lorraine Castle Apartments Building Corporation Inc. v. Mackintosh*, 326 U. S. 728 (1945). In *American Power and Light Company*, H. C. A. R. No. 6176, p. 4 (1945), where the Commission held that it would be unfair to retire the company's debentures at less than the redemption price, it appeared that the debentures were issued to the public for as low as $89.

tions as affected by a variety of political and social events are at best remotely relevant to the determination of present values. It was admitted by Mr. Benjamin that "the present condition of a company is more important than what has happened in the past" in determining the value of its securities (R. 590a). Moreover, past market prices are not only unreliable as a test of current investment value but actually can give a false picture. For example, in 1941 when Engineers' preferred ranged between $70-$85, the breakup value of the underlying securities, even during a depressed market, was estimated at $169 per share. *Engineers Public Service Co.*, 9 S. E. C. 84, 88 (1941). It is a known fact that holding company securities generally sell below the value of the common stocks which underlie them and it should be remembered that the market prices were seriously affected by the depression, the adverse publicity surrounding enactment of the Act, and the Engineers' management's procrastination. In spite of these adverse factors, during much of the time the Company was proposing to retire the preferred at only $100 per share, the stock was selling at close to the call price.[137]

If past market prices are to be given any weight, it should be pointed out that under the management's program of retiring the preferred at a discount there was the incentive and the ability to shape the conduct of the corporation's affairs so as to encourage public sales at low prices. The Commission recognized this

[137] The District Court attributed these high prices to "substantial" purchases by Engineers of its own preferred stock. Finding No. 29, R. 304a. Actually the Company purchased 37,500 shares over a period of 5 years and the total purchases amounted to less than 1% of the preferred stock outstanding. R. 303a, 304a.

possibility in the *Western* case,[138] when it pointed out that the Company had created complete uncertainty as to the management's policies with respect to compliance with Section 11. The Commission's opinion noted that:

> "* * * The continued existence of these uncertainties may well have had and continue to have an effect upon the market for the company's preferred stocks."

Assuming *arguendo* that issue and market prices are independently significant, comparative analysis in these respects of both the common and the preferreds would be highly appropriate and enlightening. On the basis of an average issuance price of $30.40 per share for the common (R. 1820a) and testimony as to the undisputed combined worth of Virginia, Gulf States and El Paso of at least $109,000,000 (R. 981a, 982a) by Barnes, President of Engineers, and after contribution of an additional $11.50 per share by the common to obtain all the underlying assets in these companies, the common will have obtained an interest in the enterprise worth $57 for each $41.90 contributed. Thus even on the District Court's premise, there is inadequate basis for its conclusion. Moreover, the market history of both the common and the preferreds are comparable. Although we dislike to dignify the importance of past market prices, we note that the common stock has had a much more volatile history

[138] 12 S. E. C. 804, 812 (1943). In *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194, 204-5, rehearing denied 332 U. S. 783 (1947), Mr. Justice Murphy pointed out management's ability to affect market prices:

> "* * * The broad range of business judgments vested in Federal's management multiplied opportunities for affecting the market price of Federal's outstanding securities * * *."

than the preferreds. While the preferred reached a high of $123 per share in 1929 and a low of $10 1/8 in 1935 (R. 302a), the common reached a high of $79 5/8 in 1929 and a low of $1 1/8 in 1935 (R. 305a). It appears that since 1932 there have been relatively few periods when Engineers common stock has shown a market value in excess of $10 per share (R. 543a). In 1942 the stock sold as low as $1.25 (R. 452a) and between 1942 and 1945 the stock has had a turn-over of almost 300% (R. 903a). Small wonder it is that the Commission did not attribute much weight to market history.

(b) *Retention of earnings.*

The investment value of the preferred stocks has been attributed erroneously to the retention of earnings over a period of years which might otherwise have been paid out as dividends to the common stockholders (R. 291a, 308a-309a). In the first place it cannot be claimed that the dividends were withheld through any misconduct of the preferreds, particularly in view of the common stock voting control. Besides, without conceding the soundness of the District Court's finding in this respect, there would seem to be no basis for assuming that the retention of earnings resulted in an *increased* value of the preferred stocks and a *decreased* value for the common stocks; rather would the probable result be an increased value for both classes of securities. In all probability if the common had taken out all the earnings which

---

139 The District Judge considered the "retained earnings" as "past sacrifices" of the common (R. 291a). That view lacks factual basis.

were available to it since 1932, they would have been eliminated from the enterprise now rather than the preferred stockholders. Moreover, this argument overlooks the fact that the rights of the stockholders are to be "measured not in terms of the situation created by the statute but rather in terms of the situation terminated by it"[140] and that "the treatment to be accorded the preferred stocks under a comprehensive plan depends upon the conditions existing at the time such plan is approved.[141]

Even assuming the earnings were available for dividend purposes, the record clearly shows that every reason for non-payment of dividends was attributable to a business need on the one hand, or to a result desired by the controlling stockholders, on the other. Moreover, the retention of earnings was not a "sacrifice" by the common despite the statement of the District Court. In the first place, necessity for establishing a reserve for losses in "investments" made by the common controlled management,[142] required the elimination of earned surplus in 1938 and reduced the capital represented by common from over $58,000,000 to $1,999,968. Under such circumstances it was prudent, if not essential, to build up some equity behind the preferred. Secondly, the management, in the interest of the common as a class, embarked upon a program of accumulating cash in order to retire the preferred piecemeal and at substantial discounts[143]

---

[140] *United Light & Power Company*, 13 S. E. C. 1, 13, H. C. A. R. No. 4215, p. 13 (1943).

[141] *Western Public Service Company*, 12 S. E. C. 804, 814 (1943).

[142] The preferred stock had no voting rights unless two years' dividends were in arrears. R. 1415a.

[143] The Company over a period of years acquired 37,500 shares at substantial discounts. These purchases ceased only when the market price of the preferred exceeded $100. See R. 733a, 1519a, 1576a, H. C. A. R. No. 5484.

when it became apparent that Engineers would be required to reduce its capitalization.[144] In fact a deliberate policy of accumulating cash had been pursued so that the preferred stockholders could be ousted from the Company (R. 643a, 687a, 719a). A third and compelling motive for non-payment of dividends was the desire on the part of the handful of controlling stockholders to obtain capital appreciation of their investment rather than dividends which would have been subject to high federal income tax rates (R. 756a). By retiring the preferred out of earnings, which was the objective, substantial savings in taxes resulted. A strange kind of "sacrifice", to say the least.

(c) *Alleged losses from past divestments under the Act.*

The court below directed the Commission to consider and weigh into the calculation supposedly[145] "substantial losses which occurred to Engineers by

---

144 See *Western Public Service Co.*, 42 S. E. C. 804, 812 (1943).

145 After disposing of Engineers' insubstantial contention to restrict the preferred to $100 because of the alleged *Puget Sound* "loss", supposedly caused by the Act, the Commission commented:

> "In passing, we should point out that we do not accept counsel's hypothesis that the *Act* has caused the asserted losses. In all of its divestments, Engineers has been free in its choice of methods, and, within limits, to choose the time for divestment. All sales have been negotiated by Engineers at arm's-length. If, as in the case of Puget Sound, the sale brought less than the carrying value on the books of Engineers, the indication is that the carrying value was excessive and not that the sales price was low. It is significant that the market price of Engineers' common when the plan was filed was the highest since 1932 and that the price has been rising steadily since 1942 when the program of simplification got under way. As shown in Footnote 45, *supra*, Engineers' common reached a low of 1⅛ in 1935. By 1945, when the plan was filed, it had reached a high of 37." (R. 72a, n. 55).

virtue of divestitures compelled by the Act" (R. 37). Even assuming *arguendo* that these losses can be traced and attributed to the operation of the Act, this requirement is in conflict with the *Otis* principle of "full priority" which, as indicated above, places primary stress on contract rights to earnings and assets. Furthermore, such re-examination is contrary to the policy underlying the doctrine of *res judicata* and creates an insuperable administrative burden, as will be demonstrated in more detail below at page 127 ff. The sales method of divestments was entirely a choice of the common stock management. In any event, there has been no complaint that these divested securities were dumped upon the market or that inadequate consideration was received at the date of their disposition. *North American Co.* v. *S. E. C.*, 327 U. S. 686, 709 (1946). It is also highly significant that if these same divestments had resulted in substantial profits instead of alleged "substantial" losses, the preferreds would not have been permitted to share in those profits on the premise undoubtedly that the preferreds' participation has been limited by the call provisions, even though the fair investment value of the preferreds would have been even higher than that found by the Commission, absent the call feature. Such a one way street for the benefit solely of the common stockholders could hardly be called fair. Besides the common stock management being in complete control could have easily compelled the preferred stockholders to "share" the alleged losses by proposing a plan which would have permitted the preferreds to continue their participation in the enterprise. This would then have been clearly within the ambit of this Court's decision in the *Otis* case and the preferreds would have received, instead of cash the

equitable equivalent of the rights surrendered, in the form of securities in the underlying companies. The preferreds were unable to secure this participation due to the fixed attitude of the common which sought at the same time to eliminate the preferreds at a bargain price and keep for the common stockholders all the benefits of the flourishing underlying operating companies, using the Act as a cloak to accomplish their true objective. They consistently and persistently contrived to eliminate the preferred from participation and to reserve to the common all of the advantages.[146] Can the common now be heard to complain that they suffered great losses when in fact the preferreds were prohibited from participating in these so-called losses.[147] Such assumed "losses" would have all been previously absorbed and in any event would have been reflected in the present values of the two classes of both preferred and common stock. It is also interesting in this connection that after these divestments, the company's assets as of January 30, 1945 aggregated $65,756,904 (R. 86a) as compared with assets in 1938 of only $60,909,703 (R. 1525a). Likewise it cannot be fairly urged that the alleged Puget Sound book losses on which the two courts below place special emphasis can be attributed to the operation of the Act. Puget had been a cancer in the system from the time of its acquisition in 1928 (R. 1663a). It consistently failed to earn its own preferred dividend requirements and Engineers, in 1938, voluntarily created a reserve of $35,000,000 to reflect the "depreciation" in this "investment". In

[146] R. 583a, 643a, 687a, 719a, 723a.

[147] The Commission found that the elimination of the preferreds was "highly beneficial" to the common stockholders (R. 69a).

1943, Puget was recapitalized[148] and by virtue of the application of the investment value theory, Engineers received 3% of the new common stock in the reorganized company. These securities were sold in 1944 resulting in a book loss to Engineers of $33,320,519 (R. 1608a). It is clear that the book figure itself had no relationship to actual value. *To weigh in this book loss would in effect restore values which had already been lost through the operation of economic forces contrary to the mandate of this Court in the Schwabacher case.* Moreover, various other extraneous considerations entirely divorced from the requirements of the Act motivated the management in its disposition of Puget at the time, such as tax consequences (R. 1833a).

The effect, moreover, of weighing the conjectural losses from divestments for the benefit of the common, as the court below directs, results in substance, in the subordination of the claim of the preferred to that of the common on the basis of such losses, even though the history of Engineers reveals no "spoliation, mismanagement and faithless stewardship" by the preferred.[149] The voting common, not the preferred, have occupied a position of complete control and the Company "has been free in its choice of methods, and, within limits, to choose the time for divestment" (R. 72a, n. 55). Accordingly, the subordination of the wholly innocent preferred stockholders would constitute a misapplication of the "Deep Rock Doctrine".[150] Nor do the public preferred stockholders in the instant case fall within the ban of the principle established by the Commission and sustained by

[148] *Puget Sound Power & Light Co.*, 13 S. E. C. 226 (1943).

[149] *Pepper v. Litton*, 308 U. S. 295, 308 (1939).

[150] *Comstock v. Institutional Investors*, 335 U. S. 211 (1948), citing *Taylor v. Standard Gas & Electric Co.*, 306 U. S. 307 (1939) and *Pepper v. Litton*, *supra*.

this Court in *S. E. C. v. Chenery Corp.*, 332 U. S. 194 (1947), under which management insiders are limited to cost on their purchases of securities during a reorganization.

These views of the two courts below, apart from their intrinsic unsoundness, involve a shift in emphasis to factors entitled under the decisions to but little weight[151] and a veering away from elements such as current rights to earnings and assets which are entitled to primary weight.[152] It in effect seeks to restore "values * * * already lost under the operation of economic forces" in violation of the principle enunciated as follows in the *Schwabacher* case:

> ** * * Public regulation is not obliged and we cannot lightly assume it is intended to restore values, even if promised by charter terms, if they have already been lost through the operation of economic forces.* Cf. *Market Street R. R. Co.*

---

[151] Most of the arguments of the District Judge (Leahy, *J.*) are merely those advanced by Commissioner Healy in his dissenting opinion in *American Power & Light Co.*, H. C. A. R. No. 6176, plan enforced (S. N. N. Y. 1945), and those presented to the Commission by counsel for Engineers in support of its original plan. All four Commissioners (Commissioner Healy had died) found no substance in the arguments because they are based on fallacious assumptions: (1) there was no showing that the Act caused any losses; (2) the common stock was not getting "what was left" but was getting full compensatory treatment in order of its priority; (3) the common stock was not being "burdened" but was getting rid of the preferred and its prior claim on earnings; (4) the common stock had not "sacrificed" but had merely built up the value of its equity. Moreover, Judge Leahy ignored the fact that the preferred was actually the loser because the favorable dividend rates which the court termed "excessive yields" are impossible to duplicate.

[152] *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co.*, 318 U. S. 523 (1943); *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 632 (1945); *Lahti* v. *New England Power Ass'n*, 160 F. (2d) 845 (C. C. A. 1, 1947); *Phillips* v. *S. E. C.*, 153 F. (2d) 27 (C. C. A. 2, 1946), cert. den. 328 U. S. 860 (1946).

v. *Commission*, 324 U. S. 548. In appraising a stockholder's position in a merger as to justice and reasonableness, it is not the promise that a charter made to him but the *current worth* of that promise that governs, it is not what he once put into a constituent company but what value he is contributing to the merger that is to be made good" (334 U. S. 199). (Italics ours.)

Accordingly, the Circuit Court's application of the standard of "All pertinent factors and all substantial equities" constitute a misinterpretation of the fair and equitable standard as enunciated in the *Otis* and *Schwabacher* cases. Moreover, its substitute criteria, under which the extent of participation is measured by irrelevant factors extrinsic to the contract rights of the security holders, afford no rational basis for the administration of the Act upon a uniform national scale and will necessarily create a lack of uniformity in view of its dependence upon determinations of the weight of various intangible factors by different enforcement courts all over the country.

2. The court below erroneously applied a standard of valuation "as if the Act had never been passed".

The court below also states that "No particular, specific approach [to the problem of valuation] is to be nailed to Commission's head" and suggests that an approach either "*intra* the Act" or "*ex* the Act" could "lead to just and appropriate valuations" (R. 37). Such choice of alternative methods of valuation is erroneous and contrary to the opinions of this Court in the *Otis* and *Schwabacher* cases. If an appraisal "*intra* the Act" should require the rights of the security holders to be measured in terms of the situation created by the statute, *i. e.*, as though a liquidation were

taking place and not in terms of the situation terminated by it,[153] that concept would run counter to the *Otis* case under which the preferred and the common were given the equivalent of their participation "as though in a continuing enterprise instead of in liquidation". Under the *Otis* case, neither is permitted to take advantage of a situation created by Congress to secure a benefit at the expense of the other, and both are held to the value of their bargains *inter sese* without reference to the liquidation or reorganization process in accordance with the policy expressed in the *Otis* case. The approach "*intra* the Act" requiring valuation as if the liquidation pursuant to the Act falls within the coverage of the charter liquidation provisions would violate the *Otis* rule of "inoperativeness", discussed *supra* at page , Moreover, the foregoing interpretation of "*intra* the Act" would appear to be contrary to the Circuit Court's statement that the charter provisions are "not dispositive of the issues presented" (R. 34).

Even assuming the proper application of the *Otis* rule of "inoperativeness", in view of the Circuit Court's express statement in this connection, the phrase "*intra* the Act" would seem to imply valua-

---

[153] This statement is the converse of a quotation from the opinion of the *Commission in United Light and Power*, H. C. A. R. No. 4215, p. 13 [13 S. E. C. 12] (1943), which appears as follows in the opinion of this Court in the *Otis* case:

> "'Under the circumstances, fair and equitable compensation will be given to all of the claimants if their rights are measured not in terms of the situation created by the statute but rather in terms of the situation terminated by it—*i. e.*, as though no liquidation were to take place. In this way each class of stock will be accorded its proportionate share of the benefits to be gained from the elimination of a useless and expensive corporate entity and from the receipt of a security representing a more direct investment in the underlying assets and earnings of the system.'" (323 U. S. 635, n. 17).

tion "as if the Act had been passed"[154] or the converse of the phrase "*ex* the Act" as defined in at least one place in the opinion of the court below to mean valuation "as if the Act had *never* been passed" (R. 35).

This significance of "*intra*" and "*ex* the Act" appears to require an historical review of the past 10 years' activities in the Engineers' system and the public utility industry, so as to record and appraise the effects of the operation of the Act since its passage and to reconstruct Engineers on that basis. A retroactive adjustment of benefits and detriments (or profits and losses) so as to eliminate or cumulate the effects of numerous orders of the Commission,[155] interspersed among a variety of independent and possibly unrelated causal factors as the economic, political and scientific forces of the times, creates an infinite assignment impossible of fulfillment and imposes an overwhelming burden upon the Commission, in its administration of the Holding Company Act. Besides, in suggesting a re-examination of divestments and other transactions executed pursuant to the Act, it constitutes a collateral attack on the salu-

---

[154] It may be that such interpretation of the expression merely harks back to the following quotation from the opinion of the District Court to which the court below refers as "the greatest difference between the respective approaches of the court and the Commission to the problem of valuation":

> "* * * 'I do not consider the argument advanced [by the Commission] as to what these series of preferreds would be worth if there were no Public Utility Holding Company Act. I do not think it profitable to consider an argument based on unreality *for there is a Public Utility Holding Company Act.* Unless one subscribes completely to the doctrine of foreordination things might always be different from what they are' * * *" (R. 20).

[155] For a list of significant orders of Commission which affected the Engineers' system see R. 69-70.

tary policy underlying the doctrine of *res judicata*,[156] upon final decisions, such as the *Puget Sound* divestment, in which the plan proposed by a common stockholder management has already been enforced by the United States District Court for the District of Massachusetts.[157] Hindsight review of the effects of numerous other valid orders would thus be required. Lastly, a valuation "*ex* the Act", predicated upon the aforesaid historical analysis, is not reconcilable with the "current worth" rule of the *Schwabacher* case and the "going concern" doctrine of the *Otis* case. In other words, the phrase "*ex* the Act" must mean "apart from the reorganization compelled by the Act", or "on the basis of a going business and not as though a liquidation were taking place", in the language of the *Otis* case as applied by the Commission. As this Court said in the *Otis* case: "* * * when the Commission proceeds in the simplification of a holding company system, the rights of stockholders of a solvent company which is ordered by the Commission to distribute its assets among its stockholders may be evaluated on the basis of a going business and not as though a liquidation were taking place" (323 U. S. 633).

3. The court below erred in requiring dollar valuation of the common stock interest where the preferred stockholders receive cash and the common stockholders, by choice, received the residual assets.

The court below, having apparently misconceived the meaning of "*ex* the Act" as indicated above, unjustly criticized the Commission for allegedly adopt-

[156] *Commissioner* v. *Sunnen*, 333 U. S. 591 (1948); *Sherrer* v. *Sherrer*, 334 U. S. 343 (1948).

[157] *Puget Sound Power & Light Co.*, 13 S. E. C. 226 (1943), plan approved and enforced, civil action No. 2308 (D. Mass. 1944).

ing inconsistent techniques or methods in valuing the preferreds "*ex* the Act" and the common "*intra* the Act". In reality the Commission valued both the common and preferreds "*ex* the Act" or apart from the reorganization in accordance with the principles enunciated in the *Otis* case. Applying the doctrine of full priority, the Commission first valued the preferreds, and consequently, in valuing the preferreds apart from reorganization or on a going concern basis, necessarily reciprocally valued the common, by the same standard. In other words, since the total enterprise is to be divided between two claimants, the preferreds and the common, once the preferreds have been valued on a going concern basis and that value subtracted from the total, it appears obvious that the residual value is thereby established for the common, on the same basis. The preferreds are entitled, according to the Commission, to amounts at least equal to their redemption prices as the equitable equivalents of the rights surrendered,[158] and the common entitled, in exchange for their rights, to the remaining assets or the securities in the operating companies, there being no need to place a dollar value on the securities thus received in exchange.[159] The record is abundantly

[158] Common stock management selected the type of distribution (*i. e.*, cash for the preferreds and underlying securities for the common). The preferreds were not permitted to participate or retain a stake in the continuing enterprise in any form whatsoever (including the underlying securities) as the common stock management wanted to retire or treat the preferreds otherwise (R. 719a). Likewise, the initiative in suggesting the most appropriate method of complying with the Act from among the available alternatives is left to the Company management. *In the Matter of North American Light and Power Co.*, not officially reported (C. C. A. 3, 1948), printed opinion, p. 13.

[159] Full compensatory treatment may properly be made in either cash or securities by both the I. C. C. and the Commission. *Standard Gas & Electric Co.*, 151 F. (2d) 326 (C. C. A. 3, 1945);

[Footnote continued on following page.]

clear that the common stockholders were determined to secure for themselves all of the underlying securities, to the exclusion of the preferred who were denied the right to participate in the underlying operating companies unless, perchance they owned common stock, or could possibly acquire some Gulf States warrants.

The Commission, in determining fair and equitable treatment for the preferred in the instant case, has applied the usual technique in valuing senior securities, such as bonds, upon retirement unaccompanied by the liquidation or dissolution of the particular holding company.[160] In both situations, namely, the elimination of the preferred in the instant case and the retirement of bonds, a dollar value is placed upon these senior securities, while the junior securities or the common stock receive the residual assets, consisting of securities in the operating companies as in the instant case. The same result is achieved by the common stockholders' acquisition of the complete ownership of the holding company enterprise in the situation where retirement of the senior securities occurs without dissolution. Therefore, the Circuit Court's criticism that the Commission "made no finding as to the 'value' of the common stock" is without

[Footnote continued from preceding page.]

Georgia Power & Light Co., H. C. A. R. No. 5568, plan enforced (M. D. Ga. 1945); *New York, N. H. & H. R. Co.*, 147 F. (2d) 40, 47 (C. C. A. 2, 1945), aff'g 54 F. Supp. 595, cert. den. 325 U. S. 884 (1945); *Chicago Railways Co.*, 160 F. (2d) 59 (C. C. A. 7, 1947).

[160] The analogy is clear when the Engineers' plan is viewed as embracing two separate phases or transactions, (1) the retirement of the preferred stock, and (2) the subsequent dissolution of Engineers, resulting in the distribution of securities in the underlying operating companies to the common stockholders.

substance.[161] The Commission has stated in detail the very reasoning upon which it based its conclusions.[162] The Commission merely did not place a dollar sign on the rights surrendered by the common[163] but has expressly found that the "plan is fair to the common stockholders" and that the "retirement of the preferred stock will be of immediate benefit to the common stockholders". Hence the Commission has determined that the residual value of Engineers, namely the securities in the operating companies received in exchange, is the equitable equiva-

[161] No such absence of a finding of value for the common was mentioned by the District Judge. Moreover, this same Circuit Court recently gave whole-hearted approval to the Commission's valuation despite the absence of any "'attempt to fix a precise dollar value for each [inter-company] claim'" and "findings and conclusions as to (a) the value and extent" of the assets and debts and senior security claims against such assets, and "the shares and relative rank of common stock entitled to participate in the remaining net assets". *In the Matter of North American Light & Power Co.* (C. C. A. 3, Nov. 5, 1948), unreported, printed opinion, pp. 7, 10. In this latter case, the Third Circuit Court quoted with approval the Commission's statement of its approach in weighing the inter-company claims as "'integral elements of the "bundle of rights" of the respective claimants in order to determine whether the plan achieves a fair and equitable distribution.'" In sustaining the Commission, the Circuit Court concludes:

> "* * * The Commission has determined that the settlement was for the best interests of the parties; that the amount stated in the Amended Plan is both fair and equitable. They are ultimate findings, and represent a judgment based upon the consideration of all the imponderables involved in determining whether the proposed offer met the requirements of being fair, reasonable and adequate.' *Ladd* v. *Brickley*, *supra*. In point of fact, the Commission has gone further, and has stated in complete form the very reasoning upon which it based its conclusions. We think that is enough." (Printed Opinion, pp. 17-18.)

[162] See *In the Matter of North American Light and Power Company*, *supra*, printed opinion, p. 18.

[163] As stated in the *Standard Gas* case: "Actually it was not incumbent upon the Commission to reduce the result to dollars and cents in the process of valuation" [151 F. (2d) 333, n. 12].

lent of the rights surrendered by the common. In such a case, a distribution may properly be made without dollar valuation. *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co.*, 318 U. S. 523, 565 (1943); *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 482 (1943); *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 639-40 (1945). A requirement that dollar values be put upon the rights surrendered and the *quantum* received "would create an illusion of certainty where none exists and would place an impracticable burden on the whole reorganization process." *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co., supra*, at p. 565. Practical adjustments are required rather than a rigid formula. Accordingly, such determination need not be made by the use of any mathematical formula or with mathematical certitude. *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co., supra*, at pp. 565-6; *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 529-30 (1941).

4. The court below improperly directed the Commission to give greater consideration to earning power and to apportion it.

A further criticism has been erroneously directed by the court below at the Commission on the basis of the *DuBois*, the *Group of Institutional Investors*, and the *Otis* cases for its alleged failure to "give any substantial consideration to the future earning power of Engineers and its subsidiaries", and its asserted neglect "to ascertain the future earning power of the system" or "apportion earning power between the preferreds and common based upon their respective claims to income" (R. 35).[164] Reference to these cases

[164] Apparently the District Court disagrees with the Circuit Court in this respect as the District Court nowhere in its opinion refers to any inadequate consideration of earning power.

reveals that in each, the reorganization involved the formation of a *new* corporation and the appropriate allocation of the securities therein on the basis of the apportionment of the earning capacity among the claimants. Hence earning capacity was projected far into the future and ascertained in order to insure the ability of the new corporation to meet the interest and dividend requirements of the new securities as a "sine qua non to a determination of the integrity and practicability of the new capital structure", and in order to avoid the "indefensible participation of junior securities in plans of reorganization" in violation of the well established "absolute priority" rule.[165] It would therefore seem that the criticism of the court below reflects a misapplication of the principle of these cases since the instant case, in contrast to the decisions cited by the court below, involves an entirely different type of distribution and method of compliance with the Act. In the instant case, the common stock management decided upon the complete elimination of the preferred class as the method, and cash as the type of distribution, instead of the formation of a new corporation, upon the dissolution of Engineers and the allocation of securities therein. Nor is the "indefensible participation of junior securities" at issue. Accordingly, the criterion of earning capacity, which was originally fashioned as a shield to protect the preferred from "indefensible participation" of the common in a new corporation "in satisfaction of the absolute priority rule" has by the court below been converted improperly into a weapon in the hands of the common against the preferred in disregard of the aforesaid rule. In effect the court below

---

[165] *Consolidated Rock Products Co. v. DuBois*, 312 U. S. 510, 525-6, (1941).

has attempted to restrict the preferred by its misapplication of the doctrine of full priority. Moreover, in view of the material differences, particularly with respect to the type of distribution and method of compliance with the Act, between the instant case and the cases cited by the court below in support of its criticism, there is no need for a hypothetical projection into the indefinite future of the earnings capacity nor for an apportionment thereof. Yet it is evident from Badger's analysis, that in his opinion the estimated 1946 earnings indicated a continuation in earnings shown for the 1940-5 period, that future earning trends of Engineers' subsidiaries should not run counter to the strong growth trend of the public utility industry as there were no peculiar economic characteristics in respect to the territories served by these companies, and that Engineers should continue in future years to register progress along with other units in the industry (R. 2103a). Thus, in the instant case, *actual* as well as estimated earnings were considered, although, where, as here, a careful study indicates the amplitude of earnings coverage for the preferred, it does not appear necessary to go further as the common's claims to income would be subordinate, in any event, to those of the preferred stockholders. "The extent and method of inquiry necessary for a valuation based on earning capacity are necessarily dependent on the facts of each case." *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 527 (1941).

5. The court below misconceived the significance of fair investment value.

In addition, the court below has unjustifiably found fault with the Commission for attempting to substitute "the new doctrine of investment value * * * for the

doctrine of equitable equivalents enunciated in the *Otis & Co.* decision",[166] and maintains that "investment value is and can be only one of a series of factors to be used in arriving at equitable equivalents". Despite the statement of the court below, novelty cannot be ascribed to the investment value doctrine in view of its recognition by this Court in the *Otis* case. There it was pointed out that once it is concluded, as it has been here, that the dissolution results in a type of liquidation entirely distinct from the liquidation envisaged by the charter provisions, the Commission is permitted "to examine the investment values of the

---

[166] Certainly novelty is not revealed in the following rationale in the Commission's decision in the instant case:

> "It is settled that in a Section 11 reorganization a security holder must receive, in the order of his priority, from that which is available for the satisfaction of his claim, the equitable equivalent of the rights surrendered. Since under the circumstances of this case, we do not think it proper to regard the liquidation provisions of the charter as conclusive in determining those rights, we must consider all provisions of the charter applicable to the preferred, such as the dividend rate and the call price as well as the liquidation preferences, and we must analyze the financial condition of the company with particular regard to the asset and earnings coverage of the preferred" (R. 62a).

After reviewing the financial data and expert testimony the Commission concluded:

> "It is apparent that the preferred has an investment value at least equal to the respective call prices. * * *
>
> "Upon a full consideration of the record * * * the fair and equitable standard would require the payment [to the preferred] of an amount equal to the call prices of the securities, plus accrued dividends * * *": (R. 67a-68a).

It is significant that the report of the Senate Committee on Interstate Commerce, in reviewing Section 11 of the Senate bill on the Public Utility Holding Company Act, states: "Precedents under the Sherman Antitrust Act and under the Hepburn Act demonstrate that the necessary corporate adjustments can be made without forced liquidation or the sacrifice of *legitimate investment value*." S. Rep. No. 621, 74th Cong., 1st Sess., p. 33. (Italics ours.)

common and preferred stock". In reality, the doctrine of investment value connotes no novel technique but reflects the *measure* of the stockholders' rights determined in the simplification of a holding company system on the "basis of a going business", as recognized in the *Otis* case.

It has been a settled principle at least since the *United Light & Power Co.* case, 13 S. E. C. 1 (1943)[167] (the original *Otis* case) that has been continuously applied by the Commission[168] and recently reaffirmed in another aspect of that simplication,[169] that the present investment worth of a security, based on the bundle of rights surrendered, must be the measure of its participation in a section 11(e) plan. This concept[170] has recently been approved in an analogous situation in the *Schwabacher* case, *supra*, where this Court stated: "In appraising a stockholder's position in a merger as to justice and reasonableness, it is not the promise that a charter made to him but the *current*

---

167 In the words of the Commission: "It is our conclusion that we must judge the fairness of the plan according to legitimate investment values existing apart from the duty of liquidation imposed by the statute" (13 S. E. C. 11). The Commission then proceeds to a discussion of the "bundle of rights" affecting normal value.

168 *E. g., Washington Railway & Electric Co.*, H. C. A. R. No. 7410 (1947), enforced June 16, 1947 (D. C. Dist. of Col.); *Pennsylvania Edison Co.*, H. C. A. R. No. 8550 (1948).

169 *United Light & Power Co.*, H. C. A. R. No. 6603 (1946).

170 This investment value doctrine has recently received judicial sanction in the First Circuit in *In re American and Foreign Power Company*, 80 F. Supp. 514, 528 (D. Me., 1948), where the District Court said with reference to the values assigned to certain preferred stocks under a section 11(e) plan:

> "• • • But it is clear that the Commission arrived at these figures not from a conception that this was a 'call' but from a *consideration of what was the fair investment value of these stocks*, in accordance with the overriding policy of *Otis & Co.* v. *S. E. C.*, 323 U. S. 624." (Italics ours.)

worth of that promise that governs, it is not what he once put into a constituent company but what value he is contributing to the merger that is to be made good" (334 U. S. 199). (Italics ours.) The analogy to the instant case is borne out by this Court's own recognition in the *Schwabacher* case of "the very similar purposes" of the Holding Company and the Interstate Commerce Acts and its reaffirmation of the *Otis* "rule of full priority" as embodied in the fair and equitable standard. Moreover, the doctrine of "current worth" is applicable, regardless of the method of system adjustment in view of the admonition in the *Otis* case that such incidents of simplification should not affect rights. It is immaterial that the Interstate Commerce Act expressly limits the types of recapitalization while the Holding Company Act does not, since in both situations, valuation is to be determined on a going concern basis.[171]

In short, present investment value or current worth is not a substitute for equitable equivalent, but its measure. It is not "one of a series of factors" to be used in the valuation, but is the end result, the final product of the valuation process based on the bundle of rights surrendered and reflecting earning power, market history, dividend record, asset priorities, and other relevant factors,[172] all of which the Commission has taken into account in arriving at equitable equivalents. Such criteria provide a proper basis of valuation. *Consolidated Rock Products Co. v. Du Bois*, 312 U. S. 510, 526 (1941).

---

171 The similarity in the two statutes in another related aspect of the reorganization process is noted in *In the Matter of North American Light & Power Co.*, not officially reported (C. C. A. 3, 1948), printed opinion, p. 15.

172 Dr. Badger took all these elements into consideration in arriving at his values (R. 2097a).

6. The court below erred in distinguishing the *Otis* case on the basis of the continuance of the enterprise.

In addition, the court below erroneously criticized the Commission for its alleged disregard of what it conceives to be a substantial difference between the instant case and the *United Light and Power* reorganizations, namely, the termination of the holding company enterprise both for the preferreds and the common in the former and the continuance of the holding company enterprise in the latter, there being merely a shift of "the security holder participation in the enterprise * * * from the top holding company * * * to a subsidiary holding company". Thus the court below approves the district court's valuation in the instant case "of the securities '*ex* the Act', considering the holding company enterprise to be at an end as it is in fact" (R. 36). This attempted distinction is not valid and in fact represents a lateral, rather than a frontal attack upon the *Otis* principle that the charter liquidation provisions are controlling regardless of the type of liquidation involved. Granting *arguendo* that the present Engineers' plan is a "real liquidation" (as contrasted with a "nominal liquidation") then the claimed distinction disregards the admonition of this Court in the *Otis* case: "*The reason* [for its decision] *does not lie in the fact that the business of Power continues in another form.* That is true of bankruptcy and equity reorganization". (Italics ours.) In fact, the Commission viewed the dissolution in the *United Light & Power* (*Otis*) case as an actual dissolution and not merely the "peeling" off of a company in a holding company system.[173] In any

[173] In the reorganization of Puget Sound Power & Light Co., a former subsidiary of Engineers', the Commission referred to its views in the *United Light & Power* decision (13 S. E. C. 1, H. C. A. R. No. 4215) (1942) as follows: "These views were expressed in the course of our discussion of a proposal which contemplated an *actual liquidation*" [13 S. E. C. 226, 246 (1943)]. (Italics ours.)

event, a "real liquidation" of the enterprise has not occurred in the instant case, for the business of Engineers' continues in the operating companies which are now owned directly by the common stockholders instead of indirectly, since the elimination of Engineers (R. 1397a). In *American Power & Light Company* v. *S. E. C.*, 329 U. S. 90, 117 (1946), this Court has pointed out that the dissolution of a holding company means little more than the receipt of securities of the operating company in lieu of their present shares in the holding company.[174] Furthermore, the reasoning of the court below leads to the absurd result, that if Engineers, even though allegedly economically useless, had merged with one of its subsidiaries as originally contemplated, the holding company enterprise would have continued. Such a flimsy distinction[175] must be rejected as unsound.

Thus, the view of the court below when carried to its logical conclusion[176] results in improper emphasis

---

[174] The Company itself indicated to its stockholders that the results of the plan would be to give them direct ownership of the subsidiaries. See *North American Co.* v. *S. E. C.*, 327 U. S. 686 709 (1946).

Also see *Northern States Power Co.* (Del.), H. C. A. R. No. 5745, p. 21 (1945), where the Commission appropriately said: "While the plan contemplates a formal dissolution of Delaware as a separate corporate entity, the *actual business enterprise* represented by the securities of Delaware, is being continued." (Italics ours.)

[175] Cf. *Community Gas & Power Co.*, 168 F. (2d) 740, 743 (C. C. A. 3, 1948). This same Circuit Court apparently distinguishes between a going business "destined to continue" and "an enterprise which is terminating". The distinction is lacking in merit where the termination of the enterprise is compelled by the operation of the Act. In the instant case, Engineers' counsel argued that the Company would have continued into the future for many years, but for the Act (R. 61a n. 42).

[176] It would seem from the opinion of the court below that the *Otis* rule would be applied to the first of these two holding companies but not to the liquidation of the second, since no holding

[Footnote continued on following page.]

upon the procedural sequence of simplification, even though, as this Court has said in the *Otis* case, values should not "be made to depend on whether the Commission, in enforcing compliance with the Act, resorts to dissolution of a particular company in the holding company system, or resorts instead to the device of merger or consolidation". Procedural decisions, such as the selection of a particular sequence in or method of system adjustment (especially since in the case at bar the choice has been made by the common stock management of Engineers) (R. 718a, 719a), should not affect rights.[177] So said this Court as follows in the *Otis* case:

> "* * * Satisfaction of the great-grandfather clause might have been obtained in this or other holding company systems by an order for merger, consolidation or recapitalization between top holding companies or between associate companies

---

[Footnote continued from preceding page.]

company system remains after the liquidation of the second. Such result could hardly be justified as fair and equitable when each holding company has separate groups of stockholders whose interests are accorded different treatment although both companies were dissolved because of the Act. The sequence of liquidation of a particular company in a holding company system should not affect rights.

[177] Under section 11(e) of the Act, the choice of an appropriate method of compliance from available alternatives is left by the Commission to the company or as in the instant case to the common stock management of Engineers. *Commonwealth & Southern Corp.* v. *S. E. C.*, 134 F. (2d) 747, 751 (C. C. A. 3, 1943); *In the Matter of North American Light and Power Co.*, not officially reported, printed opinion, p. 13 (C. C. A. 3, 1948); *The United Corp.*, H. C. A. R. 8396 (1948). The dominant role of management in the presentation of a plan is clearly recognized in the *North American Light and Power* case, *supra*, where the Third Circuit Court said: "* * * Since the *modus operandi* of Section 11(e) provides for a unilateral plan by management, it would be in naive disregard of human instinct to assume that such plans would, in every instance, be free of the influence of dominating interests." (Printed Opinion, p. 13.)

in the lower tiers of the corporate hierarchy. Such procedure would avoid the liquidation of Power. * * * *The selection by the Commission of one method of system adjustment to accomplish simplification rather than another is an incident which ought not to affect rights*" (323 U. S. 631). (Italics ours.)

Likewise any inference from the views of the court below that the applicability of the *Otis* case depends upon the continuation of the underlying holding company system (which was the fact in the *United Light & Power* reorganization) does not stand analysis. The *Otis* rule has in fact been applied in simplification proceedings under section 11, regardless of whether or not there has been a continuing holding company system.[178] Moreover, the emphasis upon the continuation of the holding company system places a premium upon the sequence of simplification and makes stockholders' rights contingent upon the procedure of system adjustment. But such procedural decisions should not affect rights any more than the selection of a particular method of system adjustment, as this Court cautioned in the *Otis* case.

---

[178] For example, in *Puget Sound Power & Light Company*, 13 S. E. C. 226 (1943), Puget Sound had no holding company system beneath it when Engineers filed the plan for it. Also in *Southern Colorado Power Co.*, H. C. A. R. No. 4501 (1943), enforced in Civil Action No. 670 (D. Colo., 1944), aff'd *sub nom.*, *Disman* v. *S. E. C.*, 147 F. (2d) 679 (C. C. A. 10, 1945), cert. den. 325 U. S. 863 (1945), the holding company interest was wiped out so that Southern Colorado was no longer in a holding company system.

C. The Commission Applied the Proper Standards and Techniques in the Valuation Process. Its Findings Should Have Been Sustained Since Based Upon Substantial Evidence and Possessing Rational and Statutory Foundation, and in Any Event They Were Not Capricious.

In determining the participation of the preferred, the Commission, as urged above, has applied the correct standards and techniques in the process of valuation. Under the applicable principles, such participation is measured by the present worth of the security, based upon the bundle of rights surrendered, and valued as though in a continuing enterprise, with primary emphasis upon the current rights to earnings and assets. *Otis & Co.* v. *S. E. C.*, 323 U. S. 624 (1945). That process requires "expert analysis and the weighting of a complex array of factors, in which the informed judgment of the Commission counts heavily". *Lahti* v. *New England Power Ass'n.*, 160 F. (2d) 845 (C. C. A. 1, 1947). The appraisal of these factors calls for the exercise of an expert economic judgment as to "current worth" of the contract rights. *Schwabacher* v. *U. S.*, 334 U. S. 182 (1948). The Commission's determination has "substantial roots" in the law and in the facts, *Cardillo* v. *Liberty Mutual Ins. Co.*, 330 U. S. 469, 478 (1947), and is not capricious (as the two courts below apparently believed).

Viewing the charter liquidation provision as not "conclusive" in determining the equitable (economic) equivalent of the rights surrendered, the Commission considered "all provisions of the charter applicable to the preferred, such as dividend rate and call price as well as the liquidation preferences" and carefully analyzed "the financial condition of the company with

particular regard to the asset and earning coverage of the preferred" (R. 62a). It appeared that the preferred stock of Engineers represented 17.5% of corporate capitalization and surplus, is junior to 66.2% and senior to 16.3% (R. 64a). For the period 1940 to 1945, the average coverage of fixed charges and dividends was 1.4 times, and for the same period, preferred dividend requirements on a corporate basis had been earned an average of 1.5 times (R. 64a). Reliance was placed on the testimony of Badger, an expert witness, as well as Barnes, President of Engineers and other Company officers. Badger prepared an extensive report analyzing the values of the three series of preferred stock (R. 2056a *et seq.*). He examined the history of Engineers, the records in respect to the Company's property and its business, the management, the asset position, the earnings and dividend record and other pertinent data relating to the going concern value of Engineers preferred stock. He ascertained that during the years 1940 through 1945 there was a continuous improvement in the Times Charges and Preferred Dividends earned, with the exception of 1945. In 1940, these charges were earned 1.22 times and increased gradually to 1.54 times in 1944. In 1945, charges were earned 1.47 times. If effect is given to the reduction in Federal Income and Excess Profits Taxes in that year, resulting from nonrecurring deductions, the figure becomes 2.12 times (R. 2099a). Preferred dividend requirements for Engineers alone, based on balances of earnings available for Engineers, were covered between 1.81 times and 3.2 times for the period 1940 through 1945. If extraordinary deductions of income taxes for 1945 is given effect the dividends would have been earned 4.75 times (R. 2101a). Based on the Company's own estimate of 1946 earnings (R. 1826a), Badger calculated that

over-all charges in 1946 would be earned 1.67 times and Engineers' preferred dividend requirements alone would be earned 3.39 times (R. 2102a). The estimate of 1946 earnings thus indicates a continuation of the improvement in coverages shown for the 1940-45 period. In that connection Badger also expressed the view that earning trends of Engineers' subsidiaries should not run counter to the strong growth trend of the public utility industry as there were no peculiar economic characteristics in respect to the territories served by these companies, and that Engineers should continue in future years to register progress along with other units in the industry (R. 2103a). After the analysis of earnings of Engineers he compared, on the basis of investment characteristics, Engineers preferreds with preferred stocks of five public utility holding companies which he believed to be similar to Engineers for the period 1940 to 1945 in order to ascertain their relative position and yield (R. 2108a). On the basis of a comparison of yields of the securities studied, he concluded that the $5., $5.50, and $6.00 had a respective average value of $107.49, $118.31 and $129.07 (R. 2112a). Badger also prepared a study of the preferred stock of ten operating and holding companies selected for similarity of their earnings to those of Engineers (R. 2113a). He found an average yield for the ten stocks selected of 4.5 and by an application of this yield to the $5.00, $5.50 and $6.00 preferreds, obtained their corresponding values of $111.11, $122.22 and $133.33 (R. 2114a). He concluded that a proper yield for Engineers preferreds would be 4.6%, resulting in respective fair investment values per share for the three series of $108.70, $119.57 and $130.33, absent the call features. In view of the redemption feature and a premium for a period

until call, it was his opinion that the three series had fair investment values of $106.25, $111.38 and $111.50 respectively (R. 66a-67a, R. 2118a). It also appears from the opinion of the Commission that "No additional expert testimony on value was introduced into the record and no serious challenge was made in the proceedings to Badger's conclusion that the fair investment value of the preferred on a going concern basis is in excess of the call price" (R. 67a). In fact, this view was substantiated by other testimony as that, for instance, by Barnes, President of Engineers (R. 522a). In the opinion of both witnesses the call price of the securities established a ceiling or "stopper" on their value.

The Commission found that the preferred has an investment value at least equal to the respective call prices and concluded, upon "full consideration of the record" before it, that "the fair and equitable standard would require the payment of an amount equal to the call prices of the securities, plus accrued dividends" (R. 68a). The Commission also found that "the retirement of the preferred stock will be of immediate benefit to the common stockholders" (R. 72a) and that "the plan is fair to the common stockholders" (R. 135a). The Commission considered comparatively unimportant such factors as issue prices and market history, alleged losses from divestments, etc. The appraisal by the Commission, which involves a discretionary weighing of a variety of factors, is based upon substantial evidence and has a rational basis in fact and is not predicated upon any clear cut error of law. In any event, its determination is not arbitrary or capricious but reflects the exercise of an informed expert economic judgment based upon the record.

This determination of the Commission should be considered as of the date of its approval, particularly as the District Court accepted Badger's values and "in the absence of a showing of changed circumstances", assumed "that they are applicable at the present time" (R. 2110a), although not considering them "controlling as the plan did not propose to give these amounts" to the preferred stockholders (R. 290a). In any event, the Commission's decision should be reviewed on the basis of the administrative record as of the date when the rights of the parties were fixed by virtue of the *actual* consummation of the plan pursuant to the District Court decree,[179] after the denial of the Streeter petitions for a stay by the two courts below and by a Justice of this Court. In that connection it should be noted that the dividend rights of the preferreds were terminated at that time and that the consummation of the plan led to the mooting of the appeals then pending before this Court with respect to the 11(b) divestment orders (R. 113, n. 1). In any event, no substantial or radical change has occurred which would require a reopening of the administrative record. Under such circumstances, the Commission's action should be tested on the basis of the administrative record which is the same both at the time of the Commission's and the District Court's action. Consequently, it is urged that the Commission's determination should have been sustained since it has a rational and statutory foundation and the Commission has not plainly abused its discretion, even though the District Court believed

[179] Cf. *Public Service Commission of N. Y. v. S. E. C.*, 166 F. (2d) 784, 788 (C. C. A. 2, 1948).

that greater weight should be given to certain elements all of which had been considered by the Commission. The court below therefore should have held that the decision of the District Court was clearly erroneous both in fact and in law.

IV. The Court Below Erred in Disregarding an Improper Change in the Plan and Approving Incorrect Procedure Used Therefor, Both Sanctioned by the District Court.

A. The Dividend Rights of the Preferred Stockholders Should Not Have Been Terminated Under a Fair and Equitable Plan Prior to Receipt of the Full Amount of Current Value of Their Stock as Limited by the Call Prices.

As heretofore related, the plan which was approved by the Commission and submitted to the District Court for enforcement provided for the retirement of the preferred stock at amounts equal to the respective call prices (R. 134a). Although the undisputed investment values of the preferred shares exceeded their respective voluntary redemption prices, the Commission treated the call prices as setting "a ceiling" and restricted the participation of the preferred stockholders to amounts at least equal to their respective call prices. In accordance with the redemption provisions of the charter (R. 1413a), under the provisions of the plan the dividend rights of the preferred stockholders could be terminated only upon payment of the full amounts to which they were entitled (R. 108a). We agreed with the Commission that this plan was fair and equitable and urged its enforcement (R. 158a).

The District Court, however, over our objections (R. 361a) changed the plan by its order so that the

dividend rights of the preferred stockholders were terminated upon the receipt of $100 per share, together with the creation of an escrow to cover the excess between $100 and the respective call prices plus an amount of prospective interest (R. 320a, 321a). Although holding that "the escrow provisions of the plan are proper" (R. 40), without discussion of the objections, the court below directed the District Court to enter an order disapproving the plan as the District Court had found the plan as submitted by the Commission unfair and inequitable. The court below also pointed out that in view of the denial of a stay of consummation, "the escrow agreement accordingly delimits the area in which the plan to be approved by the Commission and district court must fall" (R. 40).

Assuming but not conceding that the District Court had the power to rewrite the plan in the first instance,[180] it is our contention that the plan as changed is unfair to the preferred stockholders, particularly in the light of the Circuit Court's direction for the disapproval of the plan.

Although the *Otis* case held that liquidation preferences in the charter are "inoperative" under section 11 it did not hold that the redemption provisions are likewise inoperative. In fact, the Commission *applied* the redemption provisions when it restricted the preferred's claim to their respective call prices in spite of the undisputed testimony that the investment values were in excess of such prices.

The Commission stated the theory as follows:

"* * * We have indicated in previous opin-

[180] The Commission maintains that its Order of Amendment did not constitute an amendment to the plan (R. 389a).

ions that the call price will ordinarily set a ceiling on the value of a security, for it provides a means, apart from the Act, whereby the security can be retired at a maximum price." (R. 67a).

The District Court also applied the redemption provisions of the charter by permitting the consummation[181] of the plan and the creation of an escrow of the difference between $100 per share and the respective call prices plus an amount of prospective interest.[182] This the court below sustained, in spite of its direction for the disapproval of the plan. The effect of what the Commission and the two courts below did was to place a ceiling on the preferred's claim, which ceiling, absent the redemption provisions, would be nonexistent. *Continental Insurance Co. v. U. S.*, 259 U. S. 156 (1922). At the same time the two courts below permitted the termination of the preferred's dividends upon their receipt of $100 although under the redemption provisions the common stockholders did not have that right except upon the payment of the full call prices. Thus the common received the full benefits for which the charter required them to pay a premium, but without payment of the premium. On the other hand, the preferred suffered all the detriments which a call of the stock would have entailed but did not receive the benefits, *i. e.*, receipt of the premium.

The premature termination of the preferred's dividend rights under the circumstances herein is contrary to congressional intent. S. Rep. No. 621, 74th Cong.,

---

[181] The plan has since been consummated except for the payment of the amounts in excess of $100 per share (R. 40).

[182] The escrow also included an allowance for expenses and for interest on the amount withheld from the preferred.

1st Sess., p. 33. In the course of its analysis of sections 11(d), (e) and (f), the Senate Report states: "If a company is *solvent*, the court should continue the payment of interest and in appropriate cases *dividends until a prudent reorganization is effected.*" (Italics ours.) An analogous principle has been applied to consolidations, reorganizations or liquidations under State law.[183]

It is no answer to say that the receipt of $100 plus the escrow was sufficient to protect the preferred. The weighted average dividend rate on all series of preferred was 5.37%. Dr. Badger testified that under present and reasonably foreseeable future conditions a return of only 4.6% could be obtained on a security equivalent in quality to Engineers' preferred. Thus the preferred as a class loses .77% on $39,245,500, the aggregate stated value of their stock, or $302,190 per year.[184]

Furthermore, the Escrow Agreement is unfair because it required the preferred stockholders to turn in their stock certificates, whereas the common stockholders retained theirs. Thus, the preferred stockholders have no indicia of ownership. Moreover, we found no other case where similar action was taken. In cases before and after the present one, the Com-

---

[183] *Lonsdale Securities Corp.* v. *International Mercantile Marine Co.*, 101 N. J. Eq. 554; *Colgate* v. *U. S. Leather Co.*, 73 N. J. Eq. 72, rev'd on other grounds, 75 N. J. Eq. 229; *Wilson* v. *Laconia Car Co.*, 275 Mass. 435; *Garritt* v. *Edge Moor Iron Co.*, 22 Del. Ch. 142, aff'd *sub nom. Pennsylvania Co.* v. *Cox*, 23 Del. Ch. 193.

[184] Since the escrow makes provision only for interest on the excess over $100 per share, it is not adequate to protect the rights of the preferred stockholders in the event it is ultimately determined that they are entitled to amounts equal to the call prices.

mission and the courts have approved the issuance of certificates to the preferred stockholders.[185]

At all events, these elements present equities for the preferred which this Court may wish to weigh in the light of the circumstances of this case.

B. The Court Below Erroneously Sanctioned a Departure From the Statute and the Constitution in Permitting an Amendment or Modification of the Plan to Provide an Escrow Without Notice and an Opportunity to Be Heard.

As shown in our Statement the Commission, by *ex parte* action, approved the escrow arrangement (R. 170a) after the hearings before it had been closed. Objection was made (R. 181a) to the Commission's motion to amend its application to include its "Order of Amendment", because we had not been afforded an opportunity to be heard as to the adequacy of the Escrow Agreement[186] which had been submitted to the Commission. At the hearing on February 17, 1947 this version of the agreement was filed with the District Court, but after the hearing was closed a revised agreement[187] was sent to the District Court by counsel for Engineers.

On May 26, 1947, counsel for the Commission presented a proposed form of order embodying this revised Agreement (R. 422a). We objected (R. 372a)

---

[185] See *Electric Bond & Share Co.*, 73 F. Supp. 426 (S. D. N. Y., 1946); *Eastern Minnesota Power Corp.*, H. C. A. R. No. 7441 (1947), plan enforced (D. Minn., 1947), C. C. H. Fed. Sec. Serv., Par. 90,399-1; *New England Public Service Co.*, H. C. A. R. No. 7511 (1947), plan enforced, 73 F. Supp. 452 (D. Me., 1947); *Pennsylvania Edison Co.*, H. C. A. R. No. 6723 (1946).

[186] R. 402a. This version was drafted on the theory that it would be utilized in case of an appeal by the common stockholders.

[187] R. 362a. This revised form was drafted to be used in the event of an appeal by either preferred or common stockholders.

again because we had not been afforded an opportunity to be heard as to its adequacy.

On May 29, 1947 the District Court over our objection entered the order from which an appeal was taken (R. 391a) and adopted the Escrow Agreement submitted by counsel for the Commission. An appeal was immediately filed and we moved (R. 333a) for a stay of consummation because of the amendment to provide an escrow and because of its inadequacy, but were denied relief (R. 335a). Likewise petitions for stay which were filed in turn with the court below and a Justice of this Court were denied. Implicit recognition of the merit of our request for a stay is found in the opinion below where the Circuit Court said: "The action which the Commission may take will, of course, be limited by the fact that with its approval, evidenced by its opposition to the appellant Streeter's motion to stay which this court denied, the plan has been carried into effect, with the exception of the payment of the premiums which the district court disapproved" (R. 39-40).

There was no precedent or justification for this irregular procedure. The Act requires an opportunity for hearing both before the Commissions and the Court. *American Power & Light Co.* v. *S. E. C.*, 329 U. S. 90 (1946). Such opportunity to be heard is commanded by the procedural due process requirements of the Fifth Amendment to the Constitution: *Railroad Com. of Cal.* v. *Pac. G. & E. Co.*, 302 U. S. 388, 393 (1938); *Philadelphia Co.* v. *S. E. C.*, not officially reported, C. C. H. Fed. Sec. Serv., par. 90,426 (C. A., D. C., 1948). Neither the Commission nor the District Court acted in such arbitrary fashion in other instances. For example, in *American Water Works and Electric Company*, H. C. A. R. No. 7208 (1947),

the Commission approved a plan which included an escrow arrangement that had been proposed as a part of the plan and the Commission specifically reserved jurisdiction over the terms of any escrow agreement. Thus, all parties would be afforded an opportunity to be heard.

Moreover, in *Pennsylvania Edison Co.*, H. C. A. R. No. 6723 (1946), which was cited to the District Court by Commission counsel as a precedent for an escrow it appears that the Commission afforded the preferred stockholders an opportunity to be heard. Similarly, in *Eastern Minnesota Power Co.*, H. C. A. R. No. 7441 (1947), such opportunity was given before submission to the District Court for enforcement. A final illustration is the recent decision in *Federal Light & Traction Co.*, H. C. A. R. No. 7701 (1947), where as in all other instances, except the present case, the preferred stockholders received an opportunity to be heard on the escrow arrangement and were given transferable indicia of ownership pending ultimate disposition of their claims.

Regardless of the outcome, the preferred stockholders had a valuable right to be heard as to the terms of the escrow. Especially is this true, when, as shown above, the plan as modified by the District Court to termina e the preferred's dividend rights is not fair and equitable to the preferred stockholders. As stated in the *Phildalephia Co.* v. *S. E. C.*, *supra*, "Denial of a procedural right guaranteed by the Constitution * * * is never 'harmless error'."

V. Assuming *Arguendo* the Unfairness and Inequity of the Plan, the Court Below Properly Vacated the Decree of the District Court and Directed the Remand of the Proceedings to the Commission.

We have maintained that the Commission correctly determined that the preferreds have a fair investment value at least equal to the call prices and that fairness and equity require the payment to the preferreds of that amount. If, however, this Court concludes that the Commission erred in its valuation, then and only then the question of remand comes to the fore.

Assuming but not conceding the correctness of the District Court's determination "that because of the provision for the payment of premium,[188] the plan does not meet the requirements of fairness and equity" (R. 292a), nevertheless the District Court had no power to rewrite or amend the plan so as to reduce, on the basis of its own estimates and valuation, the *quantum* of participation accorded to the preferred stockholders under the plan submitted by the Commission, and then to approve and enforce the plan as so amended by it. In other words, since the District Court had, in effect, disapproved the plan submitted as unfair and inequitable,[189] it had no choice but to reject the plan, deny enforcement and remand to the Commission for appropriate action. Its failure so to do constituted a reversible error, for which

---

188 The reference of the District Judge (Leahy, *J.*) to "premium" is an inaccurate characterization, as the plan does not call for the payment of a "premium" as such, but an amount equivalent to the redemption price. Such reference reflects a "nominal" approach which begs the question.

189 In its opinion on rehearing, the court below indicated that the "district Court found the plan to be unfair and inequitable and rejected it." (R. 140).

the court below correctly vacated the District Court's decree and directed the remand to the Commission for its action (*i. e.*, valuation).[190] Such was the determination of the court below when it said:

> "Though a district court of the United States sitting pursuant to the provisions of Section 11(e) may reject a plan, if cannot value the securities, find equitable equivalents therefor and substitute its own estimates for those of the Commission requiring the plan as amended by it to be carried out. *To put the matter briefly, a district court may reject but not amend the plan. The court below, therefore, erred in one particular. It entered an order approving and enforcing the plan as amended by it. It was without power to do this.* The provisions of Section 11(e) make it clear that the Commission in the first instance must approve the plan and find it to be fair and equitable. If, as here, the district court disagrees with the conclusion of the Commission that the plan is fair and equitable, it must refuse to approve the plan and 'remand' the record to the Commission for further and appropriate action by it" (R. 39). (Italics ours.)

The principle enunciated by the court below that a section 11(e) court may disapprove and reject a plan, but not amend and then approve it has been uniformly applied by the courts.[191] A district court

---

[190] In referring to the action to be taken by the Commission, the court below said:

> "* * * The problem is and will remain, until its disposition by the Commission, one of valuation of the securities of Engineers, viz., the preferreds and the common" (R. 40).

[191] *In re Laclede Gas Light Co.*, 57 F. Supp. 997 (E. D. Mo., 1944), aff'd *sub nom. Massachusetts Mutual Life Ins. Co. v. S. E. C.*, 151 F. (2d) 424 (C. C. A. 8, 1945), cert. den. 327 U. S.

[Footnote continued on following page.]

cannot (as the instant District Court attempted) approve a plan in part and disapprove it in part.[192] Furthermore, it cannot rewrite the plan and then approve.[193] Accordingly, the District Court in the case at bar did not have the power to amend the plan so as to reduce the compensation proposed to be paid to the preferred stockholders any more than it could change the method of payment from cash to kind, or modify any other part of the plan.[194] Nor was it free to change any of the provisions as to the

795; *In re Kings County Lighting Co.*, 72 F. Supp. 767 (S. D. N. Y., 1947), aff'd *sub nom. Public Service Commission of N. Y.* v. *S. E. C.*, 166 F. (2d) 784 (C. C. A. 2, 1948); *In re Electric Bond & Share Co.*, 73 F. Supp. 426 (S. D. N. Y., 1946); *In re Eastern Minn. Power Corp.*, C. C. H. Fed. Sec. Serv., Para. 90, 399-1 (D. Minn., 1947); *Matter of Northern States Power Company*, unreported, decided Aug. 30, 1948 (D. 4th), D. Minn., Civil Action No. 2673.

192 *In re Laclede Gas Light Co., supra.*

193 Thus in *In re Electric Bond & Share Co., supra*, it was held:

> "* * * The Court cannot *amend* or *modify* the plan and then enter an order of approval since §11 (e) provides that the plan must in the first instance be approved by the Commission. The function of the Court is to approve and enforce the plan of reorganization submitted to it, if it finds such plan fair and equitable and appropriate to effectuate the purposes of the Act. * * *" (73 F. Supp. 443).

194 That such amendment is not permitted is evident from the following statement by the District Court in the *Kings County* case, *supra*:

> "* * * I agree thoroughly with the position taken by counsel for the State Commission that, under my narrow statutory jurisdiction I could not *amend* a proposed plan. For example, I could not, in the case at bar approve the plan on condition that Long Island receive, not 7½% of its present common stock holding, but 3¾%, this representing a compromise between the views expressed by the two commissions. Any such disposition would be wholly without jurisdiction" (72 F. Supp. 774).

stockholders' rights under the plan.[195] Unquestionably, any change in the *quantum* of participation to be accorded the stockholders necessarily alters substantial rights.

Likewise, this principle limiting the district court's power to amend a plan has been applied to analogous situations arising under section 77 of the Bankruptcy Act. Thus in section 77 proceedings, where the district court's approval is required in all cases, that court can only pass upon such plans as are certified to it[196] and has no power to amend the plan,[197] but is limited to approval or disapproval, in which latter event it must either dismiss the proceedings or refer the plan to the Interstate Commerce Commission.[198] Furthermore, even the "interest of speed" or expedi-

[195] In the *Public Service Commission* case, *supra*, which affirmed the *Kings County* case, *supra*, the Court of Appeals for the Second Circuit apparently imposed a stricter limitation upon the district judge's power of approval, stating:

> "We will take up the last objection first. We may assume for argument that the judge's power was limited to an approval or a rejection of the plan, as it stood. He held that, nevertheless, the condition that the plan should be submitted to the PSC for its approval was not an 'essential' part of the plan, and that for this reason he was free to disregard it. *In this he was right, not indeed because he would have been free to change any of those provisions for the issue of securities or the alteration of shareholders' rights which made up the plan, which he thought not to be 'essential';* but because, as we shall show, §11(e) did not require the consent of the PSC, and because submission to that commission was not part of the plan at all; but, as it itself declared, only one of the 'steps to be taken to make the amended plan effective' " (166 F. (2d) 786). (Italics ours.)

[196] *In re New York, N. H. & H. R. Co.*, 27 F. Supp. 392 (D. Conn., 1938), aff'd 104 F. (2d) 1018 (C. C. A. 2, 1939).

[197] *In re New York, N. H. & H. R. Co.*, 54 F. Supp. 595 (D. Conn., 1943), aff'd in part and rev'd in part on other grounds 147 F. (2d) 40 (C. C. A. 2, 1945), cert. den. 325 U. S. 884 (1945).

[198] *In re Erie R. Co.*, 37 F. Supp. 237 (D. Ohio, 1940), aff'd 133 F. (2d) 730 (C. C. A. 6, 1943), cert. den. 320 U. S. 748 (1943).

tion does not justify the judicial amendment or modification of a plan submitted by the Commission.[199]

In addition, the Commission's so-called amendatory order of February 11, 1947, and the District Court's adoption of the escrow resulted in the restoration of the splitting features of the original plan,[200] after they had been withdrawn, by separating part of the plan it disapproved and so constituted substantive changes of valuable rights[201] without authority in law so to do, as indicated above at p. 155. In any event the Commission's amendatory order and its consent to the escrow do not satisfy the statutory requirement of approval by both the Commission and the District Court. Nor can this requirement be waived by either the Commission or the District Court. The

---

[199] *In re Alton R. Co.*, 159 F. (2d) 200 (C. C. A. 7, 1947); *In re Chicago, R. I. & P. Ry. Co.*, 162 F. (2d) 257 (C. C. A. 7, 1947).

Thus, in the *Alton* case, *supra*, where the District Court in the interest of speed rewrote certain provisions of the plan after its approval by the Interstate Commerce Commission, and the security holders, the Court of Appeals reversed the District Court order, rejecting the argument as to the District Court's authority to rewrite in connection with its supervision of the execution of the plan.

The *Alton* case, we believe, cannot be distinguished from the instant case, in which the plan as approved by the Commission and submitted to the court contained none of the provisions concerning the treatment of the preferred stockholders which were incorporated by Paragraph 6 of the court's order (R. 321a). Nor does the District Court's desire for speed in the instant case justify its attempt to change the plan any more than in the *Alton* case.

[200] Although counsel for Engineers had made a motion to separate Parts I and II of the plan and for an order permitting the consummation of Part I, the Commission found that it could not grant the motion to split the plan, but stated that it would approve an amendment to provide for escrow in the event of further litigation as to the rights of the preferred stockholders (R. 75a).

[201] The Commission does not view the amendatory order as an amendment to the plan (R. 169a, 389a).

court below expressed itself on this point in the following language:

> "* * * we are of the opinion that *neither the Commission, nor the District Court, nor this court possesses the power to waive the provision of Section 11(e), providing for approval of a plan of reorganization* as fair and equitable by the Commission and by the District Court. *Moreover, we cannot treat the Commission's amendatory order of February 11, 1947 or its approval of the escrow agreement as a rejection of the role imposed on the Commission by Congress.* The correctness of our position in this regard is demonstrated by the fact that the amendatory order of the Commission provides that the escrow agent may make payment to the preferred stockholders only when the order of the District Court has become final and not subject to appeal. What the Commission intended to effect by the order was nothing more than the establishment of a means for expediting the execution of the plan of reorganization when the approval required by the statute had been attained" (R. 139). (Italics ours.)

As the District Court disapproved the plan as unfair and inequitable and the requisite concurrent approval is lacking, the District Court was required to remand the cause to the Commission for appropriate action. This procedure which the court below correctly ordered has been uniformly followed. *S. E. C.* v. *Chenery Corp.*, 318 U. S. 80 (1943); *Schwabacher* v. *U. S.*, 334 U. S. 182 (1948). Both of these Supreme Court cases involved the treatment to be accorded stockholders under a statutory reorganization plan. Thus in the first *Chenery* case, *supra*, where an order of the Commission approving a reor-

ganization plan under the Act, was reversed as based upon inapplicable judicial precedents, this Court directed the remand to the Commission for appropriate action in accordance with its opinion. As stated in the *Chenery* case, *supra*:

> "* * * But it is also familiar appellate procedure that where the correctness of the lower court's decision depends upon a determination of fact which only a jury could make but which has not been made, the appellate court cannot take the place of the jury. Like considerations govern review of administrative orders. *If an order is valid only as a determination of policy or judgment which the agency alone is authorized to make and which it has not made, a judicial judgment cannot be made to do service for an administrative judgment.* For purposes of affirming no less than reversing its orders, an appellate court cannot intrude upon the domain which Congress has exclusively entrusted to an administrative agency" (318 U. S. 88). (Italics ours.)

Similarly, in an analogous situation in the *Schwabacher* case, *supra*, this Court again directed a remand to the Interstate Commerce Commission for reconsideration as that Commission may have failed to consider the effect of certain rights of stockholders upon the "intrinsic or market values". In view of the foregoing authorities, the decision of the court below correctly requires the remand to the Commission for valuation in accordance with its opinion, where the plan has been disapproved.[202]

---

[202] As noted above, the question of remand has been argued on the assumption that the disapproval of the plan was correct, but that disapproval is of course challenged by the Streeter group of preferred stockholders.

Conclusion.

By reason of the foregoing, the judgment of the court below should be reversed and, by appropriate direction to the District Court, the plan approved by the Commission should be enforced insofar as it provided for the payment to the preferred stockholders of the amounts equal to the respective redemption prices of their stock (less $100 per share already received) plus adequate recompense for the delay in payment. In the event, and only in the event, that this Court finds that the Commission erred, as a matter of law, in the valuation process, this proceeding should be remanded to the Commission for its further action in conformity with the instructions of this Court.

Respectfully submitted,

LAWRENCE R. CONDON,
Attorney for Petitioners, Thomas W. Streeter, et al., preferred stockholders of Engineers Public Service Co.,
165 Broadway,
New York 6, N. Y.

LAWRENCE R. CONDON,
MILTON MAURER,
Of Counsel.

APPENDIX A

Section 11(d), (e) and (f) of the Public Utility Holding Company Act of 1935 [15 U. S. C. 79k(d) (e) and (f)] provides as follows:

"(d) The Commission may apply to a court, in accordance with the provisions of subsection (f) of section 79r of this chapter, to enforce compliance with any order issued under subsection (b). In any such proceeding, the court as a court of equity may, to such extent as it deems necessary for purposes of enforcement of such order, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction, in any such proceeding, to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer under the direction of the court the assets so possessed. In any proceeding for the enforcement of an order of the Commission issued under subsection (b) the trustee with the approval of the court shall have power to dispose of any or all of such assets and, subject to such terms and conditions as the court may prescribe, may make such disposition in accordance with a fair and equitable reorganization plan which shall have been approved by the Commission after opportunity for hearing. Such reorganization plan may be proposed in the first instance by the Commission, or, subject to such rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization.

"(e) In accordance with such rules and regulations or order as the Commission may deem neces-

sary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan thereto-

fore approved by the court and the Commission, the assets so possessed.

"(f) In any proceeding in a court of the United States, whether under this section or otherwise, in which a receiver or trustee is appointed for any registered holding company, or any subsidiary company thereof, the court may constitute and appoint the Commission as sole trustee or receiver, subject to the directions and orders of the court, whether or not a trustee or receiver shall theretofore have been appointed, and in any such proceeding the court shall not appoint any person other than the Commission as trustee or receiver without notifying the Commission and giving it an opportunity to be heard before making any such appointment. In no proceeding under this section or otherwise shall the Commission be appointed as trustee or receiver without its express consent. In any such proceeding a reorganization plan for a registered holding company or any subsidiary company thereof shall not become effective unless such plan shall have been approved by the Commission after opportunity for hearing prior to its submission to the court. Notwithstanding any other provision of law, any such reorganization plan may be proposed in the first instance by the Commission or, subject to such rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization. The Commission may, by such rules and regulations or order as it may deem necessary or appropriate in the public interest or for the protection of in-

vestors or consumers, require that any or all fees, expenses, and remuneration, to whomsoever paid, in connection with any reorganization, dissolution, liquidation, bankruptcy, or receivership of a registered holding company or subsidiary company thereof, in any such proceeding, shall be subject to approval by the Commission."

Section 18(f) of said Act [15 U. S. C. §79r(f)] provides as follows:

"(f) Whenever it shall appear to the Commission that any person is engaged or about to engage in any acts or practices which constitute or will constitute a violation of the provisions of this chapter, or of any rule, regulation, or order thereunder, it may in its discretion bring an action in the proper district court of the United States, the district court of the United States for the District of Columbia, or the United States courts of any Territory or other place subject to the jurisdiction of the United States, to enjoin such acts or practices and to enforce compliance with this chapter or any rule, regulation, or order thereunder, and upon a proper showing a permanent or temporary injunction or decree or restraining order shall be granted without bond. The Commission may transmit such evidence as may be available concerning such acts or practices to the Attorney General, who, in his discretion, may institute the appropriate criminal proceedings under this chapter."

Section 19 of said Act [15 U. S. C. §79s] provides as follows:

"Hearings may be public and may be held before the Commission, any member or members

thereof, or any officer or officers of the Commission designated by it, and appropriate records thereof shall be kept. In any proceeding before the Commission, the Commission, in accordance with such rules and regulations as it may prescribe, shall admit as a party any interested State, State commission, State securities commission, municipality, or other political subdivision of a State, and may admit as a party any representative of interested consumers or security holders, or any other person whose participation in the proceedings may be in the public interest or for the protection of investors or consumers."

Section 24(a) of the said Act [15 U. S. C. §79x(a)] provides as follows:

"Any person or party aggrieved by an order issued by the Commission under this chapter may obtain a review of such order in the circuit court of appeals of the United States within any circuit wherein such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the entry of such order, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall be forthwith served upon any member of the Commission, or upon any officer thereof designated by the Commission for that purpose, and thereupon the Commission shall certify and file in the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part. No

objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do. The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which, if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court affirming, modifying, or setting aside, in whole or in part, any such order of the Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended [28 U. S. C. §1254]."

APPENDIX B

Section 11(c) and (d) of the Public Utility Holding Company Bill S. 1725 (Hearings before Senate Committee on Interstate Commerce, 74th Cong., 1st Sess., p. 19 ff.) provides as follows:

"(c) The Commission may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce compliance with any order under this section. Upon any such application, the court shall take possession and exclusive jurisdiction for the purposes of this act of such assets of the company, wherever located, as may be held in contravention of such order, or, in the case of any order for reorganization or dissolution, possession, and exclusive jurisdiction for the purposes of this Act of the company and all of its assets, wherever located; and the court shall have jurisdiction, and it shall be the duty of the court, to constitute and appoint the Commission as sole trustee to administer the assets so possessed and the proceeds thereof as a trust estate for the benefit of the persons interested therein as their interests may appear. *In any proceedings for the enforcement of an order of the Commission under this section, the Commission with the approval of the Court shall have power to dispose of any or all such assets and, subject to such terms and conditions as the court may prescribe, may make such disposition in accordance with a reorganization plan which shall have been approved by the Commission after opportunity for hearing. Such reorganization plan may be prepared in the first instance by the Commission,* or, subject to such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide

interest (as defined by the rules and regulations of the Commission) in the reorganization.

"(d) If, in the judgment of the Commission, any registered holding company or any subsidiary company thereof is insolvent or unable to pay its debts as they mature, the Commission shall have power to institute proceedings for the reorganization of such company under Section 77B of the Act of July 1, 1898, entitled 'An act to establish a uniform system of bankruptcy throughout the United States', as amended. In any such proceedings or in any other proceedings in a court of the United States, whether under said Section 77B or otherwise, by whomsoever instituted, for the reorganization or liquidation of any registered holding company or subsidiary company thereof or in which a receiver or trustee of any such company or any assets thereof is appointed, the court, at the request of the Commission, shall have jurisdiction, and it shall be the duty of the court, to constitute and appoint the Commission as sole trustee or receiver, whether or not a trustee or receiver shall theretofore have been appointed. *In any such proceedings a reorganization plan for a registered holding company or any subsidiary company thereof shall not become effective unless such plan shall have been approved by the Commission after opportunity for a hearing prior to its submission to the court. Notwithstanding any other provision of law, any such reorganization plan may be prepared in the first instance by the Commission* or, subject to such rules and regulations as the Commission may prescribe as necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as

defined by the rules and regulations of the Commission) in the reorganization. All fees, expenses, and remuneration paid in connection with any reorganization or liquidation of a registered holding company or subsidiary company thereof, whether under said section 77B or otherwise, shall be subject to the approval of the Commission. The Commission shall be entitled to such reasonable compensation for its services as trustee or receiver in any proceedings as the court may allow." (Italics ours.)

Excerpt from analysis of S. 1725 (Hearings Before the Senate Committee on Interstate Commerce, 74th Cong., 1st Sess., p. 49):

"Subsections (c) and (d) outline the procedure whereby the reorganization plans must be approved by the Commission and carried out under court supervision. The court is to take jurisdiction of the assets involved and appoint the Commission sole trustee or receiver to administer the assets as a trust estate for the benefit of the persons interested therein as their interest may appear. By these provisions it is intended to give the Commission the complete supervisory power which is essential to the elimination of the present wasteful practices in corporate reorganizations. It also ensures the investors that their properties will not be needlessly sacrificed but will be conserved by the Commission and court until a satisfactory reorganization can be arranged. If a company is solvent, the court could continue the payment of interest and in appropriate cases dividends, until a prudent reorganization is effected. If it is insolvent or unable to

pay its debts, the Commission is empowered by subsection (d) to institute proceedings for the reorganization of the company under Section 77B of the Bankruptcy Act; in such proceedings, also, the Commission could have itself appointed sole trustee. Under either subsection Commission approval of reorganization plans and supervision of the conditions under which such plans are prepared will make it impossible for a group of favored insiders to continue their domination of inarticulate and helpless minorities, or, as is more often the case majorities. All fees and expenses and remuneration paid in connection with any such reorganization, whether under section 77B of the Bankruptcy Act or otherwise, are made subject to the approval of the Commission. The court is to allow the Commission reasonable compensation for its services as trustees."

APPENDIX C

Section 11(d), (e) and (f) of the Public Utility Holding Company Bill S. 2796 (74th Cong., 1st Sess.) provides as follows:

"(d) The Commission may apply to a court in accordance with the provisions of subsection (f) of section 18, to enforce compliance with any order under this section. Upon any such application, the court as a court of equity shall take exclusive jurisdiction and possession, for the purposes of this title, of such assets of the company or companies, wherever located, as may be the subject of such order, or, in the case of any order for reorganization or dissolution, exclusive jurisdiction and possession, for the purposes of this title, of the company or companies and all the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court shall have the power, and it shall be the duty of the court, to constitute and appoint the Commission as sole trustee, to administer under the direction of the court the assets so possessed and the proceeds thereof as a trust estate for the benefit of the persons interested therein as their interests may appear. In any proceeding for the enforcement of an order of the Commission under this section, the trustee with the approval of the court shall have power to dispose of any or all of such assets and, subject to such terms and conditions as the court may prescribe, may make such disposition in accordance *with a fair and equitable reorganization plan which shall have been approved by the Commission after opportunity for hearing.* Such reorganization plan may be proposed in the first instance by the Commission, or, subject to such

rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization.

"(e) *In accordance with such rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers,* any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for the reorganization or dissolution, of such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of this title and the rules, regulations and orders thereunder or to make unnecessary the issuance of any order by the Commission in respect of any such company under subsection (b). *If, after notice and opportunity for hearing, the Commission shall approve such plan, as submitted or as modified to meet such terms and conditions as the Commission may find necessary or appropriate in the public interest or for the protection of investors or consumers, as fair and equitable to the persons affected by such plan and as appropriate to effectuate the provisions of this title and the rules, regulations, and orders thereunder, the Commission shall make an order authorizing and directing such company or any subsidiary company thereof to divest itself of control, securities, or other assets or to be reorganized or dissolved*

in accordance with such plan; and the Commission may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce compliance with such order. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of this title and the rules, regulations, and orders thereunder, the court shall take exclusive jurisdiction and possession, for the purposes of this title, of such assets of the company or companies wherever located, as may be the subject of such order; or, in the case of any order for reorganization or dissolution, exclusive jurisdiction and possession, for the purposes of this title, of the company or companies and all the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court shall have power, and it shall be the duty of the court, to constitute and appoint the Commission as sole trustee, to administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed and the proceeds thereof as a trust estate for the benefit of the persons interested therein as their interest may appear. It shall be within the authority of the court and the Commission to approve and carry out any plan under this subsection which it would be within their respective authority to approve and carry out under subsection (d) of this section.

"(f) If, in the judgment of the Commission, any registered holding company or any subsidiary company thereof is insolvent or unable to pay its debts as they mature, the Commission shall have

power to institute proceedings for the reorganization of such company under Section 77B of the Act of July 1, 1898, entitled 'An Act to establish a uniform system of bankruptcy throughout the United States', as amended. In any proceeding pursuant to this section or in any other proceeding in a court of the United States, whether under said section 77B or otherwise, by whomsoever instituted, for the reorganization, dissolution, liquidation, bankruptcy, or receivership of any registered holding company or subsidiary company thereof or in which a receiver or trustee of any such company or any assets thereof is appointed, the court shall have jurisdiction to appoint a trustee or receiver, and, at the request of the Commission, shall have power, and it shall be the duty of the court to constitute and appoint the Commission as sole trustee or receiver, whether or not a trustee or receiver shall theretofore have been appointed. *In any such proceeding a reorganization plan for a registered holding company or any subsidiary company thereof shall not become effective unless such plan shall have been approved by the Commission after opportunity for hearing prior to its submission to the court. Notwithstanding any other provision of law, any such reorganization plan may be proposed in the first instance by the Commission* or, subject to such rules and regulations as the Commission may deem necessary or appropriate in the public interest or for the protection of investors, by any person having a bona fide interest (as defined by the rules and regulations of the Commission) in the reorganization. The Commission may, by such rules and regulations or order as it may deem necessary or appropriate in the public

interest or for the protection of investors or consumers, require that any or all fees, expenses, and remuneration, to whomsoever paid, in connection with any reorganization, dissolution, liquidation, bankruptcy, or receivership of a registered holding company or subsidiary company thereof, whether said section 77B or otherwise, shall be subject to approval by the Commission. The Commission shall be entitled to such reasonable compensation for its services as trustee or receiver in any proceeding as the court may allow." (Italics ours.)

Excerpts from S. Rep. No. 621, 74th Cong., 1st Sess.

At page 8:

"The committee has further added a new provision to the so-called 'elimination' section to provide the machinery for voluntary readjustments by the companies. These voluntary readjustments are to be *carried out under Commission supervision* in order to effectuate the policies of title I. This makes it possible for companies to submit their own readjustment plans for the examination and approval of the Commission at any time after the enactment of the title and to have those plans carried out if necessary in the Federal courts of equity." (Italics ours.)

At pages 13-14:

"(a) Voluntary readjustment.—* * *

"Section 11 provides that plans for the voluntary readjustment of the affairs of holding companies to conform with the section may be presented to the Federal courts at any time and that in such cases those courts may exercise in the furtherance of such voluntary plans all the extra-

ordinary powers such courts have been accustomed to exercise when called upon under the Sherman and Hepburn Acts to effect compulsory corporate readjustments required by the public policy expressed in those acts.

* * * * *

"(b) Compulsory readjustment.—In the case of those holding companies which at the end of the 5 years may not have completed for themselves the task of transformation into an investment trust or of rearrangement of their properties into a single integrated system, the Securities Commission is given power to take them into the Federal courts to require compliance with the title in one or the other way. The process of compulsory divestment of control is left to the Federal courts, without time limit, for the application of the technique worked out in the dissolutions under the Sherman Act and the Hepburn Act (commodities clause).

"The title provides that during all court processes the Securities and Exchange Commission shall act as an impartial expert economic adviser and administrative assistant to the courts. That expert assistance will enable the courts to save time and expense in the solution of essentially economic and administrative problems for which in the Sherman Act cases it had no assistance except that of opposing counsel. But the courts can take such time as they deem advisable to dispose of assets without sacrifice"

At page 33:

"Subsections (d), (e), and (f) outline the procedure whereby the reorganization plans must be approved by the Commission and carried out

under the supervision of the Federal courts. The court is to take technical jurisdiction of the assets involved and appoint the Commission sole trustee or receiver to administer the assets as a trust estate for the benefit of the persons interested therein as their interests may appear. By these provisions it is intended to give the Commission the complete supervisory power which is essential to the elimination of the present wasteful practices in corporate reorganizations. * * * Subsection (e) expressly authorizes a holding company subject to the approval of the Commission and the court to work out a plan of reorganization to make unnecessary the issuance of an involuntary order for its reorganization by the Commission, and the Commission and the court are authorized to approve any plan so worked out voluntarily by a holding company as the Commission and the court might order under their compulsory powers. * * * If a company is insolvent or unable to pay its debts, the Commission is empowered by subsection (f) to institute proceedings for the reorganization of the company under section 77B of the Bankruptcy Act; in such proceedings also, the Commission could have itself appointed sole trustee. Under these subsections, Commission approval of reorganization plans and supervision of the conditions under which such plans are prepared will make it impossible for a group of favored insiders to continue their domination over inarticulate and helpless minorities, or even as is often the case, majorities. Fees, expenses, and remuneration paid in connection with any such reorganization, whether under section 77B of the Bankruptcy Act or otherwise, are made subject to the approval of the Commission.

APPENDIX D.

Excerpts from Congressional Record, Vol. 79, 74th Cong., 1st Sess., p. 8845:

"MR. BORAH. Mr. President, I desire to ask the Senator from Montana [Wheeler] a question. On page 50, beginning with line 2, the bill provides as follows:

> 'In any such proceeding a reorganization plan for a registered holding company or any subsidiary company thereof shall not become effective unless such plan shall have been approved by the Commission after opportunity for hearing prior to its submission to the court.'

I do not exactly understand that language. Does it mean that the court's jurisdiction with reference to the reorganization, or what shall be permitted by decree of the court, is limited; or is it merely recommendatory to the court?

"MR. WHEELER. We do exactly the same thing at the present time, as I understand, with reference to the Interstate Commerce Commission. A plan for the reorganization of a railroad is supposed to be submitted to the Interstate Commerce Commission for its approval before it is approved by the court. We put this provision in here in exactly the same manner, as I recall, as the existing provision with reference to the Interstate Commerce Commission in the case of railroad reorganizations.

* * * *

"MR. STEIWER. In respect to the language which is now under discussion, at the top of page 50, has there been urged upon the committee, or brought to the attention of the chairman, the con-

tention that that language would oust the court of its jurisdiction, and, therefore, would be objectionable?

* * * * *

"MR. WHEELER. No; I do not think it would oust the jurisdiction of the court. I think there is no question that Congress would have the power to say that the court shall, when it appoints a receiver, appoint the Commission receiver, because, after all, the court is a statutory court, and we have the right to say that before this plan is approved by the court it shall be approved by the Commission. Furthermore, this is a mere matter of Congress providing the administrative machinery surrounding receiverships, and in no way usurping any judicial powers. The judicial functions remain, as always, in the court.

If I am not mistaken about the matter, we employ exactly that procedure in railroad reorganizations at the present time; and the only complaint we have had has been that the Interstate Commerce Commission has been too lenient, and has approved a number of plans which should not have been approved.

"MR. STEIWER. I make no contention about the matter at this time, but it occurs to me that provision might be subject to the objection that it would oust the jurisdiction of the court.

"MR. WHEELER. The Senator from Indiana [Mr. Minton] has called my attention to the fact that the provision does not oust the jurisdiction of the court at all, because the court has to approve the plan even though the Commission approves it. In other words there is really a double check upon the plan, and final determination rests as in the past in the courts."

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT.

ANSWERING BRIEF OF THOMAS W. STREETER, *ET AL.* TO BRIEF OF CENTRAL-ILLINOIS SECURITIES CORP., *ET AL.*

Preliminary.

The Brief previously submitted on behalf of Thomas W. Streeter, *et al.*, contains the following subjects—Opinions Below, Jurisdiction, Statute Involved, Questions Presented and Statement, to which the attention of this Court is respectfully directed and which it is

requested, be deemed incorporated herein. This Brief[1] will be devoted to answering the contentions raised in the Brief of Central-Illinois Securities Corporation and Christian A. Johnson, Respondents-Petitioners.[2]

The Procedure Suggested by Central-Illinois and Its Implications.

At the outset it should be noted that this case involves much more than the cash in the escrow fund. The issues lie far deeper than that. If the technique proposed by Central-Illinois is followed, the following will be the pattern in future cases:

First, if this Court upholds the District Court, it will amount to a judicial approval of by-passing the Commission in matters involving simplification under the Act, and particularly in valuation problems.

Second, it will place a premium on small groups of minority stockholders (a) offering no evidence before the Commission, (b) offering no evidence before the District Court, and (c) using arguments in briefs based on matters not in the record relating to alleged facts happening either prior to or subsequent to the Commission proceedings and even *after* consummation of the plan. It will place a premium on objecting stockholders carefully avoiding any request for a hearing or a reopening, at the same time implying radically changed circumstances. It will open the door to objectants having no connection with the

[1] The Brief, previously submitted on behalf of Thomas W. Streeter, *et al.*, will be called hereinafter the "Streeter Brief".

[2] The Brief for Central-Illinois Securities Corp., *et al.*, will be called hereinafter the "Central-Illinois Brief". For the sake of brevity, we shall also hereinafter refer to the Respondents-Petitioners as "Central-Illinois". In answering the contentions raised, we have followed the sequence of the Central-Illinois Brief.

Company to persuade district courts after "extensive oral argument and briefs" (see Central-Illinois Brief, p. 15) to decide valuation questions on the basis of "colloquial" equities.

Finally, it will approve a procedure eliminating a remand so that experts of the Commission and other litigants who have participated in this proceeding from its inception, would have no opportunity to expose the inapplicability of the mass of irrelevant financial data, of which this Court and the lower courts have been asked to take judicial notice.

This is the program that will stem from an affirmance of the District Court's order as requested by Central-Illinois.

Fair Presentation of the Record.

1. Haphazard Market Prices v. Fair Investment Value.

The brief of Central-Illinois exhibits a penchant for the selection of a single element, out of many considered by the Commission coupled with the incorrect assertion that such single element was the *only* element which the Commission considered. Having adopted this baseless premise, the brief proceeds to build legal arguments on such an unsubstantial base. Thus, the statement is made and frequently reiterated, that the Commission determined the investment values of the preferred and the equitable equivalents of the rights which the preferreds were forced to surrender "solely on the basis of market prices of allegedly comparable preferred stocks, as of a specific haphazard moment".[3] This demonstrably

[3] Central-Illinois Brief, pp. 26, 72 ff.

false statement is repeated in many ways and forms and many arguments are predicated on this incorrect representation of the record. In answer, we prefer to let the following portion of the record speak for itself (R. 1173a-1176a):

> "Q. Dr. Badger, page 4 of your report, second full paragraph, your definition of fair investment value, reading:
>
> 'Fair investment value may be defined as the price or value at which the shares of the several classes of stock would exchange hands between willing buyers and willing sellers, neither under compulsion to buy or to sell, and both thoroughly informed of all of the various elements of value.'
>
> Could you tell me what you had in mind when you used as part of your definition 'all of the various elements of values'?
>
> A. Well, the elements of value would include a question of the history of the enterprise, the question of its management, the nature of the business in which it was engaged, the question of competition, the question of past, present and future earnings, the dividend-paying capacity of the Company, the asset values behind the security—that, I think, would cover the more important elements.[4]

[4] The following statement from *Matter of Fulton*, 257 N. Y. 487, 495 (1931) supports Dr. Badger's concept of value:

> "It will be readily appreciated that the appraisers should have considered the investment value of the stock which is largely determined by the rate of return, the security afforded that the dividends will be regularly paid, the possibility that dividends will be increased or diminished, the selling price of stocks of like character, the amount of preferred stock in comparison with the common stock, the size of the accumulated surplus applicable to the payment of dividends, the record of the corporation and its prospects for the future."

Q. And in your determination of the fair investment value of the preferred stocks of Engineers did you take into consideration every one of those elements of value?

A. Yes sir. I did not cover them all in this report, but I gave consideration to all of them.

* * * *

Q. In other words, your over-all judgment figures which you set forth in the conclusions did consider in one form or another all these elements of value?

A. That is correct.

Q. You speak on page 4 under the title 'Basis of Valuation,' "Although the several classes of preferred stock of Engineers Public Service are bought and sold on the New York Stock Exchange, the reported prices at the present time cannot be regarded as representative of fair value.'

Now, my question is: Can market value ever be regarded as representative of fair value or fair investment value, as you put it?

A. Well, that is a rather difficult question to answer. I think it would be a fair statement to say that in a free and unfettered market that on any given date the market prices as emanating from purchase and sales might or might not be the fair value, but that they tended to approach it, and stocks that are actively traded probably approach fair investment value very closely, unless by virtue of pronouncements by the management of the company, unless by virtue of circumstances that create either fear on the one hand or a favorable atmosphere on the other hand, through events that may or may not be permanent and as the result of those events unduly depress or unduly raise the price of stock, that in the case of actively traded stocks we frequently

have a close approach to fair investment value represented in the market prices of stocks.

Q. Using your expression 'Free and unfettered market' in your experience as an expert financial analyst have you ever noticed any stock or any time when the stock market was ever in a condition that you could say it was free and unfettered?

A. Well, I think it more closely approaches it at certain times than it does at other times. For example, in the period between 1929, and I might extend that period well into the '30s, we had a serious depression involving heavy liquidation of borrowings, which had been made by individuals to carry securities, and unquestionably market prices at that time were depressed, possibly very substantially below their true investment values because of necessitous liquidation. It is my opinion that for a considerable period time, and as the result of adverse political developments in respect to public utility stocks, that certain public utility stocks were selling below their fair investment value. There may be other periods, such for example as the present time, when a stock like this newly launched automobile firm, may be selling at above its fair investment value. That, of course, is a question that will take time to answer, but, on the other hand, stocks that are very actively traded, without any undue influences prevailing in a given time, presumably closely approximate their fair investment value.

That is about the only answer that I could give to that question.

Q. *But you would not, in your opinion, as an expert, substitute market values as a test to determine fair investment value in and of itself?*

A. *No, sir.*

Q. And would you say that preferred stocks similar to those of Engineers Public Service Company, or any preferred stock of a holding company which is under the jurisdiction of the Holding Company Act, has a free and unfettered market?

A. Well, I would say that many of them do not have a free and unfettered market.

Q. And with specific reference to the Engineers preferred stock?

A. That is true. I do not believe that that stock at the present time is enjoying a free and unfettered market and I think it is influenced, as I have stated, by the proposal of the company, and the threat of litigation in connection therewith, to pay off such stock at $100 a share." (Italics ours.)

Further evidence bearing on the question of investment value and substantiating the fact that the Commission did not restrict itself to valuing the preferred by reference to the single element of temporary market prices at a "haphazard moment", appears in the opinion of counsel for Engineers, in which he recommended the amendment of the plan to conform with the Commission's views, *i. e.*, to provide for the payment of the call prices to the three series of preferred stocks, and stated as follows:

"* * * the above mentioned finding that the investment value of the preferred stock apart from the Act is equivalent to the respective redemption prices is clear cut and finds substantial evidence in the record. Furthermore it is a fact which Engineers admitted at the hearing, in its brief and on the argument. It appears clear, there-

fore, that that fact finding must be accepted without question (R. 1953a)."[5]

2. Quality Ratings of Independent Analysts v. Expert Testimony.

Another example of the failure of Central-Illinois to give the Court a reasonably fair impression of the record relates to the references to Standard & Poor's "rating" of Engineers preferred stock of "C**".[6] Every effort is made to have this Court conclude that the Commission was misled or misguided in its finding the fair investment value equal to the respective call prices of the preferreds, because of this rating. On this score the interrogation of Dr. Badger by Engineers counsel as set forth below is very enlightening:

> "Q. What is the difference, Doctor, between a current investment rating and a current market rating? One for the short pull and the other for the long pull?
>
> A. No, sir; I believe that Standard Statistics

[5] Compare this admission of counsel for Engineers with the following statement of the District Court:

> "It is, of course, true that once the charter is not accepted as controlling, there is no reason why 100 is the necessary figure for a senior security holder to receive. It may be more or it may be less. But in this case, after consideration of all factors involved, I conclude that $100 would be fair and equitable (R. 288a, n. 2)."

Having concluded that the charter did not control the District Court's finding of $100 as the *value* of the stock had no foundation in the record whatsoever.

[6] Central-Illinois, Brief pp. 12-13 wherein it refers to the analysis of Engineers preferred rating of "C**", defined as follows:

> "'Preferred stocks with erratic dividend records which can be expected to make payments only under favorable conditions' (R. 1844a-1845a)."

found their method of investment ratings as applied to preferred stocks to be of little or no value and I believe for that reason they discontinued them.

They substituted in lieu thereof a series of ratings that could be maintained more up-to-date, that were more current, and were used to reflect those factors that give rise to, we will say, value determining factors, in respect to the several preferred stocks.

Q. Are you through?

A. Yes, sir.

Q. Now, Doctor, what do you base that belief on? You said you believe something. Were you informed by some official of Standard & Poors that that was the reason that they discontinued the ratings?

A. Yes, sir; I was.

Q. Who gave you that information specifically?

A. That information was contained in a bulletin that was put out by the Home Office of Standard Statistics and was supplied to all of their sub-offices, and I was furnished a copy of that bulletin from the Detroit office and I have the bulletin right here, as a matter of fact.

Q. Will you let me see the bulletin?

A. Yes, sir (R. 1124a-1125a)."

The document produced by Dr. Badger is preferred stockholders' Exhibit No. 35, R. 2120a, 2121a. It is dated April 25, 1945, almost nine months *before* Dr. Badger testified. The authors of the rating had this to say about their own estimate concerning the reliability of the preferred stock ratings:

"PREFERRED STOCKS, ALSO QUALITY RATINGS ON PREFERREDS.

"*We have wanted to drop preferred stock*

quality ratings for years. A quality rating on a preferred doesn't mean very much, as in the case of a bond, for the simple reason that the two are entirely different types of investments.

"We had an A rating on National Lead preferred while it fluctuated all the way between 60 and 170. That doesn't make sense. A *market* rating there was of highest importance. But for anybody foolish enough to disregard market prospects, the one important thing was dividend coverage. Well, the dividend was adequately covered during that tremendous fluctuation. And in a variable security, with no maturity date, that's the only quality feature that matters, while market performance and prospects are often of highest importance.

"That paragraph explains why we moved preferreds over into the Stock Guide where they belonged, and where we cover over 1,000 issues, and cover them properly and why we abandoned meaningless quality ratings to induce investors to use safer tests with more meaning in judging the investment quality of preferreds." (Italics ours.)

In the same vein is the following excerpt from the cross examination of Dr. Badger:

"Q. Well, Doctor, they say they stopped the stock rating, even high grade preferred stocks, because they fluctuated all over the map, didn't they, in effect?

A. They said that they ceased assigning investment quality ratings to preferred stocks because of the fact that their quality ratings were meaningless (R. 1134a)."

Thus it appears that the Central-Illinois reference to the so-called "quality rating" by an independent

analyst of "C**" to the Engineers preferred was misleading and did not establish error on the part of either Dr. Badger or the Commission. Although we recognize as has the Commission[7] that the reports of analysts, not subject to cross examination are not evidence *per se*, since counsel have attempted to disparage Dr. Badger's testimony by reference to such a report, we desire to call the Court's attention to the values placed on the three subsidiaries of Engineers by statistical houses of generally good repute. They illustrate the conservatism of Dr. Badger's conclusions. Set forth below is a list of these firms and their respective estimates which were introduced in evidence.[8]

Firm	Virginia	Gulf States	El Paso	Total
Ira Haupt & Co.	$70,600,000	$25,000,000	$ 6,000,000	$101,600,000
Carl M. Loeb, Rhoades & Co.	71,247,000	31,712,000	8,655,000	90,400,000
Bear Stearns & Co.	68,000,000	30,000,000	10,000,000	108,000,000
Duff and Phelps	80,000,000	35,000,000	10,000,000	125,000,000
Security Supervisors	70,000,000	30,000,000	9,000,000	109,000,000
Paine, Webber, Jackson & Curtis	83,000,000	44,000,000	8,000,000	135,000,000
AVERAGE	$73,608,000	$32,619,000	$ 8,609,000	$111,500,000
Per Share of Engineers Preferred				$284
Badger's Estimate[9]				$265

[7] *Engineers Public Service Co.*, 9 S.E.C. 84, 90 (1941).

[8] Pref. Exhs. 26-A–26-I, R. 1980a-2045a. These analyses were not offered as proof of the facts, but for the limited purpose of showing estimates of independent analysts. The management considered several of these reports in devising the plan. R. 945a, R. 1006a, R. 1007a.

[9] Pref. Exh. 29-A, R. 2106a.

3. Offer of Proof v. Actual Introduction of Evidence.

Another inaccuracy in the Central-Illinois Brief relates to the Puget Sound matter. The following assertion is made in the Central-Illinois Brief:

> "The District Court's findings as to the losses were based upon *uncontradicted evidence* that Engineers would have been able to obtain much higher prices if it had not been compelled to carry out the divestments, or alternatively would have received higher earnings if it had retained the assets (cf. Finding 37, R. 307a-308a)" (p. 61, n. 1). (Italics ours.)

Examination of Finding No. 37 discloses *inter alia*, the following statement:

> "* * * A formal offer of proof was made during the proceedings before the Court to establish that the equity owned by Engineers in Puget Sound prior to the recapitalization would presently have a cash value of $10,000,000 (R. 307a)."

The nature of the "offer"[10] is extremely interesting. No reference thereto appears in the record of the hearing before the District Court although that statement of "offer" is contained in the findings prepared for the District Court by Central-Illinois counsel. The

[10] It is well settled that enforcement proceedings are heard only on the administrative record and that the District Court cannot receive evidence not presented to the Commission. Streeter Brief, p. 73, n. 97. Counsel for White significantly recognizes this principle when he stated in his argument before the District Court as follows: "We are practically willing and we are prepared, if your Honor will give us the opportunity, to present testimony to the *Commission* of what the real investment value of this stock is" (R. 220a-221a). (Italics ours.) Contrast this admission with the so-called "offer of proof" in the District Court Brief of Central-Illinois.

only basis for the statement appears to be a footnote in the Central-Illinois Brief submitted to the District Court reading in part as follows:

> "Expert testimony *can be made available* to the Court that the Puget Sound common stock owned by Engineers would today have a value of approximately $10,000,000. based on conservative capitalization of earnings" (Brief dated February 11, 1947, p. 8, n. 12). (Italics ours.)

Apparently such was the nature of the offer of proof to establish the present cash value of Engineers equity in Puget Sound at $10,000,000 which would support the claim of loss. As a substitute therefor judicial notice of certain statistics was written into the findings by Central-Illinois counsel.[11]

4. 20-30% of Total Capitalization v. Virtual Ownership and Control.

The examples of failure to correctly present the state of the record could be multiplied. Thus although it is not denied that the common stockholders of Engineers received virtually all of the stock of the three underlying operating companies and had virtually complete control thereof, expressions are used that the common stock of these companies represent only 20-30% of the *capitalization*.[12] The implication from the Central-Illinois statement is that the Engineers common stockholders did not control the three underlying

---

[11] It should be noted in this connection that Rule 52(b) of the Federal Rules of Civil Procedure indicates that findings of fact in non-jury actions may be questioned as to the sufficiency of the evidence to support them regardless of whether or not an objection or a motion to amend has been made.

[12] Central-Illinois Brief, p. 7, n. 3; p. 39, n. 1.

subsidiaries after the preferred were ousted. This is, of course, inaccurate. It is also clear that a primary objective of the plan had been to eliminate the preferred from the enterprise in a manner permitting the common stockholders to obtain direct and complete ownership of the three subsidiaries. The testimony of the company's secretary demonstrates this truth (R. 819a). This objective is clearly established by the following testimony of the Company's secretary:

> "Q. Didn't you say that the record of activities on the part of the management of Engineers suggests a rather persistent effort during the last four years to get rid of the preferred stock in this situation?
>
> A. Yes (R. 733a)."

5. "Special Assessment" v. Bargain Purchase.

Central-Illinois also attempts to convey the impression that the Gulf States warrant program was in effect a "special assessment" on the common stockholders.[13] This is, of course, entirely untrue.[14] The common stockholders were under no obligation to exercise the warrants and had the privilege of selling them. In fact, the preferred stockholders vigorously opposed the proposal to issue the warrants to the common on the ground that it discriminated against them because they were excluded from the program. Moreover, the issuance of the warrants was a method chosen by the management to raise additional

---

[13] Central-Illinois Brief, *i. e.*, p. 9, n. 1; p. 18; p. 60; p. 102.

[14] Central-Illinois was successful in confusing the District Court regarding the true nature of the warrant. See finding 12 (R. 297a) and finding 40 (R. 309a) where the Court refers to the program as a "sale" or "contribution".

cash needed to retire the preferred stock in Engineers, which had a prior claim on the Gulf States stock. In offering the common a chance to buy Gulf States stock at $11.50 per share the company was, in effect, declaring a property dividend to the common stockholders since the stock was worth considerably more than the market price (R. 748a).[15]

To be contrasted with the characterization of "special assessment" is the following statement:

> "A bargain purchase offered to stockholders by the corporation may be tantamount to a partial property dividend. * * * Similar cases are likely to arise where a corporation under legislation such as the Public Utility Holding Company Act, * * * finds it desirable to distribute a large block of assets to stockholders, but only if it is able partially to recoup its asset position by requiring stockholders to make a partial payment for the assets. In such bargain purchases, the difference between the price paid and the value of the assets received constitutes, of course, a dividend to stockholders * * *" (Kehl, *Corporate Dividends* (1941), p. 171).

6. Time Limit on Compliance.

Central-Illinois has asserted that the provisions of section 11(e) of the Act constituted a period of limitation which forced prompt action by the Company in complying with divestment orders of the Commission. It is clear, however, that section 11(e) is *not self-enforcing* and there is but one instance of its use and that was, in effect, at the request of the particular com-

[15] The Company's secretary testified, in effect, that these warrants were worth $4 to $5 each (R. 748a).

pany. The rarity of the use of section 11(c) is attested to by Mr. Milton Cohen, former Director of the Public Utilities Division, when in connection with a proposed amendment to section 11(c), he stated at a Congressional Hearing as follows:

> "The court, as I also said the other day, in answer to Mr. Winter's inquiry, would still not do anything in the way of enforcement under this statute, and the statute, as far as this section is concerned, *is not self-enforcing except* upon application by the Commission even after the expiration of the second-year period, and *such application for enforcement of a Commission's order has, up to the present time, never been made to a court for enforcement of one of these orders except in a single instance where the company, in effect, asked for such procedure in order to protect its maturities.*" (Hearings before the Securities Subcommittee of the House Committee on Interstate and Foreign Commerce, 79th Cong., 2nd Sess., p. 1091.) (Italics ours.)

In so far as Engineers itself is concerned, the complete answer to this innuendo of the element of "pressure of time" is seen from the fact that the Engineers proceedings were started in 1937 and in the entire record of *ten* years following, no order to liquidate was ever entered against Engineers.

7. Destruction of Values v. Preservation.

There is another contention made by Central-Illinois throughout its brief not borne out by the record that the common stockholders bore the brunt of the simplification of the Engineers system, and that the

liquidation resulted in the *aggrandizement* of the preferred, at the expense of the common.[16]

A long line of alleged hardships, sacrifices, and detriments flowing from the simplification of the Engineers system, is asserted to create equities for the common as against the preferred. The record indicates to the contrary.

It will not be disputed that the actual method of divestment was entirely a choice of the common stock management. The portfolio securities could have been used in exchange to retire the preferred had the Company not been pursuing a policy of getting rid of the preferred stock at a discount, by cash payments.[17]

Central-Illinois would have this Court believe that the enterprise was "whittled down", at great loss to Engineers in assets and earnings, because of the Commission's various divestment orders. Actually what happened was that Engineers pruned its system of dead wood and a few live twigs, at no net loss to the system but with the consequent tripling of earnings available to the stockholders, on a consolidated basis.

Subsequent to registering under the Act, Engineers took the following action with respect to its minor subsidiaries:

In October, 1941, The Western Public Service Company sold some property in Las Animas, Colorado to the city. In 1942, Engineers sold the common stock of Western to a public power district after having

[16] Central-Illinois Brief, pp. 18, 23, 60 and 116.

[17] In 1943 Engineers actually made an offer to the preferred stockholders to exchange a maximum of 25,678 shares of their stock for shares of El Paso Natural Gas Company plus cash. The plan failed because the aggregate amount offered in exchange totalled less than $100 per share whereas the market price of the preferred was in excess of that amount. H. C. A. R. Nos. 4421 (1943) and 4559 (1943).

first acquired the Wyoming properties and ownership of the subsidiaries of Western which owned properties in Missouri and North Kansas. A new subsidiary, The Western Public Service Company (Delaware) was formed to own and operate the Wyoming properties. The net proceeds were about $3,070,000 representing a loss of $1,124,000.[18] The Missouri properties were sold in 1945 at a loss of about $244,119.[19] The Western Public Service Company (Delaware) was sold in 1946 at a loss of $342,000.[20]

Baton Rouge Electric Co., Louisiana Steam Generating Corporation and Gulf States were consolidated in 1938. The bus properties were transferred to Baton Rouge Bus Co. Inc. and the bus company was sold later at a profit of $180,801.[21]

In 1943, Engineers sold its holdings in The Key West Electric Company at a profit of $386,528.[22] The transportation and bridge properties of El Paso were sold in 1943 at cost.[23]

In 1945, Engineers sold its holdings in Savannah Electric & Power Company at a profit of $221,535[24] and in March, 1944, the balance of the investment in El Paso Natural Gas Co. was sold at a profit of $1,095,325.[25]

In 1936 and 1937 after passage of the Act but before Engineers registered with the Commission, the Company had sold two blocks of stock in El Paso Natural Gas Company at an aggregate profit of $1,440,303.[26]

The net result asset-wise from these divestments was a profit to Engineers in the sum of $1,614,373.

Of the major subsidiaries in the Engineers' system all but Puget Sound Power & Light Co. were still part of the system when Engineers was dissolved and its holdings distributed to its own common stockholders pursuant to the plan. Puget had been a cancer in the system from the time of its acquisition in 1928.[27] It consistently failed to earn its own preferred dividend requirements and in 1938, Engineers voluntarily created a reserve to reflect the "depreciation" in this and other "investments", in the sum of $35,000, and embodying a "substantial allowance" for Puget Sound. In 1943, Puget was recapitalized[28] and by virtue of the application of the investment value theory, Engineers received 3% of the new common stock in the reorganized company. These securities were sold in 1944 for $777,475, resulting in a book loss to Engineers of $33,320,519.[29]

Even after the so-called "whittling" of the system the fact remains that the Company's assets as of June 30, 1945 aggregated $65,756,904 (R. 86a) as compared with assets in 1938 of only $60,909,703[30] before the

[29] Engineers Exh. 37-K, R. 1608a. In this 1944 Engineers Annual Report to Stockholders, appears the following significant statement:

"• • • The total loss was therefore $33,320,519, of which $29,297,000 was charged against the reserve created in 1938 for depreciation in the value of this investment, $75,358 was charged against earned surplus in December 1943, representing the loss on 1,200 shares sold in that month and $3,948,161 is provided for by a reserve set up in December 1943 through a charge to earned surplus to provide for the loss to be realized through the sale of the remaining investment in February 1944. *Based on the rates in the Revenue Act of 1943, enacted February 25, 1944, it is estimated that the annual saving in consolidated Federal income and excess profits taxes, by reason of the divestment of Puget Sound Power & Light Company, will amount to approximately $442,000.*" (Italics ours.)

[30] Engineers Exh. 37-E, R. 1525a.

priming began. Thus asset-wise, the appellees are woefully in error when they claim the enterprise has shrunk.

Moreover, on an earnings basis, the record is clear that the elimination of the various properties was, on the whole, of great benefit to the stockholders. The table set forth below[31] shows that the earnings of subsidiaries applicable to common stock owned by Engineers (and now owned directly by Engineers' common stockholders) more than doubled after the

program of divestment was completed. And as further proof of the fallacious argument of Central-Illinois, that divestments caused a whittling down of the system in any substantive manner, it appears from its own statements that for the twelve months ended June 30, 1947 the three remaining subsidiaries reported earnings of $10,629,724.[32] In decided contrast, at the time of the enactment of the Act the balance of earnings applicable to Engineers' holdings in all its 17 subsidiaries was only $1,605,867.[33]

8. Idle Cash v. Capital Appreciation and Increased Equity:

The Central-Illinois attempt to show that the common stockholders had been altruistic in leaving cash in the enterprise,[34] is likewise not supported.[35] It is made to appear that the common stockholders were compelled to do what they did by virtue of the provisions of the Act. The record clearly establishes that the cash was accumulated designedly by the small group of controlling common stockholders of Engineers, in order to avoid high federal personal income taxes and provide the means for getting rid of the preferred stockholders. The withholding of dividends on the common stock was a matter dictated by the self-interest of the common stockholders. Rather did they prefer to make capital gains and also build up their equity. It is barely possible that the common might have been virtually excluded from the enterprise instead of the preferred, if the common had elected to receive income available to them, over the years. The circumstance that the preferreds were likewise helped does not necessarily support a claim of hardship on the common. The contention that divi-

---

[32] Central-Illinois Brief, p. 101, n. 2.
[33] Engineers Exh. 37-C, R. 1473a.
[34] Central-Illinois Brief, p. 15, n. 1.
[35] Streeter Brief, pp. 119-120.

dends were withheld from the common stockholders so as to provide for the company's liquidation is therefore a complete distortion. On the contrary, a deliberate policy of cash accumulation had been pursued so that the preferred stockholders could be bought out piecemeal and at a discount. In this way the common stockholders received capital appreciation instead of taxable dividends. There was no need to withhold dividends to retire the preferred. Liquidating dividends in kind could have been paid to both preferred and common.

Furthermore, it appears that Gulf States had paid common stock dividends of approximately 50% of the balance available for common stock, from 1939 to June, 1945 (R. 36a). It further appears that the Engineers common had already received the benefit of retiring some 37,560 shares of preferred stock at substantial discounts (R. 39a) and that Gulf States could have been sold through competitive bidding, to yield at least $30,000,000 (R. 53a). Yet Engineers management was contented to let the common stockholders acquire this asset for approximately $22,000,000. The Engineers preferred had provided valuable leverage for the common and in 1945, with three prosperous operating companies in splendid condition, producing large income, the common no longer wished to tolerate the preferred in the enterprise. Engineers had accumulated large amounts of idle cash from previous property dispositions and retained earnings. As was pointed out by the Commission: "Ordinarily a company in this position would exercise its call privilege and redeem the preferred at its call price. However, Engineers has proposed to dissolve by paying off the preferred in cash and distributing the remaining assets to its common stockholders" (R. 60a).

Another advantage to the common (R. 70a) with respect to the Gulf States common stock as reclassified, is clear from the following comment by the Commission (R. 70a-71a):

> "* * * At $14 per share a dividend of $.80 would provide a yield of 5.72%, and on an earnings basis of $1.31 a share, the times earnings ratio would be 10.7 * * *
>
> "On the basis of earnings available for common stock for the 12 months ended June 30, 1945, the following effect on a share of Engineers' common stock will take place upon operation of the plan, assuming the bank loan were deleted and the warrant price increased to $14 per share:

TABLE XII

Per share of common stock	
Earnings on a consolidated basis	$ 3.16
Earnings on a consolidated pro forma basis	2.57
Decrease in Engineers' earnings	$0.59
Earnings on 1/5 share of El Paso	0.32
Net decrease in earnings	$0.27
Earnings per share of Gulf States	1.31
Net increase in earnings if Engineers' stockholder purchases Gulf States' common stock	$1.04"

There were many additional advantages to the common stockholders flowing from the simplification of Engineers. It was rid of the Puget Sound incubus.

The book loss has provided a cushion for Engineers for tax purposes in connection with the profits realized by the sale of Gulf States stock of over $8,000,000 with its federal income tax savings to Engineers and its common stockholders of over $2,000,000 and is a further cushion against the profit which may enure to Engineers, in the sale of its holdings, in Virginia (R. 990a).[36] It should also be noted that the Puget Sound book loss was used to offset Engineers capital gain originating from the sale of El Paso Natural Gas stock indicating a further huge tax saving (R. 616a).

The common sought and obtained the right to eliminate the preferred from the enterprise. Having gotten the benefit of the receipt of the securities in the underlying companies and profited thereby, they now seek to further diminish the preferred's rights in the enterprise. If the common thought it had been unduly burdened by the simplification proceedings it might have allowed the preferred to continue their participation. In this connection it cannot be overlooked that by eliminating preferred the common stockholders obtained absolute control of the underlying operating companies directly. This transaction was "tax free" to the common stockholders of Engineers and to the limited group of preferred stockholders who owned common stock (R. 620a).

---

[36] Gains on future sales may still be applied against the book losses, under the carry-over provisions of the Internal Revenue Code until December 31, 1949.

PART ONE.

The Nature of the Liquidation.

I. Concerning the Contentions as to the Payment of Amounts in Excess of the Involuntary Liquidation Preferences upon an Alleged "Genuine Liquidation".

With respect to Point I of the Central-Illinois Brief, which urges the limitation of the preferred stockholders to $100 per share, allegedly pursuant to the provisions of the corporate charter, we shall demonstrate below that the dissolution of Engineers is not a "true liquidation" or a "genuine liquidation". The method employed by the common stock management which continued the common stockholders in control of the underlying companies had the same effect as a voluntary liquidation. The common stock management elected this method to keep the enterprise for the common stockholders and to get rid of the preferred stockholders by a cash payment on a basis similar to a voluntary liquidation. There appears no valid reason, other than self interest, for the common stock election to liquidate, and distribute the securities in the underlying operating subsidiaries, to the common and to exclude the preferred from the enterprise. It had all the earmarks of a voluntary liquidation and there is no reason why the call prices should not be paid to the preferred stockholders.[37] At all events Engineers' dissolution was not a "true" or "genuine" liquidation within the contemplation of the parties to the contract (charter). As has been

[37] The Commission stated: "Ordinarily a company in this position would exercise its call privilege and redeem the preferred at its call price (R. 60a)."

indicated elsewhere, this Court in the *Otis* case held that a liquidation under the Act was not the kind of liquidation envisaged by the charter and that Congress did not intend to mature the liquidation preferences in any event.

The attempted distinction in the Central-Illinois Brief between simplification and liquidation is untenable. The so-called liquidation of Engineers merely passes on to the common stockholders the securities in the underlying operating companies.

A. Concerning the Contention as to Payments in Excess of the Amounts of Contract Claims in the Light of Bankruptcy and Equity Reorganization Precedents.

The Central-Illinois group also asserts that the bankruptcy and equity reorganization decisions do not support payments to senior security holders of cash amounts in excess of their contractual claims applicable to involuntary liquidation or retirement of their security.[38] This assertion is inapplicable here. In the first place, any inference that the preferred are seeking more than their contract claims is unwarranted as well as "question-begging", for the basic issue is the value of these contract claims. In fact the Commission has limited the amount of the preferred compensation by the call provisions of the charter (R. 67a). In the second place, any implication that the involuntary liquidation provision of the charter is controlling in the instant case so as to limit the preferred claim to face value, is contrary to the *Otis* principle that the charter liquidation provisions are inoperative, in simplifications under the Act. Furthermore, while contract liquidation provisions are incho-

[38] Central-Illinois Brief, p. 34 ff.

ate and not controlling in simplifications under the Act so as to require valuation of the contract rights, the contract liquidation provisions are choate or matured in bankruptcy and equity reorganizations and hence conclusive as to the amount to be paid.[39] Into this latter category fall the cases[40] cited by the Central-Illinois counsel which involve claims matured in bankruptcy or equity reorganizations and which consequently are to be distinguished from the instant case involving an inchoate claim in a simplification under the Act.

Moreover if the Act were permitted to mature the preferred claim, as Central-Illinois seems to suggest, then the Act would create a windfall to the common since the Commission has found the fair investment value of the preferreds' claims, at least equal to the

---

[39] As stated in the *Otis* case: "Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of creditors" (323 U. S. 638).

[40] The cases of *Knight* v. *Wertheim & Co.*, 158 F. (2d) 838 (C. C. A. 2, 1946), cert. den., *sub nom. McGuire* v. *Equitable Office Building Corp.*, 331 U. S. 818 (1947) and *In the Matter of Childs Co.*, Corporate Reorganization Release No. 67 (1946) obviously involve corporate reorganizations under Chapter X of the Bankruptcy Act. In *Bailey* v. *Minsch*, 168 F. (2d) 635 (C. C. A. 1, 1948), cert. den., 91 L. Ed. 38 (1948) (Advance Sheets) which involved an equity receivership in connection with Investment Company Act of 1940, the Court expressly noted the *dicta* in several cases under the Act [See *e. g., Mass. Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. (2d) 424, 430 (C. C. A. 8, 1945), cert. den., 327 U. S. 795 (1946); *In re Consolidated Electric & Gas Co.*, 55 F. Supp. 211, 216 (D. Del., 1944); *In re North Continent Utilities Corp.*, 54 F. Supp. 527, 530 (D. Del., 1944)] that on premature retirement of bonds in simplification proceedings the Commission might find the equitable equivalent of the bonds to be more than the face amount but pointed out that "in the present case there has been no such finding, so the dicta in these cases is not pertinent" (168 F. (2d) 638). Also see discussion *infra*, p. 46.

call price or in excess of the involuntary liquidation amount and has concluded that the payment of such amount is fair and equitable. Such windfall or shift in values is to be avoided.[41]

Central-Illinois in the course of its discussion of the bankruptcy reorganization precedents apparently makes a significant admission.[42] Its counsel admits that payment may be made in new securities, rather than in cash but limits its concession to a case where "the enterprise is continuing". The brief then goes on to state that "because 'practical considerations' might make it 'impossible' for the reorganized enterprise to continue if the claims of the senior security holders are paid in cash (*Case* v. *Los Angeles Lumber Co., supra,* at 117), 'fairness and equity' authorize the senior security holders to be awarded the 'equitable equivalent', in new securities, of their contractual claims".[43] In other words, if it were convenient to pay the senior security holders in cash and eliminate them from the enterprise, the letter of the contract governs and the preferreds would be limited to $100. If on the other hand it was inconvenient (presumably because the cash was not available) the common stockholders at their option and for "practical considerations" might continue the preferred stockholders in the enterprise, in which event the senior security holders would get the "equitable equivalent" in new securities, for their contract claims. The effect of this would be to give $100 to senior security holders in a system like Engineers where ample cash and other assets were available to pay the call prices and

[41] *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 637 (1945); *American Power & Light Co.*, H. C. A. R. No. 6176, p. 8 (1945).

[42] Central-Illinois Brief, p. 34 ff.

[43] Central-Illinois Brief, p. 35.

In other holding companies less fortunately situated, the senior security holders might receive the equivalent of their rights in securities. Such a result was never intended by Congress and should not be countenanced by this Court. Furthermore, in the bankruptcy reorganization involved in the *Los Angeles* case, the liquidation provisions matured and determined the exact amount of the cash payment, the equivalent of which in terms of new securities remained to be ascertained. Consequently, any implication that the medium of payment—cash or securities—increases or decreases the *quantum* to be received is erroneous. Full compensatory treatment must be made regardless of the medium of payment.[44] Moreover, as has been pointed out above, as the involuntary liquidation preference did not mature in the instant simplification, the cash equivalent of the contract rights surrendered had to be determined on a going concern basis in accordance with the principles of the *Otis* case.

B. Concerning the Contention as to Applicability of the Involuntary Liquidation Preferences of the Charter to the Instant simplification.

The Central-Illinois assertion[45] that the involuntary liquidation provision is applicable to the instant situation and is a conclusive measure of the preferred stockholders' claim has been rejected by the courts below (R. 288a, R. 34) and the Commission (R. 61a) on the basis of the correct application of the principles of the *Otis* case. We have also demonstrated in our own brief[46] the inapplicability of the Engineers charter involuntary liquidation provision as being a matter not within the contemplation of the parties.

[44] Streeter Brief, p. 29, n. 159.
[45] Central-Illinois Brief, p. 37 ff.
[46] Streeter Brief, p. 95 ff.

We have also shown that the involuntary liquidation provisions are not matured as a matter of the Congressional intention. In that connection, we pointed out that any type of dissolution, liquidation or simplification or any method of system adjustment "adopted as a matter of administrative routine" would not fall within the coverage of the charter.[47] *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 639 (1945). Consequently, the Central-Illinois effort to distinguish the *Otis* case on the basis of the prescience of the draftsmen of the Engineers charter[48] and the type of liquidation or simplification or method of system adjustment involved is unavailing.

C. Concerning the Contention as to the Inapplicability of the *Otis* Case as to an Alleged "Authentic" Liquidation.

The Central-Illinois group also urges the applicability of the involuntary liquidation provisions of the charter to the instant situation because of an alleged "authentic" or "genuine" liquidation or "final termination".[49] In this connection an effort is made to distinguish the instant case from the *Otis* case on

---

[47] Streeter Brief, p. 98.

We have also urged in our brief (pp. 99-103) that if the charter provisions are operative, the instant liquidation is voluntary and falls within the voluntary liquidation preference.

[48] It should be noted that the charter provisions which were held inoperative in the *Otis* case were drafted in 1929. *A fortiori*, the provisions of the Engineers charter drafted in 1925 (R. 1403a) must be deemed inapplicable.

On the same reasoning the dissolution, even if viewed as a reduction in capital would not, despite the contrary contention of the Central-Illinois group (Brief, p. 50) fall within the charter. It should also be noted that on a "voluntary" reduction in capital resulting in a distribution of the assets to the stockholders, the preferred are entitled to their respective call prices (R. 1412a), although Central-Illinois refers only to the provision for payment of $100 plus accrued dividends on a reduction in capital other than "voluntary". (Brief, p. 44).

[49] Central-Illinois Brief, pp. 45, *et seq.*

the ground that the *Otis* case involved a continuing enterprise as contrasted with an alleged "authentic" liquidation.[50] On the other hand, the court below, accepts the *Otis* principle that the charter provisions are not "dispositive", but criticizes (erroneously, we maintain) the Commission for allegedly disregarding the fact of the termination of the enterprise, which, in the opinion of the court below, "supplies the substantial difference between the instant case and the *United Light & Power Company* reorganizations [*Otis*]" (R. 36).[51] Thus the same alleged factual difference between the instant and *Otis* cases, *i. e.*, supposed "termination of enterprise" ("authentic" liquidation) vs. its continuance, provides the basis for a frontal assault by the Central-Illinois group and a lateral attack by the court below, upon the *Otis* principles. The discussion in our brief provides the same answer to these attempted distinctions and clearly exposes this fallacy.[52] It is clear from an examination of this Court's opinion in the *Otis* case that the fact that "the business * * * continues" is not material; that

[50] The following definition of a true liquidation has been suggested by Commissioner McConnaughey in the *El Paso* case where in dissenting he said:

> "'Liquidation' has various meanings depending upon the setting in which it is used. In its most generally accepted sense, as applied to corporate operations, the word describes a complete winding up that brings to an end the active participation in the going enterprise of all who theretofore had been associated together in it. Not only is the intangible corporate vehicle dissolved as is proposed here, but the rights and property with which the business had been conducted are disposed of and the proceeds distributed among all the participants in proportion to their interests. Thereafter none of them draws benefit from the continued operation of the enterprise. The interest of all participants is liquidated" (H. C. A. R. No. 5499, p. 14).

[51] The court below notes that in the "latter case [*Otis*] the security holder participation in the enterprise was shifted from the top holding company to a subsidiary holding company but the holding company enterprise as such continued" (R. 36).

[52] Streeter Brief, p. 96 ff., 138 ff.

charter preferences are not matured (as in a normal liquidation), "where liquidation is adopted as a matter of administrative routine"; that the dissolution under the Act and the Commission's administration thereof results in a "type of liquidation" entirely distinct from the "liquidation" envisaged by the charter provisions; and that the selection of one method of system of adjustment, to accomplish simplification "is an incident which ought not to affect rights". Procedural details, such as the selection of the method of system adjustment or of particular sequence should not affect substantive rights. It is certain that a "fortuitous"[33] choice of method and sequence should not have such an effect. *A fortiori,* a conscious, deliberate choice or selection of both time and method by a common stock management must be subjected to even more careful scrutiny to guard the rights of the preferred stockholders. Such caution is especially appropriate in the instant case, where the common stock management has made its choice[34] after considering and discarding a

---

[33] See *In re Interstate Power Co.*, 71 F. Supp. 164, 168 (D. Del., 1947); *In re United Light & Power Co.*, 51 F. Supp. 217, 225 (D. Del., 1943). In the latter case, the same District Judge pointed out: "The choice of procedural alternatives should not affect the substantive rights of the common shareholders." The same principle must apply with the same force and effect to the "substantive rights" of the preferred stockholders.

[34] Commissioner Healy makes this interesting observation in his concurring opinion in *El Paso Electric Co.*, H. C. A. R No. 5499 (1944), p. 12:

> "* * * there may be such circumstances attending a liquidation put through by common stockholders as to require a holding that they are acting improperly or inequitably or attempting to euchre the preferred stockholders out of their redemption premium rights."

In the light of Commissioner Healy's foregoing statement the following quotation from the record is extremely relevant (R. 845a-846a):

> "Q. Mr. Benjamin, is it a fair statement to say that at the time last September 5 when the directors decided to

[Footnote continued on following page.]

wide variety of plans[55] and decided to liquidate Engineers even though the Commission did not *direct*

[Footnote continued from preceding page.]

pay the $100 a share to the preferred stockholders of Engineers that they did not have before them any graphs, charts, of data with respect to future earnings or prospective earnings of Virginia, Gulf, and El Paso? A. That is correct.

Q. Would you say that it was also a fair statement that it was the intent and purpose of the majority of the Board of Directors of Engineers to retain all future interests and increments in the enterprise for the common stockholders?

* * * * *

A. Yes.

Q. I believe you testified, first, this Commission has never directed Engineers to liquidate and, second, that the Board of Engineers might have decided to liquidate the Engineers Company voluntarily; is that correct? A. Yes.

* * * * *

The Witness: By that I assume you mean initiate action to cause the stockholders to voluntarily liquidate, yes.

* * * * *

Q. I believe you also testified that the Board of Engineers might have chosen to give the preferred stockholders a stake in the subsidiary companies had they so desired? A. Yes, I think I testified that they could have chosen other methods to meet the obligation of the preferred stock other than pay them in cash.

Q. In other words, the effect of what you are saying is that the Board of Directors of Engineers chose this method as a means of limiting the preferred as to the receipt of $100 and accumulated dividends to the date of deposit? A. I think that is right. In other words, the method followed by the plan provides for the payment in cash of the amount you stated and therefore limits them to that amount, yes, sir.

Q. The effect, Mr. Benjamin, of the Board's action in this respect would be to deprive the preferred stockholders of Engineers of any prospect of participating in the enterprise, its future earnings, and prospects. A. So far as this plan is concerned, yes.

Q. They will have no further interest in the going concern activities of Virginia, Gulf States, and El Paso? A. That is correct."

[55] See Streeter Brief, p. 9.

It is settled that the choice of appropriate method, from among available alternatives is left by the Commission to the Company, and here to a common stock management and that management exercises the dominant role in the presentation of a plan. See Streeter Brief, p. 140, n. 177.

the dissolution of the Company and a contemplated merger with its subsidiary, Virginia Electric and Power Company, would have been permissible.[56] This merger alternative, it should be noted, was dropped after ascertainment that a merger was not considered a dissolution within the meaning of the charter so that the statutory appraisal provisions of Delaware and Virginia might become applicable to the rights of the preferred stockholders.[57] Had this merger route been followed, the Central-Illinois contention as to the applicability of the charter involuntary liquidation preference to the instant situation and the attempted distinction of both courts below and Central-Illinois based upon the alleged termination of the enterprise, would of course have been unquestionably groundless and unmeritorious. The result cannot be different simply because the common stock management picks and chooses the steps and their sequence. This broad range of control which management (including the instant common stock management) possesses in the course of an 11(e) adjustment has been recognized in *S. E. C.* v. *Chenery*, 332 U. S. 194, 205, rehearing denied 332 U. S. 783 (1947), when this Court said:

> "* * * Added to these normal managerial powers, the *Commission pointed out that a holding company management obtains special powers in the course of a voluntary reorganization under §11(e) of the Holding Company Act. The management represents the stockholders in such a*

[56] It was not the Act which compelled the relinquishment by the preferred stockholders of their interests in the enterprise but the considered decision of the common stock management which denied the preferred the privilege of sharing the "risks", "penalties", "burdens" and the "hardships" of the enterprise with respect to which the Central-Illinois group so bitterly complains.

[57] Streeter Brief, pp. 10-14.

reorganization, initiates the proceeding, draws up and files the plan, and can file amendments thereto at any time. These additional powers may introduce conflicts between the management's normal interests and its responsibilities to the various classes of stockholders which it represents in the reorganization. Moreover, because of its representative status, the management has special opportunities to obtain advance information of the attitude of the Commission.

"*Drawing upon its experience, the Commission indicated that all these normal and special powers of the holding company management during the course of a § 11(e) reorganization placed in the management's command 'a formidable battery of devices that would enable it, if it should choose to use them selfishly, to affect in material degree the ultimate allocation of new securities among the various existing classes,* to influence the market for its own gain, and to manipulate or obstruct the reorganization required by the mandate of the statute.' * * *" (Italics ours.)

The various divestments[38] and the presentation of the '11(e) plan and its numerous amendments afforded the common stock management every opportunity, for the "battery of devices", placed in its command during the course of the instant simplification. By its action, the common stock management has excluded the preferred stockholders from the enterprise and terminated preferreds' (not common stock) interest in it through the device of retirement and acquired, for

[38] Of the seventeen companies many were small and inconsequential; several of the others were merged into one or more of the principal underlying subsidiaries. Puget Sound has been referred to elsewhere as an economic burden (R. 1608a). See Streeter Brief, p. 7.

the common, direct ownership[59] of the enterprise by the method of distribution to the common stockholders of the securities in the three underlying operating companies. On the dissolution of Engineers, in place of their previous indirect ownership,[60] the common stockholders obtained the entire enterprise lock, stock and barrel. Thus the Engineers enterprise continues, albeit in different form, through the media of three operating companies. In any event, as indicated in our Brief (pp. 138-9), the *Otis* rule applies equally to a "true" or "genuine" liquidation, assuming *arguendo* that that is the fact here.[61] This principle

---

[59] The record is clear that the objective of the plan was to eliminate the preferred stockholders from the enterprise in a manner which would permit the common stockholders to obtain direct and complete ownership of the three subsidiaries (R. 819a). In fact Engineers had virtually 100% common stock control of these three companies and the handful of Engineers common stockholders owning 72% of Engineers common stock continued in the same relative position in these three companies. The enterprise was passed on perfectly to the Engineers common stockholders. Nevertheless, Central-Illinois in its brief (p. 7, n. 3; p. 39, n. 1) erroneously implies that the Engineers common stockholders did not gain complete control of the three operating companies, *i. e.*, Virginia, Gulf States and El Paso, by using the expression that the "common stocks of each company represent only a minority of the total capitalization of each company".

[60] *American Power & Light Co.* v. *S. E. C.*, 329 U. S. 90, 116-7 (1946); *The North American Co. v. S. E. C.*, 327 U. S. 686, 709 (1946). Thus in the *North American* case, *supra*, this Court points out that a divestment or reorganization plan "may involve no more than a distribution of the securities among the existing shareholders of the holding company". Similarly in the *American Power & Light* case, *supra*, this Court indicates that a dissolution might "mean little more than the receipt of securities of the operating companies in lieu of their present shares" in the holding company and states: "Elimination of useless holding companies may be carried out by fair and equitable methods so as to destroy nothing of real value."

[61] At the time of his opinion in the instant case, the District Judge (Leahy) rejected this same argument that the plan involves a "true liquidation" as distinguished from a "fictitious

[Footnote continued on following page.]

of the *Otis* case was recently reaffirmed in *Schwabacher v. United States*, 334 U. S. 182, 199 (1948), where after noting that corporate charters and state laws "usually have been drawn on assumptions that time and experience have unsettled", the Court said:

> "* * * we have held * * * that, as a matter of federal law liquidation preferences provided by the charter do not apply. We said that, although the *company was in fact being liquidated* in compliance with an administrative order, the rights of the stockholders could be valued '*on the basis of a going business* and *not as though a liquidation was taking place*'. Consequently the liquidation preferences were only one factor in valuation rather than determinative of amounts payable [Citing *Otis & Co.*]" (Italics ours.)

Furthermore, while the *Otis* case renders charter provisions inapplicable to a broad and unlimited variety of methods of system adjustment in the achievement of the objectives of the Act (whether involving a liquidation or continuance of the enterprise), the *Schwa-*

[Footnote continued from preceding page]

liquidation" in the *Otis* case so that the charter provisions do apply. At that time he stated:

> "Although I have an entirely open mind on the question, *my present thought is that the rule of Otis & Co., applies also to a situation in which there is a true liquidation rather than a nominal or formal liquidation mainly because this is not a change in corporate form contemplated by the charter.* But counsel argue forcefully that Otis & Co. by its stress that the court was there concerned with a continuing enterprise impliedly holds that a different result would obtain in a true liquidation. I think that perhaps Otis & Co. was not intended to go that far. When a novel question is before a court, it frequently grabs any and all reasons in support of its conclusion. It does not follow, however, that any one of those facts is the *sine qua non* for the decision" (R. 288a, n. 2). (Italics ours.)

bacher case declares the corporate charter inoperative in the limited type of recapitalizations of a continuing nature, for which the Interstate Commerce Act expressly provides. It is clear that the *Schwabacher* case was not intended to limit the broad scope of the *Otis* rule, of inoperativeness of the charter provisions.

II. Concerning the Contention That an Alleged Long Series of Decisions Precludes Payment to the Preferred Stockholders of More Than $100 Per Share.

Before addressing ourselves to certain erroneous legal contentions made by the Central-Illinois Group, we consider it appropriate to urge that the *method* of liquidation employed by Engineers common stockholders, was in essence, a matter of form in view of the fact that the common stockholders came up with the same control of the three principal underlying operating subsidiaries as they had when Engineers was alive. The common stockholders freed themselves of the continued expenses of the holding company and eliminated the preferred as an act motivated by self interest.

Central-Illinois (Brief, p. 56) squarely urges that the senior security holders are entitled to a fair investment value of their interest only if they are "*forced*" to continue in the enterprise. Carried to its logical conclusion it is suggested that, assuming the application of the *Otis* case principles and applying the fair investment value doctrine to the liquidation of all intermediate holding companies in a system, except the top holding company, if, when and as the common stockholders decide to liquidate the last holding company in line, that the choice is theirs, either to pay the preferred $100 per share in cash or to con-

tinue the preferred in the enterprise; and in the latter event, albeit grudgingly, it is admitted that the preferred would have a right to a determination of the fair investment value of their interest. Stated bluntly Central-Illinois contends that under those circumstances the common have the choice of paying $100 in cash or giving the preferred, securities of a going concern value equivalent to the call price. We ask if this is equity? Can the common stockholders who control the reorganization process have the choice of methods and procedures and at their particular whim decide such a fundamental question? Furthermore, where as here, the common stockholders deliberately exclude the preferred from any possibility of participating in a continuation of the venture, *i. e.*, receiving a fair portion of the underlying securities, can the common be heard to complain if the Commission, completely cognizant of the common stockholders' decision, fixes the amount at a sum equal to the fair investment value of the preferred?

Throughout the Central-Illinois Brief (p. 59 ff.) the contention is made that the junior security holders have suffered deprivations of a far reaching character as the result of the liquidation of Engineers. These facts are not borne out by the record and are in effect, contrary to the findings of the Commission based on evidence in the record.[62] By way of illustration, the contention is made that huge losses were occasioned by the Act as a result of the divestment

---

[62] The Commission found that the "retirement of the preferred stock will be of immediate benefit to the common stockholders" and that the elimination of the prior charge "is highly beneficial to the common" and "hastens the day when the common will begin receiving dividend income" (R. 69a).

by Engineers of Puget Sound.[63] In the first place, the investment in Puget Sound was made solely by the common stockholders. The preferred had no vote in the matter. In the second place, before the Engineers simplication proceedings had gotten under way before the Commission, the common stockholders created a reserve of $35,000,000 for the Puget Sound loss which had long been recognized as having in reality occurred at least prior to registration by Engineers with the Commission. Thirdly, such assumed "losses" would have all been previously absorbed and reflected in the present values of the common and preferred stocks. (For a detailed presentation of the true facts regarding Puget Sound, this Court is respectfully referred to the Commission's Brief, p. 59 *et seq.*)

On page 62 in Central-Illinois Brief, the contention is made that the preferred stockholders seek payment "for their 'disappointed expectations'". The preferred stockholders had a right to believe that the directors of the company were acting for all stockholders and not merely for the common. Implicit in the contract between the preferred stockholders and the company was the thought that a plan propounded by a management would give proper consideration to the rights of the preferred as well as the common. In this regard the common stock management utterly failed in the discharge of their fiduciary duties. It was this fact that impelled Thomas W. Streeter, an independent director, to insist that the preferred's rights be

---

63 The alleged Puget Sound loss is discussed in the Streeter Brief, p. 120 ff. The nature of the proof of loss has been discussed *supra*.

protected. He knew, as did the Commission, that the preferred stockholders have a right or expectation to be treated like the common stockholders as far as participation in the underlying securities, was concerned. He felt it most unfair, as did the Commission, to leave to a common stock management the deliberate decision to exclude the preferred from participation in the underlying companies. One need not argue frustration or rescission. One need only to look at "what happened" to see where the real equities lie in this situation. In any event, as will be demonstrated below, the preferreds are not seeking compensation for "disappointed expectations", but the current going concern value of their contract rights in accordance with the principles of the *Otis* case.

The Central-Illinois suggestion that the Commission created a "new fictional doctrine * * * designed to free the Commission not only of the limitation stemming from the contractual arrangements of the parties, but also from the settled principles found in the 'fair and equitable' standard of 11(e) by the Commission and the Courts"[64] is a grave and ill-founded charge. The Commission created no new fiction but conscientiously followed the principles laid down by this Court in the *Otis* case. We ask the Court to compare the 60 page detailed carefully drawn opinion of the Commission (R. 25a-85a) in the instant case, representing the culmination of a 10 year background and the complete knowledge and familiarity of every fact relating to Engineers and its subsidiaries with the

[64] Central-Illinois Brief, pp. 64-5.

opinion of the District Court, referring as it did to the 4 items of colloquial equity.[65]

As we understand the Central-Illinois contentions, its argument amounts to something like this. The contract prevails and the preferred can only receive $100 per share, if the common stockholders want to pay cash and get a bargain by excluding the preferred and keeping all the benefits of the underlying securities upon the so-called liquidation of the top holding company. On the other hand if it is to the best interest of the common to permit the preferred to continue to have a stake in the enterprise, then and only then, can the preferred hope to receive its fair investment value. To state the contention is to supply the answer.

In addition to the foregoing general contentions, the Central-Illinois group also urges that the "rights of senior security holders to premium payments upon the forced liquidation of *their enterprise* or the retirement for *cash* of their securities, where the contractual provisions were deemed not applicable",[66] is to be determined by the doctrine of frustration of enterprise, which allegedly limits the preferred to $100 per share. Passing over the characterization of "premium", which is a favorite Central-Illinois method for begging the question, we hasten to agree that the *preferred stockholders have been forced out*

---

[65] As far as we know the instant case is the one and only experience that the District Judge had with the entire Engineers proceeding. During the course of the divestment proceeding over approximately ten years, the Commission has had occasion to investigate and study factual and technical data pertaining to the entire Engineers' system. During this same period, as a result of various applications made, the Commission has had further opportunity to scrutinize the affairs of the subsidiaries of the Company. This wealth of knowledge provides the Commission with the requisite background for its action in the instant case. See Streeter Brief, p. 8; R. 69-70, *supra*, p. 17 ff.

[66] Italics ours. Central-Illinois Brief, p. 51 ff.

of the enterprise and compelled to accept cash instead of the "risk" of participating in the securities of the underlying operating subsidiaries, by the deliberate maneuverings of the common stock management, as a consequence of which the poor unfortunate common alone have become "burdened" with the direct ownership of three flourishing companies. In support of its position, Central-Illinois recites quotations from cases and S. E. C. briefs almost all preceding this Court's opinion in the *Otis* case, surrounding them with superficially impressive and detailed descriptions of the deprivations and losses which have been inflicted *solely* upon the common, who made a final noble "sacrifice" by forcibly ejecting the preferred from sharing the future "risks" and "losses" flowing from participation in the three excellent principal underlying companies. Certainly, if the doctrine of frustration is realistic and not fictional, it is not applicable here. It is self-evident that the real living enterprise has not been frustrated. Engineers has been technically eliminated but the enterprise has actually been passed along to the common stockholders.

Contained in the discourse of Central-Illinois is a concept, which is not too clearly delineated—*i. e.*, the impact of the doctrine of frustration upon the *Otis* case and vice versa. Central-Illinois claims in this connection that the "rationale of the *Otis* case certainly does not justify the abrupt rejection of the principle of 'frustration'" and contends that in the *Otis* case, "'fairness and equity' permitted the preferred stockholders to receive the 'equitable equivalent' of their claim on earnings because they remained investors in a continuing enterprise".[67] Central-Illinois

[67] Central-Illinois Brief, p. 65.

then seeks to give new life to and inject the doctrine of frustration into the law of corporate reorganization by virtue of this Court's "Cf" citation of *New York Trust Co.* v. *Securities and Exchange Commission*, 131 F. (2d) 274 (C. C. A. 2, 1942), cert. den. 318 U. S. 786 (1943), and *In re Laclede Gas Light Co.*, 57 F. Supp. 997 (E. D. Mo. 1944), in the *Otis* case. Examination of the context of the *Otis* opinion, in which the reference is made, clearly reveals its support of the principle of inoperativeness of the charter provisions in the light of the *unforeseeability* of the legislative policy, as enunciated by this Court. The stress is clearly upon the aspect of *unforeseeability* which is discussed in both the *New York Trust Co.* and *Laclede* cases. Certainly this Court did not intend to measure the rights of the parties in a simplification by the doctrine of frustration, as Central-Illinois urges. Moreover, despite any contrary Central-Illinois reference, the doctrine of frustration has historically not been "part and parcel" of the "fair and equitable" standards in the law of reorganization, although the doctrine of frustration is part of the law of equity. This supposed "apt solution", which is urged, would always result in the elimination of senior securities at face amounts (regardless of their intrinsic value) and would make mockery of the *Otis* doctrine of valuation on a going concern basis. In other words, Central-Illinois, despite its denial, seeks to substitute the doctrine of frustration (under which the contract provisions are admittedly inapplicable) for the *Otis* principles of full priority and valuation "on a going concern basis", or "as though in a continuing enterprise", in the measurement of the rights of security holders upon a simplification under the Act, and thus

again laterally attacks the *Otis* case. The mandate of this Court is clear that in the simplification of a holding company system, "the rights of the stockholders of a solvent company are to be evaluated on the basis of a going business" and not determined by the application of the doctrine of frustration. Furthermore, if the Central-Illinois analysis is correct, then the *Otis* case applies only where a common stock management elects to permit the preferred to remain in the enterprise or participate in the underlying companies, and not where the common stock chooses to pay the preferred off in *cash*. Such a personal choice by the common stock management was never intended to have the effect of altering valuable rights of nonvoting preferred stockholders. Moreover, compensatory treatment must be accorded the security holders, whether the medium of payment be cash or securities.[68] Contrary to the Central-Illinois interpretation of the *Otis* case that " 'fairness and equity' permitted the preferred stockholders to receive the 'equitable equivalent' of their claim on earnings because they remained investors in a continuing enterprise", our reading of the *Otis* case disclosed that the question there was whether the common, not the preferred, should receive *any* participation or "be deprived of its possibility for future earnings". The conclusion that the common should receive a participation was clearly based upon a valuation of the stockholders' rights "as though in a continuing enterprise."[69] As heretofore noted, the situation is quite reversed. The common has kept the enterprise and attempts to justify payment to the preferred of $100

[68] See Streeter Brief, p. 129, n. 159.

[69] The phraseology "as though" implies the possibility or contingency of the nonexistence of the continuing enterprise.

on the theory of "frustration". The Central-Illinois effort to substitute the doctrine of frustration for the concept of valuation on a going concern basis, and the principle of full priority as incorporated in the fair and equitable standard in simplifications, must be rejected as unsound and contrary to the views of this Court in the *Otis* case.

The Central-Illinois group also claims that this doctrine of frustration "was consistently applied by the Commission and the Courts to limit preferred stockholders and bondholders to the face amount of their securities".[70] However, it cannot be denied that under the application of the fair and equitable standard, the Commission and the courts also have permitted the retirement of senior securities at amounts in *excess* of their face values.[71] Therefore, neither the

---

[70] Central-Illinois Brief, p. 55.

[71] For example, *The Western Public Service Co.*, H. C. A. R. Nos. 3175, 3230, 3245 (1942) and *El Paso Electric Co.* (Delaware), 8 S. E. C. 366 (1941), which were subsidiaries of Engineers; *Mississippi River Power Co.*, H. C. A. R. No. 5776 (1945); *The North American Co.*, H. C. A. R. No. 5796 (1945); *Minnesota Power and Light Co.*, H. C. A. R. No. 5850 (1945); *NY PA NJ Utilities Co.*, H. C. A. R. No. 5975 (1945); *Buffalo, Niagara and Eastern Power Corp.*, H. C. A. R. No. 6083 (1945); *Pennsylvania Power & Light Co.*, H. C. A. R. No. 6167 (1945); *Standard Gas and Electric Co.*, H. C. A. R. No. 6435 (1946), following the decision in *Standard Gas & Electric Co.*, 63 F. Supp. 876 (D. Del. 1945); *Community Gas & Power Co.*, H. C. A. R. No. 6436 (1946); *Scranton Spring-Brook Water Service Co.*, H. C. A. R. No. 6458 (1946); *Northern States Power Co.*, H. C. A. R. No. 6578 (1946); *Pennsylvania Edison Co.*, H. C. A. R. No. 6723 (1946); *Washington Railway & Electric Co.*, H. C. A. R. No. 7410 (1947), enforced June 16, 1947 (D. C. Dist. of Col.); *United Gas Corp.*, 58 F. Supp. 501 (D. Del. 1944); *Central & Southwest Utilities Co.*, 66 F. Supp. 690 (D. Del. 1945); *In re American and Foreign Power Company*, 80 F. Supp. 514 (D. Me., 1948); *Pennsylvania Edison Co.*, H. C. A. R. No. 8550 (1948).

Several cases have also pointed out that in some situations the

[Footnote continued on following page.]

face amount nor a premium should automatically be paid upon the retirement of a senior security. The factual situation determines the amount to be paid the security holder.[72] Thus in *Massachusetts Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. (2d) 424, 430 (C. C. A. 8, 1945), cert. den. 327 U. S. 795 (1946), the Court of Appeals for the Eighth Circuit pointed out:

> "Obviously, whether, upon retirement of outstanding bonds in the reorganization of an operating utility subsidiary, payment of principal, accrued interest, *and* redemption premiums is the equivalent of the bondholders' rights *depends upon the facts of each particular case.* The proper measure of such equivalence is for the determination of the Commission in the first instance, and its expert skill in appraising the facts to be considered must be accorded due weight by the court." (Italics ours.)[73]

Such approach permits the case by case evolution of the statutory standard.[74] In accordance with such

---

[Footnote continued from preceding page.]

Commission might find the equitable equivalent of the senior securities to be more than the face amount. See e. g. *Mass. Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. (2d) 424, 430 (C. C. A. 8, 1945); *In re Consolidated Electric & Gas Co.*, 55 F. Supp. 211, 216 (D. Del., 1944); *In re North Continent Utilities Corp.*, 54 F. Supp. 527, 530 (D. Del., 1944). The correctness of this view was also conceded by the District Court, as well as counsel for Central-Illinois (R. 223a-224a).

[72] *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194, 203, rehearing denied 332 U. S. 783 (1947).

[73] The same view was expressed by the District Court in its opinion (R. 288a) as well as in the course of the hearing (R. 223a-224a).

[74] The *Otis* case which rendered inoperative charter provisions and required the valuation of the security interest on a going concern basis undoubtedly accelerated the evolutionary process.

[Footnote continued on following page.]

evolutionary process, it is clear that an automatic rule for the retirement in all cases at $100 would be unsound and inequitable. *American Power & Light Co.*, H. C. A. R. No. 6176 (1945). In that case, where the so-called frustration cases were distinguished, the Commission, in line with the foregoing reasoning correctly rejected the automatic rule for the payment of the face amount stating:

> "* * * As a result of the experience gained through consideration of a large number of later cases, we are persuaded that an automatic rule of 100 in all debt retirement cases would produce inequitable results and that it is necessary to inquire into the circumstances of the particular case to determine whether the payment of 100 is fair and equitable" (H. C. A. R. No. 6176, p. 12).

Accordingly, the Commission's decision in the instant case was merely an extension of the above principle to the retirement of the preferred stock. Moreover, if by the frustration cases, the Commission is deemed to have announced an automatic rule denying the pay-

---

[Footnote continued from preceding page.]

In the evolution of the appropriate principles to achieve the statutory objectives, it is not to be unexpected that the Commission counsel and the Commission, like the courts, may waver at times and evidence a measure of inconsistency over the span of time. Furthermore, although the briefs submitted on behalf of the Commission are interesting in litigation such as this affecting the public interest, it is likely that its views have not always been wholly and completely accepted by the courts, even where the Commission's action has been sustained. Hence the statements in the briefs submitted on behalf of the Commission in past litigation must be weighed in the light of views enunciated by the courts.

Furthermore, it is noteworthy that in many of the earlier cases no proof was offered to the Commission with respect to the going concern value or the fair investment value of the preferred stocks. *American Power & Light Company*, H. C. A. R. No. 6176 (1945), p. 11.

ment of any amount in excess of stated value, then its decision in *American Power & Light Co.*, H. C. A. R. No. 6176 (1945), plan enforced (S. D. N. Y., 1945) constituted the announcement and application of a new principle based upon administrative experience under the Act, the extension of which, to the retirement of the preferred was made in the instant case. Even if the Commission has thus announced a new principle, such action is not forbidden and is entitled to the greatest weight, since it reflects the informed expert judgment of the Commission and is the product of administrative experience, appreciation of the complexities of the problem and a realization of statutory policies.[75] Since the parties represent *ownership* interests, there is no more reason for giving to the preferred stockholders merely the sums paid in by them, than there would be to restrict the common to the amounts they have contributed. Moreover, since in the event of rescission, there are no governing provisions in the charter, an appraisal was in order and, in line with the requirements of "strict priority" and "fairness and equity", the Commission properly found the preferred to be entitled to the investment value of their stock.

III. Concerning the Contentions as to Alleged Serious Constitutional Questions.

The spectre of the Fifth Amendment, which the Central-Illinois group originally raised has apparently disappeared.[76] Its lack of merit must have finally become obvious to the Central-Illinois group. In any

[75] *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194, 207, rehearing denied 332 U. S. 783 (1947).

[76] Central-Illinois Cross-Petition, p. 5.

event, such contention has been demonstrated to be unsound.[77] In place of the Fifth Amendment contention, the Central-Illinois group now urges an unconstitutional delegation of power because of the alleged absence of a standard to guide the Commission in the exercise of its power (presumably in violation of Article I of the constitution). The uncertainty of the fair and equitable standard which Central-Illinois suggests is imaginary and nonexistent. The fair and equitable standard under section 11(e) of the Act is as clearly ascertainable and definite as the standards under section 11(b)(2) which this Court has sustained. Accordingly, a ready answer to any contention of an unconstitutional delegation (as well as a supposed violation of the Fifth Amendment) is contained in the opinion of this Court in *American Power & Light Co.* v. *S. E. C.*, 329 U. S. 90, 104-5 (1946).

[77] Streeter Brief, p. 103 ff.

PART TWO.

The Valuation Process.

Throughout Part Two of its Brief, Central-Illinois seeks to bolster the District Court's erroneous valuation and technique and to reconcile the differences between the views of the courts below by reference to matters either outside the record, or to events subsequent not only to the decisions of the Commission and the two courts below, but subsequent to the actual consummation of the plan in the middle of 1947 (excepting the escrow arrangement). Presumably in accordance with the direction of the court below that the Commission ascertain and apportion earning power (R. 35) (which direction we have urged in our Brief is unwarranted), Central-Illinois counsel criticizes the Commission for its failure to make such ascertainment and apportionment, but passes over without comment the District Court's neglect to do so while arguing the need therefor and then proceeds to supply the supposed deficiency by his own "expert" evaluation. It is submitted that such Central-Illinois process of valuation can be no substitute for that made by the Commission. In order to focus attention on the valuation technique proposed by Central-Illinois, we shall first address ourselves to an over all discussion of the approach of the two courts below and their supplementation by Central-Illinois and will then comment briefly on the various erroneous legal contentions of Central-Illinois.

As noted elsewhere,[78] the District Court actually failed to value the three series of Engineers pre-

[78] Streeter Brief, p. 113.

ferreds. Although stating that the involuntary liquidation provisions did not govern, the learned District Judge fixed the value of the three series at $100 per share, which "happened" to be the involuntary liquidation price provided in the charter for all three series, even though they all carried different dividend rates. The District Court reached this conclusion by reference *inter alia*, to four colloquial equities heretofore discussed. It has been demonstrated that these elements were very carefully considered by the Commission and were entitled to far less weight than the current rights to earnings and assets which are entitled to primary emphasis.[79] Even the court below decided that the District Court had erroneously indulged in a "species" of valuation, which it decided the District Court could not do and by reason thereof remanded the proceedings to the Commission for redetermination on the question of valuation.

Central-Illinois has, in addition to attempting to support the District Court's opinion on valuation, another objective for the inclusion of the various financial data, computations, calculations, comparisons, etc., and that is to cast doubt on the so-called "predictions" made by Dr. Badger. The fact is disregarded that the District Court in May, 1947, specifically stated (R. 290a): "I accept Dr. Badger's values and, in the absence of a showing of changed circumstances, I shall assume that those values are applicable at the present time." Despite that statement, Central-Illinois consumes many pages and injects innumerable footnotes seeking to establish, by innuendo, that there have been such changes. If such changes have in fact occurred, they must, of necessity, have taken place subsequent to the consumma-

[79] Streeter Brief, p. 113, ff. 124.

tion of the plan in mid-1947. It is, of course, our view that no change of a material character has taken place. In this connection, it is again worthy of note that Central-Illinois not only does not seek a remand, but specifically opposes a remand to the Commission, and, in effect, asks this Court to substitute the District Court's valuation for the Commission's.

Recognizing, of necessity, the District Court's reference to the four colloquial equities as a basis for disapproving the Commission's detailed findings on value, to be hopelessly inadequate, Central-Illinois resorts to a great mass of statistics and calculations, hypothetical cases, newspaper articles, financial publications and current market prices of securities, much of the data being subsequent to the consummation of the plan in the middle of 1947, to suggest to the Court that $100 per share for the preferred stockholders in this case is "enough", and also to cast doubt on the validity of the valuations made by Dr. Badger and the Commission.

It is obvious to this Court that it is not possible to try this case over again in the briefs submitted, or in oral argument. It is extremely difficult to cull out from the Central-Illinois Brief the innumerable statements and conclusions which are both incompetent and irrelevant. It is our contention that the footnotes and so-called financial arguments based on matters occurring long subsequent to the Commission's decision, and many referring to events subsequent to the consummation of the plan, are entirely foreign to the issue before this Court. However, because of the great stress and the amount of space devoted to a consideration of these items by Central-Illinois, in its Brief, we felt impelled to show that the conclusions based upon such data, are entirely erroneous.

Before taking up in detail the various highlights of the Central-Illinois contentions regarding the general subject matter, it appears worthy of comment that counsel for Central-Illinois has freely given the Court the benefit of his "expert" opinion as to the relative merits of various preferred stocks, comparing them with Engineers and with other companies and engaging in the most widespread speculation leading to conclusions which are given an air of finality. A brief reference is made here and there to changes in the earnings of one or more of the underlying subsidiaries of Engineers with the implication that the poor common stockholders of Engineers had foisted upon them, the dregs of what was left, after the preferred took the cream from the top of the bottle. No effort is spared in the attempt to establish the "bad deal" the common got. It is suggested that the Commission and Dr. Badger failed to give any consideration to the future. Nearly everything that has happened in the last three years is literally dragged in, in an effort to show that the forecasts made by Dr. Badger were inaccurate.

Nowhere is it asserted in the Central-Illinois Brief that the three underlying operating subsidiaries, to wit, Virginia, Gulf States and El Paso, had retrogressed or changed so materially as to warrant a reopening of the instant proceedings on the ground of changed circumstances.[80] Dr. Badger testified in January, 1946, and a reasonable period was covered by his forecast (R. 2103a quoted *infra*, p. 55). As was said in *St. Louis Southwestern Ry. Co.* v. *Henwood*, 157 F. (2d) 337, 395 (C. C. A. 8, 1946), cert. den. 330 U. S. 836 (1947), rehearing den. 331 U. S. 870 (1947): "What were their 'prospective earnings' * * *, have

[80] Cf. *Insurance Group Committee* v. *Denver & R. G. W. R. Co.*, 329 U. S. 607 (1947).

now become "actualities". Three years have gone by and yet, outside of an isolated reference or two to the underlying subsidiaries, nowhere in the Central-Illinois Brief is it asserted that the evidence of past earnings and past financial condition, with the voluminous evidence bearing thereon before the Commission and considered by it, differed in any material respect, from the earnings and financial condition of the three underlying companies for the period 1946, 1947 and 1948. Central-Illinois makes no claim that the assets, earnings, earnings ratios, equities and general financial condition of each of the three underlying companies are anything but satisfactory and in accord with the expectations of Dr. Badger and the Commission. The major exception to this is the reference to the decline in earnings of Virginia and the explanation for this appears at p. 60, *infra*. There is nothing asserted in the record to question the predictions made by Dr. Badger (R. 2103a) to the effect that the three underlying operating companies should continue in future years to register progress along with other units in the industry. Dr. Badger's testimony in this regard appears to be particularly pertinent:

> "This estimate of 1946 earnings indicates a continuation of the improvement in earnings shown for the 1940-1945 period, as coverage, both in respect to over-all charges and Parent Company preferred dividends, is estimated to be higher in the year 1946 than in any of the years 1940 through 1945.
>
> "The public utility industry has for many years been characterized by stability and by a strong growth trend. There are no peculiar economic characteristics in respect to the territories served

by the present subsidiaries of Engineers Public Service Company which would indicate that the earnings trend of these companies would go counter to that of the industry. It is a reasonable assumption, therefore, that this Company should continue in future years to register progress along with other units in the industry" (R. 2103a).

It appears that changes in economic conditions and money rates, down to December, 1948, have no bearing upon the fair investment value of the preferreds as of a date subsequent to the consummation of the plan. The increase in the yields of the various classes of securities referred to has been of modest proportions, and we submit that interest rates still are at historically low levels. The argument by Central-Illinois that the "percentage" increase in the yields of these securities presages a fundamental increase in the level of interest rates, appears unfounded. In effect, the past increases represent normal fluctuations and are not a forerunner of any fundamental change in money market conditions and of long-term interest rates.

The Chairman of the Board of Governors of the Federal Reserve System made the following significant statement on October 26, 1948:

> "When you consider that the public debt is one and a half times all other debt in the country combined, it seems obvious to me that the market for the Government debt securities must be one where investors can deal at all times with confidence, I remain of the conviction that for the foreseeable future the support program should be continued. This conviction is shared by all

> of the Board of Governors, ten members of the Federal Open Market Committee, and by the Treasury. It is also supported by the weight of financial opinion in the country."[81]

The Government, to finance its expenditures successfully, must maintain stable market conditions for its securities. Because such confidence is predicated upon maintaining the existing support prices on long-term Government bonds, it is improbable that the general level of interest rates will increase further. In fact, it appears quite possible that, in the near future, interest rates and preferred stock yields will recede from present levels. Apparently Dr. Badger's predictions in early 1946 that there was no indication of a substantial fundamental change in respect to money rates in the reasonably foreseeable future was correct.

We believe it might be helpful to the Court to comment on certain of the portions of the Central-Illinois Brief wherein are references to data from which the Court is asked to conclude that the value found by the Commission as being fair, just and equitable for the preferred stockholders, "could not exceed $100." This material refers mostly to arguments based on statistical data relating to matters allegedly occurring subsequent to the District Court's decision, which virtually coincided with the consummation of the plan, *i. e.*, about the middle of 1947. Thus, reference is made in the Central-Illinois Brief (p. 12) to the Federal Reserve Bank Index of Utility Stock Prices for the period from June, 1946, to December, 1947. This reference is made in the

---

[81] As reported in *The Commercial and Financial Chronicle*, November 4, 1948, p. 40.

hope that this Court will assume that Engineers and its subsidiaries all followed the same trend and that there was, in effect, a 28 percent decline in "value" of underlying securities. This is the Central-Illinois "momentary market price" theory.

At page 14 of Central-Illinois Brief and elsewhere, as noted heretofore, a studied effort is made to persuade this Court that "market prices" chosen at a particularly haphazard time, were the *only* basis for the Commission's valuation. An attempt is made to imply something sinister in the Commission's considering market values of comparable listed securities as *one* of the many elements of an expert appraisal along with history of the enterprise assets, earnings, coverages, ratios, etc. Any expert or expert body that did not consider market value of listed securities as one of the elements of value, would not be doing its job correctly. Furthermore, the fact that market prices may fluctuate, does not in any way mean "intrinsic" or "economic" values, are to be redetermined on a "ticker tape" basis. That would not be "going concern" value. Actually, the changes in money rates have been comparatively insignificant and inconsequential, and the large cushion of investment value of the three series of preferred *above* their respective call prices as found by the Commission (R. 66a) should serve as an ample margin to take care of such changes.

On page 66 footnote 1 appears an example of Central-Illinois counsel giving their expert opinion as to the comparative investment values of many senior securities referred to in various Commission decisions. We are sure that the Commission is not unfamiliar with its own decisions and findings in the cases referred to, and must be deemed to have had them in

mind, in reaching their conclusion in the Engineers case.

Regarding comments appearing on pages 77 and 78, we have heretofore exposed the fallacy of the contention that temporary market prices, at a particularly haphazard moment, constituted the only element of value considered by the Commission. In footnote 1 on page 77, market price ranges of certain companies referred to by Dr. Badger in his report and taken from Moody's *Public Utilities, 1946* are presented to discredit the report of Dr. Badger and the Commission's findings. We think it may be fairly assumed that the Commission is no stranger to Moody's, and the reference thereto hardly justifies a complete reversal of the Commission's decision.

On page 81 and elsewhere the false assumption again appears "that the Engineers' preferreds had a value approximating the redemption prices based exclusively on market prices as of January 4, 1946 . . .," and the contention is made based upon hypothetical premises and "expert opinion" by counsel for Central-Illinois, that there was a failure to consider the element of "permanence" of the valuations as found by the Commission. The answer to these contentions would appear to lie in the complete absence of any showing by Central-Illinois that the three underlying operating companies have done other than prosper, during the last three years and amply justify Dr. Badger's predictions that he thought that these companies would progress as well as other units in the industry (R. 2103a).

At page 95, in footnote 1, Central-Illinois makes one of its few references to one of the underlying subsidiaries of Engineers. It then goes on to state that the common stockholders of Engineers received

1.45 share of Virginia common stock for each share of Engineers common owned. The footnote states:

> "* * * In 1946 * * * earnings available for Virginia's common stock were $5,027,740, equivalent to $1.71 per share of common (Moody's, Public Utilities 1948, p. 745). For the 12 months ended September 30, 1948, earnings available for Virginia's common were $4,062,427, equivalent to only $1.37 per share on the number of shares then outstanding, and additional shares are now being sold which will further dilute per share earnings (Moody's, Public Utilities, Current Supplement, Vol. 20, p. 1745)."

The unfairness of asking this Court to draw any conclusions from these isolated fragments from Moody's publication is clearly shown. What Central-Illinois does not state is what appears at page 9 of the Prospectus of Virginia Electric & Power Company dated November 15, 1948,[82] as follows:

> "It is estimated that the net sum of operating expenses and depreciation would have been reduced by $1,500,000 if the new Possum Point generating station had been in operation through the 12 months ended September 30, 1948. It is presently scheduled for operation in November or December, 1948."

It thus appears that by the company's own statement it can look forward to increased income of $1,500,000. It further illustrates the complete futility of this Court attempting to reach a decision on the matter of valuation, based upon fragmentary excerpts from periodicals and statistical documents, where, by ac-

---

[82] Virginia has recently filed with the Commission a registration statement under the Securities Act of 1933 with respect to the shares of common stock referred to in the said Prospectus.

cepting isolated statements, taken out of context, a completely misleading impression of the factual situation, may result.

At page 96, the conclusion is asserted by counsel for Central-Illinois that whether the valuation of the preferred is viewed in the light of the record *subsequent* to Engineers dissolution or in the light of the entire record prior, as well as subsequent, to dissolution the Commission's valuation cannot be justified. We challenge that statement.

In effect, what Central-Illinois is asking this Court to do is to fix $100 valuation based upon a mass of confused and irrelevant data, a good portion of which is allegedly based on happenings after the common forced the preferred out and compelled them to take $100, took away their stock certificates, cut off their dividends while the litigation was pending, and are now attempting to apply a completely false theory of the current market price approach, to keep the preferred from receiving the fair value of their interest as found by the Commission.

At page 97 (which is a continuation of footnote 1 on page 96) another "hardship" argument is advanced that because of Engineers dissolution, it lost the advantage of filing consolidated tax returns with one or more of its subsidiaries. The reason for the filing of consolidated returns was related to the excess profits tax that was in existence at that time (R. 837a). It also appears that after the repeal of the Excess Profits Tax Law (1945), the advantage of Engineers filing a consolidated return with Virginia was rather slight (R. 833a, 834a, 835a). At all events, aside from the fact that this question of consolidated returns must have been carefully considered by the common stock management, it was the voluntary action of the common to do this. Furthermore, there are a

number of tax *advantages* to the common stockholders, which the Central-Illinois brief does not mention.

First, in the Virginia Electric & Power Company prospectus of November 15, 1948, page 28, it appears that Virginia expects a *tax refund for overpayment of Federal taxes on income of $1,831,182.79.*[83] This anticipated refund is a tidy sum, of which the common are the "residual" owners, as a result of apparently a $5,000,000 tax refund claim of Engineers, as to which there was a "dearth of evidence" in the record (R. 56a).

Second, it is clear that there was a profit realized by Engineers on the sale of warrants of Gulf States Utilities Company, whereby the Engineers common stockholders acquired common stock of Gulf States at $11.50 a share. This transaction was consummated in June, 1947, with a resultant profit to Engineers of nearly $8,000,000,[84] which would normally have been subject to a capital gains tax of 25 percent, except for the following facts. In 1944 Engineers had sold its common stock holdings of Puget Sound Power & Light Company with a resultant capital (book) loss of approximately $33,000,000, a portion of which capital loss was used to set off against capital gain originating principally from the sale of El Paso Natural Gas stock so as to leave available a net capital-loss carry-over from 1944 of approximately $31,000,000 (R. 616a). The capital gain from the sale of Gulf States rights would of course also be offset against the Puget Sound loss. Thus Engineers did not pay any Federal income tax on the profit realized through the sale of the Gulf States warrants. This involved a

[83] Prospectus of Virginia Electric and Power Company, dated Nov. 15, 1948, p. 28.

[84] R. 988a-989a. See discussion, *supra*, at p. 24.

saving for the common stockholders of almost $2,000,000.

Third, there still remains of the Puget Sound capital loss, a balance of approximately $23,000,000 available for set-offs of capital gains, for the taxable year of 1949, since carry-forwards of capital losses are continued for 5 years after the capital loss was incurred.

It is a fact that Enginers still retains 162,612 shares of common stock of Virginia Electric & Power Company.[85] If this stock is disposed of prior to December 31, 1949, any profit realized above the tax cost would be subject to a capital gains tax of 25 percent, but this could be in turn offset against the capital loss of approximately $23,000,000 remaining from the Puget Sound transaction, a further tax advantage for the common stockholders.

At page 98 of the Central-Illinois Brief, the following statement appears:

> "It is evident that if appropriate account is taken merely of the changes which have already occurred, even on the Commission's valuation formula the preferred stockholders could not be found entitled to more than $100 per share."

This statement is obviously incorrect and is predicated only upon opinion of counsel, based upon the so-called statistics.

At page 101 appears a rather bizarre contention, predicated upon using the total dividends normally payable to the preferred and employing this as a numerator and taking the *earnings* of Virginia, El Paso and Gulf States for 1947 as the denominator, and then allocating, on the basis of this fraction, 20

[85] H. C. A. R. No. 8631 (1948).

percent of the total assets, to the preferred stockholders, in payment of their claim. Magnanimously the Central-Illinois brief suggests awarding an additional 5 percent for the preferred "loss of position" making a total of 25 percent for the preferred. It is concluded from this that the preferred current cash value approximated $70 per share. If this "reasoning" were to be followed, it is apparent that the worse position a holding company was in, the higher percentage, up to 100, would the preferred get. In other words, if the earnings were high and the preferred dividend requirements are low, it would amount to the common stockholders paying the preferred out, with such percentage of the earnings of the system, as the annual dividend requirements of the preferred, bore to such earnings. We cannot recognize that this contention is advanced seriously. In addition to the utterly ridiculous character of it, it completely overlooks the fact of the preferred's priority. The same conclusions may be addresesd to the equally specious calculation in footnote 3 appearing at pages 101-102 of the Central-Illinois brief. There, applying the same 25 percent figure to the total estimated market value of the underlying securities, Central-Illinois concludes that the preferred would only be worth approximately $66 each. Such a calculation merits no reply.

On page 106, it is stated that the District Court "appraised" the proposed payment to the preferred stockholders both "intra the Act" and "ex the Act." How, we ask, did the District Court arrive at the amount of $100? What "method of appraisal" was applied to reach a result giving all three series of preferred stock having different interests rates the same amount, to wit, $100 per share? What equity

is there in that? What factors were decisive? How did he appraise the preferred *ex* the Act and *intra* the Act? Baldly stated, the District Court Judge felt that $100 was "enough". It is clear that his "valuation", regardless of the expressions in his opinion, went no deeper than that.

At page 112 is another "calculation" by counsel for the Central-Illinois Company predicated upon the assumption that in the supposed situation the senior securities might receive an amount which might wipe out the equity of common stockholders. In the suppositious case, it is suggested that the common stockholders would propose a plan to eliminate themselves entirely from either the enterprise or any equity therein. This is, of course, absurd. The hypothetical case suggests one in which the *Otis* principle would unquestionably be applied both by the common stockholders and by the Commission and the courts. It must never be overlooked that the decision as to the plan and its method of effectuation, rest entirely with the common stockholders.

At pages 118 and 119 there appear many statistics concerning the El Paso Natural Gas Company and the divestment of Engineers interest in this company is characterized as an additional hardship. The Commission in its main brief, at p. 63, *et seq.* have completely answered this erroneous contention.

There are other portions of Central-Illinois's Brief in which its counsel engage in calculations and hypothetical conclusions, interpersed freely with opinions of investment values. It is clear that all of the financial data are designed to discredit the Commission's valuation or point in the direction of alleged changed circumstances, although it is nowhere asserted that the change is so radical as to require a reopening.

The references to changed money rates and the rise and decline of stock market prices, appear to lack merit in the light of the facts considered by the Commission and the corroboration to be found in the events of the three years following the Commission's decision, as evidenced by complete failure on the part of Central-Illinois to adduce any contention to the contrary. Money rates may go up and they may go down. Market prices have been up and have gone down and may go up again. Both may fluctuate either one way or the other, but nothing has happened in the past three years to shake in the slightest degree, the soundness of the Commission's conclusions, on the problem of valuation.

IV. Concerning the contention as to the Commission's alleged failure to value on the basis of a continuing enterprise.

As demonstrated above, the various factual hypotheses upon which Central-Illinois bases its contentions are erroneous. Moreover, the principles and techniques of valuation which it urges are equally inapplicable and incorrect. Rather than restate at length the applicable principles and methods, we respectfully refer this Court to our original Brief (p. 105 ff.). However, we cannot let pass unnoticed, several erroneous contentions, but do not, by our silence, as to others, intend an acceptance of the Central-Illinois views.

A. Central-Illinois criticism that the Commission's determination of investment value merely represented momentary "transient market values"[86] is a complete distortion of the record. As shown above (p. 4),

[86] Central-Illinois Brief, p. 73 ff.

a variety of factors such as earning power, dividend record, history of company, asset coverage, etc., all of which criteria provide a proper basis of valuation,[87] were considered. The absence of definition[88] (although to be sure the Commission had Dr. Badger's definition before it) is inconsequential as long as all the requisite elements of value are considered, as they were by the Commission. There is little in the label. In short, the content or its characteristics, and not the label, are important. Furthermore, reference to *Schwabacher* v. *U. S.*, 334 U. S. 182 (1948), which involves an analogous problem of valuation, also discloses the use of a variety of combinations of the similar phrases by this Court, *i. e.*, "the present intrinsic values", "current worth", "present intrinsic or market value", "current values", "intrinsic or market values" and "intrinsic value". It is clear from the *Schwabacher* case that this Court measured the "intrinsic value" in terms of the "stock's past yield, present market value, and future prospects" (334 U. S. 200), all of which were considered by the Commission in the instant case. Consequently the Central-Illinois contention is merely an "exercise in semantics" and is wholly devoid of merit.

B. Central-Illinois also seeks to show the Commission's variance from the doctrine of equitable equivalents by an alleged measurement of preferred stockholders' rights by use of "momentary market price".[89] This contention is obviously lacking in merit, as the Commission made its valuation on the basis of appro-

---

[87] *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 526 (1941).

[88] See definition of fair investment value, by Dr. Badger, *supra*, p. 4.

[89] Central-Illinois Brief, p. 86 ff.

priate and relevant economic data, as indicated above, and did not rely primarily upon the isolated so-called "transient values" as Central-Illinois contends. The facts speak for themselves, but not as stated by Central-Illinois.

Citing the *DuBois*[90] and *Group of Institutional Investors*[91] cases, Ceneral-Illinois makes this interesting observation:

> "It is fundamental that in valuation for reorganization purposes earning power and other relevant economic factors must be calculated *prospectively* on a normal going-concern basis, with due regard of the past" (Central-Illinois Brief, p. 86).

Then Central-Illinois stresses the phrase "investment value" as employed by this Court as connoting "values on a long range basis of both classes of stockholders predicated upon their relative rights to participate in the prospective earnings of the enterprise". The record clearly indicates that Dr. Badger did consider and prognosticate on the future of the three underlying operating companies of Engineers (R. 2103a). Furthermore, it is clear that the common insisted upon having distributed to it all of the stock in these three underlying companies. It is our position that consideration was given to prospective earnings of the three subsidiaries by Dr. Badger. On the other hand, in view of the determination of the common stockholders to secure the advantage of these three operating companies for themselves, it is quite obvious

[90] *Consolidated Rock Products Co. v. DuBois*, 312 U. S. 510 (1941).

[91] *Group of Institutional Investors v. Chicago, Milwaukee, St. P. & P. R. R. Co.*, 318 U. S. 523 (1943).

that they were satisfied that any long range forecast of prospective earnings was surplusage.

In place of the so-called "values on a long range basis" and prospective "earning power", as urged by Central-Illinois, the District Court verbalizes on the "colloquial" equities, or various nonvaluation criteria, the error of which we have already shown.[92] Yet at the same time, Central-Illinois apparently finds no fault with the Circuit Court's instruction "to ascertain the future earning power of the system" and "to apportion earning power between the preferreds and common based upon their respective claims to income" (R. 35). As the Circuit Court relies upon the same cases cited by Central-Illinois, the only error which Central-Illinois finds in the opinion of the court below is the direction for remand, implying in effect, that the two courts had applied the same principles of valuation. At this point, Central-Illinois counsel finds himself figuratively standing astride two horses pulling in diametrically opposite directions. Central-Illinois counsel provide an "apt solution" for this predicament by the introduction of their own "expert valuation" to overcome the divergent tugs. Thus a simple reconciliation is attempted between the two opinions below by means of numerous references to statistical data and arguments of counsel flowing therefrom, to show that the preferred could not get more than $100 in any event. Such expedient cannot sustain the basically inconsistent position that Central-Illinois has taken, even after the vain attempt to augment the District Court's findings. We contend as previously set forth, that both courts below erred. The standard of "colloquial equity", as enunciated by

[92] Streeter Brief, p. 113 ff.

the District Court, and as approved by the court below *sub nomine* "substantial equities", substitutes nebulous nonvaluation criteria for definite contract rights of security holders and results in a shift in emphasis, from such primary factors as current rights to earnings and assets, as proclaimed in the *Otis* and *Schabacker* cases.[93] Furthermore, the criticism of the court below, levelled at the Commission, for its failure to give substantial consideration to future earning power and ascertain and apportion it between the preferreds and the common (R. 35) is unwarranted, for the reasons as pointed out in our Brief.[94] The instant situation is materially different from that in the *Otis, DuBois* and *Group of Institutional Investors* cases and, as recognized in the *DuBois* case, the *facts* of each case determine the extent and method of inquiry necessary for valuation, based upon earning capacity. In the instant case, where past, present and estimated earnings (R. 1826a) were considered, and careful study discloses an amplitude of earnings coverage for the preferred, to which the common's claims are subordinate, and the available cash is not required for use to meet the dividend and interest requirements of flourishing operating subsidiaries (there being no interest or dividend arrearages), a hypothetical projection of earning capacity, far into the future, it is urged, is unnecessary and, in any event, speculative. As valuation for simplification purposes requires an appraisal of many factors which cannot be reduced to a fixed formula and entails a prediction of future events, "an estimate, as distinguished from mathe-

[93] Streeter Brief, p. 113 ff., 124.
[94] Streeter Brief, p. 132 ff.

matical certitude, is all that can be made". *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co.*, 318 U. S. 523, 542 (1943).

Central-Illinois also cites a series of cases (at pp. 89-91) suggesting that the Commission found valuation for the preferred in the instant case, based only on market prices, despite the fact that even in the matters quoted in the footnote the Commission has expressly negated any such policy. Those calculations of the preferreds' claims on the basis of "market prices" are irrelevant, as that criterion does not in fact, reflect the valuation technique used by the Commission. Furthermore, it should be noted that the various cases cited by Central-Illinois, in which the preferred claims were measured against future earning power, are to be distinguished from the instant case since they involve situations similar to the *Otis*, *DuBois* and *Group of Institutional Investors* cases.[95] Likewise, *Georgia Power & Light Co.*, H. C. A. R. No. 5568 (1945), enforced Civil Action No. 133 (M. D. Ga., 1945), cited by Central-Illinois (at pp. 93-4), is also similar to the *Otis* case in that dividend arrearages of the preferred, there involved, had to be valued, in order to insure fair and equitable treatment to the preferred. The fact that the *Georgia Power & Light Co.* case involved a projection of earnings for the purpose of valuing the preferred dividend arrearages is completely disregarded by Central-Illinois. Moreover, reference to the opinion discloses that no apportionment of the earning capacity was made. Under such circumstances the valuation technique in the two cases is reconcilable, since in both cases no apportionment was made, while a forecast was required in the

[95] See discussion, Streeter Brief, pp. 132-4.

Georgia Power & Light Co. case because of the dividend arrearages. In the instant case as there were no dividend arrearages and because the Commission and the common stockholders were, no doubt, completely satisfied with the future prospects of the three operating subsidiaries, no such claim was made either on behalf of Engineers or the common stockholders. Moreover, *in National Power & Light Company*, H. C. A. R. No. 8445 (1948), and *Pennsylvania Edison Co.*, H. C. A. R. No. 8550 (1948), short term forecast of future earnings (3-4 years) was made for certain specific purposes (*i. e.*, ability to meet dividend requirements, etc.), but in neither was any apportionment of earning capacity necessary. Likewise in the instant case, the Badger forecast was supplemented by a prediction as to the future earnings course of the underlying companies. There is virtually nothing in the Central-Illinois Brief, except references to the decline in market price of securities, changed money rates, etc., which in any way suggests that Dr. Badger's predictions were unjustified.[96] It should also be noted that although the equitable equivalent must be received regardless of the type of distribution—cash or kind—the valuation technique may be affected by such factors, either separately or combined, *i. e.*, the type of distribution, the existence of dividend arrearages, nature of the simplification (formation of a new company, recapitalization of the old, dissolution), the integrity and practicability of the new capital structure, and the propriety of junior security participation. As

[96] The Central-Illinois reference (Brief, p. 95, n. 1) to decline in earnings of Virginia has been answered at p. 60, *supra*. We, of course, believe that all such data, subsequent to the consummation of the plan are entirely irrelevant.

indicated above, the facts determine the nature and method of the valuation process. For the situation at hand, the requisite criteria, such as actual and estimated earning (with a prediction as to the future), dividend and earning records, asset coverage, etc. provided a proper basis for the valuation by the Commission.

C. We have already[97] demonstrated lack of merit in the criticism of the court below, which is also urged by Central-Illinois,[98] that the Commission allegedly adopted inconsistent techniques in valuing the preferred "*ex* the Act" and the common "*intra* the Act". In passing, however, it is appropriate to note our disagreement with the Central-Illinois assertion that the phrase "residual" claimants implies a "liquidation". On the contrary, an ordinary meaning of the word "residual" is "that which remains after subtraction".[99] In fact, that is the nature of the reciprocal valuation applied in the instant case. In other words, the Commission valued the preferreds on a going concern basis, and subtracted that value from the total enterprise (of which the preferreds and the common were the two claimants) with the result that the remainder went to the residual claimants, the common, as demanded by them. This reciprocal valuation which involved a dollar value for the preferred and the residuum for the common stock, results in findings of value for both the preferred and the common. Consequently, the criticism of the court below as to the

---

97 Streeter Brief, p. 128 ff.

98 Central-Illinois Brief, p. 103 ff.

99 Funk & Wagnalls *New Standard Dictionary of the English Language* (1935), vol. 2, p. 2092.

absence of a finding of value for the common is without merit.[100]

The Commission, in determining the participation of the preferred, under the fair and equitable standard, on the basis of its intrinsic value did not ignore the rights of the common. It viewed the common as a residual security by its nature, in accordance with the terms of the contract, which created the priorities and made its rights subordinate. Despite the charge of the District Court in which Central-Illinois has joined,[101] that the Commission was "dealing cards off the top of a deck" (R. 291a), the Commission merely applied the doctrine of full priority, as incorporated in the fair and equitable standard.[102] Moreover, the Commission had not overlooked the rights of the common, but found the plan of immediate benefit to the common and fair to them (R. 69a).

V. Concerning the Contention as to Alleged Repugnancy of the Fair Investment Value, to the Strict Priority Principle and the Fair and Equitable Standard.

We have pointed out above (*supra*, p. 26) the fallacy of the Central-Illinois contention (Brief, p. 108) that the bankruptcy and equity receivership reorganization precedents do not support payments to senior security holders "in excess of their contract claims". First, no excess over the preferred contract

---

[100] Streeter Brief, pp. 130-132.

In this connection Central-Illinois again finds itself in the unhappy plight of supporting the inconsistent views of both courts below: the Circuit Court criticizing the Commission for its failure to make a finding of value for the common and the District Court finding no fault on this score with the Commission's action. Central-Illinois sidesteps the issue.

[101] Central-Illinois Brief, p. 105.

[102] *Otis & Co. v. S. E. C.*, 323 U. S. 624 (1945).

claim is sought, but the equitable equivalent thereof. Second, bankruptcy or equity receiverships mature liquidation preferences, which consequently become the conclusive measure of the security holders rights, while in the instant case, the simplification did *not* mature the preferreds' claim and hence required the ascertainment of the amount to be received by the preferred, by a valuation of the rights surrendered, on a going concern basis. Thus, in the *Otis* case, this Court points out that the fair and equitable standard of section 11(e) incorporates the principle of full priority, in the treatment to be accorded various classes of security interests, and then indicates the need to recognize prior rights to earnings and assets in the following language:

> "* * * When by contract as evidenced by charter provisions *one class of stockholders is superior to another in its claim against earnings or assets that superior position must be recognized* by courts or agencies which deal with the earnings or assets of such a company. Fairness and equity require this conclusion. * * * This is the rule applied by the Commission in the simplification of corporate structure. The Commission recognizes and applies the doctrine of full priority by giving value to the rights of the preferred *in a going concern rather than as if by sale and distribution* * * *" (323 U. S. 634-5). (Italics ours.)

That superior position of the preferred must, under the mandate of the *Otis* case, be recognized on a going concern basis, not as urged by Central-Illinois, on a "liquidation" basis.

The investment value doctrine, as previously indicated,[103] connotes no fictional device, but signifies the

[103] Streeter Brief, p. 136.

measure of the bundle of rights surrendered—the end result of the valuation process, reflecting earning power, market history, dividend record, asset and earning coverages, priorities and other revelant factors,[104] all of which were considered by the Commission, and not "momentary peak market prices" as Central-Illinois implies. The reciprocal valuation protects both the common and the preferred. An over all dollar valuation or a dollar valuation for the common, suggested by Central-Illinois (Cf. Brief, p. 113) is not required and would merely create an illusion of certainty where none exists.[105]

VI. Concerning the Contention as to the Alleged Imposition of Supposed Additional Losses.

A. "Frustration" v. "Appropriation".

Baldly stated, Central-Illinois contends that the "deprivation" sustained by the prefered stockholders upon the compulsory retirement of their stock, by the payment of $100 per share, is not compensable and that the common stockholders did not "necessarily" become the beneficiaries thereof. In other words, the argument is that the contract has been frustrated by governmental action and therefore the preferred stockholders are not to be compensated for the valuable

---

[104] *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 526 (1941).

[105] *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 486-8 (1943); *Group of Institutional Investors* v. *Chicago, Milwaukee, So. P. & P. R. R. Co.*, 318 U. S. 523, 564-566 (1943). In the latter case this Court in referring to the issue of compensatory treatment, comments as follows: "A decision on that issue involves a consideration of the numerous *investment features* of the old and new securities and a financial analysis of many factors" (318 U. S. 571). (Italics ours.)

rights surrendered. In support of this contention, Central-Illinois cites *U. S. ex rel. T. V. A. v. Powelson*, 319 U. S. 266 (1943). At the outset, it must be observed that the elimination of the preferred results from the conscious deliberate decision of the common stock management, and need not have occured, despite the Act, but for that decision. It cannot be asserted that the retirement of the preferred was occasioned *solely* by the sovereign act of the government. Clearly distinguishable from the instant situation is the *Powelson* case, which involves the exercise of the power of eminent domain by the T. V. A. and is wholly unrelated to the problem of respective rights of security holders on simplification under the Act. Thus in *The North American Co. v. S. E. C.*, 133 F. (2d) 148, 154 (C. C. A. 2, 1943), aff'd 327 U. S. 686 (1946), it was pointed out that "Compelling the holding company to dispose of its securities is not the same as condemning private property for public use without paying just compensation". Moreover, the *Powelson* case clearly recognizes that compensation must be made for the appropriation of a "going enterprise" (319 U. S. 282). It is also clear that the preferred stockholders must receive "just compensation" for their interest, or their equitable equivalents in accordance with the due process requirements.[106] Despite the Central-Illinois claim, the Commission has not confused " 'frustration with appropriation' ". On the contrary, as pointed out above (p. 43 ff.) the Commission must have recognized the difference and correctly refused to apply the doctrine of frustration, in the determination of the rights of security holders in a simplification under the Act. To have limited the

[106] *American Power & Light Company v. S. E. C.*, 329 U. S. 90 (1946); *The North American Company v. S. E. C.*, 327 U. S. 686 (1946).

preferred stockholders to the involuntary liquidation amount on the Central-Illinois theory, would have resulted in an "*appropriation*" of their rights for the benefit of the *common*, without compensation. Such treatment is forbidden by the principles of *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510 (1941), that full compensatory provision must be made for the bundle of rights surrendered. As stated by this Court:

> "* * * If they [creditors] receive less than that full compensatory treatment, some of their property rights will be *appropriated* for the benefit of stockholders without compensation. That is not permissible. The plan then comes within judicial denunciation because it does not recognize the creditors' 'equitable rights to be preferred to stockholders against the full value of all property belonging to the debtor corporation'." (312 U. S. 529).[107]

"In concrete terms", we contend and the Commission has held that the preferreds are entitled to the current going concern value of the bundle of rights (including *inter alia*, the prior rights to earnings) surrendered, namely, an amount at least equal to the redemption prices, and that to the extent that they receive less, the common will have profited.

---

[107] *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co.*, 318 U. S. 523, 570 (1943). In the latter case this pertinent observation is made: "Unless that principle [of full priority] is respected, there will be serious invasions of the rights of senior claimants to the benefit of junior interests. The property of one group will be subtly appropriated to pay the claims of another while lip service is rendered the principles of priority."

B. Alleged "Frivolous Claim" of "Economic Benefit to the Common Stockholders".

The contention as to the absence of "economic benefit to the common" is not borne out by the record. It has been indicated elsewhere that the earnings and assets of Engineers had increased during the process of divestment (*supra*, at p. 20). It was also pointed out how the Puget Sound burden was eliminated, and how Engineers used a portion of its assets to acquire Virginia Public Service Co., merging it into Virginia and thereby materially increasing its underlying assets and earnings. Tax benefits have flowed to the common stockholders in the form of capital appreciation taxable at 25%, instead of ordinary income taxable at higher rates. *The common have obtained the direct ownership of three flourishing underlying operating companies by their exclusion of the preferreds.* The warrant program, erroneously labeled as a "special assessment", has provided the common stockholders with a benefit of $3-4 per share and an increase in earnings of $1.08 per ashare. Pertinent to the elimination of the preferred from the enterprise, is the following observation of the Commission:

> "* * * Under the circumstances the elimination of this prior charge is highly beneficial to the common. Moreover, in so far as the retirement of the preferred is a step toward bringing the Engineers system into complaince with the Act, it *hastens the day when the common will begin receiving dividend income*" (R. 69a). (Italics ours.)

It is no wonder that the Commission found, and rightly so, that the elimination of the preferred stock was of immediate benefit to the common (R. 69a). The characterization as "frivolous" is but a resort to adjective instead of fact.

PART THREE.

The Function of the Section 11(e) Court and the Direction for Remand.

VII. As to Contentions Whether the District Court Exceeded Its Power in Rejecting the Commission's Determination of Fairness.

Point I of the Streeter brief not only establishes the fallacy of the Central-Illinois contention on this score, but also clearly demonstrates the error in the views of the two courts below as to the power of the 11(e) court, to ignore the Commission's findings and determination of fairness and value, even though based upon substantial evidence and possessing warrant in the law and in the record. In that connection, we have shown that the District Court does not have the power to reject such findings and determination of the Commission, on the basis of its own discretionary weighing of so-called colloquial equities and in disregard of the doctrines of substantial evidence and administrative finality. That concept, as to the limitation upon the scope of review by the 11(e) court in passing upon the fairness of a plan, is borne out by the provisions of the Act, is consistent with the legislative history and analogous precedents in the law of reorganizations (Streeter Brief, p. 29 ff.), recognizes the correlation between sections 11(e) and 24(a) as alternate avenues of reviews (*Id.*, p. 68 ff.) and accords with the preponderant judicial authorities in deciding the issue (*Id.*, p. 77 ff.) under the Act and with decisional and statutory trends in administrative law (*Id.*, p. 90 ff.). The course of that discussion

indicates the lack of merit in the respondent's present contention. Rather than repeat our argument, we shall comment on various erroneous and unmeritorious contentions of Central-Illinois.

1. The Central-Illinois group formerly asserted that "the 'essence of the holdings of both Courts below was that the Commission's *conclusions* are without substantial evidentiary or legal basis; or, stated, in the restrictive terms for which Petitioners contend, that they 'lack rational or statutory foundation' ".[108] Now at last Central-Illinois counsel admits that the court below refused to apply the doctrines of administrative finality and substantial evidence (p. 124) (which refusal, we maintain is erroneous), and contends, nevertheless, that "even under the most restrictive view of the jurisdiction of the District Court in these matters, its judgment * * * was correct and should be affirmed since the conclusion of the Commission" as to the fairness of the plan was without "rational and statutory foundation".[109] In the first place, this contention is clearly contrary to the reasoning and approach of the District Court. No elaborate discussion is required to demonstrate that the District Court erroneously ignored the Commission's findings of fairness, mistakenly substituted its own determination for that of the Commission, in disregard of the doctrines of administrative finality and substantial evidence, made its own "valuation" of $100 per share of the preferred stock, amended the plan to that extent and enforced the plan, as so amended by it.[110] In fact, to the extent that the District Court substituted its valuation for that of

---

[108] See Central-Illinois Brief in Opposition to Petitions, p. 9.
[109] Central-Illinois Brief, p. 125.
[110] Streeter Brief, p. 76 ff.; p. 154 ff.

the Commission and enforced the plan as amended by it; the court below concluded that the District Court erred (R. 39), with which conclusion we agree, assuming, *arguendo*, that the District Court's disapproval of the plan for unfairness was correct.[111] In the second place, even further assuming *arguendo* that the District Court had tested the Commission's conclusion of fairness, on the basis of the doctrines of substantial evidence and administrative finality, and had determined that the Commission's conclusion of fairness lacked rational and statutory foundation or that the Commission had plainly abused its discretion (both of which we dispute), then it would have been the duty of the District Court to reject the Commission's conclusion or reverse its judgment and remand to the Commission for a fresh determination. But in that event, the District Court, should not, as it did, enter its own judgment as to the fairness of the payment of only $100 per share to the preferred stockholders of all three series (R. 288a, n. 2, 320a). In effect, Central-Illinois seeks to distort the application of the doctrine of administrative finality by seeking to obtain the affirmance of the District Court's "independent" valuation of the preferreds' participation at the same time resisting any remand to the Commission. We have shown in our brief,[112] and the record clearly demonstrates that the Commission's findings and conclusion should have been sustained, since based upon substantial evidence and possessing rational and statutory foundation. In fact, even under the approach of the court below, the Commission's determination was not arbitrary or capricious

[111] This assumption we have challenged in Point III of our brief and demonstrated it to be erroneous.

[112] Streeter Brief, Point III-C, p. 142 ff.

and should have been upheld. Lastly, underlying this contention of the Central-Illinois group are statements that the District Court, in reaching its determination of unfairness "was not required to disturb, and did not disturb, any factual finding of the Commission" and that the "District Court differed with the Commission's ultimate conclusion, based upon the admitted and undisputed facts as set forth in the Court's opinion and findings".[113] These Central-Illinois statements, like the former assertions that the conflict between the District Court and the Commission relates primarily to legal conclusions and not the factual findings of the Commission[114] clearly contradict the District Court's definite rejection of "such findings and conclusions of the Commission [that] relate to or bear upon the payments of the premiums or are inconsistent with the Opinion dated May 15, 1947 or with the findings and conclusions of law filed with said Order" (R. 293a-294a).[115] Likewise the Central-Illinois effort to attribute accuracy to "the facts recited in the District Court's opinion or in its findings"[116] by virtue of the alleged absence of attack thereon is unavailing. The record is clear that Central-Illinois counsel at the suggestion of the District Court prepared the findings allegedly based upon the record

---

[113] Central-Illinois Brief, p. 125.

[114] Central-Illinois Brief in Opposition to Petitions, p. 9.

[115] It can hardly be fairly claimed that the District Court's findings Nos. 36-38 (R. 307a-308a) are consistent with the Commission's findings (R. 69a-72a). The failure to recognize the conflict between the District Court's and Commission's findings is surprising as Central-Illinois counsel apparently prepared the findings for the District Judge (R. 377a, 385a).

[116] Central-Illinois Brief, p. 125. In fact, Central-Illinois counsel even opposed a hearing on the proposed findings (to no avail) as "it would be a rehearing of the entire case" and pointed out that the District Judge could satisfy himself on the basis of his annotation of the findings to the record (R. 368a).

before the Commission for signature by the District Judge (R. 368a). Some of these findings are consistent with and others inconsistent with the Commission's findings. One glaring factual difference[117] between

[117] Central-Illinois at several points seeks to cloak with finality certain allegedly concurrent findings of the two courts below on the basis of the principle recently reaffirmed in *Comstock v. Institutional Investors*, 335 U. S. 211, 214 (1948) that a "seasoned and wise rule of this Court makes concurrent findings of two courts below final here in the absence of very exceptional showing of error". It is obvious that the instant situation is far different from that in the *Comstock* case as is clearly revealed in the opening recital of this Court's opinion in that case quoted as follows:

> "The issues of facts, contested in a long hearing, are not before us for review. Petitioner assured us, in support of the petition for certiorari here, that 'there is no factual controversy before this Court' and 'we assume the findings of the District Court. Our challenge is directed only to the legal import of these unchallenged facts.'"

Examination of the opinion in the *Comstock* case discloses unchallenged findings as to a basic issue of good faith which had never been raised before the Interstate Commerce Commission (such procedure of bypassing the Commission, according to this Court, is not to be encouraged).

In the instant case, on the basis of the rule as to concurrent findings, Central-Illinois claims finality for the District Court's findings as to losses arising out of divestments occasioned by the Act (p. 61, n. 1), and the "examination of relevant factors" (p. 125, n. 1), both supposedly affirmed by the court below. In the first place, there is a clear-cut conflict between the District Court and the Commission with respect to the cause of these losses as contrasted with the *Comstock* case where the basic finding as to which the two courts were in agreement, was unchallenged. In the second place, the court below, although sustaining the District Court's examination of the various factors, expressly refused to permit the District Court to substitute its valuation of $100 for that of the Commission. Furthermore, the rule of concurrent findings was clearly not intended to permit a disregard of the factual findings of the trier of facts, that is, the Commission, and none of the decisions cited by this Court in the *Comstock* case indicate such application of the rule. Rather has this Court on occasion sought to protect the findings of an administrative body by the application of this very same rule. *E. g., Columbus*

[Footnote continued on following page.]

the views of the District Court and those of the Commission, is the treatment of the alleged losses from divestments. While the Commission refused to accept the hypothesis "that the Act has caused the asserted losses" (R. 72a; n. 55), the District Court found that the "losses" arising from the divestments were occasioned by the Act (Findings Nos. 37-8, R. 307a, 308a).[118]

[Footnote continued from preceding page.]

Gas & Fuel Co. v. *Public Utilities Commission*, 292 U. S. 398, 414 (1934). In any event, "it is not a rule to be applied in a blind manner simply because a case involves a complex factual situation" as is aptly pointed out in the dissenting opinion in the *Comstock* case. Assuming arguendo, that there are concurrent findings that fall within that rule, it is here urged that "there is an exceptional error involved in the conclusions reached by the District Court and affirmed by the Circuit Court of Appeals, an error that is apparent on the face of the District Court's findings". In this connection, it should also be noted that the following status is attributed to the findings of the court under Rule 52(b) of the Federal Rules of Civil Procedure:

> "* * * When findings of fact are made in actions tried by the court without a jury, the question of the sufficiency of the evidence to support the findings may thereafter be raised whether or not the party raising the question has made in the district court an objection to such findings or has made a motion to amend them or a motion for judgment."

[118] Counsel for Engineers recognized the difference between its assertion and the Commission's views when he wrote:

> "The principal findings of fact involved therein we think have to do with * * * (2) the losses which Engineers claimed were suffered from the impact of Section 11 of the Act.
>
> * * * * *
>
> "As to (2) above, it will be recalled that Engineers claimed certain losses which should equitably be borne by the preferred as well as the common. These included, among others, losses resulting from the forced sale of Puget Sound and El Paso Natural Gas, and that resulting from the fact that the impact of the Act had prevented the Company from refunding the preferred stock with its present relatively

[Footnote continued on following page.]

There is no need to multiply the examples of differences in the factual findings of the District Court and the Commission. The Central-Illinois effort to secure the review by this Court of the rational and statutory foundation of the Commission's decision in the light of the *findings* of the District Court, instead of the Commission's findings, must be rejected, since the premise as to the acceptance by the District Court of the Commission's findings (and vice-versa), upon which the Central-Illinois contention is based, lacks factual basis and is fallacious.

2. Central-Illinois counsel also *cautiously*[119] suggests that "the court below was perhaps overstating the effect" of *Lahti* v. *New England Power Ass'n.*, 160 F. (2d) 845 (C. C. A. 1, 1947), and *Mass. Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. (2d) 424 (C. C. A. 8, 1945), cert. den. 327 U. S. 795 (1946), in referring

---

[Footnote continued from preceding page.]

high dividend rates on the basis of the lower dividend rates for comparable securities now prevailing (For details as to these claimed losses see pp. 12-15 of Engineers' brief). In order to sustain Engineers' claim respecting these losses, it is important that these losses be recognized and found to have been caused by the Act. Not only does the Commission not find that these losses were caused by the Act, but in footnote 52, [55] above quoted, they say they do not 'accept counsel's hypothesis that the *Act* that [has] caused the asserted losses'. It is not improbable that a reviewing court might say this was tantamount to a finding that the losses were not caused by the Act so directly, at least, as to be used as an offset to the payment of the premiums to the preferred stock" (R. 1953a-1954a).

The bracketed references are based upon the footnote as printed elsewhere in the record (R. 72a, n. 55).

[119] The Central-Illinois group in its Brief in Opposition to the Petitions at p. 13, n. 18, originally sought to discredit the recognition by the court below that the cited decisions "look the other way" as not based upon "an independent analysis of the decisions themselves".

to them "as 'cases which look the other way, and [which] are entitled to great consideration'".[120] Rather is the view of the court below an understatement, as examination of the *Lahti* and *Massachusetts Mutual* cases[121] will reveal a clear-cut conflict with the opinion below in the instant case and the recognition and application of those cases of the doctrines of substantial evidence and administrative finality, which represent the views of the majority of appellate and lower courts on this question.[122]

One of the respondents (White) may urge as a distinction that, in the instant case, the court below, in its review, considered the "function of the District Court, *vis-a-vis* the Commission" while in the *Lahti* and *Massachusetts Mutual* cases, the "Circuit Court was acting only as a review court and was bound by the findings of fact of both the District Court and the Commission".[123] The attempted distinction is devoid of merit. In both the case at bar and the *Lahti* and *Massachusetts Mutual* cases, the status of the Commission's findings or the treatment to be accorded them by a section 11(e) district court was at stake, and consequently affected the relative function of the district court and the Commission. Reference to the opinions of the respective District and Circuit Courts in these cases confirms the fact that the standard to be used by a section 11(e) court in reviewing the Commission's action, was involved, and that the First and Eighth Circuit Courts, contrary to the Third Circuit, adhere to the view that the Commission's findings and

---

120 Central-Illinois Brief, p. 142.

121 The *Lahti* and *Mass. Mutual* cases are discussed in the Streeter Brief, p. 82 ff.

122 Streeter Brief, p. 76, n. 100.

123 See White Memorandum in Opposition to Petitions, p. 15.

determination must not be upset if supported by substantial evidence or unless shown to be without rational basis in fact and law.[124] Moreover, any doubt that the function of the District Court was in issue in the *Massachusetts Mutual* case[125] was recently removed by the decision of *In re Northern States Power Company*, 80 F. Supp. 193 (D. Minn., 1948). In the latter case, the District Judge recited the unsuccessful contentions of appellant in the *Massachusetts Mutual* case, as to the District Court's abdication of its independent duty and its acceptance of the Commission's conclusion[126] and commented that "the weight, therefore, that the court should attach to the Commission's factual findings was directly before the Circuit Court in that [*Massachusetts Mutual*] case" (80 F. Supp. 201). Furthermore, the recent decisions of the District Courts within the First and Eighth Circuits have adhered to the standards enunciated within their respective Circuits and refused to follow the decision of the Third Circuit in the instant case. *In re Northern States Power Company*, 80 F. Supp. 193 (D. Minn.,

---

[124] Streeter Brief, p. 76 ff.

[125] The *Massachusetts Mutual* case is discussed in Streeter Brief, p. 82.

[126] In the *Northern States Power Company* case, the District Judge recited the contentions unsuccessfully urged in the *Massachusetts Mutual* case as follows:

> "'Section 11(e) of the Public Utility Holding Company Act of 1935 requires the District Court to independently determine whether the plan is fair and equitable and appropriate to effectuate the provisions of Section 11 of the Act. The Court cannot, as if has done here, abdicate this independent duty to the Securities and Exchange Commission.'
>
> . . . . .
>
> "'The Court below failed to exercise the independent judgment required of it by the Act. Instead it completely accepted, and felt itself bound by, the conclusions of the Commission, which at best are advisory only'" (80 F. Supp. 201).

1948); *In re American and Foreign Power Company*, 80 F. Supp. 514, 522 (D. Me., 1948). In fact, in the *Northern States Power Company* case, the District Judge refused to reject the Commission's valuations and factual findings, since supported by substantial evidence and recognized the soundness of the "rational basis" rule of the Eighth Circuit. The views expressed in the *Northern States Power Company* case, were approved in the *American and Foreign Power Company* case, *supra*. Consequently, under the prevailing view, the section 11(e) court is required to accept (and not ignore) findings and determinations of the Commission, if based upon substantial evidence and having a rational basis in fact and predicated on no clear-cut error of law.[127] Under the majority doctrine, it is clear that a district court's rejection of the Commission's conclusion as to fairness, in disregard of the principles of substantial evidence and administrative finality would constitute reversible error. So, too, in the instant case, we urge that the court below committed error in sustaining the District Court's rejection of the Commission's conclusion as to fairness, where supported by substantial evidence and possessing rational and statutory foundation.

---

[127] The disagreement in conclusion between the District Court and the Commission is attributable in part to the application of an erroneous standard by the District Court, for the review of the administration action. Moreover the difference in the standards of review as between the Third Circuit and the other circuits (First, Second and Eighth) is so substantial as to result in a disapproval of the Commission's decision on a section 11(e) plan in the Third Circuit, and its approval in the First, Second and Eighth Circuits.

VIII. Concerning the Contentions as to Remand.

We have already disposed of the Central-Illinois contentions,[128] opposing a remand to the Commission, in our brief.[129] The gist of our position briefly stated is that assuming *arguendo*, that the Commission erred in its valuation of the preferred stockholder's interest, the District Court did not, as the court below correctly found, have the power to amend the plan and substitute its valuation for that of the Commission, but is required to remand to the Commission for its initial determination.

Although our brief adequately answers the Central-Illinois contentions, for the convenience of this Court, we wish to point out the absurdity of the statement in the Central-Illinois brief which describes the District Court's determination as follows:

> "* * * The District Judge *did not determine that the Commission must award a specific sum to the preferred stockholders;* nor has it ruled that while the Commission might fairly and equitably award more than $100 to the preferred, a maximum of $100 was also 'fair and equitable' and in its judgment sufficient. In either of those cases it might be contended that the District Court was intruding upon the Commission's legitimate function under the Act. But here the Court has decided only that the Commission could not lawfully award more than $100; *i. e.*, it has examined the record made before the Commission in order to determine the outer limits of permissible Commission action on that record, and concluded that

[128] Central-Illinois Brief, p. 148 ff.
[129] Streeter Brief, p. 154 ff.

no more than $100 can 'fairly and equitably' be paid to the preferreds" (pp. 155-6). (Italics ours.)

In juxtaposition, we set forth the following language in the District Court's opinion:

> "It is, of course, true that once the charter is not accepted as controlling, there is no reason why 100 is the necessary figure for a senior security holder to receive. It may be more or it may be less. *But, in this case, after consideration of all factors involved, I conclude that $100 would be fair and equitable, but that the payment of premiums would not be fair and equitable*"[130] (R. 288a, n. 2). (Italics ours.)

Likewise, the court below recognized the error of the District Court's determination in the following statement:

> "* * * it [District Court] cannot value the securities, find equitable equivalents therefor and substitute its own estimates for those of the Commission requiring the plan as amended by it to be carried out" (R. 39).

Although the Central-Illinois group may deny that the District Court made a specific determination of $100 per share, the reality of the District Court's action cannot be concealed by the findings prepared by Central-Illinois counsel (R. 377a, 385a). Conse-

[130] Central-Illinois counsel chides the Commission for its use of the so-called "talismanic phrase"—"upon full consideration of the entire record", which is the Commission's conclusory statement following a full presentation of its reasoning, but finds no fault with the similar expression which appears in the quotation above from the District Court's opinion and frequently in its own Brief.

quently, the District Court, to use the language of Central-Illinois, "was intruding upon the Commission's legitimate function under the Act".[131] Such error would require remand.[132]

The Central-Illinois group also suggests[133] that the District Court should have the power upon examining the record to determine "the outer limits of permissible Commission action under the 'fair and equitable' standard". When this "outer limits" doctrine as submitted, is analyzed, it simply means that the District Court *may reduce* but not increase, the amounts awarded by the Commission, under the "fair and equitable" standard. This is, of course, grotesque. It further means that the District Court decision is final where the amount awarded by the Commission is reduced, and the Commission becomes a body of little, if any, consequence.

Central-Illinois also urges in the instant case there is no function left for the Commission "except formally to approve payment of 100 to the preferred". This clearly makes the Commission a rubber stamp and nothing else. Congress never intended any such result.

---

[131] Central-Illinois Brief, p. 155.

[132] We have assumed *arguendo* an erroneous valuation by the Commission, but have urged, of course, the correctness of the Commission's decision in its performance of the valuation function.

[133] Central-Illinois Brief, p. 157.

Conclusion.

For the reasons advanced herein and in the Brief previously submitted, the judgment of the court below should be reversed, with appropriate direction to the District Court to enforce the plan as approved by the Commission insofar as it provides for the payment to the preferred stockholders of amounts equal to the respective redemption prices of their stock (less the sum already received plus adequate recompense for the delay in payment). If this Court concludes, however, that the Commission has erred in the valuation process, this case should be remanded to the Commission for reconsideration, in accordance with the instructions of this Court.

Respectfully submitted,

REPLY BRIEF OF THOMAS W. STREETER, *ET AL.* TO ANSWERING BRIEF OF CENTRAL-ILLINOIS SECURITIES CORP., *ET AL.* AND BRIEF FOR LUCILLE WHITE, *ET AL.*

Preliminary.

This Brief[1] is devoted to replying to the various contentions raised in the Answering Brief of Central-Illinois Securities Corp., *et al.*, and in the Brief for

[1] The first Brief for Thomas W. Streeter, *et al.* and the Answering Brief of Thomas W. Streeter, *et al.* to Brief of Central-Illinois Securities Corp., *et al.* are hereinafter called the "Streeter Brief" and the "Streeter Answering Brief", respectively.

Lucille White, *et al.*[2] (hereinafter called "Central-Illinois" and "White", respectively).

I. Concerning the Contentions as to the Decision of the Common Stock Management to Eliminate the Preferred.

Despite the various Central-Illinois assertions[3] it cannot be denied that no 11(b) order was ever entered against Engineers directing its liquidation. Furthermore, the record establishes that the common stock management had a primary objective of retaining the underlying companies for the common stockholders and that a persistent effort was made to eliminate the preferred at $100 and to preclude their participation in any form whatsoever in the underlying operating companies.[4] These facts find their support in the following excerpts from the record:

> [Cross-examination of D. C. Barnes, President of Engineers]
>
> "* * * They have always felt that such a plan should preserve, as far as possible, the interests of the common stockholders in the companies in which they chose to invest, leaving to them the decision as to when and if they should sell their interest" (R. 627a).
>
> * * * *

[2] Answering Brief of Central-Illinois Securities Corp., *et al.*, and Brief for Lucille White, *et al.*, are hereinafter referred to as "Central-Illinois Answering Brief" and "White Brief", respectively.

[3] Central-Illinois Answering Brief, p. 3 ff.

[4] See excerpts from record quoted in Streeter Answering Brief, pp. 14 and 32-33 (R. 733a, R. 745a-846a, respectively). Also see R. 583a.

"Q. Mr. Benjamin testified that one of the principal factors considered by the Board of Directors in formulating the present plan was that the present Engineers common stockholders want to continue their interest in the three operating companies, namely Gulf, El Paso, and Virginia. Do you recall his testimony? A. Yes, I do recall his testimony.

Q. And I take it that is your opinion? A. I have so testified this morning" (R. 643a).

[Cross-examination of R. N. Benjamin, Secretary of Engineers]

"Q. Is it fair to state that the dominant principle that guided the Board in its decisions with respect to its several plans—and I do not mean formal plans, but considerations of plans—was to preserve for the common stockholders the equities in the going concerns that would be left if, as and when it became necessary to dispose of Engineers?

* * * * *

"The Witness: I think that is correct" (R. 687a).

* * * * *

"Q. Now, for the purpose of the record is it fair to state that in principle the one-stock plan, the package plan, and the partial exchange plan are more or less variations of the same concept of giving the preferred stock a stake in the continuing enterprise in one form or another? A. I think that is true.

[These and other plans were discarded by Engineers management because each might give the preferred a continuing interest. This is clear from the following testimony.]

The Examiner: I gather from your testimony,

Mr. Benjamin, that it was the idea of the management and of the Board as well that the preferred stock should be retired rather than treated otherwise. Is that the substance of your testimony?

The Witness: That is correct" (R. 719a).

* * * *

"A. * * *

I think that all of the plans that the Board has shown a desire to follow contemplates the retirement of the preferred stock at $100 per share and the distribution to the common stockholders of the underlying common stocks" (R. 723a).

* * * * *

"Q. Didn't you say that the record of activities on the part of the management of Engineers suggests a rather persistent effort during the last four years to get rid of the preferred stock in this situation? A. Yes."

* * * *

"Q. * * * Do you recall any thought of ever paying the preferred stockholders anything in excess of $100? A. No" (R. 733a).

* * * *

"Q. You testified several times with respect to an essential objective of the Board of Engineers to retain for the common stockholders their interest in the three companies, the operating companies. Do you recall giving that testimony in general? A. Yes, I do" (R. 819a).

It is equally true that the common stock management could have elected to merge Engineers with Virginia, an alternative which the original plan filed

in September, 1945, contemplated.[5] Had such merger method been followed, the Central-Illinois contentions that the involuntary liquidation provisions of the charter govern and that the *Otis* case is inapplicable, because of an alleged termination of the enterprise, could not have been asserted. The selection of the method of system adjustment, whatever form it may take, must not as this Court has stated in the *Otis* case, affect the rights of stockholders.[6] Consequently the common stock management's effort to curtail the rights of the preferreds is unavailing, for its conscious choice cannot make operative the involuntary liquidation provisions of the charter.

Furthermore, the efforts of Central-Illinois to suggest that in reality, it would have been more to the financial advantage of the common who own preferred to take the "premium" is completely baseless. This contention merely further emphasizes the partiality of the plan toward the common stockholders. The special status enjoyed by the select group of common stockholders also possessing preferred stock, is evidenced in the various calculations made by Central-Illinois in an effort to demonstrate that this select group would have fared better by the payment to the preferred, of the amounts in excess of $100.[7] This supposed "self sacrifice" on the part of the select preferred-common stockholders does not bear scrutiny. It would appear from the Central-Illinois calculation that whether the preferred are limited to $100 or found to be entitled to the amounts in excess thereof equivalent to the redemption price, the select pre-

[7] Central-Illinois Answering Brief, p. 18, n. 2.

ferred-common stockholder group[8] (with their co-common stockholders) obtain the same measure of control and ownership of the three underlying companies. In addition, while it is suggested that the premium cost, as characterized by Central-Illinois, is $1.70 per share of common stock, and that it would have been more advantageous to the select group of preferred stockholders (holding common) to take the premium, we submit that the argument is completely fallacious for two reasons: (1) that should the preferred stockholders prevail in the instant litigation, the select group of preferred-common stockholders will still get the amounts in excess of $100; and (2) that the cost of $1.70 per share for the common stockholders to eliminate the preferred stock from this entire enterprise would appear to be a very nominal sum for the achievement of the advantages, which are so obvious to the common stockholders under the instant plan.

II. Concerning the Contentions as to the Various So-called Colloquial Equities and Other Erroneous Criteria.

We have already demonstrated the lack of factual and legal basis for any special consideration to be given to such factors as (a) issue price and market history, (b) retention of earnings and (c) alleged losses from divestments.[9] Therefore, we shall point out certain erroneous legal conclusions and misstatements of fact.

[8] This same group of select preferred-common stockholders also received special privileges in connection with the Gulf States warrant program whereby they were permitted to acquire warrants using the preferred stock as payment if they wished (R. 119a). Such privilege was not afforded any other preferred stockholder, who was forced out and denied the opportunity to participate.

[9] Streeter Brief, p. 113 ff.

A. "Retained Earnings."

As we have already shown the absence of merit in the contention based upon the alleged colloquial equity arising from "retained earnings", we will only devote one attention to the Central-Illinois effort to analogize the instant situation to a claim of "double interest",[10] as involved in *Vanston Bondholders Protective Committee* v. *Green*, 329 U. S. 156, 165-7 (1946). In the *Vanston* case, a Kentucky District Court appointed an equity receiver for a debtor corporation and took custody of its assets and enjoined the payment of its debts. Thereafter interest fell due on the mortgage bonds which the debtor did not pay and the court did not direct the payment. The indenture trustee under the terms of the indenture declared the principal due and payable despite the assumption of custody of the estate by the federal court. Then the proceeding moved from an equity receivership through section 77B to Chapter X in the wake of statutory changes. The indenture provided for payment of interest on unpaid interest. The debtor was insolvent but had sufficient assets to pay the mortgage bond creditor in full including interest upon interest, but the payment of interest upon interest would have resulted in a greatly reduced share for "subordinate creditors" in the reorganized corporation. Under these circumstances this Court found it inequitable to pay interest upon interest.

That situation is far removed from the instant case. First, no double interest is involved. The assumption of Central-Illinois of the alleged "transfer of value" from the common to the preferred is baseless. The

[10] Central-Illinois Answering Brief, p. 34.

Commission has found the preferred entitled to a principal sum equal at least to the call prices, which Central-Illinois erroneously persists in characterizing as premiums. Obviously a principal right is not "interest". Second, much of the so-called accumulation of earnings in the Engineers system, which was motivated by tax and other reasons and added to the value of the common, did not accrue while Engineers was in "*custodia legis.*" Third, in the instant case, Engineers, as contrasted with the debtor in the *Vanston* case, has ample assets to pay the entire going concern value of the preferred without any reduction in payment. Engineers is free from debt and clearly solvent. Furthermore, even in the *Vanston* case, this Court recognized the fact that the rule would be different in a solvency situation; when, in a passage, preceding the quotation from the *Vanston* case appearing in the Central-Illinois Brief, this Court said:

> "* * * But where an estate was ample to pay all creditors and to pay interest even after the petition was filed, equitable considerations were invoked to permit payment of this additional interest to the secured creditor rather than to the debtor" (329 U. S. 164).

In effect, the *Vanston* case not only does not support the Central-Illinois contention, but sustains the claim of the preferred to the dividends that were prematurely cut off by District Court consummation of the plan, while the common litigated the payment of the full amount of the going concern value of the preferred.[11]

---

[11] Streeter Brief, p. 147 ff.

B. Alleged Puget Sound Loss.

Central-Illinois and White have urged[12] that the alleged Puget Sound loss was occasioned by the Act. At several points, we have demonstrated the fallacy of this contention both legally and factually.[13] Moreover, we have already pointed out that the so-called "formal offer of proof" of present cash value of Puget Sound at $10,000,000 finds no basis in the record,[14] that no real pressure in making the divestment resulted from the statutory requirement of compliance,[15] that the rule of concurrent findings enunciated in the *Comstock*[16] case does not control in the instant situation[17] for various reasons, including the fact that such finding is not supported by the evidence in the record.[18]

The history of Puget establishes the fact that this investment was a fiasco from the outset and that this so-called "book" loss cannot be fairly attributed to

---

[12] Central-Illinois Answering Brief, p. 39 ff.; White Brief, p. 36.

[13] Streeter Brief, p. 113, p. 120 ff.; Streeter Answering Brief, p. 16 ff.

[14] White counsel joins Central-Illinois in asserting on the basis of District Court finding No. 37 (R. 307a) that a "formal offer of proof was made before the Court to establish that the equity owned by Engineers in Puget Sound would presently have a cash value of $10,000,000" (White Brief, p. 36; Central-Illinois Answering Brief, p. 40). As previously indicated, we find no basis in the record for the Central-Illinois and White assertions nor for the statement in the District Court finding (Streeter Answering Brief, pp. 12-13). The District Court had no authority to make findings on material not in the record and subject to cross-examination. *Republic Aviation Corp.* v. *N. L. R. B.*, 324 U. S. 793 (1945); see *U. S.* v. *Abilene & So. Ry. Co.*, 265 U. S. 274, 288 (1924). It is interesting to note that White counsel points out in another connection: "No new proof was submitted by the common stockholders for considered by the Court" (White Brief, p. 16).

[15] Streeter Answering Brief, pp. 15-16.

[16] *Comstock* v. *Institutional Investors*, 335 U. S. 121 (1948).

[17] Streeter Answering Brief, p. 84, n. 117, p. 85.

[18] The Commission expressly refused to accept the hypothesis that this "book" loss was occasioned by the Act (R. 72a, n. 55).

the operation of the Act. In the interim between its acquisition in 1928 and 1938, various troubles beset Puget Sound—a drop in earnings in 1929 (R. 1673a, 1676a); unfavorable business conditions in 1930-1932 and the appearance of the threat of public competition (R. 1688a-1690a, 1702a-1703a, 1713a-1714a); new taxes and the approval of Grand Coulee and Bonneville projects in 1933 (R. 1435a); dividends not paid in 1934 (R. 1443a); business conditions in area of service subnormal in 1935 (R. 1448a); failure to earn dividends in 1935 to 1938 (R. 1469a, 1480a, 1500a, 1515a), the completion of one federal power project and anticipated completion of the other by 1942, and the creation or enlargement of public power districts for acquiring portions of private systems (R. 1505a).

Finally, in 1938, Engineers recognized the true condition of Puget Sound, by providing a reserve of $35,000,000 for depreciation in investments, embodying a substantial allowance for Puget (R. 1516a). The following excerpts from the Engineers Annual Report for 1938 adequately demonstrate the time of occurrence and cause of these so-called "book" losses:

> "The Company has made certain adjustments in its balance sheet as described more fully hereafter under 'Adjustment of Balance Sheet,' which included the *creation of a reserve for depreciation in investments in subsidiaries, embodying a substantial allowance for the Company's investment in the common stock of Puget Sound Power & Light Company.* Since this reserve has provided for a considerable period in advance, for losses which may be sustained because of the accrual of unearned cumulative dividends on the preferred stocks of the Puget Sound

subsidiary held by the public, it is unnecessary to deduct from current consolidated income the amount of the deficiency in earnings of this subsidiary. Accordingly, beginning with the January 1939 monthly report, the consolidated balance for the 12 months' period then ended applicable to stocks of Engineers Public Service Company is being set forth without deduction for such deficiency.

* * * * *

"As of May 31, 1938 the Directors of the Company authorized certain adjustments in the balance sheet, as follows:

* * * *

"(3) The creation of a $35,000,000 reserve for depreciation in investments in subsidiaries by a transfer from capital surplus in this amount. *This reserve was established to provide for losses which the Directors believed to have accrued at that date although such losses had not yet been taken. The principal factors causing the depreciation against which this reserve was provided, were reduced net earnings brought about largely by increased taxes, existing competition and the announced intention of certain power districts and other public authorities either to purchase or condemn certain properties of subsidiaries of the Company or to compete with such subsidiaries. These factors are largely covered in subsequent sections of this letter*" (R. 1516a, 1517a-1518a). (Italics ours.)

The foregoing statement was made in the Engineers annual report one year after registration under the Act, and not one word of blame for this loss was laid at the door of the Act, although reference was made in the

original report to the Act (R. 1519a). Thus the Puget loss had already occurred by 1938, but was not taken until a later date. Puget's past accurately forecast a dismal future—poor earnings record (R. 1536a, 1537a, 1553a, 1571a); pendency of condemnation proceedings against Puget's property and negotiation for its transfer (R. 1540a-1541a; 1559a-1560a, 1577a-1578a, 1594a-1595a); growth in public competition (R. 1559a, 1595a); and increased taxes (R. 1559a).

The foregoing recital of facts by the Engineers Company itself strikingly establishes that the Puget failure cannot be attributed to the Act, but was occasioned before the Act and by forces totally unrelated thereto and existing entirely independently thereof. The sale of Puget in 1944 was but the unhappy ending of an ill-fated venture, which was clearly foreshadowed by the creation of the reserve in 1938 and finally resulted upon disposition in 1944 in a book loss of approximately $33,000,000, charged against the 1938 reserve (R. 1608a). The foregoing circumstances definitely support the Commission's refusal to accept the hypothesis urged by Engineers counsel that the Puget Sound loss was occasioned by the Act and further clearly demonstrate that the District Court Finding No. 37 is not supported by evidence in the record and consequently must be rejected.[19] Likewise the White and Central-Illinois contentions based thereon must equally fail for lack of support in the record. In any event, that sale of Puget brought in its wake several significant tax benefits, such as (a) the immediate income tax saving of $442,000 (R. 1608a) until the repeal of the Excess Profits Tax Law in December 1945, which would in the absence of a repeal, have resulted in annual savings

[19] Rule 52 (b) of the Federal Rules of Civil Procedure.

and (b) an offset against capital gains arising from the sale of El Paso Natural Gas stock and the profits from the sale of Gulf States stock and any future sale of Virginia common stock.[20]

III. Concerning the Contentions as to Alleged Valuation on the Basis of Haphazard Market Prices, and "Boom Conditions" (Abnormal Earnings) and Inaccurate Predictions of Future Earnings.

Central-Illinois persists in its attack upon the valuation made by the Commission and Dr. Badger as allegedly based upon momentary market prices (Brief, p. 22 ff.). In addition, Central-Illinois and White complain that the valuation rests upon "the high earnings of the war and immediate post-war period"[21] and upon "two years of abnormal earnings" during a war (1943-1944).[22] Central-Illinois refers us to its mass of unrelated statistical data and calculations derived from newspaper articles, financial publications, current market prices, occurring long after consummation of the plan, all of which this Court is asked to judicially notice, in an attempt to discredit both the Commission and Dr. Badger. Similarly, White requests this Court to "take judicial notice of the fact that since January 1946 there has been a considerable decline in the market value of public utility company stocks (as well as of stocks generally) and that the price earnings ratio at which utility stocks are now valued, has declined considerably below the times earning ratio which existed in

[20] Streeter Answering Brief, pp. 24, 62-63.
[21] Central-Illinois Brief, p. 27.
[22] White Brief, p. 138.

January 1945."[23] At another point White refers to the advance in wages over and above the prediction of Barnes which was supposedly better than Badger's, and also states that it "is a matter of common knowledge, and this Court may take judicial notice of the fact, that while *gross* utility company earnings have increased since last year (owing to the present abnormally high rate of business activity), utility *net* earnings have decreased owing to the increases in labor costs, fuel and costs of replacement and repairs" and that at "the present time we are in the very midst of an acceleration of the 'inflationary spiral' * * * which are already adversely affecting utility company earnings."[24] White attacks Badger, as did Central-Illinois, for his prediction as to the continuance of low interest rates, making the general observation that it "is a matter of common knowledge and this Court may take judicial notice of the fact that interest rates since March 1947 down to the present time have steadily risen" (Brief, p. 41). It is thus apparent that both Central-Illinois and White have directed their attack upon Badger's valuation because of his alleged reliance upon "peak earnings" for a short period during the war or immediately thereafter and upon the continuance of low interest rates, the former by resort to a variety of so-called general financial data, calculations and comparisons and the latter by broad statements of a general character. The Central-Illinois and White objective for the inclusion of this mass of irrelevant data is not to support a request for remand, but to bolster the District Court's opinion on valuation and to discredit Badger's predictions. It is quite

[23] White Brief, p. 39.
[24] White Brief, p. 49.

obvious that the Central-Illinois and White Briefs cannot serve as a substitute for a trial record, with an opportunity to examine and cross-examine. Moreover, reference to the Badger report clearly demonstrates that one of Badger's studies deals with earnings for a seven year period[25] (1940-1945) including the 1946 estimate (R. 2098a, 2102a) (about which we shall have more to say later) and is not solely based upon a two year period, as contended by Central-Illinois and White. Furthermore, in reply to the Central-Illinois and White charge as to the period used, we refer to the acute observation of Judge Kennedy in the *Kings County Lighting Co.* case,[26] when in answer to a contention that the standards applied by the Commission in measuring the fairness of a plan were not sound, from a long range point of view, Judge Kennedy pointed out:

> "* * * But it [the objector] goes further and says that on the score of *potential earnings the federal commission is far too optimistic.* To point up this contention, the Public Service Commission supplies *figures showing that at December 31, 1946, the financial* condition of Kings had deteriorated as against its April 30th condition. In this fact the state commission finds confirmation for its belief not only that potential earnings as a standard of distribution furnish a treacherous guide, but also that at the date of hearing the underlying facts now demonstrate conclusively that the plan is unfair and inequitable.

---

[25] It should also be noted that the Commission considered the Engineers earnings for the period from 1937 to 1945 (R. 64a-65a).

[26] *In re Kings County Lighting Co.*, 72 F. Supp. 767 (E. D. N. Y., 1947), aff'd *sub nom. Public Service Commission of N. Y. v. S. E. C.*, 166 F. (2d) 784 (C. C. A. 2, 1948), cert. den. 334 U. S. 838 (1948).

"But if earnings are to be used as a principal standard of recapitalization, *it will always be true that some particular accounting period may yield the conclusion that the standard used is unreliable* * * * *a conclusion that may lose its validity if a longer accounting period is used.* At best, there can be no mathematical certitude but only an estimate of how the plan will work, as the cases say. To paraphrase the language of *Consolidated Rock Co.* v. *Du Bois, supra,* 312 U. S. 510, 526, so long as the estimate is based on an informed judgment embracing all facts relevant to future earning capacity, taking into consideration the *nature and condition of the properties,* the past earning record, and all circumstances indicating whether or not that record is a reliable criterion, the Securities and Exchange Commission has properly discharged its function. And it has done so here.

"There is ample support in the record to sustain the findings of the commission, and its conclusion that the proposed plan, as amended and modified, is fair and reasonable. And I also find that it is" (72 F. Supp. 783). (Italics ours.)

Besides, Central-Illinois and White take an even more untenable position in the instant case than did the Public Service Commission in the *Kings County Lighting Co.* case, for instead of supplying any recent figures as to the earnings of the three underlying companies, they advert to a wide variety of isolated statistical and financial data of a vague and general character.

Although we have strongly urged that such material is entirely irrelevant to the issues before the Court, since both Central-Illinois and White have strenuously emphasized these subsequent events of a general nature, we have felt impelled to present this Court

with such facts as will demonstrate conclusively the fallacy and error of the Central-Illinois and White conclusions, based upon the data in their Briefs.

In order to answer these contentions and demonstrate their lack of factual basis, we have prepared data relating to economic conditions and money rates and to the actual status of the three operating companies which bring down to date a substantial portion of Dr. Badger's report (Pref. Exh. 29-A, R. 2088a) and are based upon matters of which this Court may wish to take judicial notice.[27] The data clearly demonstrate that Dr. Badger and the Commission were entirely correct and that their forecasts were not only amply justified by the events of the last three years, insofar as Virginia, Gulf States and El Paso were concerned, but also that the predictions of Dr. Badger were distinctly on the conservative side. In other words, as stated in the *Henwood* case, "What were then 'prospective' earnings * * * have now become actualities".[28]

---

[27] *Insurance Group Committee* v. *Denver & R. G. W. R. Co.*, 329 U. S. 607 (1947); *St. Louis Southwestern Ry. Co.* v. *Henwood*, 157 F. (2d) 337 (C. C. A. 8, 1946), cert. den. 330 U. S. 836 (1947); rehearing den. 331 U. S. 870.

[28] In the *Henwood* case, *supra*, n. 27, the Court of Appeals made the following pertinent statement at page 395:

"The Commission had before it evidence of past earnings and past financial condition with voluminous evidence bearing thereon. The report shows that earnings up to and including at least the first six months of 1941 were before the Commission. Also, the prospective war earnings were urged upon the Commission and denied as a basis for the long time requirements of a reorganization valuation, although the United States had been in the war for three months when the Supplemental Report was filed.

"What were then 'prospective' earnings for the last half of 1941 to 1944, inclusive, have now become actualities. Tables showing (1917 to 1944, inclusive) gross operating revenues and net railway operating income and (1923 to

[Footnote continued on following page.]

For the sake of convenient presentation, we have divided the subject into the following five categories:

A. Economic Conditions and Money Rates—December 1948.

B. Earnings Analysis—Consolidated Basis.

C. Balance Sheet Analysis—Consolidated Basis.

D. Analysis of Operating Performance of Three Former Operating Subsidiaries of Engineers for 1946, 1947 and 1948 Covering the Three Year Period Subsequent to Badger's Valuation (Pref. Exh. 29-A, R. 2088a).

E. Comparison of Engineers Actual Earnings for 1946 and Pro Forma Earnings for 1947 and

[Footnote continued from preceding page.]

1944, inclusive) income available for fixed charges are in the footnote. While statistics of almost every kind are subject to explanations which sometimes vitally affect the worth of deductions from them, yet a series covering many successive years of a business are quite likely to reveal, on their face, significant matters. A long series furnishes fairly solid foundation for deductions as to normals, abnormals and averages. Since reorganization proceedings must have the long range in view, such deductions are valuable. The statistics in the footnote are long range experience of the Debtor. They reveal clearly the abnormal character of the years 1942, 1943 and 1944."

Paraphrasing the above quotation, the Commission in the instant case had before it the entire earnings record of Engineers as set forth in all of its annual statements from 1925 through 1944 (Engineers Exhibits 37-A to 37-T, inclusive, R. 1432a ff.). In addition, the Commission had before it estimated income of Engineers and subsidiaries for 1946 (Exhibit No. 63, R. 1829a). The "prospective earnings" have been brought right down to date. As the court said, prospective earnings have now become "actualities". The results of those last three years are set forth below. The conditions have been improving steadily, as Dr. Badger testified they would (R. 2103a). The last three years certainly reveal no abnormal character of income of Engineers and its subsidiaries for the period from 1940 to 1945. In short, the data below even further highlights the inherent equities of the preferred stockholders in the instant case.

for the Twelve Months Ended September 30, 1948 with the Earnings Estimate for 1946 of Engineers (Engineers Exh. 63, R. 1828a-1839a).

A. Economic Conditions and Money Rates—December, 1948.

Money market conditions and interest rates have not changed substantially since January 24, 1946. Although the Federal Reserve System has allowed the rate on one-year Certificates to increase from ⅞% to 1¼%, it is still maintaining the 2½% rate on the long-term bank ineligible 2½s. The effect of this policy has been to keep interest rates at the historically low levels prevailing at January, 1946. This is indicated by the tabulations set forth in the footnote.[29]

The tabulations below show that the yield on taxable United States Government securities has increased .24 basis points from 1946 through 1948. Likewise, high-grade corporate bonds, which are purchased and sold in an uncontrolled market, have increased by .29 basis points. This increase is slightly greater than the increase in yields on taxable Governments. As might be

[Footnote continued on following page.]

expected; yields on high-grade preferred stocks have shown a greater increase, amounting to .62 basis points in the same period. The average yield of eleven high-grade municipal bonds has increased from 1.23% in 1946 to 2.14% in 1948, or .91 basis points. The increase in the yields of these classes of securities has been of modest proportions, and it may be concluded that interest rates currently still are at historically low levels.

It has been argued by Central-Illinois and White that the modest increase in the yields of these securities presages a fundamental increase in the level of interest rates. Events within the past month, however, have indicated that these past increases represent normal fluctuations and are not a forerunner of a fundamental change in money market conditions and long-term interest rates. A change of .29% in the average yield on uncontrolled high-grade, long-term corporate bonds over a two year period is indeed a very small change. Furthermore, the very modest tendency for yields to increase appears to be now

* Changes in yield affected in considerable part by lowering of tax rates, and hence change in value of tax exemption.

reversed. Since the election, United States Treasury bonds ineligible for purchase by banks, have been moving above their respective price support levels maintained by the Federal Reserve System. Confidence in the long-term Treasury 2½% rate has been greatly increased, which may well indicate that yields of strictly high-grade corporate issues have now reached their maximum spread from yields on Government bonds. In the first week following the presidential election the Reserve Banks purchased only $85.9 million of Treasuries maturing in five years or longer.[30] In the week ended December 1, 1948, the Federal Reserve System purchased only $7 million of bonds with maturities of five years or over.[31] This contrasts with the average weekly purchase of $363 million in the period from about mid-September to the election when confidence in the 2½% rate was clearly declining.[32] These reduced purchases of long-term Treasuries by the Federal Reserve System are indicative of the revived confidence of the investors in the present level of interest rates.

Current conditions in the corporate bond market also reflect this revived confidence by the investing public. Thus, Moody's Aaa bond yields stabilized at a yield of 2.82% for the week ended November 19, 1948, down from 2.87% on October 30.[33] As of November 23, 1948, the average yield on Standard Statistics high-grade preferred stocks was 4.15%, down from 4.28% in October.[34] The average yield of eleven bonds used in the index of municipal bonds declined from 2.22% on November 4, to 2.12% as of November

[30] Moody's Bond Survey, Nov. 15, 1948, p. 159.

[34] Federal Reserve Bulletin, December 1948, p. 1500.

24, 1948, and has since declined further. It is true, of course, that the recent decline in municipal bond yields may be partly attributed to the recent heavy demand arising from current fears regarding increases in Federal Income Taxes.

Statements by responsible officials of the Treasury Department and the Federal Reserve System indicate that there is no intention in the foreseeable future to lower the support levels on the long-term Treasury bonds. Thus, Mr. Thomas B. McCabe, Chairman of the Board of Governors of the Federal Reserve System, speaking before the annual stockholders' meeting of the Federal Reserve Bank of Boston, on October 26, 1948, stated: "When you consider that the public debt is one and a half times all other debt in the country combined, it seems obvious to me that the market for the Government debt securities must be one where investors can deal at all times with confidence. I remain of the conviction that for the foreseeable future the support program should be continued. This conviction is shared by all members of the Board of Governors, the members of the Federal Open Market Committee, and by the Treasury. It is also supported by the weight of financial opinion in the country".[35]

It is well known that financing through common stock equity since the 1946 stock market break has been small and costly, and therefore the pressure on senior financing has been accentuated. Practically any series of figures which one might care to use would show that new construction, plant expansion, etc. have been at maximum levels and that there is every reason to feel that from this point forward some

[35] The Commercial and Financial Chronicle, November 4, 1948, p. 40.

slackening in capital requirements may be witnessed. This would, therefore, tend to moderate the demand for new money, making for firm bond and preferred stock prices.

It may be said in summary that although interest rates and preferred stock yields have shown minor increases since the date of Dr. Badger's valuation, such increases are not indicative of any fundamental change in the general level and structure of interest rates and preferred stock yields. In fact, confidence has revived among the investing public since the election with respect to the continuance of present support prices on long-term Federal obligations. With the present administration committed to a high level of spending for operating expenses, farm crop supports, housing, re-armament, veteran's benefits, and European aid—all of which will probably require expenditures approximating $45 billion in fiscal 1950—it is quite possible that the Treasury Department may resort to deficit financing in the foreseeable future. To finance these deficits successfully, the Government must maintain stable market conditions for its securities. Because such confidence is predicated upon maintaining the existing support prices on long-term Government bonds, it is highly improbable that the general level of interest rates will increase further. In fact, it is quite possible that in the near future interest rates and preferred stock yields will recede from present levels. Dr. Badger's predictions of early 1946 that there was no indication of a fundamental change in respect to money rates seems to still stand.

B. Earnings Analysis—Consolidated Basis.

In analyzing the earnings record of Engineers subsequent to 1946, assumptions must be made regarding the character of its assets and the extent of its operations. In 1947 the Company divested itself of its 100% holdings of the common stock of El Paso Electric Company and Gulf States Utilities Company, and all but 162,612 shares of Virginia Electric & Power Company stocks.[36] Proceeds from the sale of the Gulf States stock, as well as other funds of the Company, have been used to pay $100 per share to each of the various classes of preferred stock. Therefore, in order to determine the current earnings available for dividends on Engineers Preferred, it is necessary to reconstruct pro forma income accounts for 1947 and 1948 on the assumption that the Parent Company had retained its investment in its former subsidiaries.

An income account analysis, on a consolidated basis, for Engineers for the period 1940-1946 has been prepared as Table 1, and is set forth in Appendix A, *infra*.

Analysis of the data in that table indicates that in the year 1946 the company experienced an improvement in earnings over 1945. Thus, total charges and preferred dividends of the consolidated companies were earned 1.85 times as contrasted to 1.51 times in 1945, and 1.54 times in 1944. This was accomplished in spite of an increase in the operating ratio from 61.30% in 1945, to 66.28% in 1946. The proportion of maintenance and depreciation expense to total operating revenues for 1946 was 14.9%, as contrasted

[36] See Moody's Public Utility Manual 1947, p. 1295, and 1948, p. 403.

to 14.3% in 1945, and 14.8% in 1944. Dr. Badger's testimony was predicated on the continuance of earnings on a basis at least as favorable as that of 1945. As a matter of fact, earnings actually *improved* substantially.

We have also set forth in Tables 2 and 3 (Appendix B and C, *infra*) an analysis of income account, on a pro forma basis, of Engineers and its former subsidiaries, Virginia, Gulf States and El Paso, for the year ended December 31, 1947, and for the 12 months ended September 30, 1948. In that consolidation it has been necessary to make assumptions regarding the operating expenses of the Parent Company. In order to reflect higher wage and material costs in 1947 and 1948, 1946 operating expenses were increased by 20% to obtain the 1947 estimate, and by 30% to obtain the estimate for the twelve months ended September 30, 1948. Such adjustments as have been made are minor and any error in these computations would exert no appreciable influence on any final figure.

Analysis of the pro forma statements indicates that the showing for 1946 was bettered in 1947 and equalled the twelve months ended September 30, 1948. Thus, all charges and preferred dividends were earned 2.01 times in 1947 and were earned 1.81 times in the twelve months ended September 30, 1948. The operating ratio in 1947 was 69.30% and for the twelve months ended September 30, 1948, was 73.16%. However, the increase in the operating ratio is not peculiar to the Engineers group, but reflects a condition existing throughout the public utility industry. It should be pointed out, however, that as new, efficient plants are placed in operation the operating ratio should decrease. Thus as previously mentioned in our

Answering Brief on page 9 of the Prospectus of Virginia Electric and Power Company, dated November 15, 1948 filed with SEC, it is estimated that savings amounting to $1.5 million would have been realized had the new 60,000 kw Possum Point power station been in operation for the twelve months ended September 30, 1948. This plant was scheduled to begin operation in December, 1948.

There has also been prepared and set forth in Table 4 (Appendix D, *infra*) an analysis of income data relative to Engineers for the years ended December 31, 1946 and 1947, and for the twelve months ended September 30, 1948, showing the times Parent Company preferred dividends earned. Data for the year 1947 and for the twelve months ended September 30, 1948, are based on the pro forma consolidations made in the preceding tabulations. It should be pointed out that the caption "Balance of Subsidiaries Earnings Applicable to Parent Company" represents the total earnings available to the common stocks of the subsidiary companies and includes not only earnings paid out as dividends but also the retained earnings of subsidiaries.

The data in Table 4 indicate improvement in respect to times Parent Company preferred dividends earned. In 1946 preferred stock dividends were earned 3.75 times, and in 1947 such dividends were earned 4.40 times. For the twelve months ended September 30, 1948, preferred stock dividends were earned 3.95 times.

On the basis of the above facts, it is clear that the earnings record of Engineers and its operating subsidiaries has *exceeded substantially* the improvement anticipated at the time of Dr. Badger's valuation. Consideration must be given to the growth in the

revenues of the operating companies, which, without exception, are characterized by rapid expansion. The earnings record per the pro forma consolidated earnings statement for the twelve months ended September 30, 1948, shows a slight decrease from that shown in 1947. It is evident from an analysis of the consolidated statements that such decline as did occur was attributable to Virginia which reduction was largely offset by increased earnings of the other subsidiaries. It is apparent in the case of Virginia that such decrease is temporary and will be offset as and when new plants and equipment are placed in operation. The facts indicating the foregoing appear in the Prospectus of Virginia dated November 15, the Registration Statement of Gulf States filed January 1949, and the application of El Paso to the Federal Power Commission to sell notes in the amount of $1,500,000 dated November 18, 1948, and filed November 23, 1948, which are discussed below in "D", *infra*, page 30 ff.

C. Balance Sheet Analysis—Consolidated Basis.

The consolidated balance sheet data for Engineers and subsidiaries, for the years 1942-1946, inclusive, have been set forth in Table 5 (Appendix E).

At December 31, 1946, Engineers showed a book value of equity per share of preferred stock of $252.10, which represents a substantial increase from the amount shown for 1944, namely $192.51. In 1946 preferred stock and subordinate items of the Parent Company constituted 40.99% of the total capitalization of the consolidated balance sheet, and 39.50% in 1945, a significant improvement over the figure of 31.74% for 1944. Also, the per cent of net quick assets to total prior obligations was 16.56% in 1946, and

16.78% in 1945, as contrasted to 10.55% for 1944. The improvement of the ratio of equity to total is largely the result of the favorable earnings record of Engineers (subsidiaries) since Dr. Badger's valuation in January 1946.

There has also been prepared a pro forma consolidated balance sheet of Engineers with its operating subsidiaries as of December 31, 1947 which is contained in Table 6 (Appendix F, *infra*). It was not possible to effect this consolidation by using orthodox accounting methods as there was not available certain information regarding the basis and the amount of certain inter-company eliminations, particularly those relating to consolidated earned surplus and consolidated capital surplus. It was, therefore, necessary to take the consolidated balance sheet items as of December 31, 1946 (see Table 5, Appendix E, *infra*), and indicate the changes which had taken place with respect to each of these items during the year 1947 for each subsidiary and for the Parent Company, thereby deriving the pro forma figures for December 31, 1947. The method of computation and the results are shown in this tabulation.

The data in Table 6 (Appendix F, *infra*) further substantiate the conclusions reached in the preceding table to the effect that the financial picture of Engineers, on a pro forma basis, has shown material improvement since Dr. Badger's valuation. Although the proportion of equity to total capital has not changed from the 1947 figure, book value of equity per share of preferred stood in the amount of $270.34 in 1947, a sizeable increase from the $252.10 shown for 1946 (see Table 5, Appendix E, *infra*). Moreover, the per cent of net quick assets to prior

obligations had declined to only 12.03%, in spite of the large construction programs which the operating companies were currently undertaking.

Another computation has been made in respect to the corporate balance sheet of Engineers, in which study a calculation is made of the value of preferred stock of Engineers on the basis of the market prices of the common stocks of its former operating subsidiaries. In making this computation it was necessary to use the balance sheet of the Parent Company as of December 31, 1946, and to add thereto estimated retained cash income for the years 1947 and 1948, after adjustment, to reflect the pro forma subscription in 1948 to the common stock issues of Gulf States and subscription to the convertible debentures issue of Virginia. The results of this analysis are shown in Table 6A, set forth in Appendix E.

On the basis of market prices of the common stock of the operating subsidiaries for the week ending November 22, 1948, and the price of the convertible preferred at November 26, 1948, the assets per share of preferred stock of Engineers stood in the amount of $279.22, which contrasts with the figure of $270.34 book value per share of preferred at December 31, 1947. The value of $279.22 exceeds the value which Dr. Badger found by making a similar computation in his valuation, which value then stood at $265.68. It should be pointed out, however, that the market price of the common stock of Virginia Electric & Power Company is currently depressed because of the recent issuance of 739,128 shares of new common stock at a subscription price of $14.25 per share.

In conclusion, it may be said that an analysis of data subsequent to the date of Dr. Badger's valuation indicates that from an asset standpoint the preferred

stock of Engineers has shown a decided improvement. This improvement has been indicated by an increase in the proportion of consolidated equity to consolidated total capital, by the increase in the book value per share of the preferred stock, and by an increase in the market value of assets per share of preferred stock. In view of this favorable showing it would appear that there is no justification for any statement to the effect that the credit position of Engineers could have deteriorated since Dr. Badger's valuation. (Pref. Exh. 29-A, R. 2088a *et seq.*)

D. Analysis of Operating Performance of Three Former Operating Subsidiaries of Engineers for 1946, 1947 and 1948 Covering the Three Year Period Subsequent to Badger's Valuation (Pref. Exh. 29-A, R. 2088a).

It is our position that the predictions of Dr. Badger embracing a period of three years have now become "actualities."[37] Events subsequent to the testimony of Dr. Badger in January, 1946, serve only to deepen the conviction that his estimates, as well as those of the Commission, were most conservative. In lieu of the generalities of the Central-Illinois and White groups and the vague and indefinite references to isolated fragments of statistical data, we have prepared and submitted to this Court, for such consideration as it deems appropriate, the record of performance of Virginia, Gulf States and El Paso for the years 1946, 1947 and 1948. No one can examine these without concluding that prediction has ripened into performance and the performance has exceeded any-

[37] *St. Louis Southwestern Ry. Co.* v. *Henwood*, 157 F. (2d) 347 (C. C. A. 8, 1946), cert. den. 330 U. S. 836 (1947), rehearing den. 331 U. S. 870.

one's expectation. The following data should completely eliminate from this case any contention by the common stockholders that the decision of the Commission in the instant case was unfair.

It is our position that the factual changes subsequent to the consummation of the plan (assuming *arguendo* their relevancy and the propriety of their recognition by judicial notice for the purpose of substitution by Central-Illinois and White, as valuation evidence, in lieu of the decision of the Commission) are not sufficiently significant to affect the Commission's valuation. In any event, these changes have not adversely affected the earnings and condition of the three underlying companies, which have materially improved and more than fulfilled Dr. Badger's estimate of value and prediction as to their continued progress.

It has been demonstrated that on the basis of past earnings performance of the companies comprising Engineers there has been a material improvement in earnings and asset position of the consolidation since the valuation made by Badger in January 1946 (Pref. Exh. 29-A). This improvement is, of course, the result of the improvement in the earnings position of the three operating companies. The tabulation set forth in Appendix G, *infra*, shows the record of earnings for each of the principal subsidiaries, *i. e.*, Virginia, Gulf States and El Paso.

The figures in Table 7 (Appendix G) show that substantial improvement in earnings available for common was experienced by each subsidiary in each of the years 1940 through 1947. In the case of Virginia, such net earnings were 35% greater in 1947 than in 1940. For Gulf States, the increase in earnings in

the same period was 85%, and for El Paso such increase was 147%. The following table combines the earnings figures of the subsidiaries into over-all earnings figures for selected years, as follows:

NET EARNINGS AVAILABLE FOR COMMON
SELECTED YEARS

	1940	1945	1947	12 mo. ended 9 30 48
Virginia	$3,954,352	$4,094,036	$5,324,075	$4,062,427
Gulf States	1,841,366	2,071,569	3,415,480	3,646,794
El Paso	471,256	691,482	1,030,761	1,107,301
Total	$6,266,974	$6,857,087	$9,770,316	$8,816,522
% to 1940	100	109	156	141
% to 1945	—	100	143	120

Combined earnings of the subsidiaries for the year 1947 and for the 12 months ended September 30, 1948, were 156% and 141%, respectively, of 1940. Likewise, earnings for these periods were 143% and 120%, respectively, of 1945 earnings. Steps have been taken by management to remedy the temporary earnings reduction in the case of Virginia, which steps will be described below. It may be concluded on the basis of the percentage increase in net earnings available for common that the three operating companies formerly subsidiaries of Engineers have experienced a substantial growth since 1940, with much of this growth occurring after 1945.

The earnings record of these companies in large measure is caused by their location in areas characterized by rapid expansion. Thus Virginia is located in a territory in which the major industries are tobacco and tobacco products, textiles (including rayon), ships, food and related prod-

nets, wood products, paper and pulp, and other commodities.[38] Many of these industries are characterized by a high rate of growth. Gulf States derives a substantial portion, approximately 12.1%, of its total operating revenues from sales of electric energy or steam directly to the oil industry for refining, pipe line pumping and well pumping and drilling. The production of chemicals, including synthetic rubber, also constitutes an important industry and sulphur, salt and a diversified list of agricultural commodities are other important products of its territory.[39] In connection with the future outlook of the company, it should be pointed out that contracts have recently been signed with Esso Standard Oil Company and Ethyl Fuel Corporation extending the original terms of contracts with these two firms to December 31, 1961, and May 1, 1960, respectively, whereby the maximum combined contract demands under both contracts have been increased by 43,000 kwh.[40] This tangible evidence of future growth taken in conjunction with the inherent growth characteristics of the industries located in the territories served by Gulf States indicates that the current record of this company regarding revenue and earnings cannot be considered a temporary phenomenon.

El Paso is also located in an area characterized by rapid industrial expansion. The City of El Paso has always been an active trading center in extensive farming and cattle raising regions. Industries in that vicinity include copper refining and smelting plants, railroad repair shops, and oil refineries.[41]

---

[38] Prospectus of Virginia dated November 15, 1948, p. 12 (filed with SEC).

[39] Registration Statement filed with SEC in January 1949, p. 7.

[40] Ibid.

[41] Moody's Public Utility Manual, 1948, p. 283.

Evidence of growth is indicated in various operating statistics of these companies relating to gross dollar sales of electricity, kilowatt sales of electricity, and number of customers served. Current performance of these companies is compared to 1940, a measure of prewar performance, and to 1945, which was the last complete year preceding Badger's valuation. The balance of this section is devoted to such statistics and the analysis thereof.

The tabulation set forth in Appendix H is a comparison of gross sales of electricity of the operating subsidiaries classified according to type of customer, *i. e.*, residential and rural, commercial, industrial, and others for the year 1940 and for the years 1944 through September 30, 1948. Electricity sales have consistently accounted for over 90% of the gross operating revenues of each company. As indicated in Table 8 (Appendix H), each of the companies has shown a substantial growth in gross sales of electricity. Thus sales of Virginia increased from $23,754,357 in 1940 to $45,676,204 for the twelve months ended September 30, 1948, an increase of 94%. The increase from 1940 to the latter date for each of the customer classifications was substantial and consistent. The percentage increase in gross sales for each customer classification was 79% for residential and rural, 107% for commercial and 69% for industrial sales. Moreover, increases have been shown since the year 1945 which was the last year preceding Badger's valuation (Pref. Exh. 29-A). Thus gross operating revenues of Virginia have increased from $37,912,214 in 1945 to $45,676,204 for the twelve months ended September 30, 1948, which represents an increase of 20%. Analysis of each of the customer classifications moreover indicates that in-

creases were shown for each classification. Thus, sales to residential and rural customers increased 24% from 1945, commercial sales increased 11% over 1945 and industrial sales have increased 24% over 1945. As regards Virginia, the Central-Illinois and White contentions that revenues of Virginia at the time of Badger's valuation were *temporary* are not borne out by actual sales in the post-war era. Current revenues from sales of electricity have greatly exceeded the revenues obtained in 1940 and 1945.

Gulf States shows a similar growth from 1940 to the twelve months ended September 30, 1948. Its gross sales of electricity have increased from $9,740,738 in 1940 to $19,529,643 for the twelve months ended September 30, 1948, an increase of 100%. In that period, residential and rural sales increased 97%, commercial sales increased 34%, and industrial sales increased 97%. In other words, the Company currently has a dollar volume of sales twice as great as in 1940. Comparing the year 1945 with the twelve months ended September 30, 1948, reveals that this Company has undergone substantial growth in that period. Thus, gross sales of electricity increased from $15,888,915 in 1945, declined to $14,858,359 in 1946, and then increased through 1947 to $19,529,643 for the twelve months ended September 30, 1948. The gain from 1945 through 1948 represents a 23% increase. Residential and rural sales increased 39% and commercial sales increased 60% from 1945 to September 30, 1948, while industrial sales declined 6% in that period. Although Gulf States derived substantial revenues from sales to pipe line companies during the war, which sales decreased as ocean tanker service was resumed following the termination of hostilities, Gulf States had almost made up revenue

losses in the industrial category by September 30, 1948. Moreover this revenue loss was more than offset by increases in other directions.

El Paso Electric Company shows a growth characteristic of the two preceding companies in that its gross sales from electricity increased from $2,782,918 in 1940 to $5,268,555 for the twelve months ended September 30, 1948, an increase of 89%. In other words, the operating revenues of this company were nearly twice as great in 1948 as in 1940. A classification of sales by type of customers is not available for the later date. Comparison of sales by type of customer for the year 1947 with the year 1940 reveals that residential and rural sales have increased 50%, commercial sales have increased 59% and industrial sales have increased 85%. Likewise, comparison of gross sales of electricity for the twelve months ended September 30, 1948, with the year 1945 indicates that such sales have increased 30% with sizeable increases being recorded in each of the customer classifications from 1945 to 1947.

It may be concluded from this tabulation (Appendix II) that the increase in gross sales of electricity for each of the operating companies from 1940 through September 30, 1948, has been steady and consistent. Moreover, it is quite evident that the current record of such sales has, on the whole, greatly exceeded the records established during the war years. A sufficient period has now elapsed since the termination of hostilities to indicate that the "wartime" level of sales was not a temporary phenomenon.

A comparative study of kilowatt sales of electricity to customers of each subsidiary by total and by customer classification is contained in Table 9 (Appendix I), *infra*.

That tabulation indicates that each of the operating subsidiaries has sold increasing amounts of electric energy to each of its customer classifications since the year 1940 and since the year 1945. Virginia increased its sales of electricity from 1,966,142,000 kwh in 1940 to 2,360,465,000 kwh for the twelve months ended September 30, 1948, an increase of 21%. In that period, residential and rural sales increased 125%; commercial sales increased 179% and industrial sales increased 60%. Kilowatt sales increased from 1,934,267,000 kwh in 1945 to 2,360,405,000 kwh for the twelve months ended September 30, 1948, an increase of 22%. By the later date, residential and rural sales had increased 45% over 1945, commercial sales had increased 11% over 1945 and industrial sales had increased 23% over 1945. Gulf States likewise showed a remarkable growth in electricity sales. Thus, total sales of electricity increased from 705,744,000 kwh in 1940 to 1,622,556,000 kwh for the twelve months ended September 30, 1948, an increase of 130%. In that period, residential and rural sales increased 147%, commercial sales increased 213% and industrial sales increased 107%. The sales of 1,622,556,000 kwh for the twelve months ended September 30, 1948, contrast with sales of 1,434,579,000 kwh in 1945, which represent an increase of 13%. The relatively slight increase is accounted for by the fact that industrial sales which had decreased in 1946 had returned only to their 1945 level. However, it should be remembered that increases in other categories more than offset the decrease in the industrial category, for residential and rural sales increased 55% and commercial sales increased 69% during this period.

In the case of El Paso, there are no statistics available relative to kilowatt sales for the twelve months

ended September 30, 1948, the latest year for which such data is available being 1947. Kilowatt sales of electricity increased from 133,451,000 kwh to 292,016,000 kwh in 1947, an increase of 119%. Residential and rural sales increased 83%, commercial sales increased 93% and industrial sales increased 95%. Also a substantial increase in kilowatt sales was recorded from 1945 through 1947, which increase was from 223,117,000 kwh to 292,016,000 kwh or 33%. Again increases in sales were recorded for each customer classification from 1945 through 1947 with residential and rural sales increasing 38%, commercial sales increasing 61% and industrial sales increasing 27%. This is further indication that the sales of electricity during the war period were not a temporary and unrepresentative experience of the company at the time Badger made his valuation in January 1946.

It may be concluded on the basis of this tabulation (Appendix I) that the operating companies which formerly were subsidiaries of Engineers have shown an outstanding ability to market electric energy throughout the period under consideration. This record of increased revenue sales and kilowatt sales, especially from 1944 to the present, took place in spite of sizeable rate reductions during that period. As stated on page 14 of its Prospectus dated November 15, 1948 (filed with the S. E. C.), Virginia reduced rates on thirteen separate occasions, which reductions represented savings to consumers in the amount of $4,064,000 for these years. Likewise, in its registration statement filed with the S. E. C. in January 1949, Gulf States has made rate reductions from 1944 on. These reductions have effected savings to its customers amounting to $687,000 for the period. Moreover, because of their location in

territories characterized by rapid growth, these companies have been able to more than offset losses of sales to war time customers. It may be concluded that the current operating record of these companies is representative of their future ability to sell electricity at reasonable rates.

It should be pointed out that these companies have substantially increased their residential kilowatt sales and revenues. Thus for Virginia the average annual use of electric energy per residential customer (including rural customers on residential rates) was 1,682 kwh for the twelve months ended September 30, 1948 as compared with 1,134 for 1940. Corresponding average annual billings per residential customer were $49.72 and $42.22 respectively. The average amount billed to residential customers was 2.96 cents per kwh for the twelve months ended September 30, 1948 and 3.72 cents per kwh for 1940.[42] Similar statistics may be cited for Gulf States. The average annual use of electric energy and average annual billings per residential customer for the twelve months ended September 30, 1948 were 1,363 kwh and $44.54 as compared with 1,021 kwh and $41.89 for 1940. The average rate billed to residential customers was 3.27 cents per kwh for the twelve months ended September 30, 1948 and 4.10 cents per kwh for 1940.[43] Likewise El Paso has shown a substantial increase in residential customer usage of electricity. For this company the average annual use of electric energy and average annual billings per residential customer for the year ended December 31, 1947 were 1,649 kwh and $44.52 as compared with 1,221 kwh and $39.06 for 1940. The average rate billed to resi-

[42] Prospectus of Virginia filed with the SEC dated Nov. 15, 1948, p. 13.

[43] Registration Statement filed with SEC January 1949, p. 13.

dential customers was 2.7 cents per kwh for 1947 and 3.2 cents per kwh for 1940.[41]

The tabulation, included in Appendix J, indicates the growth in number of consumers of the operating subsidiary companies, Virginia, Gulf States and El Paso from 1940 through the twelve months ended September 30, 1948.

The figures in Table 10 (Appendix J) indicate that there has been a substantial increase in the total number of customers served by these subsidiary companies. Thus Virginia was serving a total of 424,792 customers at September 30, 1948 in contrast with 284,084 in 1940, an increase of 50%. For the same two dates residential and rural customers increased 51%, commercial customers increased 40% and industrial customers on a reclassified basis decreased 41%. It should be pointed out, however that total kwh sales to industrial customers had increased 50% in this period. Comparing the number of customers of Virginia at September 30, 1948 with the number of customers in 1945 shows that the total number of customers had increased 20% with residential and rural customers increasing 19%, commercial customers increasing 20% and industrial customers increasing 9%. Gulf States also showed sizeable gains in customers from 1940 to September 30, 1948, the total number increasing from 92,132 in 1940 to 170,250 at September 30, 1948, an increase of 85%. In this period, residential and rural customers increased 88%, commercial customers increased 68% and industrial customers increased 53%. If the year 1948 is compared with the year 1945, we see that the total number of customers increased from 124,902 on the earlier date to 170,250 on the later date, an increase of 36%. In this postwar

[41] Moody's Public Utilities Manual, 1946, p. 914 and 1948, p. 284.

period residential customers increased 35%, commercial customers increased 40% and the number of industrial customers increased 30%. El Paso conformed to the experience of the above companies. Thus the total number of customers increased from 30,341 in 1940 to 41,966 in 1947, an increase of 38%. Residential and rural customers increased 36%, commercial customers increased 45% and industrial customers increased 45%. If a comparison is made between 1945 and 1947 it will be noted that the total number of customers increased from 37,544 in 1945 to 41,966 in 1947 or 19%. Residential and rural customers increased 15%, commercial customers increased 43% and industrial customers increased 100%.

In summary it may be said that the expanding character of the territory is reflected by the substantial increases in number of customers of these former subsidiaries occurring from 1940 and 1945 to 1948.

The substantial increase in the number of customers served by these subsidiaries since 1945 has greatly exceeded the expectations of company officers at the time of Badger's valuation (Pref. Ex. 29-A). As an indication of this, we may note that the Registration Statement of Gulf States, filed with the S.E.C. in January 1948, states on p. 14 as follows:

> "* * *. At the end of the war a substantial reduction in load was expected and further increase in capacity did not appear necessary. *However such reduction did not materialize*, as such cutbacks as did occur from military establishments and war industries were more than offset by the general increase in business and the addition of new customers". (Italics ours)

On p. 19 of the Prospectus of Virginia, dated November 15, 1948, filed with the S.E.C., general refer-

ence is made to the fact that the rate of growth in system loads has increased greatly due to the general increase in business and the addition of new customers. In fact, the company has had to rely greatly on interconnections to meet its existing requirements.

Although Virginia showed a decline in net earnings available for common in the twelve months ended September 30, 1948, its management has taken steps to remedy this situation. Beginning September 1, 1948, the temporary 5% discount applicable to certain classes of customers was eliminated and in August 1948 the application of fuel clause riders in certain of its customers filed rates, was broadened. The estimated annual increases in revenues because of these two changes, based on the level of use by customers at the respective times such changes were made, was $1,750,000.[45] Moreover, in a footnote on page 9 of the prospectus referred to above, it is estimated that the net sum of operating expenses and depreciation would have been reduced by $1,500,000 had the new Possum Point generating plant been in operation through the twelve months ended September 30, 1948. This plant was scheduled to be in operation by the end of 1948. Finally, increases in gas rates in the Norfolk-South Norfolk and Newport News-Hampton areas became effective on November 1, 1948. These rates were designed to produce additional revenues amounting to $500,000 annually.[46]

Admittedly, the earnings for the twelve months ended September 30, 1948 do not fully reflect the increased coal and wage cost which have occurred in 1948. Thus, on p. 14 of the Prospectus of Virginia dated November 15, 1948 (filed with the S. E. C.), it

[45] Prospectus of Virginia filed with the SEC dated Nov. 15, 1948, p. 14.

[46] Ibid., p. 16

is estimated that fuel costs for the twelve months ended September 30, 1948, would have been $800,000 greater had the present average contract price of coal been in effect for the full twelve months. In addition, wage increases granted during the twelves months ended September 30, 1948, amounted, on an annual basis, to approximately $779,000, of which $275,000 is reflected in the income statement for the above period. Finally, the income statement for this period does not fully reflect the annual interest expense of the $11,459,000 3⅛% convertible debentures issued in April, 1948, which expense on an annual basis is $367,306.

For the convenience of the Court, there is presented a tabulation showing the net effect of these anticipated increases in income and expenses of Virginia, on an annual basis as follows:

Increase in Gas Rates	$ 500,000
Discontinuance of Temporary Discounts and Application of Fuel Clause Riders	1,750,000
Savings Arising from Operation of Possum Point Plant	1,500,000
Total Increase in Income	$3,750,000
Deduct: Increased Expenses	
Increase in Fuel Costs	$ 800,000
Annual Interest Requirements on 3⅛% Conv. Deb.	367,306
Increased wage costs not reflected in Income Statement as of 9/30/48	504,000
Estimated Increase in Net Income before Federal Income Taxes	$2,078,694
Deduct 38% Federal Income Tax	789,904
Estimated Increase in Net Income	$1,288,790

Adding this anticipated increase in net income to t
earnings available for common as of September
1948, in the amount of $4,062,427 would produce es
mated net earnings of $5,351,217, which would
slightly greater than the earnings for the year end
December 31, 1947. This contrasts with 1945 earnin
of $4,094,036, the latest earnings figure available at t
time of Badger's valuation, which was predicated
the maintenance of earnings at that level. There
every reason to believe that the past increase in ki
watt sales will be maintained, which would result
an even greater increase in earnings available f
common.

In conclusion, it should be remembered th
Badger's conclusions relative to the value of Eng
neers preferred (Pref. Exh. 29-A) were predicat
upon the continuance of the earnings of subsidiari
at the then-existing level. Data in this section, ho
ever, shows that the earnings performance anticipat
at the time of his valuation has been *greatly exceed*
and, unlike the innuendoes of Central-Illinois ar
White, such earnings did not recede to pre-war leve
in the post-war periods. Furthermore, it has be
shown that current sales of electricity are well abo
their levels for 1940 and 1945, whether they a
measured in dollars or in kilowatt hours. Moreov
it has been shown that the growth of the territori
served by these companies has been reflected in th
substantial increases in number of customers serv
from 1940 and from 1945.

E. Comparison of Engineers Actual Earnings for 1946 and Pro Forma Earnings for 1947 and for the Twelve Months Ended September 30, 1948 With the Earnings Estimate for 1946 of Engineers (Eng. Exh. 63, R. 1828a-1829a).

Statements have been made above to the effect that Badger's valuation of the preferred stocks of Engineers was not based upon temporary and inflated wartime earnings, as contended by Central-Illinois and White, but upon earnings reasonably permanent in character. It will be recalled that his valuation was predicated upon the maintenance of the consolidated earnings of Engineers at their then-existing level. Badger's valuation was made on January 24, 1946. The best tangible evidence of anticipated earnings at that time was to be found in an exhibit of Engineers (Engineers Exh. 63, R. 1828a-1829a). For the convenience of the Court a comparison of that estimated income statement with both the actual consolidated income statement found in Table 1 (Appendix A, *infra*) and with the pro forma consolidated income statements for the year ended December 31, 1947 and for the twelve months ended September 30, 1948, shown as Tables 2 and 3 respectively (Appendix B and C, *infra*) has been prepared and set forth in Table 11 (Appendix K, *infra*).

That table shows conclusively that the earnings *estimate* for 1946 has been substantially exceeded in 1946, 1947 and for the twelve months ended September 30, 1948. Thus, the estimated earnings statement establishes that total charges and preferred dividends of the consolidation, which includes dividends on Engineers' preferred stock, were covered 1.85 times in 1946, 2.01 times in 1947, and 1.81 times for the twelve months ended September 30, 1948. The cover-

age expectation at the time of Badger's valuation (1.68, R. 1829a) has been excelled in all of the three subsequent years. Furthermore, it has been shown in the preceding section dealing with performance of operating companies that there is every indication that the coverage rate of 1.81 for the twelve months ended September 30, 1948 will be bettered in the foreseeable future. Therefore, the tabulation contained in Appendix K is further proof that Badger's valuation was based upon earnings, reasonably permanent in character.

Conclusions Respecting Present Applicability of Badger's Valuation.

The material presented, *supra*, has proved conclusively that Badger's valuations of Engineers preferred stocks at January 1946 were not based upon transitory factors as regards interest rates and earnings and asset coverages. It has been amply demonstrated that interest rates and preferred stock yields have remained relatively close to their levels at January 1946 and that such increases as have occurred represent relatively minor fluctuations. There is every expectation that the present level of interest rates will be maintained in the foreseeable future. It has been and will be the established policy of the Federal Reserve Board and the Treasury Department to peg, at par, the price of the long-term bank ineligible 2½% Treasury Bonds. Following the November election, investor confidence has been increased with respect to the ability of the Federal Reserve Board to maintain this rate with the result that interest rates and preferred stock yields have consequently declined. It has also been shown that the consolidated earnings record of Engineers (on a pro forma basis) has substantially

improved subsequent to Badger's valuation. In fact, consolidated earnings have materially exceeded the best estimates of anticipated earnings available at January 1946 and prove conclusively that Badger's valuation was predicated upon earnings permanent in character. In addition, the improved record of earnings has resulted in giving Engineers preferred on a pro forma basis a substantially increased asset coverage, whether such coverage be measured in terms of consolidated book value per share or pro forma net assets per share at market values (Tables 6 and 6A, Appendix F). Finally, the operating record and characteristics of the three operating subsidiaries of Engineers establish that, without exception, these companies are characterized by rapid growth. This growth was measured by comparing gross income, current earnings, sales of electricity, both in dollars and in kilowatt hours and number of customers, with similar statistics for 1940, a pre-war year, and 1945, the last year previous to Badger's valuation in 1946. It was there shown (1946 estimate) that the indicated increases will be continued into the future. In view of these demonstrated facts and conclusions, namely that interest rate presently remain at historically low levels, that the earnings and asset coverage of Engineers has shown substantial improvement since 1946, and that the operating companies are characterized by ever increasing expansion, it is amply evident that, were the preferred stocks of Engineers presently outstanding and being currently traded in the open market, such stocks would be selling at or near their respective call prices. Were there no call features attaching to these preferreds, they would be selling at prices materially in excess of their call prices.

In addition, assuming *arguendo* that this Court

may take judicial notice of the variety of statistical data, general utility trends and economic conditions[47] selected from various publications, and occurring long after consummation of the plan, and concludes that such subsequent changes discredit or undermine the Commission's valuation (which we deny), it is urged that in such event the Central-Illinois and White Briefs cannot serve as a substitute for the Commission's initial valuation and the subsequent review by the District Court. That function has, by statute, been allocated to the Commission and remand for its consideration would then be required.[48] Consequently, it would be the duty of this Court to return this case to the Commission for a fresh determination. Similarly, assuming for the sake of argument that there has been a substantial radical change not envisaged or foreseen which would warrant a reopening upon an express request or otherwise,[49] then it is equally true that this Court should direct a remand and not make its own valuation. On this score it must be pointed out that Central-Illinois and White have never claimed a radical and substantial change nor have they sought a remand—well knowing, no doubt, that such request would lack both factual and legal basis. Nor for that matter did the two courts below find the record stale, even though the same

S. 448 (1943), rehearing den. 318 U. S. 803 (1943).

type of material was presented in the briefs there.[50] In any event, it is a rare occasion[51] when this Court will reopen a case long pending before an administrative body and the courts on the basis of a substantial and radical change in economic conditions, even upon express request, and then only if substantial injury to the party affected can be clearly established.[52] Any other rule would result in interminable litigation and would encourage objectants to prolong the proceeding in the hope that economic conditions would materially change to their advantage. Even more so is this salutary principle applicable in the instant case where the plan has been virtually consummated with the approval of Central Illinois and White who, among others, opposed any stay (such as was sought by Streeter) and yet, at this time, indirectly imply significant economic changes. By virtue of such opposition to a stay which was denied by the two courts below and a Justice of this Court, and, in fact, because of the demand by counsel for Engineers for the immediate execution of the plan, in order to insure the success of the warrant program in view of the market conditions then existing (R. 374a-375a) the District Court directed the plan to be carried out.[53] That consummation resulted in the termination of the preferreds rights to dividends and

---

[50] The Circuit Court was certainly familiar with the rule requiring a remand to the Commission for its reconsideration where the record furnished the court has grown stale (R. 264) and the District Court expressly accepted Dr. Badger's values and assumed their applicability at that time on May 15, 1947 "in the absence of a showing of changed circumstances" (R. 290a).

[51] *Interstate Commerce Commission* v. *Jersey City*, 322 U. S. 503, 514-515 (1944); *United States* v. *Pierce Auto Freight Lines*, 327 U. S. 515, 534-535 (1946).

[52] *Insurance Group* v. *Denver & R. G. W. R. Co.*, 329 U. S. 607, 619 (1947).

[53] In fact the dissolution of Engineers has taken place and the directors have been constituted trustees pursuant to the provisions of Delaware corporation law (R. 15).

left them without any tangible transferable evidence of their interest in the escrow, while the common stock litigated the payment of the full amount as approved by the Commission. It ill becomes the common who urged consummation, and cut off the preferreds rights and obtained the benefits of such consummation, to urge a revaluation by this Court on the basis of so-called statistics in their Briefs, without any opportunity to other parties to subject that data to examination and cross-examination. The Central-Illinois and White Briefs are no substitute for evidence and hearing nor is this Court the proper place for a trial of the facts solely on the basis of briefs. The rights of the parties became fixed as of the time of consummation and should not be subjected to reappraisal at this time. It is seriously doubted that any court has gone so far as to permit a reopening at such a late date as this—and even the general principle that equity speaks as of the date of the entry of the decree does not support such view—for its decree has already been entered and more than that, *de facto* consummation has occurred. The *de facto* consummation was clearly recognized by the court below, which in directing a remand to the Commission for the valuation noted that in view of the denial of the stay of consummation, "the escrow agreement accordingly delimits the area in which the plan to be approved by the Commission and district court must fall" (R. 40). What justice or equity rests with the common who have obtained the result sought, that is, to pass on the underlying companies and cut off the preferred dividend rights and at the same time urge alleged changes in economic conditions, in an effort to obtain a valuation by this Court on the basis of their Briefs? Such procedure should not be sanctioned by this Court, especially where the Commission's determination has been amply sup-

ported not only by the facts prior,[51] but also subsequent, to the consummation of the plan.

(We cannot let go unnoticed several statements made in the Central-Illinois Briefs and have found it necessary to discuss them in an addendum hereto.)

Conclusion.

For the reasons stated herein and in the Briefs previously submitted, the judgment of the Court of Appeals for the Third Circuit should be reversed with appropriate mandate to the District Court to enforce the plan as approved by the Commission insofar as it provides for the payment to the preferred stockholders of amounts equal to the respective redemption prices of their stock (less the sum already received) plus adequate recompense for the delay in payment. If this Court determines however, that the Commission has erred in the valuation process, this proceeding should be returned to the Commission for a fresh determination, in accordance with the instructions of this Court.

Respectfully submitted,

LAWRENCE R. CONDON,
Attorney for Petitioners, Thomas W. Streeter, et al., preferred stockholders of Engineers Public Service Co.,
165 Broadway,
New York 6, N. Y.

LAWRENCE R. CONDON,
MILTON MAURER,
Of Counsel.

[51] In *Public Service Commission* v. *S. E. C.*, 166 F. (2d) 784, 788 (C. C. A. 2, 1948), cert. den. 334 U. S. 838 (1948), the following pertinent comment is made: "There was certainly some basis for the valuation of the SEC when the order of the District Court was entered on July 16, 1947. How far later events may have thrown doubt upon the plan, as then approved, we cannot consider; we pass upon the order as of the time when it was entered."

Addendum.

1. Accepting *arguendo* the Central-Illinois valuation of the enterprise of $103,700,000 (Central-Illinois Brief, pp. 101-102), according call prices to the preferred would result in allocating to them 40.9% of the enterprise and to the common 59.1% of the enterprise. If the valuation of the enterprise made by Badger of $118,000,000 is accepted (R. 1163a), the preferred will receive under the plan, 36% of the enterprise and the common will receive 64% of the enterprise. It is apparent therefore that the preferred are in a position where the major portion of the enterprise provides a cushion against any decline in value. This is significantly different from the situation in the *Otis* case where the preferred stock interest in the enterprise was valued at 95% and the common stock at only 5%.

2. The Central-Illinois Answering Brief contains the following statement (at p. 26): "The record establishes that when adjustment is made for such balance sheet items, the asset value of the Engineers preferred stocks barely approximate $100 per share." The authority for this statement is Engineers Exhibit 77 (R. 1851a). That conclusion is not supported by this Exhibit. Engineers Exhibit 77 supports and confirms Dr. Badger's conclusion that the book value or equity per share for the preferred stock of Engineers before deducting reserves was $192.51 and after deducting reserves, $181.31.

In the event that Central-Illinois was referring to Engineers Exhibit 78 (R. 1852a) for its conclusion,

we respectively point out (1) that the Exhibit was entirely irrelevant and incompetent, and (2) that the conclusions set forth therein were completely disclaimed by Dr. Badger (R. 1162a *et seq.*). Engineers' Exhibit 78 showed that after excluding certain reserve items, there was only available for the preferred the sum of approximately $39,000,000 (R. 1851a). Dr. Badger, in commenting upon this Exhibit to which objection was made by the preferred stockholders, pointed out that after adding up the $16,000,000 of cash, $65,000,000 for Virginia (which was Barnes' appraisal), $30,000,000 for Gulf States and $7,000,000 for El Paso, in "giving a valuation of these assets, in accordance with the evidence and/or records in this case" the value of the assets of Engineers was equal to $118,000,000 (R. 1163a). He characterized as "ludicrous" the value of $39,000,000 which appeared in Engineers Exhibit 78.

(1) Statistics for subsidiaries appear in Moody's Public Utilities Manual, 1948, Virginia Electric at p. 743-4, Gulf States at p. 820-1, and El Paso at p. 284. As the Parent Company was placed in liquidation in 1947, it did not prepare an income account for 1947. Therefore, the Parent Company's statement for year ended December 31, 1946, Moody's Public Utilities Manual, 1947, p. 1297, has been used with adjustments as noted in Footnotes (2) and (3)

(2) Compiled as follows:

Company	Total Common Dividends	Pro Rata Share to E.P.S.Co.	Amount to E.P.S.Co.
Virginia Elec.& Pwr.Co.	$3,673,031.	99.80%	$3,665,685.
Gulf States Utilities Co.	1,623,473.	100.00	1,623,473.
El Paso Electric Co.	611,190.	100.00	611,190.
		Total.	$5,900,348.

(3) 1946 Operating Expenses of $272,960. increased by 20% to reflect higher materials and wage costs. Other taxes assumed to increase to $20,000 from $16,451 in 1946. Other income assumed to be the same as in 1946.

(4) Computation of Federal Income Taxes

Dividend Income	$5,900,348.
Less:85% Dividend Inc. Credit	5,015,296.
Taxable Dividend Income	$ 885,052.
Other Income	177,585.
Total Tax Income	$1,062,637.
Less:Expenses and Other Taxes	347,552.
Taxable Net Income	$ 715,085.
Federal Income Tax at 38%	$ 271,732.

(5) Minority interest computed as follows:

Earnings Available for Charges		$8,899,177.
Less: Interest & Amortization	$2,127,747.	
Subsidiary Pfd. Dividend	1,447,355.	3,575,102.
Earnings Available to Common		$ 5,324,075.
Percent Minority Interest		0.02%
Minority Interest		$ 10,649

Opinions Below 1

Statement 2

I. In Opposition to Central-Illinois Cross-Petition .. 3

A. Questions Presented 3

B. Reasons for Denying Writ 4

C. Argument 4

1. Assuming *arguendo* the unfairness and inequity of the plan, the court below properly vacated the decree of the District Court and directed the remand of the proceedings to the Securities and Exchange Commission 4

2. The Act and Fifth Amendment do not bar payment to preferred stockholders under a fair and equitable plan of an amount equal to the redemption price established as the equitable equivalent of the rights surrendered, in the face of the limitation of the preferred to stated value under the charter involuntary liquidation provision 12

II. In Reply to Common Stockholders' Briefs in Opposition to Streeter Petition 14

A. As to Contentions Respecting the Function of a Section 11(e) Court vis-a-vis the Commission 14

B. As to Contentions Regarding the Valuation Process 23

1. Significance of fair and equitable standard 23

PAGE

2. Fair investment value doctrine 23

3. Bankruptcy and equity reorganization precedents 27

4. Continuance of the holding company "enterprise" and "system" 28

Conclusion 30

Nos. 266, 227.

No. 266.

CENTRAL-ILLINOIS SECURITIES CORPORATION and CHRISTIAN A. JOHNSON

v.

SECURITIES AND EXCHANGE COMMISSION, THOMAS W. STREETER, *et al.*, THE HOME INSURANCE CO., *et al.*

No. 227.

THOMAS W. STREETER, *et al.*, *Petitioners,*

v.

CENTRAL-ILLINOIS SECURITIES CORP., C. A. JOHNSON, LUCILLE WHITE, and FRANCES BOEHM.

BRIEF OF THOMAS W. STREETER, *ET AL.* IN OPPOSITION TO CROSS-PETITION OF CENTRAL-ILLINOIS SECURITIES CORP., *ET AL.* AND IN REPLY TO BRIEFS OPPOSING PETITION OF THOMAS W. STREETER, *ET AL.*

Opinions Below.

The opinion of the Court of Appeals (R. 12) and the opinion denying the prayers of the petitions and cross-petitions for rehearing (R. 138) are reported in 168 F. (2d) 722. The opinion of the District Court (R. 283a) is reported in 71 F. Supp. 797. The findings and opinion (R. 25a) and supplemental findings and opinion of the Securities and Exchange Commission (R. 128a) have not yet been officially reported but are set forth in the Commission's Holding Company Act Releases Nos. 7041 and 7119, respectively.[1]

[1] As the jurisdictional statement and the statute involved appear in the Streeter petition, pp. 2-5, it is requested that they be deemed incorporated herein.

Statement.

The petition previously filed on behalf of Thomas W. Streeter, *et al.* contains a complete statement of the case, to which the attention of this Court is respectfully directed and which it is requested be deemed incorporated herein.[2]

While it is not appropriate to argue the merits of the case at this time, we believe that we can assist the Court in its consideration of the three petitions by commenting, even if only briefly, on several of the major contentions in the two opposing briefs, independently submitted on behalf of two groups of common stockholders.[3] As demonstrated in the aforesaid three petitions, two issues basic to the proper administration of the Public Utility Holding Company Act,—the function of the district court vis-a-vis the Commission and the significance of the fair and equitable standard—have been raised and require resolution by this court. Furthermore by indirection the cross-petition filed by the common stockholders, Central-Illinois Securities Corp. *et al.*,[4] constitutes an admission that the decision below raises "substantial issues in the administration

---

[2] *Thomas W. Streeter, et al.* v. *Central-Illinois Securities Corp., et al.*, October Term, 1948, No. 227, (hereinafter called the "Streeter petition"), pp. 7-16. In addition, petitions have also been filed on behalf of the Securities and Exchange Commission and The Home Insurance Company, *et al.*, Nos. 226 & 243, respectively.

[3] Memorandum of Respondents Lucille White and Frances Boehm in Opposition to Appellants' Petitions and Brief of Respondents Central-Illinois Securities Corporation and C. A. Johnson, in Opposition (hereinafter called the "White opposition brief" and the "Central-Illinois opposition brief", respectively.)

[4] *Central-Illinois Securities Corp., et al.* v. *Securities and Exchange Commission, et al.*, October Term, 1948, No. 266 (hereinafter called the "Central-Illinois cross-petition").

of the Public Utility Holding Company Act" and a recognition that "important questions arising from the judgment"[5] of the court below exist. In addition, since the Central-Illinois cross-petition raises questions on which the views of the preferred stockholders have hitherto not been set forth for this Court, we believe that the presentation of the position of the Streeter group will serve a purpose in assisting the Court in its consideration and facilitating its disposition of that cross-petition. Accordingly, this memorandum will be devoted to presenting the Streeter group's views (I) in opposition to the Central-Illinois cross-petition and (II) in reply to the briefs opposing the Streeter petition.

I. In Opposition to Central-Illinois Cross-Petition.

A. Questions Presented.

1. Did the court below properly vacate the decree of the District Court and remand the proceedings to the Securities and Exchange Commission for appropriate action where the plan was disapproved as not being fair and equitable within the purview of section 11(e) of the Public Utility Holding Company Act?

2. Does a fair and equitable plan under section 11(e) which provides for the payment to the preferred stockholders of an amount equal to the redemption price established as the equitable equivalent of the rights surrendered contravene the Public Utility Holding Company Act or the Fifth Amendment to the Constitution, where the involuntary liquidation clause

---

[5] Central-Illinois cross-petition, p. 18.

of the charter limits the preferred stockholders to face value?

B. Reasons for Denying Writ.

The Central-Illinois cross-petition raises no substantial issues affecting the administration of the Public Utility Holding Company Act (hereinafter called the "Act"). Its cross-petition primarily questions the propriety of the remand on the valuation aspect. In this respect, no conflict between the decision of the court below and the decision of other courts of appeals is disclosed. The cross-petition cites no decision of any court directly in point that conflicts with the opinion of the court below as to the requirement of remand. Likewise, no substantial issue exists with respect to the alleged violation of the Act or Fifth Amendment.[6]

C. Argument.

1. Assuming *arguendo* the unfairness and inequity of the plan, the court below properly vacated the decree of the District Court and directed the remand of the proceedings to the Securities and Exchange Commission.

The Streeter group maintains that the Securities and Exchange Commission (hereinafter called the "Commission") correctly determined that the preferreds have a fair investment value at least equal to the call price and that fairness and equity require the payment to the preferreds of that amount. If, however, this Court concludes that the Commission erred in its valuation, then the question of remand comes to the fore. Accordingly, the Streeter group has assumed, only for the sake of argument, that the payment to the preferreds of an amount equal to the call

[6] The same contention made by the White group (opposition petition, p. 8) is likewise without merit.

prices is not fair and equitable, but have challenged this determination in the petition.[7]

Granting *arguendo* the District Court's determination "that because of the provision for the payment of premium,[8] the plan does not meet the requirements of fairness and equity" (R. 292a), nevertheless the District Court had no power to rewrite or amend the plan so as to reduce, on the basis of its own estimates and valuation, the quantum of participation accorded to the preferred stockholders under the plan submitted by the Commission, and then to approve and enforce the plan as so amended by it. In other words, since the District Court had in effect disapproved the plan submitted as unfair and inequitable,[9] it had no choice but to reject the plan, deny enforcement and remand to the Commission for appropriate action. Its failure so to do constituted a reversible error, for

[7] In addition to challenging the significance of the fair and equitable standard as determined by the court below, the Streeter petition also questions the standard of review as applied in testing the valuation reached.

[8] The reference of the District Judge (Leahy, *J.*) to "premium" is an inaccurate characterization, as the plan does not call for the payment of a "premium" as such, but an amount equivalent to the redemption price. Such reference reflects a "nominal" approach which, although begging the question, is frequently used by the common stockholders. Moreover, the same District Judge on another occasion in his decision in *In re Cities Service Co.*, 71 F. Supp. 1003 (D. Del., 1947) rendered shortly after his opinion in the instant case views the payment of the amount in excess of the face value as "premium" only where the equitable equivalent is cash, and not other securities, even though such securities are deemed the equivalent of money; and in the same opinion, payment of the excess in the form of securities was justified on the basis of the medium used to satisfy the claim. This distinction in treatment based upon the medium of payment—cash or kind—is without substance and was properly rejected by the court below (R. 38). It is well settled that compensation may be made either in cash or kind (Streeter petition, p. 39, n. 30).

[9] In its opinion on rehearing, the court below indicated that the "District Court found the plan to be unfair and inequitable and rejected it" (R. 143).

which the court below correctly vacated the District Court's decree and directed the remand to the Commission for its action (*i. e.*, valuation).[10] Such was the determination of the court below when it said:

> "Though a district court of the United States sitting pursuant to the provisions of Section 11(e) may reject a plan, it cannot value the securities, find equitable equivalents therefor and substitute its own estimates for those of the Commission requiring the plan as amended by it to be carried out. To put the matter briefly, a district court may reject but not amend the plan. The court below, therefore, erred in one particular. It entered an order approving and enforcing the plan as amended by it. It was without power to do this. The provisions of Section 11(e) make it clear that the Commission in the first instance must approve the plan and find it to be fair and equitable. If, as here, the district court disagrees with the conclusion of the Commission that the plan is fair and equitable, it must refuse to approve the plan and 'remand' the record to the Commission for further and appropriate action by it" (R. 39).

The principle enunciated by the court below that a section 11(e) court may disapprove and reject a plan, but not amend and then approve it has been uniformly applied by the courts. *In re Laclede Gas Light Co.*, 57 F. Supp. 997 (E. D. Mo., 1944), aff'd *sub nom. Massachusetts Mutual Life Ins. Co. v. S. E. C.*, 151 F. (2d) 424 (C. C. A. 8, 1945), cert. den. 327 U. S. 795; *In re Kings County Lighting Co.*, 72 F. Supp. 767 (S. D. N. Y., 1947), aff'd *sub nom. Public Service*

---

[10] In referring to the action to be taken by the Commission, the court below said:

> "* * * The problem is and will remain, until its disposition by the Commission, one of valuation of the securities of Engineers, *viz.*, the preferreds and the common" (R. 40).

Commission of N. Y. v. *S. E. C.*, 166 F. (2d) 784 (C. C. A. 2, 1948); *In re Electric Bond & Share Co.*, 73 F. Supp. 426 (S. D. N. Y., 1946). A district court cannot (as the instant District Court attempted) approve a plan in part and disapprove it in part.[11] Furthermore, it cannot rewrite the plan and then approve.[12] Accordingly, the District Court in the case at bar did not have the power to amend the plan so as to reduce the compensation proposed to be paid to the preferred stockholders any more than it could change the method of payment from cash to kind, or modify any other part of the plan.[13] Nor was it free to change any of the provisions as to the stockholders'

[11] Thus in the *Laclede Gas* case, *supra*, the District Court said:

"* * * The Court of Appeals may—'affirm, modify, or set aside such order, in whole or in part.' No such power is given to this Court under Section 11(e) proceedings. This Court can only 'approve' or disapprove of the plan" (57 F. Supp. 1002).

[12] Thus in *In re Electric Bond & Share Co.*, *supra*, it was held:

"The province of the District Court in a §11(e) enforcement proceeding is that of a reviewing authority. *Okin* v. *S. E. C.*, 2 Cir., 1944, 145 F. 2d 206. The Court cannot *amend* or *modify* the plan and then enter an order of approval since §11(e) provides that the plan must in the first instance be approved by the Commission. The function of the Court is to approve and enforce the plan of reorganization submitted to it, if it finds such plan fair and equitable and appropriate to effectuate the purposes of the Act. To do this the Court must examine the plan and the record upon which the Commission's approval of the plan was based. To judge the plan on any other record would run counter to the procedure expressed in the statute" (73 F. Supp. 443). (Italics ours.)

[13] That such amendment is not permitted is evident from the following statement by the District Court in the *Kings County* case, *supra*:

"* * * I agree thoroughly with the position taken by counsel for the State Commission that, under my narrow

[Footnote continued on following page.]

rights under the plan.[14] Unquestionably, any change in the quantum of participation to be accorded the stockholders necessarily alters substantial rights. That fact cannot be changed by the mere repetitious assertion that the feature of the plan affecting stockholders' participation does "not go to the heart of the plan".[15] The history of the litigation in the instant case[16] and

[Footnote continued from preceding page]

statutory jurisdiction I could not *amend* a proposed plan. For example, I could not, in the case at bar approve the plan on condition that Long Island receive, not 7½% of its present common stock holding, but 3¾%, this representing a compromise between the views expressed by the two commissions. Any such disposition would be wholly without jurisdiction" (72 F. Supp. 774).

[14] In the *Public Service Commission* case, *supra*, which affirmed the *Kings County* case, *supra*, the Court of Appeals for the Second Circuit apparently imposed a stricter limitation upon the district judge's power of approval, stating:

> "We will take up the last objection first. We may assume for argument that the judge's power was limited to an approval or a rejection of the plan, as it stood. He held that, nevertheless, the condition that the plan should be submitted to the PSC for its approval was not an 'essential' part of the plan, and that for this reason he was free to disregard it. *In this he was right, not indeed because he would have been free to change any of those provisions for the issue of securities or the alteration of shareholders' rights which made up the plan, which he thought not to be 'essential';* but because, as we shall show, §11(e) did not require the consent of the PSC, and because submission to that commission was not part of the plan at all; but, as it itself declared, only one of the 'steps to be taken to make the amended plan effective'." (166 F. (2d) 786). (Italics ours.)

[15] Central-Illinois cross-petition, pp. 20, 22.

[16] This feature has been sharply litigated before the Commission and the two courts below. Thus, in the first instance, inadequate compensation to the preferred resulted in the Commission's refusal to approve the plan unless and until amended to increase the participation of this group (R. 73a). In turn this increased participation gave rise to objection by two common stock groups before two courts below to the enforcement of the amended plan.

in the other cases arising under section 11(e) amply demonstrates the significance of this issue concerning the treatment of stockholders' claims. Central-Illinois' efforts to minimize the importance of the compensatory aspect of the plan is manifestly ridiculous.

Likewise, this principle limiting the district court's power to amend a plan has been applied to analogous situations arising under section 77 of the Bankruptcy Act. Thus in section 77 proceedings, where the district court's approval is required in all cases, that court can only pass upon such plans as are certified to it[17] and has no power to amend the plan,[18] but is limited to approval or disapproval, in which latter event it must either dismiss the proceedings or refer the plan to the Interstate Commerce Commission.[19] Furthermore, even the "interest of speed" or expedition does not justify the judicial amendment or modification of a plan submitted by the Commission. *In re Alton R. Co.*, 159 F. (2d) 200 (C. C. A. 7, 1947);[20]

---

[17] *In re New York, N. H. & H. R. Co.*, 27 F. Supp. 392 (D. Conn., 1938), aff'd 104 F. (2d) 1018 (C. C. A. 2, 1939).

[18] *In re New York, N. H. & H. R. Co.*, 54 F. Supp. 595 (D. Conn., 1943), aff'd in part and rev'd in part on other grounds 147 F. (2d) 40 (C. C. A. 2, 1945) cert. den., 325 U. S. 884 (1945).

[19] *In re Erie R. Co.*, 37 F. Supp. 237 (D. Ohio, 1940).

[20] Thus, in the *Alton* case, *supra*, where the District Court in the interest of speed rewrote certain provisions of the plan after its approval by the Interstate Commerce Commission and the security holders, the Court of Appeals reversed the District Court order, rejecting the argument as to the District Court's authority to rewrite in connection with its supervision of the execution of the plan.

The *Alton* case, we believe, cannot be distinguished from the instant case, in which the plan as approved by the Commission and submitted to the court contained none of the provisions concerning the treatment of the preferred stockholders which were incorporated by Paragraph 6 of the court's order (R. 321a). Nor does the District Court's desire for speed in the instant case justify its attempt to change the plan any more than in the *Alton* case.

In re Chicago, R. I. & P. Ry. Co., 162 F. (2d) 257 (C. C. A. 7, 1947).

In addition, the Commission's amendatory order of February 11, 1947 and the District Court's adoption of the escrow resulted in the restoration of the splitting features of the original plan,[21] after they had been withdrawn, by separating part of the plan it disapproved and so constituted substantive changes of valuable rights[22] without authority in law so to do, as indicated above (pp. 7-8). In any event the Commission's amendatory order and its consent to the escrow do not satisfy the statutory requirement of approval by both the Commission and the district court.[23] Nor can this requirement be waived by either the Commission or the district court. So stated the court below in the following language:

> "* * * we are of the opinion that neither the Commission, nor the District Court, nor this court possesses the power to waive the provision of Section 11(e) providing for approval of a plan of reorganization as fair and equitable by the Commission and by the District Court. Moreover, we cannot treat the Commission's amendatory order of February 11, 1947 or its approval of the escrow agreement as a rejection of the role imposed on the Commission by Congress. The cor-

[21] Although counsel for Engineers had made a motion to separate Parts I and II of the plan and for an order permitting the consummation of Part I, the Commission found that it could not grant the motion to split the plan, but stated that it would approve an amendment to provide for escrow in the event of further litigation as to the rights of the preferred stockholders (R. 75a).

[22] The Commission does not view the amendatory order as an amendment to the plan (R. 169a, 389a).

[23] The Central-Illinois group has implicitly recognized in its opposition brief (pp. 13-14), that the Commission has not approved the plan in the form approved and enforced by the District Court despite their present elaborate argument as to the existence of the concurrent approval in its cross-petition (pp. 22-23). See also White opposition brief, p. 15.

rectness of our position in this regard is demonstrated by the fact that the amendatory order of the Commission provides that the escrow agent may make payment to the preferred stockholders only when the order of the District Court has become final and not subject to appeal. What the Commission intended to effect by the order was nothing more than the establishment of a means for expediting the execution of the plan of reorganization when the approval required by the statute had been attained" (R. 139).

As the District Court has disapproved the plan as unfair and inequitable and the requisite concurrent approval is lacking, the District Court was required to remand the cause to the Commission for appropriate action. This procedure which the court below correctly ordered has been uniformly followed. *S. E. C.* v. *Chenery Corp.*, 318 U. S. 80 (1943); *Schwabacher* v. *U. S.*, 334 U. S. 182 (1948). Both of these Supreme Court cases involved the treatment to be accorded stockholders under a statutory reorganization plan. Thus in the first *Chenery* case, *supra*, where an order of the Commission approving a reorganization plan under the Act was reversed as based upon inapplicable judicial precedents, this Court directed the remand to the Commission for appropriate action in accordance with its opinion. Similarly, in an analogous situation in the *Schwabacher* case, *supra*, this Court again directed a remand to the Interstate Commerce Commission for reconsideration as that Commission may have failed to consider the effect of certain rights of stockholders upon the "intrinsic or market values". In view of the foregoing authorities, as to which no conflict has been shown to exist, the decision of the court below correctly requires the remand to the Com-

mission for valuation in accordance with its opinion where the plan has been disapproved.[24]

2. The Act and Fifth Amendment do not bar payment to preferred stockholders under a fair and equitable plan of an amount equal to the redemption price established as the equitable equivalent of the rights surrendered, in the face of the limitation of the preferred to stated value under the charter involuntary liquidation provision.

The standard of fairness and equity incorporated in section 11(e) of the Act imposes the outer limits upon plans thereunder. By adoption of that standard, Congress has in substance decreed that in achieving the objectives of the Act a plan must not produce unfair results. If adherence to charter provisions, such as an involuntary liquidation clause, has that effect, such provisions may not stand in the way of the Congressional objectives.[25] However, the threat of the due process barrier of the Fifth Amendment to the Constitution is in the instant case unwarranted. The constitutional question is no more "reached" here than in *Otis & Co.* v. *S. E. C.*, 323

---

[24] As noted above, the question of remand has been argued on the assumption that the disapproval of the plan was correct, but that disapproval has been challenged in the Streeter petition.

[25] *North American Company* v. *S. E. C.*, 327 U. S. 686, 705 (1946); *Continental Insurance Co.* v. *U. S.*, 259 U. S. 156, 171 (1922). In the *North American* case, *supra*, this Court said:

> "This broad commerce clause does not operate so as to render the nation powerless to defend itself against economic forces that Congress decrees inimical or destructive of the national economy. Rather it is an affirmative power commensurate with the national needs. It is unrestricted by contrary state laws or private contracts. And in using this great power, Congress is not bound by technical legal conceptions. Commerce itself is an intensely practical matter. *Swift & Co.* v. *United States*, 196 U. S. 375, 398. To deal with it effectively, Congress must be able to act in terms of economic and financial realities. The commerce clause gives it authority so to act."

U. S. 624 (1945). Even if it were, the short answer to such argument is found in *American Power & Light Company* v. *S. E. C.*, 329 U. S. 90 (1946) and the *North American Company* v. *S. E. C.*, 327 U. S. 686 (1946).[26] The implication from these cases is clear that where under a plan security holders receive "just compensation" for their interest, the due process requirements are satisfied. The substitution of the equitable equivalent for contract rights surrendered involves no destruction of values but merely a change in the form of investment to another of equal value. Accordingly, neither the Act nor the Constitution forbids payment to the preferred of an amount equal to its redemption price established as the equitable equivalent of the rights surrendered under a fair and equitable plan.

---

[26] In the *American Power & Light* case, *supra*, this Court rejected the argument that Section 11 (b) (2) may affect the rights of investors in holding companies in violation of the Fifth Amendment, and stated:

> "Our decision in *North American Co.* v. *Securities & Exch. Commission*, *supra*, largely disposes of the objections to §11 (b) (2) on the basis of the due process clause of the Fifth Amendment.
>
> "Section 11 (b) (2), like §11 (b) (1), materially affects many property interests of holding companies and their investors; * * *. But Congress carefully considered these various interests and found them 'outweighed by the political and general economic desirability of breaking up concentrations of financial power in the utility field too big to be effectively regulated in the interest of either the consumer or the investor and too big to permit the functioning of democratic institutions'. It is not our function to reweigh these diverse factors or to question the conclusion reached by Congress. Nor can we say that §11 (b) (2) on its face authorizes or necessarily involves any destruction of any valuable interests without just compensation. The legislative policy and the statutory safeguards pointed out in the *North American* case negative that argument" (329 U. S. 106).

Thus, the constitutional issue, which has been raised in the Central-Illinois cross-petition (at p. 5) and the White opposition brief (at p. 8) has in reality been resolved.

II. In Reply to Common Stockholders' Briefs in Opposition to Streeter Petition.

A. As to Contentions Respecting the Function of a Section 11(e) Court vis-a-vis the Commission.

The laborious efforts of the common stockholders to confuse the issues prove unavailing. The erroneous contention is made by the common stockholders that there is no conflict among the courts of appeals with respect to the scope of review by a section 11(e) court as to the fairness and equity of a plan.[27]

At the outset, it must be pointed out that the common stockholders' assertion that the conflict between the District Court and the Commission relates primarily to the legal conclusions and not the factual findings of the Commission[28] clearly contradicts the District Court's definite rejection of "such findings and conclusions of the Commission [that] relate to or bear upon the payments of premiums or are inconsistent with the Opinion dated May 15, 1947 or with the findings and conclusions of law filed with said Order"[29] (R. 293a-294a). The foregoing evidence of the District Court's disagreement with the Commission's findings brings into focus the issue as to the status of the Commission's findings or the treatment to be accorded them by the district court in the performance of its function under section 11(e).

---

[27] Central-Illinois opposition brief, p. 13 ff.; White opposition brief, p. 15.

[28] Central-Illinois opposition brief, p. 9; White opposition brief, p. 17.

[29] It can hardly be fairly claimed that the District Court's findings Nos. 36-38 (R. 307a-308a) are consistent with the Commission's findings (R. 69a-72a). The failure to recognize the conflict between the District Court's and Commission's findings is suprising as Central-Illinois counsel apparently prepared the findings for the District Judge (R. 377a, 385a).

The Commission's findings in respect to the value of the preferred claim (with which the District Court disagrees) are "in the realm not of mathematical demonstration, but of forecast, based upon expert analysis and weighting of a complex array of factors, in which the informed judgment of the Commission counts heavily".[30] Therefore, those findings, according to the decisions in the First, Second and Eighth Circuit Courts should not be upset, if supported by substantial evidence or unless "shown to be without a rational basis in fact or to be predicated upon a clear-cut error of law".[31] In the aforesaid three circuits, the scope of review by a section 11(e) court is delineated in terms of the doctrines of substantial evidence and administrative finality. Contrariwise, the two courts below have in effect viewed the section 11(e) enforcement proceedings as substantially a trial *de novo*.[32] Under that approach, a section 11(e) court is at liberty to exercise its affirmative and independent duty to examine the evidence as if *de novo* (Cf. R. 26) and make findings of fairness, and is then free to reject the Commission's findings, even if supported by substantial evidence and even if possessing a rational basis in fact and based upon a reasonable

---

[30] *Lahti* v. *New England Power Ass'n*, 160 F. (2d) 845, 851 (C. C. A. 1, 1947).

[31] *Lahti* v. *New England Power Ass'n, supra*; *Public Service Commission of N. Y.* v. *S. E. C.*, 166 F. (2d) 784, 788 (C. C. A. 2, 1948); *Mass. Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. (2d) 424, 430 (C. C. A. 8, 1945) cert. den. 327 U. S. 795 (1946). See Streeter petition, pp. 17-20.

[32] In the same spirit the decision below erroneously sustains the right of a section 11(e) court to reopen the administrative record and receive additional evidence respecting the fairness and equity of a plan (R. 26). Such unlimited reopening of the administrative record is contrary to the weight of authority. See Streeter petition, pp. 23-24. Also see *In re Eastern Minnesota Power Corp.*, C. C. H., Fed. Sec. Serv., Par. 90,399-1 (D. Minn., 1947), *infra*, at p. 19, n. 39.

view of the law. Thus the views of the two courts below are clearly in conflict with those of the First, Second and Eighth Circuit Courts.

It would seem that the Central-Illinois group implicitly recognizes that the First and Eighth Circuit Courts sustains the district court's application of the doctrine of substantial evidence and administrative finality in testing the Commission's findings as distinguished from a "trial *de novo*" approach or the principle of the so-called "independent check",[33] but contends[34] that these appellate holdings "cannot be

[33] This criterion of "independent check" is apparently the same as the "full and independent judgment" established by the court below under which a section 11(e) court is free to reject administrative findings in disregard of the doctrine of substantial evidence and administrative finality. However, an entirely different significance has been ascribed to the concept of "independent judgment" in *St. Joseph Stockyards* v. *U. S.*, 298 U. S. 38, 53 (1936), where this Court in a confiscation case stated:

> "* * * this judicial duty to exercise an independent judgment does not require or justify disregard of the weight which may properly attach to findings upon hearing and evidence. On the contrary, the judicial duty is performed in the light of the proceedings already had and may be greatly facilitated by the assembling and analysis of the facts in the course of the legislative determination. Judicial judgment may be none the less appropriately independent because informed and aided by the sifting procedure of an expert legislative agency."

It is thus apparent that the issue concerns the extent to which a district court is free to reject or is required to accept the findings of an administrative agency based upon substantial evidence or possessing a rational and statutory foundation.

[34] Any attempted distinction by the common stock groups based upon the presence of the concurrent approval of both the District Court and the Commission in the *Lahti* and *Massachusetts Mutual* cases and its absence in the instant case is also lacking in merit. We maintain that that difference in result is attributable to the difference in the treatment accorded the findings of the Commission by the section 11(e) district courts in the First and Eighth Circuits, as contrasted with the Third Circuit, and would not have

[Footnote continued on following page.]

construed as holdings that the district courts are *required* in performing their statutory function to approve and enforce determinations of the Commission which they deem erroneous".[35] No such contention has been made. Instead, the Streeter group have urged that under the prevailing appellate view, the section 11(e) district courts must in performing their statutory duty sustain the administrative findings unless shown to be without rational basis in fact or to be predicated upon a clear-cut error of law. Such standard of review conflicts with the doctrine of the district courts' "full and independent judgment" implying a trial *de novo,* as announced by the two courts below.

The Central-Illinois group also claims that "the 'essence of the holdings of both Courts below was that the Commission's *conclusions* are without substantial evidentiary or legal basis; or, stated in restrictive terms for which Petitioners contend, that they 'lack rational or statutory foundation' ".[36] To no avail does it seek to convey the impression that the courts below applied the doctrines of substantial evidence and administrative finality. The ready answer to such

---

[Footnote continued from preceding page.]

occurred in the instant case if the District Court had applied, or had been directed by the court below to apply, the correct standard for testing the Commission's findings.

The Central-Illinois effort (opposition brief, p. 13, n. 18) to discredit the recognition by the court below that the cited decisions "look the other way", as not based upon "an independent analysis of the decisions themselves", discloses incredible omniscience that can hardly be accepted in the light of a fair and independent examination of the opinion below and the "searching and detailed analysis" asserted by Central-Illinois to have been made by the court below in another respect.

[35] Central-Illinois opposition brief, pp. 13-14.

[36] *Sic.* Central-Illinois opposition brief, p. 9.

attempt is the language of the court below when it said:

> "In the light of the foregoing we *cannot hold*, as the Commission contends we must, that unless the conclusions of the Commission lack rational or statutory foundation they may not be disturbed by the Section 11(e) court, or that a reversal of the Commission's judgment by the court may not be effected save where the Commission has plainly abused its discretion" (R. 34). (Italics ours.)
>
> "* * * The Court [in the second *Chenery* case] stated that its duty of examination is at an end '* * * when it becomes evident that the Commission's action is based upon substantial evidence and is consistent with the authority granted by Congress * * *' *Ibid.* at p. 207. The Chenery decision in our opinion cannot be deemed to be controlling in the case at bar" (R. 33).

On the other hand, the White group urge as a distinction that, in the instant case, the court below, in its review, considered the "function of the District Court *vis-a-vis* the Commission" while in the *Lahti* and *Massachusetts Mutual* cases, the "Circuit Court was acting only as a review court and was bound by the findings of fact of both the District Court and the Commission".[37] The attempted distinction is devoid of merit. In both the case at bar and the *Lahti* and *Massachusetts Mutual* cases, the status of the Commission's findings or the treatment to be accorded them by a section 11(e) district court was at stake, and consequently, affected the relative function of the district court and the Commission. Reference to the opinions of the respective District and Circuit Courts confirms the fact that the standard to be used by a section 11(e)

[37] White opposition brief, p. 15.

court in reviewing the Commission's action was involved and also that a conflict exists with respect to the standards enunciated among the circuits.[38] Further confirmation of this conflict appears in two recent[39] District Court decisions within the First and Eighth Circuits, decided since the filing of the Streeter petition, both of which cite the opinion of the court

---

[38] Despite the contrary assertion by the White group, additional evidence appears that the function of the district court was in issue in the *Massachusetts Mutual* case. Thus in the recent decision in *In the Matter of Northern States Power Company*, unreported, decided August 30, 1948 (D. 4th D. Minn.) Civil Action No. 2673, the District Judge, after quoting the "rational basis" statement from the *Massachusetts Mutual* case, recites the contentions apparently unsuccessfully urged by the appellant in that case as follows:

> "'Section 11(e) of the Public Utility Holding Company Act of 1935 requires the District Court to independently determine whether the plan is fair and equitable and appropriate to effectuate the provisions of Section 11 of the Act. The Court cannot, as it has done here, abdicate this independent duty to the Securities and Exchange Commission.'
>
> * * * * *
>
> "'The Court below failed to exercise the independent judgment required of it by the Act. Instead it completely accepted, and felt itself bound by, the conclusions of the Commission, which at best are advisory only.'". (Mimeographed opinion, p. 15).

The District Court then commented: "The weight, therefore, that the Court should attach to the Commission's factual findings was directly before the Circuit Court in that case * * *."

[39] Nor can the Third Circuit's view be reconciled with the acceptance of the substantial evidence rule in earlier decisions of District Courts within the First and Eighth Circuits. *In re Eastern Minnesota Power Corp.*, C. C. H. Fed. Sec. Service, par. 90,399-1 (D. Minn., 1947); *In re New England Public Service Company*, 73 F. Supp. 452, 456 (D. Me., 1947). For example, in the *Eastern Minnesota* case, *supra*, the District Judge said:

> "* * * The power of the Court is too limited and circumscribed to set aside the Findings and Order of the Commission on the record here controlling. The Court cannot exercise any general supervision of the Commission, nor can it direct the administrating of the Act. *City of North Miami Beach, Fla.* v. *Federal Water & Gas Corp. et al.*, 151 F. 2d 420.

[Footnote continued on following page.]

below and note the difference in the standard enunciated in their own respective circuits as contrasted with that of the Third Circuit.[40] *In the Matter of Northern States Power Company,* unreported, decided August 30, 1948, Civil Action No. 2673 (D. 4th D. Minn.); *American and Foreign Power Company,* unreported, decided Sept. 21, 1948, Civil Action No. 490 (D. S. D. Me.): Thus in the *Northern States Power Company* case, *supra,* where the contentions were made that "the court should reject the Commission's valuations and estimates and forecasts * * * regardless of the fact that there may be substantial evidence in support of the Commission's findings" and that "the findings of fact of the Commission supported by substantial evidence are not binding upon the court, although such findings should be treated with respect",[41] the District Judge (Norbye, *J.*) notes the Third Circuit's rejection of the administrative finality doctrine and comments as follows:

"* * * But Judge Biggs' decision in that case

[Footnote continued from preceding page.]

"That a contrary conclusion may have been reached by the Court if the Act permitted a hearing *de novo* is of no avail to objectors. Nor is the wisdom of the conclusion reached by the Commission of any concern of the Court. *Board of Trade* v. *United States,* 314 U. S. 534. The duty of the Court ends if the record submitted in the present case is convincing that it supports the findings of the Commission by substantial evidence, consistent with the authority granted by Congress. *National Broadcasting Co., Inc.* v. *United States,* 319 U. S. 190. The record of the instant case, in my opinion, will not permit a finding that the Amended Plan was not fair and equitable. *Mass. etc. Co.* v. *S. E. C.* (8 C. C. A.) 131 F. 2d 424" (at pp. 91, 100-101 of the Service).

[40] Central Illinois in its citation of these two recent cases (opposition brief, p. 14, n. 21) glosses over the difference in views between the circuits. Nor can a resort to phraseology such as "independent duty" hide that difference.

[41] The District Court in the *Northern States Power Company* case refused to accept these contentions which were apparently urged upon the basis of the opinion below.

must be considered by this Court in the light of the particular facts and circumstances therein involved, and by his recognition that *Lahti* v. *New England Power Association*, 1 Cir., 160 F. 2d 845, and *Massachusetts Mutual Life Ins. Co.* v. *S. E. C.*, 8 Cir., 151 F. 2d 424, in affirming *In re Laclede Gas Light Co.*, D. C. E. D. Mo., 57 F. Supp. 997, 'look the other way.' Presumably, Judge Biggs had reference to Judge Thomas' statement in the *Massachusetts Mutual Life Ins. Co.* case (p. 430, 151 F. 2d). * * * [quotation from *Massachusetts Mutual* case omitted and also the recital of appellant's contentions in that case, quoted *supra* p. 19, n. 38].

* * * *

"The weight, therefore, that the Court should attach to the Commission's factual findings was directly before the Circuit Court in that case, and it seems clear that the view of the Eighth Circuit is that such findings should be given considerable weight where there is a rational basis therefor, particularly where it appears that the Commission has given its careful and conscientious consideration to the many complex and involved questions presented by the record. * * * The limited authority vested in the Court, which has either to approve or disapprove the plan, would seem to lend weight to the *soundness of the views of the Eighth Circuit as to the duty of a Section 11(e) court where there is a 'rational basis' for the Commission's findings.* * * *

"I conclude, therefore, that the exercise of my independent judgment in passing upon the fairness of the plan to the parties involved must be made in recognition of the experience, skill and facilities of the Commission in considering and appraising the facts before it in the lengthy hearings and voluminous testimony during the past

five years. *Due weight should be accorded its findings and conclusions in factual matters where there is substantial evidence in support thereof.*" (Italics ours.) (Typewritten opinion, pp. 15, 16, 17.)

Similarly in the *American and Foreign Power Company* case, *supra*, which arose within the First Circuit, the District Court refers to the attitudes of the First, Third and Eighth Circuits as enunciated in *Lahti, Engineers* and *Massachusetts Mutual* cases and discussion of them in the recent *Northern States Power Company* case, *supra*, from which it quotes, and then concludes as follows:

> "While this Court is not convinced that there is any real difference between not acting 'capriciously' (to use the words of Judge Biggs in the *Engineers* case) and recognizing a 'range of tolerance' (to use Judge Magruder's language in the *Lahti* case) it should of course look *primarily to standards set forth in this Circuit.*" (Italics ours.) (Mimeographed opinion, p. 15.)

It is apparent from the foregoing recent District Court decisions within the First and Eighth Circuits that the standard within these two circuits differs from that applied in the Third Circuit respecting the extent to which a section 11(e) court is bound by findings of the Commission supported by substantial evidence or having a rational and statutory basis. Moreover, that difference is sufficiently substantial so as to result in the approval or disapproval of a section 11(e) plan dependent upon the circuit in which its enforcement is sought. The opinion of the court below has thus generated confusion which this Court should dispel.

B. As to Contentions Regarding the Valuation Process.

Numerous broad statements of fact and law appear in the opposition briefs that are lacking in basis and merit. Accordingly, only major contentions will be considered below.

1. Significance of fair and equitable standard.

The fair and equitable standard in a simplication under the Act under the *Otis* principles requires full compensation for senior securities for the contract rights surrendered on a "going concern" and not liquidation basis prior to the payment of junior securities.[42] On the other hand, the court below, in its approach to the problem of valuation, stresses the nebulous criteria of "factors" and "equities" clearly extrinsic to the contract rights in the light of the supposed termination of the enterprise. It is thus readily apparent that the views of the court below conflict with the principles of the *Otis* case, as set forth above.

2. Fair investment value doctrine.

The Commission is charged with applying the investment value doctrine in the instant case "to require premiums to be paid to the Engineers' pre-

[42] *Otis & Co.* v. *S. E. C.*, 323 U. S. 624 (1945). In conformance with this mandate, the Commission valued the preferred claim in the light of the applicable charter provisions (such as dividend rate, call prices and liquidation preferences) and an analysis of the financial condition of the company (R. 62a) and refused to hold the charter liquidation provisions (voluntary or involuntary) "conclusive" and to permit the Act to transform the existing value of the security in a going concern into a matured claim. The Central-Illinois contention (opposition brief, p. 18) that the Commission clearly ignored the charter liquidation provisions is groundless. The court below recognized that the Commission had properly considered them as not "dispositive" (R. 34).

ferreds" without even the "slightest reference" to an alleged long line of decisions denying "premiums" under the fair and equitable standard of section 11(e).[43] Apart from the inaccurate characterization of "premiums" for an amount "at least equal to the respective call prices", which was found by the Commission to be the fair investment value of the preferreds (R. 67a-68a), that assertion by the Central-Illinois group is distortional[44] and groundless like many of its other misstatements. It completely disregards the Commission's citation, in its Findings and Opinion (R. 67a), of the *American Power & Light Co.*, H. C. A. R. No. 6176 p. 11 ff. (1945); in which the Commission adequately distinguished the so-called frustration cases and accordingly, had no further reason to discuss them in the instant case. Moreover, despite any contrary implication from the Central-Illinois assertion, the Commission and the courts have in many section 11(e) cases permitted companies voluntarily to retire senior securities at amounts in excess of 100.[45] But even if by the so-called frustra-

---

[43] Central-Illinois opposition brief, pp. 15-18. Also see White opposition brief, p. 14.

[44] Torn from its context by Central-Illinois is the claimed concession of the Commission with respect to precedents supporting the retirement of bonds and preferred stocks without payment of the call prices. Contrast the Commission's statement in its petition, p. 9 with the Central-Illinois distortion in its opposition brief, p. 15.

[45] For example, *The Western Public Service Co.*, H. C. A. R. Nos. 3175, 3230, 3245 (1942) and *El Paso Electric Co.* (Delaware), 8 S. E. C. 366 (1941), which were subsidiaries of Engineers; *Mississippi River Power Co.*, H. C. A. R. No. 5776 (1945); *The North American Co.*, H. C. A. R. No. 5796 (1945); *Minnesota Power and Light Co.*, H. C. A. R. No. 5850 (1945); *NY PA NJ Utilities Co.*, H. C. A. R. No. 5975 (1945); *Buffalo, Niagara and Eastern Power Corp.*, H. C. A. R. No. 6083 (1945); *Pennsylvania Power & Light Co.*, H. C. A. R. No. 6167 (1945);

[Footnote continued on following page.]

tion cases, the Commission is deemed to have announced an automatic rule denying the payment of any amount in excess of face or stated value, then its decision in *American Power & Light Co.*, H. C. A. R. No. 6176 (1945) certainly constituted the announcement and application a new principle based upon administrative experience under the Act. In that case the Commission said:

> "* * * As a result of the experience gained through consideration of a large number of later cases, we are persuaded that an automatic rule of 100 in all debt retirement cases would produce inequitable results and that it is necessary to inquire into the circumstances of the particular case to determine whether the payment of 100 is fair and equitable" (H. C. A. R. No. 6176, p. 12).

Hence, the Commission's decision in the instant case was merely an extension of the above principle to the retirement of the preferred stock. In its application

---

[Footnote continued from preceding page.]

Standard Gas and Electric Co., H. C. A. R. No. 6435 (1946), following the decision in *Standard Gas & Electric Co.*, 63 F. Supp. 876 (D. Del. 1945); *Community Gas & Power Co.*, H. C. A. R. No. 6436 (1946); *Scranton Spring-Brook Water Service Co.*, H. C. A. R. No. 6458 (1946); *Northern States Power Co.*, H. C. A. R. No. 6578 (1946); *Pennsylvania Edison Co.*, H. C. A. R. No. 6723 (1946); *Washington Railway & Electric Co.*, H. C. A. R. No. 7410 (1947), enforced June 16, 1947 (D. C. Dist. of Col.); *United Gas Corp.*, 58 F. Supp. 501 (D. Del. 1944); *Central & Southwest Utilities Co.*, 66 F. Supp. 690 (D. Del. 1943); *In the Matter of American and Foreign Power Company*, unreported, decided Sept. 21, 1948 (D. S. D. Me.) Civil Action No. 490.

Several cases have also pointed out that in some situations the Commission might find the equitable equivalent of the senior securities to be more than the face amount. See e. g. *Mass. Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. (2d) 424, 430 (C. C. A. 8, 1945); *In re Consolidated Electric & Gas Co.*, 55 F. Supp. 211, 216 (D. Del., 1944); *In re North Continent Utilities Corp.*, 54 F. Supp. 527, 530 (D. Del., 1944).

of this new principle, if it be a new principle, the Commission's action is to be tested like any ordinary administrative order and is not to be disturbed except for plain abuse of discretion by the Commission since based upon an "informed, expert judgment of the problem".[46]

Thus, once the automatic denial of an amount in excess of face is no longer the rule, it is incumbent upon the Commission to determine the fair and equitable payment. As the liquidation provisions are not determinative in a simplification under the Act, the Commission measures the investment worth of the securities, based on the bundle of rights surrendered.[47] This investment value doctrine, whether novel or not, has recently received judicial sanction within the First Circuit. Thus, in *In the Matter of American and Foreign Company*, unreported, decided Sept. 21, 1948 (D. S. D. Me.), Civil Action No. 490, the District Court said with reference to the values assigned to certain preferred stocks under a section 11(e) plan:

> "* * * But it is clear that the Commission arrived at these figures not from a conception that this was a 'call' but from a *consideration of what was the fair investment value of these stocks*, in accordance with the overriding policy of *Otis & Co. v. S. E. C.*, 323 U. S. 624." (Italics ours.) (Mimeographed Opinion, p. 30.)

Such acceptance of the investment value doctrine in the First Circuit cannot be reconciled with its rejection in the Third Circuit.

---

[46] *S. E. C. v. Chenery Corp.*, 332 U. S. 194, 207 (1947), rehearing denied, 332 U. S. 783 (1947).

[47] Streeter petition, pp. 42-43.

3. Bankruptcy and equity reorganization precedents.

The Central-Illinois group also asserts that the bankruptcy and liquidation decisions do not support payments to senior security holders of amounts "in excess of their contract claims".[48] This assertion is inapplicable here. In the first place, any inference that the preferred are seeking more than their contract claims is unwarranted as well as "question-begging", for the basic issue is the value of these contract claims. In fact, the Commission has limited the amount of the preferred compensation by the call provision of the charter (R. 67a). In the second place, any implication that the involuntary liquidation provision of the charter is controlling in the instant case so as to limit the preferred claim to face value is contrary to the *Otis* principle that the charter liquidation provisions are inoperative in simplifications under the Act. Lastly, while contract liquidation provisions are inchoate and not controlling in simplifications under the Act so as to require valuation of the contract rights, the contract liquidation provisions are choate or matured in bankruptcy and equity reorganizations and hence conclusive as to the amount to be paid.[49] Moreover if the Act were permitted to mature the preferred claim, as Central-Illinois seems to suggest, then the Act would create a windfall to the common since the Commission has found the fair investment value of the preferred claim at least equal to the call price or in excess of the involuntary liquidation amount and has concluded that the payment of such amount is

---

[48] Central-Illinois opposition brief, p. 24.

[49] As stated in the *Otis* case, "Congress did not intend that its exercise of power to simplify should mature rights, created without regard to the possibility of simplification of system structure, which otherwise would only arise by voluntary action of stockholders or, involuntarily, through action of creditors" (323 U. S. 638).

fair and equitable. Such windfall or shift in values is to be avoided[50] and is certainly not sanctioned by the doctrine of rescission which Central-Illinois claims to be applicable to the instant situation.[51] The Central-Illinois quotation of this principle is most eloquent by virtue of what is omitted. The statement in its entirety is set forth below, with the part omitted by Central-Illinois in italics:

> "Since there is no fault on either side, the loss due to impossibility or frustration must lie where it falls. Neither party can be compelled to pay for the other's disappointed expectations. *But on the other hand, neither can be allowed to profit by the situation.*"[52]

Furthermore, since in the event of rescission, there are no governing provisions in the charter and the parties represent *ownership* interests, an appraisal was in order and, in line with the requirements of "strict priority" and "fairness and equity", the Commission properly found the fair investment value of the preferred to be an amount at least equal to the call price.

4. Continuance of the holding company "enterprise" and "system".

The court below also considered highly significant the supposed termination of the holding company enterprise in the instant case as contrasted with its alleged continuance in the *United Light & Power Company* reorganization, in which there was merely

---

[50] *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 637 (1945); *American Power and Light Co.*, H. C. A. R. No. 6176, p. 8 (1945).

[51] Central-Illinois opposition brief, pp. 18-19.

[52] American Law Institute, *Restatement of the Law of Contracts*, Sec. 468 (comment on Subsection 3, p. 887).

a shift of participation in the enterprise from the top holding company to a subsidiary holding company. This attempted distinction which Central-Illinois likewise urges[53] is not valid. Granting *arguendo* that the present Engineers' plan is a "real liquidation" (as contrasted with a "nominal liquidation"), then the claimed distinction disregards the caution of this Court in the *Otis* case: "The reason [for its decision] does not lie in the fact that the business of Power continues in another form. That is true of bankruptcy and equity reorganization". In fact, the Commission viewed the dissolution in the *United Light & Power (Otis)* case as an actual dissolution and not merely the "peeling" off of a company in a holding company system.[54] In any event, a "real liquidation" of the enterprise has not occurred in the instant case, for the business of Engineers' continues in the operating companies which are now owned directly by the common stockholders instead of indirectly since the elimination of Engineers' (R. 1397a).[55]

Likewise any inference from the views of the court below that the applicability of the *Otis* case depends upon the continuation of the underlying holding company system (which was the fact in the *United Light & Power* reorganization) does not stand analysis.

---

[53] Central-Illinois opposition brief, p. 26.

[54] In the reorganization of Puget Sound Power & Light Co., a former subsidiary of Engineers', the Commission referred to its views in the *United Light & Power* decision (13 S. E. C. 1, H. C. A. R. No. 4215) (1943) as follows: "These views were expressed in the course of our discussion of a proposal which contemplated an actual liquidation" [13 S. E. C. 226, 246 (1943)].

[55] In *American Power & Light Company* v. *S. E. C.*, 329 U. S. 90, 117 (1946), this Court has pointed out that the dissolution of a holding company means little more than the receipt of securities of the operating company in lieu of their present shares in the holding company.

The *Otis* rule has in fact been applied in simplification proceedings under section 11, regardless of whether or not there has been a continuing holding company system.[36] Moreover, the emphasis upon the continuation of the holding company system, if carried to its logical conclusion, places a premium upon the sequence of simplification and makes stockholders' rights contingent upon the procedure of system adjustment. But such procedural decisions should not affect rights any more than the selection of a particular method of system adjustment, as this Court cautioned in the *Otis* case.

Conclusion.

I. The remand for valuation was proper, assuming *arguendo* a correct disapproval of the plan by the District Court. The decision below in respect to the remand is in accordance with the applicable decisions of this Court and other courts of appeals. Furthermore, the constitutional questions have been settled. For these reasons, the cross-petition (No. 266) for writ of certiorari to the Court of Appeals for the Third Circuit should be denied.

---

[36] For example, in *Puget Sound Power & Light Company*, 13 S. E. C. 226 (1943), Puget Sound had no holding company system beneath it when Engineers filed the plan for it. Also in *Southern Colorado Power Co.*, H. C. A. R. No. 4501 (1943), enforced in Civil Action No. 670 (D. Colo., 1944), aff'd sub. nom., *Disman* v. *S. E. C.*, 147 F. (2d) 679 (C. C. A. 10, 1945), cert. den. 325 U. S. 863 (1945), the holding company interest was wiped out so that Southern Colorado was no longer in a holding company system. Also see *Northern States Power Co.* (Del.), H. C. A. R. No. 5745, p. 21 (1945), where the Commission appropriately said: "While the plan contemplates a formal dissolution of Delaware as a separate corporate entity, the actual business enterprise represented by the securities of Delaware, is being continued."

II. The opinions of the courts below are in conflict with decisions of the First, Second and Eighth Circuits respecting the function of a section 11(e) court vis-a-vis the Commission. The decision below has also made uncertain the status of the Commission's findings. In addition, the views of the courts below conflict with the applicable decisions of this Court and other courts of appeals as to the significance of the fair and equitable standard. For these reasons as set forth above and previously presented, the petition (No. 227) for writ of certiorari to the Court of Appeals for the Third Circuit should be granted.

Dated: New York, N. Y., October 8, 1948.

ON WRITS OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT.

ANSWERING BRIEF FOR THE HOME INSURANCE COMPANY AND TRADESMENS NATIONAL BANK AND TRUST COMPANY AS RESPONDENTS IN NO. 266.

OPINIONS BELOW.

The opinion and judgment of the Court of Appeals for the Third Circuit (R. 12), and the opinion denying

petitions and cross-petitions for rehearing (R. 138) are reported at 168 F. 2d 722 (C. A. 3, 1948). The opinion of the District Court is reported at 71 F. Supp. 797 (D. C. Del., 1947) (R. 283a). The findings and opinions of the Commission dated December 4, 1946, and January 8, 1947, have not yet been officially reported. They are set forth in the Commission's Holding Company Act Release Nos. 7041 (R. 25a) and 7119 (R. 128a).

JURISDICTION.

The jurisdiction of this Court is invoked under Section 240 of the Judicial Code, as amended by the Act of February 13, 1925, 43 Stat. 938 (28 U. S. C. 347), made applicable by Section 25 of the Public Utility Holding Company Act of 1935, 49 Stat. 803, 835 (15 U. S. C. 79y). The judgment of the Court of Appeals for the Third Circuit was entered on March 19, 1948. Petitions and cross-petitions for rehearing were denied on June 11, 1948. The petition of Central-Illinois Securities Corporation, et al. for a writ of certiorari was filed September 8, 1948, and granted on October 25, 1948.

STATUTES INVOLVED.

Sections 11 (d), (e) and (f), Section 18 (f), Section 24 (a) of the Public, Utility Holding Company Act of 1935 (15 U. S. C. 79k (d), (e) and (f); 79r (f); 79x) and Section 77 (e) of the Bankruptcy Act (11 U. S. C. 205 (e)) are set forth in the Appendix at pages 45 to 54, inclusive, in the main brief of The Home Insurance Company, et al., in No. 243.

ANALYSIS OF ISSUES AND SUPPLEMENTARY STATEMENT.

The limited purpose of this sub-division is to clarify the issues, which we think have become confused by certain fundamental inaccuracies and omissions in the statement and argument in the brief of Central-Illinois Securi-

ties Corporation et al. The importance of the deficiencies and their correction may be more readily comprehended if they are considered in relation to the respective contentions of the opposing sides, particularly the contention of each side that it is entitled to succeed as a matter of law without remand to the Commission.

Summary Analysis of Central-Illinois' Contentions.

The Central-Illinois group of common stockholders contends that the preferred stockholders are not entitled to any amount in excess of $100 per share plus accrued dividends as a matter of law on six bases, namely: (1) the *Otis* case (323 U. S. 624) is distinguishable and the involuntary liquidation preference in the charter is controlling (pp. 33-50, 106-113); (2) if the involuntary liquidation preference is not controlling, nevertheless, the enterprise has been frustrated by Section 11 (b) of the Holding Company Act and the preferred stockholders should, on a theory of rescission, be limited to the amounts which they or their predecessors contributed to the enterprise, theoretically (sic) mirrored by the face amount of the security (which in this case must mean the applicable stated capital, since the shares have no par value) (pp. 51-67, 114-123, part, 57); (3) the Commission's valuations represent only transient market values and the preferred stocks cannot properly be valued at any amount in excess of $100 per share on the basis of any collection of relevant financial factors or evaluation of the correlative rights of the two classes of stockholders (pp. 72-106); (4) the District Court is not bound to give effect to the findings and conclusions of the Commission (pp. 124-148), and in any event the Commission abused its discretion (p. 125); (5) the District Court decided only that the Commission could not lawfully award more than $100 per share as the outer limits of permissible action by the Commission on the record, and the Court of Appeals erred in holding that the District Court valued the preferred stocks or substituted any valuation of its own

for that of the Commission (pp. 154-156); and (6) the escrow agreement and related orders of the Commission constitute advance approval by the Commission of the plan as modified by the District Court and remand is therefore inappropriate (pp. 148-153).

The common stockholders seek corroboration for these end results in the findings and conclusions of one or more of the three tribunals, and in the marshalling of such evidence, within or without the record,[1] as furnishes or seems to furnish support for the argument. Apart from such basic questions of law as the effect of the involuntary liquidation preference, or the existence and application of the frustration doctrine, the common stockholders have the considerable task of showing that there is no factual basis to support a valuation of more than $100 per share and that no other conclusion is permissible. Only in this way can the related factual questions be converted into questions of law and the impact of the substantial evidence rule avoided. Recognizing this necessity, the common stockholders, make the following assertion (p. 125):

> "To reach its determination that the plan as approved by the Commission was not fair and equitable, the District Court was not required to disturb, and did not disturb, any factual finding of the Commission. Virtually all the facts upon which the District Court rested its conclusion had been found by the Commission. No attack was made in the courts below, and so far as we are aware none is made here, by any party, upon the accuracy of the facts recited in the District Court's opinion or in its findings. The District Court differed with the Commission's ultimate conclusion, based upon admitted and undisputed facts as set forth in the Court's opinion and findings. And, where the *conclusion* of the Commission upon the facts is, as here,

[1] See, e. g. footnotes, pp. 12, 41, 43, 69, 76, 77, 78, 86, 90, 95, 96, 97, 101, 102, 118, 119.

> either without rational basis or contrary to law, even a 'review' court exercising the most limited review functions would have the power to set aside the conclusion."

Thus the common stockholders set for themselves the task of disqualifying the valuations of the Commission in their factual as well as legal aspects. As part of this undertaking they attempt to show that these valuations are merely transient or speculative market values as of January, 1946; that "the Commission merely accepted Badger's estimate of the hypothetical market prices at which the preferred stocks would have sold at the time of his testimony, assuming liquidation were not to take place," and that Badger's opinion "was not based on the intrinsic merit of the preferred stocks as an investment, but admittedly upon the unprecedentedly low money rates then prevailing" (p. 14).[2] They couple this with argument that the market values could not possibly exceed $100 per share and imply that the Courts so found, presumably on the basis of undisputed facts and as a matter of law. Having thus excised the valuations of the Commission, they say the District Court necessarily examined all the factors *in the record* (italics supplied) which could be deemed relevant under any standards recognized in the statute and judicial decisions. They say that these factors could lead to no other conclusion than that reached by the District Court and there is no valid basis for remand, since the Commission has already approved the result under the escrow agreement.

In contrast, the Commission and preferred stockholders contend that they are entitled to the amounts approved by the Commission as a matter of law on three[3] main bases,

---

[2] The same idea is restated in numerous ways throughout the brief (e. g. pp. 74-79).

[3] The Streeter group is also contending that the retirement of the preferred and the liquidation are voluntary (Streeter Brief, pp. 99 et seq.).

namely: (1) the involuntary liquidation preference in the charter is not controlling and the preferred stockholders are entitled to receive the value of the preferred stocks on a going concern basis with full priority as the equitable equivalent of the rights surrendered; (2) the Commission's valuations of the preferred stocks are based on the consideration and weighing of all relevant factors, and conversely, the decision of the District Court is based on irrelevant factors; and (3) since the findings of the Commission are supported by substantial evidence and have rational foundation in law; they are binding on the District Court. Remand to the Commission would be necessary only if, as a matter of law, the Commission failed to consider relevant factors, or considered irrelevant factors, or abused its discretion.

We have, therefore, at the factual base a sharp cleavage in approach and evaluation of facts, with the common stockholders striving to show that the Commission abused its discretion in the area of fact finding and also lost sight of the law. Certain major inaccuracies and omissions in statements of fact and characterization bear importantly on the definition of the real issues and their ultimate resolution. Their correction will serve to define more clearly the issues as presented by the opposing sides, to eliminate certain issues or sub-issues posed by the common stockholders, and aid in bringing out the real facts relevant to the real issues.

Supplementary Statement.

The corrections are grouped according to the related issues.

(1) *Statements regarding the charter involuntary liquidation preference and the frustration doctrine.*

Preliminarily we note here the concurrence of the common stockholders in our analysis of the process actually

used by the District Court in reaching its decision. In our main brief we stated that, while the District Court seems to agree that the involuntary liquidation preference is not controlling, the Court, nevertheless, treated it as a ceiling for the compensation to the preferred stockholders or at least a major premise for rejecting the findings of the Commission (R. 291a, 316a, Conclusion 4) (Home Brief, pp. 8, 22, 23). The Central-Illinois brief states that the District Court summed up its conclusions by formally finding that the enterprise has been frustrated and terminated by governmental action; that there was no valid basis for hypothesizing a "continuing enterprise" or "going concern" (Central-Illinois Brief, p. 19).

(a) The common stockholders assert that, while the Commission held the involuntary liquidation preference to be a factor to be taken into account, the Commission disregarded it entirely and prescribed the payment of the voluntary liquidation premiums (Central-Illinois Brief, pp. 10, 11, 69). They imply that the dissolution of Engineers was of the type contemplated by the charter (pp. 41-44), and that the Commission was unable to make, and did not make, any finding that the liquidation was not an involuntary liquidation within the meaning of the charter (pp. 39, 44, 45).

The Commission did not disregard the charter provision. The Commission took note of Engineers' statement that it would not be dissolving if Section 11 had not been passed and would have continued into the future for many years (R. 61a, n. 42; See also R. 256a, 635a, 636a, 1240a, 1241a). It found that ordinarily a company in the position of Engineers would exercise its call privilege and redeem its preferred stock at call prices (R. 60a). These considerations completely outweighed the involuntary liquidation factor under the Commission's interpretation of the *Otis* case.

The Commission expressly stated that it must consider all provisions of the charter applicable to the preferred

stocks, such as the dividend rate, call price and liquidation preferences, and must analyze the financial condition of the company with particular regard to the asset and earnings coverage of the stock (R. 62a). It stated it could not accept any argument that the preferred claim is matured by the liquidation and that the involuntary liquidation provision of the charter is the conclusive measure of the claim (R. 61a). Engineers had previously contended that the involuntary preference was not controlling, but only one of many factors to be considered. *The Western Public Service Company*, 12 S. E. C. 804, 814 (1943).

(b) The common stockholders state that the Commission held that the company must pay the preferred stockholders the redemption premiums payable under the charter only on voluntary liquidation or redemption (Central-Illinois Brief, p. 10). This characterization only confuses the issues. The Commission used the call prices as stoppers in reaching its valuations (R. 67a, 68a) and never required the payment of premiums as such.

(2) *The Commission's valuations.*

We have pointed out above (supra, p. 5) how the common stockholders seek to excise the Commission's valuations from the record by first asserting that the Commission did not make any valuations of its own, but merely adopted Badger's valuations, and then characterizing Badger's valuations as irrelevant, transient or speculative market values based upon the low money rates then prevailing and not on the intrinsic merit of the preferred stocks as an investment (Central-Illinois Brief, p. 14). They state (pp. 83, 84) that both Courts so found (R. 310a-315a; 17). They also state that the District Court was not required to disturb, and did not disturb, any factual finding of the Commission (p. 125). The purpose is to make it appear that the record supplies no primary facts or permissible inferences on which the Commission's valuations could be

founded, and conversely, that the record compels valuations not in excess of $100 per share.

Contrariwise, the Commission and preferred stockholders have disputed, and continue to dispute, any characterization of the Badger valuations and Commission valuations as transient or speculative market values not based on intrinsic worth. The characterization of the Commission's valuations as transient or speculative values on the one hand or intrinsic values on the other hand is in itself a fact-finding operation.

Neither the District Court nor the Court of Appeals found that the Commission did not use its own competence in making valuations or that its valuations are not supported by substantial evidence. The Court of Appeals said the District Court treated the Commission's findings and conclusions with respect as was proper (R. 34), which in itself refutes any conclusion that they are not supported by substantial evidence. The District Court, however, went its own way, supplied its own concepts of legal and factual relevance, and its own weight and emphasis to factors deemed relevant by it, on the legal theory that it was not bound by the findings of the Commission even though based on substantial evidence. The Court of Appeals said that the ultimate conclusion of the District Court was at least not clearly erroneous, that is, within some permissible margin of error (R. 39).

Neither the Court of Appeals nor the District Court found that the values of the Commission are in fact transient or speculative values, although the Court of Appeals thought the District Court had found the money rate used by Badger too low (R. 19; Cf. R. 313a, 314a). Neither Court ventured to predict for the foreseeable future an increase in money rates which would invalidate the valuations.

The District Court in its original decision accepted the valuations in the absence of proof of change, and then excised them for entirely different reasons (R. 290a). The attack on the values was first introduced in the findings of

fact and conclusions of law prepared by the common stockholders and adopted by the Court after the opinion was filed (Home Brief, pp. 7-14). For further discussion see *infra* pp. 18-20.

The Court of Appeals said, "We think that it is apparent on a careful examination of the testimony of the two men (Badger and Barnes) that each was testifying to values as of May, 1946, *ex* the Act." (R. 17) The Court does not make any finding that these valuations are not intrinsic values as of the time of valuation, and it could not very well do so on the basis of a careful examination of the testimony. The common stockholders fail to point out that repeatedly Badger stated that he was appraising the intrinsic values of the preferred stocks, and resorted to current market values and yields of comparable stocks and other factors as tests (R. 1014a, 1015a, 1019a, 1033a, 1175a-1177a, 1184a).

In substance the common stockholders are contending that the valuations were stale at the time of the decision of the District Court (Central-Illinois Brief, p. 97). This contention is based on the assembly of financial data outside the record without the benefit of cross-examination of the authors or any opportunity to present countervailing evidence (e. g., R. 314a; Brief, pp. 95-97). Although the District Court accepted the valuations in the absence of any showing of change, the common stockholders are in effect now asking this Court to find as matter of law that the valuations of the Commission were, nevertheless, stale in May, 1947, and are now stale and must be revised to conform to the date of a final decree in this proceeding. This decree, they say, must take into account the "*material supervening changes, not foreseen or allowed for in the Commission's findings*" (italics supplied) and, presumably as a matter of law, direct the Commission to value the preferred stocks at not exceeding $100 per share (p. 98).

We cite these variable contentions and the nature of the evidence proffered in their support because of the as-

sertion that the District Court "was not required to disturb, and did not disturb, any factual finding of the Commission" and that "virtually all the facts upon which the District Court rested its conclusion had been found by the Commission" (Brief, p. 125), although the result depends upon *material supervening changes not foreseen by the Commission and not found to exist by the District Court.*

We think these citations bring back into focus the issues centering on the nature of the valuations of the Commission and the substantial evidence rule. We submit that they completely dispose of the contentions that the Commission's valuations were merely transient market values and not intrinsic values and its findings were irrational and not based on substantial evidence.

(3) *The alleged advance approval by the Commission of the Plan as modified by the District Court.*

The common stockholders state that remand is unnecessary because the Commission had given prior consideration and advance approval to the plan in the form approved and enforced by the District Court's order of May 29, 1947 (Central-Illinois Brief, pp. 16, 157).

This statement is the forerunner of another statement that the Commission correctly recognized that the basic issue was one of legal and statutory interpretation, as to which the last word was not in the Commission but in the Courts (p. 152). The purpose is to by-pass the Court of Appeals conclusion that "the problem is and will remain, until its disposition by the Commission, one of valuation of the securities of Engineers" (R. 40). The contention is based on two incomplete citations from the record at page 150 and 151 in the Central-Illinois Brief designed to make it appear that no further proceedings before the Commission were contemplated in any contingency. The material omissions show just the opposite and are supplied below in italics.

ESCROW AGREEMENT (R. 328a).

"4. Upon delivery to you of an opinion of independent counsel ....., accompanied by a certified copy of the order or decree involved, to the effect that *an order of the Commission in the above mentioned proceedings now pending before it or in any other proceedings under section 11 (b), section 11 (d) or section 11 (e) of the Public Utility Holding Company Act of 1935, or* an order or decree of any court having jurisdiction, has been entered, has become final and is no longer subject to appeal, which *Commission order or* court order or decree determines or finds that the holders of Preferred Stock are not entitled to receive any amounts in addition to the amount of $100 per share plus accrued dividends to be allowed to Preferred Stockholders. . . ."

This paragraph 4 complements corresponding provisions in paragraphs 2 and 3 of the escrow agreement relating to additional amounts found payable to the preferred stockholders (R. 325a-327a).

COMMISSION'S PETITION FOR REHEARING (R. 44).

"If the ruling is that the Commission is bound by the District Judge's determination as to amount, then we believe that no remand to the Commission would be necessary, because the Commission has already contingently approved an alternative allocation of cash to preferred stockholders at the amount of the liquidation preference if as a result of the processes of review in the District Court and on appeal therefrom this should be judicially determined fair and equitable." (Footnote 1)

The Court of Appeals has rejected this contention of the common stockholders, pointing out that the escrow agent may make payment only when the order of the District Court has become final and not subject to appeal (R. 139).

We believe this corrected statement of the facts effectively disposes of the issue without further argument.

In this connection the common stockholders state that the District Court did not make any valuation of the equitable equivalent of the rights surrendered by preferred stockholders or substitute any valuation of its own or that of the Commission. The District Court, they say, decided only that the Commission could not lawfully award to the preferred stockholders more than $100 as the outer limits of permissible Commission action on the record (Central-Illinois Brief, pp. 155, 156).

If the common stockholders mean by their ambiguous statement that the District Court reached its conclusion on the basis of the controlling effect of involuntary liquidation preference in the charter or the frustration doctrine applied with equivalent effect, then their assertions would be correct. But the Court of Appeals said that the problem continues to be one of valuation of the preferred and common stocks, and in this context, any statement that the District Court did not substitute its own valuation for that of the Commission is incorrect. The District Court could not on this theory approve and enforce the payment to the preferred stockholders of $100 per share without making a valuation, whatever its theory.

They also assert that the Court of Appeals "squarely affirmed the determination of the District Court that the provision of the plan for the payment of the premiums was unfair and inequitable" (pp. 21, 154-156).

Further the Court of Appeals never made any finding which prohibits valuations in excess of $100 per share.

ARGUMENT.

Much of the argument in the Central-Illinois brief has been anticipated and answered in the main briefs of the Commission and the preferred stockholders and will not be repeated here. Certain points are further answered in our Analysis of Issues and Supplementary Statement (*supra*, pp. 2-13). The purpose of this argument is to answer certain points raised by the common stockholders and in this respect, this argument supplements the anticipatory arguments.

I.

The Contention That the Charter Involuntary Liquidation Preference and the Frustration Doctrine Preclude Payment of More than $100 Per Share.

We believe that the briefs of the Commission and Streeter Group effectively dispose of the contention that the involuntary liquidation prices for the preferred stocks prescribed by the charter are controlling as a matter of law or equity, and of the attempts by the common stockholders to take Engineer's plan out of the orbit of the *Otis* case. We shall comment here principally on the frustration doctrine.

Central-Illinois cites two cases for the proposition that in reorganizations the equitable equivalent for senior securities "can never exceed the cash amount of the claim", and states that it is not aware of any decision suggesting that the involuntary liquidation claim may be exceeded (p. 36). These cases support neither the proposition nor the statement in reference to this situation.

One case is *Bailey v. Minsch*, 168 F. 2d 635 (C. A. 1, 1948), cert. den. 69 Sup. Ct. 83 (1948). During an equity receivership and while an order to liquidate an investment trust was outstanding, certain debentures were retired at the insistence of the debenture holders in cash.

The Court denied the payment of call premiums and ordered payment at the face amount plus accrued interest. Subsequently the order was revised to permit the continuance of the enterprise on a reduced basis and the motion for payment of premiums was revived. The District Court granted the motion (76 F. Supp. 614) and the Court of Appeals reversed on appeal. The grounds for the limitation were that there was no finding by the District Court of the value of the old debentures or that it was necessary to award the premium to give the equitable equivalent of the old debentures (p. 637); the debenture holders were not being deprived of a favorable investment (p. 638). The Court referred to cases under the Holding Company Act where the possibility of payment of more than the face amount of securities in some situations was recognized, but reiterated that there had been no qualifying finding in this case. Nowhere did the Court say payment in cash could never exceed the face amount of the security.

The other case is *Knight v. Wertheim & Co.*, 158 F. 2d 838 (C. A. 2, 1946), cert. den. sub. nom. *McGuire v. Equitable Office Bldg. Corp.*, 331 U. S. 818. This was a reorganization under Chapter X of the Bankruptcy Act. The original plan provided for payment of debentures partly in convertible bonds and partly in stock. The old debentures appreciated in value above their face amount in anticipation of the consummation of the plan, and the debtor then proposed to amend the plan to pay off the debentures at their face amount in cash. The debenture holders wanted to hold on to the advantages accruing under the first plan and objected. The amendment was allowed. Cases under the Bankruptcy Act are, of course, not in point, since the claims mature.

Bailey v. Minsch (*supra*, p. 14) is a prelude to the "equitable doctrine of frustration" which Central-Illinois advances as an alternative to the involuntary preference (Brief, pp. 51-67; 114-123). It derives from impossibility of performance of contracts by reason of governmental

edict and is characterized by Central-Illinois as a species of rescission by operation of law (p. 57). Central-Illinois then argues that the preferred stockholders are entitled only to the amount contributed by them or their predecessors to the enterprise (pp. 53, 57, 62), which is said to be "theoretically" mirrored by the face amount of the security. The same test is not applied to the common stock, probably for the simple reason that the common stockholders claim all the excess.

This one-sided approach leads to a considerable distortion. Both classes of stockholders are being deprived of the opportunity of sharing in a profitable enterprise. Each class is being deprived of the opportunity of enjoying a pool of capital and its earning capacity. The common stockholders enjoy a leverage through the use of senior capital with limited dividends. The preferred stockholders enjoy a greater security at the cost of a reduced participation in earnings. Each hired the capital of the other for the purpose of exploiting the opportunity. Each is now being deprived of the use of the capital of the other. The common stockholders want to take in addition to the capital amounts contributed by them, all the excess value in the enterprise, that is, the surplus and unrealized appreciation [4] which reflects the strength of the enterprise built by the combined capital. The future stake which the preferred stockholders have in that excess and the earning power is involved in the frustration just as much as is the continuing opportunity of the common stockholders to enjoy the leverage afforded by the preferred capital at the applicable rates or cheaper rates obtainable on refunding.

Incidentally, the common stockholders state (Brief, p. 118) that had Engineers continued, they would have been free to retain the preferred capital ($39,000,000) without limitation of time at an over-all cost of approximately

[4] This unrealized appreciation is substantial. See, for example, valuations of subsidiary stocks by Barnes, (R. 981a-983a; also p. 497a).

5.40%, while realizing some 12½% on this capital (pp. 117-118). The 12½% rate is based on alleged current market values for common stock, and of course, the company would not earn 12½% on the preferred capital; the average rate for the entire capital would be lower.

Since the common stockholders claim all the excess without regard for the amount of capital contributed by them or their predecessors, they must do so on the theory that contractually the common stock is entitled to such excess. They do not, however, accept this theory with respect to alleged losses realized on divestments or lost opportunities arising from divestments, which are cited as reasons for limiting the preferred stockholders to their "theoretical" contribution.

The considerations which lead the Court to adopt the principle of equitable equivalents in the *Otis* case are equally valid under any doctrine of frustration. We are not here dealing with an executory contract but with the product of approximately 20 years of operations. The original contributions of the limited partners and general partners are not true measures of their relative positions in the enterprise at the time of its dissolution in June, 1947. Talk about disappointed expectations on one side or the other accomplishes nothing. The disappointments are mutual. As the Court of Appeals said the problem continues to be one of valuation of the respective claims.

In this case the common stockholders have elected to take the stocks in the operating companies and the other residual assets and pay off the preferred stockholders in cash. They selected the form of the remedy. They seek to take the whole excess over the involuntary liquidation preference of the preferred stocks by maturing their claims as common stockholders, and thereby deprive the preferred stockholders of a position found to have value at least equal to the voluntary redemption prices as the equitable equivalent of the rights surrendered. The windfall would go to the common stockholders.

II.

The Contention That the Preferred Stocks Could Not Be Valued at More Than $100 Per Share.

We have already described the nature, purpose, and to some extent the quality of this effort (Central Illinois Brief, pp. 72-106) in the Analysis of Issues and Supplementary Statement (*supra*, pp. 3-5, 8-11). By an admixture of data selected from record and non-record sources, assumptions, characterizations, and computations on variable bases, we are told that a present price for the preferreds would probably be less than $90 per share on a comparable yield basis (Brief, pp. 95-96, n. 2) and approximately $70 per share on the basis of normal earnings capitalized (p. 101, incl. n. 2). The purpose, of course, is to make it appear that payment of $100 per share was liberal treatment (p. 96). The subjective nature of the processes and the weaknesses of the techniques and results are readily apparent on reading. We will not, therefore, undertake a detailed exposure and will continue to rely on the special competence of the Commission as reflected in its findings and the acceptance of the Badger values by the District Court (R. 290a).

We will, however, comment on the use made by the common stockholders of Findings Nos. 41 to 54, inclusive, of the District Court (R. 310a-315a). Included in these findings are certain findings (Nos. 49-54, inclusive) of prospective import. They include an enumeration of factors which might in the future adversely affect the valuations of the preferred stocks. They include statistics relating to declines in market prices of securities in the terms of averages and a concomitant trend toward somewhat higher money rates (R. 314a). These findings are cited as proof that the District Court based its decision on such factors (Central Illinois Brief, pp. 85, 97).

In our main brief we pointed out the difference in the approach and findings of the District Court in its opinion

as compared with the subsequent findings (Home Brief, p. 7). In the opinion the District Court accepted the Badger valuations, but scaled them down to $100 per share because of other off-setting factors not in any way related to market conditions or money rates (R. 290a). The Court did not in its opinion charge that the Commission valuations or the Badger valuations were transient market values or challenge the stability of the prevailing money rates. Actually the Court used the low money rates to challenge the fairness of the preferred dividend rates as excessive and to scale down the preferred contract for the purpose of evaluating the equities on its own scales (R. 291a) (Home Brief, pp. 23, 24). In this way the low money rates were integrated in the Court's findings.

In Finding No. 52 the District Court said (R. 314a):

> "Continuance for two or three years of the trend indicated over the past year could substantially reduce or wholly eliminate the differential in the current yield rate over dividend rate in the case of preferred stocks of the type of Engineers."

The common stockholders ask that this observation be accepted as a prophecy come true (Central-Illinois Brief, pp. 97-98). We submit that it cannot now be demonstrated that there has been any substantial departure of a permanent nature from the money rate levels prevailing at the time the valuations were made, or that any increases which may have occurred substantially reduce or wholly eliminate the differential between the dividend rates for the preferred stocks of Engineers and the yield rate of 4.6% adopted therefor by Badger. Certainly such speculations should not now be substituted for valuations based on substantial evidence and applicable when the preferred stocks were surrendered in June, 1947.

Findings such as No. 52 are susceptible to subtle applications on appeal. They can be brought into play whenever the indicated trend seems to have set in. Whether

or not the indicated trend has set in and is something more than a fluctuation of temporary nature is usually determined by hindsight. We submit that the supplemental findings of the District Court should be evaluated with relation to the original decision of the District Court, which on its face was based on a wholly different theory. The following observation in *Matton Oil Transfer Corp. v. The Dynamic, et al.*, 123 F. 2d 999, 1001 (C. A. 2, 1941) is appropriate:

> "We agree fully with the spirit and the terms of the resolution passed by a majority vote of the judges at our Judicial Conference of last June recommending 'that the trial judge make brief, pertinent findings in respect to contested matters and file the same in connection with his opinion.' This puts the emphasis where it should be, namely, on brief and pertinent findings of contested matters, and also upon a finding made as a part of the judge's opinion and decision, rather than the delayed, argumentative, over-detailed documents prepared by winning counsel after the event which often appear in appellate records, though they are not effective aids to adjudication."

See also *United States v. Forness*, 125 F. 2d 928, 942 (C. A. 2, 1942).

III.

The Contention That the District Court May Exercise Its Independent Discretion and Is Not Bound by Findings of the Commission Based on Substantial Evidence and Having Rational Foundation in Law.

The common stockholders have said that "the disagreement of the District Court with the Commission as to the payment of premiums was basically a disagreement as to applicable legal principles" (Central-Illinois Brief, p. 16). As pointed out above (pp. 4-5, 8-11) they include in this characterization of the issues, the postulate that as mat-

ters of law there is no evidence or no substantial evidence to support a valuation of more than $100 per share for the preferred stocks, and the contention that even if there is substantial supporting evidence for the valuations of the Commission, the substantial evidence rule does not apply to the District Court in Section 11 (e) proceedings. It is not clear whether they would consider findings of fact by the District Court based on substantial evidence binding on the Commission, but looking in that direction is the statement of the Court of Appeals that the District Court's decision should stand if not clearly erroneous. (R. 39).

The Commission and preferred stockholders contend that, as matters of law, the substantial evidence rule does apply and that there is substantial evidence to support the valuations of the Commission. We are, therefore, in agreement that the difference between the District Court and the Commission was basically a disagreement as to applicable legal principles, but for different reasons. If the Commission failed to consider and weigh any factors legally relevant, then, of course, further fact-finding operations by the Commission will be necessary.

The existence of substantial evidence to support the findings of the Commission has been demonstrated in the main briefs of the Commission and the preferred stockholders. In our supplementary statement we have exposed and corrected the postulates of the common stockholders in this respect (*supra*, pp. 4-5, 8-11). Likewise, the respective roles of the Commission and District Court and the standing of administrative findings in Section 11 (e) have been thoroughly covered and the arguments of the common stockholders anticipated and answered.

We have said that the resolution of this question is largely a matter of attitudes (Home Brief, p. 39). Congress has set up a statutory plan for carrying out the integration and simplification of holding company systems and it may fairly be assumed that it intended to have a workable plan. If the district courts are to exercise inde-

pendent, full, self-contained, plenary judgment, if they are to exercise independent discretion and be sustained so long as their conclusions are not clearly erroneous, we do not have a workable plan. Sincere and objective fact-finding is exposed and subordinated to the need for workability and for results which then can only be obtained by compromises.

We return to the suggestion that the stature of the findings of the Commission is as great in the District Court as in the Court of Appeals where such findings are conclusive if based on substantial evidence.

Respectfully submitted,

FRANCIS H. SCHETZ,
Attorney for The Home Insurance Company, et al., Petitioners-Respondents.

OCTOBER TERM, 1948.

No.

THOMAS W. STREETER, *et al.*,

Petitioners,

v.

CENTRAL-ILLINOIS SECURITIES CORP., C. A. JOHNSON, LUCILLE WHITE, and FRANCES BOEHM.

PETITION FOR WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT.

To the Honorable, the Chief Justice, and the Associate Justices of the Supreme Court of the United States:

Thomas W. Streeter, *et al.*, the petitioners herein, pray that a writ of certiorari be issued to review the judgment of the United States Circuit Court of Appeals for the Third Circuit vacating the decree of the United States District Court for the District of Delaware with directions to enter an order disapproving the plan as not being fair and equitable within the purview of section 11(e) of the Public Utility Holding Company Act and to remand to the Securities and Exchange Commission which had approved the plan.

Opinions Below.

The opinion of the Circuit Court of Appeals (R. 12) and the opinion denying the prayers of the petitions and cross-petitions for rehearing (R. 138) have not yet been reported. The opinion of the District Court (R. 238a) is reported in 71 F. Supp. 797. The findings and opinion (R. 25a) and supplemental findings and opinion of the Securities and Exchange Commission (R. 128a) have not yet been officially reported but are set forth in the Commission's Holding Company Act Releases Nos. 7041 and 7119, respectively.

Jurisdiction.

The judgment of the Circuit Court of Appeals (R. 41) was entered on March 19, 1948. A petition for rehearing (R. 140) was denied on June 11, 1948. The jurisdiction of this Court is invoked in section 240 of the Judicial Code as amended by the Act of February 13, 1925 (28 U. S. C. §347) and made applicable by section 25 of the Public Utility Holding Company Act of 1935 (15 U. S. C. §79y).

Statute Involved.

Section 11(e) of the Public Utility Holding Company Act of 1935 [15 U. S. C. §79k(e)] provides as follows:

> "In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control,

securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed."

Section 24(a) of the said Act [15 U. S. C. §79x(a)] provides as follows:

"Any person or party aggrieved by an order issued by the Commission under this chapter may obtain a review of such order in the circuit court of appeals of the United States within any circuit wherein such person resides or has his prin-

cipal place of business or in the United States Court of Appeals for the District of Columbia by filing in such court, within sixty days after the entry of such order, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall be forthwith served upon any member of the Commission, or upon any officer thereof designated by the Commission for that purpose, and thereupon the Commission shall certify and file in the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do. The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which, if supported by substantial evidence, shall be conclusive, and its recommendation, if any for the modification or setting aside of the original order. The judgment and decree of the court

affirming, modifying, or setting aside, in whole or in part, any such order of the Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended [28 U. S. C. §§346 and 347]."

Questions Presented.

The holding company which is being liquidated in compliance with section 11 is solvent. Under its charter, the three classes of preferred stock have a call or redemption price higher than their (involuntary) liquidation preference. Each of the three classes of preferred shares has an investment value at least equal to the call price. The following questions are presented:

1. Did the Commission properly apply the "fair and equitable" standards of section 11(e) of the Public Utility Holding Company Act as interpreted in *Otis & Co.* v. *S. E. C.*, 323 U. S. 625, in approving a plan which would pay the preferred stockholders cash equal to the current going concern value of their shares but not in excess of the call price, where this amount exceeds the (involuntary) liquidation preference of such shares under the charter?

2. Where preferred stockholders are accorded the going concern value of their rights surrendered in the liquidation of a holding company pursuant to section 11(e) of the Public Utility Holding Company Act, is the Commission required to reconstitute the history of the company so as to determine whether there have been any losses as a result of divestments or other action taken by the common stock management by reason of the Act, with a view to charging those losses in whole or in part to preferred stockholders?

3. Where a plan under section 11(e) of the Public Utility Holding Company Act satisfies a preferred stockholder's senior claim in cash and the Commission (a) equates the cash received to the value of the interest surrendered by the preferred, and (b) finds that the residual common stock interest is benefited through the retirement of the preferred and that the plan is fair to the common stockholders, is the Commission required to put a cash value on what the common stockholders should receive and surrender?

4. Where a plan under section 11(e) of the Public Utility Holding Company Act is sought to be enforced in a district court and there is no dispute as to the sufficiency of the evidence upon which the Commission based its finding of fairness, is the court authorized to reject such finding on the basis of a discretionary weighing of alleged equities without reference to the limitations upon the scope of judicial review which this Court has held apply to a circuit court of appeals in direct review of a plan under section 24(a) of the Act?

5. Is the scope of review by a district court which has been requested to enforce a plan approved by the Commission pursuant to section 11(e) of the Public Utility Holding Company Act so broad that the district court may substitute its judgment as to the fairness of the plan for that of the Commission?[1]

---

[1] Questions 1-4 have been substantially adopted from the statement of questions in Commission's petition for writ of certiorari. In addition, if certiorari is granted, we shall also argue (1) that the retirement of the preferred stock was voluntary within the meaning of the charter and that therefore the voluntary liquidation preferences were controlling, as an alternative to question 1 above; (2) that where the undisputed investment values are greater than the voluntary redemption prices but the Commission restricts the participation of senior security holders

[Footnote continued on following page.]

Statement.

History of Proceedings.

A proceeding was instituted in the United States District Court for the District of Delaware by the Securities and Exchange Commission ("the Commission") pursuant to sections 11(e) and 18(f) of the Public Utility Holding Company Act of 1935 ("the Act")[2] to effectuate a section 11(e) plan of liquidation and dissolution filed by the Engineers Public Service Company ("Engineers")[3] with the Commission, which plan, as subsequently amended, was approved by that body on January 8, 1947 (R. 141a).

On May 15, 1947, the district court filed an opinion (R. 283a) approving the plan except as to that por-

[Footnote continued from preceding page.]

to amounts equal to the call prices fixed in the Company's charter, the plan is not fair and equitable which permits termination of the dividend rights of those security holders while the common stockholders are contesting the payment of the aforesaid full amounts; (3) that the modification or amendment of the plan to provide for the deposit in escrow of the difference between the stated values and the respective call prices of the preferred was improper as it was accomplished without notice and an opportunity to be heard in disregard of pertinent provisions of section 11(e) of the Act.

[2] Act of Aug. 26, 1935, c. 687, Title I §33; 49 Stat. 838, 15 U. S. C. §§79-79z-6, §79k in particular.

[3] Engineers was incorporated in Delaware in 1925 (R. 1403a) primarily to acquire and own public utility properties. The Engineers' system which was put together by Stone & Webster, Inc., an engineering firm, sprawled over many states and was composed of a great many separate corporate entities. Although there were over 12,000 common stockholders, 338 or 2.52% of them owned 72.54% of the stock and of this amount the greatest number of shares was owned directly or indirectly by members of the Stone and Webster families (R. 567a-570a).

tion of it which proposed to retire the outstanding three series of preferred stocks at amounts equal to the respective call prices fixed by the charter (R. 292a). The district court found the preferred stockholders entitled to only $100 per share—the amount specified in the charter as payable in the event of involuntary liquidation. On May 29, 1947, the district court entered its order adopting certain changes in the plan, including the creation of an escrow of the amount in excess of $100 per share and directing the retirement of the preferred stocks at $100 per share and the immediate consummation of the plan as so changed.

On May 29, 1947,[1a] the petitioners filed their appeal from the district court order in the Circuit Court of Appeals for the Third Circuit from which order appeals were also subsequently taken on behalf of the Commission and the Home Insurance group of preferred stockholders. On March 19, 1948, the Circuit Court of Appeals filed its opinion (R. 12), affirming the decision of the district court that the plan as submitted by the Commission was unfair and inequi-

[1] The applications by the petitioners herein for a stay of this order of consummation, pending appeal, were denied in turn by the district court on May 29, 1947 (R. 335a), by the United States Circuit Court of Appeals for the Third Circuit on June 2, 1947 (R. 14) and a Justice of the United States Supreme Court on June 4, 1947. Since then the plan has been consummated except for the distribution of the fund deposited in escrow pursuant to the district court order (R. 39-40).

[1a] One of the petitioners herein is Thomas W. Streeter, a director and preferred stockholder of Engineers, who dissented from the initial plan as unfair in its proposal to retire the preferred stock at $100 per share. At Streeter's insistence the Board of Directors authorized the preferred stockholders to employ independent counsel to insure that the rights of those stockholders would be adequately represented before the Commission and in the courts (R. 473a).

table and vacating the decree of the district court approving the plan as amended, with directions to enter an order of disapproval and to remand to the Commission for further and appropriate action by it. On June 11, 1948, the Circuit Court of Appeals filed its opinion denying the prayers of the petitions and cross-petitions for rehearing (R. 138).

Proceedings before the Commission.

On September 10, 1945, during the pendency of an action before this Court to test the validity of the Commission's divestment orders under section 11(b)(1)[5] of the Act, the Company filed a plan (R. 1307a) under section 11(e) of the Act which was designed to effect compliance with those divestment orders and which also provided for the elimination of Engineers although such action had not been required by the Commission. This plan was the cul-

[5] On February 21, 1938, Engineers registered with the Commission and on February 28, 1940, the Commission instituted integration proceedings under section 11(b)(1) of the Act. In 1941 the Commission ordered the Company to dispose of its interests in two subsidiaries. The Company did not contest this order. On September 16, 1942, and October 6, 1942, the Commission issued other divestment orders which were set aside by the Court of Appeals for the District of Columbia, the cause being remanded to the Commission. *Engineers Public Service Co. v. S. E. C.*, 138 F. (2d) 936 (App. D. C., 1943) cert. granted, 322 U. S. 723 (1944). Certiorari was granted by the Supreme Court, but disposition was not had because of the lack of a quorum. In the meantime, Engineers disposed of the properties which were the subject of Commission's orders, in the consummation of the plan, approved and enforced by the district court's order dated May 29, 1947, the stay of which, as noted above, had been denied in turn by the district and circuit courts and a Supreme Court Justice. On October 20, 1947, the Supreme Court dismissed the appeals as moot [332 U. S. 783 (1947)].

mination of efforts of management stemming from about 1941, during which period several types of plans were considered and discarded, including distributions in kind, a one stock reorganization, a "package" distribution, a partial payment plan, a voluntary exchange plan, etc.[6] After consultation with the major common stockholders, the primary objective was set at the ultimate elimination of the preferred stockholders from the enterprise so as to give the common stockholders direct ownership of the underlying companies.[7]

Accordingly a plan was fashioned (I) to provide for the immediate retirement of the three series of outstanding preferred stocks[8] at the involuntary liquidation price of $100 per share plus accrued dividends by a deposit of that amount by Engineers in favor of the stockholders, the remaining assets thereafter to be distributed to the common stockholders; (II) to permit the later determination of the question as to whether the preferred stockholders were entitled to any amount in excess of $100; and (III) to eliminate Engineers, either by way of dissolution or by merger with one of its subsidiaries (R. 1310a), the merger alternative being removed by amendment by the company during hearings before the Commission.

On December 4, 1946, the Commission issued its findings and opinion (R. 25a, H. C. A. R. No. 7041), in which it found, among other things, that although

[6] R. 475a, 481a, 482a, 675a, 688a, 689a, 691a, 707a, 709a, 715a, 717a, 718a.

[7] R. 583a, 643a, 687a, 719a, 723a.

[8] $5 series, $5.50 series and $6 series. Engineers had no debt. The pertinent charter provisions are set forth at R. 1412a.

the plan was necessary to effectuate the provisions of section 11 of the Act, it was unfair to the preferred stockholders in its proposal to retire their stock at $100 per share. The Commission was of the view that under the principles enunciated in *Otis & Company* v. *S. E. C.*, 323 U. S. 624 (1945), the preferred stockholders were entitled to the current investment value of their securities and that such value was at least equal to the respective call prices of the three series of outstanding preferreds, namely, $105 for the $5 preferred and $110 for both the $5.50 preferred and $6 preferred. The Commission reached this conclusion after (a) consideration of "all provisions of the charter applicable to the preferred, such as the dividend rate and the call price, as well as the liquidation preferences", (b) analysis of "the financial condition of the company, with particular regard to the asset and earnings coverage of the preferred" (R. 62a), and (c) reference to the undisputed testimony of both the preferred stockholders' and the Company's witnesses that the intrinsic values of the preferred were considerably in excess of the call prices (R. 67a). However, the Commission was of the opinion that the call prices placed a ceiling on the right of the preferred to participate in the distribution of the assets (R. 67a).

The Commission stated, also, that it would approve an amendment to permit the deposit in escrow of the amount in excess of $100 per share in the event of further litigation as to the rights of the preferred stockholders (R. 75a). The Commission indicated that the plan would be disapproved unless it were amended to provide for retirement of the preferred at amounts equal to their respective call prices (R. 73a, 299a).

Within the time specified, Engineers filed an amended plan proposing to retire the preferred at amounts equal to their respective call prices (R. 102a). On January 8, 1947, the Commission issued its supplemental findings and opinion and order among other things (a) approving the plan as amended, (b) directing its counsel, in accordance with Engineers' request, to proceed with court enforcement, and (c) finding it fair and equitable to provide an escrow arrangement subject to the enforcement court's jurisdiction in the event of delay due to further litigation (R. 128a, 141a).

Court Proceedings.

In accordance with the Commission's direction, an application (R. 4a) was filed on January 9, 1947 with the United States District Court for the District of Delaware. During the pendency of the aforesaid application, the Commission, pursuant to a request by the President of Engineers (R. 271a, 394a), entered without notice to the preferred stockholders or an opportunity to be heard thereon a so-called order of amendment[9] on February 11, 1947 (R. 165a) permitting the consummation of the plan by an alternative method through the use of an escrow.

On May 15, 1947, the district court filed an opinion in which it concluded "that because of the provision for payment of premium, the plan does not meet the requirements of fairness and equity. With the exception of the payment of redemption premiums, the plan is approved including the Escrow Agreement" (R. 292a). It was the district court's view that a "§11(g) court has the affirmative and independent

[9] It is the Commission's view that the Order of Amendment did not constitute an amendment to the plan (R. 166a, 389a).

duty to consider and find whether a proposed plan, which has been approved by the Securities and Exchange Commission, is fair and equitable" (R. 286a). Stating that the quantum of participation to be allowed the preferred stockholders under §11 was to be measured by standards of "colloquial equity", the district court found that the investment value of the preferred stock was not controlling but was just one of the elements to be considered and that "after consideration of all factors involved" (including issue price, market history, losses due to divestments, "past sacrifices", etc.), it concluded "that $100. would be fair and equitable, but that the payment of premiums would not be fair and equitable" (R. 288a).

On May 29, 1947, the district court entered its findings of fact and conclusions of law (R. 293a) and an order (R. 318a), among other things, (a) adopting the alternative method of consummation via an escrow arrangement, (b) directing the retirement of the preferred stock at $100 per share [despite the Commission's finding that such treatment was unfair] and (c) the immediate consummation of the plan, except for the proposed allowance of the so-called premium. In accordance with this order, the plan has been carried into effect, except for the distribution of the fund deposited in escrow (R. 39-40).

On the appeals filed by the Commission and the Home Insurance and Streeter groups of preferred stockholders, the circuit court affirmed the decision of the district court that the plan, as approved and submitted by the Commission was unfair and inequitable, and vacated the district court's decree for its error in amending the plan to substitute its own estimates of values and approving and enforcing the plan as so amended. It directed the return of the record

for further and appropriate action by the Commission, the remaining problem being one of valuation. The circuit court also noted that in view of its denial of the Streeter motion for a stay made shortly after the entry of the district court's order of approval and enforcement, the plan had been carried into effect except for the payment of the fund deposited in escrow (R. 39-40).

The rationale of the circuit court's decision hinges primarily upon two concepts—(1) the function of a section 11(e) court, and (2) the standards of valuation for determining equitable equivalents. With respect to the first concept the circuit court after an extensive analysis concluded that a "Section 11(e) court must exercise its full and independent judgment as to the fairness and equity of the plan" (R. 33). The circuit court held that the findings and conclusions of the Commission are not binding upon the district court and expressly refused to apply the substantial evidence rule to a section 11(e) proceeding (R. 33), and also refused to follow the principles that "unless the conclusions of the Commission lack rational or statutory foundation they may not be disturbed by the section 11(e) court, or that a reversal of the Commission's judgment by the court may not be effected save where the Commission has plainly abused its discretion" (R. 34).

In reference to the standards of valuation, the court below held that "all pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached by the approach *ex* the Act or the approach *intra* the Act" (R. 38). It stated that the Commission has "misunderstood the principle of equitable equiva-

lents' enunciated by the Supreme Court in the *Otis & Co.* case"; that "the new doctrine of investment value * * * may not be substituted for the doctrine of equitable equivalents"; and that "investment value is and can be only one of a series of factors to be used in arriving at equitable equivalents" (R. 38, 39). The court below also criticized the Commission for its alleged errors in (a) failing to give adequate consideration to such "equities" and "factors" as losses occurring to Engineers by virtue of the divestitures compelled by the Act, future earning power, etc.; (b) adopting inconsistent techniques in valuing the preferred "*ex* the Act" and the common "*intra* the Act"; (c) making "no finding as to the 'value' of the common stock"; and (d) disregarding the fact that "the holding company enterprise is at an end, both for the preferred and common", which fact (according to the court below) differentiates the instant case from The United Light & Power Company reorganizations (R. 35, 36).

Petitions for rehearing were filed on behalf of the Commission and the Home Insurance and Streeter groups of preferred stockholders for the reason, among others, to obtain clarification of various aspects of the opinion below relating to the functions of a section 11(e) court vis-a-vis the Commission and the standard of valuation in simplification proceedings. Answers and cross-petitions were filed on behalf of two groups of common stockholders. The court below denied the prayers of the petitions and cross-petitions, stating that "neither the Commission, nor the district court, nor this Court possesses the power to waive the provision of section 11(e) providing for approval of a plan of reorganization as fair and equitable" (R. 139). It refused to treat the Commission's amendatory order

of February 11, 1947 or its approval of the escrow agreement as a rejection of Commission's statutory role—the order (according to the court below) being merely a device to expedite execution of the plan of reorganization after the requisite statutory approval. In view of its affirmance of the district court's disapproval of the plan as unfair and inequitable, the court below directed the Commission to reconsider the problem presented in the light of its opinion or "procure the review" thereof by this Court (R. 140).

Reasons for Granting the Writ.

The case at bar poses two major issues—the division of functions between the district court and Commission and the significance of the fair and equitable standard in simplification proceedings under the Act—which, together with several subsidiary questions, loom large in the proper administration of the Act. Both major issues directly affect the uniform and practicable enforcement of the Act and their resolution by the court below renders difficult the achievement of uniformity and imposes an impossible administrative burden upon the Commission in the performance of its duties under the Act. The decision of the court below is difficult to comprehend and impossible to apply. It has created confusion and complexity where none previously existed. Moreover, the rights of stockholders under other similar plans may be affected.

I.

1. The decision of the court below appears to be squarely in conflict with decisions of the Circuit Courts of Appeals for the First, Second and Eighth Circuits in respect to the scope of review by a section 11(e) court as to the fairness and equity of a plan. *Ladd* v. *Brickley*, 158 F. (2d) 212, 216 (C. C. A. 1, 1946) cert. den. 330 U. S. 816 (1947); *Lahti* v. *New England Power Ass'n.*, 160 F. (2d) 845, 850-1 (C. C. A. 1, 1947); *Public Service Commission of N. Y.* v. *S. E. C.*, 166 F. (2d) 784, 788 (C. C. A. 2, 1948); *Mitss. Mutual Life Ins. Co.* v. *S. E. C.*, 151 F. (2d) 424, 430 (C. C. A. 8, 1945) cert. den. 327 U. S. 795 (1946). In the case at bar, the court below held "that a Section 11(e) court must exercise its full and independent judgment as to the fairness and equity of the plan" (R. 33) and that the findings and conclusions of the Commission are not binding upon it but should be treated "with respect". It refused to apply the substantial evidence doctrine to the Commission's findings and to hold that the Commission's conclusions may not be disturbed by a section 11(e) court unless they lack "rational or statutory foundation" or that the Commission's judgment may not be reversed by such court except for a clear abuse of discretion (R. 33, 34).[10] In the course of its opinion,

[10] The district judge's view in the instant case as to his "affirmative and independent duty" to consider the fairness and equity of the plan, which the circuit court has in substance adopted, is of relatively recent vintage, and does not square with his own earlier expressions and other decisions within the Third Circuit which are in accord with the majority doctrine of substantial evidence. *E. g., In re Central & South West Utilities Co.*, 66 F. Supp. 690, 692 (D. Del. 1946); *In re Standard Gas and Electric*

[Footnote continued on following page.]

the court below recognized its disagreement in this respect with other circuit courts, stating: "There are decided cases which look the other way and these are entitled to great consideration" (R. 31).

The contrary standard as indicated in the opinion below, has been enunciated in *Mass. Mutual Life Ins. Co.* v. *S. E. C.*, *supra*, where the Eighth Circuit Court said:

"Obviously, whether, upon retirement of out-

[Footnote continued from preceding page.]

Co., 59 F. Supp. 274, 283 (D. Del. 1945), reversed on other grounds, 151 F. (2d) 326 (C. C. A. 3, 1945); *In re United Light & Power Co.*, 51 F. Supp. 217 (D. Del. 1943). Thus in the *Standard Gas* case, *supra*, the same district judge said:

> "* * * Under the substantial evidence rule, we are required and should follow the 'informed' judgment as articulated in the Commission's findings.
>
> * * * *
>
> "Examination of testimony and documentary proofs presented to the Commission demonstrates manifestly there was substantial evidence to support the Commission's findings as to the value of the securities to be disfributed to the Noteholders under the plan. * * *"

In the same spirit, the Third Circuit Court of Appeals, although reversing in the *Standard Gas* case, *supra*, on a point of law, declared:

> "This case does not come to the court as the result of agreement between the parties or the action of a special master approving a plan in the common form of reorganization proceeding. It comes following a thorough consideration by the Securities and Exchange Commission which has a very broad grant of power from Congress in the premises.
>
> "It can be set out as a well established rule of administrative law that the action of an expert administrative body in determining the particular remedial measures demanded in an individual case is not to be overturned by court action unless the administrative body has lost sight of the law. The more technical the subject matter before the administrative tribunal, the more reluctant the court should be, we think, in disagreeing with it on a matter which is a question of judgment" [151 F. (2d) 331].

standing bonds in the reorganization * * * payment of principal, accrued interest, *and* redemption premiums is the equitable equivalent of the bondholders' rights depends upon the facts of each particular case. The proper measure of such equivalence is for the determination of the Commission in the first instance, and its expert skill in appraising the facts to be considered must be accorded due weight by the Court.

"Since there is a 'rational basis' in fact for the finding of the Commission and no 'clear-cut' error of law by either Commission or court, we are not inclined to disturb the conclusion that retirement of the bonds at principal and accrued interest amounts to the 'equitable equivalent of the rights surrendered.'" [131 F. (2d) 430].

Similarly in *Lahti* v. *New England Power Ass'n., supra,*[11] the First Circuit Court sustained the Commission's finding of equivalence saying:

"Appellants' real challenge is to the correctness of the finding by the Commission and the district court that the plan is fair and equitable to the persons affected by it. This finding cannot be upset by us unless it is shown to be without rational basis in fact or to be predicated on a clear-cut error of law.

* * * * *

"* * * We are here in the realm not of mathematical demonstration, but of forecast, based

[11] The district court in this same case [66 F. Supp. 378, 382 (D. Mass. 1946)], said:

"In truth, any court charged with a review of the findings of the Securities and Exchange Commission, in a matter so complex in its nature as is the present proceeding, should accept the findings of the expert body unless it concludes that an error of law has been committed or the findings are of an arbitrary or capricious nature."

upon expert analysis and weighting of a complex array of factors, in which the informed judgment of the Commission counts heavily. It could not be otherwise" [160 F. (2d) 850-1].

The same principle, although not as clearly articulated, appears to have been applied by the Second Circuit Court in the *Public Service Commission* case, *supra*,[12] where the court said:

> "* * * Whether there was any evidence to support the conclusion that the old common shares had any value, based upon the future earning power of the Kings County Company, is an inquiry into which we are not disposed to enter. Any opinion is at best a guess, dependent, among other things, upon what rates the Company will be allowed to charge. There was certainly some basis for the valuation of the SEC when the order of the District Court was entered on July 16, 1947" [166 F. (2d) 788].

Moreover, the standard of "'full and independent judgment'" established by the court below is in conflict with the applicable general principle of review that

---

[12] The Second Circuit Court is apparently endorsing the doctrine as announced by the District Court in the same case [72 F. Supp. 767, 783 (S. D. N. Y. 1947)] in the following language:

> "As far as I am concerned, my duty is at an end when I find, as I do, that the action of the Securities and Exchange Commission was based upon findings supported by evidence, and was made pursuant to authority granted by Congress. I do not pretend to have either technical competence or legal authority to pronounce upon the wisdom of the course taken by either commission. *Board of Trade* v. *United States*, 1942, 314 U. S. 534, 548, 62 S. Ct. 366, 86 L. Ed. 432; *National Broadcasting Co.* v. *United States*, 1943, 319 U. S. 190, 224, 63 S. Ct. 997, 87 L. Ed. 344; both of which cases are cited in *Securities and Exchange Commission* v. *Chenery Corp.*, 67 S. Ct. 1575."

courts will uphold an administrative order, if based upon substantial evidence, and not arbitrary nor erroneous as a matter of law as recently reaffirmed by this Court in *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194, 208 (1947), and as continually applied in analogous situations.[13]

The second *Chenery* case, *supra*, expounds a doctrine of judicial review of administrative action, which, although deemed not controlling in the case at bar by the circuit court, we submit, is applicable here and at variance with the circuit court's position and affords the correct test of administrative action, whether judicial review occurs via section 11(e) as in the instant case, or via section 24(a)[14] of the Act as in the second *Chenery* case. In the language of this Court in the second *Chenery* case:

> "The scope of our review of an administrative order wherein a new principle is announced and applied is no different from that which pertains to ordinary administrative action. The wisdom of the principle adopted is none of our concern. * * * Our duty is at an end when it becomes evident that the Commission's action is based upon substantial evidence and is consistent with the authority granted by Congress. See *National Broadcasting Company* v. *United States*, 319 U. S. 190, 224. . .

---

[13] For instance: *National Broadcasting Co.* v. *U. S.*, 319 U. S. 190, 224 (1943); *Rochester Telephone Corp.* v. *U. S.*, 307 U. S. 125, 139, 140, 145, 146 (1939); *U. S.* v. *Morgan*, 307 U. S. 183, 199 (1939); *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 473 (1943); *RFC* v. *Denver & Rio G. W. R. Co.*, 328 U. S. 495, 508-9 (1946); *Dobson* v. *Commissioner*, 320 U. S. 489 (1948).

[14] Section 24(a) of the Act [15 U. S. C. §79x(a)] provides in pertinent part as follows: "The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive."

"We are unable to say in this case that the Commission erred in reaching the result it did. The facts being undisputed, we are free to disturb the Commission's conclusion only if it lacks any rational and statutory foundation. In that connection, the Commission has made a thorough examination of the problem, utilizing statutory standards and its own accumulated experience with reorganization matters. * * *

"* * * The 'fair and equitable' rule of §11(e) * * * [was] inserted by the framers of the Act in order that the Commission might have broad powers to protect the various interests at stake. * * * The very breadth of the statutory language precludes a reversal of the Commission's judgment save where it has plainly abused its discretion in these matters" (332 U. S. 207-8).

Hence the scope of review of administrative action is no different, even where, assuming *arguendo*, as the court below suggests, the Commission has announced and applied a "new" "formula" of "investment value" in the evaluation of the rights surrendered in the simplification of a holding company system. Such action is entitled to the "greatest amount of weight", as it lies primarily in the informed discretion of the Commission and is a judgment, of the type which the Commission is especially equipped to make, being based upon statutory standards and its own accumulated reorganization experience. As stated in the second *Chenery* case: "The Commission's conclusion here rests squarely in that area where administrative judgments are entitled to the greatest amount of weight. * * *. It is the product of administrative experience, appreciation of the complexities of the problem, realization of the statutory policies, and responsible treatment of the uncontested facts. It is the

type of judgment which administrative agencies are best equipped to make and which justifies the use of the administrative process. * * * Whether we agree or disagree with the result reached, it is an allowable judgment which we cannot disturb" (332 U. S. 209).

Moreover, the decision of the court below is also at variance with, and sanctions the departure by the district court from, the customary standards of judicial review as codified in section 10(e)(B)(1) and (5) of the Administrative Procedure Act [60 Stat. 243, 5 U. S. C. § 1009(e)(B)(1) and (5)]. These codified rules, which have been held declaratory of existing law of judicial review,[15] require the reviewing court to "(B) hold unlawful and set aside agency action, findings and conclusions found to be (1) arbitrary, capricious, an abuse of discretion, or otherwise not in accordance with law" and "(5) unsupported by substantial evidence in any case * * * reviewed on the record of an agency hearing provided by statute". Instead of applying the foregoing codified standards to the Commission's action, the court below maintains that a section 11(e) court is entitled to exercise its own independent judgment in determining the fairness and equity of the plan.

2. A subsidiary question arises from the statement by the court below that a section 11(e) court may "receive evidence *aliunde* the Commission's record respecting the fairness and equity of a plan", and "may decide upon the new evidence and upon that contained in the Commission's record that the plan is unfair and inequitable and remand the proceeding

[15] *Olin Industries* v. *N. L. R. B.*, 72 F. Supp. 228 (D. Mass. 1947).

to the Commission for further consideration". Such unlimited reopening of the administrative record for the receipt of additional evidence is fraught with danger as it permits in effect a trial *de novo* by the district court and is contrary to the rule uniformly and generally applied by the courts in other circuits to section 11(e) proceedings under the Act[16] and implicitly recognized in the cases applying the substantial evidence rule (*supra*, at p. 17). Thus in *In re Electric Bond and Share Company, supra,* the district court said, in quoting from the case of *In re Laclede Gas Light Co., supra*:

> "* * * we can see no more reason for permitting evidence to be offered, other than the record made before the Commission in a hearing under Section 11(e) than in a hearing under Section 24(a) of the Act, and especially do we believe this should be the rule when the Court of Appeals may "modify" or "set aside" order of the Commission "in whole or in part" and yet is restricted in the receipt of evidence, solely to send the case back to the Commission to hear such additional evidence. A reasonable interpretation of the Act does not permit a more liberal rule on hearing additional testimony in a case before the Court under Section 11(e) than under Section 24(a) of the Act." (73 F. Supp. 443).

3. In sanctioning the substitution of the district court's judgment for that of the Commission, the disregard of the Commission's findings and the reopening of the administrative record, the decision of the

---

[16] *In re Electric Bond & Share Co.*, 73 F. Supp. 426, 443 (S. D. N. Y., 1946); *In re Laclede Gas Light Co.*, 57 F. Supp. 997, 1002 (E. D. Mo., 1944), aff'd *sub nom. Massachusetts Mutual Life Ins. Co. v. S. E. C.*, 151 F. (2d) 424 (C. C. A. 8, 1945), cert. den. 327 U. S. 795; *In re Jacksonville Gas Co.*, 46 F. Supp. 852 (D. Fla., 1942).

court below, relegates the Commission to a position of comparative insignificance and distorts the legislative division of functions between the Commission and the district court. Cf. *Scripps Howard Radio* v. *F. C. C.*, 316 U. S. 4, 11 (1942). Such distortion of the statutory scheme results from a mistaken rejection of the doctrines of substantial evidence and administrative finality. Yet the Commission's action, when tested by every theoretical and practical reason for administrative finality, is entitled to the highest credit in the courts—its independence, expertness, procedures, staffing, the complexity of the subject, etc.

Furthermore, the consideration of a uniform and expeditious administration of the Act requires that the Commission be given all the credit to which it is entitled under the law and that its decisions receive identical treatment. The dispersal of section 11(c) enforcement proceedings to district courts all over the country tends inevitably to produce conflicting decisions[17] and the concomitant lack of uniformity, particularly if every district court is given the power to substitute its judgment for that of the Commission. Uniform application of the Act can only be accomplished by the coordination of the standards of review under section 11(e) and section 24(a) on the basis of the substantial evidence rule and the doctrine of administrative finality as enunciated by this Court.

[17] It is not inconceivable that such a conflict as suggested in the instant case might lead to a stalemate and a consequent frustration of Congressional intent.

II.

The opinion of the court below is in conflict in several respects with the applicable decisions of this Court, particularly *Otis & Co.* v. *S. E. C.*, 323 U. S. 624 (1945), and *Schwabacher* v. *United States*, 334 U. S. 182 (1948).[18] Paying lip service merely to the *Otis* principles, the court below has in reality strayed far afield from the rules established by this Court and has enunciated the following conflicting doctrine in evaluating the rights surrendered upon simplification under section 11(e) of the Act:

> "* * * All pertinent factors and all substantial equities must be considered by the Commission whether equitable equivalents are to be reached by the approach *ex* the Act or the approach *intra* the Act. The new doctrine of investment value presently urged by the Commission may not be substituted for the doctrine of equitable equivalents enunciated in the *Otis & Co.* decision" (R. 38).

1. These criteria, apart from their nebulous and ambiguous character, represent only a mirage of consistency with this Court's views and in reality, reject the conception that the phrase "fair and equitable" as used in section 11(e) of the Act imports the principle of full priority as developed in the receivership and bankruptcy reorganization cases. In place of the principle of full priority, the court below proposes a variable and uncertain theory of "all pertinent factors and all substantial equities"—apparently simi-

[18] In a letter dated May 11, 1948, during the pendency of the rehearing, General Counsel of the Commission drew the circuit court's attention to the *Schwabacher* case decided on May 3, 1948, by this Court.

lar to the principle of "colloquial equity"[19] by which the district court in the instant case sought to measure the participation of the security holders. Such non-technical significance of the phrase "fair and equitable", resulting as it does in a substitution of indefinite considerations for the well-defined rights of the security holders, is entirely at variance with the technical definition of that expression, as words of art, in the *Otis* and *Schwabacher* cases which require that full priority in treatment be accorded various classes of security interests—creditors and stockholders and various classes of stockholders *inter sese*,—so that each security holder in the order of his priority receives from that which is available for the satisfaction of his claim the equitable equivalent of the rights surrendered. The entire bundle of rights must be determined as though in a continuing enterprise—a going concern apart from the pending reorganization. These principles are announced by this Court in the *Otis* case in the following terms:

> "Like the bankruptcy and reorganization statutes, the Public Utility Holding Company Act, in providing that plans for simplification be 'fair and equitable', incorporates the principle of full priority in the treatment to be accorded various classes of security interests. This right to priority

---

[19] This standard of colloquial equity has been articulated, on several other occasions in addition to the instant case by the same district court, *e. g., In re Community Gas & Power Co.*, 71 F. Supp. 171 (D. Del. 1947); *In re Cities Service Co.*, 71 F. Supp. 1003 (D. Del. 1947). In *In re United Light and Power Co.*, 51 F. Supp. 247 (D. Del. 1943), which eventually became the *Otis* case, the same district court announced a similar view, suggesting that the "expression 'fair and equitable' should be given its ordinary non-technical meaning". Despite the district court's statement as to the application of the standard of colloquial equity in the *Otis* case neither this Court nor the circuit court adopted any such nebulous theory.

in assets which exists between creditors and stockholders, exists also between various classes of stockholders. When by contract as evidenced by charter provisions one class of stockholders is superior to another in its claim against earnings or assets that superior position must be recognized by courts or agencies which deal with the earnings or assets of such a company. Fairness and equity require this conclusion. * * * This is the rule applied by the Commission in the simplification of corporate structure. The Commission recognizes and applies the doctrine of full priority by giving value to the rights of the preferred in a going concern rather than as if by sale and distribution * * *" (323 U. S. 634-5).

This *Otis* doctrine, it should be noted, has recently been reaffirmed in the *Schwabacher* case where this Court said:

"In construing the words 'fair and equitable' in a federal statute of very similar purposes, we have held that although the full priority rule applies in liquidation of a solvent holding company pursuant to a federal statute, the priority is satisfied by giving each class the full economic equivalent of what they presently hold, and that, as a matter of federal law, liquidation preferences provided by the charter do not apply. We said that, although the company was in fact being liquidated in compliance with an administrative order, the rights of the stockholders could be valued 'on the basis of a going business and not as though a liquidation was taking place'. Consequently the liquidation preferences were only one factor in valuation rather than determinative of amounts payable. *Otis & Co.* v. *Securities & Exchange Commission*, 323 U. S. 624" (334 U. S. 199).

2. Moreover, reference to various "factors" and "equities" which, in the opinion of the court below, merit special consideration, reveals further deviations from the applicable decisions of this Court. Thus, the court below requires the Commission to consider and weigh into the calculation "substantial losses which occurred to Engineers by virtue of divestitures compelled by the Act".[20] Even assuming *arguendo* that these losses can be traced and attributed to the operation of the Act, this requirement is not only in conflict with the *Otis* principle of "full priority" as indicated above but, in compelling a re-examination of divestments and other transactions executed pursuant to the Act, it constitutes a collateral attack in violation of the salutary policy underlying the doctrine of *res judicata,* upon final decisions, such as the *Puget Sound* divestment, in which the plan proposed by a common stockholder management has already been enforced by the United States District Court for the

---

[20] After disposing of Engineers' insubstantial contention to restrict the preferred to $100 because of the alleged *Puget Sound* "loss", supposedly caused by the Act, the Commission commented:

> "In passing, we should point out that we do not accept counsel's hypothesis that the *Act* has caused the asserted losses. In all of its divestments, Engineers has been free in its choice of methods, and, within limits, to choose the time for divestment. All sales have been negotiated by Engineers at arm's-length. If, as in the case of *Puget Sound*, the sale brought less than the carrying value on the books of Engineers, the indication is that the carrying value was excessive and not that the sales price was low. It is significant that the market price of Engineers' common when the plan was filed was the highest since 1932 and that the price has been rising steadily since 1942 when the program of simplification got under way. As shown in Footnote 45, *supra*, Engineers' common reached a low of 1⅛ in 1935. By 1945, when the plan was filed, it had reached a high of 37" (R. 72a, fn. 55).

District of Massachusetts.[21] Such suggested re-examination clearly flies in the face of the well-settled doctrine of *res judicata* as enunciated in the recent cases of *Commissioner* v. *Sunnen*, 333 U. S. 586 (1948) and *Sherrer* v. *Sherrer*, —— U. S. ——, 92 L. Ed. 1055 (1948).

Furthermore, the effect of weighing the alleged losses arising from divestments for the benefit of the common, as the court below directs, results in substance, in the subordination of the claim of the preferred to that of the common to the extent of such losses, even though the history of Engineers reveals no "spoliation, mismanagement and faithless stewardship" by the preferred. The voting common, not the preferred, have occupied a position of complete control. Accordingly, the subordination of the preferred stockholders would constitute a misapprehension and misapplication of the "Deep Rock Doctrine", as recently restated in *Comstock* v. *Institutional Investors*, —— U. S. ——, 92 L. Ed. 1360, 1370 (1948), citing *Taylor* v. *Standard Gas & Electric Co.*, 306 U. S. 307, 83 L. Ed. 669 (1939) and *Pepper* v. *Litton*, 308 U. S. 295, 84 L. Ed. 281, 290 (1939). Nor do the public preferred stockholders in the instant case fall within the ban of the principle established by the Commission and sustained by this Court in *S. E. C.* v. *Chenery Corp.*, 332 U. S. 194 (1947), under which management insiders are limited to cost on their purchases of securities during a reorganization.

Other "factors" and "equities" to be considered in view of the circuit court's affirmance of the district

[21] *Puget Sound Power & Light Co.*, 13 S. E. C. 226 (1943), plan approved and enforced, civil action No. 2308 (D. Mass. 1944).

court's views, although not expressly mentioned in the opinion below, are, in the language of the district court, the so-called "past sacrifices and contributions of the common", including such historical "factors" and "equities", as issue prices, market prices, brief period of dividend omission, retained earnings, etc. This approach involves a shift in emphasis to factors entitled under the decisions to but little weight and away from elements, such as current rights to earnings and assets which are entitled to primary weight. *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co.*, 318 U. S. 523 (1943); *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 632 (1945); *Lahti* v. *New England Power Assn.*, 160 F. (2d) 845 (C. C. A. 1, 1947); *Phillips* v. *S. E. C.*, 153 F. (2d) 27 (C. C. A. 2, 1946), cert. den. 328 U. S. 860 (1946). It in effect, seeks to restore "values * * * already lost under the operation of economic forces" contrary to the principle proclaimed as follows in the *Schwabacher* case:

> "* * * Public regulation is not obliged and we cannot lightly assume it is intended to restore values, even if promised by charter terms, if they have already been lost through the operation of economic forces. Cf. *Market Street R. Co.* v. *Commission*, 324 U. S. 548. In appraising a stockholder's position in a merger as to justice and reasonableness, it is not the promise that a charter made to him but the current worth of that promise that governs, it is not what he once put into a constituent company but what value he is contributing to the merger that is to be made good" (334 U. S. 199).

Accordingly, the circuit court's rejection of the technical definition of "fair and equitable" as embodying the principle of "full priority" described above

and its application of the standard of "all pertinent factors and all substantial equities" constitute a misconception of the *Otis* case and are at variance with the *Otis* and *Schwabacher* cases. Moreover, its substitute criteria, under which the extent of participation is measured by irrelevant factors extrinsic to the contract rights of the security holders, affords no rational basis for the administration of the Act upon a uniform national basis and will necessarily create a lack of uniformity in view of its dependence upon determinations of the weight of various intangible factors by different enforcement courts all over the country.

3. The court below also states that "No particular, specific approach [to the problem of valuation] is to be nailed to Commission's head" and suggests that an approach either "*intra* the Act" or "*ex* the Act" could "lead to just and appropriate valuations". Such choice of alternative methods of valuation is erroneous and contrary to the opinions of this Court in the *Otis* and *Schwabacher* cases. The approach "*intra* the Act" requiring valuation as if the liquidation pursuant to the Act falls within the coverage of the charter liquidation provisions would violate the *Otis* rule of "inoperativeness" as enunciated in the following statement from this Court's opinion:

> "* * * We think, however, the charter preference is inoperative in simplification under §11(b)(2). The provision having been adopted in 1929, six years prior to enactment of the Public Utility Holding Company Act, a 'simplification' under this Act, having as an incident to it the dissolution of one company in a holding company system, was not an anticipated 'liquidation' within the meaning of Power's charter provision. * * * The Commission in its enforcement of the

policies of the Act should not be hampered in its determination of the proper type of holding company structure by considerations of avoidance of harsh effects on various stock interests which might result from enforcement of charter provisions of doubtful applicability to the procedures undertaken. Where pre-existing contract provisions exist which produce results at variance with a legislative policy which was not foreseeable at the time the contract was made, they cannot be permitted to operate. * * *" (323 U. S. 634-8).[22]

Moreover, the foregoing interpretation of "*intra* the Act" would appear to be inconsistent with the circuit court's statement that the charter provisions are "not dispositive of the issues presented".[23] But even assuming the proper application of the *Otis* rule of "inoperativeness" in view of the circuit court's express statement in this connection, the phrase "*intra* the Act" would seem to imply valuation "as if the Act had been passed" or the converse of the phrase "*ex* the Act", as defined in at least one place in the opinion of the court below to mean "as if the Act had *never* been passed". A literal application of this interpretation would involve the reconstitution of Engineers' assets by recording and appraising the effects of the operation of the Act for the past 10 years upon the Engineers' system and possibly the whole public utility industry. Since such reconstruction is at variance with the applicable decisions of this Court, imposes an impossible administrative burden upon the Commission, and is based upon a misconception by the court below of the significance of the phrase "*ex* the Act", as will be demonstrated *infra* at p. 35

[22] Engineers was incorporated in Delaware in 1925 (R. 1403a).
[23] R. 34.

ff., this definition of "*intra* the Act" must necessarily be found to be erroneous.

It may be that the above interpretation of the expression merely harks back to the following quotation from the opinion of the district court to which the court below refers as "the greatest difference between the respective approaches of the court and the Commission to the problem of valuation":

> "'I do not consider the argument advanced [by the Commission] as to what these series of preferreds would be worth if there were no Public Utility Holding Company Act. I do not think it profitable to consider an argument based on unreality *for there is a Public Utility Holding Company Act.* Unless one subscribes completely to the doctrine of foreordination things might always be different from what they are.'" (R. 20).

Under such view, an appraisal "*intra* the Act" would require the rights of the security holders to be measured in terms of the situation created by the statute, *i. e.*, as though a liquidation were taking place and not in terms of the situation terminated by it.[24]

[24] This statement is the converse of a quotation from the opinion of the Commission in *United Light and Power*, H. C. A. R. No. 4215 p. 13 [13 S. E. C. 12] (1943), which appears as follows in the opinion of this Court in the *Otis* case:

> "'Under the circumstances, fair and equitable compensation will be given to all of the claimants if their rights are measured not in terms of the situation created by the statute but rather in terms of the situation terminated by it—*i. e.*, as though no liquidation were to take place. In this way each class of stock will be accorded its proportionate share of the benefits to be gained from the elimination of a useless and expensive corporate entity and from the receipt of a security representing a more direct investment in the underlying assets and earnings of the system.'" (323 U. S. 635, fn. 17).

Accordingly, this concept runs counter to the *Otis* case under which the preferred and the common were given the equivalent of their participation "as though in a continuing enterprise instead of in liquidation".

It is clear that, under the *Otis* case, contrary to the above implication of "*intra* the Act", as used by the court below, one class of security holders is not permitted to take advantage of a situation created by Congress to secure a benefit at the expense of the other, and both are held to the value of their bargains *inter sese* without reference to the liquidation or reorganization process in accordance with the policy expressed as follows in the *Otis* case: "Enforcement of an overriding public policy should not have its effect visited on one class with a corresponding windfall to another class of security holders" (323 U. S. 637).

In short, the approach "*intra* the Act" does not under any conceivable interpretation establish a sound standard for determining equitable equivalents and is also inconsistent with the views of this Court as indicated above. In any event, it is nowhere explained with sufficient clarity to provide the Commission with an adequate guide for valuation. Indeed the attempts by appellants (including petitioners herein) to secure clarification on rehearing by the court below, were unavailing (R. 140).

4. The alternative approach "*ex* the Act" signifies in the opinion of the court below valuation "as if the Act had never been passed". This significance of "*ex* the Act" appears to require an historical review of the past 10 years' activities in the Engineers' system and the public utility industry, with an eye toward the elimination of the effects of the Act and

the reconstruction of Engineers on that basis.[25] A retroactive readjustment of benefits and detriments (or profits and losses) so as to eliminate the effects of numerous orders of the Commission, interspersed among a variety of independent and possibly unrelated causal factors as the economic, political and scientific forces of the times, creates an infinite assignment impossible of fulfillment, and imposes an overwhelming burden upon the Commission, in its administration of the Act. Furthermore, such re-examination represents a collateral attack upon final judicial and administrative decisions in disregard of the doctrine of *res judicata*, as indicated above. Lastly, this valuation "*ex* the Act", predicated upon the aforesaid historical analysis, is not reconcilable with the "current worth" rule of the *Schwabacher* case and the "going concern" doctrine of the *Otis* case. In other words, the phrase "*ex* the Act" must mean "apart from the reorganization compelled by the Act", or "on the basis of a going business and not as though a liquidation were taking place", in the language of the *Otis* case as applied by the Commission, and cannot possibly be construed to mean "as though the Act had never been passed", the approach suggested by the court below. As this Court said in the *Otis* case:

> "We reach the conclusion that the Securities and Exchange Commission applied the correct rule of law as to the rights of the stockholders inter sese. That is to say, when the Commission proceeds in the simplification of a holding company system, the rights of stockholders of a solvent company which is ordered by the Commission to distribute its assets among its stock-

[25] Converse of the interpretation of "*intra* the Act" discussed at pp. 33-35 of this Petition.

holders may be evaluated on the basis of a going business and not as though a liquidation were taking place" (323 U. S. 633).

5. In addition, the court below criticizes the Commission for its alleged disregard of what it conceives to be a substantial difference between the instant case and the *United Light and Power* reorganizations, namely, the termination of the holding company enterprise both for the preferreds and the common in the former[26] and the continuance of the holding company enterprise in the latter, there being merely a shift of "the security holder participation in the enterprise from the top holding company * * * to a subsidiary holding company". Thus the court below approves the district court's valuation in the instant case "of the securities '*ex* the Act', considering the holding company enterprise to be at an end, as it is in fact" (R. 36).

In the first place the attempted distinction overlooks this Court's admonition in the *Otis* case that "The reason [for its decision] does not lie in the fact that the business of Power continues in another form". Secondly, the statement of the court below when carried to its logical conclusion results in improper emphasis upon the procedural sequence of simplification, even though, as this Court has said in the *Otis* case, values should not "be made to depend on whether the Commission, in enforcing compliance with the Act, resorts to dissolution of a particular company in the holding company system, or resorts instead to the device of merger or consolidation". Procedural deci-

[26] In contrast, the district judge considered the *Otis* rule to apply to a situation in which there is a true liquidation rather than a nominal or formal liquidation (R. 288, fn. 2).

sions, such as the selection of a particular sequence in or method of system adjustment (especially since in the case at bar the choice has been made by the common stock management of Engineers[27]), should not affect rights.[28] So said this Court as follows in the *Otis* case:

> "* * * Satisfaction of the great-grandfather clause might have been obtained in this or other holding company systems by an order for merger, consolidation or recapitalization between top holding companies or between associate companies in the lower tiers of the corporate hierarchy. Such procedure would avoid the liquidation of Power. * * * The selection by the Commission of one method of system adjustment to accomplish simplification rather than another is an incident which ought not to affect rights" (323 U. S. 631).

6. The court below, having apparently misconceived the meaning of "*ex* the Act," as indicated above, unjustly censures the Commission for allegedly adopting inconsistent techniques or methods in valuing the preferreds "*ex* the Act" and the common "*intra* the Act". In reality the Commission valued both the common and preferreds "*ex* the Act" or apart from the reorganization in accordance with the principles enunciated in the *Otis* case. Applying the doctrine of full priority, the Commission first valued the preferreds, and consequently, in valuing the preferreds apart from reorganization or on a going concern basis, necessarily reciprocally valued the com-

---

[27] R. 718a, 719a.

[28] Under section 11(e) of the Act the choice of an appropriate method of compliance from available alternatives is left by the Commission to the company or as in the instant case to the common stock management of Engineers. *Commonwealth & Southern Corp.* v. *S. E. C.*, 134 F. (2d) 747, 751 (C. C. A. 3, 1943).

mon, by the same standard. In other words, since the total enterprise is to be divided between two claimants, the preferreds and the common, once the preferreds have been valued on a going concern basis and that value subtracted from the total, it appears obvious that the residual value is thereby established for the common, on the same basis. The preferreds are entitled, according to the Commission, to amounts equal to their redemption prices as the equitable equivalents of the rights surrendered,[29] and the common entitled, in exchange for their rights, to the remaining assets or the securities in the operating companies, there being no need to place a dollar value on the securities thus received in exchange.[30]

The Commission, in determining fair and equitable treatment for the preferred in the instant case, has applied the usual technique in valuing senior securities, such as bonds, upon retirement unaccompanied by the liquidation or dissolution of the particular holding company.[31] In both situations, namely, the

[29] Common stock management selected the type of distribution (*i. e.*, cash for the preferreds and underlying securities for the common). The preferreds were not permitted to participate or retain a stake in the continuing enterprise in any form whatsoever (including the underlying securities) as the common stock management wanted to retire or treat the preferreds otherwise (R. 719a).

[30] Full compensatory treatment may properly be made in either cash or securities by both the I. C. C. and the Commission. *Standard Gas & Electric Co.*, 151 F. (2d) 326 (C. C. A. 3, 1945); *Georgia Power & Light Co.*, H. C. A. R. No. 5568, plan enforced (M. D. Ga. 1945); *New York, N. H. & H. R. Co.*, 147 F. (2d) 407, 47 (C. C. A. 2, 1945), aff'g 54 F. Supp. 595, cert. den. 325 U. S. 884 (1945); *Chicago Railways Co.*, 160 F. (2d) 59 (C. C. A. 7, 1947).

[31] The analogy is clear when the Engineers' plan is viewed as embracing two separate phases or transactions, (1) the retirement of the preferred stock; and (2) the subsequent dissolution of Engineers, resulting in the distribution of securities in the underlying operating companies to the common stockholders.

elimination of the preferred in the instant case and the retirement of bonds, a dollar value is placed upon these senior securities, while the junior securities or the common stock receive the residual value, consisting of securities in the operating companies as in the instant case, in view of the dissolution of Engineers. The same result is achieved by the common stockholders' acquisition of the complete ownership of the holding company enterprise in the situation where retirement of the senior securities occurs without dissolution.[32] Therefore the circuit court's criticism that the Commission "made no finding as to the 'value' of the common stock" is without substance,[33] for the Commission merely did not place a dollar sign on the rights surrendered by the common[34] but has expressly found that the "plan is fair to the common stockholders" and that the "retirement of the preferred stock will be of immediate benefit to the common stockholders". Hence the Commission has determined that the residual value of Engineers, namely the securities in the operating companies received in exchange, is the equitable equivalent of the rights surrendered by the common. In such a case a distribution may properly be made without dollar valuation. *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. & P. R. R. Co.*, 318 U. S. 523, 565 (1943); *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 482 (1943); *Otis & Co.* v. *S. E. C.*, 323 U. S. 624

[32] A dissolution of a holding company means little more than the receipt of securities in the operating company in lieu of the present shares in the holding companies. *American Power and Light Company* v. *S. E. C.*, 329 U. S. 90 (1946).

[33] No such absence of a finding of value for the common was mentioned by the district judge.

[34] As stated in the *Standard Gas* case: "Actually it was not incumbent upon the Commission to reduce the result to dollars and cents in the process of valuation" [151 F. (2d) 333, n. 12].

(1945). A requirement that dollar values be put upon the rights surrendered and the *quantum* received "would create an illusion of certainty where none exists and would place an impracticable burden upon the entire simplification process." Practical adjustments are required rather than a rigid formula. Accordingly, such determination need not be made by the use of any mathematical formula or with mathematical certitude. *Group of Institutional Investors* v. *Chicago, Milwaukee, St. P. and P. R. R. Co.*, *supra*, at pp. 565-6.

7. In addition the court below finds fault with the Commission for attempting to substitute "the new doctrine of investment value * * * for the doctrine of equitable equivalents enunciated in the *Otis & Co.* decision";[35] and maintains that "investment value is and can be only one of a series of factors to be used in arriving at equitable equivalents." Even assuming

[35] Certainly novelty is not revealed in the following rationale in the Commission's decision in the instant case:

> "It is settled that in a Section 11 reorganization a security holder must receive, in the order of his priority, from that which is available for the satisfaction of his claim, the equitable equivalent of the rights surrendered. Since under the circumstances of this case, we do not think it proper to regard the liquidation provisions of the charter as conclusive in determining those rights, we must consider all provisions of the charter applicable to the preferred, such as the dividend rate and the call price as well as the liquidation preferences, and we must analyze the financial condition of the company with particular regard to the asset and earnings coverage of the preferred" (R. 62a).

After reviewing the financial data and expert testimony the Commission concluded:

> "It is apparent that the preferred has an investment value at least equal to the respective call prices. * * *

[Footnote continued on following page.]

arguendo that the Commission has by its decision herein announced and applied a novel principle of valuation, such action is not forbidden and is entitled to the greatest weight since it reflects the informed expert judgment of the Commission and is the "product of administrative experience, appreciation of the complexities of the problem, realization of statutory policies and responsible treatment of uncontested facts." *S. E. C. v. Chenery Corp.*, 332 U. S. 194, 209 (1945). Yet despite the statement of the court below, novelty cannot be ascribed to the investment value doctrine in view of its recognition by this Court in the *Otis* case. There it was pointed out that once it is concluded, as it has been here, that the dissolution results in a type of liquidation entirely distinct from the liquidation envisaged by the charter provisions, the Commission is permitted "to examine the investment values of the common and preferred stockholders". In reality the doctrine of investment value connotes no novel technique but reflects the measure of the stockholders' rights determined in the simplication of a holding company system on the "basis of a going business", as recognized in the *Otis* case.

[Footnote continued from preceding page.]

"Upon a full consideration of the record * * * the fair and equitable standard would require the payment [to the preferred] of an amount equal to the call prices of the securities, plus accrued dividends" (R. 67a-68a).

This latter quotation is to be contrasted with the following statement from the opinion of the court below:

"* * * We conceive that the Commission could make a finding under certain circumstances that investment value was the equitable equivalent to the security holder. The Commission in the instant case, however, has not made such a finding * * *" (R. 38).

It should also be noted that the district court does refer to the Commission's finding of the investment value of the preferreds (R. 299a).

It has been a settled principle at least since the *United Light & Power Co.*, 13 S. E. C. 1 (1943)[36] (the original *Otis* case) and recently reaffirmed in another aspect of that simplification,[37] that the present investment worth of a security, based on the bundle of rights surrendered, must be the measure of its participation in a section 11(e) plan. In short, present investment value or worth is not a substitute for equitable equivalent but its measure. It is not "one of a series of factors" to be used in valuation, but is the end result, the final product of the valuation process based on the bundle of rights surrendered and reflecting the earning power, market history, dividend record, asset priorities, and all other relevant factors. Such criteria provide a proper basis of valuation. *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 526 (1941).

8. A further criticism is directed by the court below at the Commission on the basis of the *DuBois*, the *Group of Institutional Investors*, and the *Otis* cases for its failure "to give any substantial consideration to the future earning power of Engineers and its subsidiaries", and its neglect "to ascertain the future earning power of the system" or "apportion earning power between the preferreds and common based upon

---

[36] In the words of the Commission: "It is our conclusion that we must judge the fairness of the plan according to legitimate investment values existing apart from the duty of liquidation imposed by the statute" (13 S. E. C. 11) The Commission then proceeds to a discussion of the "bundle of rights" affecting normal value.

[37] *United Light & Power Co.*, H. C. A. R. No. 6603 (1946).

their respective claims to income".[38] Reference to these cases reveals that in each, the reorganization involved the formation of a new corporation and the appropriate allocation of the securities therein on the basis of the apportionment of the earning capacity among the claimants. Hence earning capacity was projected far into the future and ascertained in order to insure the ability of the new corporation to meet the interest and dividend requirements of the new securities "as a *sine qua non* to the determination of the integrity and practicability of the new capital structure", and in order to avoid the "indefensible participation of junior securities in plans of reorganizations" in violation of the well established "absolute priority" rule.[39] It would therefore seem that the criticism of the court below reflects a misapplication of the principle of these cases since the instant case, in contrast to the decisions cited by the court below, does not involve the formation of a new corporation upon the dissolution of Engineer's nor consequently the allocation of securities therein nor the "indefensible participation of junior securities". Accordingly, the criterion of earning capacity which was originally fashioned as a shield to protect the preferred from "indefensible participation" of the common in a new corporation "in satisfaction of the absolute priority rule" has by the court below been converted improperly into a weapon in the hands of the

---

[38] Apparently the district court disagrees with the circuit court in this respect as the district court nowhere in its opinion refers to any inadequate consideration of earning power.

[39] *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 525-6 (1941).

common against the preferred in disregard of the aforesaid rule. In effect the court below has attempted to restrict the preferred by its misapplication of the doctrine of full priority. Moreover, in view of the differences between the instant case and the cases cited by the court below in support of its criticism, there is no need for a hypothetical projection into the indefinite future of the earning capacity nor for an apportionment thereof. Where, as here, a careful study indicates the amplitude of earnings coverage for the preferred, it does not appear necessary to go further as the common's claims to income would be subordinate to those of the preferred stockholders. "The extent and method of inquiry necessary for a valuation based on earning capacity are necessarily dependent on the facts of each case." *Consolidated Rock Products Co.* v. *DuBois*, 312 U. S. 510, 527 (1941).

Conclusion.

The views of the courts below tend to cause confusion and enlarge the areas of uncertainty and dispute with respect to the powers and jurisdiction of the district court *vis-a-vis* the Commission, as affecting the fair and equitable standard and the scope of review in the simplification process. Appropriate guides to valuation must be provided and a proper allocation of function between court and agency made. The expeditious and uniform administration of the Act is at stake.

For the reasons stated, this petition for a writ of certiorari to the United States Circuit Court of Appeals for the Third Circuit should be granted.

Dated: New York, N. Y., August 16, 1948.

THE HOME INSURANCE COMPANY AND TRADESMENS NATIONAL BANK AND TRUST COMPANY,

Petitioners,

v.

CENTRAL-ILLINOIS SECURITIES CORPORATION; C. A. JOHNSON, LUCILLE WHITE, AND FRANCES BOEHM,

Respondents.

PETITION FOR WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT.

To the Honorable, The Chief Justice and Associate Justices of the Supreme Court of the United States:

The Home Insurance Company, a New York corporation, and Tradesmens National Bank and Trust Company, a national banking association, respectfully pray for a writ of certiorari to the United States Circuit Court of Appeals for the Third Circuit to review a final order and judgment of that Court, entered March 19, 1948 (R. 41),[1] vacating a decree of the United States District Court for the District of Delaware and remanding the cause to the District Court with directions to enter an order disapproving a plan filed by Engineers Public Service Company (Engineers) under Section 11 (e) of the Public Utility Holding Company Act

[1] Record references are in parenthesis.

of 1935 as not being fair and equitable within the purview thereof, and to return the record to the Commission to the end that it may take such action as the facts and the law may require (R. 40). The petitioners seasonably filed with the Circuit Court of Appeals their Petition for Rehearing (R. 92), which petition was denied by order entered June 11, 1948 (R. 140). A certified transcript has been furnished in accordance with Rule 38, Paragraph 1, of the Rules of this Court, having been filed by the Securities and Exchange Commission on behalf of itself and preferred stockholders participating in the proceedings below and pursuant to Stipulation of Counsel (R. 41).

INTEREST OF PETITIONERS.

The Home Insurance Company and five affiliated companies, namely, City of New York Insurance Company, National Liberty Insurance Company of America, The Homestead Fire Insurance Company, The New Brunswick Fire Insurance Company, and The Georgia Home Insurance Company, and Tradesmens National Bank and Trust Company, collectively, were the owners of 7400 shares (having a stated value of $740,000) of preferred stock of Engineers, and as preferred stockholders have participated in the proceedings before the Commission and in the District Court and the Circuit Court of Appeals. When the plan was consummated in June, 1946, each preferred stockholder received payment of $100. per share plus accrued dividends on account of its shares of preferred stock, retaining under the plan and accompanying escrow arrangement a claim for such additional amount as may ultimately be found payable on its shares of preferred stock. On June 1, 1948, the four affiliates first above-named were merged into The Home Insurance Company as the surviving corporation, and on June 30, 1948, The Home Insurance Company acquired by purchase the assets of the fifth affiliate, thereby succeeding to the surviving claims of the five affiliates as preferred stockholders of Engineers.

OPINIONS BELOW.

The opinion of the Circuit Court of Appeals (R.12), and the opinion denying the petitions and cross-petitions for rehearing (R. 138) have not yet been reported. The opinion of the District Court is reported at 71 F. Supp. 797 (R. 283a). The findings and opinions of the Commission dated December 4, 1946, and January 8, 1947, have not yet been officially reported, but are set forth in the Commission's Holding Company Act Release Numbers 7041 (R. 25a) and 7119 (R. 128a).

JURISDICTION TO REVIEW.

The jurisdiction of this Court is invoked under Section 240 (a) of the Judicial Code, as amended by the Act of February 13, 1925 (43 Stat. 938, 28 U. S. C., Sec. 247 (a)), made applicable by Section 25 of the Public Utility Holding Company Act of 1935. The date of the order and judgment of the Circuit Court of Appeals for the Third Circuit to be reviewed was entered March 19, 1948. The petition for rehearing was denied on June 11, 1948.

STATUTE INVOLVED.

Section 11 (e) of the Public Utility Holding Company Act of 1935 provides as follows:

> "In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and opportunity for

hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, whefever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed."

Section 24 (a) of the same Act provides as follows:

"Any person or party aggrieved by an order issued by the Commission under this title may obtain a review of such order in the circuit court of appeals of the United States within any circuit wherein such person resides or has his principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the entry of such order, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall be forthwith served upon any member of the Commission, or upon any officer thereof designated by the

Commission for that purpose, and thereupon the Commission shall certify and file in the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order, in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission or unless there were reasonable grounds for failure so to do. *The findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive.*[2] If application is made to the court for leave to adduce additional evidence, and it is shown to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceeding before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. *The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which, if supported by substantial evidence, shall be conclusive,*[2] and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court affirming, modifying, or setting aside, in whole or in part, any such order of the Commission shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347)."

---

[2] Italics supplied.

STATEMENT OF FACTS.

Preliminary.

The Commission has heretofore filed a Petition for Certiorari in this Court for the purpose of obtaining a review of the order and judgment of the Circuit Court of Appeals. Its petition includes a Statement (pp. 7-12) setting forth the features of the plan relevant to the surviving dispute, the history of the formulation of the plan, and the history of the proceedings. The petitioners respectfully request this Court to consider this Statement against the background furnished by the Statement of the Commission.

The Plan.

Engineers' amended plan as filed by it provided for satisfaction of the claims of its preferred stockholders in cash, distribution of the remaining assets, consisting of the common stocks of operating utility companies, in kind to the common stockholders, and dissolution of Engineers. The amounts to be paid to the preferred stockholders were $110. per share for the $6. and $5.50 dividend series and $105. per share for the $5. dividend series, plus accrued dividends in each case. In order to obtain the balance of cash needed to pay off the preferred stockholders, Engineers was to distribute to its common stockholders purchase warrants for the purchase of common stock of one of its operating companies and sell in the open market the shares not purchased by its common stockholders under the warrants. The amended plan was filed by Engineers after the Commission, following extensive hearings, had disapproved as unfair and inequitable a previous plan providing for payment to the preferred stockholders of $100. per share plus accrued dividends, and had held that the preferred stockholders were entitled to the larger amounts now provided in the amended plan in exchange for their rights surrendered.

Summary of Opinion of the District Court.

The Commission approved the amended plan, and at the request of Engineers pursuant to Section 11 (e) of the Act, filed enforcement proceedings under Section 18 (f) of the Act. The District Court approved the plan as fair and equitable, except for any allowance to preferred stockholders in excess of $100. per share and accrued dividends, and entered an order enforcing the plan as amended by it. Cash in an amount equal to the difference between the plan as approved by the Commission and as amended by the District Court was placed in escrow and the portion of the plan so approved was consummated, subject to reservation of the disputed issue.

The District Court found that the liquidating preference of the preferred stocks set forth in Engineers' charter was not dispositive, but only one of the factors to be considered in evaluating the preferred stocks. It, nevertheless, disapproved the payment of anything in excess of the liquidating preference on the basis of "colloquial equity." Among the factors entering into the District Court's conception of colloquial equity were such items as the original issue prices, underwriting costs, market prices and dividend records of the preferred and common stocks during the existence of the enterprise, market purchases of preferred stocks by Engineers, earnings retained in the system, losses said to have been sustained by Engineers in making previous divestments in compliance with Section 11 (b) of the Act. The District Court also scaled down the claim of the preferred stockholders by some indefinite amount because it considered the dividend rates for the three series of preferred stock "excessive," saying that fairness and equity do not require that preferred stockholders be paid an additional sum for the theoretical future deprivation of their "present excessive dividend rates"—which are part of the very claims to be evaluated under

any plan (R. 291a). The Court accepted the Commission's valuations of the preferred stocks as applicable at the time under consideration but refused to recognize them as the equitable equivalent of the preferred stocks because of the possibility of future decline and the off-setting factors entering into the "colloquial equity" (R. 290a).

Chronologically the District Court first filed its opinion in which it simply arrived at a value of $100. per share for the preferred stock as a matter of "colloquial equity." Certain "off-setting" factors were used to scale down the present going concern values for the preferred as found by the Commission and conceded by the Court to $100. per share, thus eliminating what the Court called the premium. Subsequently the Court filed findings of fact and conclusions of law (initially prepared by the common stockholders) adhering to the concept of colloquial equity, but reversing the approach. The Court started with the premise that payment of the maximum amount originally contributed by the preferred stockholders or their predecessors, without deduction for any underwriting expenses or discount, is fair and equitable, and failed to find any special facts or circumstances in connection with the issuance of the preferred stocks or their subsequent history, or the relationships of the preferred and common stockholders, which would create any equitable circumstances warranting payment to the preferred stockholders of amounts in excess of $100. per share plus accrued dividends (R. 316a).

It is not possible to discover from the District Court's opinion, findings of fact, or conclusions of law the extent to which the several factors deemed relevant by the Court entered into its ultimate conclusion or how such factors were evaluated. All we know is that these factors absorbed exactly the excess of the going concern value over the involuntary liquidating preference of $100. per share plus accrued dividends.

Summary of Opinion of the Circuit Court of Appeals.

The gist of the opinion is that a district court in a proceeding under Section 11 (e) must exercise its independent plenary judgment as an equity reorganization tribunal in every matter relating to the fairness and equity of the plan; the court is not bound by the findings and conclusions of the Commission as an administrative tribunal, and while a district court may not substitute its valuations for those of the Commission, it may reject valuations even though based on substantial evidence; in this case the District Court Judge weighed the numerous elements involved in the case on his own scales, and in the exercise of his independent judgment, arrived at the conclusion that the plan was not fair and equitable; the weight and emphasis applied by the District Court and the Commission to the various factors in the case go to two primary considerations on which the two tribunals differed, namely, (1) the Commission did not determine and apportion the earning power of the enterprise between the preferred and common stocks based on their respective claims as it did in the *United Light & Power Company* case (*Otis & Co. v. S. E. C.*, 323 U. S. 624), and (2) the Commission failed to consider and give effect to losses said to have been sustained by Engineers on previous divestitures compelled by the Act; the Commission's "investment value" for the preferred stocks did not give effect to all the pertinent factors and substantial equities; the District Court's conclusion was not clearly erroneous; however, the District Court cannot amend a plan and enforce it and the record should have been remanded to the Commission for further and appropriate action.

We have, therefore, a situation where the Commission and the District Court used different weights and measures to arrive at opposite conclusions, and the Circuit Court of Appeals, favoring in substance the "colloquial equity" concept of the District Court, has held that the Commission should have considered and given effect to an allocation of

future earning power and historical losses. The Commission did consider the loss factor and found it irrelevant in law and in fact (R. 64a, 65a, 72a, n. 55). The Commission did consider the future earning power in determining the going concern value of the preferred stocks, but did not allocate earning power between the preferred and common stocks for the simple reason that, under the plan, the common stockholders received the full benefit of the residual earning power through the distribution in kind of the common stocks of the operating companies, augmented by the decrease in expenses resulting from the dissolution of the enterprise.

In passing the Circuit Court of Appeals recognized that its conclusion as to the function of a district court and the scope of review in proceedings under Section 11 (e) conflicts with decisions in other circuits, citing *Lahti v. New England Power Ass'n.*, 1 Cir., 160 F. 2d 845, 858, and *Massachusetts Mutual Life Ins. Co. v. S. E. C.*, 8 Cir., 151 F. 2d 424, 430, affirming *In re Laclede Gas Light Co.*, D. C. E. D. Mo. E. D. 57 F. Supp. 997, 1004. It distinguished its own decision in *In re Standard Gas & Electric Co.*, 3 Cir., 151 F. 2d 326, by saying the question here presented was not in focus in that case, but we respectfully suggest that an adjustment of the judicial lens would bring it in focus and classify the decision with the other Circuit cases just cited (R. 31, 32).

QUESTIONS PRESENTED.

1. Did the Commission properly apply the fair and equitable standards of Section 11 (e) of the Public Utility Holding Company Act in approving as part of a plan payment to preferred stockholders of cash equal to the current going concern value of their shares, not exceeding the voluntary call prices therefor.

2. May the Commission, in applying fair and equitable standards to a plan under Section 11 (e) of the Public Utility Holding Company Act, be required to determine

whether there have been any losses as a result of prior divestments or other action taken by the Company in compliance with Section 11 (b) of the Act and charge such losses in whole or in part to preferred stockholders generally, and particularly when the amounts to be paid the preferred stockholders for their rights surrendered do not exceed the going concern value thereof based on the residual enterprise.

3. Where the Commission finds that a plan filed under Section 11 (e) of the Public Utility Holding Company Act is fair and equitable to the persons affected thereby and such finding is based on substantial evidence and has rational foundation in law, may the District Court reject such finding on the basis of an independent discretion in view of the principles generally applicable to findings and conclusions of administrative tribunals and particularly in view of Section 24 (a) of the Act which, recognizing the stature and competence of the Commission, makes its findings as to the facts, if supported by substantial evidence, conclusive on any direct review of a plan by a Circuit Court of Appeals?

REASONS FOR GRANTING THE WRIT.

1. The Circuit Court of Appeals has decided an important question of Federal law in conflict with the decision in *Otis & Co. v. S. E. C.*, 323 U. S. 624, or in conflict with the proper application of that decision to the facts in this case.

While the Court agreed that the liquidation preference of the preferred stocks set forth in the charter is not dispositive, it indicated that the Commission should have determined the future earning power of the Engineers' system and valued the common stock presumably with reference to that earning power, as was done in the *Otis* case which involved the allocation of a single class of stock between preferred and common stockholders. Here it was conceded that the preferred stocks have going concern

values at least equal to the call prices [the amounts payable under the plan (R. 296a)] and that the preferred stocks would have been redeemed by refunding operations at lower dividend rates had the enterprise continued (R. 920a, 921a). The only problem was to determine the amount payable to the preferred stockholders according to their priorities for the rights being surrendered by them under a plan which gave to the common stockholders all the residual assets and the earning power thereof by distribution in kind.

Having commanded the Commission to ascertain the future earning power of the enterprise and to allocate it between the preferred and common stockholders, the Court also commands the Commission to determine and give effect to prior losses. The Court does not make it clear what losses must be considered, or how such losses are to be related to the future earning power. Is the future earning power to be determined on the basis of the residual system or a reconstructed system incorporating the divested companies, and if the latter, what are to be the capital structures of the reincorporated companies. How are such losses to be related to, or integrated in, the future earning power, or how are they to be separately allocated between the preferred and the common stockholders? The implication is that no matter how strong the preferred stocks may be or become after the losses have occurred, something must be charged to the preferred stockholders. It is clear that the task is impossible. This concept also ignores the fundamental nature of the common stock. While the common stockholders are thus to be protected the prices paid by the original preferred stockholders are the continuing burden of the present preferred stockholders no matter how seasoned or strong the preferred stocks have become.

2. The Circuit Court of Appeals has decided a question of law in conflict with *Securities Commission v. Chenery Corp.* (the second Chenery case), 332 U. S. 194, and the principles generally applicable to the findings of administrative tribunals.

This Court was not passing on the powers and duties of a Section 11 (e) court in the *Chenery* case. The case had gone to the Circuit Court of Appeals on direct appeal from the Commission under Section 24 (a) of the Act, which provides that "the findings of the Commission as to the facts, if supported by substantial evidence, shall be conclusive". This Court did not expressly allude in its opinion to the provisions of Section 24 (a), and sustained the findings of the Commission on the ground that the very breadth of the statutory language precludes a reversal of the Commission's judgment, save where it has plainly abused its discretion in "these matters." These matters expressly related back to the application of the "fair and equitable" rule of Section 11 (e) and the standard of "what is detrimental to the public interest or the interest of investors or consumers" under Sections 7 (d) (6) and 7 (e) of the Act. This Court said further that the application of those criteria necessarily requires the use of informed discretion by the Commission.

The Circuit Court of Appeals has also rejected the more conservative rule that findings of the Commission as an administrative tribunal should not be set aside if based on substantial evidence and consistent with law.

The stage is thus set for an impasse in any situation where there may be a reasonable difference of opinion as to valuations and fairness and equity, unless the Commission stultifies itself under the pressure of a veto by the district court. If the decision of the Circuit Court of Appeals is correct, then in any conscientious stand-off between the Commission and a district court in the area of rationality, there is no tribunal in a position to cast a deciding vote. If, on the other hand, the findings and conclusions of the Commission have in the district court the usual stature of the findings and conclusions of administrative tribunals, then the appellate courts would have the problem only of determining whether the Commission had committed error in law or abused its discretion in the area of fact

finding. This function, so limited, would be consistent with the function of a Circuit Court of Appeals under Section 24 (a). By way of contrast the Circuit Court of Appeals in this case favored the District Court on the ground that the finding of the District Court was not clearly erroneous (R. 39). Surely the reverse of this approach is more consistent with the purpose of the Congress and the Act. Also, the net result of the decision of the Circuit Court of Appeals is that the findings of the Commission have different stature depending on procedural accident, that is, whether the proponents of a plan seek enforcement under Section 11 (e), or proceed without enforcement, leaving an aggrieved person to his remedy under Section 24 (a).

The special competence of the Commission lies in comprehending the problems, investigating the facts, selecting facts according to their relevance and importance, evaluating facts, and reaching ultimate conclusions in accordance with equitable principles. The Commission has the front line problem of discerning whether any fact or combination of facts invoke any principles of law or equitable considerations and then applying such principles and considerations with due weight and with regard for the inter-play of factors in complex situations, exercising its discretion wherever it has a choice. It has the duty of making an equitable valuation of the whole according to its judgment, and the function of a district court under Section 11 (e) should be defined with regard to the wide powers granted the Commission.

The special competence of the Court lies in determining whether applicable principles of law have been violated or disregarded by the Commission in the equitable evaluation of a plan and whether the facts found by the Commission are supported by substantial evidence. While Section 11 (e) gives the district court the independent duty of determining whether plans are fair and equitable before lending its aid to enforcement, its function in this respect is necessarily circumscribed. Congress could never have intended

that the district court should reach over into the area reserved for the special skills of the Commission and substitute its judgment for that of the Commission, provided the Commission's findings and conclusions have a rational basis in fact. While the question of relevance of factors may be so clear in some instances as to become a question of law, the relevance and impact of economic factors in complex situations are more often questions of fact more readily to be resolved in the area allotted to experienced tribunals. Any other division of labor can lead only to confusion and deadlock.

3. The Circuit Court of Appeals has decided a question of Federal law in conflict with the decision of other Circuit Courts of Appeal on the same subject matter.

As stated in the preceding paragraph, the Circuit Court of Appeals has held that the District Court, in passing upon the fairness and equity of the Plan under Section 11 (e) of the Public Utility Holding Company Act, may exercise its independent judgment or discretion and is not bound to any extent by the findings of fact and conclusions of law of the Commission even though based on substantial evidence and consistent with law. As conceded by the Circuit Court of Appeals (R. 31), this is in direct conflict with the decisions of the 1st Circuit Court of Appeals in *Lahti v. New England Power Association*, 160 F. 2d 845, and the 8th Circuit Court of Appeals in *Massachusetts Mutual Life Insurance Co. v. S. E. C.*, 151 F. 2d 424, affirming *In re Laclede Gas Light Company*, D. C. E. D. Mo., 57 F. Sup. 997.

WHEREFORE, your petitioners respectfully pray that a writ of certiorari be issued out of and under the seal of this Court, directed to the United States Circuit Court of Appeals for the Third Judicial Circuit, sitting at Philadelphia, Pennsylvania, to the end that the case may be reviewed and determined by this Court; that the order and judgment of the Circuit Court of Appeals be reversed; and

that your petitioners be granted such other and further relief as may seem proper.

CENTRAL-ILLINOIS SECURITIES CORPORATION and CHRISTIAN A. JOHNSON

v.

SECURITIES AND EXCHANGE COMMISSION, THOMAS W. STREETER, et al., THE HOME INSURANCE CO., et al.

PETITION FOR WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT

Central-Illinois Securities Corporation and Christian A. Johnson pray that a writ of certiorari issue to review the judgment of the United States Circuit Court of Appeals for the Third Circuit entered on March 19, 1948 vacating a decree of the United States District Court for the District of Delaware entered May 29, 1947, with the direction to enter an order disapproving in part a plan under Section 11(e) of the Public Utility Holding Company Act as not being fair and equitable within the purview of Section 11(e) of said Act and to return the record to the Securities and Exchange Commission to the end that it may take such action as the facts and the law may require.

Petitioners are respondents with respect to three petitions for certiorari which have been filed by the respondents named herein to review the same judgment (Nos. 226, 227, 243), and petitioners will file a timely brief in opposition to said petitions. The certified transcript of the record and the requisite number of copies of the printed record have been furnished in accordance with paragraphs 1 and 7 of this Court's Rule 38, having been heretofore filed by the Securities and Exchange Commission in No. 226 on behalf of all the parties pursuant to stipulation of counsel (R. 41).

Opinions Below

The opinion and judgment of the Court below (R. 12) and the opinion denying petitions and cross-petitions for rehearings (R. [illegible]) are reported at 168 F. 2d 722. The opinion of the District Court is reported at 71 F. Supp. 797 (R. 283a), but its detailed Findings of Fact and Conclusions of Law (R. 293a-317a) are not reported. The Findings and Opinion of the Commission dated December 4, 1946 and January 8, 1947 have not yet been officially reported but are set forth in the Commission's Holding Company Act Releases Nos. 7041 (R. 25a) and 7119 (R. 128a).

Jurisdiction

The judgment of the Circuit Court of Appeals for the Third Circuit was entered March 19, 1948, and its judgment denying petitions and cross-petitions for rehearing was entered June 11, 1948. The jurisdiction of this Court is invoked under Section 240 of the Judicial Code, as amended by the Act of February 13, 1925 (28 U. S. C. 347), made applicable by Section 25 of the Public Utility Holding Company Act of 1935, 49 Stat. 803 (15 U. S. C. 79 *et seq.*).

Statute Involved

Section 11(e) of the Public Utility Holding Company Act of 1935 provides as follows:

> "(e) In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1, 1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed."

Questions Presented

1. Did the Circuit Court properly order the vacating of the District Court's decree and the remand of the proceedings to the Securities and Exchange Commission where:

(a) The Commission had recognized that if the rationale on which it predicated an award of redemption premiums to preferred stockholders in a final liquidation under Section 11(e) of the Public Utility Holding Company Act were judicially determined to be invalid, that payment to the preferred stockholders of $100 per share plus dividends would be "fair and equitable"; and had entered an order alternatively approving such amount if the District Court found (as it did) payment of the premiums unfair and inequitable, and its determination were either not appealed or were affirmed upon appeal;

(b) The Commission had urged the District Court not to remand the proceedings to it by reason of finding the provision for payment of the premiums unfair and inequitable, but instead to enter its decree approving and enforcing the remainder of the plan and to authorize establishment of an escrow fund for the premium payments, pending appellate review of the District Court's determination respecting such premiums, which determination the Circuit Court affirmed;

(c) On the facts and the law as found by the District Court and affirmed by the Circuit Court, and further on the basis of supervening changes in applicable money rates, no amounts can be found payable to the preferred stockholders in addition to the $100 per share plus dividends already received, without violating the "fair and equitable" standard of Section 11(e);

(d) Remand of the proceedings to the Commission will result in substantial further expense and will seriously delay the distribution of approximately $4,000,000 to the common stockholders who have made large sacrifices in order to effect the complete liquidation of their enterprise in obedience to the requirements of the Public Utility Holding Company Act?

2. Does the Statute authorize, and the Fifth Amendment of the Constitution permit, applicable corporate charter provisions to be overridden where not reasonably necessary to effectuation of the Congressional objectives embodied in the Statute?

Statement

These proceedings relate to a plan of liquidation filed with the Securities and Exchange Commission by Engineers Public Service Company ("Engineers"), in order to effect final compliance with a series of mandatory orders previously issued against Engineers by the Commission under Section 11(b)(1) of the Public Utility Holding Company Act of 1935 ("the Act"). The cumulative net effect of these Section 11(b)(1) orders, when taken in combination with the provisions of Section 11(b)(2) of the Act, was to require the complete and final dissolution of Engineers and its entire holding company system (R. 47a-48a, 139a-140a). The Engineers system, which at the time of the passage of the Act had comprised some seventeen electric, gas and other utility and non-utility companies throughout the United States, had been whittled down to only three operating companies in the course of Engineers' compliance with the Commission's mandatory divestment orders; and Engineers was required by outstanding Commission divestment orders to dispose of two of these remaining three.

When the dissolution plan was filed Engineers' capital structure consisted of common stock and preferred stock, the latter all having a stated book value of $100 per share (increased in 1938 from $96 per share, R. 301a) but being divided into three series carrying different dividend rates ($5, $5.50 and $6), and all being entitled in the event of "liquidation, dissolution, winding up" or any "reduction of its capital stock resulting in any distribution of its assets to stockholders", to $100 per share plus accrued dividends in preference to any payments to the holders of the common stock. However, if such liquidating acts were "voluntary", the preferred holders would in addition be entitled to the redemption premiums of each series (i.e., $5 per share for the $5 series, and $10 for the others). Under the provisions of the charter, the preferred stocks were callable at any time at the option of the company upon payment of these redemption amounts (R. 1403a-1431a).

Engineers' plan, so far as here material, provided in substance: (1) that the common stockholders of Engineers should initially pay $22,000,000 in cash into Engineers' treasury by purchasing the stock of one of the three remaining subsidiaries; (2) that this money plus treasury cash on hand (representing the proceeds of other property sales and retained earnings) would be used to effect the retirement in cash of all the preferred stock of Engineers at the charter liquidation amount of $100 per share plus dividends to the date of payment; (3) that promptly thereafter, the remaining assets of Engineers would be distributed among the approximately 13,000 common stockholders of Engineers as a final liquidating dividend, and Engineers would be dissolved.

Commission Decision

In its Findings and Opinion issued December 5, 1946, the Commission held that the dissolution of Engineers was an involuntary dissolution made necessary by the mandatory provisions of Section 11 of the Act (R. 48a, 139a-140a). Unlike the dissolution involved in *Otis & Co.* v. *S. E. C.*, 323 U. S. 642, Engineers' liquidation would effect the dissolution not only of the holding company, but the final and complete disintegration of the entire holding company system.

Despite its finding that the dissolution of Engineers and its system was not voluntary, the Commission nevertheless held that the company must pay the preferred stockholders the redemption premiums which the charter provided were payable only in the event of a voluntary liquidation or redemption. These premiums totalled $3,204,795 in excess of the amounts specified by the charter as payable to the preferred holders in the event of liquidation, dissolution, winding-up or reduction of the corporation's capital stock resulting in any distribution of its assets to stockholders."

In reaching this result, which was directly contrary to a long line of Commission and Court decisions,[1] the Commission's initial postulate was that *Otis & Co.* v. *S. E. C.*, *supra*, established the proposition that charter liquidation provisions were not controlling in any liquidations under the Holding Company Act, but were merely one factor to be taken into account.[2] For that reason, the

[1] See note 21, *infra*.

[2] The Commission made no attempt to compare the complete and definitive dissolution of the Engineers system with the pseudo-liquidation involved in the *Otis* case, despite the plain reliance in the majority opinion of this Court upon the Commission's emphatic argument that the liquidation there involved (relating as it did merely to the top layer of a multi-tiered holding company structure) left essentially unchanged a vast holding company enterprise (See Commission Brief filed with this Court in *Otis & Co.* v. *S. E. C.*, p. 78.)

Commission stated the liquidation provisions of Engineers' charter could not be regarded as "conclusive" in determining the rights of the stockholders (R. 61a-62a). It thereupon proceeded to disregard these charter provisions entirely.

The amount which the preferred stockholders must receive, the Commission held, was "the investment value of their stock on a going-concern basis", and as though no liquidation were taking place (R. 67a-68a). The Commission noted that two witnesses (Badger, a witness on behalf of certain preferred holders, and Barnes, president of Engineers) had testified that "if there were no Holding Company Act, or if the Act were to be repealed today" they believed Engineers' preferred stock would sell on the market at or about their redemption prices and would probably be called and redeemed by the company.[3] The Commission thereupon stated that it was "conceded" and "unchallenged" that "the preferred has an investment value at least equal to the respective redemption prices"; and it held that this was the amount they must be paid (R. 67a-68a).

No mention was made by the Commission of Barnes' repeated and emphatic testimony that such "values" merely reflected the inflated stock market prices current at that

[3] Barnes, one of the two witnesses referred to, pointed out that "if there were no Holding Company Act, or if the Act were to be repealed today" so that Engineers were not compelled to liquidate, it would, of course, take advantage of the current low money rates to replace its outstanding preferred stock with preferred stock carrying a much lower dividend rate, thereby benefiting the common stockholders substantially (R. 522a-525a, 633a). The Commission's opinion made no reference to this portion of Barnes' testimony.

moment,[4] and could by no means be deemed the "fair value" of the stock for any representative period of time in the light of its very poor past record and future uncertainties. Despite the fact that the amounts to which the Commission held the Engineers preferreds entitled were admittedly the maximum which could be awarded if the stock were the highest grade of "gilt-edge" security, no mention was made by the Commission of Badger's admission that the Engineers preferreds were not "high grade" but at best "medium grade" (R. 1133a, 1485a); nor of Barnes' testimony that on the basis of the criteria customarily employed by financial analysts they are "closer to a low-grade preferred" (R. 1133a, 1140a); nor of the evidence establishing that during the period the preferreds were outstanding they were accorded by the leading independent analysis an investment rating of only C**, defined as "Preferred stocks with erratic dividend records which can be expected to make payments only under favorable conditions" (R. 1844a-1845a).[5]

---

[4] The testimony of Badger and Barnes was given at various times over the period December 1945 through February 1946, at which time stock market prices (including those of public utilities) stood at the highest point since 1931. Barnes warned "we are in a boom period", and stressed its temporary nature (R. 667a). The Federal Reserve Bank Index of utility stock prices which stood at 130 in June 1946 subsequently declined to 94 by the end of 1947, indicating an average decline of about 28% (cf. Federal Reserve Bulletin).

The Commission has itself referred to the period of Barnes' and Badger's testimony as "the peak of the post-war market", and has admitted that "investment values" computed on the basis of yields and market prices then prevailing have since been adversely affected to a substantial extent. (*The United Light and Railways Company-American Light & Traction Co.*, Holding Company Act Release No. 7951, Dec. 31, 1947.)

[5] In an earlier portion of its opinion, the Commission did summarize statistically evidence in the record establishing that the preferred stocks had been in arrears of dividends for several years and had sold for considerable periods of time as low as $10-$14 per share for all series, and that the overall market price through the entire period from the time of issuance to the date of the testimony

Although the Commission purported to be determining the value of the preferred stock "on a going-concern basis" and "as though no liquidation were taking place", it did not determine or even consider what would be the value of the preferred stock for any period of time in the future if the liquidation compelled by the statute actually were not to take place and the preferred were permitted to remain outstanding as part of a continuing enterprise or "going-concern". On the theory adopted by the Commission, this would have necessitated consideration not only of normal prospective earning power, such as is fundamental in valuation for reorganization purposes,[6] but also of the prospective yields applicable to preferred stocks having investment characteristics comparable to those of Engineers. For the very essence of Badger's "expert opinion" (which the Commission simply adopted) that the preferred stockholders were entitled to receive more than the par value of their stock was that the unprecedentedly low money rates prevailing at that time enhanced the market value these preferred stocks would have (absent the liquidation) to an amount at least

---

was only $63-$67 per share for all series (R. 62a); but no reference was made to these factors at the point where the Commission discussed the so-called "investment values".

Similarly, although the Commission's computations showed that these preferreds were actually a speculative *junior security* (being junior to 66.2% of the system's capitalization, R. 64a), no allusion to the significance of this factor is to be found anywhere in the opinion; nor is allusion made to the significance of the slim coverage for charges and dividends over the past decade (R. 64a) nor of the fact that for several years continuously charges and dividends had not been fully earned.

These omissions are all the more inexplicable in view of the fact that in the long line of decisions in which the Commission theretofore had refused to approve payment of premiums upon retirement of senior securities, it had repeatedly stressed all of these very factors. (See decisions cited n. 21, *infra*.)

[6] Cf. *Consolidated Rock Products Co.* v. *Dubois*, 312 U. S. 510, 526; *Group of Institutional Investors* v. *Milwaukee R. Co.*, 318 U. S. 523, 565-6.

equal to their redemption prices.[7] Further, while allegedly determining values "ex the Act" ("apart from the impact of liquidation compelled by the Act"), neither the Commission nor Badger made allowance for the many important factors which came into existence directly as the result of this very statutory requirement for liquidation.[8] None of the other drastic impacts of the Act upon the common stockholders received consideration; nor did the Commission attempt to "find" the so-called "investment value" or any other value of the common stock on "a going-concern basis" ("apart from the necessity for liquidation") or otherwise.

---

[7] Thus, Badger stated: "Except insofar as a preferred stock may be callable at a specific price, preferred stocks are in the nature of perpetual annuities; and should be valued by capitalizing their dividend rates at rates of capitalization which give full weight to inherent investment risk and money rates at the date of valuation" (R. 2062a). With respect to the then prevailing money rates (which he employed without modification in "valuing" the Engineers preferreds) he testified "* * * yields on preferred stocks are at the present time, the lowest which they have been in the history of our country, or, conversely * * * the prices of such stocks are at the highest levels ever experienced. The permanency of this situation will depend on the permanency of low interest rates" (R. 2065a). Several months from the time this testimony was given (and many months prior to the issuance of the Commission's findings and opinion) money rates and preferred stock yields commenced the sharp upward climb, and preferred stock prices the concomitant decline, which has been in progress ever since (see District Court Finding No. 52, R. 314a, and R. 122).

[8] For example, no allowance was made for approximately $24,500,000 which had accrued to the equity of the common stockholders of Engineers and which had been withheld from them largely because of the necessity of providing for this very liquidation (R. 306a, 469a-471a, 1395a). Instead this entire amount (equivalent to 60% of the preferreds' stated value) was credited to the preferred in determining its so-called "investment value *ex* the Act" (R. 306a, 312a).

The District Court's Decision

After consideration of extensive oral argument and briefs by counsel for the Commission and all the other parties,[9] the District Court (to which the Commission had applied pursuant to Section 11(e) for entry of a decree approving and enforcing the plan) held that the provision of the amended plan for the payment of the amounts in excess of $100 per share (the premiums) was not consonant with the "fair and equitable" standard of Section 11(e), but that in all other respects the plan met the statutory requirements. The Court thereupon followed the course strongly urged by the Commission's attorneys,[10] of not remanding the proceedings to the Commission, but instead of approving and enforcing the plan except as to the premium payments, and requiring the latter to be deposited in an escrow fund approved by the Commission pending review of the District Court's determination. The Commission's opinions had expressly advocated this course (R. 75a, 136a), and its order of February 11, 1948 (R. 165a), had provided formal advance approval for it.

The disagreement of the District Court with the Commission as to the premium payments was basically a disagreement as to applicable legal principles. The Court regarded as erroneous and devoid of judicial support the Commission's thesis that the rights of security holders of a holding company enterprise which is being entirely and definitively liquidated pursuant to governmental edict should

[9] The company refrained from taking a position on the premium issue either before the District Court or the Circuit Court on the theory that it was in essence "a neutral stakeholder" in a controversy between its stockholders (R. 200a). Two groups of common stockholders (including petitioners) who had given timely and detailed notification to the Commission of their opposition to this phase of the plan (R. 135a, 2150a) independently presented their objections to the Court.

[10] R. 257a-261, 281a-282a.

be approached on the purely fictional hypothesis that "the enterprise continues", and the claims of the preferred holders (but not the common) measured "on a going concern basis", and "as though there were no Holding Company Act or as if the Act were to be repealed today" (R. 292a, 314a, 315a-316a).[11] The District Court was of the view that this recently evolved and mis-named "investment value" doctrine, as sought to be applied by the Commission in the case at bar, contravened firmly rooted decisions of at least four circuit courts of appeal and many district courts, as well as a long line of decisions of the Commission itself (R. 288a, 292a). These decisions uniformly hold that where retirement of senior securities is not the result of voluntary action by management of the junior security holders, but is mandatory by virtue of Section 11 of the Act, the equity holders must not be penalized by being made to pay premiums to the senior security holders as though a "call or redemption" were being effected on a normal "going-concern" basis.[12]

---

[11] It may be noted that the District Judge (Judge Leahy) had been the first court to pass upon and approve the United Light plan subsequently upheld by this Court in *Otis & Co.* v. *S. E. C.*, 323 U. S. 624, the decision relied upon in the instant case by the Commission as support for the proposition here rejected by the District Court. Judge Leahy's cogent understanding of the issues involved in the *Otis* case is attested by his decision therein (51 F. Supp. 217, D. Del. 1943). Similarly, Judge Biggs, who wrote the Circuit Court's opinion in the instant case, was also the author of that Court's opinion in the *Otis* case (*In re Securities and Exchange Commission* (*Otis & Co.*), 142 F. 2d 411, C. C. A. 3, 1943).

[12] Decisions cited at n. 21, *infra*. Judge Leahy had himself repeatedly and uniformly upheld the Commission's determination that such premiums were not payable, although envisaging that a contrary view might possibly be justified upon proof of "a different fact situation" (*In re North Continent Utilities Corp.*, 54 F. Supp. 527, D. Del.). As the Circuit Court had occasion to point out (R. 30, 39) Judge Leahy, commencing with the earliest enforcement cases under the Act and continuously ever since, has had exceptionally specialized experience with Section 11(e) reorganizations, the Commission having applied to him for approval and enforcement of almost 50% of all Section 11(e) plans which have been brought to the Courts for enforcement.

Upon examination of the record which had been filed by the Commission with the Court, the District Judge ascertained a number of factors of which the Commission's opinion gave little or no inkling and which he found strongly corroborative of his view that payment of the premiums to the preferred would result in unfairness and inequity in a "colloquial" sense, as well as in its technical statutory sense; that Badger's "values" were largely "market" values (R. 310a) admittedly dependent upon continuance of governmental "pegging operations" designed to hold money rates to the artificially low level considered desirable because of the exigencies of governmental war financing (R. 313a-314a); that on the basis of the inherent investment qualities of the stocks, they were admittedly not "high grade" but rather "*medium* medium grade" or "low grade" (R. 311a); that even such inherent value as they possessed was in large measure due to the more than $24,000,000 of earnings which the common stockholders had, from the time enactment of the Holding Company Act sealed the company's doom, left in the enterprise to provide for its final liquidation (R. 306a); that the company had sustained heavy losses and sacrifices in carrying out the Commission's Section 11(b)(1) divestment orders, and that such losses had fallen and would necessarily fall on the common stockholders (R. 307a-308a); that the common stockholders had gone without dividends or return of any kind for 15 years while the preferred stockholders received full payment of their dividends over the entire period, aggregating approximately $90 per share (R. 302a, 306a); that in order to pay the preferred holders their full liquidating claim in cash the common stockholders would be required in connection with the liquidation to contribute an additional $22,000,000 cash, and to "mortgage" the assets distributable in the liquidation by advance payment of dividends (R. 308a-310a); that the common stockholders like the preferred stockholders were forced to relinquish continuance of the holding company enterprise in which they had invested (R. 311a, 312a, 316a).

The Court summed up its conclusions by formally finding that the enterprise in which the preferred and common stockholders of Engineers had invested had been frustrated and terminated by governmental action (R. 316a); that there was no valid basis for hypothesizing a "continuing enterprise" or "going concern" (R. 292a, 316a); that the Commission's "investment value ex the Act" doctrine as applied in this case was not only unsound and unrealistic in theory but inequitable and erroneous in application (R. 292a, 316a-317a). It held in the light of its "careful examination of all the relevant factors" that payment to the holders of the preferred stocks of Engineers of any amounts in excess of $100 per share plus accrued dividends would not be warranted or justified; would be unfair and inequitable to the holders of Engineers' common stock; and would contravene the fair and equitable standards of Section 11(e) of the Act (R. 317a).[13]

The Circuit Court's Decision [14]

The Circuit Court rejected the Commission's contention that the District Court under Section 11(e) should be

[13] The District Judge stated that he found it unnecessary to conclude whether the charter liquidation provisions per se foreclosed any amounts in excess of $100 per share plus dividends, because "the conclusion is reached that the preferred stockholders are in any event not entitled to receive any such excess amounts on the basis of all the relevant considerations, even if the charter provision is not itself controlling. Said charter provision, however, if taken into account, constitutes an additional factor supporting the conclusions reached, as above stated" (R. 317a).

[14] Following the entry of the District Court's order, notice of appeal to the Third Circuit Court of Appeals was filed by the Commission and the two groups of preferred stockholders, one of which sought to stay consummation of any portion of the plan. The Commission joined in opposing the stay, which was denied in turn by the District Court, the Circuit Court and by Mr. Justice Burton of this Court. Thereupon, the escrow fund was duly established and the other provisions of the plan were consummated, including payment to the preferred stockholders of $100 per share and accrued dividends.

deemed a mere review court which must bow to the Commission's conclusions unless they wholly lack "any rational or statutory foundation" (R. 21, 34),[15] and held, after careful analysis of the statute and its legislative history, that a Section 11(e) Court must exercise its independent judgment as to the fairness and equity of a plan (R. 23, 33). It found that the District Judge treated the Commission's findings "as was proper * * * with respect" (R. 34), and commended his "careful and far-reaching examination of the relevant factors" (R. 34). It held that the Commission, in failing to take these important factors into account, had reached an inequitable and erroneous result (R. 38).

With respect to the Commission's attempted reliance on the *Otis* decision, the Circuit Court agreed with the District Court that the liquidation of the Engineers system was a complete and definitive termination of the enterprise, and thus differed materially from the mere simplification of a continuing holding company system involved in the *Otis* decisions (R. 36).[16] It held that even if it was permissible under these circumstances to measure security holders' rights on the fictional hypothesis of a "going concern" without regard to the liquidation which was in fact taking place under compulsion of the Act (i.e., "ex the Act"), the so-called "investment value" formula as applied by the Commission in this case to measure only the claims of the preferred holders "ex the Act" failed to produce that "equitable equivalence" for the rights of both classes

[15] The Court pointed out that the Commission's demand that Section 11(e) Courts should be relegated to the position of mere review Courts was at sharp variance with the positions which the Commission has for many years taken before the Courts and before Congress, wherein the independent plenary role of the District Court with respect to 11(e) plans was heavily emphasized (R. 30-31).

[16] As was pointed out *supra* (n. 11), Judge Biggs wrote the Third Circuit's opinion in the *Otis* case as well as in the case at bar.

of security holders which is of the very essence of the *Otis* rationale (R. 38).

The Third Circuit squarely affirmed the determination of the District Court that the provision of the plan for the payment of the premiums was unfair and inequitable (R. 39, 140). It also found "proper" and upheld the escrow arrangements embodied in the District Court's order (R. 40). Yet, notwithstanding its full approval of the District Court's reasoning and findings, the Circuit Court concluded that the District Court should have remanded the proceedings to the Commission.

On the question of remand, the Circuit Court's reasoning was in essence, that the disapproval by the District Court of the provision for payment of the premiums effected an "amendment" in the plan which under the Statute must receive the Commission's approval as well as of that of Court (R. 39). In addition, the Circuit Court's opinion suggests that the District Judge engaged in a species of "valuation" in formally finding that payment to the preferred holders of $100 per share plus dividends would be fair and equitable to the preferred and that payment of any additional amounts would contravene the "fair and equitable standard" of Section 11(e), instead of merely holding the premium payments as proposed in the plan unfair and inequitable and remanding the plan to the Commission. Stating that "The problem is and will remain until its disposition by the Commission, one of valuation of the securities of Engineers, viz., the preferreds and the common" (R. 40), the Court vacated the decree of the District Court [17] and remanded the proceedings to it:

> "with directions to enter an order disapproving the plan as not being fair and equitable within the purview

[17] It is clear that the Court intended to vacate only so much of the District Court's decree as related to the premium payments since the remainder of the plan had already been fully consummated; presumably this will be more precisely stated when the Court's mandate is ultimately issued.

of Section 11(e) of the Public Utility Holding Company Act, and to return the record to the Commission to the end that it may take such action as the facts and the law may require" (R. 40, 41).

Petitions for rehearing were filed by the appellants in the Circuit Court with respect to the Court's affirmance of the determination that the proposed payment of the premiums was unfair and inequitable. Answers thereto and cross-petitions were filed by the appellees (including petitioners) with respect to the requirement for remand to the Commission (R. 97). The Court denied the petitions and cross-petitions, stating in a short opinion its adherence to the views previously enunciated (R. 138).

Reasons Relied On for Allowance of the Writ

The decision of the Circuit Court that these proceedings must be remanded to the Commission for further action raises substantial issues in the administration of the Public Utility Holding Company Act and with respect to the impact of the Act upon the many thousands of security holders of holding companies which are required by the Act to terminate their existence. Issuance of this writ is especially vital if the Court is disposed to grant the petitions heretofore filed by respondents (Nos. 226, 227, 243) in order that the Court may have full latitude to consider and dispose of all the important questions arising from the judgment to be reviewed. Further, it is believed the Circuit Court's requirement for remand of these proceedings to the Commission conflicts with principles enunciated by this Court in other reorganization cases, and presents issues which have both procedural and substantive aspects of importance.

I. Procedural Aspects

(1) The Circuit Court's decision requiring remand negates a sound and essential procedure for coordinating and dovetailing the overlapping statutory roles of the Securities and Exchange Commission and the district courts in approving and effectuating reorganization and liquidation plans under Section 11(e) of the Act. Many plans presented to the district courts involve no controversial questions, and thus ordinarily receive swift approval from the court on the basis of the Commission's findings and opinion. But where, as here, sharp issues are raised bearing on the fairness of the plan to a class of security holders, the Circuit Court recognized and vigorously affirmed that the district court may not enter its decree approving and enforcing a plan merely because "the Commission's conclusions are not wholly lacking in a rational or statutory foundation" (as the Commission and the other appellants before the Circuit Court contended), but must exercise an independent and carefully considered judgment as to whether the plan satisfies the statutory requirement of "fairness and equity" to the persons affected (R. 33.)[18] Concurring as we do in the foregoing view of the respective duties of the Commission and the District Court, we believe the Circuit Court thereafter reached an erroneous and untenable result in concluding that the Commission could not, or that in this instance it did not, give advance approval to an alternative treatment of the preferred stockholders by payment of $100 per share and accrued dividends contingent upon determination by the District Court (subject to appellate review) that payment of the premiums was not fair and

---

[18] Cf. *Ecker* v. *Western Pacific R. Corp.*, 318 U. S. 448, 479:

> "For example, there may arise controversies over the priority or the validity of claims. A Commission finding involving such problems would require an independent examination and an affirmation by the Court." Cf. *Comstock* v. *Group of Investors*, 68 S. Ct. 1454, 1462.

equitable. The Circuit Court's statement that the statutory requirement for approval of a plan by both the Commission and the District Court may not be "waived" or "rejected" (R. 139) is not to be gainsaid, but this does not mean that the Commission may not foresee the possibility that the courts may reach a contrary conclusion to that of the Commission with respect to one or more phases of the plan, and that the Commission may not provide in advance for its concurrence within specified limits with such judicial determination, especially where it relates to questions which do not go to the heart of the plan. Indeed, it is our view that this is virtually the only sound and rational procedure, within the statutory framework as correctly interpreted by the Circuit Court, for dovetailing the dual functions of the Commission and the courts without interminable delays resulting from shuffling proceedings back and forth from one to the other.[19] This view is supported by, and the Circuit Court's requirement for remand conflicts with, expressions of this Court with regard to the somewhat (though not entirely) analogous roles of the district courts and the Interstate Commerce Commission relative to railroad reorganization under Section 77(e) of the Bankruptcy Act. Thus, in *Ecker* v. *Western Pacific R. R. Co.*, 318 U. S. 448, the Court stated (p. 475): "These reorganizations may be attained only through properly coordinated action between the Commission and the Court"; and admonitions of like import bear-

[19] Respondents have persistently urged, on the other hand, that these functions should be accommodated merely by requiring the District Court to bow to the Commission's judgment unless it "wholly lacks any rational and statutory foundation". We think it is clear that not even this draconian standard of review could save the Commission's decision in the instant case. But in any event the Circuit Court's conclusion that accommodation on this basis cannot be achieved without violation of the clear statutory language and intent is plainly unassailable in the light of its careful reasoning and statutory analysis.

ing on the need for expediting reorganizations of this character have been repeatedly put forth by the Court.[20]

(2) The Commission, in requiring the plan to be amended to propose payment of the premiums over the objections of the company and the common stockholders, was necessarily aware that there existed no judicial sanction whatever for such premium payments, and that to the contrary the Commission itself and numerous Courts, including four different Circuit Courts of Appeals, had consistently and uniformly held over a period of five years that payment of premiums to senior security holders at the expense of the junior holders could not be required in reorganizations or liquidations under Section 11(e) of the Act in consonance with the fair and equitable standard of Section 11(e).[21]

---

[20] See also *Continental Illinois Bank* v. *C. R. I. & P. Ry. Co.*, 294 U. S. 648, where the Court stated (p. 685):

> "Not only are those who institute the proceeding and those who carry it forward bound to exercise the highest degree of diligence, but it is the duty of the Court and of the Interstate Commerce Commission to see that they do. Proceedings of this character, involving public and private interests of such magnitude should, so far as practicable, be given the right of way both by the Court and by the Commission to the end that they may be speedily determined."

[21] *New York Trust Co.* v. *S. E. C.*, 131 F. 2d 274 (C. C. A. 2d, 1942), *cert. den.* 318 U. S. 786, *rehearing den.* 319 U. S. 781; *City National Bank & Trust Co.* v. *S. E. C.*, 134 F. 2d 665 (C. C. A. 7, 1943); *Massachusetts Mutual Life Insurance Co.* v. *S. E. C.*, 134 F. 2d 665 (C. C. A. 7, 1943), *cert. den.* 327 U. S. 796; *In re Standard Gas & Electric Co.*, 151 F. 2d 326 (C. C. A. 3, 1945); cf. *Bailey* v. *Minsch*, 168 F. 2d 635 (C. C. A. 1, 1948).

In the District Courts, see *In re North Continent Utilities Corp.*, 54 F. Supp. 527 (D. Del., 1944); *In the Matter of Consolidated Electric & Gas Co.*, 55 F. Supp. 211 (D. Del., 1944); *In re Central States Power & Light Corp.*, 58 F. Supp. 877 (D. Del., 1944);

Under the foregoing circumstances, it would have required a singularly myopic vision (or perhaps an overweening confidence in judicial deference to the Commission's new views) for the Commission not to foresee at least the possibility that the provision for payment of the premiums might be found unfair and inequitable by the courts; and would obviously have been an act of administrative irresponsibility if the Commission did not make appropriat provision for this contingency in order to avoid the necessity for remand to the Commission and subsequent resubmission to the Courts, especially since the question was of relatively narrow scope and in no way touched the heart of the plan. Both the Commission's opinions (R. 75a, 136a) and its amendatory order of February 11, 1947 (R. 165a-174a), were intended to, and did, make such provision by approving as fair and equitable payment to the preferred holders of the liquidating preference of $100 per share plus accrued dividends and such additional amounts, if any, not exceeding the aggregate premiums with interest thereon, as might be thereafter approved by the enforcement Court's order which had become final for lack of appeal or which had been affirmed on appeal. As the Commission has itself stated: "* * * the Commission has already contingently approved an alternative allocation of cash to preferred stockholders at the amount of the liquidation preference if as a result of the processes of review in the District Court and on appeal therefrom this should be judicially determined fair and equitable." [22]

[22] R. 44, note 1, Commission's petition for rehearing in the Circuit Court.

It is thus apparent that the Commission had given its prior consideration and advance approval to the plan in the form approved and enforced by the District Court's order of May 29, 1947 (R. 318a); and indeed the record discloses that this order was actually drafted and submitted to the District Court for signature by the Commission's attorneys (R. 357a). These circumstances scarcely justify the Circuit Court's statement that the District Court erred in entering an order approving and enforcing the plan as amended *by it*,[23] and without the Commission's prior consideration and approval. On the contrary, the procedure followed by the District Court in every particular was that which the Commission in its opinions and orders and by its attorneys in open court,[24] requested and urged the Court to follow, including establishment of the escrow fund and non-remand of the proceedings to the Commission by reason of the Court's disapproval of the premium payments. Even the very language of the escrow agreement embodied in the Court's decree, as well as the decree itself as has been stated, were formulated and submitted to the Court by the Commission's attorneys. Although concededly these circumstances do not insulate the Court's decree from attack if the Commission's actions were in effect "*ultra vires*", we submit that they do completely refute any suggestion that the Court engaged in a process of amending the plan in respects which procedurally, at least, had not received the full concurrence and approval of the Commission, and, indeed, as to which

---

[23] "The Court below, therefore, erred in one particular. *It entered an order approving and enforcing the plan as amended by it.* It was without power to do this. The provisions of Section 11(e) make it clear that the Commission in the first instance must approve the plan and find it to be fair and equitable. If, as here, the district court disagrees with the conclusion of the Commission that the plan is fair and equitable, it must refuse to approve the plan and 'remand' the record to the Commission for further and appropriate action by it" (R. 39; emphasis supplied).

[24] R. 257a-260a, 281a-282a.

the Commission had not actually been the prime mover. Nor do we think the procedure urged upon the Court by the Commission can properly be deemed "ultra vires". If the Courts did not find the Commission's new "investment ex the Act" doctrine consonant with established legal principles and the statutory intent, nothing further remained to be decided; for in such event the preferred holders necessarily must receive the liquidating preference of $100 per share plus dividends, in conformance with a long line of Commission and Court decisions. Accordingly, the Commission correctly recognized that the basic issue was one of legal and statutory interpretation, as to which the last word was not in the Commission but in the Courts.[25] Therefore, in approving as fair and equitable payment of the liquidation preference in the event the District Court held payment of the premiums unfair and inequitable (and such determination became final for lack of appeal or were affirmed upon appeal), it is evident the Commission was not "waiving" or "rejecting" its statutory role, but was performing it in the only way consonant with reason and the repeated admonitions of this Court for expeditious and coordinated procedure in reorganizations of this character.[26]

(3) A valid basis is also lacking for the Circuit Court's suggestion that the District Court may have substituted

---

[25] If confirmation be needed for this proposition, it is amply furnished by the legislative history of the statute, to which reference was made in the Circuit Court's opinion (R. 23, 23). For example, Senator Wheeler (who had the Bill in charge in the Senate) stated during the debates:

> "* * * the provision does not oust the jurisdiction of the Court at all, because the Court has to approve the plan even though the Commission approves it. In other words, there is really a double-check upon the plan, *and final determination rests as in the past in the courts*" (79th Cong. Rec. 8845, 74th Cong., 1st Sess.; emphasis added).

[26] See note 20, *supra*. Cf. *Comstock* v. *Group of Investors*, 68 S. Ct. 1454; majority opinion p. 1462, minority p. 1467.

its "valuations" and "estimates" for those of the Commission (R. 39). In essence this seems to reduce itself to a contention that the District Judge should have worded only negatively what he also worded affirmatively; that he should have held the provision for premiums "unfair and inequitable" without also finding affirmatively that the preferred holders received "fair and equitable" treatment upon receipt of $100 per share plus dividends without the premiums.

What the District Court "valued" was not the preferred stocks, but the Commission's "investment value ex the Act" doctrine. The initial and basic issue before the Court was the legal validity of the Commission's new doctrine, and in rejecting this doctrine squarely on the merits as a matter of law,[27] the District Judge merely adverted (though searchingly) to numerous relevant factors which confirmed to his satisfaction as a court of equity that payment of the liquidation preference without premiums would produce a

---

[27] Judge Leahy addressed himself to this doctrine as follows (R. 311a-312a):

"Analysis of the value of the Engineers preferreds on a 'going concern' basis is largely an exercise in semantics, since the Act dictates the dissolution of Engineers and of the entire holding company enterprise, and thus makes impossible the 'going concern' in which the preferred and common stockholders engaged to invest. If not for the requirements of the Act, Engineers as a 'going concern' would have been free to take advantage of the present low money markets by calling and redeeming its preferred stocks and replacing them with preferred stocks carrying a lower dividend rate than those now outstanding; it would thus continue to enjoy the leverage advantages of senior capital, but at a substantially lower cost. Under these circumstances, payment of the premiums to the preferred stockholders would have been consonant with the purposes and intent of the charter redemption provision. But the Act has made it impossible for the Company and the common stockholders to avail themselves of these benefits contemplated by the contract, along with the many other advantages which would have accrued to them as a 'going concern, exclusive of the impact of Section 11'."

result wholly fair and equitable in its realistic ("colloquial") sense as well as in the technical statutory sense.[28]

The Circuit Court squarely affirmed the District Court's determination, after reviewing and approving Judge Leahy's reasoning and his "careful and far-reaching examination of the relevant factors" (R. 34, 140). The Circuit Court should therefore have affirmed the District Court's decree, without requiring the remand.[29]

II. Substantive Aspects

The Circuit Court's requirement for remand of the proceedings to the Commission, while couched largely in procedural terms, has undertones which raise substantive issues of far-reaching importance if interpreted as the Commission has already indicated it contemplates in the event of remand of the proceedings to it.[30] These substantive issues stem principally from the sentence near the end of the Circuit Court's opinion which states: "The problem is and will remain, until its disposition by the

---

[28] To be sure, the Court also made clear in its findings that even assuming the validity of the Commission's basic doctrine it could not accept the Commission's thesis that "investment values" may properly be determined on the basis of market prices and money rates as of a given moment, without regard to past and future events of significance (Findings 41-54, R. 310a-315a). But here again the Court was not "valuing" stock but pointing to the fallacies in the Commission's formula.

[29] It may be observed that the Circuit Court's expressed hope that the delay might be "of short duration" (R. 139) hardly derives encouragement from the record to date. Engineers' plan was filed with the Commission September 10, 1945; the Commission's findings and opinion were issued December 4, 1946, and its supplemental opinion and order January 8, 1947 (R. 118a, 141a).

[30] In its petition for rehearing in the Circuit Court the Commission stated its understanding of the issue on remand as follows: "* * * to require a remand merely for the purpose of a Commission finding that what the common stockholders receive in the plan is at least equal to what they give up in the plan, *is to require a statement in different terms of what the Commission has already found*" (R. 53; emphasis added).

Commission, one of valuation of the securities of Engineers, viz., the preferreds and the common" (R. 40).

The suggestion that a problem of "valuation" remains for disposition is illusory when viewed together with the preceding portions of the Court's opinion which discuss the fallacies of the Commission's "investment ex the Act doctrine" (R. 36-38) and the "pertinent factors" and "substantial equities" (R. 38) which must be considered whether evaluation proceeds "intra the Act" or "ex the Act". For in the light of these factors (which are the very ones considered by the District Court) no process of "valuation" can produce a result different from the one arrived at by the District Court. Any one of these considerations and factors would present virtually an insuperable barrier to a determination that the preferred holders are entitled to more than the $100 per share plus dividends they have already received; and in combination they are absolutely fatal to any such determination.

If the rights of the stockholders are determined realistically in the light of the authentic and compulsory liquidation which has in fact taken place ("intra the Act") the amount already paid to the preferred stockholders marks the outer limit of the preferreds' claim whether the charter liquidation provisions be recognized as dispositive,[31] or a

[31] Although the District Court found it unnecessary to decide the question of whether the charter provisions are themselves "dispositive of the issue", considering them merely one factor supporting the conclusion that $100 per share plus dividends is fair and equitable (R. 287a, 317a), and the Circuit Court also did not deem them dispositive (R. 34), we continue to maintain that these charter provisions are in fact controlling in respect of the type of final liquidation which both courts found has here taken place. Not only does this create a vital distinction from the *Otis* case, as the Circuit Court held (R. 36), and not only does the Engineers' charter contain significantly different provisions from the charter considered in *Otis*, but that decision held only that the charter liquidation provisions were not "*matured*" or "*accelerated*" by virtue of that pseudo-liquidation compelled by the Act; it did not hold that the maximum amount specified in the charter as payable to the preferred in a liquidation may be *exceeded*.

We also continue to maintain that the overriding of these applicable charter provisions to subserve no purpose reasonably related

species of equitable rescission by operation of law is deemed to have occurred as a result of the governmental frustration of the enterprise,[32] or an overall "weighting" of the equities is made in order to arrive at a result which is fair and equitable in a non-technical ("colloquial") sense.[33] On the other hand, if the rights of the security holders are to be determined on a going-concern basis "apart from liquidation" ("ex the Act"), no amount in excess of $100 per share can be found for the preferred if there merely be restored to the credit of the common holders the more than $24,000,000 left by them in the enterprise to provide for the liquidation (R. 306a, 312a); or if account be taken of the other sacrifices and deprivations sustained by the common in carrying out the liquidation (R. 307a, 36-7); or if their claims be measured consistently with those of the preferred (as the Court held they must, R. 35-8) on a going-concern basis "ex the Act".

Indeed, to the extent that *investment value* is entitled to any weight under the rulings of the Courts below in determining the rights of the security holders in this liqui-

---

to the Congressional objective in enacting Section 11 would violate vested rights of the common stockholders protected by the Fifth Amendment of the Constitution, a question which this Court expressly stated it did not reach in that decision (*Otis & Co.* v. *S. E. C.*, 323 U. S. 624, 640; but see dissenting opinion, pp. 645, 648-9).

[32] Cf. District Court Conclusions 2-8 (R. 316a). See also 6 *Williston on Contracts* (1938) 5486 (n. 139) where, in discussing judicial decisions with respect to governmental frustration, it is stated: "These decisions may profitably be compared with those where mutual mistake as to some vital characteristic of a thing contracted for has been held to justify rescission." Elements of this doctrine are also found in the premium decisions cited in n. 21, *supra*.

[33] This was virtually conceded by appellants in the Court below. For example, the Commission's Reply Brief (p. 3) stated: "* * * there are no considerations of colloquial equity upon which the Commission would rely as a basis for according an increased participation to the preferred stockholders."

dation; it alone (and wholly apart from all the other considerations already mentioned) forecloses a finding of more than $100 per share and dividends for the preferred. For the Commission did not and could not determine that these preferreds actually have an authentic, *investment value* in excess of $100 if this term be employed in its normal sense. What the Commission did was merely to credit and accept the testimony of Badger that as of the date of his testimony, these preferreds would have had a *market* value approximating the redemption prices if dissolution were not required by the Act. And Badger's opinion as to this hypothetical market value [34] was based not on the inherent investment qualities of these stocks (which the evidence established was at best a low-grade medium holding company preferred, R. 314a) but on the extremely low money rates and yields prevailing at that particular moment: "the lowest which they have ever been in the history of our country" and "conversely, the prices of such stocks [preferred] are at the highest levels ever experienced" (R. 2065a).

Both Courts below were struck by the Commission's anomalous and almost inexplicable [35] action in terming the momentary market value of the preferreds in May 1946 their "investment value" on a "going-concern" basis; [36] and held that if rights are to be measured on the Commission's fictional theory of "a going-concern", then values must also be determined on that basis (R. 312a-315a, 35-37). The

---

[34] Even the actual market values were lower than the redemption prices on the date of Badger's testimony (R. 2062a).

[35] In other decisions the Commission has consistently rejected market values as a criterion for valuation in Section 11(e) plans. Cf. *Washington Railway and Electric Co.*, Holding Company Act Release No. 7410 (May 1947), where the Commission stated (p. 27): "However, we have never considered market values as determinative of the fairness of a Section 11(e) plan."

[36] District Court Findings 48-54 (R. 312a-315a); and see Circuit Court's statement regarding the District Court's "cogent finding" as to Badger's money rates (R. 19).

drastic decline in preferred stock yields and market prices which commenced shortly after Badger's testimony and has continued almost steadily since, adds further incontrovertible proof to the evidence pointed to by Barnes (and found by the District Court) which establishes that the Engineers preferreds have not in the past and cannot now be valued at more than $100 on a going-concern basis. Not only did the Circuit Court find that the evidence in the record bears this out,[37] but the Court was asked to take judicial notice of authoritative and competent data establishing that if the liquidation had not in fact taken place (as the Commission hypothesized) the Engineers preferreds would have a present market value of not more than $90-$95 per share (R. 122-3).

In the light of the foregoing factors, we believe it is evident that remand to the Commission can only lead to a finding by the Commission that in view of the holdings of the District and Circuit Courts, payment to the preferred holders of the amounts already received is fair and equitable, and that this is the "disposition by the Commission" contemplated in the Circuit Court's sentence previously quoted (*supra*, p. 27).[38]

Since, as was pointed out in the earlier discussion, such a finding has *already* been made in alternative contingent form by the Commission in its two opinions and formally embodied in its order of February 11, 1947, no purpose

---

[37] Cf. R. 38, where the Court stated with respect to the contention that the redemption prices were the "equitable equivalent" of the rights surrendered by the preferred "* * * we do not believe that such a finding could be supported on the present record".

[38] If, on the other hand, the Circuit Court's language be construed paradoxically as a holding that the Commission may validly determine additional amounts to be payable to the preferred holders in this case, contrary to the determination of the District Court which the Circuit Court affirmed, such a ruling would imperatively call for consideration and determination by this Court of the respective statutory functions of the Commission and the District Court, as well as all those fundamental issues of "fairness and equity" under Section 11(e) which the Circuit Court held were correctly determined by the District Court.

would be served by the remand except to delay distribution to the common stockholders of the escrow fund and further protract the litigation of which the entire expense must be borne by the common stockholders (R. 72a-82a).

CONCLUSION

For the reasons stated, this petition for a writ of certiorari to the Court of Appeals for the Third Circuit should be granted.

Dated: September 4, 1948.

Respectfully submitted,

ALFRED BERMAN,
Attorney for Petitioners.

PHILIP W. AMRAM,
ALFRED BERMAN,
HERBERT L. COBIN,
J. HOWARD ROSSBACH,
ABRAHAM SHAMOS,
of Counsel.

In the Supreme Court of the United States

OCTOBER TERM, 1948

No. 266

CENTRAL-ILLINOIS SECURITIES CORP. AND CHRISTIAN A. JOHNSON

v.

SECURITIES AND EXCHANGE COMMISSION, THOMAS W. STREETER, ET AL., THE HOME INSURANCE CO., ET AL.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES COURT OF APPEALS FOR THE THIRD CIRCUIT

MEMORANDUM FOR THE SECURITIES AND EXCHANGE COMMISSION

---

1. The Commission agrees that the instant petition should be granted. Petitioners herein are common stockholders of Engineers Public Service Company and are respondents in cases Nos. 226, 227, and 243 wherein the Commission and preferred stockholders of Engineers are seeking review of the judgment of the Court of Appeals for the Third Circuit entered March 19, 1948, and its judgment

denying petitions and cross-petitions for rehearings entered June 11, 1948. The petitions filed by the Commission and the preferred stockholders urged that the court below should have directed the district court to approve and enforce, in accordance with the prior approval of the Commission, the proposal in an otherwise uncontested plan under Section 11(e) of the Public Utility Holding Company Act, to pay the preferred stockholders in satisfaction of their claims amounts equal to the redemption prices. The Court of Appeals for the Third Circuit upheld the district court in its rejection of the Commission's determination, but held that the district court erred in enforcing the plan in accordance with its own view that an amount equal to the involuntary liquidation preference of $100 per share was the amount required by the fair and equitable standard of Section 11(e). The present petition raises questions which closely parallel those raised by petitioners in cases Nos. 226, 227, and 243, except that these questions are, of course, posed from the point of view of common stockholders who disagree with the Commission's determination of what is fair and equitable and seek to support the contrary views of the district court. In addition, the petition urges alternative grounds for support of the district court's decision which both courts below rejected, and argues that if the Commission does not prevail in its effort to have the plan enforced as approved by it, then the court below should be directed to affirm the decision of

the district court rather than to continue in effect the order for remand to the Commission.

2. Although we disagree with many of the arguments advanced by petitioners and with their version of the facts, we do not oppose the issuance of a writ of certiorari on their petition, for we believe the issues petitioners raise and the issues raised by the Commission's petition are interrelated and may appropriately be considered at the same time.

3. The procedural question of whether there should be a remand to the Commission if the district court is upheld in its rejection of the Commission's valuation, is interrelated with the questions as to the proper interpretation of the fair and equitable standard of Section 11(e) and as to the relative roles of Commission and district court in applying those standards.

The Commission's action granting alternative approval to a plan providing for the payment of only $100 per share to the preferred stock and, if the district court should so order, for an escrow of the amount in dispute pending the outcome of the litigation, was premised upon the assumption that the facts were not disputed or susceptible of dispute and that the courts would be confronted only with the issue of whether the involuntary liquidation preference specified in the charter or the fair investment value of the stock was, as a matter of law, the "equitable equivalent" of the rights the preferred stockholders were called upon to surrender.

Both courts below, however, have accepted the Commission's determination that under *Otis* v. *S. E. C.*, 323 U. S. 624, the preferred stockholders' liquidation preference is not "dispositive". Unless petitioner should persuade this Court otherwise, or unless this Court should agree with the district court that its weighing of colloquial equities may be substituted for the Commission's finding of equitable equivalence, we see no escape from the requirement of a remand to the Commission. Acceptance of the views of the court below that the Commission has an unfulfilled valuation function to perform and that the district court may reject the Commission's valuation without laying down a substitute standard which the Commission must follow, appears to make that result inevitable. No waiver on the Commission's part, even if its action could be so construed, could abdicate or delegate to the district court any unfulfilled valuation function vested in it by the statute. *Cf. Schwabacher* v. *United States*, 334 U. S. 182, 198.

The embarrassing and anomalous problem confronting the Commission on such a remand has been pointed out in the petition for a writ of certiorari in case No. 226. Petitioner in the present case agrees that if the decision of the court below leaves it open to the Commission to do any more on remand than accept the determination of the district court "such a ruling would imperatively call for consid-

eration and determination by this Court of the respective statutory functions of the Commission and the District Court, as well as all those fundamental issues of 'fairness and equity' under Section 11(e) which the Circuit Court held were correctly determined by the District Court" (Pet., p. 30, fn. 38).[1]

4. While we believe it premature to argue the merits of the decision below, we note briefly a few of our objections to statements by the present petitioners both in their petition in No. 266 and in their brief in opposition in Nos. 226, 227, and 243. Some of these misstatements appear also in the Boehm and White memorandum in opposition.

A. *It is stated that under today's conditions in the financial market Engineers' preferreds, if still outstanding, "would have a present market value of not more than $90-$95 per share* (R. 122-3)." (By Central Illinois in its petition, p. 30, and in its brief in opposition, Point I). The record references are to Central Illinois' own

[1] This problem would become all the more embarrassing if the present petitioner is right in its contention (brief in opposition, Point IV, p. 34) that the court below "had no intention of insisting upon the exact ascertainment and computation of each loss sustained by Engineers, but merely upon giving reasonable consideration to the fact that such losses (without necessity for precise computation) had been sustained." It is not indicated how the Commission, without reference to proof of actual losses, is to give content in terms of computing the amount of dollars payable to the preferred, to such hypothetical losses. (R. 71a-73a).

arguments, purportedly based on matters of judicial notice set forth in answer to the Commission's petition for rehearing in the court below. These assertions involve, we believe, a gross exaggeration of an admitted change in market conditions since Engineers' preferred stocks were retired under the plan. Central Illinois' highest valuation of $95 per share, if applied to Engineers' 6% preferred stock, could be supported only if securities of comparable quality were presently selling to yield 6.32% or higher. On the other hand, a yield of 5.45% or less on the same class of preferred would support, according to the Commission's approach, a finding that its investment value, if presently outstanding, is equal to the $110 per share redemption price. The Badger testimony, which was accepted by the district court (R. 290a), indicated that, except as limited by the redemption ceiling price, the preferred would sell on a 4.6% yield bases (R. 310a), i. e., in excess of $110 per share. This testimony was based on a comparison of the then current market prices for other "medium grade" preferred stocks which Badger regarded as comparable. Our own computation, based upon market prices of September 22, 1948, show an average yield at the present time of 4.82% for the securities used by Badger as a basis of his comparisons and now outstanding. Thus, even making allowance for the change in market

conditions to date, it is clear that the Commission's original conclusion that the preferred stocks have an investment value of not less than the redemption prices is still valid.[2]

In any event, we believe that the latest relevant date for computing the equitable equivalent in cash of what the preferred stockholders surrendered was the effective date of the plan when their shares were cancelled and their right to future dividends terminated. Thus, even if this Court should accept Central Illinois' exaggeration of the extent of the change in market conditions since that date, that change would not affect either the issue of whether the plan should have been enforced as approved by the Commission, or the issue of what, if any, different standards the Commission should apply if there is to be a remand. Without resolution by this Court of the questions posed in the Commission's petition, remand for the purpose of ascertaining market conditions would be dilatory, futile, and confusing. Moreover, since the court below did not rest its decision upon alleged changes in market conditions, acceptance of Central Illinois' assertions as a basis for denying a writ of certiorari would itself involve a modification of the decision below.

---

[2] Central Illinois' computations appear to be based in part upon market figures as of March 26, 1948, and using only three of the securities upon which Badger based his computation.

B. On the basis of quotations out of context it is asserted, as an indisputable fact, that the Commission's decision in the instant case was a novel departure from a "long line of Commission and Court decisions", and the Commission is chided because its opinion "avoided even the slightest reference to the long and deeply-rooted decisions discussed above." (Petition in No. 266, p. 24; Central Illinois brief in opposition, p. 18; Boehm and White memorandum, p. 14.) Apart from the fact that this argument of inconsistency was rejected by both courts below in holding the liquidation preference not "dispositive", the statements give a misleading picture of Commission precedents. The Commission has consistently held that neither redemption prices nor liquidation preferences are necessarily determinative of the equitable equivalent in cash of bonds or preferred stock where the investment is forcibly surrendered under Section 11. The Commission cases on which Central Illinois relies which disallowed payment of redemption prices, while not discussed by the Commission in its *Engineers* opinion, had been fully dealt with in the earlier *American Power and Light* case which the Commission cited (R. 62a, n. 43, citing Holding Company Act Release No. 6176). Indeed, it was in recognition of previous expressions of the Commission's view that the parties to the administra-

tive proceeding offered testimony concerning the "investment value" of Engineers preferreds.[3]

Respectfully submitted,

PHILIP B. PERLMAN,
Solicitor General.

ROGER S. FOSTER,
General Counsel,
Securities and Exchange Commission.

[3] Central Illinois' statement that in the United Light and Power debt retirement case "the debentures had been selling at *a permium above par* despite the imminence of retirement" brief in opposition, p. 16) apparently is based upon a Commission footnote which intimates that the premium of "as much as 1½ points above par" (with the issue of the debentureholders' claim for a 9 point premium undecided) was attributable to, rather than "despite", the imminence of liquidation. The footnote referred to reads as follows:

> All the debentures were originally sold to the public during the years 1923 to 1925 at prices ranging between 90 and 95. From 1931 to 1940 market quotations were constantly below par reaching as low as 25 for a time in 1933. Since 1940 and especially since our order of March 20, 1941, for the liquidation and dissolution of Power, market quotations have been close to and sometimes as much as 1½ points above par. [10 S. E. C. 1227, n. 27.]

SECURITIES AND EXCHANGE COMMISSION, THOMAS W. STREETER, *et al.*, THE HOME INSURANCE CO., *et al.*

MEMORANDUM OF COMMON STOCKHOLDERS LUCILLE WHITE AND FRANCES BOEHM IN SUPPORT OF PETITION FOR WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE THIRD CIRCUIT

Lucille White and Frances Boehm, common stockholders of Engineers, pray that the petition of common stockholders Central-Illinois Securities Corporation and Christian A. Johnson, for a writ of certiorari to the United States Circuit Court of Appeals for the Third Circuit be granted.

Lucille White and Frances Boehm are respondents with respect to three petitions for certiorari to review the same judgment (Nos. 226, 227, 243) and have filed a brief in opposition to said petitions.

Opinions Below

The opinion and judgment of the Court below (R. 12) and the opinion denying petitions and cross-petitions for rehearings (R. 138) are reported at 168 F. 2d 722. The opinion of the District Court is reported at 71 F. Supp. 797 (R. 283a), but its detailed Findings of Fact and Conclusions of Law (R. 293a-317a) are not reported. The Findings and Opinion of the Commission dated December 4, 1946 and January 8, 1947 have not yet been officially reported but are set forth in the Commission's Holding Company Act Releases Nos. 7041 (R. 25a) and 7119 (R. 128a).

Jurisdiction

The judgment of the Circuit Court of Appeals for the Third Circuit was entered March 19, 1948, and its judgment denying petitions and cross-petitions for rehearing was entered June 11, 1948. The jurisdiction of this Court is invoked under Section 240 of the Judicial Code, as amended by the Act of February 13, 1925 (28 U. S. C. 347), made applicable by Section 25 of the Public Utility Holding Company Act of 1935, 49 Stat. 803 (15 U. S. C. 79, *et seq.*).

Statute Involved

Section 11(e) of the Public Utility Holding Company Act of 1935 provides as follows:

> "(e) In accordance with such rules and regulations or order as the Commission may deem necessary or appropriate in the public interest or for the protection of investors or consumers, any registered holding company or any subsidiary company of a registered holding company may, at any time after January 1,

1936, submit a plan to the Commission for the divestment of control, securities, or other assets, or for other action by such company or any subsidiary company thereof for the purpose of enabling such company or any subsidiary company thereof to comply with the provisions of subsection (b). If, after notice and opportunity for hearing, the Commission shall find such plan, as submitted or as modified, necessary to effectuate the provisions of subsection (b) and fair and equitable to the persons affected by such plan, the Commission shall make an order approving such plan; and the Commission, at the request of the company, may apply to a court, in accordance with the provisions of subsection (f) of section 18, to enforce and carry out the terms and provisions of such plan. If, upon any such application, the court, after notice and opportunity for hearing, shall approve such plan as fair and equitable and as appropriate to effectuate the provisions of section 11, the court as a court of equity may, to such extent as it deems necessary for the purpose of carrying out the terms and provisions of such plan, take exclusive jurisdiction and possession of the company or companies and the assets thereof, wherever located; and the court shall have jurisdiction to appoint a trustee, and the court may constitute and appoint the Commission as sole trustee, to hold or administer, under the direction of the court and in accordance with the plan theretofore approved by the court and the Commission, the assets so possessed."

Reasons Relied On For Allowance of Writ

The determination of the Circuit Court directing a remand to the Commission raises issues of substantial importance in the administration of the Public Utility Holding Company Act and directly affects the rights of

many stockholders. If the petitions of appellants for a writ is granted, it is particularly important that this petition be granted in order that this Court may have before it all of the issues raised in this case for a complete determination.

I.

The District Court merely followed the procedure mapped out by the Commission in the event that the District Court found that the preferred stock was not entitled to the redemption premium, and remand to the Commission was unnecessary.

The Circuit Court of Appeals, after affirming the determination of the District Judge that the plan as submitted by the Commission was unfair and inequitable, vacated the decree of the District Judge and remanded the cause to the Commission solely on the ground that the District Judge erred in approving and enforcing the plan as amended by him.

The statement by the Circuit Court on this point is as follows (R. 39):

> "To put the matter briefly, a district court may reject but not amend the plan. The court below, therefore, erred in one particular. It entered an order approving and enforcing the plan as amended by it. It was without power to do this. The provisions of Section 11 (e) make it clear that the Commission in the first instance must approve the plan and find it to be fair and equitable. If, as here, the District Court disagrees with the conclusion of the Commission that the plan is fair and equitable, it must

refuse to approve the plan and remand the record to the Commission for further and appropriate action by it."

In this respect we believe that the Circuit Court is in error. The District Court did not amend the plan. The only question before the District Court was whether the preferred stockholders were entitled to the redemption premium provided by the Engineer's charter to be paid in the event of a voluntary redemption or liquidation. The rest of the plan was not in dispute, and has already been carried out. The amount of this premium, plus expenses, was deposited in Court subject to the determination of that question. The District Court found that it would be unfair and inequitable to pay such redemption premium.

All of the proceedings concerning the amendment of the plan, the provisions for an escrow agreement and the submission to the District Court, were ordered by the Commission, and contemplated and provided for the contingency that the District Court might, as indeed it did, find that the payment of $100 per share plus accrued dividends to the preferred stockholders was fair and equitable and that the payment in excess of $100 per share plus accrued dividends was not fair and equitable, which finding was affirmed by the Circuit Court of Appeals. And it was in accordance with that amended plan as approved by the Commission and the District Court that the preferred stockholders have received $100 per share, plus accrued dividends, and that the amount of the premiums has been deposited in escrow.

That the determination of the courts as to whether or not the preferred stockholders should receive more than $100 per share, should be binding upon the Commission, and that the Commission had thereby given advance ap-

proval, is amply borne out by the record. In its Order of Amendment dated February 11, 1947 (H. C. A. Release No. 7490, R. 165a), the Commission approved payment to the holders of the preferred stock of $100 per share and such additional amounts as may be directed by an order or decree of the United States District Court or any appellate court (R. 174a). Thereafter the Commission approved and joined in presenting to the District Court the escrow agreement, the pertinent provision of which states that the amount of the premium which is deposited in escrow shall be released and paid over to Engineers upon proof of the entry of an order or decree of the Commission, or of an order or decree of any court having jurisdiction, which determines or finds that the holders of the preferred stock are not entitled to receive any amounts in excess of $100 per share plus accrued dividends (R. 328a).

And in oral argument before the District Court in answer to the statement by Mr. Tucker, counsel for Engineers, that if the District Court did not approve the plan in its entirety, it goes back to the Commission, Mr. Slater, counsel for the Commission, stated (R. 281a):

> "If your Honor please, I hesitate to do so, but we must disagree with the statement just made by Mr. Tucker. As we view this escrow, it is a two way escrow. The Commission or the preferred stockholders might appeal in the event that this Court should determine only one hundred dollars is payable. The common stockholders have indicated they would appeal if the Court agreed with the determination of the Commission. But certainly the reorganization process and equity powers of this Court can't be so inflexible that this Court can't by appropriate order approve those portions of a plan which are clearly separable and in no way impinge on the controverted

> portions of a plan. * * * It is just silly to upset ten-elevenths of this plan, at least that, if not ninety-nine one-hundredths, simply because there is a disagreement as to a segregated small portion in relation to the whole of what we are doing here."

That the Commission has consistently maintained this position is apparent from its petition for rehearing in the Circuit Court where the Commission stated (R. 44, note 1):

> "* * * the Commission has already contingently approved an alternative allocation of cash to preferred stockholders at the amount of the liquidation preference if as a result of the processes of review in the District Court and on appeal therefrom this should be judicially determined fair and equitable."

It is thus apparent that not only has the District Court not amended the plan, but has in fact followed a procedure which has been concurred in and approved by the Commission. The procedures and decisions of the Commission and the District Court have fully satisfied the statutory requirement for approval of the plan by the Commission and the enforcing Court.

II.

Should certiorari be allowed, the Court should likewise permit certiorari to review the question, undecided up to now, whether upon a true liquidation under the Holding Company Act, the charter provisions of the corporation to be liquidated, are controlling.

It is further contended by respondents Lucille White and Frances Boehm that the charter provisions in this case are applicable and that the overriding of these charter

provisions is not reasonably necessary to effectuate the provisions of the Holding Company Act, and thereby constitutes a violation of the Fifth Amendment.

The applicable section of the corporate charter of Engineers provides:

> "III. Preference on liquidation, etc. In the event of liquidation, dissolution or winding up of this Corporation, or any reduction of its capital stock, resulting in any distribution of its assets to its stockholders, the holders of the preferred stock of each series shall be entitled to receive, for each share thereof, an amount equal to $100, together with all dividends accrued or in arrears thereon, plus, in case such liquidation, dissolution or winding up or reduction shall have been voluntary, the fixed redemption premium for such series, if any, before any distribution of its assets shall be made to the holders of the common stock * * *."

Not only has the Commission conceded that the dissolution in this case is not voluntary, but the District Court found that a plan, whether submitted by the company or the Commission, is not a voluntary plan (R. 287a, note 1).

The case of *Otis & Co.* v. *Securities and Exchange Commission*, 323 U. S. 624 (1945), relied on by the Commission in the lower courts as dispositive of this issue is clearly distinguishable. In the Otis case, there was involved a mere simplification and reorganization of a continuing holding company system, in fact only the removal of the top holding company (the lower tier of holding companies remaining and the enterprise continuing), whereas the Engineers case involves a final and complete liquidation, which in fact has already been accomplished.

This distinction is emphasized by this Court in the Otis case when it said that (p. 631):

> "* * * The exercise of legislative power by Congress through §11 (b) (2) to accomplish *simplification* as a matter of public policy and the Commission's administration of the Act *by dissolution of this particular company* results in a type of liquidation which is entirely distinct from the 'liquidation of the corporation, whether voluntary or involuntary' envisaged by the charter provisions of Power for preferences to the senior stock." (Italics supplied).

The provision of the corporate charter providing for payment of a fixed amount to the preferred stockholders in the event of an involuntary dissolution constitutes a contract among the stockholders which is entitled to constitutional protection.

Bedford v. *Eastern Building & Loan Association*, 181 U. S. 227, 21 S. Ct. 597, 45 L. Ed. 834.

Hopkins Federal Savings & Loan Association v. *Cleary*, 296 U. S. 315, 56 S. Ct. 235, 80 L. Ed. 251.

Treigle v. *Acme Homestead Association*, 297 U. S. 189, 194, 196, 56 S. Ct. 408, 80 L. Ed. 575.

And in this connection, the language of the minority in the Otis case is particularly appropriate (p. 647):

> "We can find no basis for saying that it is not fair and equitable, both in a technical as well as a general and non-technical sense, to require the stockholders to abide by their agreement in the very circumstances to which it was intended to apply, and where, as we have said, there is no contention that the contract when made was or is now oppressive, unfair, inequitable or illegal."

The District Court chose not to pass on this point. It said (R. 287a):

> "Certain common stockholders argue that this plan involves a true liquidation as distinguished from the fictitious liquidation involved in re United Light & Power Co., D. C. Del., 51 F. Supp. 247, aff'd. 3 Cir., 142 F. 2d 413, aff'd. sub. nom. Otis & Co. v. Securities and Exchange Commission, 323 U. S. 624, and that consequently the stock rights of the various security holders are not to be treated as though in a continuing enterprise. Since this is a true liquidation, the parties argue, the charter provisions do apply and therefore the preferreds are not entitled to a premium. The charter in this case provides that the preferreds shall be entitled to a premium only in the event that the winding up is voluntary; and this and other courts have held that where a company must change its capital structure because of the impact of the Act, the winding up or reorganization is not voluntary. See in re Consolidated Electric & Gas Co., D. C., Del., 55 F. Supp. 211; In re North Continent Utilities Corp., D. C., Del., 54 F. Supp. 527; City National Bank & Trust Co. of Chicago v. S. E. C. and North American Light & Power Co., 7 Cir., 134 F. 2d 65; New York Trust Co., et al. v. S. E. C., 2 Cir., 131 F. 2d 274. This is ingenious argument and, if accepted, would of course be dispositive of the holding that payment of the premiums would not be fair and equitable. I prefer not to definitely decide this particular point. * * *"

Should this Court issue its writ of certiorari as requested by the Commission and the other appellants, then we respectfully submit that it should likewise grant the petition of appellees for the issuance of a writ to determine this question, as well as the question of remand to the Commission.

Conclusion

For the reasons stated, the petition of Central Illinois Securities Corp., et al., for a writ of certiorari to the United States Circuit Court of Appeals for the Third Circuit should be granted.

Dated: New York, N. Y., October 7, 1948.

Respectfully submitted,
